Macau \mə-'kaù\ *or* **Macao** *Chinese* **Aomen** \'aù-'men\ Special administrative region (pop., 2005 est.: 470,000), southern CHINA. Located on the South CHINA SEA coast about 40 mi (64 km) west of HONG KONG, it consists of a small peninsula, which projects from GUANGDONG province, and two small islands. Its total land area is 10.6 sq mi (27.5 sq km). Macau city is the administrative centre. Portuguese traders first arrived in Macau in 1513, and it soon became the chief market centre for trade between China and Japan. Portugal declared it an overseas province in 1844 and an overseas territory in 1951. In 1999 Portugal returned it to Chinese rule. Tourism and gambling are the mainstays of its economy.

Macaulay \mə-'kò-lē**, Thomas Babington, Baron Macaulay of Rothley** (b. Oct. 25, 1800, Rothley Temple, Leicestershire, Eng.—d. Dec. 28, 1859, Campden Hill, London) English politician, historian, and poet. While a fellow at Cambridge University, Macaulay published the first of his essays, on JOHN MILTON (1825), and gained immediate fame. After entering Parliament in 1830, he became known as a leading orator. From 1834 he served on the Supreme Council in India, supporting the equality of Europeans and Indians before the law and inaugurating a national educational system. He reentered Parliament on returning to England in 1838. He published *Lays of Ancient Rome* (1842) and *Critical and Historical Essays* (1843) before retiring to private life and beginning his brilliant *History of England*, 5 vol. (1849–61); covering the period 1688–1702, it established a WHIG interpretation of English history that influenced generations.

macaw \mə-'kó\ Any of about 18 species of large tropical New World PARROTS (subfamily Psittacinae) with very long tails and big sickle-shaped beaks. Macaws eat fruits and nuts. They are easily tamed and often kept as pets; some learn to mimic human speech, but most only screech. A few have lived 65 years. Best known is the scarlet macaw (*Ara macao*), found from Mexico to Brazil, a 36-in. (90-cm) bright-red bird with blue and yellow wings, blue and red tail, and white face.

MacBride, Seán (b. Jan. 26, 1904, Paris, France—d. Jan. 15, 1988, Dublin, Ire.) Irish statesman. Born to Irish patriots—his mother was WILLIAM BUTLER YEATS's beloved Maud Gonne (1866–1953), and his father was Maj. John MacBride, executed for his part in the 1916 Easter Rising—he became chief of staff of the IRISH REPUBLICAN ARMY at age 24, but he eventually accepted the fact of partition and the futility of warfare. In 1936 he founded the Irish Republican Party; he served in the Irish legislature (1947–58) and as minister of external affairs (1948–51). He was the first chairman of AMNESTY INTERNATIONAL (1961–75). He also served as UN assistant secretary-general for South West Africa and Namibia (1973–77). In 1974 he was awarded the Nobel Prize for Peace for his efforts on behalf of human rights.

Maccabees \'ma-kə-ˌbēz\ (fl. 2nd century BC) Priestly family of Jews who organized a successful rebellion against ANTIOCHUS IV EPIPHANES in Palestine and reconsecrated the defiled Temple of JERUSALEM. The rebellion began under the leadership of the Jewish priest Mattathias after Antiochus sought to stamp out Judaism by forbidding all Jewish practices and desecrating the temple (167 BC). When Mattathias died (c. 166 BC), his son JUDAS MACCABAEUS recaptured Jerusalem and reconsecrated the temple, an event celebrated in the holiday HANUKKAH. After Judas's death, the war continued intermittently under his brothers Jonathan and Simon. The Maccabees formed the HASMONEAN DYNASTY.

Macchiaioli \ˌmäk-kē-ˌī-'ò-lē\ Group of 19th-century Tuscan painters who reacted against the rule-bound art academies and looked to nature for instruction. The Macchiaioli felt that patches (*macchia*) of colour were the most significant aspect of painting. They believed that the effect of a painting on the spectator should derive from the painted surface itself, rather than from any ideological message or narrative. The Macchiaioli used a sketch technique to record their initial impressions of nature—often as seen from a distance—by means of colour and light. Their theory, similar to that of the French IMPRESSIONISTS, was even more concerned with the experimental use of colour. The most outstanding artist of the group was the Florentine Giovanni Fattori.

MacDiarmid, Alan G. (b. April 14, 1927, Masterson, N.Z.) U.S. chemist. He earned Ph.D.'s in chemistry at the University of Wisconsin at Madison (1953) and the University of Cambridge (1955). He then began teaching at the University of Pennsylvania, becoming Blanchard Professor of Chemistry there in 1988. With ALAN J. HEEGER and SHIRAKAWA HIDEKI, he demonstrated that certain plastics can be chemically altered to be almost as conductive as metals. The discovery led scientists to uncover other conductive polymers, which contributed to the growing field of molecular electronics. In 2000 he received the Nobel Prize for Chemistry with Heeger and Shirakawa.

MacDiarmid \mək-'dər-məd**, Hugh** *orig.* **Christopher Murray Grieve** (b. Aug. 11, 1892, Langholm, Dumfriesshire, Scot.—d. Sept. 9, 1978, Edinburgh) Scottish poet. In 1922 he founded the monthly *Scottish Chapbook*, in which he published his lyrics and sparked the Scottish literary renaissance. A radical leftist, he rejected English as a medium and

© 2006 Encyclopædia Britannica, Inc.

scrutinized modern society in verse written in "synthetic Scots," an amalgam of various dialects. A noted work is the extended rhapsody *A Drunk Man Looks at the Thistle* (1926). He later returned to standard English in such volumes as *A Kist of Whistles* (1947) and *In Memoriam James Joyce* (1955). He is regarded as Scotland's preeminent poet of the early 20th century.

Macdonald, Dwight (b. March 24, 1906, New York, N.Y., U.S.—d. Dec. 19, 1982, New York City) U.S. writer and film critic. He graduated from Yale University. During World War II he founded the magazine *Politics*, which featured the work of such figures as André Gide, Albert Camus, and Marianne Moore. One of the first serious film critics, he was a staff writer for *The New Yorker* (1951–71) and reviewed films for *Esquire* magazine (1960–66). Politically, he moved from Stalinism through Trotskyism and anarchism to pacifism. During the Vietnam War he urged young men to defy the draft. His best-known collection of essays is *Against the American Grain* (1963).

MacDonald, (James) Ramsay (b. Oct. 12, 1866, Lossiemouth, Moray, Scot.—d. Nov. 9, 1937, at sea en route to South America) British politician, first Labour Party prime minister of Britain (1924, 1929–31, 1931–35). He joined the precursor of the Labour Party in 1894 and was its secretary from 1900 to 1911. He was a member of the House of Commons (1906–18), where he served as leader of the Labour Party (1911–14), before he was forced to resign after opposing Britain's participation in World War I. Reelected to Parliament in 1922, he led the Labour opposition. He became prime minister in 1924 with Liberal Party support, but he was forced to resign later that year when Conservatives regained a majority. In 1929 Labour won a majority and he returned as prime minister. In 1931 he offered his resignation during the Great Depression but decided instead to remain in office as head of a national coalition until 1935, when Stanley Baldwin became prime minister. MacDonald remained in the government as lord president of the council until 1937.

Macdonald, Sir John (Alexander) (b. Jan. 11, 1815, Glasgow, Scot.—d. June 6, 1891, Ottawa, Ont., Can.) Canadian politician, first prime minister of the Dominion of Canada (1867–73, 1878–91). He immigrated to Canada as a child and practiced law in Kingston, Upper Canada (now Ontario), from 1836. From 1844 to 1854 he served in the Province of Canada's assembly. He cofounded the Liberal-Conservative Party (see Progressive Conservative Party of Canada) in 1854 and became premier of the Province of Canada in 1857. He worked for confederation and helped secure passage of the British North America Act, which created the Dominion of Canada (1867). As prime minister, he supported trade protectionism and aided the completion of the Pacific railway. In response to later challenges to Canadian unity, he advocated loyalty to the British Commonwealth and independence from the U.S.

Macdonnell Ranges Mountain system, south-central Northern Territory, Australia. Extending east and west of the town of Alice Springs for some 250 mi (400 km), its highest peak is Mount Ziel (4,954 ft [1,510 m]). The mountains were first explored in 1860 by John McDouall Stuart and were named after Richard Macdonnell, governor of South Australia.

Macdonough \mək-'dä-nə**, Thomas** (b. Dec. 31, 1783, The Trap, Del., U.S.—d. Nov. 10, 1825, at sea en route from the Mediterranean Sea to New York City) U.S. naval officer. He joined the navy in 1800 and served with Stephen Decatur in the Tripolitan War. In the War of 1812 he was ordered to cruise the lakes between Canada and the U.S. When British troops threatened Plattsburg, N.Y., site of U.S. Army headquarters on the northern frontier, he sailed his 14-ship fleet to meet the British 16-ship squadron on Lake Champlain. His victory there (Sept. 11, 1814) saved New York and Vermont from invasion.

MacDowell, Edward (Alexander) *orig.* **Edward Alexander McDowell** (b. Dec. 18, 1860, New York, N.Y., U.S.—d. Jan. 23, 1908, New York City) U.S. composer. He started piano lessons at age eight. While in Germany for further study, he impressed the composer Joachim Raff (1822–82), who urged him to write a piano concerto (1882), then introduced him to Franz Liszt, who assisted MacDowell with performances and publication. In 1888 he returned to the U.S. with his wife, and in 1896 he became Columbia University's first professor of music. Paresis made him unable to perform or compose after 1904, and he lapsed into insanity and died at age 47. His farm in Peterborough, N.H., became the MacDowell Colony for artists after his death. His most popular works are the *Second Piano Concerto in D Minor* (1886), the *Second Orchestral* ("*Indian*") *Suite* (1895), and piano sets such as *Woodland Sketches* (1896) and *Sea Pieces* (1898).

Macedonia *officially* **Republic of Macedonia** Country, Balkan Peninsula, southeastern Europe. Area: 9,928 sq mi (25,713 sq km). Population (2005 est.): 2,034,000. Capital: Skopje. About two-thirds of the

population are Macedonians, and about one-fourth are Albanians. Languages: Macedonian, Albanian. Religions: Christianity (predominantly Eastern Orthodox; also Roman Catholic), Islam. Currency: denar. Located on a high plateau studded with mountains, Macedonia is one of the poorest countries in Europe. Although its importance has diminished recently, agriculture remains central to the economy, with tobacco, fruit, vegetables, and wine notable. Sheepherding is also significant. The manufacturing base includes iron and steel, textiles, and chemicals and chemical products. Macedonia is a republic with one legislative house; its head of state is the president, and the head of government is the prime minister. The Macedonian region has been inhabited since before 7000 BC. Under Roman rule, part of the region was incorporated into the province of Moesia in AD 29. It was settled by Slavic tribes by the mid-6th century and was Christianized during the 9th century. Seized by the Bulgarians in 1185, it was ruled by the Ottoman Empire from 1371 to 1912. The north and centre of the region were annexed by Serbia in 1913 and became part of the Kingdom of Serbs, Croats, and Slovenes (later Yugoslavia) in 1918. When Yugoslavia was partitioned by the Axis Powers in 1941, Yugoslav Macedonia was occupied principally by Bulgaria. Macedonia once again became a republic of Yugoslavia in 1946. After Croatia and Slovenia seceded from Yugoslavia, fear of Serbian dominance prompted Macedonia to declare its independence in 1991. In deference to Greece, which also has an area traditionally known as Macedonia, the country joined the United Nations in 1993 under the name The Former Yugoslav Republic of Macedonia and normalized relations with Greece in 1995. Ethnic strife has periodically endangered national stability—e.g., in 2001, when pro-Albanian rebel forces in the north, near the Kosovo border, led guerrilla attacks on government forces.

Macedonian Wars Three wars fought by Philip V of Macedonia and his successor, Perseus, against Rome (215–205 BC, 200–197, 171–167). The first war, fought by Rome in the context of the Second Punic War, ended favourably for the Macedonians. Rome was victorious in the next two wars. The Macedonian forces were assisted by Carthage and the Seleucids, Rome by the Aetolian League and Pergamum. After Rome's vic-

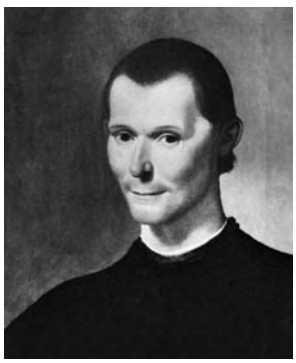
tory at the Battle of Pydna (168), Macedonian territory was divided into four republics. Another conflict, fought in 149–148, may be considered a fourth Macedonian War; it resulted in a decisive Roman victory, and in its aftermath Macedonia became the empire's first province.

Macfadden, Bernarr *orig.* **Bernard Adolphus McFadden** (b. Aug. 16, 1868, near Mill Spring, Mo., U.S.—d. Oct. 12, 1955, Jersey City, N.J.) U.S. publisher and champion of physical health. A sickly orphan by age 11, he began in his teens to increase his strength as an act of defiance. In 1899 he began publishing *Physical Culture* magazine, and in later decades he built up a publishing empire, bringing out the first confession magazine, *True Story* (1919), followed by *True Romances* (1923), *True Detective Mystery Magazine* (1924), and other periodicals. Macfadden also toured widely to promote his message of vigorous physical exercise and to preach about the dangers of alcohol, drugs, gluttony, corsets, prudishness, tea, coffee, and white bread. Shocking to Victorian sentiments were his advocacy of a diet consisting of carrots, beans, nuts, and raw eggs and his encouragement of sleeping on the floor, nudity, and "physical love." To promote such "love," he encouraged openness about sexual matters and invented a device to enlarge men's penises. To exemplify fitness, he walked five miles daily to his office in Manhattan in bare feet while carrying a 40-pound bag of sand. He also staged the first physique (bodybuilding) contest in America (1903) and fostered the rise of fitness icon Charles Atlas. Macfadden's bids for the presidency, U.S. Senate, and governorship of Florida all failed. Physically fit into old age, he parachuted into Paris on his 84th birthday.

Mach \'mäk,\ *English* \'mäk**, Ernst** (b. Feb. 18, 1838, Chirlitz-Turas, Moravia—d. Feb. 19, 1916, Haar, Ger.) Austrian physicist and philosopher. After earning a doctorate in physics in 1860, he taught at the Universities of Vienna and Graz as well as Charles University in Prague. Interested in the psychology and physiology of sensation, in the 1860s he discovered the physiological phenomenon known as Mach's bands, the tendency of the human eye to see bright or dark bands near the boundaries between areas of sharply differing illumination. He later studied movement and acceleration and developed optical and photographic techniques for measuring sound waves and wave propagation. In 1887 he established the principles of supersonics and the Mach number, the ratio of the velocity of an object to the velocity of sound. He also proposed the theory of inertia known as Mach's principle. In *Contributions to the Analysis of the Sensations* (1886), he asserted that all knowledge is derived from sensory experience or observation.



Machado de Assis \mə-'shä-dō-dē-ä-'sēs**, Joaquim Maria** (b. June 21, 1839, Rio de Janeiro, Braz.—d. Sept. 29, 1908, Rio de Janeiro) Brazilian poet, novelist, and short-story writer. Machado began to write in his spare time while working as a printer's apprentice. By 1869 he was a successful man of letters. His witty, pessimistic works, rooted in European cultural traditions, include the eccentric first-person narrative *Epitaph of a Small Winner* (1881) and the novels *Philosopher or Dog?* (1891) and *Dom Casmurro* (1899), the latter his masterpiece. Considered the classic master of Brazilian literature, he became the first president of the Brazilian Academy of Letters in 1896.

Machaut \mä-'shō**, Guillaume de** *or* **Guillaume de Machault** (b. c. 1300, Machault, France—d. 1377, Reims) French poet and composer. After possibly receiving a university education and taking holy orders, he traveled throughout Europe as secretary to the king of Bohemia. He was appointed canon of Reims cathedral in 1337. After the king's death, Machaut was supported by several royal patrons, including the duke de Berry, and King Charles V. Beside 14 narrative poems incorporating short lyrics, he wrote more than 400 separate lyric poems. He wrote dozens of musical compositions in each of the genres of formes fixes. He also composed the first complete setting of the mass for four voices, and he was the outstanding figure of the Ars Nova. His poetry is noted chiefly for its technical innovations. Geoffrey Chaucer's *Book of the Duchesse* shows the influence of Machaut.

Machiavelli \ˌmä-kē-ə-'vel-ē**, Niccolò** (b. May 3, 1469, Florence—d. June 21, 1527, Florence) Italian statesman, historian, and political theorist. He rose to power after the overthrow of Girolamo Savonarola in 1498. Working as a diplomat for 14 years, he came in contact with the most powerful figures in Europe. He was dismissed when the Medici family returned to power in 1512, and during the next year he was arrested and tortured for conspiracy. Though soon released, he was not permitted to return to public office. His famous treatise *The Prince* (1513, published 1532) is a handbook for rulers; though dedicated to Lorenzo de' Medici, ruler of Florence from 1513, it failed to win Machiavelli his favour. Machiavelli viewed *The Prince* as an objective description of political reality. Because he viewed human nature as venal, grasping, and thoroughly self-serving, he suggested that ruthless cunning is appropriate to the conduct of government. Though admired for its incisive brilliance, the book also has been widely condemned as cynical and amoral, and "Machiavellian" has come to mean deceitful, unscrupulous, and manipulative. His other works include a set of discourses on Livy (completed c. 1518), the comedy *The Mandrake* (completed c. 1518), *The Art of War* (published 1521), and the *Florentine Histories* (completed c. 1525).

machine Device that amplifies or replaces human or animal effort to accomplish a physical task. A machine may be further defined as a device consisting of two or more parts that transmit or modify force and motion in order to do work. The five simple machines are the lever, the wedge, the wheel and axle, the pulley, and the screw; all complex machines are combinations of these basic devices. The operation of a machine may involve the transformation of chemical, thermal, electrical, or nuclear energy into mechanical energy, or vice versa. All machines have an input, an output, and a transforming or modifying and transmitting device. Machines that receive their input energy from a natural source (such as air currents, moving water, coal, petroleum, or uranium) and transform it into mechanical energy are known as prime movers; examples include windmills, waterwheels, turbines, steam engines, and internal-combustion engines.

machine gun Automatic weapon capable of rapid, sustained fire, usually 500–1,000 rounds per minute. Developed in the late 19th century by such inventors as Hiram Maxim, it profoundly altered modern warfare. The World War I battlefield was dominated by the belt-fed machine gun, which remained little changed into World War II. Modern machine guns are classified into three groups: the squad automatic weapon, chambered for small-calibre assault-rifle ammunition and operated by one soldier; the general-purpose machine gun, firing full-power rifle ammunition and operated by two; and the heavy machine gun, firing rounds of 12.7 mm (.5 in) or higher and often mounted on an armoured vehicle. See also submachine gun.

machine language *or* **machine code** Elemental language of computers, consisting of a string of 0s and 1s. Because machine language is the lowest-level computer language and the only language that computers directly understand, a program written in a more sophisticated language (e.g., C, Pascal) must be converted to machine language prior to execution. This is done via a compiler or assembler. The resulting binary file (also called an executable file) can then be executed by the CPU. See also assembly language.

© 2006 Encyclopædia Britannica, Inc.

machine tool Stationary, power-driven machine used to cut, shape, or form materials such as metal and wood. Machine tools date from the invention of the STEAM ENGINE in the 18th century; most common machine tools were designed by the middle of the 19th century. Today dozens of different machine tools are used in the workshops of home and industry. They are frequently classified into seven types: turning machines such as LATHES; SHAPERS and PLANERS; power DRILLS or DRILL PRESSES; MILLING machines; GRINDING MACHINES; power SAWS; and presses (e.g., PUNCH PRESSES).

machismo \mä-'chēz-mō\ Exaggerated pride in masculinity, perceived as power, often coupled with a minimal sense of responsibility and disregard of consequences. In machismo there is supreme valuation of characteristics culturally associated with the masculine and a denigration of characteristics associated with the feminine. It has for centuries been a strong current in Latin American politics and society. CAUDILLOS (military dictators), prominent in the history of Latin America, have typified machismo with their bold and authoritarian approach to government and their willingness to employ violence to achieve their ends.

Mach's principle \'mäks\ Hypothesis that the inertial forces acting on a body in accelerated motion are determined by the quantity and distribution of MATTER in the universe. ALBERT EINSTEIN found its suggested connection between geometry and matter helpful in formulating his theory of general RELATIVITY; unaware that GEORGE BERKELEY had proposed similar views in the 18th century, he attributed the idea to ERNST MACH. He abandoned the principle when he realized that INERTIA is assumed in the geodesic equation of motion (see GEODESY) and need not depend on the existence of matter elsewhere in the universe.

Machu Picchu \'mä-chü-'pēk-chü\ Ancient fortress city of the INCAS in the ANDES MOUNTAINS, south-central Peru. Perched near CUZCO in a narrow saddle between two sharp peaks, at an elevation of 7,710 ft (2,350 m), it escaped detection by the Spaniards, and its existence was made known only in 1911 by U.S. explorer Hiram Bingham. One of the few pre-Columbian urban centres found nearly intact, it is about 5 sq mi (13 sq km) in area and includes a temple and a citadel. The period of occupancy is uncertain. Made a UNESCO WORLD HERITAGE SITE in 1983, it is a popular tourist attraction.

Machu Picchu.
MAYES/FPG

MacIver \mə-'kē-vər**, Robert M(orrison)** (b. April 17, 1882, Stornoway, Outer Hebrides, Scot.—d. June 15, 1970, New York, N.Y., U.S.) Scottish-born U.S. sociologist and political scientist. He taught at the University of Aberdeen and later at Canadian and U.S. universities, principally Columbia (1915–26). He believed in the compatibility of individualism and social organization and saw societies as evolving from highly communal states to states in which individual functions and group affiliations were extremely specialized. His works included *The Modern State* (1926), *Leviathan and the People* (1939), and *The Web of Government* (1947).

Mack, Connie *orig.* **Cornelius (Alexander) McGillicuddy** (b. Dec. 22/23, 1862, East Brookfield, Mass., U.S.—d. Feb. 8, 1956, Philadelphia, Pa.) U.S. baseball manager and team executive. Mack played professional baseball (1886–96), usually as a catcher, before becoming manager of the Milwaukee Brewers (1897–1900) and the Philadelphia Athletics (1901–50). He was president of the Athletics from 1937 to 1953. His teams won 3,776 games and lost 4,025, both all-time records. He helped establish the AMERICAN LEAGUE.

Mackenzie \mə-'ken-zē**, Alexander** (b. Jan. 28, 1822, Logierait, Perth, Scot.—d. April 17, 1892, Toronto, Ont., Can.) Scottish-born Canadian politician, first Liberal prime minister of Canada (1873–78). He emigrated to Canada West (now Ontario) in 1842. In 1852 he became editor of a local Liberal newspaper and befriended GEORGE BROWN, leader of the Reform Party. When the Dominion of Canada was created in 1867, Mackenzie was elected to the House of Commons, where he led the Liberal opposition. As prime minister, his efforts at renewed reciprocity with the U.S. failed to address economic concerns, and his government was defeated in 1878. He resigned as leader of the opposition but held a seat in Parliament until his death.

Mackenzie, Sir Alexander (b. 1755?, Stornoway, Lewis and Harris, Outer Hebrides, Scot.—d. March 11, 1820, near Pitlochry, Perth) Scottish-born Canadian explorer. Immigrating to Canada as a young man, he entered a fur-trading firm in 1779. In 1788 he set up a trading post, Fort Chipewyan, on Lake Athabasca. From there he began an expedition (1789) that followed the Mackenzie River from Great Slave Lake to the Arctic Ocean. In 1793 he journeyed from Fort Chipewyan through the Rocky Mountains to the Pacific coast, thereby becoming the first European to complete a transcontinental crossing north of Mexico.

Mackenzie, Sir (Edward Montague) Compton (b. Jan. 17, 1883, West Hartlepool, Durham, Eng.—d. Nov. 30, 1972, Edinburgh, Scot.) British novelist and playwright. Educated at Oxford University, he gave up legal studies to finish his first play, *The Gentleman in Grey* (1906). During World War I he directed the Aegean Intelligence Service in Syria; when he wrote about those experiences in *Greek Memories* (1932), he was prosecuted under Britain's Official Secrets Act. He founded *Gramophone* magazine in 1923 and edited it until 1962. He served as rector of Glasgow University (1931–34) and as literary critic for the London *Daily Mail*; his more than 100 novels, plays, and biographies include 10 volumes of memoirs.

Mackenzie, Sir James (b. April 12, 1853, Scone, Perthshire, Scot.—d. Jan. 26, 1925, London, Eng.) Scottish cardiologist. He received his M.D. from the University of Edinburgh and practiced medicine in Lancashire for 25 years before moving to London. His classic *The Study of the Pulse* (1902) described an instrument called a polygraph, which simultaneously recorded arterial and venous pulses so that they could be correlated with the heartbeat to distinguish harmless from dangerous irregularities. A pioneer in the study of cardiac arrhythmia, he also proved the efficacy of digitalis for its treatment.

Mackenzie, William Lyon (b. March 12, 1795, Springfield, Angus, Scot.—d. Aug. 28, 1861, Toronto) Scottish-born Canadian journalist and political agitator. He immigrated to Canada in 1820 and became a merchant in Upper Canada (later Ontario). In 1824 he founded a newspaper in Queenston, the *Colonial Advocate*, in which he criticized the ruling oligarchy in Upper Canada. Elected to the province's assembly (1828–36), he was expelled six times by the conservative majority for his newspaper's invectives against the government. A list of Canadian grievances against British colonial rule that he published led to the recall of the province's governor. In 1837 he led 800 followers in an unsuccessful attempt to overthrow the provincial government. After attempting to rally his forces on Navy Island in the Niagara River, N.Y., he was jailed for violating U.S. neutrality laws. He returned to Canada in 1849 and later served in the Canadian Parliament (1851–58).

Mackenzie River River system, Northwest Territories, Canada. It flows northward from GREAT SLAVE LAKE into the Beaufort Sea of the Arctic Ocean. Its basin, with an area of 697,000 sq mi (1,805,200 sq km), is the largest in Canada. It is 1,025 mi (1,650 km) long and 1–2 mi (1.5–3 km) wide. With the Finlay River, its farthest headstream, the entire system is 2,635 mi (4,241 km) long, making it the second longest river in North America. It was discovered by the explorer ALEXANDER MACKENZIE in 1789.

mackerel Swift-moving, carnivorous, torpedo-shaped food and sport fishes (family Scombridae, order Perciformes) of temperate and tropical seas worldwide. Mackerels are 1–5.5 ft (30–170 cm) long. The common mackerel (*Scomber scombrus*) of the North Atlantic Ocean and the chub mackerel (*S. colias*) of the Pacific and Atlantic oceans are economically important, as are the Indian mackerels (genus *Rastrelliger*) and the frigate mackerels (genus *Auxis*). Other species (genus *Scomberomorus*) are favourite game fish. The name *mackerel* also refers to certain shark species (see MACKEREL SHARK), TUNA, and BONITO.

mackerel shark Any of several temperate-water SHARKS (genus *Lamna*) in a family (Isuridae) that also includes the GREAT WHITE SHARK and the MAKO shark group. The swift, active mackerel sharks have a crescent-shaped tail and slender teeth. They are gray or blue-gray above and paler below and about 10 ft (3 m) long. They eat fishes such as herring, mackerel, and salmon, sometimes taking fishermen's catches and damaging

Mackinac \'ma-kə-ˌnȯ**, Straits of** Channel connecting Lake Michigan with Lake Huron. Forming an important waterway between the Upper and Lower peninsulas of Michigan, U.S., the straits are 30 mi (48 km) long and 4 mi (6 km) wide at their narrowest point. They are spanned by the Mackinac Bridge, a 3,800-ft (1,158-m) suspension bridge built in 1957.

Mackinac Island Island in the Straits of Mackinac, southeastern Upper Peninsula of Michigan, U.S. It is 3 mi (5 km) long. It was an ancient Indian burial ground called Michilimackinac when the British built a fort there in 1780. After the U.S. took possession in 1783, it became the headquarters of the American Fur Co. Occupied by the British during the War of 1812, the island returned to U.S. control in 1815. It has been a state park since 1895; automobiles are banned from the island. A popular tourist destination, the island is home to the Grand Hotel (1887), the world's largest summer hotel.

Mackintosh, Charles Rennie (b. June 7, 1868, Glasgow, Scot.—d. Dec. 10, 1928, London, Eng.) Scottish architect, furniture designer, and artist. A giant of the Arts and Crafts Movement, he is especially revered for his glass-and-stone studio building at the Glasgow School of Art (1896–1909), where he had attended classes. In the 1890s he achieved an international reputation creating unorthodox posters, craftwork, and furniture. Considered Britain's first designer of true Art Nouveau architecture, he produced work of an unrivaled lightness, elegance, and originality, as exemplified by four remarkable tearooms he designed in Glasgow (1896–1904). By 1914 he was dedicating all his energies to watercolour painting. The late 20th century saw a revival of interest in his work and the manufacture of reproductions of his chairs and settees, which were characterized by starkly simple geometric lines.

MacLaine, Shirley *orig.* **Shirley McLean Beaty** (b. April 24, 1934, Richmond, Va., U.S.) U.S. film actress. She worked as a dancer on Broadway. After replacing the injured star in *The Pajama Game* (1954), she was discovered by a film producer and made her movie debut in Alfred Hitchcock's *The Trouble with Harry* (1955). Known for her deft portrayal of charmingly eccentric characters, she went on to play comic and dramatic roles in *Some Came Running* (1959), *The Apartment* (1960), *Irma La Douce* (1963), *Sweet Charity* (1969), *The Turning Point* (1977), *Terms of Endearment* (1983, Academy Award), *Madame Sousatzka* (1988), and *Mrs. Winterbourne* (1996). She wrote several best-selling books, often about her mystical experiences, including *Out on a Limb* (1983) and *Going Within* (1989). She is the sister of Warren Beatty.

Maclean, Donald See Guy Burgess

Maclean's \mə-'klānz\ Weekly newsmagazine published in Toronto, the leading Canadian magazine. It provides coverage of Canadian affairs and world news from a Canadian perspective. Founded by John Bayne Maclean as *The Business Magazine* in 1905, its large-page format presented feature articles and fiction reflecting a conservative view of Canadian life and values and developed a reputation for outstanding photography. The magazine took its current name in 1911. After experiencing losses in the 1960s, *Maclean's* reduced its page size and moved from biweekly to monthly circulation in the 1970s; this continued until the magazine's finances revived, and in 1978 *Maclean's* became Canada's first weekly newsmagazine.

MacLeish \mə-'klēsh**, Archibald** (b. May 7, 1892, Glencoe, Ill., U.S.—d. April 20, 1982, Boston, Mass.) U.S. poet, playwright, teacher, and public official. He practiced law before leaving for France in 1923 to perfect his poetic craft. His early poems "Ars Poetica" (1926) and "You, Andrew Marvell" (1930) are often anthologized. He later expressed his concern for democratic ideals in "public" verse such as *Conquistador* (1932, Pulitzer Prize) and *Public Speech* (1936). Other works include *Collected Poems* (1952, Pulitzer Prize) and the verse drama *J.B.* (1958, Pulitzer Prize). He served as librarian of Congress (1939–44) and assistant secretary of state (1944–45) and later taught at Harvard (1949–62).

MacLennan \mə-'klen-ən**, (John) Hugh** (b. March 20, 1907, Glace Bay, Cape Breton, Nova Scotia, Can.—d. Nov. 7, 1990, Montreal, Que.) Canadian novelist and essayist. He was a Rhodes scholar at Oxford University and earned a doctorate at Princeton, then taught at McGill University (1951–81). His novels include *Barometer Rising* (1941), *Two Solitudes* (1945), *The Watch That Ends the Night* (1959), and *Voices in Time* (1980). He won five Governor-General's awards for his fiction and nonfiction. He is regarded as the first major English-speaking novelist to use Canadian themes.

Macleod \mə-'klaůd**, J(ohn) J(ames) R(ickard)** (b. Sept. 6, 1876, Cluny, near Dunkeld, Perth, Scot.—d. March 16, 1935, Aberdeen) Scottish physiologist. He taught in U.S., Canadian, and Scottish universities, becoming noted for his work on carbohydrate metabolism. With Frederick Banting and Charles Best he discovered insulin, an achievement for which he and Banting shared a Nobel Prize in 1923.

Macmillan, Daniel and Alexander (respectively b. Sept. 13, 1813, Isle of Arran, Buteshire, Scot.—d. June 27, 1857, Cambridge, Cambridgeshire, Eng.; b. Oct. 3, 1818, Irvine, Ayrshire, Scot.—d. Jan. 26, 1896, London?) Scottish booksellers and publishers. Apprenticed to a bookseller in Scotland at age 11, Daniel worked for London booksellers from 1837 to 1843. In 1843 he and his brother Alexander founded Macmillan & Co., a successful bookshop in Cambridge that began publishing textbooks in 1844 and novels in 1855. After Daniel's death, Alexander expanded the firm's list and founded *Macmillan's Magazine* (1859–1907), a literary periodical, and from 1869 *Nature*, still a leading scientific journal. He established offices abroad and published many important Victorian writers. Long led by Daniel's descendants, the company grew into one of the largest publishing firms in the world.

Macmillan, Harold *in full* **Maurice Harold Macmillan, 1st earl of Stockton, Viscount Macmillan of Ovenden** (b. Feb. 10, 1894, London, Eng.—d. Dec. 29, 1986, Birch Grove, Sussex) British prime minister (1957–63). He served in the House of Commons (1924–29, 1931–64) and held posts in Winston Churchill's wartime coalition government. After the war he served as minister of housing (1951–54), minister of defense (1954), foreign secretary (1955), and chancellor of the Exchequer (1955–57). In 1957 he became prime minister and leader of the Conservative Party. He worked to improve relations with the U.S. and visited Soviet leader Nikita Khrushchev in 1959. Domestically, Macmillan supported Britain's postwar social programs. His government began to lose popularity in 1961 because of a wage freeze and other deflationary measures and a Soviet espionage scandal involving John Profumo, secretary of state for war. He championed membership in the European Economic Community, though Britain's membership application was vetoed in 1963 by Charles de Gaulle. Demands for a new party leader led to his resignation in 1963. He wrote a series of memoirs (1966–75) and served as chair (1963–74) of his family's publishing house, Macmillan & Co.

MacMillan, Sir Kenneth (b. Dec. 11, 1929, Dunfermline, Fife, Scot.—d. Oct. 29, 1992, London, Eng.) British dancer and choreographer. After studies at the Sadler's Wells ballet school, he danced with its ballet companies from 1946. He choreographed his first work, *Somnambulism*, in 1953 and followed that with *Danses concertantes* (1955). His ballet *Romeo and Juliet* (1965) made an international impact. He was ballet director of the German Opera in Berlin (1966–69). In 1970 he was appointed director of the Royal Ballet; in 1977 he resigned to become its principal choreographer. His other successful ballets included *Anastasia* (1971), *Manon* (1974), and *Isadora* (1981).

MacNeice
CAMERA PRESS

MacNeice, Louis (b. Sept. 12, 1907, Belfast, Ire.—d. Sept. 3, 1963, London, Eng.) British poet and playwright. He published his first book of poetry, *Blind Fireworks* (1929),

© 2006 Encyclopædia Britannica, Inc.

while studying at Oxford. In the 1930s he became known as one of a group of socially committed young poets that included W.H. Auden, C. Day-Lewis, and Stephen Spender. His volumes include *Autumn Journal* (1939) and *The Burning Perch* (1963). He wrote and produced radio verse plays for the BBC, notably *The Dark Tower* (1947), with music by Benjamin Britten. Among his prose works are *Letters from Iceland* (1937; with Auden) and *The Poetry of W.B. Yeats* (1941).

Macon \'mā-kən\ City (pop., 2000: 97,255), central Georgia, U.S. A fort was built near the site, and in 1806 a settlement grew up around it. Macon was laid out across the river in 1823, and it annexed the settlement in 1829; the town was named for Nathaniel Macon. During the American Civil War, it was a Confederate supply depot. A distribution centre in an agricultural region, it is the site of several institutions of higher learning and Robins Air Force Base, as well as the birthplace of the poet Sidney Lanier (1842–81).

Macon, Dave *orig.* **David Harrison Macon** (b. Oct. 7, 1870, Smart Station, Warren county, Tenn., U.S.—d. March 22, 1952, Readyville, Tenn.) U.S. country music singer and banjo player. He grew up in Nashville, where his parents ran a hotel that catered to traveling performers. He was in the mule business for 20 years; after the trucking industry put him out of business, he became a professional musician. Performing as Uncle Dave Macon, he entertained audiences with his jovial folk tunes, such as "Go Long Mule," and energetic showmanship. He is considered the first individual to become a star of the Grand Ole Opry, and he was an Opry regular from the mid-1920s until his death.

Macon, Nathaniel (b. Dec. 17, 1758, Edgecombe, N.C.—d. June 29, 1837, Warren county, N.C., U.S.) U.S. politician. He fought in the American Revolution and served in the North Carolina legislature (1781–85). Elected to the U.S. House of Representatives (1791–1815), he served as speaker (1801–07) and was a leading Anti-Federalist. In the Senate (1815–28) he continued to support states' rights and opposed legislation to strengthen the central government.

Macphail, Agnes Campbell (b. March 24, 1890, Grey county, Ont., Can.—d. Feb. 13, 1954, Toronto) Canadian politician. Originally a schoolteacher, she entered politics to represent the farmers in her region. In 1921, the first year women could vote in national elections in Canada, she was elected to the Canadian House of Commons as its first female member; she served until 1940. She advocated prison reform and women's rights as well as a protective tariff. She was the first female Canadian delegate to the League of Nations. Elected to the Ontario legislature (1943–45, 1948–51), she sponsored the province's first equal-pay legislation.

Macquarie \mə-'kwar-ē**, Lachlan** (b. Jan. 31, 1761, Ulva, Argyllshire, Scot.—d. July 1, 1824, London, Eng.) British soldier and colonial governor. He served with the British army in North America, Europe, the West Indies, and India; in 1809 he was appointed governor of New South Wales, Australia, where he replaced the corrupt military corps that had overthrown the previous governor, William Bligh. He began a program of public works construction and town planning that gave opportunities to Emancipists (freed convicts), established the colony's currency, and encouraged exploration and settlement. His policy favouring Emancipist agriculture angered the large landowners and sheep farmers (Exclusionists), and he was recalled in 1821.

Macquarie Harbour \mə-'kwar-ē\ Inlet of the Indian Ocean, western Tasmania, Australia. It is 20 mi (32 km) long and 5 mi (8 km) wide. Visited in 1815 by Capt. James Kelly, it was named after Lachlan Macquarie, governor of New South Wales. Its coast was the site of a penal colony 1821–33.

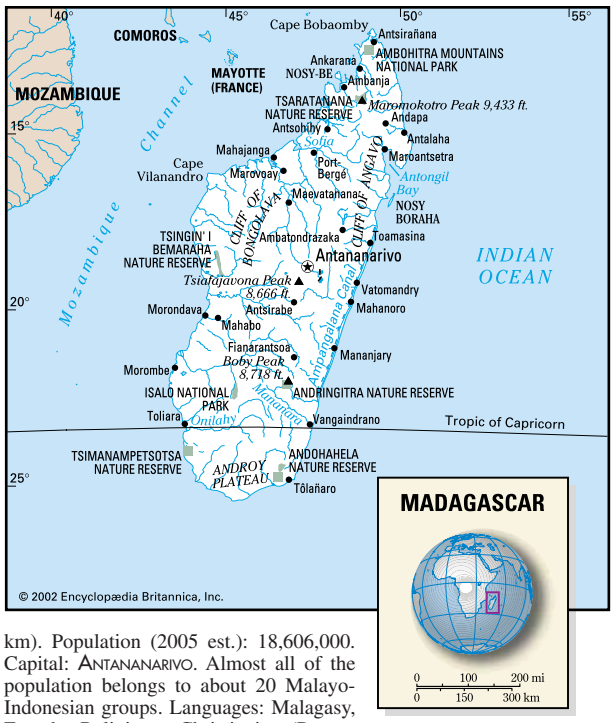
Macready \mə-'krē-dē**, William (Charles)** (b. March 3, 1793, London, Eng.—d. April 27, 1873, Cheltenham, Gloucestershire) English actor-manager. He made his debut in 1810, and by 1820 he was famous for his performances as Hamlet, Lear, and Macbeth. As theatre manager of London's Covent Garden (1837–39) and Drury Lane (1841–43), he introduced reforms such as full rehearsals, historically accurate costumes and sets, and a reversion to the original Shakespeare texts. He toured the U.S. in 1826, 1843, and 1848–49; his last tour ended with the Astor Place riot, caused by partisans of Edwin Forrest. He retired from the stage in 1851. His diary provides a view of 19th-century theatrical life.

macrobiotics Dietary practice based on the Chinese philosophy of balancing yin and yang (see yin-yang). It stresses avoiding foods that are classified as strongly yin (e.g., alcoholic beverages) or yang (e.g., meat) and relying mainly on near-neutral foods such as grains. In addition, foods that grow naturally in one's climate should be the mainstay of one's diet. Macrobiotics was first articulated in Asia in the 1930s and swept Europe and the U.S. in the late 1960s. Adherents maintain that not only can the quality of life be enhanced but that serious ailments such as cancer can be healed; critics counter that uninformed attempts to practice such a diet can lead to malnutrition.

macroeconomics Study of the entire economy in terms of the total amount of goods and services produced, total income earned, level of employment of productive resources, and general behaviour of prices. Until the 1930s, most economic analysis focused on specific firms and industries. The aftermath of the Great Depression and the development of national income and production statistics brought new interest to the field of macroeconomics. The goals of macroeconomic policy include economic growth, price stability, and full employment. See also microeconomics; national income accounting.

macromolecule Any very large molecule, composed of much larger numbers (hundreds or thousands) of atoms than ordinary molecules. Some macromolecules are individual entities that cannot be subdivided without losing their identity (e.g., certain proteins, with molecular weights into the millions). Others (polymers) are multiples of a repeating building block (monomer) in chains or networks (e.g., plastics, cellulose). Most macromolecules are in the size range typical of colloids.

macular degeneration Degeneration of the macula (central part of the retina), with corresponding visual-field defect. It is the leading cause of blindness in old age. Probably due to reduced blood circulation, it is now known to have a genetic component. It is twice as common in smokers as in nonsmokers, and it is also correlated with lifelong sun exposure. Peripheral vision usually remains, but loss of central visual acuity makes reading or fine work difficult or impossible, even with special magnifying eyeglasses. Some forms of macular degeneration can be halted (but not reversed) by laser surgery.



Macumba \mə-'küm-bə\ Afro-Brazilian religion characterized by the syncretism of traditional African religions, Brazilian spiritualism, and Roman Catholicism. Of the several Macumba sects in Brazil, the most important are Candomblé and Umbanda. African elements include an outdoor ceremonial site, the sacrifice of animals (e.g., cocks), spirit offerings (e.g., candles and flowers), and dances. Macumba rites are led by mediums, who fall prostrate in trances and communicate with holy spirits. Roman Catholic elements include the cross and the worship of saints, who are given African names.

Macy & Co. *in full* **R.H. Macy & Co., Inc.** Major U.S. department-store chain. Its main outlet, the 11-story store that occupies a city block in New York City's Herald Square, was for many years the largest single store in the country. Rowland H. Macy (1822?–1877) established the business in 1858; its red star trademark was derived from a tattoo he bore. The Straus family acquired part interest in the company in 1887, took full control in 1896, and expanded the business by purchasing or building branch stores around the country. Forced into bankruptcy in 1992, Macy's agreed to a merger with Federated Department Stores, Inc. in 1994.

mad cow disease *or* **bovine spongiform encephalopathy (BSE)** \'spən-ji-ˌfȯrm-in-ˌsef-ə-'läp-ə-thē\ Fatal neurodegenerative disease of cattle. Symptoms include behavioral changes (e.g., agitation), gradual loss of coordination and locomotive function, and, in advanced stages, weight loss, fine muscular contractions, and abnormal gait. Brain tissue becomes pitted with holes and spongy. Death usually follows within a year. The disease is similar to the neurodegenerative disease of sheep called scrapie. No treatment is known. A BSE epidemic in Britain that began in the mid-1980s is believed to have been caused by the use of cattle feed containing supplements made from ruminant carcasses and trimmings. Hundreds of thousands of infected cattle were slaughtered and the use of animal-derived protein supplements ended. The cause of both BSE and scrapie is attributed to an infectious aberrant protein called a prion. The unusual occurrence of Creutzfeldt-Jakob disease, another prion-related illness, in young people beginning in the mid-1990s may be linked to eating meat from cattle with BSE.

Madagascar *officially* **Republic of Madagascar** Country, occupying the island of Madagascar, in the western Indian Ocean off the southeast coast of Africa. The island is the world's fourth largest, about 975 mi (1,570 km) long and 355 mi (570 km) wide. It is separated from the African coast by the Mozambique Channel. Area: 226,658 sq mi (587,041 sq

© 2006 Encyclopædia Britannica, Inc.

km). Population (2005 est.): 18,606,000. Capital: ANTANANARIVO. Almost all of the population belongs to about 20 Malayo-Indonesian groups. Languages: Malagasy, French. Religions: Christianity (Protestant, Roman Catholic), traditional beliefs, Islam. Currency: ariary. Madagascar's high central plateau rises to 9,436 ft (2,876 m) at the volcanic Tsaratanana massif; the island was once heavily forested, and forests still cover one-fifth of the land area. Agriculture dominates the economy; staple crops include rice and cassava, and cash crops include coffee, cloves, and vanilla. Madagascar is a republic with two legislative houses; its chief of state and head of government is the president, assisted by the prime minister. Indonesians migrated to Madagascar c. AD 700. The first European to visit the island was Portuguese navigator Diogo Dias in 1500. Trade in arms and slaves allowed the Malagasy kingdoms to develop at the beginning of the 17th century. In the 18th century the Merina kingdom became dominant; with British assistance, it gained control of a large part of Madagascar in the early 19th century. In 1868 Merina signed a treaty granting France commercial access to the northwestern coast, and in 1895 French troops took the island. Madagascar became a French overseas territory in 1946. In 1958 France agreed to let the territory decide its own fate; as the Malagasy Republic, it gained independence in 1960 and severed ties with France in the 1970s, taking its present name in 1975. A new constitution was adopted in 1998.

Madani \'mä-dä-nē**, Abbasi al-** (b. 1931, Sīdī ʿUqbah, Alg.) Cofounder, with ALI BELHADJ, of the Algerian ISLAMIC SALVATION FRONT (FIS). After earning a doctorate in London, he returned to Algeria to teach at the University of Algiers, where he became a leader of religious students. He traveled with other itinerant preachers around the country, exchanging ideas and preaching the outlines of a religious political movement. He was arrested after the first round of voting in the 1991–92 legislative elections. In 1999 he endorsed a peace agreement put forward by Algeria's president, Abdelaziz Bouteflika, between the FIS and the Algerian government.

Madariaga y Rojo \ˌmä-də-rē-'ä-gə-ē-'rō-hō**, Salvador de** (b. July 23, 1886, La Coruña, Spain—d. Dec. 14, 1978, Locarno, Switz.) Spanish writer, diplomat, and historian. Abandoning an engineering career for journalism, he joined the League of Nations Secretariat in 1921 as a press member, served as ambassador to the U.S. and France, and was Spain's permanent delegate to the League (1931–36). When the Spanish Civil War broke out in 1936, he moved to England, returning only after FRANCISCO FRANCO's death. He wrote prolifically in English, German, French, and Spanish, his works including *Englishmen, Frenchmen, Spaniards* (1928), *Spain* (1942), *The Rise and Fall of the Spanish American Empire* (1945), and novels based on Latin American history.

madder family Family Rubiaceae, composed of about 6,500 species of herbs, shrubs, and trees in 500 genera. The leaves usually are large and evergreen in tropical species, deciduous in temperate species, and needlelike or scalelike in desert species. The plants may bear a single flower or many small flowers clustered together. Economically important products of the family include COFFEE, QUININE, IPECAC, the red dye alizarin (from the roots of common madder, *Rubia tinctorum*, and of *R. cordifolia*), and ornamentals including GARDENIAS.

Madderakka \'mäd-dä-ˌräh-kä\ Among the SAMI, the goddess of childbirth. She was assisted by three of her daughters—Sarakka, the cleaving woman; Uksakka, the door woman; and Juksakka, the bow woman—who watched over the child from conception through early childhood. Madderakka was believed to receive the soul of a child from Veralden-radien, the god who ruled the world; she then gave it a body, which Sarakka placed in the mother's womb.

Maddux, Greg *in full* **Gregory Alan Maddux** (b. April 14, 1966, San Angelo, Texas, U.S.) U.S. baseball player. Maddux was a star pitcher in high school and was drafted and brought up to the major leagues by the Chicago Cubs (1986–92). He joined the Atlanta Braves in 1993 as a free agent and helped them win the World Series in 1995. Known for his superior control and consistency, Maddux is the only pitcher ever to win the Cy Young pitching award four years in a row (1992–95). He rejoined the Cubs in 2004.

Madeira \mä-'dār-ə\ **Islands** Island group (pop., 2001 prelim.: 242,603) and autonomous region of Portugal, in the North Atlantic Ocean. Madeira, the largest of the Madeira Islands, is the site of the region's capital, FUNCHAL. Madeira Island is 34 mi (55 km) long and 14 mi (22 km) wide and has deep ravines and rugged mountains. Possibly known to ancient PHOENICIANS, it was rediscovered by the Portuguese navigator João Gonçalves Zarco, who founded Funchal in 1421. It allegedly had the world's first sugarcane plantation. Its Madeira wine has been an important export since the 17th century. Tourism is also important.

Madeira River River, western Brazil. A major tributary of the AMAZON RIVER, it is formed by the junction of the MAMORÉ and BENI rivers in Bolivia and flows north along the border between Bolivia and Brazil. It meanders northeast in Brazil to join the Amazon east of MANAUS. Measured from the upper reaches of the Mamoré, it is 2,082 mi (3,352 km) long.

Madero \mə-'der-ō**, Francisco (Indalécio)** (b. Oct. 30, 1873, Parras, Mex.—d. Feb. 22, 1913, Mexico City) Mexican revolutionary and president (1911–13). Son of a wealthy landowner, in 1908 he called for honest, participatory elections and an end to the long dictatorship of PORFIRIO DÍAZ. Jailed for sedition but released on bail, he incited an armed insurrection that led to Díaz's resignation. He was elected president in 1911. Handicapped by political inexperience and excessive idealism, he was quickly overwhelmed by conflicting pressures from conservatives and revolutionaries, and his administration ended in personal and national disaster when he was assassinated in 1913. See also MEXICAN REVOLUTION; PANCHO VILLA; EMILIANO ZAPATA.

Francisco Madero, c. 1910.
ARCHIVO CASASOLA

Madhya Pradesh \'mä-dyə-prə-'däsh\ State (pop., 2001 prelim.: 60,385,118), central India. It is bordered by the states of RAJASTHAN, UTTAR PRADESH, CHHATTISGARH, MAHARASHTRA, and GUJARAT. Occupying an area of 119,016 sq mi (308,252 sq km), it is India's second largest state. Its capital is BHOPAL. It is the source of some of the most important rivers of India, including the NARMADA, the TAPI, the Mahanadi, and the Wainganga. It was part of the Mauryan empire of the 4th–3rd centuries BC and was ruled by numerous other dynasties. Under Islamic control from the 11th century, it was annexed by the Mughal Empire in the 16th century. It was under Maratha rule by 1760 and passed to the British early in the 19th century. The state was formed after India gained its independence in 1947; its boundaries were altered in 1956. In 2000 the eastern portion of the state

© 2006 Encyclopædia Britannica, Inc.

was made into the new state of Chhattisgarh. Though Madhya Pradesh is rich in mineral resources, its economic mainstay is agriculture.

Madhyamika \mäd-'yə-mi-kə\ School in the MAHAYANA Buddhist tradition. Its name means "middle" and derives from its middle position between the realism of the SARVASTIVADA school and the idealism of the YOGACARA school. The most renowned Madhyamika thinker was NAGARJUNA.

Madison City (pop., 2000: 208,054), capital of Wisconsin, U.S. It is located in the south-central part of the state, on an isthmus between Lakes Mendota and Monona. Founded in 1836 and named for JAMES MADISON, it became the capital of Wisconsin Territory the same year. It was incorporated as a village in 1846 and as a city in 1856. Steady development followed the 1854 arrival of the railroad. Noted for its parks and wooded lakeshore, it is the commercial centre of an agricultural region. Educational and governmental services are economically important; it is the seat of the University of Wisconsin's main campus.

Madison, James (b. March 16, 1751, Port Conway, Va.—d. June 28, 1836, Montpelier, Va., U.S.) Fourth president of the U.S. (1809–17). After graduating from the College of New Jersey (now Princeton University), he served in the Virginia state legislature (1776–80, 1784–86). At the CONSTITUTIONAL CONVENTION (1787), his Virginia, or large-state, Plan furnished the Constitution's basic framework and guiding principles, earning him the title "father of the Constitution." To promote its ratification, he collaborated with ALEXANDER HAMILTON and JOHN JAY on the FEDERALIST PAPERS, a series of articles on the Constitution and republican government published in newspapers in 1787–88 (Madison wrote 29 of the 85 articles). In the U.S. House of Representatives (1789–97), he sponsored the BILL OF RIGHTS. He split with Hamilton over the existence of an implied congressional power to create a national bank; Madison denied such a power, though later, as president, he requested a national bank from Congress. In protest of the ALIEN AND SEDITION ACTS, he drafted one of the VIRGINIA AND KENTUCKY RESOLUTIONS in 1798 (THOMAS JEFFERSON drafted the other). From 1801 to 1809 he was Jefferson's secretary of state. Elected president in 1808, he immediately faced the problem of British interference with neutral U.S. merchant vessels, which Jefferson's Embargo Act (1807) had failed to discourage. Believing that Britain was bent on permanent suppression of American commerce, Madison proclaimed nonintercourse with Britain in 1810 and signed a declaration of war in 1812. During the ensuing WAR OF 1812 (1812–14), Madison and his family were forced to flee Washington, D.C., as advancing British troops burned the executive mansion and other public buildings. During Madison's second term (1813–17) the second BANK OF THE UNITED STATES was chartered and the first U.S. protective tariff was imposed. He retired to his Virginia estate, Montpelier, with his wife, Dolley (1768–1849), whose political acumen he had long prized. He participated in Jefferson's creation of the University of Virginia, later serving as its rector (1826–36), and produced numerous articles and letters on political topics.

Madonna In Christian art, a depiction of the Virgin MARY. Though often shown with the infant JESUS, the Madonna (Italian: "My lady") may also be represented alone. Byzantine art was the first to develop a set of Madonna types—the Madonna and child enthroned, the Madonna as intercessor, the Madonna nursing the child, and so on. Western art adapted and added to the Byzantine types during the Middle Ages, producing images of the Virgin that sought to inspire piety through beauty and tenderness. In the Renaissance and Baroque periods, the most popular image of the Madonna foreshadowed the CRUCIFIXION, showing the Virgin looking gravely away from the playful child.

The Grand-Duke's Madonna, oil painting by Raphael, 1505; in the Pitti Palace, Florence.
SCALA/ART RESOURCE, NEW YORK

Madonna *orig.* **Madonna Louise Ciccone** (b. Aug. 16, 1958, Bay City, Mich., U.S.) U.S. pop singer, songwriter, and actress. She studied dance at the University of Michigan and later with MARTHA GRAHAM and ALVIN AILEY. Her first hit single, "Holiday" (1983), forged an upbeat dance-club sound that sold 70 million albums by 1991, including *Like a Virgin* (1984). In music videos and in concert, she captivated fans and scandalized critics with provocatively sexual showmanship. Ever atop the latest trend, she incorporated TECHNO in *Music* (2000). Her films include *Desperately Seeking Susan* (1985), *Dick Tracy* (1990), and *Evita* (1996). Few female entertainers have attained her levels of power and control in the pop music industry.

Madras See CHENNAI

Madras See TAMIL NADU

madrasah \'mäd-rə-sə\ (Arabic: "school") Islamic theological seminary and law school attached to a MOSQUE. The residential madrasah was a newer building form than the mosque, flourishing in most Muslim cities by the end of the 12th century. The Syrian madrasahs in Damascus tended to follow a standardized plan: An elaborate facade led into a domed hallway and then into a courtyard where instruction took place, with at least one *eyvan* (vaulted hall) opening onto it. The madrasah at the Qalaun Mosque in Cairo (1283–85) has a unique cruciform *eyvan* on the richly carved *qibla* (wall facing Mecca) side and a smaller *eyvan* opposite. Residential cells for scholars occupy the other two sides.

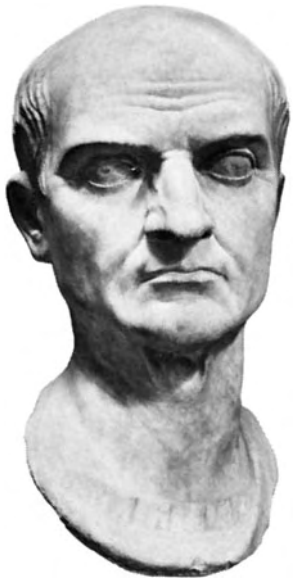
Madre, Laguna Long narrow inlet of the Gulf of Mexico along the shore of southern Texas, U.S., and northeastern Mexico. Sheltered from the gulf by barrier islands, including PADRE ISLAND, it is divided into two sections by the delta of the RIO GRANDE; the U.S. portion extends south for 120 mi (190 km) from Corpus Christi Bay, and the Mexican portion extends north for 100 mi (160 km) from the mouth of the Soto la Marina River. The GULF INTRACOASTAL WATERWAY runs through it.

Madre de Dios River River, southeastern Peru and northwestern Bolivia. It rises in the easternmost range of the ANDES MOUNTAINS, in Peru, and flows east to the Bolivian border. There it turns northeast and crosses the tropical rainforest of northwestern Bolivia, joining the BENI RIVER after a course of more than 700 mi (1,100 km). A tributary of the AMAZON RIVER, it is navigable in its upper course and again below the Peru-Bolivia border.

Madrid City (pop., 2001: city, 2,938,723; metro. area, 5,086,635), capital of Spain and of MADRID autonomous community. Located on the central plateau of the Iberian Peninsula, 2,100 ft (635 m) above sea level, it is one of Europe's highest capitals. The original town grew up around the Moorish alcazar (castle), overlooking the Manzanares River. King ALFONSO VI captured the town from the Muslims in 1083. PHILIP II moved the Spanish court to Madrid in 1561, and in 1607 PHILIP III made it the official capital. It was occupied by French troops during the NAPOLEONIC WARS but returned to Spanish control in 1812. During the SPANISH CIVIL WAR (1936–39), Madrid was held by those loyal to the Republic. Spain's principal transportation centre for the interior provinces, it is an important commercial, industrial, and cultural centre. Major institutions include the PRADO MUSEUM and the University of Madrid.

Madrid \mä-'thrēth,\ *English* \mə-'drid\ Autonomous community (pop., 2001: 5,423,384), central Spain. It occupies an area of 3,100 sq mi (8,028 sq km), and its capital is MADRID. The province extends across the southern slopes of the Guadarrama Mountains and roughly coincides with the region drained by the Jarama, Henares, and Manzanares rivers. It was the scene of several decisive battles during the SPANISH CIVIL WAR (1936–39). All the national railways converge in the province. The Somo Mountain Pass provides access to the northeast through the central mountains.

madrigal Form of vocal chamber music, usually polyphonic and unaccompanied, of the 16th–17th centuries. It originated and developed in Italy, under the influence of the French CHANSON and the Italian *frottola*. Usually written for three to six voices, madrigals came to be sung widely as a social activity by cultivated amateurs, male and female. The texts were almost always about love; most prominent among the poets whose works were set to music are PETRARCH, TORQUATO TASSO, and BATTISTA GUARINI. In Italy, ORLANDE DE LASSUS, LUCA MARENZIO, DON CARLO GESUALDO, and CLAUDIO MONTEVERDI were among the greatest of the madrigalists; THOMAS MORLEY, THOMAS WEELKES, and JOHN WILBYE created a distinguished body of English madrigals.



Madura \mä-'dùr-ə\ *Dutch* **Madoera** Island, Jawa Timur province, Indonesia, off northeastern JAVA. Its capital is Pamekasan. With an area of 2,042 sq mi (5,290 sq km), it has a hilly terrain rising to more than

© 2006 Encyclopædia Britannica, Inc.

1,400 ft (430 m) in the east. Dutch influence was established in the late 17th century. Madura was attached to Java as a residency in 1885 and became part of Indonesia in 1949. Bull races, usually held in September, attract huge crowds.

Maeander River See MENDERES RIVER

Maecenas \mi-'sē-nəs**, Gaius (Cilnius)** (b. c. 70—d. 8 BC) Roman diplomat and literary patron. He claimed descent from Etruscan kings. Though highly influential in the state, he held no title, nor did he wish to be a senator. From 43 on he helped Octavian (later AUGUSTUS) diplomatically and domestically, administering Rome and Italy while Octavian was fighting POMPEIUS in 36 and Mark ANTONY in 31. He is best remembered as the generous patron of such writers as VIRGIL, HORACE, and PROPERTIUS; he used the work of such literati to glorify Augustus's regime. In 23, after the discovery of his brother-in-law's conspiracy against Augustus, he was forced to retire.

Gaius Maecenas, marble bust; in the Palazzo dei Conservatori, Rome
ALINARI—ART RESOURCE/EB INC.

Maekawa \ˌmä-ā-'kä-wä\ **Kunio** (b. May 14, 1905, Niigata-shi, Japan—d. June 27, 1986, Tokyo) Japanese architect. Maekawa worked as a drafter for LE CORBUSIER in Paris and for ANTONIN RAYMOND in Tokyo. In early works, such as Hinamoto Hall (1936) and the Dairen Town Hall (1938), he tried to counteract the pompous style of the Japanese imperialist regime. In the 1950s he continued to work primarily in the Brutalist style of Le Corbusier (see BRUTALISM). Buildings such as the Educational Centre in Fukushima (1955) and the Harumi flats and the Setagaya Community Centre, both in Tokyo (1959), reflect his efforts to use concrete in a manner appropriate to the material. His community centres influenced TANGE KENZO, who started out in Maekawa's office.

maenads and bacchantes \'mē-ˌnadz...bə-'känts, bə-kän-tēz\ Female followers of the Greek wine-god DIONYSUS. The word maenad comes from the Greek, meaning "mad" or "demented." During the orgiastic rites of Dionysus, maenads roamed the mountains and forests performing frenzied, ecstatic dances, and were believed to be possessed by the god. While under his influence they were supposed to have unusual strength; it was said they could tear animals or people to pieces (the fate met by ORPHEUS). As bacchantes they were named for Bacchus, the Roman counterpart of Dionysus.

Maes \'mȧs**, Nicolaes** (b. 1634, Dordrecht, Neth.—d. Nov. 24, 1693, Amsterdam) Dutch painter. A native of Dordrecht, he went to Amsterdam c. 1650 to study with REMBRANDT, from whom he learned the BAROQUE style. Before his return to Dordrecht in 1653 he painted a few life-size Rembrandtesque genre scenes. From 1655 to 1660 he painted smaller domestic scenes, usually of women spinning, eavesdropping, reading the Bible, or cooking. In 1673 he moved permanently to Amsterdam and devoted himself to portraiture, abandoning intimacy and the deep glowing colours characteristic of Rembrandt for elegance and cooler tones reminiscent of ANTHONY VAN DYCK. He was a prolific painter, and he achieved great success with his portraits.

Maeterlinck \'mā-tər-ˌliŋk**, Maurice (Polydore-Marie-Bernard)** *later* **Comte Maeterlinck** (b. Aug. 29, 1862, Ghent, Belg.—d. May 6, 1949, Nice, France) Belgian playwright and poet. He studied law in Ghent but soon turned to writing poems and plays. His *Pelléas et Mélisande* (1892), considered the masterpiece of Symbolist drama (see SYMBOLIST MOVEMENT), was the basis of CLAUDE DEBUSSY's opera (1902). In his Symbolist plays, Maeterlinck used poetic speech, gesture, lighting, setting, and ritual to create images that reflect his protagonists' moods and dilemmas. His other writings include a collection of Symbolist poems (*Hothouses*, 1899) and plays such as *Monna Vanna* (1902), *The Blue Bird* (1908), and *The Burgomaster of Stilmonde* (1918). He was also noted for his popular treatments of scientific subjects, including *The Life of the Bee* (1901) and *The Intelligence of Flowers* (1907). Maeterlinck was awarded the Nobel Prize for Literature in 1911.

Maffei \mä-'fā\ **I and II** Two GALAXIES relatively close to the MILKY WAY GALAXY, first detected in the late 1960s by the Italian astronomer Paolo Maffei. Maffei I is a large elliptical galaxy, while Maffei II is a spiral galaxy. Though they are large and nearby, they are hidden in the Milky Way's zone of AVOIDANCE. At a distance of about 10 million light-years, they appear to be major members of one of the nearest galaxy groups outside the LOCAL GROUP.

Mafia Society of criminals of primarily Italian or Sicilian origin. The Mafia arose in Sicily in the late Middle Ages, possibly as a secret organization to overthrow the rule of foreign conquerors. It drew its members from the small private armies, or *mafie*, hired by landlords to protect their estates. By 1900 the Mafia "families" of western Sicily controlled their local economies. In the 1920s BENITO MUSSOLINI jailed most of the members, but they were released by the Allies after World War II and resumed their activities. In the 1970s their control of the heroin trade led to fierce rivalry among the clans, followed in the 1980s by renewed governmental efforts to imprison the Mafia leadership. In the U.S., Sicilian immigrants included former Mafia members who set up similar criminal operations. Their operations expanded from bootlegging in the 1920s to gambling, narcotics, and prostitution, and the Mafia, or Cosa Nostra, became the largest U.S. syndicated crime organization. About 24 Mafia groups or "families" controlled operations in the U.S.; the heads (or "dons") of the largest families formed a commission whose main function was judicial and could override a don's authority. At the beginning of the 21st century the Mafia's power was greatly diminished through convictions of top officials, defections, and murderous internal disputes. See also ORGANIZED CRIME.

mafic \'ma-fik\ **rock** In geology, any IGNEOUS ROCK dominated by the silicates pyroxene, amphibole, olivine, and mica. These minerals are high in magnesium and ferrous iron, and their presence gives mafic rock its characteristic dark colour. It is usually contrasted with FELSIC ROCK. Common mafic rocks include BASALT and GABBRO.

Mafikeng \'ma-fə-ˌkiŋ**, Siege of** Boer siege of a British military outpost in the SOUTH AFRICAN WAR at the town of Mafikeng (until 1980 spelled Mafeking) in northwestern South Africa in 1899–1900. The garrison, under the command of Col. ROBERT S. BADEN-POWELL, held out against the larger Boer force for 217 days until reinforcements could arrive. The rejoicing in British cities on news of the rescue produced the word *mafficking*, meaning wild rejoicing.

Magadha \'mə-gə-də\ Ancient kingdom, India, situated in present-day BIHAR and JHARKHAND states, northeastern India. An important kingdom in the 7th century BC, it absorbed the kingdom of Anga in the 6th century BC. Pataliputra (PATNA) was its capital. Its strength grew under the NANDA DYNASTY; under the MAURYAN dynasty (4th–2nd centuries BC), it comprised nearly the entire Indian subcontinent. It afterwards declined. Revived in the 4th century AD under the GUPTA DYNASTY, it was conquered by the Muslims in the late 12th century. It was the scene of many events in the life of the BUDDHA.

Magadi \mä-'gä-dē**, Lake** Lake, GREAT RIFT VALLEY, southern Kenya, east of Lake VICTORIA. It occupies an area of about 40 sq mi (104 sq km). Its bed consists almost entirely of soda deposits, which dye the waters a vivid pink.

magazine *or* **periodical** Printed collection of texts (essays, articles, stories, poems), often illustrated, that is produced at regular intervals. Modern magazines have roots in early printed pamphlets, broadsides, chapbooks, and almanacs. One of the first magazines was the German *Erbauliche Monaths-Unterredungen* ("Edifying Monthly Discussions"), issued from 1663 to 1668. In the early 18th century JOSEPH ADDISON and RICHARD STEELE brought out the influential periodicals *The Tatler* and *The* SPECTATOR; other critical reviews began in the mid 1700s. By the 19th century, magazines catering to specialized audiences had developed, including the women's weekly, the religious and missionary review, and the illustrated magazine. One of the greatest benefits to magazine publishing in the late 19th and early 20th centuries was the addition of advertisements as a means of financial support. Subsequent developments included more illustrations and vastly greater specialization. With the computer age, magazines ("e-zines") also became available over the INTERNET.

© 2006 Encyclopædia Britannica, Inc.

Magdalen \'mag-də-lən\ **Islands** *French* **Îles de la Madeleine** \ˌēl-də-lə-mȧd-'len\ Island group of eastern Quebec, Canada. Located in the Gulf of St. Lawrence between Prince Edward Island and Newfoundland, the group comprises several islands and islets, with a total area of 88 sq mi (228 sq km). The largest include Havre-Aubert (Amherst) and Cap aux Meules (Grindstone). Discovered by Jacques Cartier in 1534, the islands are inhabited mainly by French Canadians.

Magdalena \ˌmag-də-'lā-nə\ **River** River, south-central and northern Colombia. It rises on the eastern slopes of the Andes Mountains in southern Colombia and flows northward for about 950 mi (1,530 km) to empty into the Caribbean Sea near Barranquilla. It has been a major commercial artery since the Spanish conquest, though its importance has diminished.

Magdalenian \ˌmag-də-'lē-nē-ən\ **culture** Stone-tool industry and artistic tradition of Upper Paleolithic Europe. It was named after the type site, La Madeleine in southwestern France. The Magdalenians lived some 11,000–17,000 years ago, at a time when reindeer, wild horses, and bison formed large herds. They appear to have lived a semi-settled life surrounded by abundant food. They killed animals with spears, snares, and traps and lived in caves, rock shelters, and tents. Magdalenian stone tools include blades, burins (chisel-like tools), scrapers, borers, and projectile points. Their bone tools—often engraved with animal images—include adzes, hammers, spearheads, harpoons, and eyed needles. Cave art in the early period is characterized by coarse black drawings, while that of the later period includes beautifully rendered realistic figures in polychrome, such as those at Altamira, Spain. Magdalenian culture disappeared as the climate warmed at the end of the fourth (Würm) glacial period (c. 10,000 BC) and herd animals became scarce.

Magdeburg \'mäg-də-ˌbůrk\ City (pop., 2002 est.: 229,755), capital of Saxony-Anhalt state, east-central Germany. Located on the Elbe River, it was a trading settlement as early as the 9th century, and by the 13th century it was a leading member of the Hanseatic League. It embraced the Reformation in 1524 and was governed by Protestant titular archbishops. In 1631, during the Thirty Years' War, it was burned and sacked. Captured by the French during the Napoleonic Wars, it soon passed to the Prussians, and in 1815 it became the capital of the province of Saxony. It was heavily bombed during World War II. One of Germany's most important inland ports, it is a railroad junction. The composer Georg Philipp Telemann was born there.

The cathedral at Magdeburg, Germany.

Magellan \mə-'jel-ən**, Ferdinand** *Portuguese* **Fernão de Magalhães** *Spanish* **Fernando de Magallanes** (b. c. 1480, Sabrosa, or Porto?, Port.—d. April 27, 1521, Mactan, Phil.) Portuguese navigator and explorer. Born to the nobility, Magellan from 1505 served in expeditions to the East Indies and Africa. Having twice asked King Manuel I for a higher rank and been refused, he went to Spain in 1517 and offered his services to King Charles I (later Emperor Charles V), proposing to sail west to the Moluccas (Spice Islands) to prove that they lay in Spanish rather than Portuguese territory. In 1519 he left Sevilla with five ships and 270 men. He sailed around South America, quelling a mutiny on the way, and discovered the Strait of Magellan. With three ships left, Magellan crossed the "Sea of the South," which he later called the Pacific Ocean because of their calm crossing. He was killed by natives in the Philippines, but two of his ships reached the Moluccas, and one, the *Victoria*, commanded by Juan de Elcano (1476?–1526), continued west to Spain, accomplishing the first circumnavigation of the world in 1522.

Magellan, Strait of *Spanish* **Estrecho de Magallanes** \ā-'strā-chō-thā-ˌmä-gä-'lyä-nās\ Strait, linking the Atlantic Ocean and Pacific Ocean, between the southern tip of South America and Tierra del Fuego. It extends westward from the Atlantic between Cape Vírgenes and Cape Espíritu Santo and curves northwest at Froward Cape to reach the Pacific. Lying mostly within Chilean territorial waters, it is about 350 mi (560 km) long and 2–20 mi (3–32 km) wide. Named for Spanish navigator Ferdinand Magellan, the first European to pass there (1520), it remained an important shipping route until the Panama Canal opened in 1914.

Magellanic \ˌma-jə-'la-nik\ **Cloud** Either of two irregular companion galaxies of the Milky Way Galaxy, named for Ferdinand Magellan, whose crew discovered them during the first voyage around the world. They share a gaseous envelope and lie about 22° apart in the sky near the southern celestial pole (see celestial sphere). They are visible to the unaided eye in the Southern Hemisphere but cannot be seen from northern latitudes. The Large Magellanic Cloud is more than 150,000 light-years from Earth; the Small Magellanic Cloud is roughly 200,000 light-years away. They are excellent laboratories for the study of the formation and evolution of stars.

Magenta \mə-'jen-tə**, Battle of** (June 4, 1859) Battle fought during the Franco-Piedmontese war against the Austrians (second War of Italian Independence) in Lombardy, northern Italy. The narrow French victory over the Austrians was an important step toward Italian independence, leading many districts and cities to throw off Austrian rule and join the cause of Italian unity.

Maggiore \mä-'jō-rā**, Lake** *ancient* **Lacus Verbanus** Lake, northern Italy and southern Switzerland, bordered on the north by the Swiss Alps. Occupying an area of 82 sq mi (212 sq km), it is Italy's second largest lake. It is 34 mi (54 km) long, with a maximum width of 7 mi (11 km) and a maximum depth of 1,220 ft (372 m). Traversed from north to south by the Ticino River, it is also fed by the Tresa River from Lake Lugano on the east. It is a popular resort area.

Magherafelt \ˌma-krə-'felt\ District (pop., 2001: 39,780), central Northern Ireland. It is bounded by the River Bann, Lake Neaghon, and the Sperrin Mountains. It was formerly part of County Londonderry but was organized as a separate district in 1973. The town of Magherafelt, originally settled as an English company (Plantation of Ulster) town, is the seat of the district and its marketing centre.

Maghrib \'mə-grəb\ *or* **Maghreb** Region of North Africa bordering the Mediterranean Sea. It comprises the coastal plains of Morocco, Algeria, Tunisia, and, often, Libya. In earlier times the term sometimes included parts of Muslim Spain. During Roman times the region was called Africa Minor, but, following the Muslim conquests of the 7th–8th centuries, it came to be known as the Maghrib ("West") inasmuch as it comprised the most westerly reaches of the Muslim world. The region has since developed its own unique culture within the larger Islamic world. Berbers and Arabs are the two main ethnic groups. Arabic is the predominant language. Berber and French are also widely spoken.

Magi \'mā-ˌjī\ In Christian tradition, wise men from the East who came to pay homage to the infant Jesus. According to Matthew 2:1–12, they followed a miraculous guiding star to Bethlehem and brought gifts of "gold and frankincense and myrrh." Herod asked them to report the location of Jesus' birth on their return journey, but an angel warned them of his evil intentions. In later Christian tradition they were said to be kings and were given the names Melchior, Balthasar, and Gaspar. Their visit was seen as evidence that the Gentiles as well as the Jews would worship Jesus, and it is celebrated in the feast of Ephiphany. See also magus. See photograph on opposite page.

magic Use of means (such as charms or spells) believed to have supernatural power over natural forces. It constitutes the core of many religious systems and plays a central social role in many nonliterate cultures. Magic is often distinguished from religion as being more impersonal and mechanical and emphasizing technique. Its techniques are usually regarded as means to specific ends (an enemy's defeat, rainfall, etc.),

© 2006 Encyclopædia Britannica, Inc.

although another view ascribes a more symbolic, expressive character to such activity. Thus, a rainmaking ritual may both elicit rainfall and stress the symbolic importance of rain and the agricultural activities associated with it. Both the magician and the magical rite are typically surrounded by TABOOS, purification procedures, and other activities that draw the participants into the magical sphere. Strains of magic in Western tradition, formerly associated with heretics, alchemists, witches, and sorcerers, persist in modern times in the activities of satanists and others. The art of entertaining by performing apparently magical feats (sometimes called conjuring) relies on the use of sleight of hand and other means. See also SHAMAN, VODUN, WITCHCRAFT AND SORCERY.

magic realism *or* **magical realism** Latin-American literary phenomenon characterized by the matter-of-fact incorporation of fantastic or mythical elements into otherwise realistic fiction. The term was first applied to literature in the 1940s by the Cuban novelist Alejo Carpentier (1904–1980), who recognized the tendency of his region's contemporary storytellers as well as contemporary novelists to illuminate the mundane by means of the fabulous. Prominent practitioners include GABRIEL GARCIA MARQUEZ, JORGE AMADO, JORGE LUIS BORGES, MIGUEL ANGEL ASTURIAS, JULIO CORTAZAR, and Isabel Allende (born 1942). The term has been applied to literature and art outside of Latin America as well.

magic show See CONJURING

Maginot \mȧ-zhē-'nō**, André (-Louis-René)** (b. Feb. 17, 1877, Paris, France—d. Jan. 7, 1932, Paris) French politician. He was elected to the French Chamber of Deputies (1910) and fought in World War I, where he was severely wounded. He twice served as France's minister of war (1922–24, 1929–31) and was a strong advocate of military preparedness against Germany. He directed the beginning of construction of the defensive barrier in northeastern France that was later named the MAGINOT LINE in his honour.

Maginot Line \'ma-zhə-ˌnō\ Elaborate defensive barrier in northeastern France built in the 1930s. Named after its principal creator, ANDRE MAGINOT, it was an ultramodern defensive fortification along the French-German frontier. Made of thick concrete and supplied with heavy guns, it had living quarters, supply storehouses, and underground rail lines. However, it ended at the French-Belgian frontier, which German forces crossed in May 1940. They invaded Belgium (May 10), crossed the Somme River, struck at the northern end of the line (May 12), and continued around to its rear, making it useless.

magistrates' court In England and Wales, any of the inferior courts with primarily criminal jurisdiction covering a wide range of offenses, from minor traffic violations and public-health nuisances to somewhat more serious crimes, such as petty theft or assault. Magistrates' courts with similar jurisdictions, including jurisdiction over small civil claims, may be found in certain large U.S. municipalities.

The Adoration of the Magi, oil painting by Albrecht Dürer, 1504; in the Uffizi, Florence.
SCALA/ART RESOURCE, NEW YORK

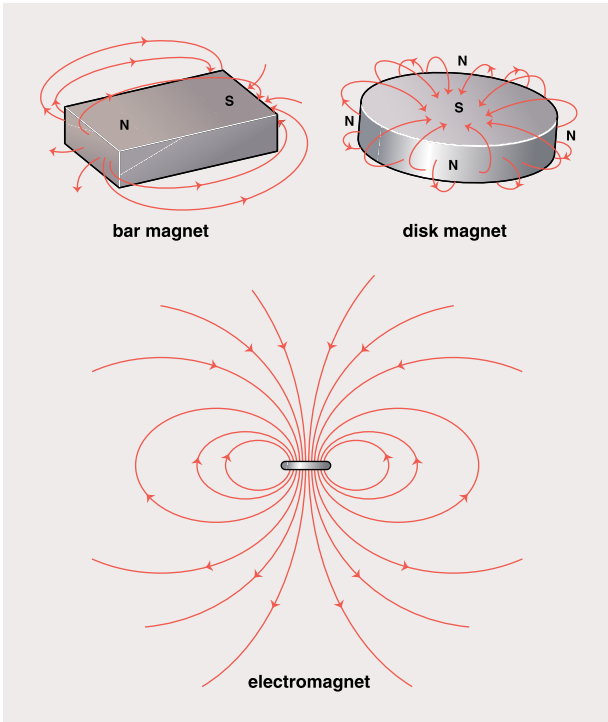
magma Molten or partially molten rock from which IGNEOUS ROCKS form, usually consisting of silicate liquid. Magma migrates either at depth or to the Earth's surface, where it is ejected as LAVA. The interactions of several physical properties, including chemical composition, viscosity, content of dissolved gases, and temperature, determine the characteristics of magma. Numerous events that can occur during crystallization influence the resulting rock: separation of early crystals from liquid prevents reaction between them; magma can cool too rapidly for reaction to occur; and loss of volatiles may remove some components from the magma.

Magna Carta (Latin: "Great Charter") Document guaranteeing English political liberties, drafted at Runnymede, a meadow by the Thames, and signed by King JOHN in 1215 under pressure from his rebellious barons. Resentful of the king's high taxes and aware of his waning power, the barons were encouraged by the archbishop of Canterbury, STEPHEN LANGTON, to demand a solemn grant of their rights. Among the charter's provisions were clauses providing for a free church, reforming law and justice, and controlling the behavior of royal officials. It was reissued with alterations in 1216, 1217, and 1225. Though it reflects the feudal order rather than democracy, the Magna Carta is traditionally regarded as the foundation of British constitutionalism.

Magna Graecia \'mag-nə-'grē-shə\ *Latin* **"Great Greece"** Group of ancient Greek cities along the coast of southern Italy. Euboeans founded the first colonies, including CUMAE, c. 750 BC, and subsequently Spartans settled at Tarentum (TARANTO); Achaeans at Metapontum, SYBARIS, and Croton; Locrians at LOCRI EPIZEPHYRII; and Chalcidians at Rhegium (REGGIO DI CALABRIA). It was a busy commercial centre as well as the seat of the PYTHAGOREAN and ELEATIC systems of philosophy. After the 5th century BC, most of the cities declined in importance.

Magnani \män-'yä-nē**, Anna** (b. March 7, 1908, Rome, Italy—d. Sept. 26, 1973, Rome) Italian film actress. An illegitimate child brought up in poverty, she became a nightclub singer noted for her bawdy street songs. After acting in a touring company, she made her film debut in *The Blind Woman of Sorrento* (1934). She earned international fame for her role in ROBERTO ROSSELLINI's *Open City* (1945). She became known for her forceful portrayals of earthy, working-class women in films such as *The Miracle* (1948), *Bellissima* (1951), *The Rose Tattoo* (1955, Academy Award), *The Fugitive Kind* (1960), and *Mamma Roma* (1962).

Magnes \'mag-nəs**, Judah Leon** (b. July 5, 1877, San Francisco, Calif., U.S.—d. Oct. 27, 1948, New York, N.Y.) U.S.-born Israeli educator and religious leader. Ordained as a rabbi in 1900, he earned a doctorate at the University of Heidelberg in 1902. Serving as rabbi for three congregations in New York, he moved from Reform to Orthodox Judaism and became a Zionist. He drifted away from ZIONISM during World War I, preferring relief efforts for Jews in Palestine over political activism. After the war he became the principal founder and first president (1935–48) of the HEBREW UNIVERSITY OF JERUSALEM, working to advance Arab-Jewish reconciliation and advocating a binational Arab-Jewish state.



Magnesia ad Sipylum \mag-'nē-zhə-ad-'si-pi-ləm\ Ancient city, LYDIA, near modern Manisa, Turkey. Dating to the 5th century BC, it was located near the regions associated with NIOBE and TANTALUS. It was the site of a famous battle during the winter of 190–189 BC, when the Romans under SCIPIO AFRICANUS THE ELDER defeated the Seleucids under ANTIOCHUS III (the Great), forcing them back across the TAURUS MOUNTAINS. It suffered severe earthquakes, notably in AD 17, and there are few archaeological remains.

magnesium Chemical ELEMENT, one of the ALKALINE EARTH METALS, chemical symbol Mg, atomic number 12. The silvery white METAL does not occur free in nature, but compounds such as the SULFATE (Epsom salts), OXIDE (magnesia), and CARBONATE (magnesite) have long been known. The metal, which burns in air with a bright white light, is used in photographic flash devices, bombs, flares, and pyrotechnics; it is also a component of lightweight alloys for aircraft, spacecraft, cars, machinery, and tools. The compounds, in which it has VALENCE 2, are used as insulators and REFRACTORIES and in fertilizers, cement, rubber, plastics, foods, and pharmaceuticals (antacids, purgatives, LAXATIVES). Magnesium is an essential element in human nutrition; it is the COFACTOR in ENZYMES of carbohydrate METABOLISM and in CHLOROPHYLL.

magnet Any material capable of attracting IRON and producing a MAGNETIC FIELD outside itself. By the end of the 19th century, all known elements

© 2006 Encyclopædia Britannica, Inc.

and many compounds had been tested for MAGNETISM, and all were found to have some magnetic property. However, only three elements—iron, NICKEL, and COBALT—exhibit FERROMAGNETISM. See also COMPASS, ELECTROMAGNET.

Magnets and their associated magnetic field lines. A permanent magnet (such as a bar or disk magnet) possesses a magnetic field by virtue of the alignment of all the magnetic particles it is composed of. An electromagnet is generated by a current flowing through a wire loop at the center of the field.
© MERRIAM-WEBSTER INC.

magnetic dipole Tiny magnet with subatomic dimensions, equivalent to the flow of ELECTRIC CHARGE around a loop. Examples include ELECTRONS circulating around atomic nuclei, rotating atomic nuclei, and single SUBATOMIC PARTICLES with SPIN. On a large scale, these effects may add together, as in iron atoms, to make magnetic compass needles and bar magnets, which are macroscopic magnetic dipoles. The strength of a magnetic dipole, its magnetic moment, is a measure of its ability to turn itself into alignment with a given external MAGNETIC FIELD. When free to rotate, dipoles align themselves so that their moments point predominantly in the direction of the magnetic field. The SI unit for dipole moment is the ampere-square metre.

magnetic field Region around a magnet, ELECTRIC CURRENT, or changing ELECTRIC FIELD in which MAGNETIC FORCES are observable. The field around a permanent magnet or wire carrying a steady DIRECT CURRENT is stationary, while that around an ALTERNATING CURRENT or changing direct current is continuously changing. Magnetic fields are commonly represented by continuous lines of force, or magnetic flux, that emerge from north-seeking magnetic poles and enter south-seeking poles. The density of the lines indicates the magnitude of the field, the lines being crowded together where the magnetic field is strong. The SI unit for magnetic flux is the weber.

magnetic force Attraction or repulsion that arises between electrically charged particles that are in motion. While only electric forces exist among stationary ELECTRIC CHARGES, both electric and magnetic forces exist among moving electric charges. The magnetic force between two moving charges is the force exerted on one charge by a MAGNETIC FIELD created by the other. This force is zero if the second charge is traveling in the direction of the magnetic field due to the first and is greatest if it travels at right angles to the magnetic field. Magnetic force is responsible for the action of electric motors and the attraction between magnets and iron.

magnetic permeability Relative increase or decrease in the MAGNETIC FIELD inside a material compared with the magnetic field in which the material is located. In empty space the magnetic permeability is 1, because there is no matter to modify the field. Materials may be classified by the value of their magnetic permeability. Diamagnetic materials (see DIAMAGNETISM) have constant relative permeabilities of slightly less than 1. Paramagnetic materials (see PARAMAGNETISM) have constant relative permeabilities of slightly more than 1. The relative permeability of ferromagnetic materials (see FERROMAGNETISM) increases as the magnetizing field increases, reaches a maximum, and then decreases. Pure iron and some alloys have relative permeabilities of 100,000 or more.

magnetic resonance Absorption or emission of ELECTROMAGNETIC RADIATION by electrons or atomic nuclei in response to certain MAGNETIC FIELDS. The principles of magnetic resonance are used to study the atomic and nuclear properties of matter; two common laboratory techniques are NUCLEAR MAGNETIC RESONANCE and ELECTRON SPIN RESONANCE. In medicine, MAGNETIC RESONANCE IMAGING is used to produce images of human tissue.

magnetic resonance imaging (MRI) Computer production of images from MAGNETIC RESONANCE. The structural and biochemical information it provides is helpful in the diagnosis of abnormalities without the possibly harmful effects of X RAYS or GAMMA RAYS. It is invaluable in detecting and delineating tumours and in providing images of the brain, the heart, and other soft-tissue organs. MRI may produce anxiety because the patient must often lie quietly inside a narrow tube. Another disadvantage is that it requires a longer scanning time than other computer-assisted forms of scanning, which makes it more sensitive to motion and of less value in scanning the chest or abdomen. However, MRI images provide better contrast between normal and diseased tissue than those produced by other computer-assisted imagery.

magnetism Phenomenon associated with MAGNETIC FIELDS, the effects of such fields, and the motion of ELECTRIC CHARGES. Some types of magnetism are DIAMAGNETISM, PARAMAGNETISM, FERROMAGNETISM, and FERRIMAGNETISM. Magnetic fields exert forces on moving ELECTRIC CHARGES. The effects of such forces are evident in the deflection of an electron beam in a CATHODE-RAY TUBE and the motor force on a current-carrying CONDUCTOR. Other applications of magnetism range from the simple magnetic door catch to medical imaging devices and electromagnets used in high-energy PARTICLE ACCELERATORS.

magnetite *or* **lodestone** *or* **magnetic iron ore** Iron OXIDE MINERAL (Fe_3O_4), the chief member of one of the series of the spinel group. Minerals in this series form black to brownish, metallic, moderately hard octahedrons and masses in igneous and metamorphic rocks and in granite pegmatites, stony meteorites, and high-temperature sulfide veins. Magnetite, as the name implies, is strongly attracted to a magnet. It is a common constituent of iron ores. Magnetite with an intrinsic magnetic field (a natural magnet) is known as lodestone.

magneto \mag-ˈnē-tō\ Permanent-magnet alternating generator used mainly to produce electrical current for the IGNITION SYSTEM in various types of INTERNAL-COMBUSTION ENGINES, such as aircraft, marine, tractor, and motorcycle engines. The main parts of a magneto are a permanent-magnet rotor, a primary winding of a small number of turns of coarse wire, a secondary winding with a large number of turns of fine wire, a cam-type circuit breaker, and a capacitor. As the rotor turns, it produces a current in the primary winding, charging the capacitor. The cam breaks the circuit, and the magnetic field around the primary winding collapses. The capacitor releases its stored current into the primary winding, causing a reversed magnetic field. The collapse and reversal of the magnetic field produce a current in the secondary winding that is sent to the SPARK PLUGS.

magnetosphere Region around a PLANET (such as Earth) or a natural satellite that possesses a magnetic field (see GEOMAGNETIC FIELD) where magnetic phenomena and the high atmospheric conductivity caused by IONIZATION strongly influence the behaviour of charged particles (see ELECTRIC CHARGE). A planet or moon's magnetic field, like its gravitational field, becomes weaker with distance from the body. The SOLAR WIND sweeps a body's magnetosphere out away from the Sun in a "tail" trailing well beyond it.

magnitude In astronomy, the measure of the brightness of a star or other celestial body. The brighter the object, the lower the number assigned as a magnitude. In ancient times six magnitude classes were used, the first containing the brightest stars (see HIPPARCHUS). In the present

© 2006 Encyclopædia Britannica, Inc.

system a difference of one magnitude is defined as a ratio of brightness of 2.512 times. Thus, a difference of five magnitudes corresponds to a brightness ratio of 100 to 1. Apparent magnitude is an object's brightness as seen from Earth (e.g., −26.7 for the Sun, about −11 for the Moon). Absolute magnitude is an object's brightness as it would be seen at a distance of 10 PARSECS (32.6 light-years; e.g., 4.8 for the Sun). See also ALBEDO; PHOTOMETRY.

magnolia Any of about 80 species of trees and shrubs in the genus *Magnolia*, native to North and Central America, the Himalayas, and East Asia. They are valued for their fragrant flowers and handsome leaves. *Magnolia* is one of 12 genera in the family Magnoliaceae, which contains 210 species. Magnolias are among the most primitive of flowering plants; their primitive features include long floral axes, spiral arrangement of flower parts, and simple water-conducting cells.

Magnus II Eriksson (b. 1316, Norway—d. Dec. 1, 1374, Sweden) King of Sweden (1319–63, as Magnus II) and Norway (1319–55, as Magnus VII). Grandson of Norway's Haakon V and nephew of the Swedish king, Magnus became ruler of both countries. Since he spent almost all his time in Sweden, Norwegian nobles arranged for his son Haakon's succession, and Magnus abdicated in 1355. He antagonized many Swedish nobles, raising taxes and curbing the economic power of the church and nobility. In 1356 he was forced to cede half his Swedish kingdom to his son Erik, and he began making concessions to the nobility. When he renewed his efforts to control the Swedish nobles, they deposed him.

Magnus effect Generation of a sidewise FORCE on a spinning cylindrical or spherical solid immersed in a fluid (liquid or gas) when there is relative motion between the spinning body and the fluid. Named after Heinrich Gustav Magnus (1802–1870), who first investigated the effect experimentally in 1853, it is responsible for the curved trajectory of a tennis or golf ball and affects the path of an artillery shell.

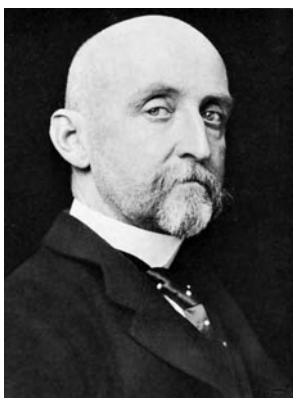
Magnus Pius, Sextus Pompeius See Sextus POMPEIUS MAGNUS PIUS

magpie Any of several genera of long-tailed songbirds of the CROW family (Corvidae). The black-billed magpie (*Pica pica*) is 18 in. (45 cm) long and strikingly pied (black-and-white), with an iridescent blue-green tail. It is found in North Africa, across Eurasia, and in western North America. A bird of farmlands and tree-studded open country, it eats insects, seeds, small vertebrates, the eggs and young of other birds, and fresh carrion. It makes a large, round nest of twigs cemented with mud, and is known for hoarding small, bright objects. Other species (in the genera *Cyanopica*, *Cissa*, and *Urocissa*) include the brilliant blue or green magpies of Asia.

Magritte \mä-'grēt**, René (-François-Ghislain)** (b. Nov. 21, 1898, Lessines, Belg.—d. Aug. 15, 1967, Brussels) Belgian painter. After study at the Belgian Academy of Fine Arts (1916–18), he designed wallpaper and did advertising sketches until the support of a Brussels art gallery enabled him to become a full-time painter. His early works were in the Cubist and Futurist styles, but in 1922 he discovered the work of GIORGIO DE CHIRICO and embraced SURREALISM with *The Menaced Assassin* (1927). Certain images appear over and over again in Magritte's works—the sea, wide skies, the female torso, the bourgeois "little man" in a bowler hat, rocks that hover overhead—and dislocations of space, time, and scale were common elements in his enigmatic and illogical paintings.

Magsaysay \mäg-'sī-ˌsī**, Ramon** (b. Aug. 31, 1907, Iba, Phil.—d. March 17, 1957, near Cebu) President of the Philippines (1953–57). Son of a Malay artisan, he was a schoolteacher before becoming a guerrilla leader during World War II. In 1950, as secretary of defense, he launched one of the most successful antiguerrilla campaigns in modern history, against insurgents of the HUKBALAHAP REBELLION. He deprived them of popular support by offering peasants land and tools and insisting that the army treat them with respect. By 1953 the Huks were no longer a threat, and Magsaysay was elected president. His efforts at reform were frustrated by a conservative Congress. He was killed in a plane crash before the end of his term.

maguey See CENTURY PLANT



magus \'mā-gəs\ Member of an ancient Persian clan specializing in cultic activities. The magi were a priestly caste during the SELEUCID, Parthian, and SASANIAN dynasties, and parts of the AVESTA are probably derived from them. Their PRIESTHOOD is believed to have served several religions, including ZOROASTRIANISM. From the 1st century AD onward, the word magus in its Syriac form (*magusai*) was applied to magicians and soothsayers, chiefly from BABYLONIA. As long as the Persian empire lasted there was a distinction between the Persian magi, credited with profound religious knowledge, and the Babylonian magi, often considered outright impostors. See also MAGI.

Magyar \'mag-ˌyär, 'mä-ˌjär\ Any member of the dominant ethnic group in Hungary. Speakers of a FINNO-UGRIC LANGUAGE, they migrated from their early home in the region of present-day Bashkortostan in eastern European Russia across the southern Russian and Ukrainian steppes into the northern Balkans in the 9th century. After collisions with neighbouring peoples, the Magyars crossed the Carpathians and settled in the middle basin of the Danube River in the late 9th century, subjugating Slavs and other peoples there. Skilled and fierce horsemen, they raided deep into the heart of Europe in the 10th century and were greatly feared until their defeat by OTTO I at the Battle of LECHFELD in 955. They adopted Christianity in the 11th century under King STEPHEN I, the founder of Hungary, who made the kingdom part of the European community.

Mah-jongg \ˌmä-'zhäŋ\ Game of Chinese origin usually played by four persons with 144 domino-like tiles that are drawn and discarded until one player secures a winning hand. The object of play is similar to that of the RUMMY card games. It is probably of 19th-century origin. The name was coined by J. P. Babcock, who introduced the game to the West after World War I. The mah-jongg set includes a pair of dice, a quantity of tokens or chips used for scorekeeping, and a rack for keeping tiles upright and keeping their faces hidden from other players.

Mahabharata \mə-ˌhä-'bä-rə-tə\ One of the two major SANSKRIT epics of India, valued for its literary merit and its religious inspiration. It tells of the struggle for supremacy between two groups of cousins, the Kauravas and the Pandavas. Many myths and legends are woven into the poem, along with didactic material on topics such as the proper conduct of a warrior and the way to attain emancipation from rebirth. Together with the second major epic, the *RAMAYANA*, it is an important source of information about the evolution of HINDUISM. Contained within the *Mahabharata* is the *Bhagavadgita*, Hinduism's single most important religious text. The sage Vyasa (fl. c. 5th century BC) is traditionally named as the *Mahabharata*'s author, but he probably compiled existing material. The poem reached its present form c. AD 400.

Mahan \mə-'han**, Alfred Thayer** (b. Sept. 27, 1840, West Point, N.Y., U.S.—d. Dec. 1, 1914, Quogue, N.Y.) U.S. naval officer and historian. He studied at the U.S. Naval Academy, and his nearly 40 years of active naval duty included fighting in the American Civil War. He was president of the Naval War College in Newport, R.I. (1886–89). His classic analysis *The Influence of Sea Power upon History, 1660–1783* (1890) argued that sea power was decisive in determining national supremacy. In *The Influence of Sea Power upon the French Revolution and Empire, 1793–1812* (1892), he stressed the interdependence of military and commercial control of the sea. Avidly read in Britain and Germany, both books greatly influenced the buildup of naval forces before World War I.

Alfred Thayer Mahan, 1897

Maharashtra \ˌmä-hə-'räsh-trə\ State (pop., 2001 prelim.: 96,752,247), west-central India. It lies on the Arabian Sea and is bordered by the states of GUJARAT, MADHYA PRADESH, CHHATTISGARH, ANDHRA PRADESH, KARNATAKA, and GOA and the union territory of DADRA AND NAGAR HAVELI; its capital is MUMBAI (Bombay). Occupying an area of 118,800 sq mi (307,690 sq km), it covers much of the DECCAN plateau, containing the valleys of the KRISHNA, BHIMA, and GODAVARI rivers. The population is a mixture of ethnic groups; Marathi is the state language. The region was divided into Hindu kingdoms in the 8th–13th centuries; they were followed by a series of Muslim dynasties. A Maratha kingdom ruled by 1674, and by the 18th century a Maratha empire had been established. The British gained control early in the 19th century.

© 2006 Encyclopædia Britannica, Inc.

When India won independence in 1947, the area was known as Bombay state; it was divided on linguistic lines in 1960, creating Gujarat in the north and Maharashtra in the south. Its economy is primarily agricultural; industries include oil-refining and cotton textiles.

Maharishi Mahesh Yogi *orig.* **Mahad Prasad Varma** (b. 1911?, India) Indian religious leader, founder of TRANSCENDENTAL MEDITATION (TM). He took a degree in physics before going to the Himalayas to study the ADVAITA school of VEDANTA religious thought with the yogi Guru Dev for 13 years. He arrived in the U.S. in 1959, preaching the virtues of TM; in the 1960s the BEATLES were perhaps his most celebrated followers. The Maharishi (the title means "Great Sage") returned to India in the late 1970s and moved to The Netherlands in 1990. His organization, which includes real estate holdings, schools, and clinics, was worth more than $3 billion in the late 1990s.

Mahasanghika \mə-ˌhä-ˈsəŋ-gi-kə\ Early Buddhist school in India that anticipated the MAHAYANA tradition. Its emergence in the 4th century BC, about 100 years after the BUDDHA's death, represented the first major schism in the Buddhist community. Though accounts of the second Buddhist council attribute the split to a dispute over rules, later texts emphasize differences between the Mahasanghikas and the Theravadins (see THERAVADA) regarding the nature of the Buddha and sainthood. The Mahasanghikas believed in a plurality of buddhas and held that the Buddha in his earthly existence was only an apparition.

Mahathir bin Mohamad \mä-ˈhä-tēr-bin-mō-ˈhä-məd\ *in full* **Datuk Seri Mahathir bin Mohamad** (b. Dec. 20, 1925, Alor Setar, Kedah, Malay states) Malaysian politician, prime minister (1981–2003). The son of a schoolmaster, Mahathir studied medicine and worked as a government medical officer before entering parliament in 1964, where he became a forceful advocate of policies to ensure economic success for ethnic Malays. Once prime minister, he was reelected repeatedly; under his leadership Malaysia achieved one of the most prosperous economies in Southeast Asia, rising literacy rates, and increased life expectancies. An economic downturn in the late 1990s precipitated a split between Mahathir and his deputy prime minister, Anwar Ibrahim, whom Mahathir dismissed in 1998; opposition to this action and other policies was suppressed. Following the SEPTEMBER 11 ATTACKS of 2001 in the U.S., he offered his support in the global war against terrorism, but he opposed the U.S.-led invasion of Iraq in 2003 and was noted for his frequent criticisms of the West.

Mahavira \mə-ˌhä-ˈvē-rə\ *orig.* **Vardhamana** (b. traditionally c. 599, Kshatriyakundagrama, India—d. traditionally 527 BCE, Pavapuri) Indian reformer of the Jain monastic community, last of the 24 TIRTHANKARAS, or saints, who founded JAINISM. Born into the warrior caste, he renounced the world at age 30 for a life of extreme asceticism. He had no possessions, not even rags to cover his body or a bowl for alms or food, and after 12 years he attained *kevala*, the highest stage of perception. An advocate of nonviolence and vegetarianism, he revived and reorganized Jain doctrine and established rules for its monastic order. His followers made five vows of renunciation (see JAIN *VRATA*).

Mahavira enthroned, miniature from the *Kalpa-sutra*, 15th-century western Indian school; in the Freer Gallery of Art, Washington, D.C.

Mahayana \mə-ˌhä-ˈyä-nə\ One of the three major Buddhist traditions. It arose in the 1st century AD and is widely followed today in China, Korea, and Japan, and Tibet. Mahayanists distinguish themselves from the more conservative THERAVADA Buddhists of Sri Lanka, Burma, Thailand, Laos, and Cambodia. Whereas the Theravadins view the historical Buddha as a (merely) human teacher of the truth, Mahayanists see him as an earthly manifestation of a celestial Buddha. Mahayanists revere BODHISATTVAS, key figures in universal salvation. Compassion, the chief virtue of the bodhisattva, is valued as highly as wisdom, the virtue emphasized by the ancient Buddhists. Within Mahayana Buddhism, some branches emphasize esoteric practices (e.g., SHINGON, TIBETAN BUDDHISM). See also KEGON, NICHIREN BUDDHISM, PURE LAND BUDDHISM, TIANTAI, ZEN.

mahdi *Arabic* **"divinely guided one"** In Islamic eschatology, a messianic deliverer who will bring justice to the earth, restore true religion, and usher in a short golden age before the end of the world. Though the mahdi is not mentioned in the QUR'ĀN and is questioned by SUNNITE theologians, he is important in SHĪʿITE doctrine. The doctrine of the mahdi gained currency during the religious and political upheavals of early ISLAM (7th–8th century) and received new emphasis in periods of crisis (e.g., after most of Spain was reconquered by Christians in 1212, and during Napoleon's invasion of Egypt). The title has been claimed by Islamic revolutionaries, notably in North Africa (see al-MAHDĪ; MAHDIST MOVEMENT).

Mahdī, al- *orig.* **Muḥammad Aḥmad ibn al-Sayyid ʿAbd Allāh** (b. Aug. 12, 1844—d. June 22, 1885, Omdurman, Sudan) Sudanese religious and political leader. The son of a shipbuilder in Nubia, he was brought up near KHARTOUM. After orthodox religious study, he turned to a mystical interpretation of Islam in the Sufi tradition, joined a religious brotherhood, and in 1870 moved to a hermitage with his disciples. In 1881 he proclaimed a divine mission to purify Islam and the governments that defiled it, targeting the Turkish ruler of Egypt and its dependency, Sudan. In 1885, after he defeated CHARLES GEORGE GORDON to capture Khartoum, he established a theocratic state, but he died the same year, probably of typhus. See also MAHDI; MAHDIST MOVEMENT; SUFISM.

Mahdist \ˈmä-dəst\ **movement** Religious and political movement founded by the Sudanese prophet al-MAHDĪ. He adopted the name al-Mahdī (meaning "Divinely Inspired One") because of his conviction that he had been divinely chosen to lead a holy war (JIHAD) against Sudan's Egyptian ruling class, who he believed had deserted the Islamic faith. His uprising began in 1881, and within four years he had conquered almost all the territory formerly occupied by Egypt, his crowning victory being the capture of KHARTOUM from Gen. CHARLES GEORGE GORDON in 1885. Establishing a new capital at OMDURMAN, he became head of an armed theocracy. When he died from illness, his disciple ʿABD ALLĀH succeeded him. Following initial victories, ʿAbd Allāh's forces were gradually hunted down by Anglo-Egyptian armies under H.H. KITCHENER and almost entirely destroyed in the Battle of OMDURMAN. The movement sustained a small following through the next century, but its political import had been destroyed.

Mahfouz \mä-ˈfüz**, Naguib** (b. Dec. 11, 1911, Cairo, Egypt) Egyptian writer. He worked in the cultural section of the Egyptian civil service from 1934 to 1971. His major work, the *Cairo Trilogy* (1956–57)—including the novels *Palace Walk*, *Palace of Desire*, and *Sukkariyah*—represents a penetrating overview of 20th-century Egyptian society. Subsequent works offer critical views of the Egyptian monarchy, colonialism, and contemporary Egypt. Other well-known novels include *Midaq Alley* (1947), *Children of Gebelawi* (1959), and *Miramar* (1967). He also wrote short-story collections, more than 30 screenplays, and several stage plays. In 1988 he became the first Arabic writer to win the Nobel Prize for Literature.

Mahican See MOHICAN

Mahilyow *Russian* **Mogilyov** City (pop., 2001 est.: 361,000), east-central Belarus, on the DNIEPER (Dnyapro) River. It was founded in 1267 as a fortress and became a town in 1526 while under Lithuanian rule. Later passing to Poland, it became Russian in the first partition of POLAND in 1772. In 1812 a major battle between NAPOLEON's troops and Russian forces was fought outside the town. It was severely damaged in World War II; rebuilt after the war, it is now a major industrial city.

Mahler, Gustav (b. July 7, 1860, Kaliště, Bohemia, Austrian Empire—d. May 18, 1911, Vienna, Austria) Austrian-Jewish composer and conductor. He attended the Vienna Conservatory, where he studied piano and composition. He wrote his first significant work, the cantata *Das Klagende Lied* (1880), as he was eking out an existence by giving lessons. In 1880 he became a conductor, and though his dictatorial manner was disliked and critics found his interpretations extreme, by 1886 he had achieved success in Prague. He also began the first of his 10 symphonies (1888–1910), his main compositional legacy. In 1897 he was named director of the Vienna Opera; his stormy reign there was acknowledged as an artistic success. He moved to the Metropolitan Opera in 1908

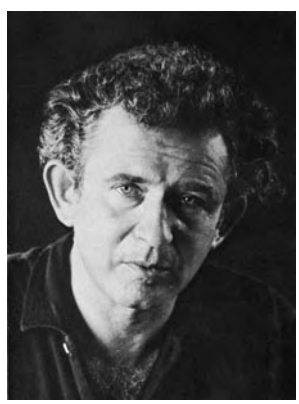
© 2006 Encyclopædia Britannica, Inc.

and the New York Philharmonic in 1909–10. Ill with heart disease and mourning his daughter's death, he wrote the masterly orchestral song cycle *Das Lied von der Erde* (1908–09) and his ninth symphony. His orchestral songs *Des Knaben Wunderhorn* (1892–98) and *Kindertotenlieder* (1904; *Songs on the Deaths of Children*) are frequently performed. His emotionally charged and subtly orchestrated music drew together many different strands of Romanticism. Although his music was largely ignored for 50 years after his death, he was later regarded as an important forerunner of 20th-century techniques of composition.

Maḥmūd \mä-'müd\ **of Ghazna** (b. 971—d. April 30?, 1030, Ghazna, Ghaznavid empire) Son of the founder of the Ghaznavid dynasty, Sebüktigin. After ascending the throne in 998, he gave nominal allegiance to the caliph of the ʿAbbāsid dynasty and in return was granted autonomy. He expanded his kingdom through some 17 invasions of the Punjab and northeastern India, carrying with him the banner of Islam. With the treasures he amassed, he transformed the city of Ghazna into a brilliant cultural centre. At his court were the scholar al-Bīrūnī and the poet Ferdowsī.

mahogany family Family Meliaceae (order Sapindales), composed of 575 species in 51 genera of trees and (rarely) shrubs native to tropical and subtropical regions. Trees of the genus *Swietenia* and *Entandrophragma*, commonly called mahogany, and of the genus *Cedrela* (especially the cigar-box cedar, *C. odorata*) are economically important timber trees. The China tree (*Melia azedarach*), also called chinaberry, bead tree, and Persian lilac, is an ornamental Asian tree with fragrant, lilac-coloured flowers and attractive but poisonous round yellow fruits, often cultivated in tropical and warm temperate areas. Most members of the family have large compound leaves and branched flower clusters. A few have edible fruits.

Mahone \mə-'hōn**, William** (b. Dec. 1, 1826, Southampton county, Va., U.S.—d. Oct. 8, 1895, Washington, D.C.) U.S. politician and railroad magnate. After graduating from the Virginia Military Institute, he studied engineering while teaching. He joined the Norfolk–Petersburg Railroad as an engineer in 1851 and became the company's president 10 years later. In the American Civil War he was appointed quartermaster general of the Confederacy but served with the army of northern Virginia, rising to major general. After the war he resumed railroading, becoming president of the Atlantic, Mississippi, and Ohio (later Norfolk & Western) Railroad (1867). He built a political base through railroad patronage but lost control of the railroad in the 1870s. Unable to win the Democratic Party nomination for governor (1877), he organized a coalition of African Americans and poor whites to form a political party, the Readjusters (1879), which succeeded in enacting reforms. He served as a Republican in the U.S. Senate (1880–87).



Maiano, Benedetto da See Benedetto da Maiano

Maidstone Town and borough (pop., 2001: 138,959), administrative and historic county of Kent, southeastern England. It is situated on the River Medway southeast of London. Its name is derived from one given it in Domesday Book. A residence of the Norman archbishops of Canterbury until the Reformation, it grew as a market town. Still an agricultural centre, it is located in England's largest hops-growing area, and brewing is important to its economy. Among many sites of architectural interest is the medieval archbishop's palace.

Mailer, Norman (b. Jan. 31, 1923, Long Branch, N.J., U.S.) U.S. novelist. He studied at Harvard University. He drew on his wartime service in the Pacific for his celebrated novel *The Naked and the Dead* (1948), which established him as one of the major American writers of the postwar decades. A flamboyant and controversial figure who often enjoyed antagonizing critics and readers, he has since commanded less respect for his fiction—which also includes the novels *An American Dream* (1965) and *Why Are We in Vietnam?* (1967)—than for journalistic works that convey actual events with the richness of novels, including *The Armies of the Night* (1968, Pulitzer Prize); *Miami and the Siege of Chicago* (1968); *Of a Fire on the Moon* (1970); and *The Executioner's Song* (1979, Pulitzer Prize), about the execution of a murderer. Mailer was a favourite target of feminists in the 1960s and '70s.

Maillol \mä-'yōl**, Aristide** (b. Dec. 8, 1861, Banyuls-sur-Mer, France—d. Sept. 27, 1944, near Banyuls-sur-Mer) French sculptor, painter, and printmaker. He was a painter and tapestry designer until he was almost 40, when eyestrain persuaded him to turn to sculpture. He rejected the highly emotional style of Auguste Rodin and attempted to preserve and purify the Classical sculpture of Greece and Rome. Most of his works depict the mature female form and are characterized by emotional restraint, clear composition, and serene surfaces. After 1910 he was internationally famous and never lacked commissions. He resumed painting later in life and produced excellent woodcut illustrations for fine editions of Latin poets, but he remained preeminently a sculptor.

Maimon \'mī-mən**, Salomon** *orig.* **Salomon ben Joshua** (b. c. 1754, Nieswiez, grand duchy of Lithuania—d. Nov. 22, 1800, Nieder-Siegersdorf, Silesia) Polish Jewish philosopher. As a young man, he pursued Hebrew and rabbinic studies, adopting the name Maimon out of admiration for Moses Maimonides. His unorthodox commentaries on Maimonides earned him the enmity of other Jews, and he left Poland at age 25 to wander through Europe as a scholar and tutor. A skeptic who emphasized the limits of pure thought, he is best known for his *Search for the Transcendental Philosophy* (1790), a major critique of Kantian philosophy. His other writings include *Philosophical Dictionary* (1791) and *Critical Investigations of the Human Spirit* (1797).

Maimonides \mī-'mä-nə-ˌdēz**, Moses** *orig.* **Moses ben Maimon** (b. March 30, 1135, Córdoba—d. Dec. 13, 1204, Egypt) Jewish philosopher, jurist, and physician. He was obliged to practice his faith secretly after a revolutionary and fanatical Islamic sect, the Almohads, captured Córdoba. To gain religious freedom, he settled in Egypt (1165), where he won fame for his medical skill and became court physician to the sultan Saladin. Maimonides's first major work, begun at age 23 and completed 10 years later, was an Arabic commentary on the Mishna. His other writings included a monumental code of Jewish law called the Mishne Torah (in Hebrew) and a classic work of religious philosophy, *The Guide of the Perplexed* (in Arabic), which was influenced by the teachings of Aristotle and called for a more rational approach to Judaism. It also sought to reconcile science, philosophy, and religion. He is considered the greatest intellectual figure of medieval Judaism.

Main River \'mīn\ River, central Germany. Rising in northern Bavaria, and flowing west, it passes through Frankfurt before emptying into the Rhine River; it is 326 mi (524 km) long. It forms part of the Main-Danube Canal, which links the Rhine and Danube rivers to create a 2,200-mi (3,500-km) waterway from the North Sea to the Black Sea.

Maine \'men\ Historical region, northwestern France. A hereditary countship in the 10th century, it briefly fell under English rule and then was united with Anjou in 1126. With Anjou and Normandy, it fell to France early in the 13th century. After alternating between English and French rule, it reverted to the French crown in 1481 and was made a duchy under Louis XIV.

Maine State (pop., 2000: 1,274,923), northeastern U.S. One of the New England states, it lies on the Atlantic Ocean and is bordered by Canada and the U.S. state of New Hampshire. It covers 33,128 sq mi (85,801 sq km); its capital is Augusta. The Appalachian Mountains cross the state, rising to 5,268 ft (1,606 m) at Mount Katahdin; Maine's upland region has many lakes and valleys, and its Atlantic coast is rocky and scenic. Algonquian Indians were the earliest known inhabitants of the area. European settlers found the Penobscot and Passamaquoddy tribes living along the river valleys and coasts. The French included Maine as part of the province of Acadia in 1603, and Britain included it in territory granted to the Plymouth Co. in 1606. During the 17th century Britain established scattered settlements, but the area was a constant battleground until the British conquered the French in eastern Canada in 1763. Maine was governed as a district of Massachusetts from 1652 until it was admitted as the 23rd state of the Union under the Missouri Compromise in 1820. Its Canadian boundary was established in 1842. The American Civil War and the Industrial Revolution diverted workers and capital from Maine in the 19th century. In the 20th century it saw slow but steady economic gains, espe-

© 2006 Encyclopædia Britannica, Inc.

cially in the southwestern coastal region. Its economy is based on agriculture and natural resources. Chief products include timber and wood products, potatoes, and lobsters. Tourism is also an important source of income.

Maine, destruction of the (Feb. 15, 1898) Incident preceding the Spanish-American War in which a mysterious explosion sank the U.S. battleship *Maine* in the harbour of Havana, Cuba, killing 260 sailors. The U.S. had sent the *Maine* to Havana in January 1898 to protect U.S. citizens and property after riots in Cuba's struggle for independence from Spain. U.S. anti-Spanish sentiment was inflamed by tabloid newspapers proclaiming "Remember the *Maine*, to hell with Spain!"; armed intervention followed in April. It is now believed that the explosion was caused internally.

Maine, Sir Henry (James Sumner) (b. Aug. 15, 1822, Kelso, Roxburgh, Scot.—d. Feb. 3, 1888, Cannes, France) British jurist and legal historian. He taught civil law at the University of Cambridge (1847–54) and lectured on Roman law at the Inns of Court. These lectures became the basis of his *Ancient Law* (1861) and *Early History of Institutions* (1875), which influenced both political theory and anthropology. In 1869 he became the first professor of comparative jurisprudence at the University of Oxford; in 1887 he became professor of international law at Cambridge. As a member of the council of the governor-general of India (1863–69), he shaped plans for the codification of Indian law. He was knighted in 1871.

Maine coon cat North America's only native breed of longhaired domestic cat. Though its origins are unknown, it was first shown in Boston in 1878. Maines are large, muscular, and heavy-boned; they may have been named for their raccoon-like tail. Excellent mousers, they are known for their gentleness, intelligence, and kind disposition, and are especially good with children and dogs. Most are brown tabbies.

mainframe Digital computer designed for high-speed data processing with heavy use of input/output units such as large-capacity disks and printers. They have been used for such applications as payroll computations, accounting, business transactions, information retrieval, airline seat reservations, and scientific and engineering computations. Mainframe systems, with remote "dumb" terminals, have been displaced in many applications by client-server architecture.

Maintenon \ma^{n}-tə-'nō^{n}**, Françoise d'Aubigné, marchioness de** *known as* **Madame de Maintenon** (baptized Nov. 28, 1635, Niort, Poitou, France—d. April 15, 1719, Saint-Cyr) Second wife of Louis XIV of France. After enduring an impoverished childhood, she married the poet Paul Scarron, 25 years her senior, in 1652. She presided over Scarron's literary salon, where she was intellectually formed. Widowed in 1660, she was left penniless, but with the help of influential friends she became governess in 1668 to the king's children born to his mistress, the marchioness de Montespan (1641–1707). In 1675 Louis bestowed the title of the Château de Maintenon and lands on her, and after the queen's death in 1683 he secretly married her, either in 1683 or 1697. Although she was blamed for being a bad influence on Louis politically, she maintained a climate of decency, dignity, and piety around him.

Mainz \'mīnts\ *French* **Mayence** \mä-'yä^{n}s\ City (pop., 2002 est.: 185,293), west-central Germany. Situated on the Rhine River opposite the mouth of the Main River, it was established as a Roman military camp c. 14 BC on the site of an earlier Celtic settlement. It became an archbishopric in AD 775, a free city in 1244, and the head of the Rhenish League in 1254. It was under French rule from 1797 to 1816 and then passed to Hesse-Darmstadt. It served as a fortress of the German Confederation and later of the German Empire until 1918. Severely damaged during World War II, it was rebuilt. The birthplace of Johannes Gutenberg, it is the seat of Johannes Gutenberg University.

Maistre \'mestr^{ə}**, Joseph de** (b. April 1, 1753, Chambéry, France—d. Feb. 26, 1821, Turin, kingdom of Sardinia) French polemical writer and diplomat. A member of the Savoy senate, he moved to Switzerland after the French invasion of Savoy in 1792. He served under the king of Sardinia as envoy to Russia (1803–17), then settled in Turin as chief magistrate and minister of state of the Sardinian kingdom. He was an exponent of the absolutist, conservative tradition and opposed the progress of science and liberal beliefs in such works as *Essay on the Generative Principle of Political Constitutions* (1814), *On the Pope* (1819), and *The St. Petersburg Dialogues* (1821). It was as a logical thinker, pursuing consequences from an accepted premise, that Maistre excelled.

Maitland, Frederic William (b. May 28, 1850, London, Eng.—d. Dec. 19, 1906, Las Palmas, Canary Islands, Spain) British legal historian. He practiced law in London before joining the faculty of the University of Cambridge (1888). With Frederick Pollock he wrote *History of English Law Before the Time of Edward I* (1895), which became a standard authority on the subject. In 1887 he helped found the Selden Society for the study of English law.

Maitland (of Lethington), William (b. c. 1528, probably Lethington, East Lothian, Scot.—d. June 9?, 1573, Leith, Midlothian) Scottish statesman. As secretary to Mary, Queen of Scots (1560), he sought to unite the realms of England and Scotland by securing Mary recognition as the successor to Elizabeth I. With that aim, he supported the murders of David Riccio and Lord Darnley, and he joined a coalition of Protestant and Catholic nobles. After Mary fled to England in 1568, Maitland tried to restore her to power and broke with the supporters of the infant King James VI (later James I). In the ensuing civil war, he held Edinburgh Castle until forced to surrender; he died in prison.

Maitreya \mī-'trā-yə\ In Buddhist tradition, the future Buddha who will descend to earth to preach again the dharma (law) when the teachings of the Buddha Gautama have completely decayed. Until then, Maitreya is believed to be a bodhisattva residing in the Tusita heaven. Mentioned in scriptures from the 3rd century AD, he is the earliest bodhisattva around whom a cult developed and is still the only one generally honored by the Theravada tradition. His images, found throughout the Buddhist world, convey an air of expectancy and promise.

Majapahit empire \ˌmä-jä-'pä-hit\ (13th–16th century) Last Indianized kingdom in Indonesia, based in eastern Java. It was founded by Vijaya, a prince of Singhasari who collaborated with the invading Mongol troops of Kublai Khan (see Kertanagara) to defeat a rival and then drove the Mongols out. Some scholars believe that Majapahit territory included present-day Indonesia and part of Malaysia; others maintain that it was confined to eastern Java and Bali. It reached its height in the mid-14th century under King Hayam Wuruk and his prime minister Gajah Mada. The rise of the Islamic states along the northern Java coast brought the empire to an end.

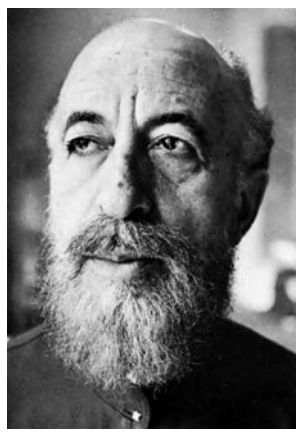
majolica \mə-'jä-li-kə\ *Italian* **maiolica** \mə-'yä-li-kə\ Tin-glazed earthenware introduced from Moorish Spain by way of the island of Majorca and produced in Italy from the 14th century. Majolica is usually restricted to five colours: cobalt blue, antimony yellow, iron red, copper green, and manganese purple; the purple and blue were used, at various periods, mainly for outline. White tin enamel was used also, for highlights or alone on the white tin glaze. The most common shape of the pottery was a display dish, decorated in the *istoriato* style, a 16th-century Italian narrative style that uses the pottery body solely as support for a purely pictorial effect. See also delftware; Faenza majolica; faience; Urbino majolica.

Major, John (b. March 29, 1943, London, Eng.) British politician and prime minister (1990–97). He was elected to the House of Commons as a member of the Conservative Party in 1979 and rose quickly through the party ranks. In 1989 Prime Minister Margaret Thatcher appointed him foreign secretary and then chancellor of the Exchequer. After Thatcher's resignation as prime minister and party leader in 1990, Major was elected as party leader, and in 1992 he led the party to a general election victory. Major's first years in office coincided with a long economic recession (1990–93). His government became increasingly unpopular, and Major

© 2006 Encyclopædia Britannica, Inc.

himself was perceived as a colourless and indecisive leader. In 1997 the Conservatives lost by a landslide to the Labour Party, and Major was succeeded as prime minister by Tony Blair.

Majorca \mä-'jȯr-kə, mä-'yȯr-kə\ *Spanish* **Mallorca** \mä-'lyȯr-kə\ *ancient* **Balearis Major** Island, Balearic Islands (Baleares) autonomous community, Spain. The largest of the Balearic Islands, it lies in the western Mediterranean Sea and occupies an area of 1,405 sq mi (3,640 sq km). Palma, the capital of the autonomous community, is located on the island. The kingdom of Majorca was established by James I of Aragon in the 13th century and was united with Aragon in the 14th century. During the Spanish Civil War (1936–39), it was a base for Italian aid to the Nationalists. Now a popular tourist centre, it was a favourite destination of Frédéric Chopin, who wrote some of his finest mazurkas and preludes there.



Majorelle \mà-yȯ-'rel**, Louis** (b. 1859, Toul, France—d. 1926, Nancy) French artist, cabinetmaker, and furniture designer. The son of a cabinetmaker, he was trained as a painter and studied under Jean-François Millet at the École des Beaux-Arts. After his father's death in 1879, he returned home to take charge of the family workshop. He moved from 18th-century reproductions to the developing Art Nouveau style and became one of its leading exponents. In his furniture he incorporated a flowing line into polished woods, highlighted by Art Nouveau bronze mounts.

Majuro \mä-'jü-rō\ Atoll (pop., 1999: 23,676) in the Ratak (eastern) chain of the Marshall Islands and capital of the Republic of the Marshall Islands, in the western Pacific Ocean. The atoll comprises 64 islets on a 25-mi (40-km) reef and has a total land area of 4 sq mi (10 sq km). It has the largest population of any of the Marshall Islands. The main settlement on Majuro is situated on three connected islands—Dalap, Uliga, and Darrit.

majuscule \'ma-jəs-ˌkyül, mə-'jəs-ˌkyül\ Uppercase, capital, or large letter in calligraphy, in contrast to the minuscule, lowercase, or small letter. All the letters in a majuscule script are contained between a single pair of real or theoretical horizontal lines. The earliest known Roman majuscule letters are in the style known as square capitals, distinguished by downstrokes that are heavier than upstrokes and by serifs (short strokes at right angles to the top and bottom of a letter). Square capitals were used mainly in inscriptions on Roman imperial monuments. Rustic capitals, used in books and official documents, formed a freer, more elliptical script. Roman cursive capitals, a running-hand script used for notes and letters, were a forerunner of the minuscule scripts that appeared later.

Makalu \'mə-kə-ˌlü\ Peak in the Himalayas, on the Nepalese-Tibetan border. Located east-southeast of Mount Everest, it reaches 27,766 ft (8,463 m), making it one of the world's highest mountains. Attempts to ascend its steep, glacier-covered sides did not begin until 1954. On May 15, 1955, two French climbers—Jean Couzy and Lionel Terray—reached the summit, and seven more members of their party arrived within two days.

Makarios \mä-'kär-ē-ˌōs\ **III** *orig.* **Mikhai Khristodolou Mouskos** (b. Aug. 13, 1913, Pano Panayia, Cyprus—d. Aug. 3, 1977, Nicosia) Archbishop and primate of the Orthodox Church of Cyprus and president of Cyprus (1959–77). Son of a poor shepherd, he was ordained in 1946; he became bishop in 1948 and archbishop in 1950. A supporter of Cyprus's union with Greece, opposing both independence and partition, he negotiated with the British governor of Cyprus (1955–56) but was arrested for sedition and exiled. In 1959 he accepted independence for Cyprus and was elected president, with a Turkish vice president. Twice reelected, he fled Cyprus following an attempted coup by the Greek Cypriot National Guard (1974). Despite a subsequent invasion by Turkey and the establishment of a separate Turkish Cypriot state in the north, he resisted partition of the country.

Makarova \mà-'kär-ə-və**, Natalia (Romanovna)** (b. Oct. 21, 1940, Leningrad, Russia, U.S.S.R.) Russian ballerina. She trained in Leningrad (St. Petersburg) and joined the Kirov (now Mariinsky) Ballet in 1959 to become a leading ballerina. In 1970 she defected while on tour in London and soon joined American Ballet Theatre. She performed as a guest artist with the Royal Ballet and other companies and is best known for her leading role in *Giselle*.

Makassar \mə-'ka-sər\ **Strait** Narrow passage of the west-central Pacific Ocean, Indonesia. Located between Borneo and Celebes (Sulawesi), it connects the Celebes Sea to the Java Sea. It is 500 mi (800 km) long and 80–230 mi (130–370 km) wide. It contains numerous islands, the largest of which are Laut and Sebuku. In 1942, during World War II, it was the scene of naval and air battles as the Allies tried to prevent the Japanese from occupying Borneo.

makeup In the performing arts, material used by actors for cosmetic purposes and to help create the characters they play. Not needed in Greek and Roman theatre because of the use of masks, makeup was used in the religious plays of medieval Europe, in which the angels' faces were painted red and those of God and Christ white or gold. In Elizabethan England, crude makeup methods included powdering the face with chalk (to play ghosts and murderers) or blackening it with burnt cork (to play Moors). As stage lighting improved in the 19th century, theatrical makeup became more artistic; stick greasepaint, invented by Ludwig Leichner in the 1860s, enabled actors to create more subtle characterizations. Stage makeup proved too heavy for motion pictures; in 1910 Max Factor created semiliquid greasepaint makeup suitable for early filmmaking, and in 1928 he created panchromatic makeup to keep pace with the development of incandescent lighting and more sensitive film. Makeup was later further modified for colour filmmaking and for television. See also cosmetics.

Makkah, Al- See Mecca

mako shark \'mā-kō\ Any of certain potentially dangerous sharks (genus *Isurus*) in the mackerel shark family (Isuridae). Two species are generally recognized: the Atlantic *I. oxyrinchus* and the Indo-Pacific *I. glaucus*. Makos range throughout tropical and temperate seas. Blue-gray, with a white belly, they are about 13 ft (4 m) long and weigh about 1,000 lbs (450 kg). They prey on fishes such as herring, mackerel, and swordfish. Outstanding game fish, they are prized for their fighting qualities and their spectacular repeated leaps out of the water.

Mako shark (*Isurus glaucus*)
PAINTING BY RICHARD ELLIS

Maktūm \mȧk-'tüm\ **dynasty** *or* **Āl Maktūm ("Maktūm family")** Ruling family of the emirate of Dubayy (Dubai) of the United Arab Emirates (UAE). One of the two members of the Āl Bū Falāsāh family to emigrate from Abu Dhabi to Dubayy in 1833 was Baṭī ibn Suhayl, father of Maktūm ibn Baṭī, the first ruler of Dubayy (r. 1833–52). The current ruler, Maktūm ibn Rāshid, who is also vice president of the UAE, is the ninth of the dynasty. The Maktūm are a branch of the same Banū Yās confederation that includes the Nahyān, rulers of Abu Dhabi.

Malabar Coast \'ma-lə-ˌbär\ Region, southwestern coast of India, stretching from the Western Ghats to the Arabian Sea. It now includes most of Kerala state and the coastal region of Karnataka state. It has sometimes been used to refer to the entire western coast of peninsular India. A large part of it was within the ancient kingdom of Keralaputra. The Portuguese established trading posts there; they were followed by the Dutch in the 17th century and the French in the 18th century. The British gained control of the region in the late 18th century.

© 2006 Encyclopædia Britannica, Inc.

Malabo \mä-'lä-bō\ *formerly (until 1973)* **Santa Isabel** City (pop., 1995 est.: 47,500), capital of Equatorial Guinea. Located on the northern edge of the island of Bioko, it is the republic's commercial and financial centre. The main activity of its harbour is the export of cocoa, timber, and coffee. Its population fluctuated in the 1960s and '70s: the European population declined after 1969 riots there, and the African population declined when Nigerian contract workers returned to Nigeria in the mid 1970s.

Malacca \mə-'lä-kə**, Strait of** Channel connecting the Indian Ocean and the South China Sea. It lies between Sumatra and the Malay Peninsula. It is 500 mi (800 km) long and is funnel-shaped; only 40 mi (65 km) wide in the south, it broadens in the north to 155 mi (249 km). Numerous islets hinder passage at its southern entrance. The shortest sea route between India and China, it is one of the most heavily traveled shipping channels in the world.

Malacca, sultanate of (1403?–1511) Malay dynasty that ruled the great entrepôt of Malacca (Melaka) and its dependencies. Malacca, which commanded the main sea route between India and China, was founded by Paramesvara (died 1424), who converted to Islam and took the title Sultan Iskandar Shah in 1414. It benefited from the rearoused desire of Ming dynasty China to trade with the West. By the mid-1430s it had become a major commercial emporium; by the mid-15th century it was an important territorial power as well. The wealthy state encouraged literature, learning, and a lively political and religious life; the period of its ascendancy is considered the golden age of Malay history. The city fell to the Portuguese in 1511.

Malachi \'ma-lə-ˌkī\ The anonymous author of the biblical book of Malachi and the last of the Twelve (Minor) Prophets. The name comes from a Hebrew word meaning "my messenger." The book consists of dialogues in question-and-answer form, in which the prophet defends the justice of God to a community doubtful because its expectations of salvation for Israel are unfulfilled. Malachi calls for faithfulness to God's covenant and promises that the day of judgment will soon arrive. The book was probably written in the 5th century BC.

malachite \'ma-lə-ˌkīt\ Widespread carbonate mineral of copper, a hydrous copper carbonate, $Cu_2CO_3(OH)_2$. Because of its distinctive, bright green colour and its presence in the weathered zone of nearly all copper deposits, malachite serves as a prospecting guide. It is found in Siberia, France, Namibia, and Arizona. Malachite has been used as an ornamental stone and as a gemstone.

Malachy \'ma-lə-kē**, Saint** (b. 1094, Armagh, County Armagh, Ire.—d. Nov. 2/3, 1148, Clairvaux, France; canonized 1190; feast day November 3) Irish archbishop and religious reformer. He studied at Armagh and was ordained a priest in 1119. While serving as vicar to the archbishop of Armagh, he persuaded the Irish church to accept reforms promoted by Pope Gregory VII in the 11th century, and he introduced the Roman liturgy into Ireland. He served as bishop in Counties Down and Antrim before being named abbot of Iveragh, County Kerry. He became archbishop of Armagh in 1129 but resigned in 1137. In 1142 he introduced the Cistercians into Ireland. In 1190 he became the first Irish Catholic to be canonized.

Málaga \'mä-lä-gä\ Port city (pop., 2001: 524,414), southern Spain. It lies on a bay of the Mediterranean Sea at the mouth of the Guadalmedina River. It was founded by the Phoenicians in the 12th century BC and was later conquered by the Romans and the Visigoths. Under Moorish rule from 711 AD, it became one of the chief cities of Andalusia. It fell to Spanish rulers Ferdinand II and Isabella I in 1487. It is the foremost Spanish Mediterranean port after Barcelona; among its exports are fruit and Málaga wine. It was the birthplace of Pablo Picasso.

Malagasy \ˌma-lə-'ga-sē\ **peoples** Complex of about 20 ethnic groups in Madagascar. The largest group is the Merina ("Elevated People"), who primarily inhabit the central plateau. The second-largest group is the Betsimisaraka, who live generally in the east. The third is the Betsileo, who inhabit the plateau around Fianarantsoa. Others include the Tsimihety, the Sakalava, the Antandroy, the Tanala, the Antaimoro, and the Bara. All Malagasy peoples speak a dialect of Malagasy, an Austronesian language. The written language is a standardized version of the Merina dialect. Most Malagasy peoples live in rural areas and grow rice, cassava, and other crops. About half are Christian, while the rest practice their traditional religion based on ancestor worship.

Malaita \mä-'lā-tä\ Volcanic island, Solomon Islands, South Pacific Ocean. Located northeast of Guadalcanal, it is about 115 mi (185 km) long and 22 mi (35 km) across at its widest point and has an area of 1,870 sq mi (4,843 sq km). It is mountainous and covered with dense forests, and its interior has not yet been extensively explored.

Malāmatiyyah \ˌmä-lä-mä-'tē-ə\ Muslim mystic group in the Sufi tradition that flourished in Iran during the 8th century. The name, derived from the Arabic *la'ma* ("to be wicked"), refers to the group's focus on their own failings and misdeeds. The Malāmatiyyahs saw self-blame as conducive to detachment from worldly things and disinterested service to God. To avoid praise and respect, they hid their knowledge and piety, and they made known their faults as a reminder of the need for self-improvement, while remaining tolerant and forgiving toward others. See also Sufism.

Malamud \'ma-lə-ˌməd**, Bernard** (b. April 26, 1914, Brooklyn, N.Y., U.S.—d. March 18, 1986, New York, N.Y.) U.S. novelist and short-story writer. Born to Russian-Jewish immigrants, he was educated at City College of New York and Columbia University, and he later taught principally at Bennington College. His novels, which often make parables out of Jewish immigrant life, include *The Natural* (1952), about a baseball hero; *The Assistant* (1957), about a Jewish grocer and a Gentile hoodlum; and *The Fixer* (1966, Pulitzer Prize), often considered his finest novel. His genius is most apparent in his stories, collected in *The Magic Barrel* (1958), *Idiots First* (1963), *Pictures of Fidelman* (1969), and *Rembrandt's Hat* (1973).

malamute, Alaskan See Alaskan malamute

Malan \mə-'lan**, Daniel F(rançois)** (b. May 22, 1874, near Riebeeck West, Cape Colony—d. Feb. 7, 1959, Stellenbosch, S.Af.) South African politician. Malan obtained a doctorate in divinity (1905) and became a Dutch Reformed minister before entering parliament in 1918. He joined J.B.M. Hertzog's cabinet (1924–33) but broke with Hertzog to form the Purified Nationalist Party (1934). He reconciled with Hertzog in 1939 and assumed leadership of the National Party after Hertzog withdrew (1940). His party won the 1948 elections by appealing to Afrikaner racial sentiments. He formed South Africa's first exclusively Afrikaner government (1948–54) and instituted apartheid.

Mälaren \'mā-ˌlär-ən\ Lake, eastern Sweden. Located just west of Stockholm, it has an area of 440 sq mi (1,140 sq km) and a length of 75 mi (120 km); it is the country's third largest lake. Connected with the Baltic Sea by navigable channels, it has more than 1,200 islands.

malaria A serious relapsing infection caused by protozoa of the genus *Plasmodium* (see plasmodium), transmitted by the bite of the *Anopheles* mosquito. Known since before the 5th century BC, it occurs in tropical and subtropical regions near swamps. The roles of the mosquito and the parasite were proved in the early 20th century. Annual cases worldwide are estimated at 250 million and deaths at 2 million. Malaria from different *Plasmodium* species differs in severity, mortality, and geographic distribution. The parasites have an extremely complex life cycle; in one stage they develop synchronously inside red blood cells. Their mass fissions at 48- or 72-hour intervals cause attacks lasting 4–10 hours. Shaking and chills are followed by fever of up to 105 °F (40.6 °C), with severe headache and then profuse sweating as temperature returns to normal. Patients often have anemia, spleen enlargement, and general weakness. Complications can be fatal. Malaria is diagnosed by detecting the parasites in blood. Quinine was long used to alleviate the fevers. Synthetic drugs, such as chloroquine, destroy the parasites in blood cells, but many strains are now resistant. Carriers of a gene for a hemoglobinopathy have natural resistance. Malaria prevention requires preventing mosquito bites: eliminating mosquito breeding places and using insecticides or natural predators, window screens, netting, and insect repellent. See also protozoal disease.

Malawi \mä-'lä-wē\ *officially* **Republic of Malawi** *formerly* **Nyasaland** \nī-'a-sə-ˌland\ Country, southeastern Africa. Area: 45,747 sq mi (118,484 sq km). Population (2005 est.): 12,707,000. Capitals: Lilongwe and Blantyre (judicial). Almost the entire population consists of Bantu-speaking black Africans. Languages: English (official), Chewa, Lomwe. Religions: Christianity (Protestant, Roman Catholic), Islam, traditional beliefs. Currency: kwacha. Malawi's terrain is characterized by dramatic highlands and extensive lakes, with forests occupying about one-fourth of the total land area. The Great Rift Valley runs north-south

© 2006 Encyclopædia Britannica, Inc.

and contains Lake Nyasa (Malawi). Agriculture employs some four-fifths of the workforce; staple crops include corn, peanuts, beans, and peas, and cash crops include tobacco, tea, sugarcane, and cotton. Coal mining and limestone quarrying also contribute to the economy. Major industrial products are food products, beverages, chemicals, and textiles. Malawi is a republic with one legislative house; its head of state and government is the president. Inhabited since 8000 BC, the region was settled by Bantu-speaking peoples between the 1st and 4th centuries AD. They established separate states, and c. 1480 they founded the Maravi Confederacy, which encompassed most of central and southern Malawi. In northern Malawi the Ngonde people established a kingdom c. 1600, and in the 18th century the Chikulamayembe state was founded. The slave trade flourished during the 18th–19th century; Islam and Christianity arrived in the region c. 1860. Britain established colonial authority in 1891, creating the Nyasaland Districts Protectorate. It became the British Central Africa Protectorate in 1893 and Nyasaland in 1907. The colonies of Northern and Southern Rhodesia and Nyasaland formed a federation (1951–53), which was dissolved in 1963. The next year Malawi achieved independence as a member of the British Commonwealth. In 1966 it became a republic, with Hastings Banda as president. In 1971 he was designated president for life, and he ruled for three decades before being defeated in multiparty presidential elections in 1994. A new constitution was adopted in 1995.

Malawi, Lake *or* **Lake Nyasa** \nī-'a-sə\ Lake, southern Africa, bounded on the west and south by Malawi, on the east by Mozambique, and on the north by Tanzania. It is the southernmost and third largest of the Great Rift Valley lakes. It is about 360 mi (580 km) long with an average width of 25 mi (40 km); it covers an area of 11,430 sq mi (29,604 sq km). It contains Likoma Island, site of an Anglican cathedral completed in 1911. On the heavily populated Malawi shore there are several government stations. The lake is fed by 14 rivers, and its sole outlet is the Shire River. There are about 200 recorded species of fish in the lake.

Malay \mə-'lā, 'mā-ˌlā\ Any member of an ethnic group that probably originated in Borneo and expanded into Sumatra and the Malay Peninsula. They constitute more than half the population of Peninsular Malaysia. They are mainly a rural people, growing rice for food and rubber as a cash crop. Heavily influenced by India, they were Hinduized before converting to Islam in the 15th century. Their culture has also been influenced by the cultures of the Thai, Javanese, and Sumatrans. Malay society has traditionally been somewhat feudal; class distinctions are still marked, and marriages have traditionally been arranged by parents and governed by Islamic law.

Malay Archipelago Largest group of islands in the world, located off the southeastern coast of Asia between the Indian and Pacific oceans. It consists of the more than 13,000 islands of Indonesia and some 7,000 islands of the Philippines. Formerly called the East Indies, the archipelago extends along the Equator for more than 3,800 mi (6,100 km). Principal islands include the Greater Sunda Islands (Sumatra, Java, Borneo, and Celebes), the Lesser Sundas, the Moluccas, New Guinea, Luzon, Mindanao, and the Visayan Islands.

Malay \mə-'lā, 'mā-ˌlā\ **language** Austronesian language with some 33 million first-language speakers in the Malay Peninsula, Sumatra, Borneo, and other parts of Indonesia and Malaysia. Because Malay was spoken on both sides of the Strait of Malacca, a crucial trade route between India and China, Malay-speaking groups were drawn into international commerce centuries before European penetration of the region, and Malay became a lingua franca in Indonesian ports, giving rise to a range of pidgins and creoles known as Bazaar Malay (Melayu Pasar). In 20th-century Indonesia, a standardized form of Malay was adopted as the national language, Indonesian; written in Latin letters, it is now spoken or understood by about 70% of the population. Similar standardizations of Malay comprise the national languages of Malaysia and Brunei. The oldest known Malay texts are 7th-century inscriptions from southern Sumatra in an Indic script (see Indic writing system); a continuous Malay literary tradition did not begin until the Islamization of the Malay Peninsula in the 14th century.

Malay Peninsula Peninsula, Southeast Asia. Comprising the mainland portion of Malaysia and southwestern Thailand, it occupies an area of 70,000 sq mi (181,300 sq km), has a width of 200 mi (322 km), and extends south for 700 mi (1,127 km) to Cape Balai, the southernmost point of the Asian continent; the island country of Singapore lies just south across the Johore Strait. Its central mountain range, rising to 7,175 ft (2,187 m) at Mount Tahan, divides the peninsula lengthwise and is the source of many rivers. Both its western and eastern coasts are exposed to monsoons. It has large tracts of tropical rainforest and is a major producer of rubber and tin.

Malayalam \ˌmä-lə-'yä-ləm\ **language** Dravidian language spoken by more than 36 million people mainly in the Indian state of Kerala. Malayalam is closely related to Tamil, from which it is estimated to have separated about the 10th century AD. The earliest literary composition in the language is from the 13th century. Like other major Dravidian languages, Malayalam has a number of regional dialects, social dialects that reflect differences in caste and religion, and marked distinctions in formal and informal usage. Literacy among Malayalam speakers is believed to be higher than literacy among speakers of any other Indian language.

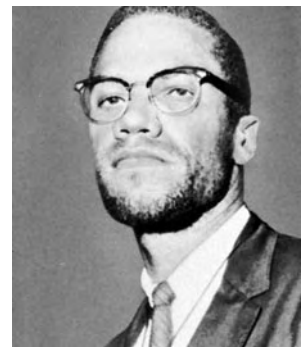
Malayan Emergency (1948–60) Period of unrest following the creation of the Federation of Malaya (precursor of Malaysia) in 1948. The Communist Party of Malaya, which was mostly Chinese, was alarmed at the special guarantees of rights for Malays (including the position of sultans) and began a guerrilla insurgency, which was supported by only a minority of the Chinese. British efforts to suppress the insurgency militarily were unpopular, especially their relocation of rural Chinese into tightly controlled "New Villages"; when the British addressed political and economic grievances, the rebels became increasingly isolated, and the emergency ended. See also Tunku Abdul Rahman Putra Alhaj; Malayan People's Anti-Japanese Army.

Malayan People's Anti-Japanese Army (MPAJA) Guerrilla movement formed to oppose the Japanese occupation of Malaya (Peninsular Malaysia) during World War II. The British military, foreseeing a Japanese invasion, trained small groups of Malayans as guerrilla troops; these became the MPAJA. Members of the MPAJA, who were primarily Chinese communists, emerged as heroes from the war and attempted to seize power before the British military returned. Its leadership then went underground until 1948, when they initiated the uprising called the Malayan Emergency.

Malayo-Polynesian languages See Austronesian languages

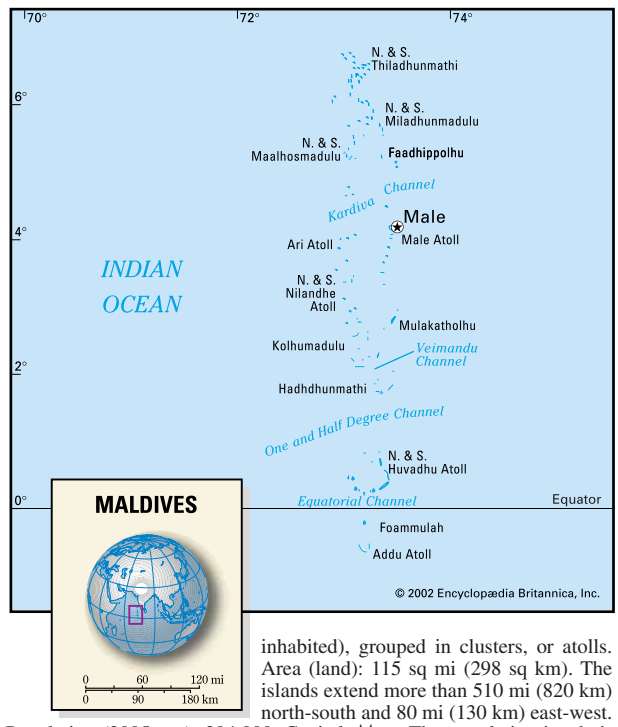
Malaysia Country, Southeast Asia. It is composed of two regions—Peninsular, or West, Malaysia and East Malaysia—separated by 400 mi (650 km) of the South China Sea. West Malaysia occupies the southern half of the Malay Peninsula (Malaya) and is bordered to the north by Thailand. East Malaysia lies on the northwestern part of the island of Borneo and consists of the states of Sarawak and Sabah. Area: 127,355 sq mi

© 2006 Encyclopædia Britannica, Inc.



(329,847 sq km). Population (2005 est.): 26,130,000. Capitals: KUALA LUMPUR/Putrajaya. Because of Malaysia's location on the heavily traveled Strait of MALACCA, the population is a highly diverse mix, in which ethnic Malays and Chinese form the largest groups and smaller ethnic groups include Indians, Pakistanis, and Tamils. Languages: Malay (official), Chinese, Indo-European languages. Religions: Islam (official), Buddhism, Christianity, Hinduism. Currency: ringgit. West Malaysia is largely mountainous; East Malaysia has coastal plains rising to hills and then to a mountainous core. Much of Malaysia is covered by rainforest. Tree crops, notably rubber and palm oil, are the most important cash crops; rice is the chief staple crop. Petroleum drilling and production and tin mining are important, as is the manufacture of electronic products, rubber goods, cement, and iron and steel products. Malaysia is a constitutional monarchy with two legislative houses; the chief of state is the paramount ruler, and the head of government is the prime minister. Malaya has been inhabited for 6,000–8,000 years. Small kingdoms existed in the 2nd–3rd century AD when adventurers from India first arrived. Sumatran exiles founded the city-state of Malacca c. 1400, and it flourished as a trading and Islamic religious centre until its capture by the Portuguese in 1511. Malacca passed to the Dutch in 1641. The British founded a settlement on SINGAPORE Island in 1819, and by 1867 they had established the STRAITS SETTLEMENTS, including Malacca, Singapore, and PENANG. During the late 19th century, Chinese began to migrate to Malaya. Japan invaded Malaya in 1941 and captured Singapore in 1942. After Japan's defeat in 1945, opposition to British rule led to the creation of the United Malays National Organization (UMNO) in 1946, and in 1948 the peninsula was federated with Penang. Malaya gained independence from Britain in 1957, and the Federation of Malaysia was established in 1963. Its economy expanded greatly from the late 1970s, though it experienced the regional economic slump of the mid- to late 1990s; the economy subsequently recovered.

Malcolm II (b. c. 954—d. Nov. 25, 1034) King of Scotland (1005–34). He acquired the throne after killing Kenneth III and defeating a Northumbrian army at Carham (c. 1016). He became the first king to reign over territory roughly equivalent to modern SCOTLAND. He tried to eliminate rivals to his grandson DUNCAN I, but Macbeth survived to challenge the succession.



Malcolm III Canmore (b. c. 1031—d. Nov. 13, 1093, near Alnick, Northumberland, Eng.) King of Scotland (1058–93). The son of King DUNCAN I, he lived in exile in England after Macbeth murdered his father. He defeated and killed Macbeth in 1057 and was crowned king, founding a dynasty that consolidated royal power in Scotland. He gave refuge to the Anglo-Saxon prince EDGAR THE AETHELING in 1066. Though he recognized WILLIAM I as overlord in 1072, Malcolm made five raids into England, during the last of which he was killed.

Malcolm X *orig.* **Malcolm Little** *later* **El-Hajj Malik El-Shabazz** (b. May 19, 1925, Omaha, Neb., U.S.—d. Feb. 21, 1965, New York, N.Y.) U.S. black Muslim leader. He was raised in Michigan, where the family house was burned by the Ku Klux Klan; his father was later murdered and his mother was institutionalized. He moved to Boston, drifted into petty crime, and was sent to prison for burglary in 1946. He converted to the Black Muslim faith (NATION OF ISLAM) the same year. On his release in 1952, he changed his last name to X to signify his rejection of his "slave name." Soon after meeting the Nation of Islam's leader, ELIJAH MUHAMMAD, he became the sect's most effective speaker and organizer. He spoke with bitter eloquence against white exploitation of blacks and derided the civil rights movement and integration, calling instead for black separatism, black pride, and the use of violence for self-protection. Differences with Elijah Muhammad prompted Malcolm to leave the Nation of Islam in 1964. A pilgrimage to Mecca led him to acknowledge the possibility of world brotherhood and to convert to orthodox Islam. Rival Black Muslims made threats against his life, and he was shot to death at a rally in a Harlem ballroom. His celebrated autobiography (1965) was written by ALEX HALEY on the basis of numerous interviews conducted shortly before Malcolm's death.

Maldives \'mȯl-ˌdēvz\ *officially* **Republic of Maldives** Archipelago country, north-central Indian Ocean southwest of Sri Lanka. It is a chain of about 1,200 small coral islands and sandbanks (some 200 of which are inhabited), grouped in clusters, or atolls. Area (land): 115 sq mi (298 sq km). The islands extend more than 510 mi (820 km) north-south and 80 mi (130 km) east-west. Population (2005 est.): 294,000. Capital: MALE. The population is ethnically mixed; ancestors include Dravidian and Sinhalese peoples as well as Arabs, Chinese, and others from surrounding Asian areas. Languages:

© 2006 Encyclopædia Britannica, Inc.

Divehi (official), Arabic. Religion: Islam (official; predominantly Sunni). Currency: rufiyaa. All the islands are low-lying, none rising more than 6 ft (1.8 m) above sea level. The atolls have sandy beaches, lagoons, and a luxuriant growth of coconut palms, together with breadfruit trees and tropical bushes. One of the world's poorest countries, the Maldives has a developing economy based on fishing, tourism, boatbuilding, and boat repairing. It is a republic with one legislative house; its head of state and government is the president. The archipelago was settled in the 5th century BC by Buddhists probably from Sri Lanka and southern India; according to tradition, Islam was adopted in 1153. The Portuguese held sway in Male in 1558–73. The islands were a sultanate under the Dutch rulers of Ceylon (Sri Lanka) during the 17th century. After the British gained control of Ceylon in 1796, the area became a British protectorate, a status formalized in 1887. The islands won full independence from Britain in 1965, and in 1968 a republic was founded and the sultanate abolished. The Maldives joined the British Commonwealth in 1982. Its economy has gradually improved, aided by the growth of tourism. In 2004 the archipelago was damaged by a large tsunami.

Maldon \'mȯl-dən**, Battle of** (991) Conflict fought between Saxons and victorious Viking raiders. The battle was commemorated in an Old English heroic poem, which described the war parties aligned on either side of a stream in Essex. It recorded the names of English deserters as well as those who stood fast against the Vikings.

Male \'mä-lē\ Chief atoll (pop., 2000: 74,069) and capital of the Maldives. Located in the centre of the Maldives, it comprises two groups of islets: North Male, which is 32 mi (51 km) by 23 mi (37 km); and South Male, which is 20 mi (32 km) by 12 mi (19 km). It has central courts, a government hospital, an international airport, and public and private schools. It is a trade and tourist centre.

Malebranche \mȧl-'brä^{n}sh**, Nicolas de** (b. Aug. 6, 1638, Paris, France—d. Oct. 13, 1715, Paris) French priest, theologian, and philosopher. His philosophy is an attempt to reconcile Cartesianism with the thought of St. Augustine and with Neoplatonism. Central to Malebranche's metaphysics is his doctrine of occasionalism, according to which what are commonly called "causes" are merely "occasions" on which God acts to produce effects. His principal work is *Search After Truth* (3 vol., 1674–75).

Malenkov \mə-'len-ˌkȯf**, Georgy (Maksimilianovich)** (b. Jan. 13, 1902, Orenburg, Russia—d. Jan. 14, 1988, near Moscow, Russia, U.S.S.R.) Soviet politician and prime minister (1953–55). He joined the Communist Party in 1920 and rose swiftly through the ranks as a close associate of Joseph Stalin. In 1946 he became a full member of the Politburo and deputy prime minister. After Stalin's death (1953), he was forced to yield his post as senior party secretary to Nikita Khrushchev, but as prime minister Malenkov worked to reduce arms appropriations, increase the production of consumer goods, and provide more incentives for collective farm workers. His programs were opposed by other party leaders, and he was forced to resign as prime minister (1955). Involved in the unsuccessful effort to depose Khrushchev, he was expelled from his other posts (1957) and from the party (1961) and was exiled to central Asia to manage a hydroelectric plant.

Malesherbes \mȧl-'erb**, Chrétien Guillaume de Lamoignon de** (b. Dec. 6, 1721, Paris, France—d. April 22, 1794, Paris) French royal administrator. A lawyer, he was made a counselor in the Parlement (high court) of Paris in 1744. As director of the press (1750–63), he allowed publication of many works by the philosophes, including Denis Diderot's *Encyclopédie*. In 1775 he became secretary of state for the royal household and instituted prison and legal reforms, including ending the misuse of lettres de cachet, and supported the economic reforms of the comptroller general, Anne-Robert-Jacques Turgot. He failed to win the king's support for his projects and resigned in 1776. In the French Revolution, he helped conduct the defense of Louis XVI (1792). He was arrested in 1793, tried for treason, and guillotined.

Malevich \mə-'lyā-vich**, Kazimir (Severinovich)** (b. Feb. 23, 1878, near Kiev, Russia—d. May 15, 1935, Leningrad) Russian painter and designer. He discovered Cubism on a trip to Paris in 1912 and returned to lead the Russian Cubist movement. In 1915 he exhibited paintings more abstractly geometrical than any seen before, consisting of simple geometrical forms painted in a limited palette, a style he called Suprematism. In 1917–18 he created his well-known *White on White* series, austere images of a white square floating on a white background. In 1919 he joined Marc Chagall at his revolutionary art school in Vitebsk, where he exerted a strong influence on El Lissitzky. In the 1920s he returned to representational painting but could not accede to the government's demand for Socialist Realism. Though his career was doomed, he greatly influenced Western art and design.

Malherbe \mə-'ler-bə**, François de** (b. 1555, in or near Caen, France—d. Oct. 16, 1628, Paris) French poet and theoretician. He converted to Roman Catholicism after receiving a Protestant education. In 1577 he became secretary to the governor of Provence, Henri d'Angoulême. His ode to the new queen, Marie de Médicis, made his name widely known, and he became court poet in 1605. His 200-odd surviving letters provide a picture of court life, and his commentary on the poetry of Philippe Desportes (1546–1606) reveal his principles of poetry: that it must demonstrate verbal harmony, propriety, and intelligibility.

Mali *officially* **Republic of Mali** Country, western Africa. Area: 482,077 sq mi (1,248,574 sq km). Population (2005 est.): 11,415,000. Capital: Bamako. The Bambara constitute about one-third of the total population. Other ethnic groups include the Fulani and the Berbers (Amazigh). Languages: French (official), Dogon, Bambara, Songhai, Soninke, Senufo, Arabic. Religions: Islam; also traditional beliefs, Christianity. Currency: CFA franc. Mali's terrain is largely flat, and in the north its plains stretch into the Sahara. The upper Niger River basin is in the south; nearly one-third of the total length of the Niger River flows through Mali. Only a tiny fraction of Mali's total land area is considered arable. Mineral reserves, which are largely unexploited, include iron ore, bauxite, gold, and copper. Agriculture constitutes the major economic activity. Staple crops include millet, sorghum, corn, and rice; cash crops include cotton and peanuts. Mali is a republic with one legislative house; its chief of state is the president, and the head of government is the prime minister. Inhabited since prehistoric times, the region was on a trans-Saharan caravan route. The Malinke empire of Mali was founded in the 12th century on the upper and middle Niger. In the 15th century the Songhai empire in the Timbuktu-Gao region gained control. Morocco invaded the area in 1591, and Timbuktu gradually declined in importance. In the mid-19th century the French conquered the area, which became part of French West Africa. In 1946 the area, known as the French Sudan, became an overseas territory of the French Union. In 1958 it was proclaimed the Sudanese Republic, and it joined with Senegal (1959–60) to form the Mali Federation. Senegal seceded, and in 1960 the independent Republic of Mali was formed. The government was overthrown by military coups in 1968 and 1991. Elections were held twice in the 1990s and again in 2002. The country has experienced continuing economic problems.

© 2006 Encyclopædia Britannica, Inc.

Mali empire Trading empire that flourished in West Africa in the 13th–16th centuries. It developed from the state of Kangaba on the upper Niger River and was probably founded before AD 1000. The Malinke inhabitants of Kangaba acted as middlemen in the gold trade in ancient Ghana. Growing in the 13th century under the leadership of Sundiata, it continued to expand in the 14th century and absorbed Gao and Timbuktu. Its boundaries extended to the Hausa people in the east and to Fulani and Tukulor peoples in the west. It eventually outgrew its political and military strength, and many of its subject areas revolted. By c. 1550 it had ceased to be an important political entity.

Malinke \mə-'liŋ-kē\ *or* **Mandinka** *or* **Mandingo** Cluster of peoples occupying parts of Mali, Guinea, Côte d'Ivoire, Senegal, Gambia, and Guinea-Bissau. They speak a Mande language of the Niger-Congo family. Numbering 4.7 million, they are divided into numerous independent groups dominated by a hereditary nobility. One group, the Kangaba, has one of the world's most ancient dynasties; its rule has been virtually continuous since the 7th-century founding of the Mali empire. Most contemporary Malinke grow millet and sorghum and tend cattle. In religion they are divided among Islam and indigenous faiths.

Malinovsky, Rodion (Yakovlevich) (b. Nov. 23, 1898, Odessa, Ukraine, Russian Empire—d. March 31, 1967, Moscow, Russia, U.S.S.R.) Soviet marshal prominent in World War II. A corps commander in 1941, he rose to army-group commands and played an important role in the Battle of Stalingrad, then commanded the Soviet drives into Romania (1944) and Austria (1945). After the war he held command positions in the Soviet Far East (1945–55). As minister of defense (1957–67), he oversaw a buildup of Soviet military power.

Malinowski \ˌma-lə-'nȯf-skē**, Bronisław (Kasper)** (b. April 7, 1884, Kraków, Pol., Austria-Hungary—d. May 16, 1942, New Haven, Conn., U.S.) Polish-British anthropologist. He is principally associated with studies of the peoples of Oceania and with the school of thought known as functionalism. After taking degrees in philosophy, physics, and mathematics in Poland, Malinowski happened upon James George Frazer's *The Golden Bough* and went to study anthropology at the London School of Economics and Political Science (1910–16). Doing research in the Trobriand Islands, he lived in a tent among the people (see Trobriander), spoke the vernacular fluently, recorded "texts" freely on the scene as well as in set interviews, and observed reactions with an acute clinical eye. He was thus able to present a dynamic picture of social institutions that clearly separated ideal norms from actual behaviour and in doing so laid much of the basis for modern anthropological field research. He taught at the London School of Economics (1922–38) and Yale University (1938–42). He wrote several works that are now considered classics of anthropology, including *Argonauts of the Western Pacific* (1922) and *Magic, Science and Religion* (1948).

Malinowski
COURTESY OF THE POLISH LIBRARY, LONDON

Malla era Period of Nepal's history when the Kathmandu Valley was ruled by the Malla dynasty (10th–18th century). The Malla ruler Jaya Sthiti (r. c. 1382–95) introduced a legal and social code strongly influenced by contemporary Hindu principles. In the early 18th century one of Nepal's independent principalities, Gurkha, began to challenge the Mallas, who were at that time weakened by familial dissension and social and economic discontent. They were overthrown by the Gurkha ruler Prithvi Narayan Shah in 1769. See also Newar.

mallard \'mal-ərd\ Abundant "wild duck" (*Anas platyrhynchos*, family Anatidae) of the Northern Hemisphere, ancestor of most domestic ducks. The mallard is a typical dabbling duck in its general habits and courtship display. The drake of the common mallard (subspecies *A. p. platyrhynchos*) has a metallic green or purplish head, reddish breast, and light-gray body; the hen is mottled yellowish brown. Both sexes have a yellow bill and a purplish blue, white-bordered wing mark. Males and females of the Greenland mallard (*A. p. conboschas*) also differ markedly in plumage. In the other subspecies, both sexes resemble the female common mallard. Mallards are found throughout most of Asia, Europe, and northern North America.

Mallarmé \mȧ-lȧr-'mā**, Stéphane** (b. March 18, 1842, Paris, France—d. Sept. 9, 1898, Valvins, near Fontainbleau) French poet. With Paul Verlaine, he was a founder and leader of the Symbolist movement. A schoolteacher throughout his life, Mallarmé made steady progress in his parallel career as a poet. Perhaps partly owing to tragedies in his life, most of his verse expresses an intellectual longing to transcend reality and find refuge in an ideal world, as in the dramatic poems *Hérodiade* (1869) and *L'Après-midi d'un faune* (1876; "The Afternoon of a Faun"), which inspired Claude Debussy's famous prelude, and the typographically innovative *Un Coup de dés* (1897). After 1868 he devoted himself to writing complex, exquisitely wrought, and extraordinarily difficult poems about the nature of imagination itself. The poems were intended for what he called his *Grand oeuvre*, which he never completed.

Stéphane Mallarmé, 1891.

Malle \'mȧl**, Louis** (b. Oct. 30, 1932, Thumeries, France—d. Nov. 23, 1995, Beverly Hills, Calif., U.S.) French film director. He made his first feature film, *Frantic*, in 1957. Malle gained commercial success with *The Lovers* (1958), starring Jeanne Moreau, and he became a leading figure in the French New Wave. In *The Fire Within* (1963), *Thief of Paris* (1967), *Murmur of the Heart* (1971), and *Lacombe, Lucien* (1973), he achieved emotional realism and stylistic simplicity. In 1975 he moved to the U.S., where he directed films such as *Pretty Baby* (1978), *Atlantic City* (1980), *My Dinner with André* (1981), *Au revoir les enfants* (1987), and *Vanya on 42nd Street* (1994).

Mallet, Robert (b. June 3, 1810, Dublin, Ire.—d. Nov. 5, 1881, London, Eng.) Irish civil engineer and scientific investigator. He studied at Trinity College and in 1831 took charge of his father's Victoria foundry, which he expanded into the dominant foundry in Ireland. His commissions included the construction of railroad terminals, the Nore viaduct, the Fastnet Rock lighthouse, and several swivel bridges over the Shannon. His major innovation in bridge technology was buckled-plate flooring. He built an early form of seismograph and advanced the technique of making large castings of iron, such as heavy cannon.

Mallorca See Majorca

mallow family Family Malvaceae (order Malvales), which contains about 95 genera of herbs, shrubs, and small trees. Mallow species occur in all but the coldest parts of the world, but they are most numerous in the tropics. Hairs that branch into starlike patterns commonly cover some or most vegetative (nonflower) parts of these plants. The flowers are regular and often showy. Cotton is the most important member of the family economically. The green fruits of okra are edible. Many species are valued as ornamentals, including hollyhock and rose of Sharon.

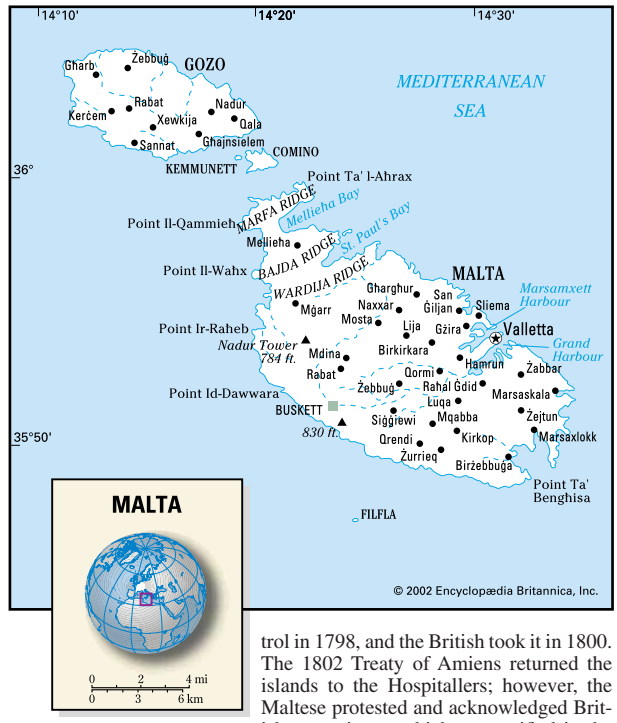
Malmö \'mäl-ˌmœ\ Port city (pop., 2000 est.: city, 259,579; metro. area, 522,857), southern Sweden, located across the Sound from Copenhagen. Originally known as Malmhaug, it was chartered in the late 13th century. Following its union with Sweden in 1658, it suffered an economic decline, partly because of the loss of trade. The building of the harbour in 1775 and the arrival of the railroad after 1800 stimulated economic development. Sweden's third largest city, it is an important commercial centre. Its economy is based on export products, shipbuilding, and textile manufactures. Its historic buildings include a 16th-century fortress, the town hall, and the 14th-century St. Peter's Church.

malnutrition Condition resulting from inadequate diet or from inability to absorb or metabolize nutrients. Food intake may be insufficient to supply calories or protein (see kwashiorkor) or deficient in one or more

© 2006 Encyclopædia Britannica, Inc.

essential VITAMINS or minerals. The latter case can lead to specific nutritional deficiency diseases (including BERIBERI, PELLAGRA, RICKETS, and SCURVY). Metabolic defects, especially of the digestive system, LIVER, KIDNEYS, or red blood cells, prevent proper DIGESTION, absorption, and metabolism of nutrients. See also NUTRITION.

Malory, Sir Thomas (fl. c. 1470) English author of *Le Morte Darthur* ("The Death of Arthur"). Even in the 16th century Malory's identity was unknown, but he is tentatively identified as a Welshman and knight who was imprisoned at various times. *Le Morte Darthur* (completed c. 1470) was the first account of ARTHURIAN LEGEND in English prose. Though based on French romances, it differs from its models in its emphasis on the brotherhood of the knights rather than on courtly love and on the conflicts of loyalty that destroy the fellowship. Only one extant manuscript predates its printing by WILLIAM CAXTON in 1485.



Malpighi \mal-'pē-gē**, Marcello** (b. March 10, 1628, Crevalcore, near Bologna, Papal States—d. Nov. 30, 1694, Rome) Italian physician and biologist. In 1661 he identified the pulmonary capillary network, proving WILLIAM HARVEY's theory on blood circulation. He discovered the taste buds and was the first to see red blood cells and realize that they gave blood its colour. He studied subdivisions of the liver, brain, spleen, kidneys, bone, and deeper skin layers (Malpighian layers), concluding that even the largest organs are composed of minute glands. Malpighi also studied insect larvae (especially the silkworm), chick embryology, and plant anatomy, seeing an analogy between plant and animal organization. He is regarded as the founder of microscopic anatomy and may be regarded as the first histologist.

malpractice NEGLIGENCE, misconduct, lack of ordinary skill, or breach of duty in the performance of a professional service (e.g., in medicine) that results in injury or loss. The plaintiff must usually demonstrate a failure by the professional to perform according to the field's accepted standards. Physicians, lawyers, accountants, and other professionals have increasingly been subject to malpractice suits in the U.S., causing a dramatic increase in malpractice insurance rates.

Malraux \mål-'rō**, André (-Georges)** (b. Nov. 3, 1901, Paris, France—d. Nov. 23, 1976, Paris) French novelist, art historian, and statesman. Imprisoned at age 21 by French colonial authorities while on an archaeological expedition in Cambodia, Malraux grew to be a fervent anticolonialist and advocate for social change. He became involved with revolutionary movements in Indochina and later fought in the Spanish Civil War and with the French Resistance during World War II. He was CHARLES DE GAULLE's minister of cultural affairs (1958–68). His novels, which often draw on his experiences, include *The Conquerors* (1928); *Man's Fate* (1933, Prix Goncourt), his masterpiece; and *Man's Hope* (1937). After 1945 he abandoned fiction for art history and criticism; *The Voices of Silence* (1951) is his major work of the period.

malt Grain product used in beverages and foods. Malt provides a basis for FERMENTATION and adds flavour and nutrients. It is made by steeping grain, usually BARLEY, in water and allowing partial GERMINATION to occur. The flavour of BEER primarily results from the malt from which it is made. The enzymes produced within the barley seed during germination break down STARCH into malt sugar, or maltose, which is then fermented by YEAST to yield alcohol and carbon dioxide. WHISKEY likewise is made with malt.

Malta Island country, south of Sicily in the Mediterranean Sea. It consists of the three inhabited islands Malta (the largest), Gozo, and Comino and the two uninhabited islets Comminotto and Filfla. Area: 122 sq mi (315 sq km). Population (2005 est.): 404,000. Capital: VALLETTA. Malta's population, nearly all native-born, has a mixture of Italian, Arab, British, and Phoenician heritage. Languages: Maltese, English (both official). Religion: Christianity (predominantly Roman Catholic [official]). Currency: Maltese lira. Although about one-third of its total land area is arable, Malta imports most of its food; tourism is its major industry. It is a republic with one legislative house; its chief of state is the president, and its head of government is the prime minister. Malta was inhabited as early as 3800 BC. Although there is limited evidence of a Phoenician presence, it seems clearer that the Carthaginians had arrived in Malta by the 6th century BC, and the island came under Roman control in 218 BC. In AD 60 St. PAUL the Apostle was shipwrecked on the island and converted the inhabitants to Christianity. It was under Byzantine rule until the Arabs seized control in 870. In 1091 the Normans defeated the Arabs, and Malta was ruled by a succession of feudal lords until the early 16th century. In 1530 it came under the control of the Hospitallers; NAPOLEON seized control in 1798, and the British took it in 1800. The 1802 Treaty of Amiens returned the islands to the Hospitallers; however, the Maltese protested and acknowledged British sovereignty, which was ratified in the 1814 Treaty of Paris. Malta became self-governing in 1921 but reverted to a colonial regime in 1936. Malta was heavily bombed by Germany and Italy during World War II, and in 1942 it received Britain's George Cross for "heroism and devotion," the first time that this medal was not conferred to an individual. In 1964 Malta gained independence within the Commonwealth, and it became a republic in 1974. When its alliance with Britain ended in 1979, Malta proclaimed its neutral status. In 2004 it joined the European Union.

Malta, Knights of See KNIGHTS OF MALTA

Maltese Breed of TOY DOG named for the island of Malta, where it may have originated about 2,800 years ago. Delicate-looking but vigorous, affectionate, and lively, it was once the valued pet of the wealthy and aristocratic. It has a long, silky, pure-white coat, hanging ears, a compact body, and a plumed tail that curves over its back. It stands about 5 in. (13 cm) and weighs up to 7 lbs (3 kg).

Maltese language Principal language of Malta, developed from a DIALECT of ARABIC closely related to those of Algeria and Tunisia. It has been strongly influenced by the ROMANCE LANGUAGES, especially Italian. Maltese is the only form of Arabic written in the LATIN ALPHABET.

Malthus \'mal-thəs**, Thomas Robert** (b. Feb. 14/17, 1766, Rookery, near Dorking, Surrey, Eng.—d. Dec. 23, 1834, St. Catherine, near Bath, Somerset) British economist and demographer. Born into a prosperous family, he studied at the University of Cambridge and was elected a fellow of Jesus College in 1793. In 1798 he published *An Essay on the Principle of Population*, in which he argued that population will always tend to outrun the food supply—that the increase of population will take place, if unchecked, in a geometrical progression, while the means of subsistence will increase only in an arithmetical progression. He believed population would expand to the limit of subsistence and would be held there by famine, war, and ill health. He enlarged on his ideas in later editions of his work (to 1826). He argued that relief measures for the poor should be strictly limited since they tended to encourage the growth of excess population. His theories, though largely disproven, had great influence on contemporary social policy and on such economists as DAVID RICARDO.

Malvinas, Islas See FALKLAND ISLANDS

mamba \'mäm-bə\ Any of four or five species of slender, agile ELAPID snakes (genus *Dendroaspis*, or *Dendraspis*) having large scales and long

© 2006 Encyclopædia Britannica, Inc.

front teeth. They inhabit sub-Saharan Africa, where they hunt small animals. The aggressive black mamba (*D. polylepis*), up to 14 ft (4.2 m) long, may be dull gray, greenish brown, or black, depending on age. It dens in rocky open country. It rears up to strike, biting a person's head or trunk. Its bite is nearly always fatal without antivenin treatment. The green mamba (e.g., *D. angusticeps*) is smaller (to 9 ft, or 2.7 m), more strongly arboreal, and less aggressive.

East African green mamba (*Dendroaspis angusticeps*).
E.S. ROSS

Mamet \'mam-it**, David (Alan)** (b. Nov. 30, 1947, Chicago, Ill., U.S.) U.S. playwright, director, and screenwriter. In 1973 he founded the St. Nicholas Theatre Co. in Chicago. He won wide notice with *Sexual Perversity in Chicago* (1974) and followed it with plays such as *American Buffalo* (1977) and *Glengarry Glen Ross* (1983, Pulitzer Prize). He became known for rapid-fire dialogue studded with obscenities and for his preoccupation with power relationships and corporate corruption. Mamet used the rhythms and rhetoric of everyday speech to delineate character, describe intricate relationships, and drive dramatic development. His later plays include *Speed-the-Plow* (1987), *Oleanna* (1992), and *The Cryptogram* (1994); his screenplays include *The Verdict* (1980) and *The Untouchables* (1986). He also wrote and directed films such as *House of Games* (1987) and *State and Main* (2000).

Mamlūk \'mam-ˌlük\ **dynasty** *or* **Mamluke** \'mam-ə-ˌlük\ **dynasty** (1250–1517) Rulers of Syria and Egypt. The term *mamlūk* is an Arabic word for slave. Slave soldiers had been used in the Islamic world since the 9th century, and they often exploited the military power vested in them to seize control from the legitimate political authorities. In 1250 a group of *mamlūk* generals seized the throne of the Ayyūbid dynasty on the death of the sultan Al-Malik al-Ṣāliḥ Ayyūb (r. 1240–49). The resulting dynasty legitimized its rule by reconstituting the caliphate of the ʿAbbāsid dynasty (destroyed by the Mongols in 1258) and by acting as patrons to the rulers of Mecca and Medina. Under Mamlūk rule the remaining crusaders were expelled from the eastern Mediterranean coast, and the Mongols were driven back from Palestine and Syria. Culturally, historical writing and architecture flourished during their rule. A shift in their ethnic makeup from Turkish to Circassian corresponded with their slow decline; their failure to adopt field artillery as weapons (except in siege warfare) contributed to their defeat by the Ottoman Empire in 1517. They afterward remained intact as a social class, however, and continued to exercise a high degree of political autonomy, though they were only one of several forces influencing Egyptian political life. Their power was finally broken by the Albanian-Egyptian officer Muḥammad ʿAlī in a massacre in 1811. See also Baybars I.

mammal Any member of the class (Mammalia) of warm-blooded vertebrates having four limbs (except for some aquatic species) and distinguished from other chordate classes by the female's milk-secreting glands and the presence of hair at some stage of development. Other unique characteristics include a jaw hinged directly to the skull, hearing through bones in the middle ear, a muscular diaphragm separating the pectoral and abdominal cavities, and nonnucleated mature red blood cells. Mammals range in size from the tiny shrew to the enormous blue whale. Monotremes (platypus and echidna) lay eggs; all other mammals bear live young. Marsupial newborns complete their development outside the womb, sometimes in a pouchlike structure. Placental mammals (see placenta) are born at a relatively advanced stage of development. The earliest mammals date from the late Triassic Period (which ended 206 million years ago); their immediate ancestors were the reptilian therapsids. For 70 million years mammals have been the dominant animals in terrestrial ecosystems, a consequence of two principal factors: the great behavioral adaptability provided by the ability of mammalian young to learn from their elders (a consequence of their dependence on their mothers for nourishment) and the physical adaptability to a wide range of climates and conditions provided by their warm-bloodedness. See also carnivore; cetacean; herbivore; insectivore; omnivore; primate; rodent.

mammary gland \'mam-ə-rē\ Milk-producing gland of female mammals, usually present but undeveloped and nonfunctional in males. Regulated by the endocrine system, it is derived from a modification of sweat glands. The mammary gland of a woman who has not borne children consists of a conical disk of glandular tissue, encased in fat that gives the breast its shape. The gland is made up of lobes drained by separate ducts that meet at the nipple. Pregnancy causes the cells lining the lobes to multiply, and lactation begins in response to hormones released starting at the time of birth. At the end of lactation, the glands return almost to their state before pregnancy. After menopause, they atrophy and are largely replaced by connective tissue and fat.

mammoth Any of several species (genus *Mammuthus*) of extinct elephants whose fossils have been found in Pleistocene deposits (beginning 1.8 million years ago) on every continent except Australia and South America. The woolly, Northern, or Siberian mammoth (*M. primigenius*) is the best-known species because the Siberian permafrost preserved numerous carcasses intact. Most species were about the size of modern elephants; some were much smaller. The North American imperial mammoth (*M. imperator*) grew to a shoulder height of 14 ft (4 m). Many species had a short, woolly undercoat and a long, coarse outer coat. Mammoths had a high, domelike skull and small ears. Their long, downward-pointing tusks sometimes curved over each other. Cave paintings show them traveling in herds. Mammoths survived until about 10,000 years ago; hunting by humans may have been a cause of their extinction. See also mastodon.

Mammoth Cave National Park National park, southwest-central Kentucky, U.S. The park, authorized in 1926 and established in 1941, occupies a surface area of 82 sq mi (212 sq km) that covers a system of limestone caverns. In 1972 a passage was discovered linking the Mammoth Cave and the Flint Ridge Cave System; the explored underground passages have a combined length of some 329 mi (530 km). The caves are inhabited by various animals that have undergone evolutionary adaptation to the dark, including cave crickets, blindfish, and blind crayfish. Mummified Indian bodies, possibly of pre-Columbian origin, have been found in the caves.

Mamoré \ˌmä-mō-'rā\ **River** River, north-central Bolivia. It rises in the Andes Mountains and in its upper course is sometimes known as Río Grande. It flows north to the Brazilian border, where it is joined by the Guaporé River; it forms the border of Bolivia and Brazil as far north as Villa Bella, where it joins the Beni River to form the Madeira River, after a total course of about 1,200 mi (1,900 km). It is navigable to Guajará-Mirim, Braz.

Mamoulian \mə-'mü-lē-ən**, Rouben** (b. Oct. 8, 1897, Tiflis, Georgia, Russian Empire—d. Dec. 4, 1987, Los Angeles, Calif., U.S.) Russian-U.S. director. After training as an actor at the Moscow Art Theatre, he moved to London in 1918, where he directed operettas and musicals. After immigrating to the U.S. in 1923, he worked for the Theatre Guild and directed the play *Porgy* (1927); he later directed the original production of its musical adaptation, *Porgy and Bess* (1935), and later musicals such as *Oklahoma!* (1943) and *Carousel* (1945). Invited to direct the film musical *Applause* (1929), he won acclaim for his innovative camera work; his later films include *City Streets* (1931), *Queen Christina* (1933) with Greta

Garbo, *Becky Sharp* (1935), *The Gay Desperado* (1936), *Blood and Sand* (1941), and *Silk Stockings* (1957). He was noted for the skillful blending of music and sound effects with an imaginative visual rhythm.

Ma'mūn \mä-'mün**, al-** (b. 786, Baghdad, Iraq—d. August 833, Tarsus, Cilicia) Seventh caliph (r. 813–833) of the ʿAbbāsid dynasty. He was the son of the celebrated Hārūn al-Rashīd and after his father's death (809) defeated his brother al-Amīn in a civil war (813) to assume the caliphate. Attempting to reconcile Sunnite and Shīʿite Muslims, he designated as his heir a Shīʿite, ʿAlī al-Riḍā, which failed to satisfy Shīʿite extremists and angered Sunnites. In any event, al-Ma'mūn was predeceased by his heir. He became a supporter of the Muʿtazilites, a theological school whose opinions on such issues as the nature of God and man's free will were at variance with accepted doctrine and found little popular support. His sponsorship of translations of Greek philosophical and scientific works and his building of observatories and libraries proved a more lasting legacy.

Man, Isle of Island, in the Irish Sea off the northwestern coast of England. Area: 221 sq mi (572 sq km). Population (2002 est.): 76,900. It is a self-governing crown possession of Britain, with its own legislature. The popularly elected House of Keys constitutes one of the most ancient legislative assemblies in the world. Capital: Douglas (pop., 2001: 25,347). The island is about 30 mi (48 km) long and 10 mi (16 km) wide. The Manx breed of tailless cats is believed to have originated there. The isle was home to Irish missionaries beginning in the 5th century AD. It was held by the Norse (9th–13th centuries), Scots (13th–14th centuries), and English settlers (from the 14th century). It was made a crown possession in 1828.

Man, Paul de See Paul de Man

Man o' War (foaled 1917) U.S. Thoroughbred racehorse. In two seasons (1919–20), he won 20 of 21 races, including the Preakness and Belmont stakes. (He did not run in the Kentucky Derby.) He sired 64 stakes horses, including War Admiral, a Triple Crown winner (1937). In a 1950 Associated Press poll, Man o' War was voted the greatest horse of the first half of the 20th century.

man-o'-war bird See frigate bird

Man Ray *orig.* **Emmanuel Radnitzky** (b. Aug. 25, 1890, Philadelphia, Pa., U.S.—d. Nov. 18, 1976, Paris, France) U.S. photographer, painter, and filmmaker. He grew up in New York City, where he studied architecture, engineering, and art. With Marcel Duchamp he formed the New York Dada group in 1917 and produced ready-mades. In 1921 he moved to Paris and became associated with the Surrealists. He rediscovered the technique for making "cameraless" pictures (photograms), which he called "rayographs," by placing objects on light-sensitive paper; he also experimented with the technique of solarization, which renders part of the image negative and part positive by exposing a print or negative to a flash of light during development. He turned to portrait and fashion photography and made a virtually complete record of the celebrities of Parisian cultural life of the 1920s and '30s. He also made important contributions as an avant-garde filmmaker in the 1920s.

mana \'mä-nə\ Among Polynesian and Melanesian peoples, a supernatural force or power that may be ascribed to persons, spirits, or inanimate objects. Mana may be either good or evil, beneficial or dangerous, but it is not impersonal; it is never spoken of except in connection with powerful beings or things. The term was first used in the 19th century in the West in connection with religion, but mana is now regarded as a symbolic way of expressing the special qualities attributed to persons of status in a hierarchical society, of providing sanction for their actions, and of explaining their failures. See also animism.

managerial economics Application of economic principles to decision making in business firms or other management units. The basic concepts are drawn from microeconomic theory, but new tools of analysis have been added. Statistical methods, for example, are increasingly important in estimating current and future demand for products. The methods of operations research and programming provide scientific criteria for maximizing profit, minimizing cost, and selecting the most profitable combination of products. Decision-making theory and game theory, which recognize the conditions of uncertainty and imperfect knowledge under which business managers operate, have contributed to systematic methods of assessing investment opportunities.

Managua \mä-'nä-gwä\ City (pop., 1995: 864,201), capital of Nicaragua. Located on the southern shore of Lake Managua, it was of minor importance during Spanish colonial times. It was selected as the nation's capital in 1857 when a choice between León and Granada could not be settled. It was devastated by earthquake and fire in 1931 and by another major earthquake in 1972. It was the scene of fighting in 1978–79 during the civil war. The largest city and commercial centre of Nicaragua, it has several institutions of higher education, including the University of Managua, now part of the National University of Nicaragua. Sites of interest include Darío Park, with its monument to poet Rubén Darío.

Managua, Lake *or* **Xolotlan** Lake, western Nicaragua. It occupies an area of 400 sq mi (1,035 sq km), extending 36 mi (58 km) long and 16 mi (25 km) wide. Located north of the city of Managua, it is fed by numerous streams rising in the central highlands and is drained by the Tipitapa River, which flows into Lake Nicaragua. Momotombo Volcano (4,199 ft [1,280 m]) is on the northwestern shore.

Manala \'mä-nä-ˌlä\ In Finnish mythology, the realm of the dead. Manala is ruled by the goddess Louhi, a fierce haglike creature. It is reached by crossing a fiery stream, the river of death, either over a narrow bridge or on a boat brought by a denizen of the other world. Though dark and gloomy, it is not a place of everlasting torment like the Christian hell.

Manama \mä-'nä-mə\ *Arabic* **Al-Manāmah** City (pop., 1999 est.: 162,000), capital of Bahrain. Situated at the northeastern tip of Bahrain island, it is Bahrain's largest city, with about one-third of the emirate's population, and is one of the Persian Gulf's most important ports. A commercial and financial centre enriched by Bahrain's oil wealth, it is linked by causeway with the nearby island city of Muḥarraq. First mentioned in Islamic chronicles c. 1345, it was taken by the Portuguese in 1521 and by the Ṣafavid Persians in 1602. It has been held, with brief interruptions, by the Khalīfah dynasty since 1783. It was the seat of the British political resident for the Persian Gulf (1946–71), after which it became the capital of independent Bahrain.

Manapouri Lake \ˌmä-nä-'půr-ē\ Lake, southwestern South Island, New Zealand. With a maximum depth of 1,455 ft (444 m), it is the deepest lake in the country. It is one of the Southern Lakes, located in Fiordland National Park. Its name derives from a Maori word meaning "lake of the sorrowing heart," and legend holds that its waters are the tears of dying sisters. It has an area of 55 sq mi (142 sq km) and drains a basin of 1,785 sq mi (4,623 sq km).

Manasarowar See Mapam Yumco

Manasseh ben Israel \mə-'na-sə-ben-'iz-rē-əl\ *orig.* **Manoel Dias Soeiro** (b. 1604, Lisbon?—d. Nov. 20, 1657, Middelburg, United Provinces of the Netherlands) Portuguese-born Dutch Hebrew scholar and Jewish leader. He was born to a family of Marranos whom persecution drove to Amsterdam. A brilliant theology student, he became rabbi of a Portuguese congregation in Amsterdam in 1622 and established the first Hebrew printing press there in 1626. In the belief that the messiah would come only when the Jews were dispersed throughout the world, he lobbied the English government to allow Jews to live in England, and he wrote *Vindication of the Jews* (1656). His efforts led to unofficial English acceptance of Jewish settlement and, after his death, to the granting of an official charter of protection to the Jews of England in 1664.

manatee Any of three species (family Trichechidae) of slow-moving, shallow-water herbivorous mammals. Manatees have a tapered body ending in a rounded flipper, no hind flippers, and foreflippers near the head. The Caribbean manatee (*Trichechus manatus*) lives along coasts of the southeastern U.S. and northern South America; the Amazonian manatee (*T. inunguis*) and the West African manatee (*T. senegalensis*) inhabit rivers and estuaries. Adults are 8–15 ft (2.5–4.5 m) long and weigh up to 1,500 lbs (700 kg). Manatees live singly or in small herds and are protected by law in most areas. The manatee or its relative, the dugong, may have given rise to the folklore of mermaids. See also sea cow.

Manaus \mä-'naůs\ City (pop., 2003 est.: 1,517,500), northwestern Brazil. Located in the heart of the Amazon rainforest, it lies along the northern bank of the Negro River above its junction with the Amazon River. The first European settlement was a small fort built in 1669. The village, called Villa da Barra, became the capital of the Río Negro captaincy general in 1809. It prospered from 1890 to 1920 as the hub for the region's only supply of rubber, after which it declined. Though 900 mi (1,450 km) from

© 2006 Encyclopædia Britannica, Inc.

the sea, it again became a major inland port and commercial centre, reviving economically in the mid-20th century. It has botanical gardens and an opera house, and the National Research Institute of Amazonia (INPA) and the Federal University of Amazonas are located there.

Manawatu \ˌmä-nä-ˈwä-tü\ **River** River, south-central North Island, New Zealand. The Manawatu flows northwest to pass between the Ruahine and Tararua ranges. It then runs southwest past Palmerston North to enter the South Taranaki Bight of the Tasman Sea. It is 113 mi (182 km) long.

Mance \ˈmäⁿs**, Jeanne** (b. Nov. 12, 1606, Langres, France—d. June 1673, Montreal) French founder of the first hospital in Montreal. A member of a French association that planned a utopian colony at Montreal, she sailed with the first settlers in 1641 and founded the Hôtel-Dieu de Montréal in 1644. After a trip to France (1657), she returned with Sisters Hospitallers to staff the hospital.

Mancha, La See Castilla-La Mancha

Manche, La See English Channel

Manchester City and metropolitan borough (pop., 1999: 431,000), in the metropolitan county of Greater Manchester, northwestern England. Lying northwest of London and east of Liverpool, it was the site of a Roman fort (AD 78–86) but was abandoned after the 4th century. By 919 the town of Manchester had sprung up nearby. In the 16th century it was important in the wool trade, and with the onset of the Industrial Revolution in the 18th century it became an important manufacturing city known for its textile production. The world's first modern railroad, the Liverpool and Manchester, opened in 1830. The city was beset by urban and industrial problems in the second half of the 20th century; thereafter it was redeveloped, ushering in a cultural renaissance. Its many educational institutions include the University of Manchester.

Manchester City (pop., 2000: 107,006), southern New Hampshire, U.S. Located on the Merrimack River, it is the state's largest city. It was settled in 1722–23 and incorporated as the town of Derryfield in 1751. One of America's first textile mills was built there in 1805, beginning a period of rapid industrial growth. Renamed Manchester in 1810, it was incorporated as a city in 1846. Canal systems built in the early 19th century opened navigation to Boston. The textile industry's decline in the 1930s spurred industrial diversification. It is the seat of St. Anselm College, Notre Dame College, and New Hampshire College.

Manchester, (Victoria) University of Public university in Manchester, England. It has its origins in a nonsectarian college for men founded in 1851. It became a university in 1880, having established colleges in Leeds and Liverpool which later (1903) became universities in their own right. Ernest Rutherford conducted important research on atomic physics at Manchester, and one of the first modern computers was built there in the late 1940s. The university grants undergraduate and advanced academic and professional degrees in a broad range of subjects.

Manchester school Political and economic school of thought led by Richard Cobden and John Bright that originated in meetings of the Manchester Chamber of Commerce in 1820 and dominated the British Liberal Party in the mid-19th century. Its followers believed in laissez-faire economic policies, including free trade, free competition, and freedom of contract, and were isolationist in foreign affairs. Its adherents tended to be businessmen, not theorists.

Manchu People, many of Juchen ancestry, who acquired a Manchu identity in the 17th century before conquering China and forming the Qing dynasty (1644–1911/12). Though official policy aimed to maintain the Manchus as a distinct people, this did not prevent considerable intermarriage and adoption of Chinese customs in areas of maximum contact with Chinese. China today recognizes the Manchu as a distinct ethnic group with over 10 million members living mainly in northeastern China.

Manchu dynasty See Qing dynasty

Manchu-Tungus \ˌman-ˈchü-tůŋ-ˈgüz\ **languages** *or* **Tungusic languages** Family of about 10 Altaic languages spoken by fewer than 55,000 people in Siberia, Mongolia, and northern China. All the languages have been losing ground for centuries as their speakers switch to the languages of surrounding populations—Russian and Yakut in Siberia, and Chinese, Turkic, and Mongolian languages in China. Evenki has about 10,000 speakers in Siberia and far northeastern China. Even has fewer than 6,000 speakers in northeastern Siberia and the Kamchatka Peninsula. Nanai has fewer than 7,000 speakers near the lower Amur River. Juchen, the tribal language of the founders of the Juchen dynasty, is now extinct, and Manchu is spoken by fewer than 100 people, though some 10 million inhabitants of northeastern China count themselves as ethnically Manchu. Effectively a dialect of Manchu is Xibe, spoken by 10,000 descendants of Manchu-speaking soldiers garrisoned at 18th-century military outposts.

Manchukuo \ˈman-ˈchü-ˈgwō\ *or* **Manchuguo** Puppet state created in 1932 by Japan out of the three historic provinces of Manchuria. After the Russo-Japanese War (1895), Japan gained control of the Russian-built South Manchurian Railway, and its army established a presence in the area; expansion in Manchuria was seen as necessary for Japan's status as an emerging world power. In 1931 the Japanese army created an excuse to attack Chinese troops there, and in 1932 Manchukuo was proclaimed an independent state. The last Qing emperor was brought out of retirement and made Manchukuo's ruler, but the state was actually rigidly controlled by the Japanese, who used it as their base for expansion into Asia. An underground guerrilla movement composed of Manchurian soldiers, armed civilians, and Chinese communists opposed the occupying Japanese, many of whom had come over to settle in the new colony. After Japan's defeat in 1945 the settlers were repatriated.

Manchuria \man-ˈchůr-ē-ə\ *or* **Northeast** *Chinese* **Dongbei** *or* **Tung-pei** \ˈdůŋ-ˈbā\ Historical region, northeastern China. It consists of the modern provinces of Liaoning, Jilin, and Heilongjiang; the northeastern portion of Inner Mongolia autonomous region is sometimes also included. Throughout the early Chinese dynasties, China had only limited control over Manchuria. In 1211 Genghis Khan invaded and occupied Manchuria. Chinese rebellions overthrew the Yuan dynasty of the Mongols in 1368, and the Ming dynasty was established. The Qing (Manchu) dynasty originated there (early 17th century) and eventually spread over China. Russia and Japan fought each other for a foothold in the region during the Russo-Japanese War (1904–05); after its defeat, Russia ceded southern Manchuria to Japan. The Japanese occupied all of Manchuria in 1931 and created the puppet state of Manchukuo in 1932. The Soviets captured Manchuria in 1945, and Chinese communist guerrillas soon came to power. In 1953 Beijing divided the region into its three current provinces. It is now one of China's most important industrial areas.

Mancini, Henry *orig.* **Enrico Nicola Mancini** (b. April 16, 1924, Cleveland, Ohio, U.S.—d. June 14, 1994, Beverly Hills, Calif.) U.S. composer. While serving in the army air force during World War II, he met Glenn Miller, and after the war he joined Miller's band as an arranger and pianist. He first gained wide attention with his jazz-inflected music for the television series *Peter Gunn* (1958), but he is perhaps best known for his humorous scores for Blake Edwards's *Pink Panther* movies. He worked extensively with Edwards throughout his career. He wrote scores for more than 80 films and won four Academy Awards for two songs—"Moon River" and "Days of Wine and Roses"—and for the film scores for *Breakfast at Tiffany's* (1961) and *Victor/Victoria* (1982). He also won 20 Grammy Awards and 2 Emmys.

Mancini \män-ˈchē-nē\ **family** Family of Italian sisters, noblewomen noted for their great beauty. Nieces of Jules Cardinal Mazarin, they moved to France at an early age. Laure Mancini, duchess de Mercoeur (1636–57), married Louis de Vendôme, duke de Mercoeur and grandson of King Henry IV. Olympe Mancini, countess de Soissons (1639–1708), was a mistress of Louis XIV. She was involved with her sister, Marie Anne, in the notorious "Affair of the Poisons" and was also accused of poisoning her husband; she was the mother of Prince Eugene of Savoy. Marie Mancini, princess de Colonna (1640–1715), was also a mistress of Louis XIV; Mazarin intrigued to prevent their marriage, and she spent most of her life in Spain. Hortense Mancini, duchess de Mazarin (1646–99), married Armand Charles de la Porté, who assumed the Mazarin title. After leaving her husband, she became a famous beauty at the English court of Charles II. Marie Anne Mancini, duchess de Bouillon (1649–1714), was known for her literary salon but was banished in 1680 for the alleged poisoning of the sorceress La Voisin (Catherine Monvoisin).

Mandaeanism \man-ˈdē-ə-ˌni-zəm\ Ancient Middle Eastern Gnostic sect surviving in Iraq and southwestern Iran. Like other dualistic systems, it stresses salvation of the soul through esoteric knowledge, or gnosis, of its divine origin. (Its name derives from *mandayya*, "having knowledge.") In its cosmology, evil Archons obstruct the soul's ascent through the

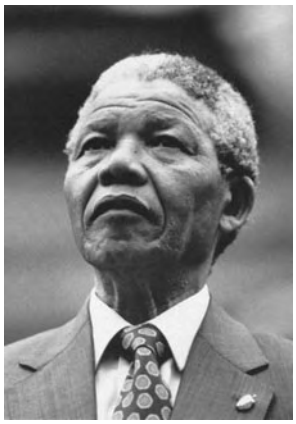
© 2006 Encyclopædia Britannica, Inc.

heavenly spheres to reunion with the supreme deity. Unlike many Gnostic systems, Mandaeanism supports marriage and forbids sexual license. It is also characterized by elaborate cultic rituals, particularly for baptism. Mandaeans view JESUS as a false messiah but revere JOHN THE BAPTIST, whose life is chronicled in their sacred writings. See also DUALISM, GNOSTICISM.

mandala \'mən-də-lə\ In Tantric Hinduism and Buddhism (see VAJRAYANA), a diagram representing the universe, used in sacred rites and as an instrument of MEDITATION. The mandala serves as a collection point for universal forces. By mentally "entering" the mandala and moving toward its centre, one is guided through the cosmic processes of disintegration and reintegration. Mandalas may be painted on paper or cloth, drawn on the ground, or fashioned of bronze or stone. Two types of mandalas represent different aspects of the universe: the *garbha-dhatu* ("womb world"), in which the movement is from one to the many, and the *vajra-dhatu* ("diamond world"), from the many into one.

Mandalay City (pop., 2004 est.: 1,176,900), central MYANMAR (Burma). Situated on the IRRAWADDY RIVER, it is the country's second largest city, after YANGÔN. It was built in 1857–59 by King Mindon to replace Amarapura as his capital. The last capital of the Myanmar kingdom, it fell to Britain in 1885. It was nearly destroyed during the Japanese occupation in World War II. An important Buddhist religious centre, it is the site of the famous Mahamuni pagoda and of 730 pagodas that house marble tablets inscribed with Buddhist scriptures.

Mandan \'man-ˌdan\ North American PLAINS INDIAN people living mostly in North Dakota, U.S. Their name is probably of French derivation. The Mandan language, which is SIOUAN, is nearly extinct. The Mandan, who lived in dome-shaped, earth-covered lodges clustered in stockaded villages, planted corn, beans, pumpkins, and sunflowers, hunted buffalo, and made pottery and baskets. They held elaborate ceremonies, including the SUN DANCE and the bear ceremony, a healing and war-preparation rite. They had age-graded warrior societies as well as shamanistic and women's societies. Artists depicted heroic deeds on buffalo robes. GEORGE CATLIN portrayed Mandan life and people in a series of paintings. According to him, they called themselves Seepohskahnumahkahkee, meaning "People of the Pheasant." By the mid-19th century the Mandan, reduced by smallpox, were removed to North Dakota's Fort Berthold Reservation, where they live with the HIDATSA and the Arikara as the Three Affiliated Tribes. Some 350 people claimed sole Mandan descent in the 2000 U.S. census.



Mandarin In imperial China, a public official drawn from the ranks of the lesser officeholders who had achieved success in the CHINESE EXAMINATION SYSTEM. The word comes from the Portuguese version of the Malay term for a minister of state. It has come to mean a pedantic official, a bureaucrat, or a person of position and influence (and usually a traditionalist or reactionary mindset) in intellectual or literary circles. The Mandarin language is the most widely spoken of the CHINESE LANGUAGES.

Mande \'män-ˌdā, män-'dā\ **languages** Branch of the NIGER-CONGO LANGUAGE FAMILY. Mande comprises 40 languages of West Africa with more than 20 million speakers in a more or less contiguous area of southeastern Senegal, The Gambia, southern Mauritania, southwestern Mali, eastern Guinea, northern and eastern Sierra Leone, northern Liberia, and western Côte d'Ivoire. Substantial numbers are also found in Guinea-Bissau, Guinea, and Burkina Faso; and there are very much smaller, isolated pockets in the region. The most significant subgroup is the Mandekan complex—a continuum of languages and dialects, including those spoken by the BAMBARA, MALINKE, Maninka, and Dyula—spoken from Senegal, The Gambia, and Guinea east through Mali to Burkina Faso. Mande, spoken in Sierra Leone, also has more than a million speakers. Several independent writing systems based on the syllable were developed by speakers of Mande languages. The best-known is the Vai script, but Mende, Loma, and Kpelle also have their own scripts.

Mandeb, Strait of *or* **Bab el-Mandeb** \'bäb-ål-'män-deb\ *Arabic* **Bāb al-Mandab** Strait that connects the RED SEA with the GULF OF ADEN. Its land boundaries are the ARABIAN PENINSULA (northeast) and the African coast (southeast), which are separated by some 20 mi (32 km). The strait is divided into two channels by Perim Island. Its name means "Gate of Tears," referring to the dangers that formerly attended its navigation.

Mandel \mäⁿ-'del**, Georges** *orig.* **Louis-Georges Rothschild** (b. June 5, 1885, Chatou, France—d. July 7, 1944, Fontainebleau) French political leader. A member of a prosperous Jewish family, he served as a personal aide to GEORGES CLEMENCEAU (1906–09, 1917–20), in the National Assembly (1919–24, 1928–40), and in cabinet posts (1934–40). As minister of the interior (1940), he supported PAUL REYNAUD's refusal to accept an armistice with Germany. Mandel was arrested in 1940, imprisoned in France and Germany, then returned to Paris in 1944, where he was shot on orders of the Vichy police chief.

Mandela \man-'del-ə**, Nelson** (b. July 18, 1918, Umtata, Cape of Good Hope, S.Af.) South African black nationalist leader and statesman. The son of a XHOSA chief, Mandela studied law at the University of Witwatersrand and in 1944 joined the AFRICAN NATIONAL CONGRESS (ANC). After the Sharpeville massacre (1960), he abandoned his nonviolent stance and helped found the "Spear of the Nation," the ANC's military wing. Arrested in 1962, he was sentenced to life imprisonment. He retained wide support among South Africa's black population and became an international cause célèbre. Released by Pres. F.W. DE KLERK in 1990, he replaced OLIVER TAMBO as president of the ANC in 1991. In 1993 Mandela and de Klerk were awarded the Nobel Peace Prize for their efforts to end APARTHEID and bring about the transition to nonracial democracy. In 1994 he was elected president in the country's first universal suffrage elections; by the time he stepped down in 1999, Mandela was the most universally respected figure of postcolonial Africa.

Nelson Mandela, 1990.

Mandelbrot \'man-dəl-ˌbrȯt**, Benoit B.** (b. Nov. 20, 1924, Warsaw, Pol.) Polish-born U.S. mathematician. He received a doctorate from the University of Paris and emigrated to the U.S. in 1958. He is best known for his work with fractals (a term he coined; see FRACTAL GEOMETRY), which, he showed, can occur in many different places in mathematics and in nature. He was influenced by Gaston Maurice Julia (1893–1978), whose work on dynamical systems theory had been forgotten until the 1970s, when Mandelbrot's fundamental computer experiments and use of computer graphics breathed new life into it. The Mandelbrot set is a mathematical set of imaginary numbers generated from a simple equation. It appears infinitely complex when graphed on a computer.

Mandelshtam \mən-dyil-'shtȧm**, Osip (Emilyevich)** *or* **Osip Emilyevich Mandelstam** (b. Jan. 15, 1891, Warsaw, Pol., Russian Empire—d. Dec. 27, 1938, Vtoraya Rechka, near Vladivostok, Russia, U.S.S.R.) Russian poet and critic. He published his first poems in 1910. A leader of the Acmeist poets, who rejected the mysticism and abstraction of Russian Symbolism, he wrote intellectually demanding, apolitical verse in such volumes as *Tristia* (1922). In 1934 he was arrested for an epigram about JOSEPH STALIN. While suffering from mental illness, he composed the *Voronezh Notebooks*, which contain some of his finest lyrics. Arrested again in 1938, he died in custody at age 47. Most of his works went unpublished in the Soviet Union until after Stalin's death, and he was almost unknown to generations of Russians and in other countries until the mid 1960s.

Mander \'män-dər**, Karel van** (b. May 1548, Meulebeke, Flanders, Spanish Netherlands—d. Sept. 2, 1606, Amsterdam, Neth.) Dutch painter, poet, and writer. Born of a noble family, after much wandering he settled in Haarlem in 1583 and founded a successful academy of painting with HENDRIK GOLTZIUS and Cornelis Cornelisz (1562–1638). He is best known for *The Book of Painters* (1604), which contains about 175 biographies of Dutch, Flemish, and German painters of the 15th–16th centuries; it became for the northern countries what GIORGIO VASARI's *Lives of the Painters* had been for Italy.

Mandeville \'man-də-ˌvil**, Sir John** (fl. 14th century) English purported author of a collection of Middle English traveler's tales. The tales are selections from the narratives of genuine travelers, embellished with Mandeville's additions and described as his own adventures. *The Voyage and Travels of Sir John Mandeville, Knight* originated in French c. 1356–57; an English version appeared c. 1375. The narrator declares that he is

© 2006 Encyclopædia Britannica, Inc.

writing of his travels in the years 1322 to 1356. Because most of the material was available in contemporary encyclopaedias and travel books, it is not clear whether the author ever traveled at all, but his literary skill and imagination have kept the book popular and highly readable. The actual author of the tales remains unknown. It is not certain that the English knight Sir John Mandeville ever existed.

Sir John Mandeville, detail from a manuscript, early 15th century; in the British Library (MS. Add. 24,189)

Mandingo See Malinke

Mandinka See Malinke

mandolin \ˌman-də-ˈlin\ Small stringed instrument related to the lute. It evolved in the 17th century in Italy, but its present form was strongly influenced by the 19th-century maker Pasquale Vinaccia (1806–82) of Naples. It has a pear-shaped body with a deeply vaulted back, a short fretted fingerboard, and four pairs of steel strings. (The American folk mandolin is a shallow, flat-backed version.) It is played with a plectrum; each pair of strings is strummed rapidly back and forth to produce a characteristic tremolo.

mandrake Any of six plant species of the genus *Mandragora* (nightshade family), native to the Mediterranean and the Himalayas. The best-known species, *M. officinarum*, has a short stem bearing a tuft of ovate flowers, with a thick, fleshy, often forked root. The mandrake has long been known for its poisonous properties. In ancient times it was used as a narcotic and an aphrodisiac, and it was believed to have magical powers. When pulled from the ground, its forked root, supposed to resemble the human form, was said to utter a shriek that killed or drove mad anyone who heard it. Once pulled, however, the plant was said to provide soothing sleep, heal wounds, induce love, and facilitate pregnancy. In North America, the name "mandrake" is often used for the mayapple (*Podophyllum peltatum*), a spring forest wildflower.

mandrill Diurnal monkey (family Cercopithecidae, usually genus *Mandrillus*) of equatorial African rainforests, known for its striking colouring. The stout-bodied, primarily terrestrial mandrill has a short tail, prominent brow ridges, and small, close-set, sunken eyes. The ribbed bare skin on the adult male's cheeks is bright blue, with scarlet on the nose; the buttock pads are pink to crimson, shading to bluish; and the beard and neck are yellow. The adult male is about 3 ft (90 cm) long and weighs about 45 lb (20 kg); the female is duller and smaller. Mandrills eat fruit, roots, insects, and small reptiles and amphibians.

Mandrill (*Mandrillus sphinx*).

Manes See Mani

Manet \mä-ˈnā**, Édouard** (b. Jan. 23, 1832, Paris, France—d. April 30, 1883, Paris) French painter and printmaker. His father, a prosperous civil servant, wanted him to pursue a naval career, but he was a poor student interested only in drawing. After having a few paintings accepted by the Salon, in 1863 the jury of the Salon rejected his *Déjeuner sur l'herbe*, and so Manet instead exhibited it at the Salon des Refusés (established to exhibit the many works rejected by the official Salon). This large canvas aroused loud disapproval from critics, who were offended by the presence of a naked woman in the company of two young men clothed in contemporary dress. At the Salon of 1865, his painting *Olympia*, created two years earlier, also caused a scandal: the painting's reclining female nude gazes brazenly at the viewer and is depicted in a harsh, brilliant light that obliterates traditional modeling and turns her into an almost two-dimensional figure. In the mid 1870s he became friendly with Claude Monet and the other Impressionists; while Manet would not participate in their independent exhibitions, for a time he experimented with some of their techniques. In 1882 he created the painting *A Bar at the Folies-Bergère* (1882), a daring, controversial composition that was radical in its obliteration of the boundary between the viewer and what is viewed. The critical resistance to Manet's work did not abate until near the end of his career; it was not until the 20th century that his reputation was secured by art historians and critics. His daring, unflinching approach to his painting and to the art world assured both him and his work a pivotal place in the history of modern art.

A Bar at the Folies-Bergère, oil on canvas by Édouard Manet, 1882; in the Courtauld Institute Galleries, London.
COURTAULD INSTITUTE GALLERIES, LONDON (COURTAULD COLLECTION)

Manfred *Italian* **Manfredi** (b. c. 1232—d. Feb. 26, 1266, near Benevento, Kingdom of Naples) King of Sicily (1258–66). Born out of wedlock, the son of Frederick II, he was made vicar of Italy and Sicily for his half brother Conrad IV, but, following Conrad's death, Manfred sought the Sicilian crown for himself. He resisted Pope Alexander IV's efforts to assign the throne to an English rival, and, after fighting off a papal army, Manfred was crowned king in 1258. He became a defender of the Ghibellines in northern Italy (see Guelphs and Ghibellines). Pope Urban IV declared Charles of Anjou (later Charles I) king of Sicily, and Manfred fell in battle against Charles's army.

mangal-kavya \ˈməŋ-gəl-ˈkä-vyə\ Type of verse in honour of a god or goddess in Bengal. Most *mangal-kavya* tell how a local deity established his or her worship on earth. They are often recited at the festivals of the deities they praise. Some have become so popular that performers sing them to entertain village audiences. Many variants exist, since each singer is free to change the verses. Most are written in a simple couplet form, using earthy imagery drawn from village, field, and river.

manganese \ˈmaŋ-gə-ˌnēz\ Metallic chemical element, one of the transition elements, chemical symbol Mn, atomic number 25. It is a silvery white, hard, brittle metal, widely distributed in Earth's crust in combination with other elements. Nodules rich in manganese occur in huge quantities on the seafloor, but no economical way to mine them has been devised. More than 95% of the manganese produced is used in iron and steel alloys and much of the rest in nonferrous aluminum and magnesium alloys to improve their corrosion resistance and mechanical properties. Manganese compounds, in which it has various valences, are used in fertilizers and textile printing and as reagents and raw materials. Potassium permanganate is used for disinfecting, deodorizing, and bleaching and as a reagent in analysis. Manganese is essential to plants for growth and to higher animals to promote the action of many enzymes.

mango Evergreen tree and fruit (*Mangifera indica*) of the sumac, or cashew, family, one of the most important and widely cultivated fruits of the tropical world. The yellow to orange fruit is juicy, distinctively spicy, and a rich source of vitamins A, C, and D. Mango fruit varies in shape, colour, and size from ovoid to long, from vividly red and yellow to dull green, and from plum- to melon-size. It is used in Theravada Buddhist

© 2006 Encyclopædia Britannica, Inc.

ceremonies. The long-lived tree reaches 50–60 ft (15–18 m) and has long, lance-shaped leaves and clusters of small, pinkish, fragrant flowers.

mangrove Any of certain shrubs and trees of the families Rhizophoraceae, Verbenaceae, Sonneratiaceae, and Arecaceae (PALM) that grow in dense thickets or forests along tidal estuaries, in salt marshes, and on muddy coasts. The term also applies to the thickets and forests of such plants. Mangroves characteristically have prop roots (exposed, supporting roots). In addition, in many species respiratory, or knee, roots project above the mud and have small openings through which air enters, passing through the soft, spongy tissue to the roots beneath the mud. Mangrove fruits put out an embryonic root before they fall from the tree; the root may fix itself in the mud before the fruit separates from the parent. Likewise, branches and trunks put out adventitious roots which, once they are secure in the mud, send up new shoots. The common mangrove (*Rhizophora mangle*) grows to about 30 ft (9 m) tall and bears short, thick, leathery leaves on short stems, and pale-yellow flowers. Its fruit is sweet and wholesome.

Manhae See HAN YONGUN

Manhattan Borough (pop., 2000: 1,537,195) of NEW YORK CITY, southeastern New York, U.S. It includes all of Manhattan island and three smaller islands in the EAST RIVER. Bounded by the HUDSON RIVER, Harlem River, East River, and Upper New York Bay, it is said to have been purchased by PETER MINUIT in 1626 from the Manhattan Indians with trinkets valued at 60 guilders. Incorporated as New Amsterdam in 1653, it was obtained by Britain in 1664 and renamed New York City. In 1898 Manhattan was chartered as one of five boroughs making up Greater New York. It is one of the world's great commercial, financial, and cultural centres. Among its many points of interest are CENTRAL PARK, the EMPIRE STATE BUILDING, the site of the former WORLD TRADE CENTER, the UNITED NATIONS headquarters, WALL STREET, the METROPOLITAN MUSEUM OF ART, the MUSEUM OF MODERN ART, LINCOLN CENTER for the Performing Arts, CARNEGIE HALL, COLUMBIA UNIVERSITY, the JUILLIARD SCHOOL, and New York University.

Manhattan Project (1942–45) U.S. government research project that produced the first ATOMIC BOMB. In 1939 U.S. scientists urged Pres. FRANKLIN D. ROOSEVELT to establish a program to study the potential military use of fission, and $6,000 was appropriated. By 1942 the project was codenamed Manhattan, after the site of Columbia University, where much of the early research was done. Research also was carried out at the University of California and the University of Chicago. In 1943 a laboratory to construct the bomb was established at LOS ALAMOS, N.M., and staffed by scientists headed by J. ROBERT OPPENHEIMER. Production also was carried out at Oak Ridge, Tenn., and Hanford, Wash. The first bomb was exploded in a test at Alamogordo air base in southern New Mexico. By its end the project had cost some $2 billion and had involved 125,000 people.

Mani \mä-'nē\ *or* **Manes** \mä-'nē, 'mā-nēz\ *or* **Manichaeus** \ˌma-nə-'kē-əs\ (b. April 14, 216, southern Babylonia—d. 274?, Gundeshapur) Persian founder of MANICHAEISM. He had his first vision of an angel in his boyhood, and when he was 24 the angel reappeared and called him to preach a new religion. He traveled to India and made converts there. The Persian king Shapur I permitted him to preach in the Persian empire, but, during the reign of Bahram I, Mani was attacked by Zoroastrian priests. After a 26-day trial he was sentenced to prison, where he died.

manic-depressive psychosis See BIPOLAR DISORDER

Manichaeism \'ma-nə-ˌkē-ˌi-zəm, ˌma-nə-'kē-ˌi-zəm\ Dualistic religion founded by MANI in Persia in the 3rd century AD. Inspired by a vision of an angel, Mani viewed himself as the last in a line of prophets that included ADAM, BUDDHA, ZOROASTER, and JESUS. His writings, now mostly lost, formed the Manichaean scriptures. Manichaeism held that the world was a fusion of spirit and matter, the original principles of good and evil, and that the fallen soul was trapped in the evil, material world and could reach the transcendent world only by way of the spirit. Zealous missionaries spread its doctrine through the Roman empire and the East. Vigorously attacked by both the Christian church and the Roman state, it disappeared almost entirely from Western Europe by the end of the 5th century but survived in Asia until the 14th century. See also DUALISM.

Manicouagan \ˌma-ni-'kwä-gən\ **River** River, eastern Quebec province, Canada. Rising near the Labrador border, it flows south to empty into the ST. LAWRENCE RIVER near its mouth. From its remotest headstream it is more than 340 mi (550 km) long. The region's dense forests are the source of its Indian name, meaning "where there is bark." The Daniel-Johnson Dam, one of the world's largest multiarch dams, generates hydroelectric power.

Manifest Destiny Concept of U.S. territorial expansion westward to the Pacific Ocean. The phrase was coined in 1845 by the editor John L. O'Sullivan, who described the U.S. annexation of Texas and, by extension, the occupation of the rest of the continent as a divine right of the American people. The term was used to justify the U.S. annexation of Oregon, New Mexico, and California and later U.S. involvement in Alaska, Hawaii, and the Philippines.

manifold In mathematics, a topological space (see TOPOLOGY) with a family of local COORDINATE SYSTEMS related to each other by certain classes of coordinate TRANSFORMATIONS. Manifolds occur in ALGEBRAIC GEOMETRY, DIFFERENTIAL EQUATIONS, and classical DYNAMICS. They are studied for their global properties by the methods of ALGEBRA and ALGEBRAIC TOPOLOGY and form a natural domain for the global ANALYSIS of differential equations. See also TENSOR ANALYSIS.

Manila City (pop., 2000: city, 1,581,082; metro. area, 9,932,560), capital of the PHILIPPINES. Located on LUZON island on the eastern shore of MANILA BAY, it is the chief port and the economic, political, and cultural centre of the Philippines. The walled Muslim settlement originally built on the site was destroyed by Spanish CONQUISTADORS, who founded the fortress city of Intramuros in 1571. It was briefly held by the British (1762–63) during the SEVEN YEARS' WAR. During the SPANISH-AMERICAN WAR, U.S. forces gained control of Manila in 1898. Occupied by the Japanese in 1942, it was widely damaged during the fight for its recapture by U.S. forces in 1945. In 1946 it became the capital of the newly independent Republic of the Philippines, and was rebuilt. QUEZON CITY became the capital in 1948, but Manila regained that position in 1976. In addition to its diversified industries, including shipbuilding and food processing, it is the seat of several universities.

Manila Bay Inlet of the South CHINA SEA extending into southwestern LUZON island, Philippines. Considered one of the world's great harbours, it forms a nearly landlocked body of water with an area of 770 sq mi (2,000 sq km). It measures 36 mi (58 km) across at its widest point. The decisive Battle of MANILA BAY, in the SPANISH-AMERICAN WAR, took place there in 1898. The Japanese gained control of the bay in 1942 during World War II, but it was recaptured by U.S. forces in 1945. Corregidor Island, the scene of intense fighting in the war, divides the bay's entrance into the South Channel and the North Channel.

Manila Bay, Battle of (May 1, 1898) Naval engagement in the SPANISH-AMERICAN WAR. The U.S. Asiatic Squadron under GEORGE DEWEY was ordered to sail from its Hong Kong base to destroy the Spanish fleet then in the Philippines. In one morning the guns of Dewey's squadron completely destroyed the Spanish ships anchored in Manila Bay. The Spanish suffered 381 casualties, the Americans fewer than 10. Manila later surrendered and was occupied by U.S. troops in August. The battle established the U.S. as a major naval power.

Manin \mä-'nēn**, Daniele** (b. May 13, 1804, Venice—d. Sept. 22, 1857, Paris, France) Italian leader of the RISORGIMENTO in Venice. A lawyer in the Austrian province of Venitia, Manin became a proponent of home rule and was imprisoned in 1848. He was freed following the rebellion that year and became president of the Venetian republic, reluctantly accepting union with the kingdom of Piedmont-Sardinia in the name of Italian unification. He led a heroic defense of Venice against an Austrian siege, but he was forced to surrender in 1849. Banished, he lived in Paris the rest of his life, but in 1868 his body was returned to liberated Venice for a state funeral.

Manipur \'mə-ni-ˌpůr\ State (pop., 2001 prelim.: 2,388,634), northeastern India. Occupying an area of 8,621 sq mi (22,327 sq km), it is bordered by MYANMAR (Burma) and the states of NAGALAND, ASSAM, and MIZORAM; its capital is IMPHAL. Its two main physical features are the Manipur River valley and the western mountainous region. In 1762 and 1824 Manipur requested British assistance in repelling Burmese invasions. The British administered the area in the 1890s, but in 1907 a local government took over; a tribal uprising in 1917 led to a new government administered from Assam. In 1947 Manipur acceded to the Indian union;

© 2006 Encyclopædia Britannica, Inc.

it was ruled as a union territory until it became a state in 1972. Agriculture and forestry are economic mainstays.

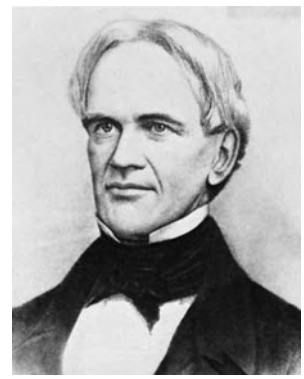
Manitoba \ˌma-ni-ˈtō-bə\ Province (pop., 2001: 1,119,583), central Canada. It is bounded by Nunavut, Hudson Bay, Ontario, Saskatchewan, and by the U.S.; its capital is Winnipeg. Three-fifths of its territory is covered by the Canadian Shield, an area of rocks, forests, and rivers. The region was first inhabited by the Inuit (Eskimo) and by the Cree, Assiniboin, and Ojibwa peoples. The Hudson's Bay Co. opened Manitoba to European influence, and the region became a focus of French and British competition for Canadian fur trade dominance; it was ceded by France to Britain in 1763. The Métis rebellion led to the passage of the Manitoba Act in 1870, making it the fifth province of the Dominion of Canada. Steamboat and rail transportation opened the province to settlers from Europe in the late 19th century. Though much of the economy is based on farming, lumbering, and mining, heavy industry has become important to an expanding Winnipeg.

Manitoba, Lake Lake, south-central Manitoba, Canada. Located northwest of Winnipeg, it drains into Lake Winnipeg. It is more than 125 mi (200 km) long and up to 28 mi (45 km) wide, with an area of 1,785 sq mi (4,624 sq km). It was discovered in 1738 by Pierre La Vérendrye, who named it Lac des Prairies. The name Manitoba is believed to come from the Algonquian word *maniot-bau* or *maniot-wapau* ("strait of the spirit").

Manitoba, University of Canadian public university in Winnipeg, founded in 1877. It has faculties of agricultural and food sciences, architecture, arts and sciences, education, engineering, law, graduate studies, management, medicine, human ecology, and social work, among other fields. Campus facilities include centres for the study of aging, defense and security, and diabetes.

Manizales \ˌmä-nē-ˈsā-lās\ City (pop., 1999 est.: 337,580), central Colombia. It is situated on a ridge of the Cordillera Central of the Andes Mountains, at an elevation of 6,975 ft (2,126 m) above sea level; its cathedral is visible for miles in all directions. Founded in 1848, it is the commercial centre of Colombia's most important coffee-growing district. It is connected by highway and railroad with Cali and by cableway with Mariquita. It is the seat of the University of Caldas.

Manjusri \ˌmən-ˈjü-shrē\ In Mahayana Buddhism, the bodhisattva personifying supreme wisdom. He is usually considered a celestial being, though some traditions give him a human history. Sutras were composed in his honor by AD 250, and he appears in Buddhist art by AD 400. He is often shown wearing princely ornaments and holding aloft the sword of wisdom, and he is sometimes seated on a lion or a blue lotus. His cult spread widely in China in the 8th century, and Mount Wutai in Shanxi province, which is dedicated to him, is covered with his temples.



Manjusri, basalt figure from Java, 1343; formerly in the Museum für Indische Kunst, Staatliche Museen, Berlin (missing from 1945).
COURTESY OF THE MUSEUM FUR INDISCHE KUNST, STAATLICHE MUSEEN, BERLIN

Mankiewicz \ˈman-ki-ˌwits**, Joseph L(eo)** (b. Feb. 11, 1909, Wilkes-Barre, Pa., U.S.—d. Feb. 5, 1993, Mount Kisco, N.Y.) U.S. film director, producer, and screenwriter. He wrote scripts for Paramount from 1929 and later produced movies such as *The Philadelphia Story* (1940) and *Woman of the Year* (1942). Known for his witty, urbane dialogue and memorable characters, he wrote and directed films such as *A Letter to Three Wives* (1949, Academy Awards for best director and screenplay), *All About Eve* (1950, Academy Awards for best picture, director, and screenplay), and *The Barefoot Contessa* (1954), and directed *Julius Caesar* (1953), *Suddenly Last Summer* (1959), and the disastrously expensive *Cleopatra* (1963). His older brother, Herman (1897–1953), was a screenwriter and a famous wit, best remembered as the principal author of *Citizen Kane* (1941, Academy Award).

Manley, Michael (Norman) (b. Dec. 10, 1924, St. Andrew, Jam.—d. March 6, 1997, Kingston) Jamaican political leader. Son of a prime minister of Jamaica and a sculptor, Manley was a leader of the People's National Party and the National Worker's Union before becoming prime minister in 1972. His leftist government made significant improvements in housing, education, and health care, but a dramatic rise in oil prices precipitated an economic crisis. Much of the middle class fled the country, unemployment rose to 30%, and violence broke out in the run-up to the 1980 election, in which he was defeated. He was reelected in 1989, this time as a moderate; he stepped down in 1992 for health reasons.

Mann, Horace (b. May 4, 1796, Franklin, Mass., U.S.—d. Aug. 2, 1859, Yellow Springs, Ohio) U.S. educator, the first great American advocate of public education. Raised in poverty, Mann educated himself at the Franklin, Mass., town library and gained admission to Brown University. He later studied law and was elected to the state legislature. As state secretary of education he vigorously espoused educational reform, arguing that in a democratic society education should be free and universal, nonsectarian, and reliant on well-trained, professional teachers. In his later years he served in the U.S. Congress (1848–53) and as first president of Antioch College, (1853–59) and he worked resolutely to end slavery.

Horace Mann

Mann \ˈmän**, Thomas** (b. June 6, 1875, Lübeck, Ger.—d. Aug. 12, 1955, near Zürich, Switz.) German novelist and essayist, considered the greatest German novelist of the 20th century. After a brief period of office work, Mann devoted himself to writing, as had his elder brother Heinrich (1871–1950). *Buddenbrooks* (1901), his first novel, was an elegy for old bourgeois virtues. In the novella *Death in Venice* (1912), a sombre masterpiece, he took up the tragic dilemma of the artist in a collapsing society. Though ardently patriotic at the start of World War I, after 1919 he slowly revised his views of the authoritarian German state. His great novel *The Magic Mountain* (1924) clarified his growing espousal of Enlightenment principles as one strand of a complex and multifaceted whole. An outspoken opponent of Nazism, he fled to Switzerland on Adolf Hitler's accession; he settled in the U.S. in 1938 but returned to Switzerland in 1952. His tetralogy *Joseph and His Brothers* (1933–43) concerns the biblical Joseph. *Doctor Faustus* (1947), his most directly political novel, analyzes the darker aspects of the German soul. The often hilarious *Felix Krull, Confidence Man* (1954) remained unfinished. He is noted for his finely wrought style enriched by humour, irony, and parody and for his subtle, many-layered narratives of vast intellectual scope. His essays examined such figures as Leo Tolstoy, Sigmund Freud, Johann Wolfgang von Goethe, Friedrich Nietzsche, Anton Chekhov, and Friedrich Schiller. He received the Nobel Prize for Literature in 1929.

Mannerheim \ˈmä-nər-ˌhām**, Carl Gustaf (Emil)** (b. June 4, 1867, Villnäs, Fin.—d. Jan. 27, 1951, Lausanne, Switz.) Finnish soldier and president of Finland (1944–46). A career officer in the Russian imperial army (1889–1917), he commanded the anti-Bolshevik forces (1918) in the Finnish Civil War and expelled the Soviet forces. He served as regent of Finland (1918–19) until the new republic was declared. As chairman of the national defense council (1931–39) he oversaw construction of the Mannerheim line of fortifications across the Karelian Isthmus. As commander in chief of Finnish forces (1939–40, 1941–44), he won initial successes against greatly superior Soviet forces in the Russo-Finnish War (1939–40). Named president of the Finnish republic in 1944, he negotiated a peace agreement with the Soviets.

Mannerism Artistic style that predominated in Italy from the end of the High Renaissance in the 1520s to the beginnings of the Baroque period c. 1590. Mannerism originated in Florence and Rome but ultimately spread as far as central and northern Europe. A reaction to the harmonious Classicism and idealized naturalism of High Renaissance art, Mannerism was concerned with solving intricate artistic problems, such as portraying nudes in complex poses. The figures in Mannerist works fre-

© 2006 Encyclopædia Britannica, Inc.

quently have graceful but queerly elongated limbs, small heads, and stylized facial features, while their poses seem difficult or contrived. The deep, linear perspectival space of High Renaissance painting is flattened and obscured so that the figures appear as a decorative arrangement of forms in front of a flat background of indeterminate dimensions. Mannerists sought a continuous refinement of form and concept, pushing exaggeration and contrast to great limits. After being superseded by the Baroque style, it was seen as decadent and degenerative. By the 20th century it was appreciated anew for its technical bravura and elegance. Major artists who practiced the style include PARMIGIANINO, FEDERICO ZUCCARO, and IL BRONZINO.

Mannheim City (pop., 2002: city, 308,385; metro. area, 1,568,679), southwestern Germany. One of Europe's largest inland ports, it is situated on the RHINE RIVER at the mouth of the NECKAR RIVER. It was a village in the 8th century, fortified by Elector Frederick IV, and chartered in 1607. The town was twice destroyed in wars during the 17th century and was rebuilt when the Palatine electors (see PALATINATE) moved their residence there in 1720. Destroyed again in 1795, the city was rebuilt and became a centre of the revolutionary movement in 1848. Mannheim is an industrial centre, manufacturing chemicals, textiles, and fertilizers.

Mannheim \'män-ˌhīm**, Karl** (b. March 27, 1893, Budapest, Austria-Hungary—d. Jan. 9, 1947, London, Eng.) Hungarian sociologist. Mannheim taught in Germany (University of Heidelberg, 1926–30; Frankfurt am Main, 1930–33) before the rise of Adolph Hitler. He was invited to England by political scientist HAROLD LASKI and for the rest of his career taught there (London School of Economics, 1933–43; University of London, 1943–47). He helped found the sociology of knowledge, the study of how knowledge is produced and maintained in societies. He emphasized the role that IDEOLOGY plays in shaping knowledge, a view he discussed in his major work, *Ideology and Utopia* (1929).

Manning, Henry Edward *known as* **Cardinal Manning** (b. July 15, 1808, Totteridge, Hertfordshire, Eng.—d. Jan. 14, 1892, London) British Roman Catholic cardinal. The son of a banker and member of Parliament, he was ordained a priest of the Church of England in 1833. A member of the OXFORD MOVEMENT, he became a Catholic in 1851 and was ordained a priest later that year. He rose rapidly in rank, being appointed archbishop of Westminster in 1865 and cardinal in 1875. He favoured the centralization of authority in the church (Ultramontanism) and supported stronger wording on PAPAL INFALLIBILITY than was eventually adopted by the First Vatican Council. He established many schools and was highly regarded for his concern for social welfare.

manorialism *or* **seignorialism** \sān-'yōr-ē-əl-i-zəm\ Political, economic, and social system by which the peasants of medieval Europe were tied to their land and their lord through SERFDOM. The basic unit was the manor, a self-sufficient landed estate, or FIEF, under the control of a lord. Free tenants paid rent or provided military service in exchange for the use of the land. Peasants farmed small plots of land and owed rent and labor to their lord, and most were not free to leave the estate. The manorial system was flourishing in Western Europe by the 8th century and had begun to decline by the 13th century, while in Eastern Europe it achieved its greatest strength after the 15th century.

Mansa Musa See MUSA

Mansfield, Katherine *orig.* **Kathleen Mansfield Beauchamp** (b. Oct. 4, 1888, Wellington, N.Z.—d. Jan. 9, 1923, Gurdjieff Institute, near Fontainebleau, France) New Zealand-born British writer. After moving to England at age 19, she secured her reputation with the story collection *Bliss* (1920). She reached the height of her powers in the collection *The Garden Party* (1922). Her delicate stories, which focus on psychological conflicts, are written in a distinctive prose style with poetic overtones that shows the influence of ANTON CHEKHOV. Her last five years were shadowed by tuberculosis, of which she died at age 34.

Mansfield, Michael (Joseph) *known as* **Mike Mansfield** (b. March 16, 1903, New York, N.Y., U.S.—d. Oct. 5, 2001, Washington, D.C.) U.S. politician who was the longest-serving majority leader (1961–77) in the U.S. Senate. He worked in Montana copper mines and later taught history at Montana State University. He served in the U.S. House of Representatives from 1943 to 1953 and in the Senate from 1953 to 1977. An outspoken critic of U.S. involvement in the VIETNAM WAR, he sponsored a 1971 bill calling for a cease-fire and phased withdrawal. He was a persistent critic of Pres. RICHARD NIXON, especially during the WATERGATE SCANDAL. After retiring, he served as U.S. ambassador to Japan (1977–88).

Mansfield, William Murray, 1st earl of (b. March 2, 1705, Scone, Perthshire, Scot.—d. March 20, 1793, London, Eng.) British jurist. Called to the bar in 1730, he gained a wide reputation in 1737 when he eloquently supported before the House of Commons a merchants' petition to stop Spanish assaults on their ships. As chief justice of the King's Bench (1756–88), he conducted several scrupulously fair trials of persons accused of treason and seditious libel. He reduced an unwieldy mass of outmoded commercial law to a coherent body of rules, refined the law of contracts, and made major contributions to MARITIME LAW. He was a member of the cabinet three times, entrusting the great seal of his office to a committee so that he could retain the chief justiceship and still exert political power. In 1783 he declined cabinet office, preferring to serve as speaker of the House of Lords. THOMAS B. MACAULAY called him the father of modern Toryism.

Mansi See SIBERIAN PEOPLES

manslaughter See HOMICIDE

Manson, Charles (b. Nov. 12, 1934, Cincinnati, Ohio, U.S.) U.S. cult leader and mass murderer. From age 9 he spent a great deal of his life in the care of the state, first in juvenile reformatories and later in prison. By 1968, he had become the leader of the "Family," a communal religious cult in Los Angeles dedicated to studying and implementing his eccentric religious teachings. In 1969 he sent Family members to a house rented by the actress Sharon Tate and her husband ROMAN POLANSKI; there they murdered Tate and five friends, and elsewhere they killed three others. The trials of Manson and four of his followers in 1971 attracted national attention. Their death sentences were commuted to life imprisonment when California abolished the death penalty in 1972. Manson's crimes were the subject of the best-selling book *Helter Skelter* (1974), by the prosecutor in the case, Vincent Bugliosi.

manta ray *or* **devil ray** *or* **devilfish** Any of several genera of warm-water marine RAYS, constituting the family Mobulidae, that are wider than they are long. Extensions of the pectoral fins project from the front of the head, looking like devils' horns; these sweep plankton and small fishes into their mouths. The long, whiplike tail may have one or more stinging spines. Mantas swim near the surface by flapping their pectoral fins. The largest species, the powerful but inoffensive Atlantic manta, or giant devil, ray (*Manta birostris*), may grow to over 23 ft (7 m) wide; contrary to old tales, it does not envelop and eat divers.

Mantegna \män-'tān-yə**, Andrea** (b. 1431?, near Vicenza, Republic of Venice—d. Sept. 13, 1506, Mantua, March of Mantua) Italian painter. The son of a woodworker, he was adopted by Francesco Squarcione, a tailor-turned-painter; Mantegna was one of several pupils who later sued him for exploitation. At about 17 he established his own workshop and received an important commission for an altarpiece, now lost. His frescoes in Padua's Eremitani Church (1448–57), with their monumental figures and detailed treatment of Classical architecture, show that he had fully mastered perspective and foreshortening and was successfully experimenting with illusionistic effects, best seen in his frescoes of the GONZAGA family (completed 1474) in the Palazzo Ducale's Camera degli Sposi (Bridal Chamber) in Mantua, which transform the small interior room into an open-air pavilion. He was the first artist in northern Italy to work fully in the Renaissance style. He married a daughter of the BELLINI FAMILY in 1453 but did not join the Bellini studio. He later became court painter to Ludovico Gonzaga. His humanistic approach to antiquity and his spatial illusionism were to have far-reaching influence.

Mantineia \ˌman-tə-'nī-ə\ *or* **Mantinea** Ancient Greek city of ARCADIA, situated north of modern TRÍPOLIS. At the first Battle of Mantineia in 418 BC, SPARTA defeated the coalition of Mantineia, Elis, Argos, and Athens. In 362 the Theban army defeated Spartan troops in an encounter nearby. In 207 Philopoemen, the Greek general of the ACHAEAN LEAGUE,

© 2006 Encyclopædia Britannica, Inc.

defeated the Spartans at Mantineia. In the later Roman Empire, Mantineia dwindled to a mere village, and it finally disappeared under Ottoman rule.

mantis *or* **praying mantis** Any of more than 1,500 species of the INSECT suborder Mantodea (order Orthoptera). The long-bodied, slow-moving mantis (or mantid) eats only living insects, using its large forelimbs to capture and hold its struggling prey. The female is likely to eat the male after mating. The European *Mantis religiosa* and the Chinese mantis (*Tenodera aridifolia sinensis*) have been introduced to North America. The latter grows to 3–8 in. (8–20 cm) long. The name mantis ("diviner") reflects an ancient Greek belief in its supernatural powers.

mantle That part of the Earth that lies beneath the CRUST and above the central CORE. On average, the mantle begins about 22 mi (35 km) below the surface and ends at a depth of about 1,800 mi (2,900 km). Predominant in the rock material are OLIVINES, PYROXENES, and the silicate perovskite, a dense form of ENSTATITE.

Mantle, Mickey *in full* **Mickey Charles Mantle** (b. Oct. 20, 1931, Spavinaw, Okla., U.S.—d. Aug. 13, 1995, Dallas, Texas) U.S. baseball player. Mantle joined the New York Yankees in 1951 and became a powerful switch-hitting outfielder and first baseman. Between 1954 and 1961 "the Mick" led the American League four times in home runs, six times in runs, and once in RBIs, the latter occurring in the year (1956) that he won the triple crown for home runs, RBI, and batting average (.353). In 1961 he hit 54 home runs, finishing second in the home-run race behind his teammate ROGER MARIS, who broke BABE RUTH's season record that same year. Mantle had to play with his legs heavily taped for much of his career because of injuries to his ankles and knees. He retired in 1968 with a lifetime total of 536 home runs.

mantra In HINDUISM and BUDDHISM, a sacred utterance (syllable, word, or verse) believed to possess mystical or spiritual power. Mantras may be spoken aloud or uttered in thought, and they may be either repeated or sounded only once. Most have no apparent verbal meaning, but they are thought to have profound significance and to serve as distillations of spiritual wisdom. Repetition of a mantra can induce a trancelike state and can lead the participant to a higher level of spiritual awareness. Widely used mantras include OM in Hinduism and *om mani padme hum* in TIBETAN BUDDHISM.

Manu \'mə-nü\ In the mythology of India, the first man and the legendary author of the *MANU-SMRTI*. Manu appears in the VEDAS as the performer of the first sacrifice. He is also known as the first king, and most rulers of medieval India claimed him as an ancestor. In the story of the great flood, Manu combines the characteristics of NOAH and ADAM. He built a boat after being warned of the flood by a fish. His boat came to rest on a mountaintop, and as the flood receded Manu poured out an oblation of milk and butter. A year later a woman calling herself the "daughter of Manu" was born from the waters, and these two became the parents of a new human race to replenish the earth.

Manu-smrti \'mə-nü-'smri-tē\ *officially* **Manava-dharma-shastra** Most authoritative of the books of the Hindu law code (*Dharma-shastra*). It is attributed to the legendary first man and lawgiver, MANU. In its present form it dates from the 1st century BC. It prescribes the DHARMA of each Hindu, stating the obligations attached to his or her social class and stage of life. Making no distinction between religious and secular law, it deals with cosmogony, SACRAMENTS, and other religious topics as well as with marriage, hospitality, dietary restrictions, the conduct of women, and the law of kings.

Manual of Discipline *or* **Rule of the Community** Major document produced by the ESSENE community of Jews. The manual, written on scrolls found in 1947 in caves at QUMRĀN (see DEAD SEA SCROLLS), explains the sect's religious and moral ideals and describes its admission ceremony, mystical doctrines, and organizational and disciplinary statutes.

Manuel \mən-'wel\ **I** *known as* **Manuel the Fortunate** (b. May 31, 1469, Alcochete, Port.—d. December 1521, Lisbon) King of Portugal (1495–1521). He opened trade with India and Brazil, sending PEDRO ÁLVARES CABRAL on a voyage to East Asia (1500), and gained riches from VASCO DA GAMA's voyage around Africa. Manuel's claims to the newly discovered lands were confirmed by the pope and recognized by Spain. In order to marry the daughter of FERDINAND V and Isabella, he agreed to expel Jews and Muslims from Portugal (1496). His reign saw the founding of Portuguese outposts in India and the Malay Peninsula, and his explorers reached China in 1513. Manuel also centralized Portuguese administration, reformed the courts, and revised the legal code.

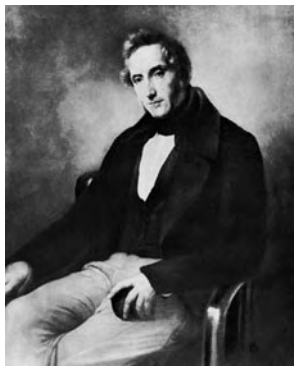
Manuel I Comnenus \'man-yù-əl...käm-'nē-nəs\ (b. Nov. 28, 1118—d. Sept. 24, 1180) Byzantine emperor (1143–80). The son of JOHN II COMNENUS, he renewed alliances in the West against the Normans in Sicily and Antioch. He took Apulia briefly (1155) but was defeated at Brindisi (1156) by a joint force of Germans, Venetians, and Normans, ending Byzantine control in Italy. He reasserted his authority over the Crusader states (1158–59) and extended his influence among the Hungarians and Serbs, adding Dalmatia, Croatia, and Bosnia to the empire in 1167. He launched a campaign against the Seljuq Turks (1176), and his defeat showed the waning of Byzantine power and ended his plan of restoring the Roman Empire.

Manuel II Palaeologus \'man-yù-əl...,pā-lē-'ä-lə-gəs\ (b. July 27, 1350—d. July 21, 1425) Byzantine emperor (1391–1425). He was crowned coemperor with his father, JOHN V PALAEOLOGUS, in 1373; his brother Andronicus IV seized the throne in 1376, but Manuel and his father regained it with Turkish aid in 1379. They were obliged to pay tribute to the sultan, who later helped them quash a rebellion by Andronicus's son (1390). Manuel was forced to live as a vassal at the Turkish court but escaped after his father's death (1391). A treaty in 1403 kept peace with the Turks until 1421, when Manuel's son and coemperor JOHN VIII meddled in Turkish affairs. After the Turks besieged Constantinople (1422) and took southern Greece (1423), Manuel signed a humiliating treaty and entered a monastery.

manufacturing Any INDUSTRY that makes products from raw materials by the use of manual labour or machines and that is usually carried out systematically with a division of labour. In a more limited sense, manufacturing is the fabrication or assembly of components into finished products on a fairly large scale. Among the most important manufacturing industries are those that produce aircraft, automobiles, chemicals, clothing, computers, consumer electronics, electrical equipment, furniture, heavy machinery, refined petroleum products, ships, steel, and tools. See also FACTORY; MASS PRODUCTION.

manure Organic material that is used to fertilize land, usually consisting of the feces and urine of domestic LIVESTOCK, with or without litter such as straw, hay, or bedding. Some countries also use human excrement ("night soil"). Though livestock manure is less rich in nitrogen, phosphorus, and potash than synthetic FERTILIZERS and therefore must be applied in much greater quantities, it is rich in organic matter, or HUMUS, and thus improves the capacity of the soil to absorb and store water, thereby preventing erosion. Because manure must be carefully stored and spread in order to derive the most benefit, some farmers decline to expend the necessary time and effort. Manufactured chemical fertilizers, though more concentrated and efficient, are also more costly and more likely to cause excess runoff and pollution. See also GREEN MANURE.

Manutius \mə-'nü-shəs**, Aldus, the Elder** *Italian* **Aldo Manuzio il Vecchio** (b. 1449, Bassiano, Papal States—d. Feb. 6, 1515, Venice) Italian printer, the leading figure of his time in printing, publishing, and typography. In 1490 he settled in Venice and gathered around him a group of compositors and Greek scholars. He produced the first printed editions of many Greek and Latin classics and is particularly associated with the production of small, carefully edited pocket-size books printed in inexpensive editions. The *Hypnerotomachia Poliphili* (1499) of Francesco Colonna, with outstanding woodcuts, was his most famous book. After his death, the Aldine Press, which he founded, was taken over by members of his family, who probably printed 1,000 editions between 1495 and 1595.



Manx cat Breed of DOMESTIC CAT believed to have come from the Isle of Man. Affectionate, loyal, and courageous, the compact Manx is distinguished by its taillessness and hopping gait. The rump is distinctly higher than the shoulders because the hind legs are longer than the forelegs. The Manx may be born with a tail, but ideally it should be tailless. The double coat may be any of several colours.

Manzanar \'man-zə-,när\ **Relocation Center** Internment facility for Japanese Americans during WORLD WAR II. Fear that Japan would invade the western U.S. with the aid of spies living in the U.S. led the government to force Japanese Americans in western states to relocate to one of ten camps, of which Manzanar, in California, was the first to be established and the best known. During its operation, over 11,000 people were confined there. The California centre was named a national historic site in 1992.

© 2006 Encyclopædia Britannica, Inc.

Manzikert, Battle of (1071) Battle near the town of Manzikert (present-day Malazgirt, Turk.), in which the Seljuq Turks (see SELJUQ DYNASTY) under Sultan ALP-ARSLAN defeated the Byzantines under ROMANUS IV DIOGENES. Romanus had assembled a large army to confront the Turks and end their forays into Byzantine-ruled Anatolia. His troops included Turkmen mercenaries who deserted to the enemy the night before the battle; the Turks destroyed the Byzantine army and took Romanus prisoner. The battle was followed by the Seljuq conquest of most of Anatolia.

Manzoni, Alessandro (b. March 7, 1785, Milan, Italy—d. May 22, 1873, Milan) Italian novelist and poet. After spending much of his childhood in religious schools, Manzoni wrote a series of religious poems, *Sacred Hymns* (1815), and later two historical tragedies influenced by WILLIAM SHAKESPEARE, *Il conte di Carmagnola* (1820) and *Adelchi* (performed 1822). He is best known for the novel *The Betrothed*, 3 vol. (1827), a masterpiece of world literature and the most famous Italian novel of its century, in which, prompted by a patriotic urge to forge a language accessible to a wide readership, he employed a clear, expressive prose that became a model for many subsequent Italian writers. Manzoni's advocacy of a united Italy made him a hero of the RISORGIMENTO; his death prompted GIUSEPPE VERDI's great *Requiem*.

Manzù \'mänd-zü**, Giacomo** *orig.* **Giacomo Manzoni** (b. Dec. 22, 1908, Bergamo, Italy—d. Jan. 17, 1991, Ardea) Italian sculptor. Apprenticed at an early age, he learned to work in wood, metal, and stone. In 1950, after making a name for himself with sculptures of more than 50 Roman Catholic cardinals and a series of female nudes, he was commissioned to create sculptural bronze doors for ST. PETER'S BASILICA. His sober realism and extremely delicate modeling achieved both severity and sensuousness of form.

Portrait of a Lady, bronze sculpture by Giacomo Manzù, 1946; in the Museum of Modern Art, New York City.

Mao Dun \'maù-'dün\ *or* **Mao Tun** *orig.* **Shen Dehong** *or* **Shen Yanbing** (b. July 4, 1896, Tongxiang, Zhejiang province, China—d. March 27, 1981, Beijing) Chinese literary critic, author, and editor. A founder of the League of Left-Wing Writers (1930), he served as minister of culture after the communist government was established (1949–64). Many Western critics consider his trilogy of novellas *Shi* (1930; "Eclipse") to be his masterpiece. English translations of his works include *Spring Silkworms and Other Stories* (1956) and the novel *Rainbow* (1992). He is generally considered China's greatest novelist of REALISM.

Mao Shan \'maù-'shän\ Sacred mountain in Jiangsu province in China, the focus of Daoist revelations to the visionary Yang Xi (AD 364–370). Yang Xi was visited by a group of perfected immortals (*zhenren*) from the heaven of Shangqing (Supreme Purity), who gave him a new set of scriptures and instructions on the coming apocalypse, during which the good were to take refuge in luminous caverns beneath such sacred mountains as Mao Shan. The Mao Shan revelations incorporated elements of BUDDHISM into Daoist thought and proposed reforms of DAOISM, including rejection of its sexual rites in favour of a spiritualized union with a celestial partner.

Mao Zedong \'maù-dzə-'dùŋ\ *or* **Mao Tse-tung** (b. Dec. 26, 1893, Shaoshan, Hunan province, China—d. Sept. 9, 1976, Beijing) Chinese Marxist theorist, soldier, and statesman who led China's communist revolution and served as chairman of the People's Republic of China (1949–59) and chairman of the CHINESE COMMUNIST PARTY (CCP; 1931–76). The son of a peasant, Mao joined the revolutionary army that overthrew the QING DYNASTY but, after six months as a soldier, left to acquire more education. At Beijing University he met LI DAZHAO and CHEN DUXIU, founders of the CCP, and in 1921 he committed himself to MARXISM. At that time, Marxist thought held that revolution lay in the hands of urban workers, but in 1925 Mao concluded that in China it was the peasantry, not the urban proletariat, that had to be mobilized. He became chairman of a Chinese Soviet Republic formed in rural Jiangxi province; its Red Army withstood repeated attacks from CHIANG KAI-SHEK's Nationalist army but at last undertook the LONG MARCH to a more secure position in northwestern China. There Mao became the undisputed head of the CCP. Guerrilla warfare tactics, appeals to the local population's nationalist sentiments, and Mao's agrarian policies gained the party military advantages against their Nationalist and Japanese enemies and broad support among the peasantry. Mao's agrarian Marxism differed from the Soviet model, but, when the communists succeeded in taking power in China in 1949, the Soviet Union agreed to provide the new state with technical assistance. However, Mao's GREAT LEAP FORWARD and his criticism of "new bourgeois elements" in the Soviet Union and China alienated the Soviet Union irrevocably; Soviet aid was withdrawn in 1960. Mao followed the failed Great Leap Forward with the CULTURAL REVOLUTION, also considered to have been a disastrous mistake. After Mao's death, DENG XIAOPING introduced social and economic reforms that began reversing the policies put in place by Mao. See also JIANG QING; LIU SHAOQI; MAOISM.

Maoism \'maù-ˌi-zəm\ Variation of MARXISM and LENINISM developed by MAO ZEDONG. It diverged from its antecedents in its agrarian focus: Mao substituted the dormant power of the peasantry (discounted by traditional Marxists) for the urban PROLETARIAT that China largely lacked. The Maoist faith in revolutionary enthusiasm and the positive value of the peasants' lack of sophistication as opposed to technological or intellectual elites fueled the GREAT LEAP FORWARD of the 1950s and the CULTURAL REVOLUTION of the 1960s and '70s. The disastrous consequences of both upheavals led Mao's successors to abandon Maoism as counterproductive to economic growth and social order. Maoism was embraced by insurgent guerrilla groups worldwide; under the KHMER ROUGE it became Cambodia's national ideology.

Maori \'maù-rē\ Any member of a Polynesian people of New Zealand. Maori traditional history describes their origins in terms of waves of migration from a mythical land between the 12th and 14th centuries, but archaeologists have dated habitations in New Zealand back to at least AD 800. Their first European contact was with ABEL JANSZOON TASMAN (1642), who did battle with a group of Maori. Later Europeans were initially welcomed, but the arrival of muskets, disease, Western agricultural methods, and missionaries corroded Maori culture and social structure, and conflicts arose. The British assumed formal control of New Zealand in 1840; war over land broke out repeatedly over the next three decades. By 1872 all fighting had ended and great tracts of Maori land had been confiscated. Today about 9% of New Zealanders are classified as Maori; nearly all have some European ancestry. Though largely integrated into modern urban life, many Maori keep alive traditional cultural practices and struggle to retain control of their ancestral lands.

map Graphic representation, drawn to scale and usually on a flat surface, of features—usually geographic, geologic, or geopolitical—of an area of the Earth or of any celestial body. Globes are maps represented on the surface of a sphere. Cartography is the art and science of making maps and charts. Major types of maps include topographic maps, showing features of the Earth's land surface; nautical charts, representing coastal and marine areas; hydrographic charts, which detail ocean depths and currents; and aeronautical charts, which detail surface features and air routes.

Mapam, Lake *Chinese* **Mapam Yumco** \'mä-ˌpäm-'yüm-kō\ *or* **Ma-fa-mu-ts'o** \ma-ˌfä-'mü-tsō\ *conventional* **Manasarowar** \ˌmä-nä-sä-'rō-ˌwär\ Lake in the HIMALAYAS, southwestern TIBET, China. Lying nearly 15,000 ft (4,570 m) above sea level, it is generally recognized as the highest body of fresh water in the world. It is prominent in Hindu mythology and is one of the most sacred places of pilgrimage for Hindus.

maple family Family Aceraceae, composed of about 200 species (in the genera *Dipteronia* in China and *Acer* across the Northern Hemisphere)

© 2006 Encyclopædia Britannica, Inc.

of ornamental, shade, and timber trees. Maples are important ornamentals for lawns, along streets, and in parks. They offer a great variety of form, size, and foliage; many display striking autumn colour. The red maple (*A. rubrum*) is one of the most common trees in its native eastern North America, where it tolerates compacted wet soils and city pollution. Box elder (*A. negundo*) grows quickly to 30–50 ft (9–15 m) and resists drought, so early prairie settlers planted many for shade and for wood to make crates, furniture, paper pulp, and charcoal. The watery, sweet sap of the sugar maple (*A. saccharum*) is boiled down for syrup and sugar; the wood of certain sugar maples is used for furniture.

mapmaking See CARTOGRAPHY

Maponos \mä-'pō-nōs\ *or* **Mac ind Óg** \'mȧ-kən-'dōg\ *or* **Oenghus** \'ē-nəs, 'öin-gəs\ In CELTIC RELIGION, a god similar to APOLLO who is often associated with healing. He appears in Welsh mythology as Mabon, who was carried off from his divine mother when he was three nights old. In Irish mythology he is said to be the son of DAGDA and of Boann, the personified sacred river of Irish tradition. He lived in the great Neolithic (and therefore pre-Celtic) passage grave of Newgrange.

Mapplethorpe \'mā-pəl-ˌthȯrp**, Robert** (b. Nov. 4, 1946, New York, N.Y., U.S.—d. March 9, 1989, Boston, Mass.) U.S. photographer. He attended the Pratt Institute (1963–70). By the mid 1970s he was pursuing what were to remain his favourite subjects throughout his career: still lifes, flowers, portraits of friends and celebrities, and homoerotic explorations of the male body. His compositions were generally stark, with his combination of cold studio light and precise focus creating dramatic tonal contrasts. His muscular male models were generally framed against plain backdrops, sometimes engaged in sexual activity or posed with sadomasochistic props such as leather and chains. His clear, unflinching style challenged viewers to confront this imagery. Moreover, the combination of his choice of subject matter with the photographs' formal beauty and grounding in art-historical traditions created what many saw as a tension between pornography and art. A posthumous retrospective exhibition of his work in 1990, funded partly by the NATIONAL ENDOWMENT FOR THE ARTS (NEA), stirred a debate about government subsidies of "obscene" art and provoked Congress to enact restrictions on future NEA grants.

mappō \'mäp-ˌpō\ In Japanese Buddhism, the age in which the BUDDHA's law will degenerate. The period following the death of the Buddha is divided into three ages: the age of the true law, the age of the copied law, and the age of the latter law, or the degeneration of the law. A new period, in which true faith will again flower, will then be ushered in by the BODHISATTVA MAITREYA (Japanese Miroku). Japanese Buddhists calculate that the age of *mappō* began in AD 1052. Since it is expected to continue for 10,000 years, the current era of human history continues to be the age of *mappō*.

Mapuche \mä-'pü-chē\ Most numerous group of Araucanian-speaking South American Indians (see ARAUCANIAN), who live in the central valley of Chile. They are noted for their 350-year struggle against Spanish and Chilean domination. In the 16th–18th centuries they learned to use horses in battle and united over great distances to fight Spanish incursions. After Chile gained independence in the 19th century, the government settled them on reservations. In the 1980s the reservation land was transferred to individuals, but their rights have become endangered by debt accrued to support their traditional, non-intensive agriculture.

Maputo \mä-'pü-tō\ *formerly (until 1976)* **Lourenço Marques** \lō-'rāⁿ-sü-'mȧr-kish\ Port city (pop., 1997: 989,386), capital of MOZAMBIQUE. It lies on the northern bank of Espírito Santo Estuary of DELAGOA BAY, an inlet of the Indian Ocean. It derived its former name from the Portuguese trader who first explored the region in 1544. The town developed around a Portuguese fortress completed in 1787. Created a city town in 1887, it superseded Moçambique as the capital of Portuguese East Africa in 1907. Since the nation's independence in 1975, the collapse of tourism and reduced access to foreign trade have damaged the city's economy.

maqām \mȧ-'käm\ Spiritual stage that serves as a milestone on the path followed by Muslim mystics (Sufis) as they strive to reach the vision of and union with God. The Sufi progresses through his own spiritual efforts and through the guidance of SHEIKHS. In each *maqām* the Sufi strives to purify himself of all worldly inclinations and prepare himself to attain an ever higher spiritual level. Most Sufis identify seven major *maqām*s: repentance, fear of the Lord, renunciation, poverty, patience, trust, and satisfaction. See also SUFISM.

Maqtūl, al- See al-SUHRAWARDĪ

Mar del Plata Coastal city (pop., 1999 est.: 579,483), east-central Argentina. It was the site of a Spanish mission (1746–51). In 1856 Portuguese explorer Jose Coelho Mierelles founded the fishing village La Peregrina. Mar del Plata was established in 1874 and promoted as a seaside resort; it became a city in 1907. It is famous for its luxurious casino. In addition to tourism, its economy is based on construction, textiles, and commercial fishing and canning. It is the seat of the National University of Mar del Plata.

Mar-pa (b. 1012, Lhobrag, Tibet—d. 1096, Tibet) Tibetan religious leader. According to tradition, he was born to wealthy parents, and to curb his violent nature he was sent to a Tibetan monastery to study Buddhism. He later spent three periods studying under the yogi Naropa in India, returning to Tibet during the intervals and gathering disciples. A major figure in the revival of Buddhism in Tibet, he is known for his translations of Indian VAJRAYANA Buddhist texts and of mystical songs of the Indian Tantric tradition.

Mara Buddhist Lord of the Senses, who repeatedly tempted the BUDDHA Gautama. When Gautama seated himself under the BODHI TREE to await enlightenment, the evil Mara appeared in the guise of a messenger claiming that a rival had usurped the family throne. After sending a storm of rain, rocks, ashes, and darkness to frighten away the gods who had gathered, he challenged Gautama's right to sit beneath the tree and sent forth his three daughters, Trsna, Rati, and Raga (thirst, desire, and delight), to seduce Gautama, but to no avail. After the Buddha had achieved enlightenment, Mara pressed him to abandon any attempt to preach, but the gods successfully persuaded him to preach the law.

marabou \'mär-ə-ˌbü\ African STORK (*Leptoptilos crumeniferus*). Standing 5 ft (1.5 m) tall with a wingspread of 8.5 ft (2.6 m), the marabou is the largest of all storks. Mainly gray and white, it has a bald pinkish face and neck; a reddish, inflatable throat pouch; and a straight, heavy bill. Marabous eat carrion, often feeding with VULTURES, which they dominate.

Maracaibo \ˌmä-rä-'kī-bō\ City (pop., 2000 est.: 1,764,038), northwestern Venezuela. Located on the channel connecting Lake MARACAIBO with the Gulf of Venezuela, it is Venezuela's second largest city. Founded in 1571 as Nueva Zamora, it became a centre for inland trade after Gibraltar, at the head of the lake, was destroyed in 1669. It changed hands several times during Venezuela's struggle for independence from Spain. Within a decade of the discovery of oil in 1917, it became the oil metropolis of Venezuela and South America.

Maracaibo, Lake Inlet of the CARIBBEAN SEA, northwestern Venezuela. The largest natural lake in South America, it occupies an area of 5,130 sq mi (13,280 sq km), extending southward for 130 mi (210 km) from the Gulf of Venezuela and reaching a width of 75 mi (121 km). Many rivers flow into the lake, notably the CATATUMBO RIVER. It is in one of the world's richest oil-producing regions, which supplies about two-thirds of Venezuela's total petroleum output. Its oil fields are located along the eastern shore, extending 20 mi (32 km) into the lake.

Maradona, Diego Armando (b. Oct. 30, 1960, Villa Fiorito, near Buenos Aires, Arg.) Argentine football (soccer) player. A midfielder renowned for his ability to create scoring chances for himself and others, he led club teams to championships in Argentina, Italy, and Spain. He starred for the Argentine national team that won the 1986 World Cup. His performance included two memorable goals against England, one scored with his hand (the referee mistakenly thought the ball struck his head) and now remembered as the "Hand of God," and another that saw him dribble through a pack of defenders. He was twice suspended for use of banned substances. An Internet poll conducted by the Fédération Internationale de Football Association named Maradona the top player of the 20th century.

Marajó \ˌmȧ-rȧ-'zhō\ Island in the AMAZON RIVER delta, Brazil. The world's largest fluvial island, it is 183 mi (295 km) long and 124 mi (200 km) wide, with an area of about 15,500 sq mi (40,100 sq km). The main flow of the Amazon passes north of Marajó, but numerous narrow channels direct part of its water into the PARÁ RIVER, an estuary that separates the island from the mainland to the south. Archaeological remains in the eastern savanna are similar to those of pre-Columbian ANDEAN CIVILIZATION.

Marañón \ˌmä-rä-'nyōn\ **River** River, central Peru. Rising in the ANDES MOUNTAINS, it is part of the headwaters of the AMAZON RIVER. It flows northwest at elevations of about 12,000 ft (3,650 m) and descends through

© 2006 Encyclopædia Britannica, Inc.

jungles in unnavigable rapids and falls; emerging from the most spectacular of these rapids, the Pongo de Manseriche, it is only 575 ft (175 m) above sea level. For the rest of its 879-mi (1,415-km) course, it meanders eastward, receiving the Huallaga River and then joining the Ucayali River to form the Amazon.

Marat \mä-'rä**, Jean-Paul** (b. May 24, 1743, Boudry, near Neuchâtel, Switz.—d. July 13, 1793, Paris, France) French politician and a leader of the radical Montagnard faction in the French Revolution. He was a well-known doctor in London in the 1770s. Returning to France in 1777, he was appointed physician at the court of Louis XVI's brother, the count d'Artois (later Charles X). Marat wrote scientific publications as well as political pamphlets. From 1789, as editor of the newspaper *L'Ami du Peuple*, he became an influential voice for radical measures against the aristocrats. He criticized moderate revolutionary leaders and warned against the émigré nobility, then advocated the execution of counterrevolutionaries. One of the most influential members of the National Convention (1792), he was actively supported by Parisians in street demonstrations. In April 1793 the Girondins brought him before a Revolutionary tribunal, but he was acquitted. In July a young Girondin supporter, Charlotte Corday, gained admittance to his room and stabbed him to death in his bath, making him a martyr to the people's cause.

Jean-Paul Marat, detail of a portrait by Joseph Boze, 1793; in the Museum of the History of Paris.
GIRAUDON/ART RESOURCE, NEW YORK

Maratha \mä-rə-'tä\ **confederacy** Maratha alliance formed in the 18th century in western India after Shivaji's Maratha kingdom collapsed under Mughal pressure. Under Shivaji's grandson, power fell to peshwas (chief ministers) from leading Maratha families, who ruled effectively in the early 18th century but quarreled as the century waned. The confederacy fell to the British in 1818.

Maratha Wars Three conflicts between the British and the Maratha confederacy in the late 18th and early 19th centuries. At the time, the confederacy controlled large portions of the Deccan and of the western coast of the Indian peninsula. The British lost the first conflict (1775–82), in which they supported one contender's bid for the office of *peshwa* (chief minister). They won the second (1803–05), defeating members of the confederacy who challenged their restoration of an ousted *peshwa*. The third war (1817–18) started after the British invaded Maratha territory in pursuit of robber bands. When Maratha forces rose against the British, they were defeated, Maratha territory was annexed, and British supremacy in India became complete.

marathon Long-distance footrace run on an open course of 26 miles 385 yards (42.2 km). First held at the revived Olympic Games in 1896, it commemorates the legendary feat of a Greek soldier who is said to have run from Marathon to Athens in 490 BC, a distance of about 25 mi (40 km), to report the Greek victory at the Battle of Marathon, after which he dropped dead. Marathons today are usually open events for both men and women, often run by thousands of participants, including the venerable Boston Marathon (established 1897). The women's marathon became an Olympic event in 1984.

Marathon, Battle of (490 BC) Decisive battle on the plain of Marathon outside Athens in the Persian Wars. Darius I led his enormous army against a much smaller Athenian force led by Miltiades. The Athenians attacked with great speed, while the Persian cavalry was absent, devastating the Persian line and resulting in Darius's departure from Greece. The victory was overwhelming: 6,400 Persians but only 192 Athenians died. It is said that a messenger ran about 25 mi (40 km) back to Athens, where he announced the victory before dying of exhaustion (see marathon). In another version, an Athenian runner was sent to Sparta before the battle to ask for help, running 150 mi (240 km) in two days; Sparta refused, so Athens fought with help only from Plataea.

Maravi confederacy \'mä-rə-vē\ Centralized system of government established in southern Africa c. 1480. It was created by members of related ethnolinguistic groups who had migrated from the north into what is now central and southern Malawi. Its seat was southwest of Lake Malawi, and at its peak in the 17th century it ruled an area stretching from the Zambezi River to the Mozambique coast. Its leaders traded with the Portuguese and Arabs in ivory, slaves, and iron. By 1720 it split into several autonomous factions.

marble Granular limestone or dolomite that has recrystallized under the influence of heat, pressure, and aqueous solutions. The main mineral in marble is calcite. Commercially, "marble" includes all decorative calcium-rich rocks that can be polished, as well as some serpentines. Marbles are used principally for buildings and monuments, interior decoration, statuary, tabletops, and novelties. Colour and appearance are their most important qualities. Statuary marble, the most valuable variety, must be pure white and of uniform grain size.

Marblehead Town (pop., 2000: 20,377), northeastern Massachusetts, U.S. Its harbour is sheltered by Marblehead Neck, a promontory about 1.5 mi (2.5 km) long. Settled in 1629 as a part of Salem, it was incorporated as a town in 1649 and developed as a fishing and shipbuilding centre. The port declined after the War of 1812. It is now a resort centre.

Marbury v. Madison (1803) First decision of the Supreme Court of the United States to declare an act of Congress unconstitutional, thus establishing the doctrine of judicial review. In 1801 newly elected Pres. Thomas Jefferson ordered Secretary of State James Madison to withhold from William Marbury the commission of his appointment by former Pres. John Adams as justice of the peace in the District of Columbia. Marbury then requested that the Supreme Court compel Madison to deliver his commission. In denying his request, the court held that it lacked jurisdiction because the section of the Judiciary Act passed by Congress in 1789 that authorized the Court to issue such a writ was unconstitutional and thus invalid. Chief Justice John Marshall, writing for the Court, declared that the Constitution must always take precedence in any conflict between it and a law passed by Congress.

Marc, Franz (b. Feb. 8, 1880, Munich, Ger.—killed in action March 4, 1916, near Verdun, France) German painter. His early works were academic, but exposure to Impressionism and Jugendstil lightened his style, and in 1911, with Vasily Kandinsky and other abstract painters, he became a founding member of the Blaue Reiter group. He believed that spiritual essence is best revealed through abstraction and was passionately interested in the art of "primitive" peoples, children, and the mentally ill. His own work consisted primarily of animal studies, since he believed nonhuman forms of life to be the most expressive manifestation of the vital force of nature.

marcasite \'mär-kə-ˌsīt\ Iron sulfide mineral that forms pale bronze-yellow crystals; the name cockscomb marcasite refers to the shape of a common form of its crystals. Marcasite has the same chemical formula as pyrite (FeS_2) but a different internal (atomic) structure. It is less stable than pyrite, being easily decomposed, and is much less common.

Marceau \mär-'sō**, Marcel** (b. March 22, 1923, Strasbourg, France) French mime. After serving in World War II, he studied with the pantomimist Étienne Decroux and had his first success in the role of Arlequin in *Baptiste*. He formed a mime troupe (1948–64) and earned worldwide acclaim in the 1950s with his production of the "mimodrama" of Nikolay Gogol's *Overcoat*. In 1978 he founded a school of mimodrama in Paris. He is noted for his eloquent, deceptively simple portrayals, including his celebrated white-faced character Bip, reminiscent of Pierrot and of Charlie Chaplin's tramp. See also mime and pantomime.

Gabriel Marcel, 1951
H. ROGER-VIOLLET

Marcel, Gabriel (-Honoré) (b. Dec. 7, 1889, Paris, France—d. Oct. 8, 1973, Paris) French philosopher, dramatist, and critic. His philosophical works explore aspects of human existence (e.g., trust, fidelity, hope, and despair) which had traditionally been dismissed as unamenable to philosophical consideration. His use

© 2006 Encyclopædia Britannica, Inc.

of PHENOMENOLOGY was independent of the work of EDMUND HUSSERL, considered the founder of the phenomenological movement. Marcel was the first French proponent of EXISTENTIALISM.

Marcellus, Marcus Claudius (b. c. 268—d. 208 BC, near Venusia, Apulia) Roman general. Elected CONSUL in 222, he fought in Gaul and won the *spolia opima* ("spoils of honour"), awarded for killing an enemy chief in single combat, for the third and last time in Roman history. He was consul again in 215 and 214. Serving in Sicily (214–211) in the Second PUNIC WAR, he took Syracuse after a two-year siege; his troops sacked the city and carried its art treasures to Rome. He served again as consul in 210 and 208. While fighting HANNIBAL near Venusia, he was caught in an ambush and killed.

Marcellus \mär-'se-ləs**, Marcus Claudius** (b. 42—d. 23 BC, Baiae, Campania [Italy]) Roman leader. Nephew of AUGUSTUS (he was the son of Augustus's sister Octavia), Marcellus was Augustus's presumed heir. He married Augustus's daughter JULIA in 25 BC and later that year served with Augustus in Spain. Great hopes had rested with him, and his unexpected death led to problems of succession.

march Musical form having an even metre with strongly accented beats, originally intended to facilitate military marching. Development of the European march may have been stimulated by the Ottoman invasions of the 14th–16th centuries. Marches were not notated until the late 16th century; until then, time was generally kept by percussion alone, often with improvised fife embellishment. With the extensive development of BRASS INSTRUMENTS, especially in the 19th century, marches became widely popular and were often elaborately orchestrated. Composers such as WOLFGANG AMADEUS MOZART, LUDWIG VAN BEETHOVEN, and GUSTAV MAHLER wrote marches, often incorporating them into their operas, sonatas, or symphonies. The later popularity of JOHN PHILIP SOUSA's band marches was unmatched.

March, Frederic *orig.* **Frederick Ernest McIntyre Bickel** (b. Aug. 31, 1897, Racine, Wis., U.S.—d. April 14, 1975, Los Angeles, Calif.) U.S. actor. He began acting on Broadway, and his parody of John Barrymore in a touring production of *The Royal Family* earned him a five-year contract with Paramount Pictures; he reprised the role in the retitled screen adaptation, *The Royal Family of Broadway* (1930). He subsequently appeared in more than 65 films, including *Dr. Jekyll and Mr. Hyde* (1932, Academy Award), *A Star Is Born* (1937), *The Best Years of Our Lives* (1946, Academy Award), *Death of a Salesman* (1951), and *Inherit the Wind* (1960). He starred on the stage, often with his wife, Florence Eldridge, in plays such as *The Skin of Our Teeth* (1942) and *Long Day's Journey into Night* (1956, Tony Award). A versatile stage and film actor, his cerebral approach occasionally resulted in stolid, emotionally unconvincing performances, but it more often produced compelling, complex characterizations.

March Laws Reform measures enacted by the Hungarian Diet in 1848 (see REVOLUTIONS OF 1848) that sought to create a modern national Magyar state. The program, presented to the Diet by KOSSUTH Lajos, provided for internal Hungarian control of its own national guard, budget, and foreign policy. The laws were constitutionally confirmed by Emperor FERDINAND I in April 1848. Austria denied the validity of the laws after the revolution was defeated (1849), but Hungary continued to insist on their legality. The Austrians reimposed their domination of Hungary until, under the COMPROMISE OF 1867, Hungary received full internal autonomy.

March on Rome See March on ROME

Marchand \mär-'shä^{n}**, Jean** (b. Dec. 20, 1918, Champlain, Que., Can.—d. Aug. 28, 1988, Saint-Augustin, Que.) Canadian politician. After graduating from Laval University, he became a prominent union leader in Quebec. From 1961 to 1965 he was president of the Confederation of National Trade Unions. He was elected to the Canadian House of Commons in 1965 and served in the cabinet of LESTER PEARSON until 1968. From 1968 to 1976 he held cabinet posts under PIERRE TRUDEAU. Elected to the Canadian Senate in 1976, he served as speaker from 1980 to 1983.

Marche \'märsh\ Historic region, central France. Once part of LIMOUSIN, it was made a separate frontier countship (march) in the 10th century. During the 12th and 13th centuries it was divided into western and eastern halves. It was held by the Bourbons (1342–1435) and by the Armagnacs (1435–77). Confiscated by FRANCIS I in 1527, it was granted to the widows of French kings (1574–1643). It was a province of France until the FRENCH REVOLUTION.

Marche \'mär-kā\ Region (pop., 2001 prelim.: 1,463,868), central Italy. It covers an area of 3,743 sq mi (9,693 sq km) and is situated between the Adriatic Sea and the region of UMBRIA and crossed by the APENNINES; its only level land is along its river valleys and on the Adriatic shore near ANCONA, its capital. Originally inhabited by Gauls and Picenes, it came under Roman rule by AD 292. During the early Middle Ages the southern part was ruled by the Lombards and the northern part by the Byzantines. Conflicts arose in 12th and 13th centuries with powerful feudal families and the attempt of the popes to reestablish their temporal authority; this culminated in 1631, when the duchy of Urbino was incorporated into the PAPAL STATES. Marche joined the Kingdom of Italy in 1860. An agricultural area, it has some industrial development.

Marciano \ˌmär-shē-'ä-nō**, Rocky** *orig.* **Rocco Francis Marchegiano** (b. Sept. 1, 1923, Brockton, Mass., U.S.—d. Aug. 31, 1969, near Newton, Ia.) U.S. boxer and world heavyweight champion. Marciano began boxing in the army in World War II. An unscientific but hard-punching and exceptionally durable fighter, he won the championship title in 1952 by defeating Jersey Joe Walcott and relinquished it upon retiring in 1956. He was undefeated in 49 professional fights, scoring 43 knockouts.

Marco Polo See Marco POLO

Marco Polo Bridge Incident Conflict in 1937 between Chinese and Japanese troops near the Marco Polo Bridge outside Beijing. The incident was a culmination of the growing tensions between the two sides—increasing Japanese aggression and Chinese reaction against it—after Japan had occupied northeastern China and established its puppet state of MANCHUKUO in 1931. The skirmish expanded into a general war between Japan and China.

Marconi, Guglielmo (b. April 25, 1874, Bologna, Italy—d. July 20, 1937, Rome) Italian physicist and inventor. He began experimenting with radio waves in 1894. In 1896 he went to England, where he developed a successful system of radio telegraphy. His work on the development of shortwave wireless communication constitutes the basis of nearly all modern radio broadcasting. His improved aerials greatly extended the range of radio signaling. In 1899 he established communication across the English Channel. In 1900 he established the American Marconi Co. In 1901 he sent signals across the Atlantic for the first time. He acquired numerous patents, though probably his most famous one, No. 7777, for an apparatus that enabled several stations to operate on different wavelengths without interference, was later overturned. Marconi shared the 1909 Nobel Prize for Physics with K. Ferdinand Braun (1850–1918). He was made a marquis and was nominated to the Italian Senate (1929), and he was elected president of the Royal Italian Academy (1930).

Guglielmo Marconi, c. 1908.
LIBRARY OF CONGRESS, WASHINGTON, D.C.

Marcos, Ferdinand (Edralin) (b. Sept. 11, 1917, Sarrat, Phil.—d. Sept. 28, 1989, Honolulu, Hawaii, U.S.) Philippine head of state (1966–86). The son of a politician, he practiced as a trial lawyer before serving under MANUEL ROXAS, the first president of the independent Philippines. He was himself elected president in 1966. In his first term he made progress in agriculture, industry, and education, but in 1972 he imposed martial law, and his later years in power were noted for rampant government corruption, economic stagnation, political repression, and the steady growth of a communist insurgency. Following public outcry over the assassination of the opposition leader Benigno Aquino (1932–83) and Marcos's apparently fraudulent electoral victory over Aquino's widow, CORAZON AQUINO, Marcos was forced into exile in Hawaii, U.S. There he and his wife, Imelda, were indicted on racketeering charges related to embezzling billions of dollars from the Philippine economy. After his death she returned to the Philippines, where she was tried and convicted of corruption; the ruling was later overturned.

Marcus, Rudolph A. (b. July 21, 1923, Montreal, Que., Can.) Canadian-born U.S. chemist. Educated at McGill University, he worked at the Polytechnic Institute of Brooklyn (from 1951), the University of Illinois (from 1964), and the California Institute of Technology (from 1978). He studied electron transfer in redox reactions in the 1950s and '60s, finding that subtle changes in the molecular structures of the reactants and the solvent molecules around them influence the ability of electrons to move between the molecules. He also discovered the parabolic relationship between the driving force of an electron-transfer reaction and the reaction's rate. His work, which has shed light on fundamental phenomena such as photosynthesis, cell metabolism, and simple corrosion, won him a 1992 Nobel Prize.

Marcus Aurelius \ˌmär-kəs-ȯ-ˈrēl-yəs\ *in full* **Caesar Marcus Aurelius Antoninus Augustus** *orig.* **Marcus Annius Verus** (b. April 26, AD 121, Rome—d. March 17, 180, Vindobona [Vienna] or Sirmium, Pannonia) Roman emperor (161–180). He was born into a wealthy and prominent family. HADRIAN arranged that Marcus and Lucius Verus be adopted by the designated future emperor ANTONINUS PIUS, who dutifully groomed Marcus as his heir. On his accession, Marcus nevertheless shared power with his adoptive brother as coemperor, though he himself remained the more dominant. His reign was marked by numerous military crises, all the major frontiers being threatened by invasion. Struggles against the Parthians (162–166) were successful, but returning troops brought a devastating plague to Rome. With a concurrent German invasion, Roman morale declined; the Germans were repulsed, but Verus died during the campaign (169). Marcus made his son COMMODUS coemperor in 177. Though a man of gentle character and wide learning, Marcus opposed Christianity and supported persecution of its adherents. His *Meditations* on STOICISM, considered one of the great books of all times, gives a full picture of his religious and moral values. His reign is often thought to mark the Golden Age of Rome.

ALINARI/ART RESOURCE, NEW YORK

Marcuse \mär-ˈkü-zə**, Herbert** (b. July 19, 1898, Berlin—d. July 29, 1979, Starnberg, Ger.) German-U.S. political philosopher. A member of the FRANKFURT SCHOOL, he fled Germany after the Nazi seizure of power in 1933. After working in U.S. intelligence in World War II, he taught at several universities, principally Brandeis University (1954–65) and the University of California at San Diego (1965–76). In his best known and most influential work, *One-Dimensional Man* (1964), Marcuse argued that society under advanced capitalism is unfree and repressive and that modern man has become intellectually and spiritually complacent through his psychological dependence on the blandishments of consumer society, a phenomenon he termed "repressive desublimation." He was also hostile to the Soviet system. His works were popular among student leftists, especially after the 1968 student rebellions at Columbia University and the Sorbonne. His other writings include *Eros and Civilization* (1955) and *Counterrevolution and Revolt* (1972).

Marcy, William L(earned) (b. Dec. 12, 1786, Southbridge, Mass., U.S.—d. July 4, 1857, Ballston Spa, N.Y.) U.S. politician. From 1823 to 1829 he was comptroller of New York state and a leading member of the "Albany Regency," a group of powerful state Democrats. He was a justice of the state supreme court from 1829 to 1831. In the U.S. Senate (1831–33), he championed the SPOILS system, remarking that "To the victor belong the spoils of the enemy." He served as governor of New York (1833–39), as U.S. secretary of war (1845–49), and as U.S. secretary of state (1853–57).

Mardi Gras \ˈmär-dē-ˌgrä\ (French: "Fat Tuesday") CARNIVAL celebrated on or culminating on Shrove Tuesday, the day before Ash Wednesday, the start of LENT. Traditionally, households consumed all the remaining foods that would be forbidden during Lent (e.g., eggs) on that day. It is a one-day event in France, but in the U.S. it lasts several days in New Orleans, where it is marked by parades, street celebrations, and extravagant costumes.

Marduk \ˈmär-ˌdük\ *or* **Bel** In Mesopotamian religion, the chief god of the city of BABYLON and the national god of BABYLONIA. He began as a god of thunderstorms, and according to legend he became lord of all the gods after conquering the monster of primeval chaos, TIAMAT. Marduk's star was the planet Jupiter, and his sacred animals were horses, dogs, and a dragon with a forked tongue, representations of which adorned Babylon's walls.

mare \ˈmär-ā\ Any flat, low, dark plain on the MOON. Maria are huge impact basins containing lava flows marked by ridges, depressions (graben), and faults; though *mare* means "sea" in Latin, they lack water. The best-known is probably Mare Tranquillitatis ("Sea of Tranquillity"), the site of the APOLLO 11 manned Moon landing. Most of the approximately 20 major maria are on the side of the Moon that always faces Earth; they are its largest surface features and can be seen from Earth with the unaided eye. The dark features of the "man in the moon" are maria.

Mare, Walter De la See Walter DE LA MARE

Marengo \mə-ˈreŋ-gō**, Battle of** (June 14, 1800) Narrow victory for NAPOLEON against Austria in the NAPOLEONIC WARS, fought on the Marengo Plain in northern Italy. The initial French force was overpowered, but when the Austrian commander gave up command to a subordinate in the belief that victory was secured, French reinforcements forced the Austrians into retreat. The victory resulted in the French occupation of Lombardy and secured Napoleon's military and civilian authority in Paris.

Marenzio \mä-ˈrents-yō**, Luca** (b. 1553, Coccaglio, near Brescia, Republic of Venice—d. Aug. 22, 1599, Rome) Italian composer. He was probably trained as a choirboy in Brescia, and he was in service with Cardinal Luigi d'Este in Rome from 1578 to 1586. The cardinal's patronage enabled the publication in the 1580s of the first 10 of his 25 books of MADRIGALS, the works for which he is best known and whose style became influential in Italy and England. His later madrigals, more serious in tone, use dissonance and chromaticism to reflect their texts, and they are sometimes linked into cycles. He also composed some 75 sacred motets.

Marfan syndrome Rare hereditary disorder of CONNECTIVE TISSUE. Affected persons are tall, with long, thin limbs and spiderlike fingers (arachnodactyly). The lens of the eye is dislocated, and many have GLAUCOMA or DETACHED RETINA. Heart muscle abnormalities and various malfunctions and malformations occur; rupture of the AORTA is the most common cause of death. Severity varies; affected individuals may die young or live essentially normal lives. The underlying abnormality cannot be cured, but some of the defects can be surgically corrected.

Margaret of Angoulême \äⁿ-gü-ˈlem\ *or* **Margaret of Navarra** *French* **Marguerite d'Angoulême** (b. April 11, 1492, Angoulême, France—d. Dec. 21, 1549, Odos-Bigorre) Queen consort of Henry II of Navarra and an outstanding figure of the French Renaissance. She was the daughter of the count d'Angoulême. When her brother FRANCIS I acceded to the crown in 1515, she became highly influential in his court. After her first husband died, she married Henry in 1525. She was noted as a patron of humanists and reformers and of such writers as FRANÇOIS RABELAIS. She was a writer and poet herself; her most important work was the *Heptaméron*, 72 tales modeled on BOCCACCIO's *Decameron* and published posthumously in 1558–59.

Margaret of Antioch, Saint *or* **Saint Marina** (fl. 3rd or 4th century, Antioch, Syria; Eastern feast day July 13; Western feast day July 20) Early Christian martyr. Tradition held that she was a virgin during the reign of DIOCLETIAN. When she refused to marry the Roman prefect of Antioch, she was tortured and beheaded. Her designation as patron saint of expectant mothers (especially those in difficult labour) was based on the story that during her trials she was swallowed by Satan in the form of a dragon and later disgorged unharmed. Widely venerated in the Middle Ages, she is now thought to have been fictitious.

Margaret of Austria (b. Jan. 10, 1480, Brussels—d. Dec. 1, 1530, Mechelen, Spanish Netherlands) Habsburg ruler who was regent of the Netherlands (1507–15, 1519–30) for her nephew, the future emperor CHARLES V. In 1497 she married the infante John, heir to the Spanish kingdoms, who died a few months later. In 1501 she married Philibert II, duke of Savoy, who died in 1504. Appointed regent by her father, Emperor MAXIMILIAN I, she pursued a pro-English foreign policy. In the 1520s she

© 2006 Encyclopædia Britannica, Inc.

extended the Habsburg dominion in the northeastern Netherlands and negotiated the Treaty of Cambrai (1529), called the "Ladies' Peace," with Louise of Savoy (1494–1547), regent for Francis I.

Margaret of Austria, detail of a painting attributed to Bernard van Orley, c. 1505; in Windsor Castle, Berkshire
ROYAL COLLECTION © HER MAJESTY QUEEN ELIZABETH II

Margaret of Parma (b. 1522, Oudenaarde, Spanish Netherlands—d. Jan. 18, 1586, Ortona, Kingdom of Naples) Duchess of Parma, Habsburg regent, and governor-general of the Netherlands (1559–67). The illegitimate daughter of Emperor Charles V, she was married first (1536) to Alessandro de' Medici, who was murdered in 1537, and then (1538) to Ottavio Farnese, duke of Parma. Appointed to govern the Netherlands by her half brother, Philip II of Spain, Margaret tried to appease the nobility with more moderate treatment of Protestants, but she brought in an army in 1567 after Calvinist extremists attacked Catholic churches. Philip then sent the duke of Alba, who assembled a Spanish army and enforced stern measures against dissident Protestants, precipitating open revolt. Margaret resigned when Alba assumed power.

Margaret of Scotland, Saint (b. c. 1045, probably Hungary—d. Nov. 16, 1093, Edinburgh; canonized 1250; feast day November 16, Scottish feast day June 16) Patron saint of Scotland. Sister of Edgar the Aetheling, she married Malcolm III Canmore, and three of their sons succeeded to Scotland's throne. She founded abbeys, worked for justice, improved conditions for the poor, and persuaded Malcolm to initiate a series of ecclesiastical reforms that transformed Scotland's religious and cultural life.

Margaret of Valois \väl-'wä\ *or* **Margaret of France** *French* **Marguerite** *known as* **Queen Margot** \mär-'gō\ (b. May 14, 1553, Saint-Germain-en-Laye, France—d. March 27, 1615, Paris) Queen consort of Navarra who played a secondary part in the Wars of Religion (1562–98). The daughter of Henry II of France, her relations with her brothers Charles IX and the future Henry III were strained, and she had an early affair with Henri, duke de Guise, leader of the extremist Catholic party. She was married in 1572 to the Protestant king of Navarra, the future Henry IV of France, to seal the peace between Catholics and Protestants, but days later the Massacre of Saint Bartholomew's Day began. Aware of her involvement in conspiracies, Henry III banished her to the castle at Usson in 1586. She granted her husband an annulment in 1600 and lived out her life in Paris. She was known for her beauty, learning, and licentious life; her *Mémoires* provide a vivid picture of France during her lifetime.

Margaret Tudor (b. Nov. 29, 1489, London, Eng.—d. Oct. 18, 1541, Methven, Perth, Scot.) Queen consort of King James IV of Scotland (1503–13). The daughter of King Henry VII of England, she was married to James to improve relations between England and Scotland. After her husband's death (1513), she became regent for her son, James V (1512–1542). When she married the pro-English earl of Angus (1514), she was forced to give up the regency, but she played a key role in the conflict between the pro-French and pro-English factions in Scotland, shifting her allegiances to suit her financial interests. She obtained an annulment from Angus (1527) to marry Henry Stewart, Baron Methven, who became James's chief adviser.

margarine Food made from one or more vegetable or animal fats or oils mixed with milk and other ingredients. It is used in cooking and as a spread as a substitute for butter. Margarine was developed by the French chemist Hippolyte Mège-Mouriès in the late 1860s. The fats used have varied widely; polyunsaturated oils such as corn, canola, and sunflower oil, considered more healthful than saturated fats, are common today.

Margherita Peak \ˌmär-ge-'rē-tə\ Highest summit of the Ruwenzori Range in East Africa. It is situated on the border between Uganda and the Democratic Republic of the Congo (Zaire). The higher of the two peaks on Mount Stanley, the central mountain of the Ruwenzori, it rises to 16,795 ft (5,119 m) between Lake Albert and Lake Edward. First climbed in 1906 by an Italian expedition, it was named for Queen Margherita of Italy. It is the third-highest mountain in Africa, after Kilimanjaro and Mount Kenya.

margin In finance, the amount by which the value of collateral pledged as security for a loan exceeds the amount of the loan. This excess provides the lender a "margin" of safety over and above the collateral offered and thus makes extending a loan a more attractive proposition. The size of the margin varies with the type of collateral, the stability of its market price, and the credit standing of the borrower. The term *margin* is also used in reference to securities transactions. When securities are purchased "on margin," the buyer supplies a percentage of the purchase price in cash, pledges the security as collateral, and borrows the remainder from the broker. The U.S. Federal Reserve Board (see Federal Reserve System) sets minimum margin requirements on loans made for the purpose of buying securities, so as to prevent excessive use of credit for speculation in stocks, as happened before the stock-market crash of 1929.

marginal-cost pricing In economics, the practice of setting a product's price equal to the additional (marginal) cost of producing one more unit of output. The producer charges an amount equal to the cost of the additional economic resources. The policy is used to maintain a low selling price or to keep a business operating during a period of poor sales. Because fixed costs such as rent and building maintenance must be paid whether a company produces or not, a firm experiencing temporary difficulties may decide to remain in production and sell the product at marginal cost, since its losses will be no greater than if it ceased production.

marginal productivity theory In economics, the theory that firms will pay a productive agent only what he or she adds to the financial earnings of the firm. Developed by writers such as John Bates Clark and Philip Henry Wicksteed at the end of the 19th century, marginal productivity theory holds that it is unprofitable to buy, for example, a man-hour of labour if it costs more than it contributes to its buyer's income. The amount in excess of costs that a productive input yields is the value of its marginal product; the theory posits that every type of input should be paid the value of its marginal product.

marginal utility In economics, the additional satisfaction or benefit (utility) that a consumer derives from buying an additional unit of a commodity or service. The law of diminishing utility implies that utility or benefit is inversely related to the number of units already owned. For example, the marginal utility of one slice of bread offered to a family that has five slices will be great, since the family will be less hungry and the difference between five and six is proportionally significant. An extra slice offered to a family that has 30 slices will have less marginal utility, since the difference between 30 and 31 is proportionally smaller and the family's appetite may be satisfied by what it already has. The concept grew out of attempts by 19th-century economists to explain the fundamental economic reality of price.

marguerite \ˌmär-gə-'rēt\ Any of several genera of golden daisylike flowers in the composite family. Yellow or white ray flowers and yellow disk flowers are borne in the compact flower heads. Marguerites are cultivated as garden ornamentals, especially golden marguerite, also called yellow chamomile (*Anthemis tinctoria*). See also chamomile, daisy.

Maria Legio \mə-'rē-ə-'lā-gē-ˌō\ *or* **Legio Maria** *or* **Legion of Mary Church** Independent African church influenced by Roman Catholicism. It originated in Kenya in 1963 when two Catholics of the Luo group, Simeon Ondeto and Gaundencia Aoko, claimed to have undergone prophetic experiences. The church, which offers healing by prayer and exorcism of evil spirits, adds features of Pentecostalism to Catholic worship and hierarchy. In its first year it gained about 90,000 adherents, but membership had dropped to 50,000 by the end of the decade. It rejects Western and traditional medicines, alcohol, tobacco, and dancing but accepts polygamy and is strongly nationalistic.

Maria Theresa \tə-'rā-sə\ *German* **Maria Theresia** (b. May 13, 1717, Vienna, Austria—d. Nov. 29, 1780, Vienna) Archduchess of Austria and queen of Hungary and Bohemia (1740–80). She was the eldest daughter of Emperor Charles VI, who promulgated the Pragmatic Sanction to allow her to succeed to the Habsburg domains. Opposition to her succession led in 1740 to the War of the Austrian Succession. After Emperor Charles VII died (1745), she obtained the imperial crown for her husband, who became Francis I. She helped initiate financial and educational reforms, promoted commerce and the development of agriculture, and

© 2006 Encyclopædia Britannica, Inc.

reorganized the army, all of which strengthened Austria's resources. Continued conflict with Prussia led to the Seven Years' War and later to the War of the Bavarian Succession. After her husband's death (1765), her son became emperor as Joseph II. She criticized many of his actions but agreed to the partition of Poland (1772). A key figure in the power politics of 18th-century Europe, Maria Theresa brought unity to the Habsburg monarchy and was considered one of its most capable rulers. Her 16 children also included Marie-Antoinette and Leopold II.

mariachi \ˌmär-ē-ˈä-chē\ Traditional Mexican street ensemble. In the 19th century, mariachis consisted solely of stringed instruments, including violin, guitar, guitarrón, vihuela, mandolin, and double bass; since the 1920s they have generally included trumpets and often other wind instruments as well. The mariachi repertoire includes songs and lively dance music.

Mariam, Mengistu Haile See Mengistu Haile Mariam

Mariana Islands \ˌmar-ē-ˈa-nə\ *formerly* **Ladrone Islands** \lə-ˈdrōn\ Island group, western Pacific Ocean. Located east of the Philippines, it comprises 15 islands and is divided politically into Guam and the Northern Mariana Islands. The population is descended from the pre-Spanish Chamorro people and Spanish, Mexican, German, Philippine, and Japanese settlers. Spanish cultural traditions are strong. After Ferdinand Magellan became the first European to discover them in 1521, they were visited frequently but were not colonized until 1668, at which time Jesuit missionaries changed their name to honor Mariana of Austria, regent of Spain.

Mariana Trench Submarine trench in the floor of the western North Pacific Ocean. It is the deepest known depression on the surface of the Earth, with a maximum depth of 36,201 ft (11,034 m). The trench extends from southeast of Guam to northwest of the Mariana Islands, a distance of more than 1,580 mi (2,550 km), and has a mean width of 43 mi (69 km). See also deep-sea trench.

Mariátegui \ˌmä-rē-ˈä-tā-gē**, José Carlos** (b. June 14, 1895, Lima, Peru—d. April 16, 1930, Lima) Peruvian political leader and essayist. In 1919 he was sent to study in Italy, where he met leading socialists of the day, including Maxim Gorky. At first a strong supporter of APRA, he split with that movement to form the Peruvian Communist Party in 1928. While emphasizing the economic aspects of Marxism in his writings, he recognized the value of religion and myth in his treatment of the Indians and advocated a greater social and political role for them. His influence is seen in the Maoist Shining Path revolutionary movement.

Ma'rib \ˈmar-ib\ Ancient city ruins, north-central Yemen. The ancient fortified city of Ma'rib was the centre of the pre-Islamic state of Saba' (950–115 BC). It was located on one of the caravan routes between the Mediterranean Sea and the Arabian Peninsula, and it prospered through its trading monopoly on frankincense and myrrh. The ancient Ma'rib Dam was built c. 7th cent BC to regulate the waters of the Wadi Sadd; some 1,800 ft (550 m) long, it irrigated more than 4,000 acres (1,600 hectares) and supported a densely settled agricultural region. The dam was destroyed in the 6th century AD.

mariculture See aquaculture

Marie-Antoinette (-Josèphe-Jeanne d'Autriche-Lorraine) (b. Nov. 2, 1755, Vienna—d. Oct. 16, 1793, Paris, France) Queen consort of Louis XVI of France. The daughter of Emperor Francis I and Maria Theresa, she was married in 1770 to the French dauphin. After he became king (1774), she was criticized for her extravagance and frivolous circle of court favourites. She was unjustly implicated in the Affair of the Diamond Necklace (1786), which discredited the monarchy. After the French Revolution began, she influenced Louis to resist attempts by the National Assembly to restrict the royal prerogative. She became the target of agitators, who attributed to her the celebrated remark, after being told the people had no bread, "Let them eat cake!" She tried to save the crown by negotiating secretly with monarchist factions and with her brother, Emperor Leopold II. News of her intrigues further enraged the French and led to the overthrow of the monarchy (1792). After a year in prison, she was tried and guillotined in 1793.

Marie-Antoinette, detail of a portrait by Élisabeth Vigée-Lebrun; in the Château de Versailles.
CLICHE MUSEES NATIONAUX

Marie de France (fl. 12th century) French poet, the earliest known woman poet of France. She wrote verse narratives on romantic and magical themes and may have inspired the musical lais of the later troubadours. She probably wrote in England and may have based her fables on an English source; her verses were dedicated to a "noble" king, either Henry II of England or his son. She also wrote a collection of fables, the *Ysopet*.

Marie de Médicis \də-mā-dē-ˈsēs\ *Italian* **Maria de' Medici** (b. April 26, 1573, Florence—d. July 3, 1642, Cologne) Queen consort of Henry IV of France. The daughter of Francesco de' Medici, of the noted Medici family, she was married in 1600 to Henry as his second wife. On his assassination in 1610, she became regent for their son, Louis XIII. Guided by the unscrupulous marquess d'Ancre, she squandered state revenues and bought the loyalty of rebellious nobles. After Ancre was assassinated, Louis assumed the throne (1617) and exiled Marie to Blois. She tried to raise a revolt and won favourable peace terms through her adviser, the future cardinal de Richelieu. Restored to the king's council (1622), she obtained a cardinal's hat for Richelieu and persuaded Louis to make him chief minister. Richelieu gradually withdrew from Marie's influence and by 1628 was opposing her policies. She attempted to have him dismissed, but Louis rejected her plot and banished Marie from court. In 1631 she fled to Brussels, where she later died in poverty.

Marie-Louise *German* **Maria-Luise** (b. Dec. 12, 1791, Vienna, Austria—d. Dec. 17, 1847, Parma) Austrian archduchess and second wife of Napoleon. The eldest daughter of Emperor Francis II, she was married to Napoleon (1810) and gave birth to his long-desired heir, the future Napoleon II, in 1811. When Napoleon abdicated (1814), Marie-Louise returned to Vienna with their son. She ignored Napoleon's entreaties to join him in exile and again after his return to France (1815). Made duchess of Parma, Piacenza, and Guastalla (1816), she ruled in accordance with Austrian prescriptions. After Napoleon's death (1821), she contracted morganatic marriages with Adam Adalbert, count von Neipperg, who died in 1829, and in 1834 with Charles René, count de Bombelles.

ALINARI/ART RESOURCE, NEW YORK

marigold Any of about 30 species of annual herbaceous plants that make up the genus *Tagetes* in the composite family, native to southwestern North America. The name also refers to the pot marigold (calendula) and unrelated plants of several families. Marigolds include popular garden ornamentals such as African marigold (*T. erecta*) and French marigold (*T. patula*), which have solitary or clustered red, orange, and yellow flowers and usually finely cut leaves. Because the strongly scented leaves discourage insect pests, marigolds are often planted among vegetable crops.

French marigold (*Tagetes patula*).

Mariinsky \mär-ˈyin-skē\ **Theatre** *or* **Maryinsky Theatre,** *formerly* **Kirov Theatre** Russian

L | M | N

© 2006 Encyclopædia Britannica, Inc.

imperial theatre in St. Petersburg. The theatre opened in 1860 and was named for Maria Aleksandrovna, wife of the reigning tsar. Ballet was not performed there until 1880 and was presented regularly only after 1889, when the Imperial Russian Ballet became its resident company and acquired the Mariinsky name. The theatre's name was changed to the State Academic Theatre (1917–35) and later to the Kirov (for Sergey Kirov) State Academic Theatre for Opera and Ballet (1935–91); it reverted to its original name in 1991. Its resident ballet company, the celebrated Mariinsky (or Kirov) Ballet, tours worldwide.

marijuana \ˌmar-ə-ˈwä-nə\ Indian hemp plant (*Cannabis sativa*) or the crude drug made of its dried and crushed leaves or flowers. The active ingredient is tetrahydrocannabinol (THC). Also called pot, grass, and weed, the drug has long been used as a sedative or analgesic; it was in use in China by the 3rd millennium BC and had reached Europe by AD 500. Today it is used worldwide, though it has been generally illegal at least since the International Opium Convention of 1925. Its psychological and physical effects, including mild euphoria and alterations in vision and judgment, vary with strength and amount consumed, the setting, and the user's experience. Chronic use is not physically habit-forming but may be mildly psychologically habit-forming. Marijuana has been shown to be medically therapeutic for patients with glaucoma, AIDS, and the side effects of chemotherapy; in 2001 Canada became the first country to legalize the use of marijuana by people with terminal illnesses and chronic conditions. Supporters of legalization claim that it is a more benign drug than alcohol; opponents contend that it is addictive and leads to use of more serious drugs. A resin from the plant is the source of hashish.

marimba Xylophone with resonators under each bar. The original African instrument uses tuned calabash resonators. In Mexico and Central America, where it was brought by African slaves, the wooden bars may be affixed to a frame supported by legs or hung at the player's waist. The orchestral marimba uses long metal tubes as resonators.

Marin \ˈmar-ən**, John** (b. Dec. 23, 1870, Rutherford, N.J., U.S.—d. Oct. 1, 1953, Cape Split, Maine) U.S. painter and printmaker. He worked as an architectural draftsman before studying painting. After exposure to Cubism and German Expressionism, he developed a personal form of expressionism, consisting of semiabstract images based on objective reality. While watercolour usually produces delicate, transparent effects, Marin's command of the medium allowed him to use it to render the monumental power of New York City and the relentless surge of the sea.

marine Member of a military force trained for service at sea and in land operations related to naval campaigns. They existed as far back as the 5th century BC, when the Greek fleets were manned by *epibatai*, or heavily armed sea soldiers. In the Middle Ages ordinary soldiers were often assigned to shipboard duty; not until the naval wars of the 17th century was the distinct role of marines rediscovered almost simultaneously by the British and the Dutch, who raised the first two modern marine corps, the Royal Marine (1664) and the Koninklijke Nederlandse Corps Mariniers (1665). See also U.S. Marine Corps.

marine biology Science that deals with the animals and plants of the sea and estuaries and with airborne and terrestrial organisms that depend directly on bodies of saltwater for food and other necessities. Marine biologists study the relations between ocean phenomena and the distribution and adaptations of organisms. Of particular interest are adaptations to the chemical and physical properties of seawater, the movements and currents of the ocean, the availability of light at various depths, and the composition of the sea floor. Other important areas of study are marine food chains, the distribution of economically important fish and crustaceans, and the effects of pollution. In the later 19th century, the emphasis was on collecting and cataloging marine organisms, for which special nets, dredges, and trawls were developed. In the 20th century, improved diving equipment, submersible craft, and underwater cameras and television have made direct observation possible.

marine geology *or* **geologic oceanography** Scientific discipline concerned with all geologic aspects of the continental shelves and slopes and the ocean basins. Marine geology originally focused on marine sedimentation and the interpretation of bottom samples. The advent of the concept of seafloor spreading, however, broadened its scope. Many investigations of the oceanic ridge system, the magnetism of rocks on the seafloor, geochemical analyses of deep brine pools, and seafloor spreading and continental drift may be considered within the general realm of marine geology.

marine geophysics Subdiscipline of geophysics that is concerned with ocean phenomena. The main techniques and areas of study include heat-flow data, seismic reflection and refraction techniques, geomagnetics, and gravity studies. The principal concepts in marine geophysics are seafloor spreading, continental drift, and plate tectonics.

marine sediment Any deposit of insoluble material, primarily rock and soil particles, transported from land areas to the ocean by wind, ice, and rivers, as well as the remains of marine organisms, products of submarine volcanic activity, and chemical precipitates from seawater that accumulate on the seafloor.

Mariner \ˈmar-ə-nər\ Any of a series of unmanned U.S. space probes sent near Venus, Mars, and Mercury. Mariners 2 (1962) and 5 (1967) passed Venus within 22,000 mi (35,000 km) and 2,500 mi (4,000 km), respectively, and made measurements of temperature and atmospheric density. Mariners 4 (1965), 6 and 7 (1969), and 9 (1971–72) obtained striking photographs of the surface of Mars and analyzed its atmosphere and magnetic field. Mariner 10 is the only spacecraft ever to have visited Mercury (1974–75).

Marinetti \ˌmä-rē-ˈnät-tē**, Filippo Tommaso (Emilio)** (b. Dec. 22, 1876, Alexandria, Egypt—d. Dec. 2, 1944, Bellagio, Italy) Italian-French writer, the ideological founder of Futurism. In early poetry such as *Destruction* (1904), he showed the vigour and anarchic experimentation with form that would characterize his later work. Futurism officially began with the 1909 publication of his manifesto in the Paris newspaper *Le Figaro*. His ideas were quickly adopted in Italy, and he later elaborated on his theory in a novel and several dramatic works. Arguing that fascism was Futurism's natural extension, he became an active fascist and lost most of his following in the 1920s.

Marini, Marino (b. Feb. 27, 1901, Pistoia, Italy—d. Aug. 6, 1980, Viareggio) Italian sculptor and painter. Working primarily in bronze, he concentrated on two major images: the earthbound woman and the horse and rider. His sensitivity to form and surface owes much to Etruscan and Roman works, but the inner tension of his bold, straining figures reflects an Expressionist sensibility. His portrait busts, as of Igor Stravinsky (1950), capture the spiritual substratum of his subjects. In the 1940s he turned to painting nearly abstract works.

Marīnid \ˈmar-i-ˌnid\ **dynasty** Berber dynasty that followed the Almohad dynasty in North Africa in the 13th–15th centuries. The Marīnids were

© 2006 Encyclopædia Britannica, Inc.

a tribe of the Zanātah group, which was allied to the Umayyads in Córdoba. In 1248 a Marīnid leader, Abū Yaḥyā, captured Fès and made it the Marīnid capital. The capture of Marrakech (1269) made the Marīnids the masters of Morocco. They waged inconclusive war in Spain and Africa that gradually depleted their resources, reducing the realm to anarchy in the 15th century. Sa'dī sharifs captured Fès in 1554.

Marino, Dan(iel Constantine), Jr. (b. Sept. 15, 1961, Pittsburgh, Pa., U.S.) U.S. gridiron football quarterback. Chosen by the Miami Dolphins in the first round of the 1983 NFL draft, he set all-time career records for passes completed (4,453 in 7,452 attempts), yards passing (55,416), and touchdown passes (385) and for 21 other categories. In 1984 he became the first quarterback to pass for more than 5,000 yards in a single season (5,084) and the first to complete over 40 touchdown passes (48) in a season.

Marino, Giambattista (b. Oct. 18, 1569, Naples—d. March 25, 1625, Naples) Italian poet, founder of the school of Marinism (later *secentismo*), which dominated 17th-century Italian poetry. Trained as a lawyer, Marino chose not to practice and instead found immense success with poetry that he managed to get published despite censorship. His most important work, a labour of 20 years, is *Adonis* (1623), an enormous poem (45,000 lines) that relates, with many digressions, the love story of Venus and Adonis. His work, praised throughout Europe, far surpassed that of his imitators, who carried his complicated wordplay and elaborate conceits and metaphors to such extremes that *Marinism* became a pejorative term.

Mariology \ˌmar-ē-'ä-lə-jē\ Study of doctrines concerning Mary, the mother of Jesus, or the content of those doctrines. The New Testament contains little information about Mary, though the tradition that she remained a virgin despite giving birth to Jesus was accepted in the early church. Various feast days in her honour were established in both the Eastern and Western liturgical traditions, and she became an especially important figure in Roman Catholicism. Pius IX proclaimed the doctrine of the Immaculate Conception in 1854. Mary is seen as the spiritual mother and heavenly intercessor of every Catholic and as a partner with Jesus in the redemption of human beings. In 1950 Pius XII proclaimed the doctrine that at her death Mary was bodily assumed into heaven.

Marion, Francis *known as* **The Swamp Fox** (b. c. 1732, Winyah, S.C.—d. Feb. 26, 1795, Berkeley county, S.C., U.S.) American Revolutionary commander. He fought the Cherokee (1759) and later served as a member of the provincial assembly (1775). In the American Revolution he commanded troops in South Carolina. After the surrender of Gen. Benjamin Lincoln to the British at Charleston, S.C. (1780), he slipped away to the swamps, gathered together his band of guerrillas, and began leading bold raids on British positions. For a daring rescue of American troops surrounded by the British at Parkers Ferry, S.C. (1781), he received the thanks of Congress. He was then appointed a brigadier general.

marionette Puppet figure manipulated from above by strings attached to a wooden cross or control. The figure, also called a string puppet, is usually manipulated by nine strings, attached to each leg, hand, shoulder, and ear and at the base of the spine. Additional strings give more sensitive control of movement, and some marionettes can be made to imitate almost every human and animal action. Early marionettes were controlled by an iron rod instead of strings, a form that survived in Sicily. In the 18th century, marionette operas were extremely popular, and they are still performed today in Salzburg to Mozart's music. See also puppetry.

Maris \'mar-əs**, Roger** *in full* **Roger Eugene Maris** (b. Sept. 10, 1934, Hibbing, Minn., U.S.—d. Dec. 14, 1985, Houston, Texas) U.S. baseball player. Maris's family moved from Minnesota to North Dakota when he was 10, and there he excelled in high school sports, playing American Legion baseball in Fargo in the summer. An outfielder and left-handed hitter, he played for the Cleveland Indians, the New York Yankees, and the St. Louis Cardinals. In 1961 his one-season total of 61 home runs broke Babe Ruth's long-standing record of 60, edging out his Yankee teammate Mickey Mantle. Maris's record stood until 1998, when it was broken by Mark McGwire's 70 and Sammy Sosa's 66. See also Barry Bonds.

Maritain \mȧ-rē-'ta^{n}**, Jacques** (b. Nov. 18, 1882, Paris, France—d. April 28, 1973, Toulouse) French philosopher. Reared a Protestant, he converted to Roman Catholicism in 1906. His thought, which is based on Aristotelianism and Thomism, incorporates ideas of other Classical and modern philosophers and draws upon anthropology, sociology, and psychology. Among the dominant themes in his work are: that science, philosophy, poetry, and mysticism are among many legitimate ways of knowing reality; that the individual person transcends the political community; that natural law expresses not only what is natural in the world but also what is known naturally by human beings; that moral philosophy must take into account other branches of human knowledge; and that people holding different beliefs must cooperate in the formation and maintenance of salutary political institutions. Among his major works are *Art and Scholasticism* (1920), *The Degrees of Knowledge* (1932), *Art and Poetry* (1935), *Man and the State* (1951), and *Moral Philosophy* (1960).

maritime law *or* **admiralty law** *or* **admiralty** Body of legal rules that governs ships and shipping. One early compilation of maritime regulations is the 6th-century Digest of Justinian. Roman maritime law and the 13th-century Consolat de Mar ("Consulate of the Sea") both brought temporary uniformity of maritime law to the Mediterranean, but nationalism led many countries to develop their own maritime codes. Maritime law deals mainly with the eventualities of loss of a ship (e.g., through collision) or cargo, with insurance and liability relating to those eventualities, and with collision compensation and salvage rights. There has been an increasing tendency to make maritime laws uniform; the chief organization overseeing maritime law is the International Maritime Committee, composed of the maritime law associations of several countries.

Maritime Provinces Canadian provinces of New Brunswick, Nova Scotia, and Prince Edward Island. They are located on the Atlantic Coast and the Gulf of St. Lawrence. With Newfoundland and Labrador they form the Atlantic Provinces. The name Acadia was applied to much of the region during French colonial rule, until it was ceded to the British in 1713.

Maritsa \mə-'rēt-sə\ **River** *Greek* **Évros** \'ev-ˌrȯs\ *Turkish* **Meriç** \me-'rēch\ River, southeastern Europe. Rising southeast of Sofia, Bulg., it flows east and southeast across Bulgaria, briefly forms the Bulgaria-Greece border, and then runs along the Greece-Turkey border. At Edirne it changes direction, flowing southwest to enter the Aegean Sea after a course of about 300 mi (480 km).

Marius \'mar-ē-əs**, Gaius** (b. c. 157, Cereatae, near Arpinum, Latium—d. Jan. 13, 86 BC, Rome) General and consul who redesigned the Roman army. He secured command of the army in Africa (107) and solved the chronic manpower shortage by enlisting landless citizens for the first time. He defeated Jugurtha in 106. At Rome he held unconstitutional successive consulships (104–100) while it was threatened by the Cimbri and the Teutones, whom he fought and defeated. He held a command during the Social War and was awarded another in 88 to replace Sulla as Asian commander and confront Mithradates. When an outraged Sulla marched on Rome, Marius fled for his life. He returned forcibly in 87, was elected consul for the seventh time, and ruthlessly murdered his opponents.

Marivaux \mȧ-rē-'vō**, Pierre (Carlet de Chamblain de)** (b. Feb. 4, 1688, Paris, France—d. Feb. 12, 1763, Paris) French playwright. Born into an aristocratic family, he joined Paris salon society, which he described in his journalistic writings. The loss of his fortune in 1720 and the death of his young wife a few years later prompted him to embark on a serious literary career. He wrote his first plays, including the tragedy *Annibal* (1720), for the Comédie-Française, but he preferred to write for the Italian commedia dell'arte theatre in Paris, for which he produced *Harlequin Brightened by Love* (1723) and *The Game of Love and Chance* (1730). His nuanced feeling and clever wordplay became known as *marivaudage*. He also wrote the satirical plays *Isle of Slaves* (1725), *Isle of Reason* (1727), and *The New Colony* (1729).

marjoram *or* **sweet marjoram** \'mär-jə-rəm\ Perennial herb (*Majorana hortensis*) of the mint family, or its fresh or dried leaves and flowering tops. Native to the Mediterranean and western Asia, marjoram is cultivated as an annual where winter temperatures kill the plant. It is used to flavor many foods. Various other aromatic herbs or undershrubs of the genera *Origanum* (see oregano) and *Majorana* of the mint family are also called marjoram.

Mark (the Evangelist), Saint (fl. 1st century, Jerusalem—d. traditionally Alexandria, Egypt; Western feast day April 25; Eastern feast day September 23) Christian evangelist to whom the second Gospel is traditionally ascribed. He joined Saints Paul and Barnabas on their first missionary journey but left them at Perga and returned to Jerusalem. He may also have aided St. Peter in Rome, and some scholars believe that Mark's

© 2006 Encyclopædia Britannica, Inc.

Gospel is based on Peter's account of his experiences as one of the Twelve Apostles. If this is true, it was probably written shortly after Peter's death c. AD 65. The Egyptian church claims Mark as its founder, and he is patron saint of the Italian cities of Aquileia and Venice. His symbol is the lion.

Mark Antony See Mark ANTONY

market Means by which buyers and sellers are brought into contact with each other and goods and services are exchanged. The term originally referred to a place where products were bought and sold; today a market is any arena, however abstract or far-reaching, in which buyers and sellers make transactions. The COMMODITY EXCHANGES in London and New York, for example, are international markets in which dealers communicate by telephone and computer links as well as through direct contact. Markets trade not only in tangible commodities such as grain and livestock but also in financial instruments such as SECURITIES and CURRENCIES. CLASSICAL ECONOMISTS developed the theory of perfect competition, in which they imagined free markets as places where large numbers of buyers and sellers communicated easily with each other and traded in commodities that were readily transferable; prices in such markets were determined only by SUPPLY AND DEMAND. Since the 1930s, economists have focused more often on the theory of imperfect competition, in which supply and demand are not the only factors that influence the operations of the market. In imperfect competition the number of sellers or buyers is limited, rival products are differentiated (by design, quality, brand name, etc.), and various obstacles hinder new producers' entry into the market.

market research Study of the requirements of specific markets, the acceptability of products, and methods of developing and exploiting new markets. Various strategies are used for market research: past sales may be projected forward; surveys may be made of consumer attitudes and product preferences; and new or altered products may be introduced experimentally into designated test-market areas. Formal market research dates back to the 1920s in Germany and the 1930s in Sweden and France. After World War II, U.S. firms led in the use and refinement of market-research techniques, which spread throughout much of Western Europe and Japan.

marketing Activities that direct the flow of goods and services from producers to consumers. In advanced industrial economies, marketing considerations play a major role in determining corporate policy. Once primarily concerned with increasing sales through ADVERTISING and other promotional techniques, corporate marketing departments now focus on credit policies (see CREDIT), product development, customer support, distribution, and corporate communications. Marketers may look for outlets through which to sell the company's products, including retail stores, DIRECT-MAIL MARKETING, and WHOLESALING. They may make psychological and demographic studies of a potential market, experiment with various marketing strategies, and conduct informal interviews with target audiences. Marketing is used both to increase sales of an existing product and to introduce new products. See also MERCHANDISING.

marketing board Organization set up by a government to regulate the buying and selling of a certain commodity within a specified area. The simplest type of board is designed to carry out MARKET RESEARCH, promote sales, and furnish information; it is usually financed by a fee levied on all sales of the product concerned. Examples include the Sri Lanka Tea Board and the Ghana Cocoa Board. Other boards are empowered to regulate terms and conditions of sale, usually by establishing packing standards and quality analysis. The primary goal of most marketing boards is to stabilize PRICES, especially of products intended for the export market, where price fluctuations are often extreme. The boards may raise average prices through manipulation of commodity flows, with the objective of maintaining reasonably high levels of demand at all times. Marketing boards such as the Washington State Apple Commission are used for products whose perishability requires that outlets be set up in advance. See also CARTEL.

Markham \'mär-kəm\ City (pop., 1991: 154,000), southeastern Ontario. It is situated on the Rouge River, northeast of TORONTO. Settled in 1794, the town was named for William Markham, archbishop of York. It annexed the nearby township of Markham in 1971.

Markham, Beryl *orig.* **Beryl Clutterbuck** (b. Oct. 26, 1902, Leicester, Leicestershire, Eng.—d. Aug. 3, 1986, Nairobi, Kenya) British pilot, adventurer, and writer. Raised in British East Africa, she became a horse trainer and breeder, training several Kenya Derby winners. Turning to aviation, she carried goods, people, and mail to far corners of Africa, and in 1936 she made a historic east-to-west solo flight across the North Atlantic from England to Cape Breton Island. In 1942 she published her celebrated memoir, *West with the Night*.

Markham River River, eastern Papua New Guinea. It rises in northeastern mountains and flows southeast for 110 mi (180 km) to enter the Huon Gulf of the Solomon Sea, south of Lae. It is named for Clements Markham of the Royal Geographical Society. During World War II its valleys were the scene of fighting in 1943 between Japan and the Allies. The area around the river suffered severe earthquakes in 1993.

Markova \mär-'kō-və**, Dame Alicia** *orig.* **Lilian Alicia Marks** (b. Dec. 1, 1910, London, Eng.—d. Dec. 2, 2004, Bath) British ballerina. She made her debut with SERGEY DIAGHILEV's BALLETS RUSSES in 1924 and became a leading ballerina noted for her ethereal lightness. At the Vic-Wells Ballet (1931–35; now the ROYAL BALLET) she became the first English dancer to dance the lead in *Giselle*. With her frequent partner ANTON DOLIN, she formed and directed several Markova-Dolin companies (1935–38) and the Festival Ballet (1950–52; now the English National Ballet). She continued to dance as a guest artist with many companies worldwide, admired for her interpretations of roles in *Les Sylphides* and *Swan Lake*, among others. She retired from the stage in 1963 and served as director of the Metropolitan Opera Ballet (1963–69).

markup language Standard text-encoding system consisting of a set of symbols inserted in a text document to control its structure, formatting, or the relationship among its parts. The most widely used markup languages are SGML, HTML, and XML. The markup symbols can be interpreted by a device (computer, printer, browser, etc.) to control how a document should look when printed or displayed on a monitor. A marked-up document thus contains two types of text: text to be displayed and markup language on how to display it.

marl Earthy mixture of fine-grained minerals, which range widely in composition. LIME (calcium carbonate) is present as shell fragments of snails and BIVALVES, or as powder mixed with clay and silica-containing silt. Large deposits contain 80–90% calcium carbonate and less than 3% magnesium carbonate. With decreasing amounts of lime, calcium-containing marls are called clays and clayey limestones. Marls rich in POTASH (potassium carbonate), called greensand marls, are used as water softeners. Marls have also been used in the manufacture of insulating material and PORTLAND CEMENT, as liming material, and in making bricks.

Marlborough, John Churchill, 1st duke of (b. May 26, 1650, Ashe, Devon, Eng.—d. June 16, 1722, Windsor, near London) British military commander. He served with distinction at Maastricht (1673), was promoted rapidly, and advanced at court, in part because his wife (see Sarah Jennings, duchess of MARLBOROUGH) was a confidant of Princess (later Queen) ANNE. On the accession of JAMES II in 1685, Churchill was made a lieutenant general and effective commander in chief. In 1688 he transferred his allegiance to WILLIAM III, who rewarded him with the earldom of Marlborough and a succession of commands in Flanders and Ireland. His relationship with William deteriorated in the 1690s. Queen Anne appointed him commander of English and Dutch forces in the War of the SPANISH SUCCESSION, and for his successes he was created duke of Marlborough (1702). His victory at the Battle of BLENHEIM (1704) helped change the balance of power in Europe. In gratitude, he was granted a royal manor, where BLENHEIM PALACE was built. His outstanding military tactics continued to produce victories, notably at Ramillies (1706) and Oudenaarde (1708). His influence with Queen Anne and financial backing for the war were undermined by intrigue between Tories and Whigs. After his Whig allies lost the election of 1710, he was dismissed on charges of misuse of public money. He retired from public life, though he was restored to favour by GEORGE I in

John Churchill, 1st duke of Marlborough, painting attributed to John Closterman; in the National Portrait Gallery, London.

1714. Considered one of England's greatest generals, he secured a reputation in Europe that was unrivaled until the rise of Napoleon.

Marlborough, Sarah Jennings, duchess of (b. May 29, 1660, Sandridge, Hertfordshire, Eng.—d. Oct. 18, 1744, London) Wife of John Churchill, duke of MARLBOROUGH. A childhood friend of Princess (later Queen) ANNE, she entered the household of Anne's father, the duke of York. She married Churchill in 1678 and served as a lady of the bedchamber after Anne's marriage (1683). When Anne acceded to the throne (1694), the Marlboroughs enjoyed great favour at court. Sarah's influence grew until her strong Whig sympathies alienated Anne, who dismissed her in 1711. The Marlboroughs retired to BLENHEIM PALACE, which Sarah completed building after her husband's death in 1722.

Marley, Bob *orig.* **Robert Nesta Marley** (b. Feb. 6, 1945, Nine Miles, St. Ann, Jam.—d. May 11, 1981, Miami, Fla., U.S.) Jamaican singer and songwriter. Born in the hill country of Jamaica to a white father and a black mother, Marley was living in the Kingston slum known as Trench Town in the early 1960s when he formed the Wailers with Peter Tosh and Bunny Livingston (Bunny Wailer). Mixing the Jamaican musical forms of ska and rock steady with rock, they helped to pioneer REGGAE and became its first international stars with releases such as *Catch a Fire* (1973), *Exodus* (1977), and *Uprising* (1980). Marley's political lyrics, grounded in his belief in the Jamaican religious movement RASTAFARI and calling for social and economic justice, made him a voice for the poor and dispossessed. His reputation grew after his death from cancer at age 36.

marlin Any of four species (genus *Makaira*, family Istiophoridae) of deep-blue to blue-green marine fish with a long body, a long dorsal fin, a rounded spear extending from the snout (which it uses to club the fish it feeds on), and usually pale vertical stripes. They are highly prized for sport and food. Species range in weight from about 100 lbs (45 kg) to more than 1,500 lbs (700 kg). The Indo-Pacific black marlin (*M. nigicans*) has a distinctive, stiff pectoral fin set at an angle.

Marlowe, Christopher (baptized Feb. 26, 1564, Canterbury, Kent, Eng.—d. May 30, 1593, Deptford, near London) British poet and playwright. The son of a Canterbury shoemaker, he earned a degree from Cambridge University. From 1587 he wrote plays for London theatres, starting with *Tamburlaine the Great* (published 1590), in which he established dramatic BLANK VERSE. *Tamburlaine* was followed by *Dido, Queen of Carthage* (published 1594), cowritten with THOMAS NASHE; *The Massacre at Paris* (c. 1594); and *Edward II* (1594). His most famous play is *The Tragicall History of Doctor Faustus* (published 1604), which uses the dramatic framework of a MORALITY PLAY in its presentation of a story of temptation, fall, and damnation. *The Jew of Malta* (published 1633) may have been his final work. His poetry includes the unfinished long poem *Hero and Leander*. Known for leading a disreputable life, he died a violent death at age 29 in a tavern brawl; he may have been assassinated because of his service as a government spy. His brilliant, though short, career makes him WILLIAM SHAKESPEARE's most important contemporary in English drama.

Marmara \'mär-mə-rə**, Sea of** Inland sea lying between the Asian and European parts of Turkey. It is connected with the BLACK SEA through the BOSPORUS, and with the AEGEAN SEA through the DARDANELLES. It is 175 mi (280 km) long and nearly 50 mi (80 km) wide, and it occupies an area of 4,382 sq mi (11,350 sq km). The sea has two distinct island groups. The Kızıl Islands in the northeast are primarily resort areas. The Marmara Islands in the southwest are rich in granite, slate, and marble, which have been quarried since antiquity.

marmoset Any species of arboreal, diurnal, long-tailed South American MONKEY (family Callitrichidae) classified in two groups: eight species with short tusks (lower canine teeth), called marmosets, and 25 with long tusks, called TAMARINS. Marmosets move in a quick, jerky manner and eat insects and sometimes fruit and small animals. Members of the common marmoset genus *Callithrix* are 6–10 in. (15–25 cm) long, excluding the 10–16-in. (25–40-cm) tail. The dense, silky fur is white, reddish, or blackish; the ears are generally tufted. Marmosets have been kept as pets since the early 17th century.

marmot \'mär-mət\ Any of about 14 species (genus *Marmota*) of stout-bodied, diurnal, terrestrial SQUIRRELS found in North America, Europe, and Asia. Marmots are 12–24 in. (30–60 cm) long, excluding the short tail, and weigh 7–17 lbs (3–7.5 kg). Most species live in burrows or among boulders. They frequently sit upright and emit a whistling alarm call. Marmots live almost entirely on green plants, storing fat for hibernation. The black-and-white hoary marmot (*M. caligata*), of Siberia and northwestern North America, which hibernates for up to nine months, is hunted for food and fur. The yellow-bellied marmot (*M. flaviventris*) inhabits the western U.S. and British Columbia. See also WOODCHUCK.

Olympic marmot (*Marmota olympus*). E.R. DEGGINGER

Marne, First Battle of the (Sept. 6–12, 1914) Military offensive by French and British troops in WORLD WAR I. After the invading German forces had moved to within 30 mi (50 km) of Paris at the MARNE RIVER, JOSEPH-JACQUES-CÉSAIRE JOFFRE counterattacked and halted the German advance. French reinforcements were driven to the front by 600 Paris taxis, the first automotive transport of troops. French and British troops forced the Germans to retreat north of the Aisne River, where they dug in to conduct the TRENCH WARFARE of the next three years. The Allied success thwarted Germany's plan for a quick victory on the Western Front.

Marne, Second Battle of the (July 15–18, 1918) Last large German attack in WORLD WAR I. As part of its final offensive to split the French forces, German troops under ERICH LUDENDORFF crossed the Marne River but were met by strong French resistance under FERDINAND FOCH. Allied counterattacks, especially at the Marne salient, forced the Germans to retreat to their former position along the Aisne and Vesle rivers.

Marne \'märn\ **River** River, northeastern France. It flows northwest into the SEINE RIVER near PARIS. It is navigable for 220 mi (350 km) of its total length of 326 mi (525 km) and has extensive canals. Its valley was the scene of crucial battles in WORLD WAR I (see First Battle of the MARNE; Second Battle of the MARNE).

Maroni \mä-'rō-nē\ **River** River forming the border between FRENCH GUIANA and SURINAME, South America. It rises in the Tumuc-Humuc Mountains near the Brazilian border and descends northward to enter the Atlantic Ocean at Point Galibi, Suri., after a course of 450 mi (725 km). Its upper course is known as the Litani in Suriname or Itany in French Guiana; its middle course is called the Lawa or Aoua. Shallow-draft vessels can navigate about 60 mi (100 km) upstream from the river's mouth.

Maronite Church \'mar-ə-ˌnīt\ Eastern-rite community centered in LEBANON (see EASTERN RITE CHURCH). It traces its origin to St. Maron, a Syrian hermit of the 4th–5th century AD, and St. John Maron, under whom the invading Byzantine forces were defeated in 684. For several centuries the Maronites were considered heretics, followers of Sergius, patriarch of Constantinople, who taught that Jesus had only a divine will and not a human will. No permanent affiliation with Rome took place until the 16th century. A hardy mountain people, the Maronites preserved their freedom in Lebanon during the Muslim caliphate. In 1860 the Ottoman government incited a massacre of the Maronites by the DRUZE, an event that led to the establishment of Maronite autonomy within the Ottoman empire. The Maronites obtained self-rule under French protection in the early 20th century. Since the establishment of a fully independent Lebanon in 1943, they have constituted a major religious group in the country. Their spiritual leader (after the pope) is the patriarch of Antioch, and the church retains the ancient West Syrian liturgy.

Marot \mä-'rō**, Clément** (b. 1496?, Cahors, France—d. September 1544, Turin, Savoy) French poet. While imprisoned in 1526 for defying Lenten abstinence regulations, he wrote some of his best-known works, including "The Inferno," an allegorical satire on justice. He held several court posts; his long service to FRANCIS I was only briefly interrupted. One of the greatest poets of the French Renaissance, he markedly influenced the style of his successors with his use of the forms and imagery of Latin poetry. When not writing official court poems, he spent most of his time translating the Psalms.

Marquesas \mär-'kā-səz\ **Islands** Island group (pop., 1996: 8,064), FRENCH POLYNESIA. Located in the central South Pacific Ocean northeast of Tahiti, the Marquesas comprise 10 islands. The southeastern group includes Hiva Oa, the largest and most populous island and the burial place of artist PAUL GAUGUIN; Fatu Hiva and Tahuata; and the uninhabited Motane and Fatu Huku. The northwestern group comprises Nuku Hiva,

© 2006 Encyclopædia Britannica, Inc.

Ua Pu, Ua Huka, Eiao, and Hatutu. The Spanish explorer Àlvaro de Mendaña de Neira named the islands for the marquesa de Mendoza in 1595. Annexed by France in 1842, the Marquesas form an administrative division of French Polynesia with headquarters at Taiohae on Nuku Hiva.

marquess \'mär-kwəs\ *or* **marquis** \mär-'kē\ European title of nobility, ranking in modern times immediately below a DUKE and above a COUNT or earl. The wife of a marquess is a marchioness or marquise. The term originally denoted a count holding a march, or mark (frontier district).

Marquess of Queensberry rules See QUEENSBERRY RULES

marquetry \'mär-kə-trē\ Decorative work in which thin pieces of wood, metal, or organic material, such as shell or mother-of-pearl, are affixed in intricate patterns to the flat surfaces of furniture. Marquetry became popular in late 16th-century France and spread throughout Europe as the demand for luxurious home furnishings rose in the next two centuries. See also ANDRÉ-CHARLES BOULLE.

Marquette \mär-'ket**, Jacques** *known as* **Père Marquette** (b. June 1, 1637, Laon, France—d. May 18, 1675, Ludington, Mich.) French missionary and explorer. Ordained a Jesuit priest, he arrived in Quebec in 1666 to preach among the Ottawa. He helped found missions at Sault Ste. Marie in 1668 and St. Ignace in 1671 (both now in Michigan). In 1673 he accompanied LOUIS JOLLIET on his exploration of the Mississippi River, traveling south to the mouth of the Arkansas River. They returned via the Illinois River to Green Bay on Lake Michigan, where Marquette remained. In 1674 he set out to found a mission among the Illinois Indians, reaching the site of present-day Chicago. His journal of his voyage with Jolliet was published in 1681.

Márquez, Gabriel García See Gabriel GARCÍA MÁRQUEZ

Marr, Nikolay (Yakovlevich) (b. Jan. 6, 1865, Kutaisi, Georgia, Russian Empire—d. Dec. 20, 1934, Leningrad, Russia, U.S.S.R.) Russian linguist, archaeologist, and ethnographer. A specialist in CAUCASIAN LANGUAGES, he published collections of literature in the GEORGIAN and ARMENIAN languages and tried to prove a relationship between the Caucasian and AFROASIATIC LANGUAGES and the BASQUE LANGUAGE. His theory that all languages evolved from one original language and that the creation of language was a class-related phenomenon was adopted as official Soviet linguistic doctrine until 1950, when Stalin denounced it.

Marrakech *or* **Marrakesh** \mə-'rä-kish, ˌmar-ə-'kesh\ City (pop., 2004: 823,154), west-central MOROCCO. One of the four imperial cities, it lies in the centre of the Haouz plain. It was founded in the mid-11th century by Yūsuf ibn Tāshufīn as the capital of the ALMORAVID DYNASTY. It fell to the ALMOHAD DYNASTY in 1147, passed to the MARĪNID DYNASTY in 1269, and was the capital under the Saʿdid dynasty in the 16th century. In the premodern era, it was one of Islam's great cities. In 1912 it was captured by the French, who dominated the city until 1956. Now a popular tourist destination, it has many historical buildings and a well-known souk within its ancient city centre (designated a UNESCO WORLD HERITAGE SITE in 1985).

Marrano \mä-'rä-nō\ Spanish Jew who converted to Christianity to escape persecution but continued to practice Judaism secretly. During fierce persecutions in the late 14th century, many Jews died rather than renounce their faith, but at least 100,000 converted to Christianity in order to survive. In time the Marranos came to form a compact society within Spain, growing rich and gaining political power. They were viewed with suspicion, and the name Marrano was originally a term of abuse. Resentment against them led to riots and massacres in 1473. In 1480 the INQUISITION intensified the persecution, and thousands of Marranos lost their lives. In 1492 a royal edict ordered the expulsion of all Jews who refused to renounce their faith. Many Marranos settled in North Africa and Western Europe. By the 18th century, emigration and assimilation had led to the disappearance of the Marranos in Spain.

marriage Legally and socially sanctioned union, usually between a man and a woman, that is regulated by laws, rules, customs, beliefs, and attitudes that prescribe the rights and duties of the partners and accords status to their offspring (if any). The universality of marriage is attributed to the many basic social and personal functions it performs, such as procreation, regulation of sexual behaviour, care of children and their education and socialization, regulation of lines of DESCENT, DIVISION OF LABOUR between the sexes, economic production and consumption, and satisfaction of personal needs for SOCIAL STATUS, affection, and companionship. Until modern times marriage was rarely a matter of free choice, and it was rarely motivated by romantic love. In most eras and most societies, permissible marriage partners have been carefully regulated. In societies in which the extended FAMILY remains the basic unit, marriages are usually arranged by the family. The assumption is that love between the partners comes after marriage, and much thought is given to the socioeconomic advantages accruing to the larger family from the match. Some form of DOWRY or BRIDEWEALTH is almost universal in societies that use arranged marriages. The rituals and ceremonies surrounding marriage are associated primarily with religion and fertility and validate the importance of marriage for the continuation of a family, CLAN, TRIBE, or society. In recent years the definition of marriage as a union between members of opposite sexes has been challenged, and in 2000 The Netherlands became the first country to legalize same-sex marriages. See also BRIDEWEALTH; DIVORCE; DOWRY; EXOGAMY AND ENDOGAMY; POLYGAMY.

marriage chest See CASSONE

marriage law Body of legal specifications and requirements and other laws that regulate the initiation, continuation, and validity of marriages. In western Europe most marriage law derives from Roman Catholic canon law. Although the church regards marriage as a sacred, indissoluble union, modern western European and U.S. marriage law treats it as a civil transaction. Marriage law allows only monogamous unions; partners must be above a certain age and not within prohibited degrees of blood relationship; and they must be free to marry and give consent to the marriage. DIVORCE is now almost universally allowed. Although Islamic law regards marriage as a contract between the two spouses for the "legalization of intercourse and the procreation of children," it is also considered a gift from God or a kind of service to God; the Islamic practice of POLYGAMY was always limited and has waned. Polygamous marriages are permitted under customary laws in many African countries, though there has been a growing trend toward monogamy. Marriage law in present-day China and Japan resembles that in the West. Although most jurisdictions restrict marriage to a union between a man and a woman, same-sex marriages have been legalized in The Netherlands, Belgium, Spain, and Canada. Civil unions or domestic partnerships between persons of the same sex, which entail many of the rights and obligations assumed by married couples, are recognized in numerous other jurisdictions, including several European countries and some U.S. states. Other U.S. jurisdictions, while not recognizing civil unions or domestic partnerships, grant a range of legal rights to same-sex couples.

Marriott \'mar-ē-ˌät**, J(ohn) Willard** (b. Sept. 17, 1900, Marriott, Utah, U.S.—d. Aug. 13, 1985, Wolfeboro, N.H.) U.S. businessman who founded one of the largest U.S. hotel and restaurant organizations. The son of a Mormon rancher, he opened a rootbeer and barbecue stand in Washington, D.C., in 1927. By the end of World War II his chain of Hot Shoppe family restaurants extended over the entire East Coast, and in 1957 he opened his first hotel. His son J. Willard Marriott, Jr., succeeded him as president of the Marriott Corp. in 1964. At the time of the elder Marriott's death, the Marriott Corp. had 140,000 employees in 26 countries and total annual sales of $3.5 billion. He was posthumously awarded the Presidential Medal of Freedom in 1988.

Marryat \'mar-ē-ət**, Frederick** (b. July 10, 1792, London, Eng.—d. Aug. 9, 1848, Langham, Norfolk) English naval officer and novelist. He served in the Royal Navy from age 14 until he retired in 1830 as a captain. He then began a series of adventure novels—including *The King's Own* (1830), *Peter Simple* (1834), and *Poor Jack* (1840)—marked by a lucid, direct narrative style, humour, and incidents drawn from his varied experience at sea. His *Children of the New Forest* (1847), set during the English Civil Wars, is a classic of children's literature.

Mars Ancient Roman god of war and protector of Rome, second only to JUPITER in importance. His festivals occurred in the spring (March) and fall (October). Until the time of AUGUSTUS, Mars had only two temples in Rome. His sacred spears were kept in a sanctuary; on the outbreak of war, the consul had to shake the spears, saying "Mars vigila!" ("Mars, awake!") Under Augustus, Mars became not only the guardian of Rome in its military affairs but the emperor's personal guardian. He was identified with the Greek god ARES.

Mars Fourth PLANET from the Sun, named after the Roman god of war. Its mean distance from the Sun is 141 million mi (227 million km). Its day is 24.6 Earth hours and its year about 687 Earth days. It has two small moons, Phobos and Deimos. Mars's equatorial diameter is 4,220 mi (6,792 km), about half that of Earth, and it is less dense than Earth. Its

© 2006 Encyclopædia Britannica, Inc.

mass is about one-tenth of Earth's and its surface gravity about one-third as strong. No magnetic field has been detected on Mars, suggesting, as does its low density, the absence of a substantial metallic core. Like Earth, it has seasons and an atmosphere, but its average daytime surface temperature is only −10 °F (−20 °C). Mars's thin atmosphere is mainly carbon dioxide, with some nitrogen and argon and traces of water vapour. Spacecraft images show a cratered surface, with volcanoes, lava plains, flood channels, and canyons, many large by Earth standards; Olympus Mons, for example, is the largest known volcano in the solar system. Wind is an important element on Mars, sculpting features such as dunes and occasionally causing global dust storms. In the distant past Mars appears to have had a denser, warmer atmosphere and much more water than at present. Images from the Mars Global Surveyor spacecraft suggest that some liquid water may have flowed near the planet's surface in relatively recent times. No life has been detected on the planet.

Mars, canals of Apparent systems of straight-line markings on the surface of Mars, now known to be an illusion caused by the chance alignment of large craters and other surface features. Giovanni Virginio Schiaparelli (1835–1910) observed about 100 of what he described as channels. Percival Lowell called them canals and believed them to be evidence of intelligent life. Most astronomers could not see them, and many doubted their reality. The controversy was finally resolved only when pictures from Mariner spacecraft showed nothing resembling a network of channels.

Mars Pathfinder First spacecraft to land on Mars since the Viking 1976 missions. Launched in 1996 by NASA, Pathfinder descended to the Martian surface in July 1997 using parachutes, rockets, and air bags. It then deployed instruments, including Sojourner, a small, six-wheeled robotic rover, which explored as far as 1,600 ft (500 m) from the lander and sent pictures back for over a month. The mission's main objective was to show that low-cost Mars landings and exploration are feasible.

Marsalis \mär-'sa-ləs**, Wynton** (b. Oct. 18, 1961, New Orleans, La., U.S.) U.S. trumpeter and composer. Marsalis was a trumpet prodigy and was recognized as an important soloist in both the classical and jazz traditions at an early age. He joined Art Blakey's Jazz Messengers (1980–82) before leading his own groups. As a composer he has written ballet and concert works, and he won the 1997 Pulitzer Prize for his oratorio *Blood on the Fields*. He also worked on Ken Burns's *Jazz* miniseries and was a catalyst in the revival of broad interest in jazz.

Marseille *or* **Marseilles** \mär-'sā\ City (pop., 1999: city, 797,486; metro. area, 1,349,772), southeastern France. One of the Mediterranean's major seaports and the second largest city in France, it is located on the Gulf of Lion, west of the French Riviera. It was settled by Greeks during the 7th century BC and was annexed by the Romans, who called it Massilia, in 49 BC. It declined along with the Roman Empire but revived as a commercial port during the Crusades era; it passed to the French crown in 1481. The plague of 1720 killed half of its population. In the 19th century the development of France's colonial empire added to the city's importance. Following World War II, rapid industrial growth took place around the port complex at Fos-sur-Mer and in suburbs such as Marignane and Vitrolles.

marsh Freshwater or marine wetland ecosystem characterized by poorly drained mineral soils and by plant life dominated by grasses. Fewer plant species grow in marshes than on well-watered but not waterlogged land; grasses, sedges, and reeds or rushes are most common. Commercially, rice is by far the most important freshwater marsh plant: it supplies a major portion of the world's grain. Salt marshes are formed on intertidal land by seawater flooding and draining, and salt-marsh grasses will not grow on permanently flooded flats. See also swamp.

Marsh, Dame (Edith) Ngaio (b. April 23, 1895, Christchurch, N.Z.—d. Feb. 18, 1982, Christchurch) New Zealand writer of detective stories. Originally an artist, she later acted in and produced Shakespearean repertory theatre (1938–64). She is known for her mystery stories featuring Inspector Roderick Alleyn of Scotland Yard. With novels such as *Overture to Death* (1939), *Final Curtain* (1947), *Death of a Fool* (1956), and *Dead Water* (1963), she helped make the detective story a respectable literary genre.

Marsh, O(thniel) C(harles) (b. Oct. 29, 1831, Lockport, N.Y., U.S.—d. March 18, 1899, New Haven, Conn.) U.S. paleontologist. He spent his entire career at Yale University (1866–99) as the first professor of vertebrate paleontology in the U.S. From 1870 he led scientific expeditions to the West; in 1871 his party discovered the first pterodactyl found in the U.S. In 1882 he was placed in charge of the U.S. Geological Survey's work in vertebrate paleontology, aggravating a fierce rivalry between him and Edward D. Cope. Credited with discovering more than 1,000 fossil vertebrates and describing at least 500 more, Marsh published major works on toothed birds, gigantic horned mammals, and North American dinosaurs. His books include *Fossil Horses in America* (1874) and *Introduction and Succession of Vertebrate Life in America* (1877).

Marsh, Reginald (b. March 14, 1898, Paris, France—d. July 3, 1954, Bennington, Vt., U.S.) U.S. painter and printmaker. Born to American parents in Paris and educated at Yale University, from 1922 to 1925 he produced a daily column of drawings of vaudeville acts for the *New York Daily News*. In 1925 he became an original member of the staff of *The New Yorker* magazine, for which he drew humorous illustrations and metropolitan scenes. In 1929 he began painting scenes of city life, including Coney Island crowds and Bowery derelicts. He taught at the Art Students League from 1934 until his death.

marsh gas See methane

marsh mallow Perennial herbaceous plant (*Althaea officinalis*) of the mallow family, native to eastern Europe and northern Africa and naturalized in North America. Found usually in marshy areas near the sea, the marsh mallow has strongly veined, heart-shaped or oval leaves and pinkish flowers borne on stalks about 6 ft (1.8 m) tall. The root was formerly processed to make marshmallows.

marsh marigold Perennial herbaceous plant (*Caltha palustris*) of the buttercup family, native to wetlands in Europe and North America. It is grown in boggy wild gardens. The plant has a hollow stem, heart-shaped or round leaves, and glossy pink, white, or yellow flowers composed solely of sepals (petals are absent). The stems, leaves, and roots are sometimes cooked and eaten as a vegetable, though the fresh plant is poisonous. See also cowslip.

Marshall, Alfred (b. July 26, 1842, London, Eng.—d. July 13, 1924, Cambridge, Cambridgeshire) British economist, one of the founders of English neoclassical economics. The first principal of University College, Bristol (1877–81), and a professor at the University of Cambridge (1885–1908), he reexamined and extended the ideas of classical economists such as Adam Smith and David Ricardo. His best-known work, *Principles of Economics* (1890), introduced several influential economic concepts, including elasticity of demand, consumer's surplus, and the representative firm. His writings on the theory of value proposed time as a factor in analysis and reconciled the classical cost-of-production principle with the theory of marginal utility. See also classical economics.

Marshall, George C(atlett) (b. Dec. 31, 1880, Uniontown, Pa., U.S.—d. Oct. 16, 1959, Washington, D.C.) U.S. Army officer and statesman. After graduating from the Virginia Military Institute, he served in the Philippines (1902–03) and in World War I. He was later an aide to Gen. John Pershing (1919–24) and assistant commandant of the army's infantry school (1927–33), where he taught many future commanders. As chief of staff of the U.S. Army (1939–45), he directed army operations throughout World War II. After his retirement in 1945, Pres. Harry Truman sent him to China to mediate the civil war there. As secretary of state (1947–49), Marshall proposed the European aid program known as the Marshall Plan and initiated discussions that led to the formation of NATO. He resigned because of ill health but was called back by Truman to become secretary of defense (1950–51) and to prepare the armed forces for the Korean War. In 1953 he was awarded the Nobel Prize for Peace.

Marshall, John (b. Sept. 24, 1755, near Germantown, Va.—d. July 6, 1835, Philadelphia, Pa., U.S.) U.S. patriot, politician, and jurist. In 1775 he joined a regiment of minutemen and served as a lieutenant under Gen. George Washington in the American Revolution. After his discharge (1781), he served in the Virginia legislature and on Virginia's executive council (1782–95), gaining a reputation as a leading Federalist. He supported ratification of the U.S. Constitution at the state's ratifying convention. He was one of three commissioners sent to France in 1797–98 (see XYZ Affair); he later served as secretary of state (1800–01) under Pres. John Adams. In 1801 Adams named Marshall chief justice of the Supreme Court of the United States, a post he held until his death. He participated in more than 1,000 decisions, writing 519 himself. During his tenure, the Supreme Court set forth the main structure of the government; its groundbreaking decisions included *Marbury v. Madison*, which established judi-

CIAL REVIEW; *McCULLOCH v. MARYLAND*, which affirmed the constitutional doctrine of "implied powers"; the DARTMOUTH COLLEGE CASE, which protected businesses and corporations from much government regulation; and *GIBBONS v. OGDEN*, which established that states cannot interfere with Congress's right to regulate commerce. Marshall is remembered as the principal founder of the U.S. system of constitutional law.

Marshall, Paule *orig.* **Paule Burke** (b. April 9, 1929, Brooklyn, N.Y., U.S.) U.S. writer. She was born to Barbadian parents and attended Brooklyn College. Her autobiographical first novel, *Brown Girl, Brownstones* (1959), was acclaimed for its acute rendition of dialogue. Her short story "Reena" (1962) was one of the first pieces of fiction to feature a college-educated, politically active black woman as its protagonist. Her most eloquent statement of her belief in black Americans' need to rediscover their African heritage is the novel *Praisesong for the Widow* (1983). *The Fisher King* (2000) is a story of love and family conflict.

Marshall, Thomas R(iley) (b. March 14, 1854, North Manchester, Ind., U.S.—d. June 1, 1925, Washington, D.C.) U.S. politician. As governor of Indiana (1909–13) he sponsored a broad program of social legislation. In 1912 he was elected vice president on a ticket with WOODROW WILSON. He became the first vice president in nearly 100 years to serve two terms (1913–21). When Wilson suffered a stroke that partially paralyzed him in 1919, Marshall refused to assume the powers of the presidency without a congressional resolution and written requests from first lady Edith Wilson and the president's doctor. A popular public official, he was heard to remark during a tedious debate, "What this country needs is a really good five-cent cigar."

Marshall, Thurgood (b. July 2, 1908, Baltimore, Md., U.S.—d. Jan. 24, 1993, Bethesda, Md.) U.S. jurist and civil-rights advocate. He received his law degree from Howard University in 1933. From 1936 he worked for the NAACP, becoming its chief counsel in 1940. He won 29 of the 32 cases he argued before the SUPREME COURT OF THE UNITED STATES, including the landmark *BROWN v. BOARD OF EDUCATION* (1954) and others that established EQUAL PROTECTION for African Americans in housing, voting, employment, and education. He served as U.S. solicitor general (1965–67) before being appointed in 1967 to the Supreme Court by Pres. LYNDON B. JOHNSON, becoming the first African American Supreme Court justice. Marshall was a steadfast liberal during his tenure on the Court, and he maintained his previous views concerning the need for equitable and just treatment of the nation's minorities by the state and federal governments. He retired in 1991.

Marshall Islands *officially* **Republic of the Marshall Islands** Island country, central Pacific Ocean. It is composed of two parallel chains of low-lying coral atolls: the Ratak, or Sunrise, to the east and the Ralik, or Sunset, to the west. The chains lie 125 mi (200 km) apart and extend some 800 mi (1,290 km) northwest to southeast. The islands and islets number more than 1,200. Area: 70 sq mi (181 sq km). Population (2005 est.): 56,300. Capital: MAJURO. The indigenous people are Micronesian. Languages: Marshallese, English (both official). Religion: Christianity (Protestant, Roman Catholic, other Christians). Currency: U.S. dollar. The largest atoll is Kwajalein, consisting of about 90 islets, with a total land area of 6 sq mi (16 sq km). Much of Kwajalein is used as a missile-testing range by the U.S. military, which provides a major source of revenue to the Marshall Islands. Subsistence farming, fishing, and the raising of pigs and poultry are the principal economic activities. The Marshall Islands is a republic with two legislative houses; its head of state and government is the president. The islands were sighted in 1529 by the Spanish navigator Álvaro Saavedra (or de Saavedra). Germany purchased the islands from Spain in 1885 and declared them a protectorate the following year. Japan seized them in 1914 and after 1919 administered them as a League of Nations mandate. During World War II the U.S. seized Kwajalein and Enewetak, and the Marshall Islands were made part of the UN Trust Territory of the Pacific Islands under U.S. jurisdiction in 1947. BIKINI and Enewetak atolls served as testing grounds for U.S. nuclear weapons from 1946 to 1958. The Marshall Islands became an internally self-governing republic in 1979. It signed the compact of free association with the U.S. in 1982 and became fully self-governing in 1986. The compact was amended in 2004.

Marshall Plan (1948–51) U.S.-sponsored program to provide economic aid to European countries after World War II. The idea of a European self-help plan financed by the U.S. was proposed by GEORGE MARSHALL in 1947 and was authorized by Congress as the European Recovery Program. It provided almost $13 billion in grants and loans to 17 countries and was a key factor in reviving their economies and stabilizing their political structures. The plan's concept was extended to less-developed countries under the POINT FOUR PROGRAM.

Marshfield Bay See COOS BAY

Marsic War See SOCIAL WAR

Marsilius of Padua (b. c. 1280, Padua, Kingdom of Italy—d. c. 1343, Munich) Italian political philosopher. He was consultant to the GHIBELLINES until condemned as a heretic (1327) after writing *Defensor pacis* (1320–24) and fleeing to the court of LOUIS IV of Bavaria. He helped declare Pope JOHN XXII a heretic, install NICHOLAS V as antipope, and crown Louis emperor (1328). In his secular concept of the state, the power of the church is limited, and political power lies with the people, a theory that influenced the modern idea of the state.

Marston, John (b. Oct. 7, 1576, Oxfordshire, Eng.—d. June 25, 1634, London) English dramatist. He began his literary career as a poet in 1598 but soon turned to writing for the theatre. One of the most vigorous satirists of his era, he wrote all his plays before taking holy orders in 1609. His best-known work is the tragicomedy *The Malcontent* (1604), which rails at the iniquities of a lascivious court. Also notable is *The Dutch Courtezan* (produced 1603–04), one of the cleverest comedies of its time. Though he satirized and feuded with BEN JONSON, the two collaborated on *Eastward Hoe* (1605; with George Chapman) and *Love's Martyr* (1607).

Marston Moor, Battle of (July 2, 1644) First major Royalist defeat in the ENGLISH CIVIL WARS. Royalist forces under Prince RUPERT relieved the siege of York and pursued the Parliamentary forces to nearby Long Marston. A surprise counterattack by Parliamentary forces under OLIVER CROMWELL caused heavy losses to Royalist troops. With the fall of York, CHARLES I lost control of the north, and Cromwell emerged as the leading Parliamentary general.

marsupial \mär-'sü-pē-əl\ Any MAMMAL of the infraclass Marsupialia, characterized by premature birth and continued development outside the womb. The young remain attached to the mother's teats for a period corresponding to the late stages of fetal development of a placental mammal. More than 170 species (e.g., BANDICOOTS, KANGAROOS, KOALAS, WOMBATS) are found in Australia, New Guinea, and nearby islands. About 65 species of OPOSSUM occur in the Americas and seven species of ratlike marsupials in South America. Many species have a pouch (marsupium), a fold of skin covering the nipples on the mother's lower belly, where the young continue their development.

"Peleus Taming Thetis," pelike by the Marsyas Painter, *c.* 340–330 BC; in the British Museum
COURTESY OF THE TRUSTEES OF THE BRITISH MUSEUM

Marsyas \mär-'sē-əs\ **Painter** (fl. c. 350–325 BC, Greece) Greek painter of the late Classical period, known for two containers, both dated 340–330 BC. Both are painted in the so-called Kerch style, named for the area north of the Black Sea where many such vessels were excavated. Characterized by slender, mannered forms, elaborate decoration, and polychrome effects, the Kerch style is thought to be the last major style of Attic RED-FIGURE POTTERY.

Stone marten (*Martes foina*)
REINHARD/REISER—BAVARIA-VERLAG

marten Any of several forest-dwelling CARNIVORE species (genus *Martes,* family Mustelidae). Species differ in size and colour, but they resemble WEASELS in general proportions, and their fur is valuable. Their total length is 20–40 in. (50–100 cm), and they may weigh 2–5 lb (1–2.5 kg) or more. Martens hunt

© 2006 Encyclopædia Britannica, Inc.

alone, feeding on animals, fruit, and carrion. The fur of the American marten (*M. americana*) of northern North America is sometimes sold as sable. Other species include the pine, baum, or sweet marten (*M. martes*) of Europe and Central Asia and the yellow-throated marten, or honey dog (*M. flavigula*), named for its preference for sweet foods, of southern Asia. See also FISHER; POLECAT.

Martha's Vineyard Island, Atlantic Ocean, off the southeastern coast of Massachusetts, U.S. Situated across Vineyard Sound from CAPE COD, it is nearly 20 mi (32 km) long and 2–10 mi (3–16 km) wide. It was first described in 1602 by Bartholomew Gosnold and was named for its wild grapevines. Purchased by Thomas Mayhew in 1641, it was considered part of New York before being ceded to Massachusetts in 1692. It was once a centre of the whaling and fishing industries; it is now a popular summer resort.

Martí \mär-'tē\ **(y Pérez), José Julián** (b. Jan. 28, 1853, Havana, Cuba—d. May 19, 1895, Dos Ríos) Cuban poet, essayist, and patriot. Involved in an 1868 revolutionary uprising, Martí was deported to Spain, where he received a law degree and continued his political activities and writing. He later lived in various countries, spending most of 1881–95 in New York City. He organized and unified the movement for Cuban independence and died in battle. As a writer, he is noted for his personal prose and deceptively simple verse on themes of a free and united America. His essays, such as those in *Our America* (1881), are often considered his greatest contribution to Latin American letters. He is the national hero of Cuba.

Martial \'mär-shəl\ *Latin* **Marcus Valerius Martialis** (b. c. AD 38/41, Bilbilis, Hispania—d. c. 103) Roman poet. Born in a Roman colony in what is now Spain, Martial went to Rome as a young man. There he associated with such figures as SENECA, Lucan, and JUVENAL and enjoyed the patronage of the emperors TITUS and DOMITIAN. His early poetry, some marred by gross adulation of Titus, was undistinguished. He is renowned for his 12 books of EPIGRAMS (86–102?), a form he virtually created. Pointed and often obscene, they provide a picture of Roman society during the early empire that is remarkable both for its completeness and for its accurate portrayal of human foibles.

martial art Any of several arts of combat and self-defense that are widely practiced as sport. There are armed and unarmed varieties, most based on traditional fighting methods used in East Asia. In modern times, derivatives of armed martial arts include KENDO (fencing with wooden swords) and *kyudo* (archery). Unarmed varieties include AIKIDO, JUDO, KARATE, KUNG FU, and TAE KWON DO. Because of the influence of Taoism and Zen Buddhism, there is a strong emphasis in all the martial arts on the practitioner's mental and spiritual state. A hierarchy of expertise, ranging from the novice ("white belt") to the master ("black belt"), is usually recognized. See also T'AI CHI CH'UAN; JUJITSU.

martial law Temporary rule of a designated area by military authorities in time of emergency when the civil authorities are deemed unable to function. Under martial law, civil rights are usually suspended, and the activities of civil courts are restricted or supplanted entirely by military tribunals. Such "acts done by necessity" are limited only by INTERNATIONAL LAW and the conventions of civilized warfare. Though temporary in theory, a state of martial law may in fact continue indefinitely. See also HUMAN RIGHTS; WAR CRIMES.

Martin V *orig.* **Oddo Colonna** (b. 1368, Genazzano, Papal States—d. Feb. 20, 1431, Rome) Pope (1417–31). His election at the Council of Constance marked the end of the Western SCHISM. He condemned conciliar theory (see CONCILIAR MOVEMENT) and any appeals of papal judgment on matters of faith. Martin rejected French efforts to persuade him to live at Avignon (see AVIGNON PAPACY). Instead he returned to Rome (1420), where he helped to rebuild the ruined city. He also tried to recover control of the PAPAL STATES. He mediated in the HUNDRED YEARS' WAR and organized crusades against the HUSSITES, and he asserted the rights of the church against the crown.

martin Any of several species of songbirds in the family Hirundinidae. In the U.S., the name refers to the purple martin (*Progne subis*), at 8 in. (20 cm) long, the largest U.S. SWALLOW. The sand martin, or bank swallow (*Riparia riparia*), a 5-in. (12-cm) brown-and-white bird, breeds throughout the Northern Hemisphere, nesting in sandbank burrows. The house martin (*Delichon urbica*), blue-black above and white-rumped, is common in Europe. The African river martin (*Pseudochelidon eurystomina*) of the Congo is black, with red eyes and bill.

Martin, Agnes (b. March 22, 1912, Macklin, Sask., Can.—d. Dec. 16, 2004, Taos, N.M., U.S.) Canadian-born U.S. painter. She moved to the U.S. in 1931 and became a U.S. citizen in 1950. She studied at Columbia University and taught at the University of New Mexico. In 1958 she had her first solo exhibition. Martin was a prominent exponent of geometric abstraction, and, for her, a gray grid of intersecting penciled lines became the ultimate geometric composition. Her gridlike abstractions were also noted for their light-soaked appearance and quiet effect. In the 1970s she produced printed equivalents of her paintings; a notable series of silkscreens, *On a Clear Day* (1973), was produced after her mathematically annotated sketches. Martin was one of the leading practitioners of ABSTRACT EXPRESSIONISM in the 20th century.

Martin, Mary (Virginia) (b. Dec. 1, 1913, Weatherford, Texas, U.S.—d. Nov. 3, 1990, Rancho Mirage, Calif.) U.S. singer and actress. She co-owned a dancing school in her native Weatherford, Texas, before moving in 1938 to New York City, where she won a small part in the musical *Leave It to Me* and became famous for her rendition of "My Heart Belongs to Daddy." She appeared in movies before returning to Broadway to star in *One Touch of Venus* (1943). Martin originated the role of Nellie Forbush in *South Pacific* (1949–53) and later starred in *Peter Pan* (1954, Tony Award; television version, 1955), *The Sound of Music* (1959, Tony Award), and *I Do, I Do* (1966).

Martin, Paul *in full* **Paul Joseph Martin, Jr.** (b. Aug. 28, 1938, Windsor, Ont., Can.) Canadian prime minister (2003–06). The son of Paul Joseph Martin, who served as a minister in four Liberal governments, the younger Martin studied law at the University of Toronto and was called to the bar in 1966. Instead of practicing law, however, he joined Canada Steamship Lines, a freight carrier he purchased in 1981. From 1993 to 2002 Martin, a member of the LIBERAL PARTY, served as minister of finance in Prime Minister JEAN CHRÉTIEN's government. Highly successful in the post, Martin eliminated a large budget deficit, achieved five consecutive budget surpluses, and secured the largest tax cut in Canadian history. In 2003 Martin succeeded Chrétien as leader of the Liberal Party and as prime minister. He was elected prime minister in his own right in 2004 but was ousted from office following his party's defeat in the 2006 Canadian general election.

Martin, Steve (b. Aug. 14, 1945, Waco, Texas, U.S.) U.S. comedian and writer. He began writing for the Smothers Brothers in 1967. In the 1970s he wrote for and performed on shows such as *Saturday Night Live*. His slapstick and absurdist humour were showcased in *The Jerk* (1979), which he both wrote and starred in. His other film comedies include *All of Me* (1984), *Roxanne* (1987), *Little Shop of Horrors* (1986), *Dirty Rotten Scoundrels* (1988), *Parenthood* (1989), *L.A. Story* (1991), *Bowfinger* (1999), and *Bringing Down the House* (2003). He wrote the stage play *Picasso at the Lapin Agile* (1995).

Martin du Gard \mär-ta^{n}-dü-'gär**, Roger** (b. March 23, 1881, Neuilly-sur-Seine, France—d. Aug. 22, 1958, Bellême) French novelist and dramatist. Originally trained as a paleographer and archivist, he brought to his literary works a spirit of objectivity and a scrupulous regard for detail. He first attracted attention with the novel *Jean Barois* (1913), the story of an intellectual torn between the Roman Catholic faith of his childhood and the scientific materialism of his maturity. He is best known for the eight-novel cycle *Les Thibault* (1922–40), the record of a family's development that chronicles the social and moral issues facing the French bourgeoisie in the pre-World War I era. He received the 1937 Nobel Prize for Literature.

Martin of Tours \'tür**, Saint** (b. c. 316, Sabaria, Pannonia—d. Nov. 8, 397, Candes, Gaul; Western feast day, November 11; Eastern feast day November 12) Patron saint of France. Born a pagan, he converted to Christianity at age 10. He was forced to join the Roman army but asked to be released because service was incompatible with his Christianity. After imprisonment he settled in Poitiers and then became a missionary on the Balkan Peninsula. He returned to Poitiers in 360 and founded the first monastery in Gaul. In 371 he was made bishop of Tours. A second monastery he founded, at Mormoutier, became a great monastic complex. St. Martin was known as a miracle worker in his own lifetime and was one of the first venerated saints who was not a martyr.

Martineau \'mär-ti-ˌnō**, Harriet** (b. June 12, 1802, Norwich, Norfolk, Eng.—d. June 27, 1876, near Ambleside, Westmorland) English essayist, novelist, and economic and historical writer. She became prominent among English intellectuals of her time despite deafness and other

© 2006 Encyclopædia Britannica, Inc.

disabilities. She first gained a large reading public with a series popularizing classical economics, published in several collections (1832–34). Her chief historical work was *The History of the Thirty Years' Peace, A.D. 1816–1846* (1849), a widely read popular treatment. Her most scholarly work is a condensed translation of *The Positive Philosophy of Auguste Comte* (1853). Her best-regarded novel is *Deerbrook* (1839).

Martínez Montañés, Juan See Juan Martínez Montañés

Martini, Simone (b. c. 1284, Siena, Republic of Siena—d. 1344, Avignon, Provence) Italian painter. An exponent of Gothic art, he did much to spread the influence of Sienese painting. Duccio di Buoninsegna influenced his use of harmonious, pure colour, but his graceful, decorative lines were inspired by French Gothic art, as seen in his *Maestà* fresco (1315), which depicts the Madonna as a Gothic queen holding court beneath a Gothic canopy. His equestrian portrait of Guidoriccio da Fogliano (1328) was an important precedent for Renaissance equestrian portraits.

Martinique \ˌmär-tə-ˈnēk\ Island (pop., 2002 est.: 386,000) of the Windward Islands, West Indies, and overseas department of France. It is 50 mi (80 km) long and 22 mi (35 km) wide and occupies an area of 436 sq mi (1,128 sq km). Largely mountainous, its highest point, Mount Pelée, is an active volcano. Its capital is Fort-de-France. Tourism is the basis of its economy. Carib Indians, who had ousted earlier Arawak inhabitants, resided on the island when Christopher Columbus visited it in 1502. In 1635 a Frenchman established a colony there, and in 1674 it passed to the French crown. The British captured and held the island from 1762 to 1763 and occupied it again during the Napoleonic Wars, but each time it was returned to France. Made a department of France in 1946, it remained under French rule despite a communist-led independence movement in the 1970s.

Martins, Peter (b. Oct. 27, 1946, Copenhagen, Den.) Danish-born U.S. dancer, choreographer, and director of the New York City Ballet. He trained at the Royal Danish Ballet School and became a member of its company in 1965. He joined the New York City Ballet in 1969 as a principal dancer and created roles in ballets such as Jerome Robbins's *Goldberg Variations* (1971) and George Balanchine's *Duo Concertante* (1972). He began choreographing for the company in 1977 with *Calcium Light Night*. After Balanchine's death in 1983, Martins became codirector (until 1990) and then sole director of the company.

Martinson, Harry (Edmund) (b. May 6, 1904, Jämshög, Swed.—d. Feb. 11, 1978, Stockholm) Swedish novelist and poet. He spent his childhood in foster homes and his young adulthood as a merchant seaman, labourer, and vagrant. He described his early experiences in two autobiographical novels, *Flowering Nettle* (1935) and *The Way Out* (1936), and in travel sketches. Among his best-known works are the poetry collection *Trade Wind* (1945), the novel *The Road* (1948), and the epic poem *Aniara* (1956). In 1949 he became the first self-taught working-class writer ever elected to the Swedish Academy. He shared the 1974 Nobel Prize for Literature with Eyvind Johnson.

Martinů \mär-ˈtē-nü**, Bohuslav (Jan)** (b. Dec. 8, 1890, Polička, Bohemia—d. Aug. 28, 1959, Liestal, Switz.) Czech (Bohemian) composer. He started composing at age 10 but was expelled from the conservatory for neglecting his studies. His early pieces combined the influences of Czech folk music and French composer Claude Debussy's music. In Paris (1923–40) he gained a reputation for his colourful ballet scores and experimented with Neoclassicism, jazz, and ragtime. He composed many works, including six symphonies, operas (including *Julietta*, 1938), and large choral works (including *The Epic of Gilgamesh*, 1955), but he did little to promote his music.

Martov \ˈmär-ˌtȯf**, L.** *orig.* **Yuly Osipovich Tsederbaum** (b. Nov. 24, 1873, Constantinople, Ottoman Empire—d. April 4, 1923, Berlin, Ger.) Russian revolutionary. He first lived in Vilna, where he belonged to the Bund, a Jewish socialist group. In 1895 he and Vladimir Ilich Lenin formed the St. Petersburg Union of Struggle for the Liberation of the Working Class. After his arrest and exile to Siberia (1896–99), he joined Lenin in Switzerland as an editor of *Iskra*. From 1903 Martov supported the Menshevik faction of the Russian Social-Democratic Workers' Party and became its leader (1905–07). After the Russian Revolution of 1917, he supported the Bolshevik government in the Russian Civil War but later opposed many of its dictatorial measures. He left Russia in 1920 and edited the *Socialist Courier* in Berlin.

martyr Person who voluntarily suffers death rather than deny his or her religion. Readiness for martyrdom was a collective ideal in ancient Judaism, notably in the era of the Maccabees, and its importance has continued into modern times. Roman Catholicism sees the suffering of martyrs as a test of their faith. Many saints of the early church underwent martyrdom during the persecutions of the Roman emperors. Martyrs need not perform miracles to be canonized. In Islam, martyrs are thought to comprise two groups of the faithful: those killed in jihad and those killed unjustly. In Buddhism, a bodhisattva is regarded as a martyr because he voluntarily postpones enlightenment to alleviate the suffering of others.

Marvell \ˈmär-vəl**, Andrew** (b. March 31, 1621, Winestead, Yorkshire, Eng.—d. Aug. 18, 1678, London) English poet and politician. He was employed as a tutor, including to Oliver Cromwell's ward, before becoming an assistant to John Milton in the foreign office in 1657. From 1659 he held a seat in Parliament. His reputation as one of the finest secular Metaphysical poets (see Metaphysical poetry) is based on a small body of brilliant lyric verse, notably "To His Coy Mistress" (1681) and "The Garden." Among his other works are classical odes, such as "An Horatian Ode upon Cromwell's Return from Ireland" (1650); political verse satires opposing the government after the Restoration, such as *Last Instructions to a Painter* (1667); and prose satires.

Marx, Karl (Heinrich) (b. May 5, 1818, Trier, Rhine province, Prussia [Ger.]—d. March 14, 1883, London, Eng.) German political philosopher, economic theorist, and revolutionary. He studied humanities at the University of Bonn (1835) and law and philosophy at the University of Berlin (1836–41), where he was exposed to the works of G.W.F. Hegel. Working as a writer in Cologne and Paris (1842–45), he became active in leftist politics. In Paris he met Friedrich Engels, who would become his lifelong collaborator. Expelled from France in 1845, he moved to Brussels, where his political orientation matured and he and Engels made names for themselves through their writings. Marx was invited to join a secret left-wing group in London, for which he and Engels wrote the Communist Manifesto (1848). In that same year, Marx organized the first Rhineland Democratic Congress in Germany and opposed the king of Prussia when he dissolved the Prussian Assembly. Exiled, he moved to London in 1849, where he spent the rest of his life. He worked part-time as a European correspondent for the *New York Tribune* (1851–62) while writing his major critique of capitalism, *Das Kapital* (3 vol., 1867–94). He was a leading figure in the First International from 1864 until the defection of Mikhail Bakunin in 1872. See also Marxism; communism; dialectical materialism.

Marx Brothers U.S. comedy team. The original five brothers were Chico (orig. Leonard) (1886–1961), Harpo (orig. Adolph Arthur) (1888–1964), Groucho (orig. Julius Henry) (1890–1977), Gummo (orig. Milton) (1893–1977), and Zeppo (orig. Herbert) (1901–79). They formed a vaudeville act with their mother, Minnie, called "The Six Musical Mascots" (1904–18). Gummo left the act early on, and the brothers later became "The Four Marx Brothers." They won fame with their first Broadway play,

Groucho, Harpo, and Chico Marx

I'll Say She Is (1924), which was followed by *The Cocoanuts* (1925; film, 1929) and *Animal Crackers* (1926; film, 1930). They later starred in *Monkey Business* (1931), *Horse Feathers* (1932), *Duck Soup* (1933), *A Night at the Opera* (1935), and *Room Service* (1938), among other films, developing a skillful blend of visual and verbal humour, with Groucho supplying wisecracks and a running commentary as counterpoint to the frantic, anarchic activities of the silent Harpo and the Italian-accented Chico. Zeppo left the act in 1934, and the act disbanded in 1949. Groucho later hosted the television quiz program *You Bet Your Life* (1950–61).

Marxism Ideology and socioeconomic theory developed by Karl Marx and Friedrich Engels. The fundamental ideology of communism, it holds that all people are entitled to enjoy the fruits of their labour but are prevented from doing so in a capitalist economic system, which divides society into two classes: nonowning workers and nonworking owners. Marx called the resulting situation "alienation," and he said that when the workers repossessed the fruits of their labour, alienation would be overcome and class divisions would cease. The Marxist theory of history posits class struggle as history's driving force, and it sees capitalism as the most recent and most critical historical stage—most critical because at this stage the proletariat will at last arise united. The failure of the European Revolutions of 1848 and an increasing need to elaborate on Marxist theory, whose orientation is more analytical than practical, led to adaptations such as Leninism and Maoism; in the late 20th century the collapse of the Soviet Union and China's adoption of many elements of a free-market economy seemed to mark the end of Marxism as an applicable economic or governmental theory, though it retains interest as a critique of market capitalism and a theory of historical change. See also *Communist Manifesto*; dialectical materialism; socialism; Stalinism; Trotskyism.

Mary *or* **St. Mary** *or* **Virgin Mary** (fl. beginning of the Christian Era) Mother of Jesus. According to the Gospels, she was betrothed to St. Joseph when the archangel Gabriel appeared to her to announce the coming birth of Jesus. Other incidents in the Gospels in which she appears include the visit to Elizabeth, mother of John the Baptist; the birth of Jesus and his presentation in the Temple; the coming of the Magi and the flight to Egypt; the marriage at Cana in Galilee; the attempt to see Jesus while he was teaching; and watching at the cross. Eastern Orthodoxy, Roman Catholicism, and most Protestant denominations hold Jesus to have been divinely conceived and Mary to have remained a virgin. The Roman Catholic church also holds to the doctrine of her Immaculate Conception and her bodily assumption into heaven. Catholics pray to Mary as an intercessor. See also Mariology.

Mary See Merv

Mary I *or* **Mary Tudor** (b. Feb. 18, 1516, Greenwich, near London, Eng.—d. Nov. 17, 1558, London) Queen of England (1553–58). The daughter of King Henry VIII and Catherine of Aragon, she was declared illegitimate after Henry's divorce and new marriage to Anne Boleyn (1533). In 1544 Mary was restored to court and granted succession to the throne. After becoming queen (1553), she married Philip II of Spain, restored Roman Catholicism, and revived the laws against heresy. The resulting persecution of Protestant rebels and the execution of some 300 heretics earned her the hatred of her subjects and the nickname "Bloody Mary." She waged an unsuccessful war against France that in 1558 resulted in the loss of Calais, England's last foothold on the Continent.

Mary II (b. April 30, 1662, London, Eng.—d. Dec. 28, 1694, London) Queen of England (1689–94). The daughter of King James II, a Catholic convert, she was reared as a Protestant and in 1677 married to her cousin, William of Orange. They lived in Holland until English nobles opposed to James's pro-Catholic policies invited William and Mary to assume the English throne. After William landed with a Dutch force (1688), James fled, and Mary and William (as King William III) became corulers of England (1689). Mary enjoyed great popularity, and her Dutch tastes had an influence on English pottery, landscape gardening, and interior design. She died of smallpox at age 32.

Mary, Queen of Scots *orig.* **Mary Stuart** (b. Dec. 8, 1542, Linlithgow Palace, West Lothian, Scot.—d. Feb. 8, 1587, Fotheringhay Castle, Northamptonshire, Eng.) Queen of Scotland (1542–67). She became queen when her father, James V (1512–42), died six days after her birth. She was sent by her mother, Mary of Guise, to be raised at the court of the French king Henry II and was married in 1558 to his son Francis II. After Francis's brief rule as king (1559–60) ended with his premature death, Mary returned to Scotland (1561), where she was distrusted because of her Catholic upbringing. In 1565 the red-haired queen married her ambitious cousin Henry Stewart, Lord Darnley, and became a victim of intrigues among the Scottish nobles. Darnley conspired with them to murder her confidant David Riccio. After the birth of her son James (later James I of England) in 1566, Mary was estranged from Darnley, who was murdered in 1567. Ignoring objections by the jealous Scottish nobility, she married James Hepburn, earl of Bothwell (1535?–78), a suspect in Darnley's murder. The rebellious nobles deserted her army at Carberry Hill and forced her to abdicate in favour of her son (1567). After failed attempts to win back the throne, she sought refuge in England with her cousin Elizabeth I, who arranged to keep her in captivity. Several uprisings by English Catholics in Mary's favour convinced Elizabeth to have Mary tried and condemned; she was beheaded at Fotheringhay Castle in 1587.

Mary Magdalene, Saint (fl. 1st century, Palestine; feast day July 22) Follower of Jesus and the first person to see the resurrected Christ. According to Luke 8:2 and Mark 16:9, Jesus cleansed her of seven demons. She accompanied him in Galilee, and she witnessed his Crucifixion and burial. On Easter morning she went with two other women to anoint the corpse, but the tomb was empty. Christ later appeared to her and instructed her to tell the Apostles that he was ascending to God. Popular tradition has long associated her with the repentant prostitute who anointed Christ's feet.

Maryland State (pop., 2000: 5,296,486), eastern U.S. A Middle Atlantic state, it is deeply indented by Chesapeake Bay and is bordered by Pennsylvania, Delaware, Virginia, the District of Columbia, and West Virginia. It covers 10,460 sq mi (27,091 sq km); its capital is Annapolis. The state's main geographic regions are the coastal plain along Chesapeake Bay, the rich farming country of the Piedmont plateau, and the Appalachian Mountains. First occupied by late Ice Age hunters c. 10,000 BC, the area was later inhabited by the Nanticoke and Piscataway tribes. Capt. John Smith charted the Chesapeake Bay region in 1608. Maryland was included in a charter given by the British king to Cecil Calvert, Lord Baltimore. Leonard Calvert, his brother, founded the first settlement in 1634 at St. Marys City. Maryland became the first American colony to establish religious freedom. Its boundary dispute with Pennsylvania was settled in the 1760s with the drawing of the Mason-Dixon Line. In 1788 Maryland became the seventh state to ratify the U.S. Constitution. The state ceded the District of Columbia as the site for a new federal capital in 1791. It was involved in the War of 1812 (see Fort McHenry). The U.S. Naval Academy was founded at Annapolis in 1845. Maryland remained in the Union during the American Civil War, but strong Southern sentiments resulted in the imposition of martial law. After the war, it prospered as an important entrepôt for consumer goods to the South and Midwest. During the 20th century its proximity to the national capital spurred population growth. Its economy is based primarily on government services and manufacturing.

Masaccio \mə-ˈzä-chē-ˌō\ *orig.* **Tommaso di Giovanni di Simone Guidi** (b. Dec. 21, 1401, Castel San Giovanni, Duchy of Milan—d. autumn 1428, Rome, Papal States) Italian painter. Little is known about him until 1422, when he entered the artists' guild in Florence. Giotto probably influenced his massive figures and spare composition, but the gestural and emotional expression in his rendering of the human body are closer in spirit to Donatello. In his most famous work, the frescoes in the Brancacci Chapel of Florence's Santa Maria del Car-

mine (c. 1425–28), painted in conjunction with his sometime partner, Masolino, his figures are constructed with strongly differentiated areas of light and dark that give them a three-dimensional effect. His *Trinity* fresco (c. 1427–28) in Florence's Santa Maria Novella is the first extant example of the systematic use of one-point perspective in a painting. He went to Rome in 1428 and died there so suddenly that some people suspected he had been poisoned. The rationality, realism, and humanity of the art he created in his brief six years of work inspired the major Florentine Renaissance painters of the mid-15th century and ultimately influenced the course of Western painting.

Masada \mə-'sä-də\ Ancient mountain fortress, southeastern Israel. It occupies the entire top of a mesa, which is 1,424 ft (434 m) tall and has an area of 18 acres (7 hectares). Its fortifications were built by Herod the Great in the 1st century BC; it was captured by the Zealots, a Jewish sect, in their revolt against Rome in AD 66. After the fall of Jerusalem, Masada, the last remnant of Jewish rule in Palestine, refused to surrender. In 73, after a lengthy siege, it was finally taken by the Romans, who found that nearly all of the some 1,000 Zealots there had committed suicide rather than be captured. In the 20th century, the fortress became a symbol of Jewish national heroism; it is now one of Israel's most visited tourist attractions.

Masai *or* **Maasai** \ma-'sī\ Nomadic herders of southern Kenya and northern Tanzania. They speak a language (usually called Maa) of the Nilo-Saharan family. Numbering some 900,000, the Masai subsist almost entirely on the meat, blood, and milk of their cattle herds. A kraal, consisting of a large circular thornbush fence around a ring of mud-dung houses, holds four to eight families and their herds. Polygamy is common among older men. All men are grouped into age sets. Young men traditionally live in isolation in the bush for varying lengths of time in order to develop strength, courage, and endurance. See also Nilot.

Masamune \ˌmä-sä-'mù-ne\ *orig.* **Okazaki Gorōnyūdō** (b. 1264?, Japan—d. 1343?, Kamakura) Japanese swordsmith. Masamune was appointed chief swordsmith by the emperor Fushimi in 1287. He founded the Sōshū school of swordmaking, in which blades were made entirely of steel and hardened throughout. It marked an important advance in metallurgical technique that was significantly ahead of the technical level in Europe or elsewhere in Asia.

Masaryk \'mä-sə-rik**, Jan (Garrigue)** (b. Sept. 14, 1886, Prague, Bohemia, Austria-Hungary—d. March 10, 1948, Prague, Czech.) Czech statesman. The son of Tomáš Masaryk, he entered the foreign service of the newly independent Czechoslovakia in 1919 and served as ambassador to Britain from 1925 to 1938. During World War II he was foreign minister of the Czechoslovak provisional government in London (1940–45) and later Prague (1945–48). At the request of Pres. Edvard Beneš, he remained at his post after the communist takeover in 1948. Two weeks later he either jumped or was pushed to his death from a window in the foreign office.

Masaryk, Tomáš (Garrigue) (b. March 7, 1850, near Gölding, Moravia, Austrian Empire—d. Sept. 14, 1937, Lány, Czech.) First president of Czechoslovakia (1918–35). After receiving a doctorate from the University of Vienna, he taught philosophy at the Czech University of Prague (1882) and wrote on the Czech Reformation; his most important works were a study of Marxism (1898) and *Russia and Europe* (1913). In the Austrian Reichsrat (1891–93, 1907–14), he supported democratic policies and criticized Austria-Hungary's alliance with Germany. In 1915 he went to western Europe, where he organized the Czech national council, which in 1918 gained recognition as the de facto government of the future Czechoslovakia. He negotiated its liberation as one of the Fourteen Points in the projected post-World War I peace settlement. Elected president of the new country (1918–35), he was occupied with settling conflicts between the Czech and Slovak parties.

Masbate \mäs-'bā-tā\ Island (pop. 2000: 707,668) of the Visayan group, central Philippines. The V-shaped island occupies an area of 1,262 sq mi (3,269 sq km); its capital is Masbate (pop., 2000: 71,441). Explored by Spain in the late 16th century, it was ruled by the Spanish until the Spanish-American War, when the U.S. gained control. It was occupied by the Japanese during World War II but was recovered by the U.S. in 1945. Gold has been mined for centuries near Aroroy in the north.

Mascagni \mäs-'kän-yē**, Pietro** (b. Dec. 7, 1863, Livorno, Italy—d. Aug. 2, 1945, Rome) Italian composer. He began to compose when very young. At the Milan Conservatory he studied with Amilcare Ponchielli (1834–86) and was Giacomo Puccini's roommate, but he was expelled. Taking conducting jobs with touring opera companies, he started writing operas and won a contest with his one-act *Cavalleria rusticana* (1890); it was an instant success from its premiere, and it remains his best-known work.

Masefield, John (b. June 1, 1878, Ledbury, Herefordshire, Eng.—d. May 12, 1967, near Abingdon, Berkshire) English poet. He went to sea in his youth, then lived precariously for several years in the U.S. before settling in London. He is best known for his poems of the sea, *Salt-Water Ballads* (1902, including "Sea Fever" and "Cargoes"), and for his long narrative poems, such as *The Everlasting Mercy* (1911), containing phrases of colloquial coarseness that were unknown in earlier 20th-century English verse. After he became poet laureate in 1930, his poetry became more austere. He also wrote adventure novels, sketches, and works for children.

maser \'mā-zər\ Device that produces and amplifies electromagnetic radiation in the microwave range of the spectrum. The first maser was built in 1951 by Charles H. Townes. Its name is an acronym for "microwave amplification by stimulated emission of radiation." The wavelength produced by a maser is so constant and reproducible that it can be used to control a clock that will gain or lose no more than a second over hundreds of years. Masers have been used to amplify faint signals returned from radar and communications satellites, and have made it possible to measure faint radio waves emitted by Venus, giving an indication of the planet's temperature. The maser was the principal precursor of the laser.

Maseru \'ma-zə-ˌrü\ City (pop., 1999 est.: metro. area, 373,000), capital of Lesotho. It lies on the Caledon River near the border with Free State province, Republic of South Africa. In 1869 the chief of the Basotho (Sotho) nation, Moshoeshoe I, founded the town near his mountain stronghold of Thaba Bosiu. Diamond mining is important economically. The country's only urban centre, Maseru is the site of government buildings as well as a technical school and Lesotho Agricultural College. Roma, to the southeast, is the seat of the National University of Lesotho (1945).

Mashhad \'måsh-håd, mə-'shad\ *or* **Meshed** \mə-'shed\ City (pop., 1996: 1,887,405), northeastern Iran. It is situated in the valley of the Kashaf River. For centuries it has been an important trade centre along the caravan routes and highways of the Middle East. It was damaged in a Mongol attack in 1220 and was sacked by Turkmen and Uzbeks in the 16th–17th centuries. Nādir Shah (r. 1736–47) made Mashhad his capital. The city is the burial place of Hārūn al-Rashīd and a site of pilgrimage for Shī'ite Muslims visiting the tomb of the eighth Shī'ite imam, 'Alī al-Riḍā'.

Masinissa \ˌma-sə-'ni-sə\ (b. c. 240—d. 148 BC) Ruler of the North African kingdom of Numidia. Originally an ally of Carthage, he switched sides to help Rome after being persuaded by Scipio Africanus the Elder (206). After winning the Battle of Zama (202), he was awarded a larger kingdom. Though displeased with the presence of Cato's army in Africa (149), he remained faithful to Rome and a client of the Scipios until his death.

Masjed-e Shah \'mås-jid-i-'shä\ Celebrated 17th-century mosque in Eṣfahān, Iran. The mosque, part of the rebuilding effort of the Ṣafavid shah 'Abbās I, was located at the centre of Eṣfahān, along a great central mall called the *maydān*. Along with neighbouring structures of the period, it is notable for its logically precise vaulting and use of coloured tiles.

mask Object worn either to disguise or protect the face or to project the image of another personality or being. Masks have been used in art and religion since the Stone Age. In most primitive societies, their form is dictated by tradition, and they are thought to have supernatural power. Death masks, associated with the return of the spirit to the body, were used in ancient Egypt, Asia, and the Inca civilization, and were sometimes kept as portraits of the dead. Masks worn on holidays such as Halloween and Mardi Gras signal festivity and license. They have also been widely used in the theater, beginning with the Greek drama and continuing through medieval mystery plays, and the Italian commedia dell'arte, as well as in other theater traditions (e.g., Japanese No drama).

Maslow \'maz-lō**, Abraham H(arold)** (b. April 1, 1908, New York, N.Y., U.S.—d. June 8, 1970, Menlo Park, Calif.) U.S. psychologist. He taught at Brooklyn College (1937–51) and Brandeis University (1951–69). A practitioner of humanistic psychology, he is known for his theory of "self-actualization." In *Motivation and Personality* (1954) and *Toward a Psychology of Being* (1962), Maslow argued that each person has a hier-

L M N

© 2006 Encyclopædia Britannica, Inc.

archy of needs that must be satisfied, ranging from basic physiological requirements to love, esteem, and, finally, self-actualization. As each need is satisfied, the next higher level in the emotional hierarchy dominates conscious functioning.

masochism \'ma-sə-ˌki-zəm, 'ma-zə-ˌki-zəm\ Psychosexual disorder in which an individual achieves erotic release by being subjected to pain or humiliation. The term is derived from the name of Leopold von Sacher-Masoch, a 19th-century Austrian novelist who wrote extensively about the sexual enjoyment he derived from verbal and physical abuse. The amount of pain involved can vary; it is usually sought out and to some degree controlled by the masochist. Masochistic and sadistic traits often occur in the same individual.

Masolino \ˌmä-sō-'lē-nō\ *orig.* **Tommaso di Cristoforo Fini** (b. 1383, Panicale, Romagna—d. probably 1440–47, Florence, Republic of Florence) Italian painter. He came from the same district in Tuscany as his younger contemporary Masaccio, with whom his career is closely linked. The two worked together on frescoes for the Brancacci Chapel in Florence's Santa Maria del Carmine. Masaccio's influence is evident in Masolino's contributions, but upon Masaccio's death Masolino returned to the more decorative Gothic style of his earlier years.

Mason, George (b. 1725, Fairfax county, Va.—d. Oct. 7, 1792, Fairfax county, Va., U.S.) American Revolutionary statesman. The owner of a large plantation, he became active in efforts to promote the westward expansion of the colonies. In 1774 he helped his neighbour George Washington draft the Fairfax Resolves (1774), which called for a boycott of English goods. In 1776 he drafted the Virginia state constitution and the Virginia Declaration of Rights, which influenced Thomas Jefferson and was used as a model by other states. A member of the Virginia House of Delegates (1776–88), he attended the Constitutional Convention but did not sign the Constitution of the United States, which he believed granted large and indefinite powers to the central government.

Mason, James (b. May 15, 1909, Huddersfield, Yorkshire, Eng.—d. July 27, 1984, Lausanne, Switz.) British film actor. After studying architecture at the University of Cambridge, he made his screen debut in *Late Extra* (1935) and soon became a star in British films such as *The Man in Grey* (1943), *The Seventh Veil* (1945), and *Odd Man Out* (1947). He moved to Hollywood in the late 1940s but continued to make films in Britain as well. Noted for his urbane characterizations of flawed individuals, he appeared in more than 100 movies, including *Madame Bovary* (1949), *A Star Is Born* (1954), *North by Northwest* (1959), *Lolita* (1962), *Georgy Girl* (1966), *The Boys from Brazil* (1978), and *The Verdict* (1982).

Mason, James Murray (b. Nov. 3, 1798, Fairfax county, Va., U.S.—d. April 28, 1871, Alexandria, Va.) U.S. politician. A grandson of George Mason, he practiced law in his native Virginia from 1820. He served in the state legislature (1826, 1828–32), the U.S. House of Representatives (1837–39), and the U.S. Senate (1847–61). An advocate of secession, he resigned his Senate seat in 1861. Appointed Confederate commissioner to England, he was captured at sea with John Slidell aboard the *Trent* and imprisoned for two months (see Trent Affair). Released in 1862, he remained in England until 1865 but was unable to win support for the Confederate cause.

Mason-Dixon Line Originally, the boundary between Maryland and Pennsylvania. The 233-mi (375-km) line was surveyed by Charles Mason and Jeremiah Dixon in 1765–68 to define the disputed boundaries between the land grants of the Penns, proprietors of Pennsylvania, and the Baltimores, proprietors of Maryland. The term was first used in congressional debates leading to the Missouri Compromise (1820) to describe the dividing line between the slave states to its south and the free-soil states to its north. It is still used as the figurative dividing line between the North and South.

masonry Craft of building in stone, brick, or block. By 4000 BC, Egypt had developed an elaborate cut-stone technique. In Crete, Italy, and Greece, cyclopean work overcame material weaknesses by using enormous irregularly shaped stones without mortar, thereby reducing the number of joints. African stonemasons also were skilled at mortarless work, and Japanese mortarless castle walls resisted collapse during earthquakes. The Roman inventions of concrete and mortar permitted the development of the arch into one of the basic construction forms and gave rise to a number of variations in the facing used for walls: squared stone blocks, concrete studded with rough stones, concrete with diagonal stone courses, brick- and tile-faced concrete, and mixed brick and stone. The Assyrian and Persian empires, which lacked stone outcroppings, used sun-dried clay bricks. Stone and clay were the primary masonry materials in the Middle Ages and later. Precast-concrete blocks, often used as infill in modern steel framing, did not effectively compete with brick until the 20th century. Brick and block are often combined or used in cavity walls. Glass-block walls, which utilize steel rods to reinforce the mortar joints, admit light and afford greater protection against intruders and vandals than ordinary glass. See also adobe, building stone.

Masqat See Muscat

masque Short dramatic entertainment performed by masked actors. It originated in the folk ceremony known as mummery (see mumming play) and evolved into elaborate court spectacles in the 16th–17th centuries. A masque presented an allegorical theme using speeches, dances, and songs, in a performance often embellished with rich costumes and spectacular scenery. The genre reached its height in 17th-century England when the court poet, Ben Jonson, collaborating with Inigo Jones on many notable masques (1605–34), gave it literary force. The masque later developed into opera.

mass Quantitative measure of inertia, or the resistance of a body to a change in motion. The greater the mass, the smaller is the change produced by an applied force. Unlike weight, the mass of an object remains constant regardless of its location. Thus, as a satellite moves away from the gravitational pull of the Earth, its weight decreases but its mass remains the same. In ordinary, classical chemical reactions, mass can be neither created nor destroyed. The sum of the masses of the reactants is always equal to the sum of the masses of the products. For example, the mass of wood and oxygen that disappears in combustion is equal to the mass of water vapour, carbon dioxide, smoke, and ash that appears. However, Albert Einstein's special theory of relativity shows that mass and energy are equivalent, so mass can be converted into energy and vice versa. Mass is converted into energy in nuclear fusion and nuclear fission. In these instances, conservation of mass is seen as a special case of a more general conservation of mass-energy. See also critical mass.

mass Celebration of the Eucharist in the Roman Catholic church. It is considered a sacramental reenactment of the death and resurrection of Jesus as well as a true sacrifice in which the body and blood of Jesus (the bread and wine) are offered to God. It is also seen as a sacred meal that unifies and nourishes the community of believers. The mass includes readings from Scripture, a sermon, an offertory, a eucharistic prayer, and communion. The rite was greatly changed after the Second Vatican Council, notably in the adoption of vernacular languages in place of Latin. See also sacrament, transubstantiation.

mass action, law of Fundamental law of chemical kinetics (the study of rates of chemical reactions), formulated in 1864–79 by the Norwegian scientists Cato M. Guldberg (1836–1902) and Peter Waage (1833–1900). The law states that the reaction rate of any simple chemical reaction is proportional to the product of the molar concentrations of the reacting substances, each raised to the power corresponding to the number of molecules of that substance in the reaction.

mass-energy equation See Einstein's mass-energy relation

mass flow *or* **convection** In physiology, the mechanism responsible for movement of air from the atmosphere into the lungs and for movement of blood between the lungs and the tissues. It is one of two principal mechanisms of exchange by which oxygen and carbon dioxide move between the environment and the tissues, the other being diffusion. Local

© 2006 Encyclopædia Britannica, Inc.

flows (e.g., through skeletal muscles during exercise) can be increased selectively, increasing the exchange of gases between tissue cells and the capillaries.

mass movement *or* **mass wasting** Bulk movements of soil and rock debris down slopes, or the sinking of confined areas of the Earth's ground surface. The term *mass wasting* refers only to gravity-driven processes that move large masses of earthen material from one place to another. The term *mass movement* includes the sinking of confined areas.

mass production Application of the principles of specialization, DIVISION OF LABOUR, and standardization of parts to the manufacturing of goods on a large scale. Modern mass-production methods have led to such improvements in the cost, quality, quantity, and variety of goods available that the largest global population in history is now sustained at the highest general standard of living ever. The requirements for mass production of a particular product include the existence of a market large enough to justify a large investment; a product design that can use standardized parts (see INTERCHANGEABLE PARTS) and processes; a physical layout that minimizes materials handling; division of labour into simple, short, repetitive steps (see TIME-AND-MOTION STUDY); continuous flow of work; and tools designed specifically for the tasks to be performed. See also ASSEMBLY LINE.

mass spectrometry *or* **mass spectroscopy** Analytic technique by which chemical substances are identified by sorting gaseous IONS by mass using ELECTRIC and MAGNETIC fields. A mass spectrometer uses electrical means to detect the sorted ions, while a mass spectrograph uses photographic or other nonelectrical means; either device is a mass spectroscope. The process is widely used to measure masses and relative abundances of different ISOTOPES, to analyze products of a separation by liquid or gas CHROMATOGRAPHY, to test vacuum integrity in high-vacuum equipment, and to measure the geological age of minerals.

mass transit Transportation systems, usually publicly but sometimes privately owned and operated, designed to move large numbers of people in various types of vehicles in cities, suburbs, and large metropolitan areas. Modern mass transit is an outgrowth of industrialization and urbanization. In the 1830s early mass transit in New York City included horse-drawn buses, which were soon replaced by fixed-rail horse-drawn trolleys. By 1900 motorized BUSES had appeared in Europe and America. With the advent of electricity, STREETCARS and SUBWAYS were introduced in many large cities. In the 20th century the AUTOMOBILE's increasing popularity undermined mass transit development; fixed-rail streetcar systems were widely removed to provide space for cars. Concern over air pollution has revived interest in light-rail transit and has led to regional mass transit systems.

Massachusetts *officially* **Commonwealth of Massachusetts** State (pop., 2000: 6,349,097), northeastern U.S. One of the NEW ENGLAND states, it lies on the Atlantic Ocean and is bordered by Vermont, New Hampshire, Rhode Island, Connecticut, and New York. It covers 8,262 sq mi (21,399 sq km); its capital is BOSTON. The state's soils are poor and rocky, and agriculture plays a limited role in the economy, although cranberry farming is important. The region was inhabited by Algonquian Indian peoples when the first English settler, Bartholomew Gosnold, arrived in 1602. PLYMOUTH was settled by the PILGRIMS, who arrived on the *Mayflower* in 1620. The MASSACHUSETTS BAY COLONY was founded and governed by the Massachusetts Bay Co., spurring Puritan settlement. It joined the NEW ENGLAND CONFEDERATION in 1643 and acquired MAINE in 1652. The southeastern and central settlements in the state experienced KING PHILIP'S WAR in 1675. After losing its first charter in 1684, it became part of the Dominion of New England in 1686. Its second charter in 1691 granted the colony jurisdiction over Maine and Plymouth. In the 18th century Massachusetts became a centre of resistance to British colonial policy; it was the scene of the BOSTON TEA PARTY and of uprisings at the Battles of LEXINGTON AND CONCORD that marked the beginning of the AMERICAN REVOLUTION. In 1788, it became the sixth state to ratify the U.S. Constitution. It was in the forefront of the 19th century INDUSTRIAL REVOLUTION and was known for its textile mills. Today its major industries are electronics, high technology, and communications. It is well-known as the location of many institutions of higher learning. Tourism is important especially in the CAPE COD region and the BERKSHIRES.

Massachusetts Bay Colony Early English colony in MASSACHUSETTS. It was settled in 1630 by a group of 1,000 Puritan refugees from England (see PURITANISM). In 1629 the Massachusetts Bay Co. had obtained an English charter allowing it to trade and colonize in New England. Puritan stockholders envisioned the colony as a refuge from religious persecution in England, and they transferred control of the company to the emigrants in Massachusetts. Led by JOHN WINTHROP, the colonists founded their colony on the CHARLES RIVER at what would become BOSTON. In 1684 England annulled the company's charter and in 1691 established royal government under a new charter, which merged PLYMOUTH colony and Maine into the Massachusetts Bay Colony.

Massachusetts Institute of Technology (MIT) U.S. private university in Cambridge, famous for its scientific and technological training and research. Founded in 1861, MIT has schools of architecture and planning, engineering, humanities and social sciences, management (the Sloan School), and science and a college of health sciences and technology. Though it is best known for its programs in engineering and the physical sciences, other areas such as economics, political science, urban studies, linguistics, and philosophy are also strong. Among its facilities are a nuclear reactor, a computation centre, geophysical and astrophysical observatories, a linear accelerator, a space research centre, supersonic wind tunnels, an artificial-intelligence laboratory, a centre for cognitive science, and an international-studies centre.

massage \mə-'säzh\ Systematic, scientific manipulation of body tissues with the hands to relieve pain and reduce swelling, relax muscles, and speed healing after strains and sprains. It has been used for more than 3,000 years by the Chinese. Early in the 19th century, the Swedish physician Per Henrik Ling (1776–1839) devised a massage system for joint and muscle ailments, which was later extended to relieve deformities of arthritis and re-educate muscles following paralysis. Manipulations include light or hard stroking, compression (kneading, squeezing, and friction), and percussion (striking with the edges of the hands in rapid alternation). In ACUPRESSURE, a style of massage derived from China, pressure is exerted on Chinese ACUPUNCTURE points for healing effects. See also PHYSICAL MEDICINE AND REHABILITATION.

Massasoit \ˌmas-ə-'sȯit\ (b. c. 1590, near present Bristol, R.I.—d. 1661, near Bristol) American Indian chief. He was the grand sachem (intertribal chief) of the Wampanoag Indians, who inhabited parts of Massachusetts and Rhode Island. In March 1621, several months after the *Mayflower* landed, he journeyed to Plymouth and established peaceful relations with the settlers, with whom he shared techniques of planting, fishing, and cooking. In 1623 he was nursed back to health from a serious illness by grateful Pilgrims. After his death, good will gradually dissolved, leading to the bloody KING PHILIP'S WAR (1675), which was led by his son METACOM.

Masséna \mȧ-sā-'nȧ**, André, duke de Rivoli** *later* **prince d'Essling** (b. May 6, 1758, Nice, France—d. April 4, 1817, Paris) French general. Entering the military in 1775, he served in the Revolutionary government's army and rose to general in 1793. In campaigns against the Austrians in Italy, he became NAPOLEON's most trusted officer; he then commanded the French army in Switzerland, defeating the Russians at Zürich (1799). Sent by Napoleon to restore the demoralized army of Italy, he successfully defended Genoa against Austrian besiegers and enabled the French victory at the Battle of MARENGO. He was made a marshal in 1804 and duke de Rivoli in 1808. He displayed heroism against the Austrians, notably at Aspern-Essling and the Battle of WAGRAM (1809), and Napoleon made him prince d'Essling (1810). In command of the French forces in Portugal and Spain (1810–11), he was defeated by the British under the duke of WELLINGTON. Masséna was relieved of his command and returned to Paris, where he supported the restoration of the monarchy.

Massenet \ˌma-sᵊn-'ā**, Jules (-Émile-Frédéric)** (b. May 12, 1842, Montaud, near Saint-Étienne, France—d. Aug. 13, 1912, Paris) French composer. He attended the Paris Conservatoire from 1851. When his family left Paris in 1854, he ran away to continue his studies, playing piano and drums and teaching to support himself. His hard work paid off when he won the Prix de Rome in 1863, and he began writing operas in 1867. His reputation was established with his oratorio *Marie-Magdeleine* (1873), and his *Le Roi de Lahore* was performed at the Paris Opéra in 1877. There followed the series of successes for which he is chiefly known, including *Hérodiade* (1881), *Manon* (1884), *Le Cid* (1885), *Esclarmonde* (1889), *Werther* (1892), *Thaïs* (1894), and *Don Quichotte* (1910).

Massey, (Charles) Vincent (b. Feb. 20, 1887, Toronto, Ont., Can.—d. Dec. 30, 1967, London, Eng.) Canadian administrator, first Canadian governor-general of Canada (1952–59). He taught history at the University of Toronto from 1913 to 1915. During World War I he served

© 2006 Encyclopædia Britannica, Inc.

as associate secretary of the cabinet war committee. After the war he operated a farm-machinery business until 1925. Active in Liberal Party politics, he served in the cabinet of W.L. Mackenzie King (1925) and was later Canada's first minister to the U.S. (1926–30) and high commissioner for Canada in Britain (1935–46). After serving as chancellor of the University of Toronto (1947–52), he was named governor-general. His brother was the actor Raymond Massey (1896–1983).

Massif Central \ma-'sēf-sä^{n}-'träl\ Plateau region, south-central France. It is bordered by the lowlands of Aquitaine, the Loire basin, the Rhône-Saône valley, and the Mediterranean coastlands of Languedoc. Comprising about one-sixth of France, it occupies an area of 35,006 sq mi (90,665 sq km). It consists mainly of plateaus with elevations of 2,000 to 3,000 ft (600 to 900 m). Its highest peak is Puy de Sancy, which reaches 6,184 ft (1,885 m). It is the source of many rivers, including the Loire, Allier, Cher, and Creuse.

Massine \ma-'sēn**, Léonide** *orig.* **Leonid Fyodorovich Miassin** (b. Aug. 9, 1896, Moscow, Russia—d. March 15, 1979, Cologne, W.Ger.) Russian-born French dancer, teacher, and choreographer. He joined the Ballets Russes in 1914 and produced his first ballet, *Midnight Sun*, in 1915; this was followed by *Parade* (1917), *The Three-Cornered Hat* (1919), and *Pulcinella* (1920). He extended Michel Fokine's reforms by enriching the characterization of many roles. During 1932–38 he was principal dancer and choreographer for the Ballet Russe de Monte Carlo. His ballets *Les Présages* (1933), *Choreartium* (1933), and *Rouge et noir* (1939) displayed innovative choreography and set designs and were among the first dances based on symphonies. In 1938–42 he directed his re-formed Ballet Russe de Monte Carlo, and he became artistic director of a new Ballet de Monte Carlo in 1966.

Massinger \'ma-sin-jər**, Philip** (b. 1583, near Salisbury, Wiltshire, Eng.—d. March 1639/40, London) English playwright. After a period during which he collaborated with playwrights such as John Fletcher, Massinger began c. 1620 to write independently. From 1625 he was associated with the theatrical company The King's Men. His 15 surviving solo works are noted for their social realism and satirical power. They include the comedies *A New Way to Pay Old Debts* (c. 1624), his most popular and influential play, and *The City Madam* (c. 1632), both of which probed economic and social issues, and the historical tragedy *The Roman Actor* (c. 1626).

Masson \mä-'sō^{n}**, André (-Aimé-René)** (b. Jan. 4, 1896, Balagny, France—d. Oct. 28, 1987, Paris) French painter and graphic artist. After studying painting in Brussels and Paris, he was severely wounded in World War I, and an overriding pessimism penetrated his art. He joined the Surrealist movement in 1924 and became the leading practitioner of automatism. In the late 1920s and '30s he produced turbulent images of violence, psychic pain, eroticism, and physical metamorphosis, using sinuous lines to delineate abstract biomorphic forms. He lived in Spain (1934–36) and later the U.S. (1941–45), where he became an important link between Surrealism and Abstract Expressionism. He later returned to France and concentrated on landscape painting.

mastaba \'mas-tə-bə\ (Arabic: "bench") Rectangular superstructure of ancient Egyptian tombs, built of mud brick or, later, stone, with sloping walls and a flat roof. A deep shaft descended to the underground burial chamber. Old Kingdom mastabas were used chiefly for nonroyal burials. Storage chambers were stocked with food and equipment, and walls were often decorated with scenes showing the deceased's expected daily activities. What had earlier been a niche on the side grew into a chapel with an offering table and a false door through which the spirit of the deceased could leave and enter the burial chamber.

mastectomy \ma-'stek-tə-mē\ Surgical removal of a breast, usually because of breast cancer. If the cancer has spread, radical mastectomy may remove surrounding tissue and/or nearby structures, including chest muscles and lymph nodes. Modified radical mastectomy leaves at least the main chest muscle, has an equally high survival rate, and makes reconstruction easier. Simple mastectomy is removal of the breast only. Lumpectomy is removal of the tumour only.

master of the animals See master of the animals

Masters, Edgar Lee (b. Aug. 23, 1869, Garnett, Kan., U.S.—d. March 5, 1950, Philadelphia, Pa.) U.S. poet and novelist. He grew up on his grandfather's farm and became a lawyer in Chicago. He wrote undistinguished poetry and plays before publishing *Spoon River Anthology* (1915), his major work. Its 245 free-verse epitaphs in the form of monologues are spoken from the grave by the former inhabitants of a fictitious small town, who tell of their bitter, unfulfilled lives in its dreary confines.

Edgar Lee Masters
COURTESY OF THE LIBRARY OF CONGRESS, WASHINGTON, D.C.; PHOTOGRAPH, ARNOLD GENTHE

Masters, William H(owell); and Johnson, Virginia E(shelman) (respectively b. Dec. 27, 1915, Cleveland, Ohio, U.S.—d. Feb. 16, 2001, Tucson, Ariz.; b. Feb. 11, 1925, Springfield, Missouri, U.S.) U.S. human-sexuality research team. Together (as physician and psychologist, respectively), they founded and codirected the Masters & Johnson Institute in St. Louis. They observed couples having sex under laboratory conditions, using biochemical equipment to record sexual stimulations and reactions. Their book *Human Sexual Response* (1966) was considered the first comprehensive study of the physiology and anatomy of human sexual activity (see sexual response). They were married in 1971 and continued to collaborate after their divorce in 1993.

Masters Tournament Invitational golf competition held annually since 1934 at the Augusta National Golf Club, Augusta, Ga., U.S. One of the world's most prestigious golf contests, it comprises 72 holes of stroke play (the player with the lowest score wins). The course, famous for its beauty and for the speed and difficulty of its greens, was designed by Bobby Jones and Alister MacKenzie. The tournament is held during the first full week in April.

Masterson, Bat *orig.* **Bartholomew Masterson** (b. Nov. 27, 1853, Henryville, Canada East—d. Oct. 25, 1921, New York, N.Y., U.S.) Canadian-born U.S. lawman and gambler. He grew up on successive family farms in New York, Illinois, and Kansas. In Dodge City, Kan., he worked as a buffalo hunter and Indian scout (1873–75), as sheriff of Ford county (1877–79), and as deputy U.S. marshal (1879). In Tombstone, Ariz. (1880–81), he worked briefly with Wyatt Earp at the Oriental Saloon. He lived a gambler's life in Denver (1887–1902) and then moved to New York City, where he was a deputy U.S. marshal (1905–07) and later a prominent sports editor for the *Morning Telegraph*.

mastication See chewing

mastiff Breed of powerful but gentle dog of Europe and Asia dating to 3000 BC. Mastiffs fought bears, lions, tigers, bulls, and gladiators in Roman arenas and were used in English bull- and bear-baiting rings. The mastiff stands 28–30 in. (70–75 cm) tall and weighs 165–185 lbs (75–85 kg). It has a broad head, short dark muzzle, and dark drooping ears. Its short coat is apricot, silver fawn, or brindled. The bullmastiff, a bulldog-mastiff crossbreed standing 24–27 in. (61–69 cm) tall and weighing 100–130 lbs (45–59 kg), is used as a police and guard dog.

Mastiff
SALLY ANNE THOMPSON/EB INC.

mastitis \ma-'stī-təs\ Inflammation of the breast. Acute mastitis, usually caused by bacteria, begins almost exclusively in the first three weeks of nursing and can be cured with antibiotics without stopping nursing. The breasts may become swollen, red, hard, and tender; without treatment abscesses may occur. Mastitis can be localized or widespread, and the breast's lymphatic system may be involved. Girls may have brief hormone-induced breast inflammation soon after birth and during puberty. Chronic mastitis usually occurs in systemic diseases (e.g., tuberculosis, syphilis). One rare type is seen mostly in older women with a history of difficult nursing. Some mastitis cases resemble certain cancers.

mastodon \'mas-tə-ˌdän\ Any of several extinct elephant species (genus *Mastodon*) that lived worldwide 23.7 million–10,000 years ago or later

© 2006 Encyclopædia Britannica, Inc.

in North America, where they were contemporaneous with historic American Indian groups. Well-preserved remains are quite common. Mastodons ate leaves and had small grinding teeth and long, parallel, upward-curving upper tusks; males also had short lower tusks. Shorter than modern elephants, they had long, heavily built bodies and short, pillarlike legs. Their long hair was reddish brown. The skull was similar to that of modern elephants but lower and flatter, and the ears were small. Human hunting may have played a role in the mastodon's extinction. See also MAMMOTH.

mastoiditis \ˌmas-ˌtȯid-ˈī-təs\ INFLAMMATION of the mastoid process, a bony projection just behind the ear, almost always due to OTITIS media. It may spread into small cavities in the bone, blocking their drainage. Very severe cases infect the whole middle ear cleft. It causes pain behind the ear and on the side of the head. Temperature and pulse rate may rise. Tissues over the bone may swell until an ABSCESS develops, indicating destruction of the bone's outer layer. Complications of inward spread include abscess inside the skull, THROMBOSIS, and INNER-EAR infection; meningitis is a serious danger. Now rare with treatment of otitis media, mastoiditis usually responds to early ANTIBIOTIC treatment; if not, surgical drainage with removal of all diseased bone is necessary.

Mastroianni \mäs-trȯy-ˈä-nē**, Marcello** (b. Sept. 28, 1924, Fontana Liri, Italy—d. Dec. 19, 1996, Paris, France) Italian film actor. He made his film debut in 1947 and was a well-known actor in Italy by the mid-1950s. Darkly handsome, with a screen persona alternately winning and morose, he won international fame in films such as LUCHINO VISCONTI's *White Nights* (1957) and FEDERICO FELLINI's *La dolce vita* (1960). He acted in more than 100 movies, including *8½* (1963), *Yesterday, Today, and Tomorrow* (1963), *We All Loved Each Other So Much* (1975), *Dark Eyes* (1987), and *Voyage to the Beginning of the World* (1997).

masturbation Erotic stimulation of one's own genital organs, usually to achieve orgasm. Masturbatory behavior is common in infants and adolescents, and is indulged in by many adults as well. Studies indicate that over 90% of U.S. males and 60–80% of U.S. females have masturbated at one time or another. Christian moral teaching condemned masturbation as the sin of Onan, who in the Old Testament was censured for spilling his seed, and the Roman Catholic Church still officially condemns it.

Masurian \mə-ˈzůr-ē-ən\ **Lakeland** Lake district, northeastern Poland, containing more than 2,000 lakes. It extends 180 mi (290 km) eastward from the lower VISTULA RIVER to the Poland-Belarus border and occupies an area of 20,000 sq mi (52,000 sq km). It was the scene of Russian defeats in 1914–15 during World War I. It came under Russian control in January 1945 but was later granted to Poland by the POTSDAM CONFERENCE.

Mata Hari *orig.* **Margaretha Geertruida Zelle** (b. Aug. 7, 1876, Leeuwarden, Neth.—d. Oct. 15, 1917, Vincennes, near Paris, France) Dutch courtesan and alleged spy in World War I. In 1895 she married Campbell MacLeod, a Scottish officer, and lived in Java and Sumatra (1897–1902), after which they returned to Europe and separated. In 1905 she began to dance in Paris, calling herself Mata Hari (a Malay expression for the sun). Beautiful and exotic and willing to dance virtually nude, she soon had numerous lovers, including military officers. Details of her spying activities are unclear, but she apparently spied for Germany from 1916. She was arrested by the French in 1917, tried by a military court, and shot by firing squad.

Mata Hari.
H. ROGER-VIOLLET/HARLINGUE

Matabele See NDEBELE

matador In BULLFIGHTING, the principal performer, who works the capes and attempts to dispatch the bull with a sword thrust between the shoulder blades. Most of the techniques used by modern matadors were established in the 1910s by Juan Belmonte (b. 1894–d. 1962) of Spain. The matador's traditional costume, which offers no protection, is known as the "suit of lights." The audience judges the matador according to his skill, grace, and daring. Almost every matador is gored at least once a season with varying degrees of severity, and many have received fatal wounds in the ring.

Matamba \mä-ˈtäm-bə\ Historic African kingdom of the MBUNDU people, located northeast of LUANDA, Angola. A strong state in the early 16th century, it came into conflict with the Portuguese colonists of Angola. About 1630 it was conquered by Nzinga, ex-ruler of NDONGO, who strengthened it and stopped Angola's eastward expansion in the 1670s. A 1684 treaty remained in effect until the Portuguese seized part of Matamba's territory in 1744. The rest of it, assigned to Angola by European treaties of 1870–1900, remained a self-governing kingdom until it was occupied by Portuguese troops in the early 20th century.

Matamoros City (pop., 2000: 376,279), northern TAMAULIPAS state, Mexico. It is situated on the southern bank of the RIO GRANDE, across from Brownsville, Texas, U.S. Founded in 1824, it was the scene of bitter fighting in the MEXICAN WAR and was occupied by U.S. troops in 1846. It is now one of Mexico's chief ports of entry for tourists and a trade centre.

Matapédia \ˌma-tə-ˈpē-dē-ə\ **Valley** Valley of the Notre Dame Mountains, GASPÉ PENINSULA, eastern Quebec province, Canada. Extending for some 60 mi (100 km), it forms a direct lowland route through the mountains from the ST. LAWRENCE RIVER to the Atlantic coast. It serves as an important transportation route between the MARITIME PROVINCES and the Canadian mainland. It is drained by the Matapédia River, which flows 50 mi (80 km) to join the Restigouche River.

Mataram \mə-ˈtä-rəm\ Historic kingdom, JAVA. Originally a vassal state of Pajang, it became powerful under Senapati, who became its first king in the late 16th century. Its territory expanded in the early 17th century, but the kingdom later began to decline. In the mid-18th century it lost both power and territory to the Dutch EAST INDIA CO., and was a vassal state of the company by 1749. Wars of succession in 1755 led to its division into the regions of Surakarta and Yogyakarta.

matchlock Device for igniting GUNPOWDER, invented in the 15th century. The first mechanical ignition system, it represented a major advance in small-arms manufacture. It consisted of an S-shaped arm, called a serpentine, that held a match, and a trigger device that lowered the serpentine so the lighted match would fire the priming powder in the pan at the side of the barrel. The flash in the pan penetrated a small port in the breech and lit the main charge. Though slow and somewhat clumsy, the matchlock was useful because it protected all the working elements inside the lock and freed the user's hand. Early matchlock guns included the MUSKET.

maté *or* **yerba maté** \ˈmä-tā\ Stimulating tealike beverage, popular in many South American countries, brewed from the dried leaves of an evergreen shrub or tree (*Ilex paraguariensis*) related to HOLLY. It contains caffeine and tannin but is less astringent than tea. To brew maté, the dried leaves (*yerba*) are placed in dried hollow gourds (*matés* or *culhas*) decorated with silver and covered with boiling water and steeped. The tea is sucked from the gourd with a tube, often made of silver, with a strainer at one end to catch leaf particles. Though usually served plain, maté is sometimes flavored with milk, sugar, or lemon juice.

Silver vessel for the preparation and serving of maté; in a private collection.

materialism In METAPHYSICS, the doctrine that all of reality is essentially of the nature of matter. In the philosophy of MIND, one form of materialism, sometimes called central-state materialism, asserts that states of the mind are identical to states of the human brain. In order to account for the possible existence of mental states in creatures that do not share the human nervous system (e.g., octopuses and Martians), proponents of functionalism identified particular mental states with the functional or causal roles those states play with respect to other physical and mental states of the organism; this allows for the "multiple realizability" of the same mental state in different physical states. (Strictly speaking, functionalism is compatible with both materialism and non-materialism, though most functionalists are materialists.) As a form of materialism, functionalism is "nonreductive," because it holds that mental states cannot be completely explained in terms that refer only to what is physical. Though not identical with physical states, mental states are said to "supervene" on them, in the sense that there can be no change in the former without some change in the latter. "Eliminative" materialism rejects any aspect of the mental that cannot be explained wholly in physical terms; in particular, it denies the existence of the familiar categories of mental state presupposed in FOLK PSYCHOLOGY. See also IDENTITY THEORY; MIND-BODY PROBLEM.

materials science Study of the properties of solid materials and how those properties are determined by the material's composition and structure, both macroscopic and microscopic. Materials science grew out of solid-state physics, metallurgy, ceramics, and chemistry, since the numerous properties of materials cannot be understood within the context of any single discipline. With a basic understanding of the origins of properties, materials can be selected or designed for an enormous variety of applications, from structural steels to computer microchips. Materials science is therefore important to many ENGINEERING fields, including electronics, aerospace, telecommunications, information processing, nuclear power, and energy conversion. See also MECHANICS, METALLOGRAPHY, STRENGTH OF MATERIALS, TESTING MACHINE.

mathematical physics Branch of mathematical ANALYSIS that emphasizes tools and techniques of particular use to physicists and engineers. It focuses on VECTOR SPACES, MATRIX algebra, DIFFERENTIAL EQUATIONS (especially for boundary value problems), INTEGRAL EQUATIONS, INTEGRAL TRANSFORMS, INFINITE SERIES, and COMPLEX VARIABLES. Its approach can be tailored to applications in electromagnetism, classical MECHANICS, and QUANTUM MECHANICS.

mathematical programming Application of mathematical and computer programming techniques to the construction of deterministic models, principally for business and economics. For models that only require linear algebraic equations, the techniques are called LINEAR PROGRAMMING; for models that require more complex equations, it is called nonlinear programming. In either case, models frequently involve hundreds or thousands of equations. The discipline emerged during World War II to solve large-scale military LOGISTICS problems. Mathematical programming is also used in planning civilian production and transportation schedules and in calculating economic growth.

mathematics Science of structure, order, and relation that has evolved from counting, measuring, and describing the shapes of objects. It deals with logical reasoning and quantitative calculation. Since the 17th century it has been an indispensable adjunct to the physical sciences and technology, to the extent that it is considered the underlying language of science. Among the principal branches of mathematics are ALGEBRA, ANALYSIS, ARITHMETIC, COMBINATORICS, EUCLIDEAN and NON-EUCLIDEAN geometries, GAME THEORY, NUMBER THEORY, NUMERICAL ANALYSIS, OPTIMIZATION, PROBABILITY, SET THEORY, STATISTICS, TOPOLOGY, and TRIGONOMETRY.

mathematics, foundations of Scientific inquiry into the nature of mathematical theories and the scope of mathematical methods. It began with EUCLID's *Elements* as an inquiry into the logical and philosophical basis of mathematics—in essence, whether the AXIOMS of any system (be it EUCLIDEAN GEOMETRY or CALCULUS) can ensure its completeness and consistency. In the modern era, this debate for a time divided into three schools of thought: LOGICISM, formalism, and INTUITIONISM. Logicists supposed that abstract mathematical objects can be entirely developed starting from basic ideas of sets and rational, or logical, thought; a variant of logicism, known as mathematical PLATONISM, views these objects as existing external to and independent of an observer. Formalists believed mathematics to be the manipulation of configurations of symbols according to prescribed rules, a "game" independent of any physical interpretation of the symbols. Intuitionists rejected certain concepts of logic and the notion that the AXIOMATIC METHOD would suffice to explain all of mathematics, instead seeing mathematics as an intellectual activity dealing with mental constructions (see CONSTRUCTIVISM) independent of language and any external reality. In the 20th century, GÖDEL'S THEOREM ended any hope of finding an axiomatic basis of mathematics that was both complete and free from contradictions.

mathematics, philosophy of Branch of philosophy concerned with the EPISTEMOLOGY and ONTOLOGY of mathematics. Early in the 20th century, three main schools of thought—called LOGICISM, formalism, and INTUITIONISM—arose to account for and resolve the crisis in the foundations of mathematics. Logicism argues that all mathematical notions are reducible to laws of pure thought, or logical principles; a variant known as mathematical PLATONISM holds that mathematical notions are transcendent Ideals, or Forms, independent of human consciousness. Formalism holds that mathematics consists simply of the manipulation of finite configurations of symbols according to prescribed rules; a "game" independent of any physical interpretation of the symbols. Intuitionism is characterized by its rejection of any knowledge- or evidence-transcendent notion of truth. Hence, only objects that can be constructed (see CONSTRUCTIVISM) in a finite number of steps are admitted, while actual infinities and the law of the excluded middle (see laws of THOUGHT) are rejected. These three schools of thought were principally led, respectively, by BERTRAND RUSSELL, DAVID HILBERT, and the Dutch mathematician Luitzen Egbertus Jan Brouwer (1881–1966).

Mather \'ma-thər**, Cotton** (b. Feb. 12, 1663, Boston, Massachusetts Bay Colony—d. Feb. 13, 1728, Boston) American Puritan leader. The son of INCREASE MATHER, he earned a master's degree from Harvard College and was ordained a Congregational minister in 1685, after which he assisted his father at Boston's North Church (1685–1723). He helped work for the ouster of the unpopular British governor of Massachusetts, EDMUND ANDROS (1689). Though his writings on witchcraft fed the hysteria that resulted in the SALEM WITCH TRIALS, he disapproved of the trials and argued against the use of "spectral evidence." His best-known writings include *Magnalia Christi Americana* (1702), a church history of New England, and his *Diary* (1711–12). His *Curiosa Americana* (1712–24) won him membership in the Royal Society of London. He was an early supporter of smallpox inoculation. See also CONGREGATIONALISM; PURITANISM.

Mather, Henry See Charles S. and Henry M. GREENE

Mather, Increase (b. June 21, 1639, Dorchester, Massachusetts Bay Colony—d. Aug. 23, 1723, Boston) American Puritan leader. The son of a Puritan cleric, he was educated at Harvard College and at Trinity College, Dublin. He returned to New England and served as minister of Boston's North Church (1661–1723). He and his son COTTON MATHER lobbied successfully for the removal of the hated governor of Massachusetts, EDMUND ANDROS, and obtained a new charter for the colony in 1691. He served as president of Harvard College (1685–1701). His writings include *Case of Conscience Concerning Evil Spirits Personating Men* (1693), which helped end the SALEM WITCH TRIALS. See also PURITANISM.

Mathewson, 1909

U.S.—d. Oct. 7, 1925, Saranac Lake, N.Y.) U.S. baseball pitcher. Mathewson played football and baseball for Bucknell University and was one of the first college-educated men to enter the major leagues. Throwing right-handed for the New York Giants (1900–16), he won more than 20 games in each of 13 seasons, and 30 or more in four of those years. He ranks third in all-time wins (373) and shutouts (80) and fourth in earned run average (2.13). He played for and managed the Cincinnati Reds (1916–18) and later served as president of the Boston Braves (1923–25). He died of tuberculosis at 45.

Mathias \mə-'thī-əs**, Bob** *in full* **Robert Bruce Mathias** (b. Nov. 17, 1930, Tulare, Calif., U.S.) U.S. decathlete. He suffered from anemia as a child and turned to athletics to gain strength. In 1948, at age 17, he won a gold medal in the Olympic DECATHLON, becoming the youngest gold medalist ever to win an Olympic track-and-field event. He won a second decathlon gold medal in 1952; that same year he played fullback on Stanford University's gridiron football team at the Rose Bowl. He won all 11 decathlon competitions he entered in his career. He later served in the U.S. House of Representatives.

Mathura art \'mə-tə-rə\ Buddhist visual art that flourished in the trading and pilgrimage center of Mathura, Uttar Pradesh, India, from the 2nd century BC to the 12th century AD. Standing and seated Buddhas are represented with broad shoulders, large chest, legs apart, and feet firmly planted, conveying a sense of enormous energy. Female figures are frankly sensuous.

A *yaksi* (female nature spirit) holding tray and pitcher, red sandstone relief from Mathura, Uttar Pradesh, India, 2nd century AD; in the Archaeological Museum, Mathura.
P. CHANDRA

Matilda *or* **Maud** (b. 1102, London, Eng.—d. Sept. 10, 1167, near Rouen, Fr.) Daughter of HENRY I of England and claimant to the English throne. She married Emperor Henry V in 1114; he died in 1125, and she made a second marriage to Geoffrey Plantagenet. Her brother's death in 1120 left her as Henry I's sole legitimate heir, and Henry named her as his successor in 1127. STEPHEN of Blois, Henry's nephew, seized the throne on the king's death in 1135, and his army defeated Matilda's supporters in 1141. She continued her resistance and retired to Normandy in 1148. Her son became HENRY II of England, and she remained his adviser and oversaw his continental possesions.

Matilda of Canossa \kə-'nä-sə\ *Italian* **Matilde** *known as* **Matilda the Great Countess** (b. 1046, Lucca, Tuscany—d. July 24, 1115, Bondeno, Romagna) Countess of Tuscany. A close friend of Pope GREGORY VII, she backed him in his struggle against King HENRY IV (see INVESTITURE CONTROVERSY), and it was at her castle at Canossa that the king performed his barefoot penance before Gregory (1077). After Henry's second excommunication, she was intermittently at war with him until his death (1106), sometimes donning armour to lead her own troops, and she helped finance the pope's military operations and encouraged Henry's son Conrad to rebel against his father (1093). Her unwavering support for the popes of Rome was honoured by her reburial in St. Peter's Basilica in 1634.

Matisse \mä-'tēs**, Henri (-Émile-Benoît)** (b. Dec. 31, 1869, Le Cateau, Picardy, Fr.—d. Nov. 2, 1954, Nice) French painter, sculptor, and graphic artist. He was a law clerk when he became interested in art. After study with GUSTAVE MOREAU at the École des Beaux-Arts, he exhibited four paintings at the Salon and scored a triumph when the government bought his *Woman Reading* (1895). Self-confident and venturesome, he experimented with pointillism but eventually abandoned it in favour of the swirls of spontaneous brushwork and riots of colour that became known as FAUVISM. Though his subjects were largely domestic and figurative, his works exhibit a distinctive Mediterranean verve. He also took up sculpture and would produce some 60 pieces during his lifetime. The ARMORY SHOW exhibited 13 of his paintings. In 1917 he moved to the French Riviera, where his paintings became less daring but his output remained prodigious. After 1939 he became increasingly active as a graphic artist and in 1947 published *Jazz*, a book of reflections on art and life with brilliantly coloured illustrations made by "drawing with scissors": the motifs were pasted together after being cut out of sheets of coloured paper. He was ill during most of his last 13 years; he designed the magnificent Chapelle du Rosaire at Vence (1948–51) as a gift to the Dominican nuns who cared for him. His well-known paintings include *Joy of Life* (1906), *The Red Studio* (1915), *Piano Lesson* (1916), and *The Dance I* and *The Dance II* (1931–33).

Matlock Town (pop., 1995 est.: 14,000), Derbyshire Dales district, administrative and historic county of DERBYSHIRE, north-central England. It consists of a group of settlements built along the River DERWENT, in a region noted for its beautiful valleys and rugged hills. Between Cromford (site of RICHARD ARKWRIGHT's first water-powered mill in 1771) and the 16th-century Matlock Bridge, the river runs through a narrow gorge. The town was once a famous spa offering hydropathic treatment.

Mato Grosso \'mä-tü-'grō-sü\ State (pop., 2003 est.: 2,651,335), southwestern Brazil. It covers an area of 348,788 sq mi (903,358 sq km), and its capital is Cuiabá. It is bounded by Bolivia on the southwest and west. Cuiabá was founded in 1719 after gold was discovered nearby. In 1748 Mato Grosso became an independent captaincy, in 1822 a province of the empire, and in 1889 a state of the federal union. One of the few great frontier regions still in existence, it consists of grassland, dense forest, and highland plains, with some areas that remain largely unexplored.

matriarchy \'mā-trē-ˌär-kē\ Social system in which familial and political authority is wielded by women. Under the influence of CHARLES DARWIN's theories of evolution and, particularly, the work of the Swiss anthropologist Johann Jakob Bachofen (b. 1815, Basel, Switz.—d. 1887, Basel), some 19th-century scholars believed that matriarchy followed a stage of general promiscuity and preceded male ascendancy (patriarchy) in human society's evolutionary sequence. Like other elements of the evolutionist view of culture, the notion of matriarchy as a universal stage of development is now generally discredited, and the modern consensus is that a strictly matriarchal society has never existed. Nevertheless, in those societies in which matrilineal DESCENT occurs, access to socially powerful positions is mediated through the maternal line of kin. See also SOCIOCULTURAL EVOLUTION.

matrix Set of numbers arranged in rows and columns to form a rectangular array. Matrix elements may also be differential operators, vectors, or functions. Matrices have wide applications in engineering, physics, economics, and statistics, as well as in various branches of mathematics. They are usually first encountered in the study of SYSTEMS OF EQUATIONS represented by matrix equations of the form $Ax = B$, which may be solved by finding the inverse of matrix A or by using an algebraic method based on its DETERMINANT.

matsuri \'mät-sü-ˌrē\ Civil or religious festival in Japan, especially a SHINTŌ shrine festival. It traditionally has two parts: a solemn ritual of worship and a joyous celebration. The participants first purify themselves (see *HARAI*) by periods of abstinence and by bathing. The inner doors of the shrine are then opened, a drum or bells are sounded, and the deity or sacred power (*kami*) is called to descend. The ritual continues with offerings, prayers, and ceremonial music and dancing. The celebration usually includes a feast, dancing, theatrical performances, divination, and athletic contests. A portable shrine housing the *kami* is often taken out and carried in procession.

Matsushita \mät-'sü-shi-tə\ **Electric Industrial Co., Ltd.** Major Japanese manufacturer of electric appliances and consumer electronics products. Founded in 1918 by Matsushita Konosuke (1894–1989) to produce electric lamp sockets and plugs, the company was incorporated in 1935. In the 1930s it manufactured a variety of electrical products, including radios and phonographs. In the 1950s it added television sets, tape recorders, and household appliances; a decade later it brought out microwave ovens, air conditioners, and videotape recorders. It markets prod-

L M N

ucts under such brand names as Panasonic, JVC, and Quasar. Matsushita is noted for its heavy investment in research and development. Its headquarters are in Kadoma, near Ōsaka; it has manufacturing and sales subsidiaries in many overseas markets.

Matteotti \ˌmä-tā-'ȯt-tē**, Giacomo** (b. May 22, 1885, Fratta Polesine, Italy—d. June 10, 1924, Rome) Italian Socialist leader. A lawyer, he joined the Italian Socialist Party and was elected to the Chamber of Deputies in 1919. As head of the Socialists in 1924, he strongly denounced the Fascist Party. Two weeks after his speech, he was kidnapped and murdered by fascists. The murder created a worldwide scandal, and BENITO MUSSOLINI took responsibility as head of the Fascist Party and dared his critics to prosecute him. Opposition was weak, and the Matteotti crisis enabled Mussolini to further consolidate his power.

matter Material substance that constitutes the observable universe and, together with ENERGY, forms the basis of all objective phenomena. ATOMS are the basic building blocks of matter. Every physical entity can be described, physically and mathematically, in terms of interrelated quantities of MASS, INERTIA, and GRAVITATION. Matter in bulk occurs in several states; the most familiar are the gaseous (see GAS), LIQUID, and SOLID states (PLASMAS, GLASSES, and various others are less clearly defined), each with characteristic properties. According to ALBERT EINSTEIN's special theory of RELATIVITY, matter and energy are equivalent and interconvertible (see CONSERVATION LAW).

Matterhorn *French* **Mont Cervin** \ˌmȯⁿ-ser-'veⁿ\ *Italian* **Monte Cervino** \'mȯn-tā-cher-'vē-nō\ Mountain in the ALPS, on the border between Italy and Switzerland. Rising to 14,692 ft (4,478 m), it appears from the Swiss side to be an isolated peak, but it is actually the end of a ridge. The Italian slope is more difficult to climb than the Swiss slope. It was first scaled on July 14, 1865, by British explorer Edward Whymper, who ascended the Swiss side. Three days later Giovanni A. Carrel led an Italian group in the first ascent from the Italian side.

Matthau \'ma-thaù**, Walter** (b. Oct. 1, 1920, New York, N.Y., U.S.—d. July 1, 2000, Santa Monica, Calif.) U.S. actor. He began his career as a child actor in Yiddish theatre and appeared on Broadway in plays such as *Once More, with Feeling* (1958) and *A Shot in the Dark* (1962). He worked steadily as a character actor on the stage and on television in the early 1950s and made his film debut in *The Kentuckian* (1955). He won stardom with his stage role in *The Odd Couple* (1965), which he reprised in the 1968 film version with his frequent costar, JACK LEMMON. Known for his rumpled face, nasal bray, and razor-sharp timing, Matthau appeared in numerous other films, including *The Fortune Cookie* (1966, Academy Award), *Charley Varrick* (1973), *The Sunshine Boys* (1975), *Grumpy Old Men* (1993), and *I'm Not Rappaport* (1996).

Matthew, Saint (fl. 1st century AD, Palestine; Western feast day September 21, Eastern feast day November 16) One of the Twelve APOSTLES, traditional author of the first GOSPEL. According to the Gospels, he was a tax collector known as Levi when Jesus called him to be a disciple. Other information about him is scarce. The Gospel of Matthew is directed at a Jewish-Christian audience in a Jewish environment and may have been written originally in Hebrew, but it is now doubted that the apostle Matthew was its author. Tradition holds that Matthew conducted his ministry in Judaea, after which he served as a missionary to Ethiopia and Persia. Legend differs as to whether he died a martyr's death.

Matthews, Leigh (b. Jan. 3, 1952, Frankston, Victoria, Austl.) Australian Rules football player. A tenacious forward, he was legendary for his robust play and extraordinary skills. He played for Hawthorn (1969–85), scoring 915 goals and helping the team to four league titles. He enjoyed subsequent success as a coach at Collingwood (1986–95) and Brisbane (1999–), guiding both teams to league titles. He was inducted into the Australian Football Hall of Fame and elevated to Legend in 1996.

Matthias I *or* **Matthias Corvinus** \mə-'thī-əs...kȯr-'vī-nəs\ *Hungarian* **Mátyás Corvin** *orig.* **Mátyás Hunyadi** (b. Feb. 24, 1443, Kolozsvár, Transylvania—d. April 6, 1490, Vienna) King of Hungary (1458–90). He spent much of his reign combating the claims of the HABSBURG DYNASTY and attempting to reconstruct the Hungarian state after decades of feudal anarchy. He raised taxes, modernized the army, and codified Hungarian law. After fighting off Turks on Hungary's southern border, Matthias organized a defensive system against them. He gained control of Bosnia (1463) but lost a struggle with Poland for Bohemia. Long a rival of Emperor FREDERICK III, he occupied Vienna and other Habsburg lands, but after his death his conquests were lost.

Matthiessen \'math-ə-sən**, Peter** (b. May 22, 1927, New York, N.Y., U.S.) U.S. naturalist and writer. He attended Yale University and worked as a fisherman on Long Island before undertaking his extensive world travels. His nonfiction, much of it inspired by his career as a naturalist, includes *Wildlife in America* (1959), *The Snow Leopard* (1978, National Book Award), and *In the Spirit of Crazy Horse* (1983). His novels include *At Play in the Fields of the Lord* (1965; film, 1991), *Far Tortuga* (1975), and *Killing Mister Watson* (1990). *The Cloud Forest* (1996) is a chronicle of his travels in South America.

mattock \'ma-tək\ Picklike digging implement, one of the oldest tools of agriculture. It resembles the modern hoe but with a stone or wooden blade rather than a metal one, set at right angles to a long wooden handle. Though large-scale agriculture uses plows, harrows, and rotary hoes that open many rows of a field simultaneously, home gardeners and horticulturists may still use mattocks to loosen dirt and to chop weeds.

Māturīdiyyah \mä-ˌtůr-ē-'dē-ə\ Muslim orthodox school of theology named after its founder, Abū Manṣūr Muḥammad al-Māturīdī (d. 944). It is characterized by reliance on the QUR'ĀN with minimal reasoning and little scope for interpretation. On the question of free will, it once emphasized the absolute omnipotence of God and allowed only limited freedom of action, but it later stated unequivocally that humans have the utmost freedom to act. Unlike the ASHʿARIYYAH (followers of al-AshʿarÄ«), who believed that only God could determine whether a person was saved, the Māturīdiyyah asserted that a Muslim who sincerely performed all religious duties as prescribed in the Qur'ān was assured of a place in heaven.

Mau Mau \'maù-ˌmaù\ Militant KIKUYU-led nationalist movement of the 1950s in Kenya. The Mau Mau (the name's origin is uncertain) advocated violent resistance to British domination in Kenya. In response to actions by Mau Mau rebels, the British Kenya government banned the movement in 1950 and launched a series of military operations between 1952 and 1956. Some 11,000 Kikuyu, 100 Europeans, and 2,000 African loyalists were killed in the fighting; another 20,000 Kikuyu were put into detention camps. Despite their losses, Kikuyu resistance spearheaded the independence movement, and JOMO KENYATTA, jailed as a Mau Mau leader in 1953, became prime minister of independent Kenya in 1963. In 2003 the ban on the Mau Mau was lifted.

Mauchly \'mäk-lē**, John W(illiam)** (b. Aug. 30, 1907, Cincinnati, Ohio, U.S.—d. Jan. 8, 1980, Ambler, Pa.) U.S. physicist and engineer. He joined the faculty at the University of Pennsylvania after completing his graduate studies. During World War II he and J. PRESPER ECKERT were asked by the U.S. Army to devise ways to accelerate the recomputation of artillery firing tables, for which they eventually developed the electronic computer ENIAC. The two men formed a computer-manufacturing firm in 1948, and in 1949 they produced the Binary Automatic Computer (BINAC), which used magnetic tape instead of punched cards for data storage. Their third computer, the UNIVAC I, was designed to handle business data.

Maud See MATILDA

Maudslay \'mȯdz-lē**, Henry** (b. Aug. 22, 1771, Woolwich, Kent, Eng.—d. Feb. 14, 1831, London) British engineer and inventor. The son of a workman, he became the inventor of machines fundamentally important to the INDUSTRIAL REVOLUTION, most outstandingly the metal LATHE. He also invented methods for printing calico cloth and for desalting seawater for ships' boilers, as well as a measuring machine that was accurate to 0.0001 in. (0.00025 cm), and he designed and built many stationary and marine engines. Several outstanding engineers, notably JAMES NASMYTH and JOSEPH WHITWORTH, learned their profession in Maudslay's shop. See also JOSEPH BRAMAH.

© 2006 Encyclopædia Britannica, Inc.

Maugham \'môm**, W(illiam) Somerset** (b. Jan. 25, 1874, Paris, France—d. Dec. 16, 1965, Nice) English novelist, playwright, and short-story writer. He abandoned a short career in medicine when his first novel, *Liza of Lambeth* (1897), had some success. His plays, mainly Edwardian social comedies, brought him financial security. His reputation rests primarily on the novels *Of Human Bondage* (1915), *The Moon and Sixpence* (1919), *Cakes and Ale* (1930), and *The Razor's Edge* (1944), all of which were adapted for film and some for television. His short stories often portray the confusion of Europeans in alien surroundings. His works, regarded less highly today than formerly, are characterized by a clear, unadorned style, cosmopolitan settings, and a shrewd understanding of human nature.

W. Somerset Maugham.
MICHAEL OCHS ARCHIVES/VENICE, CALIF.

Mauna Kea \ˌmau̇-nä-'kē-ə\ Dormant volcano, north-central Hawaii island, Hawaii, U.S. Rising to 13,796 ft (4,205 m), it is the highest point in the state and is the chief feature of a state park occupying 500 acres (202 hectares). Its name means "white mountain," referring to its snowcapped peak. Its dome is 30 mi (48 km) across and is the site of a major astronomical observatory. The volcano's lava flows have buried the southern slopes of the Kohala Mountains to the northwest, and its own western and southern slopes are covered with lava from its neighbour, Mauna Loa.

Mauna Loa Volcano, south-central Hawaii island, Hawaii, U.S. Located in Hawaii Volcanoes National Park, it is one of the world's largest mountain masses. It rises to 13,678 ft (4,169 m) and has a dome 75 mi (120 km) long and 64 mi (103 km) wide. Mokuaweoweo, its pit crater, has an area of nearly 4 sq mi (10 sq km) and a depth of 500–600 ft (150–180 m). It has averaged one eruption every 3.5 years since 1832. Many of its eruptions are confined within Mokuaweoweo; others are from fissures and vents. Its lava flows occupy more than 2,000 sq mi (5,120 sq km) of the island. See also Kilauea.

Maupassant \mō-pä-'sä^{n}**, (Henry-René-Albert-) Guy de** (b. Aug. 5, 1850, Château de Miromesnil?, near Dieppe, France—d. July 6, 1893, Paris) French writer of short stories. His law studies were interrupted by the Franco-Prussian War; his experience as a volunteer provided him with material for some of his best works. Later, as a civil-service employee, he became a protégé of Gustave Flaubert. He first gained attention with "Boule de Suif" (1880; "Ball of Fat"), probably his finest story. In the next 10 years he published some 300 short stories, six novels, and three travel books. Taken together, his stories present a broad, naturalistic picture of French life from 1870 to 1890. His subjects include war, the Norman peasantry, the bureaucracy, life on the banks of the Seine, the emotional problems of the different classes, and, ominously, hallucination. Maupassant was phenomenally promiscuous, and before he was 25 years old his health was being eroded by syphilis. He attempted suicide in 1892 and was committed to an asylum, where he died at age 42. He is generally considered France's greatest master of the short story.

ARCHIVES PHOTOGRAPHIQUES

Mauretania Ancient region of North Africa, corresponding to present-day northern Morocco and western and central Algeria. It was settled by the Phoenicians and Carthaginians from the 6th century BC. Its later inhabitants were known to the Romans as the Mauri and Massaeyli. It was annexed to Rome c. AD 42 and divided into two provinces. It became virtually independent in the 5th century but was overrun by the Vandals and then by the Arabs in the 7th century.

Mauriac \mȯr-'yȧk**, François** (b. Oct. 11, 1885, Bordeaux, France—d. Sept. 1, 1970, Paris) French writer. Mauriac grew up in a pious and strict Catholic family, and he subsequently placed at the heart of all his works the soul grappling with the problems of sin, grace, and salvation. He is best known for his austere, psychological novels, including *Young Man in Chains* (1913); *The Kiss to the Leper* (1922); *Thérèse* (1927); *Vipers' Tangle* (1932), often considered his masterpiece; and *A Woman of the Pharisees* (1941). He wrote polemical works against totalitarianism and fascism in the 1930s and worked with the Resistance during World War II. In 1952 he was awarded the Nobel Prize for Literature.

Maurice of Nassau *Dutch in full* **Maurits, prince van Oranje, count van Nassau** (b. Nov. 13, 1567, Dillenburg, Nassau—d. April 23, 1625, The Hague) Dutch general and statesman. The son of William I (the Silent), he was invested in 1585 as stadtholder (chief executive) of the northern provinces of the Netherlands. With political direction from Johan van Oldenbarnevelt, Maurice consolidated the power of the provinces against Spain and made them trade and shipping centres. He used military planning and siege warfare to defeat Spanish forces in the north and east but failed to take the southern Netherlands and was forced to conclude a truce with Spain in 1609. His development of military strategy and tactics made the Dutch army the most modern in Europe. In 1618 he consolidated his political power after removing Oldenbarnevelt from office, and as prince of Orange, count of Nassau, he became effectively king of the Netherlands.

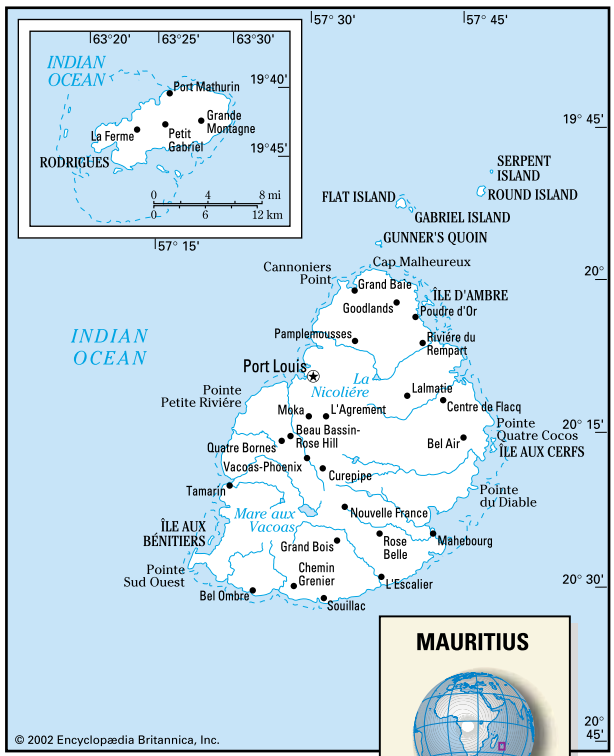
Mauritania *officially* **Islamic Republic of Mauritania** Country, northwestern Africa. It is bordered by the Atlantic Ocean. Area: 398,000 sq mi (1,030,700 sq km). Population (2005 est.): 3,069,000. Capital:



Nouakchott. The Moors (of mixed Arab-Berber and Sudanic descent) constitute the great majority of the population. Languages: Arabic (official), Fulani, Soninke, Wolof (all national). Religion: Islam (official; predominantly Sunni). Currency: ouguiya. Most of Mauritania is made up of low-lying desert that forms the extreme western part of the Sahara. Only a tiny fraction of its land is arable, but almost two-fifths is suitable for grazing, and the herding of goats, sheep, and camels occupies a significant portion of the largely nomadic population. Ocean fishing and iron ore production are

© 2006 Encyclopædia Britannica, Inc.

major sources of revenue. Mauritania is a republic with two legislative houses; its head of state and government is the president, assisted by the prime minister. Inhabited in ancient times by Sanhaja Berbers, in the 11th–12th century it was the centre of the Berber Almoravid dynasty, which imposed Islam on many of the neighbouring peoples. Arab tribes arrived in the 15th century and formed several powerful confederations: Trarza and Brakna, which dominated the Sénégal River region; Kunta in the east; and Rigaibāt in the north. The Portuguese arrived in the 15th century. France gained control of the coastal region in 1817, and in 1904 a formal French protectorate was extended over the territory. In 1920 it was added to French West Africa as a territory. In 1960 Mauritania achieved independence and left the French Community. The country's first president, Moktar Ould Daddah, was ousted in a coup in 1978, and a military government was established. In 1991 a new constitution was adopted, and a civilian government was installed in 1992. The country has faced continued economic hardship and political unrest.

Mauritius \mȯ-'ri-shəs\ *officially* **Republic of Mauritius** Island country, lying east of Madagascar in the western Indian Ocean. The central independent island state of the Mascarene group, it extends 38 mi (61

km) north-south and 29 mi (47 km) east-west. Its outlying territories are Rodrigues Island to the east, the Cargados Carajos Shoals to the northeast, and the Agalega Islands to the north. Area: 788 sq mi (2,040 sq km). Population (2005 est.): 1,245,000. Capital: Port Louis. About two-thirds of the population are of South Asian descent, and most of the rest are of mixed European, South Asian, and African ancestry. Languages: English (official), Creole (lingua franca), various ethnic languages. Religions: Hinduism, Christianity, Islam. Currency: Mauritian rupee. Volcanic in origin and almost surrounded by coastal reefs, Mauritius rises to 2,710 ft (826 m) at Petite Rivière Noire Peak. The chief water source is Lake Vacoas. About half of the land is arable; sugarcane is the major crop, though the government has sponsored agricultural diversification. The country depends heavily on food imports, mainly rice. The population density is one of the highest in the world. The island was visited, but not settled, by the Portuguese in the early 16th century. The Dutch took possession (1598–1710), called it Mauritius for the governor Maurice of Nassau, and attempted to settle it (1638–58, 1664–1710) before abandoning it to pirates. The French East India Company occupied it, renamed it Île de France in 1721, and governed it until the French Ministry of Marine took over its administration in 1767. Sugar planting was the main economic activity, and the colony prospered. The British captured the island in 1810 and were granted formal control of it under the Treaty of Paris in 1814; the name Mauritius was reinstated and slavery abolished. In the late 19th century, competition from beet sugar caused an economic decline, compounded by the opening of the Suez Canal in 1869. After World War II Mauritius adopted political and economic reforms, and in 1968 it became an independent state within the Commonwealth. In 1992 it became a republic. It has successfully diversified its economy, notably into clothing manufacturing.

Maurois \mōr-'wä**, André** *orig.* **Émile Herzog** (b. July 26, 1885, Elbeuf, France—d. Oct. 9, 1967, Paris) French writer. An officer in the British army during World War I, Maurois had his first literary success with *The Silences of Colonel Bramble* (1918), a humorous commentary on warfare and the British character. His novels include *Bernard Quesnay* (1926) and *Whatever Gods May Be* (1928). He is best known for biographies with the narrative interest of novels; his subjects included Percy B. Shelley, Lord Byron, Victor Hugo, and Marcel Proust.

Maurras \mȯ-'rȧs**, Charles (-Marie-Photius)** (b. April 20, 1868, Martigues, France—d. Nov. 16, 1952, Tours) French writer and political theorist. In 1891 he cofounded a group of poets opposed to the Symbolist movement and later known as the *école romane*. An ardent monarchist, he cofounded *L'Action Française* (1899), a review whose "integral nationalism" promoted the idea of the supremacy of the state; it became the party organ of the reactionary Action Française. He also wrote philosophical short stories and poetry. During World War II he was a strong supporter of the government of Philippe Pétain, for which he was imprisoned (1945–52).

Mauryan \'maù-rē-ən\ **empire** (c. 321–c. 185 BC) In ancient India, a state centred at Pataliputra (later Patna) near the junction of the Son and Ganges (Ganga) rivers. After the death of Alexander the Great, Chandragupta Maurya (Candra Gupta), the dynastic founder, carved out an empire that encompassed most of the subcontinent except for the Tamil south. Ashoka (r. c. 269–232 BC), the famous Buddhist emperor, left stone edicts that include some of the oldest deciphered original texts of India. The empire declined after Ashoka's death, but in its heyday it was an efficient and highly organized autocracy. See also Gupta dynasty; Nanda dynasty.

mausoleum Large, impressive tomb, especially a stone building with places for entombment of the dead aboveground. The word is derived from Mausolus, whose widow raised a splendid tomb at Halicarnassus (c. 353–350 BC). Probably the most ambitious mausoleum is the Taj Mahal.

Mausolus \mȯ-'sō-ləs\ (d. 353 BC) Satrap (governor) of Caria in South Asia Minor. Nominally under the control of the Persian empire, he took advantage of upheaval in Asia Minor to gain independence. He was influential among the Greek cities of Ionia and instigated the revolt of Athens's allies in 357. He endowed his capital, Halicarnassus, with fine buildings. His sister and wife, Artemisia II, finished building his tomb, the Mausoleum. It was designed by the Greek architect Pythius and considered one of the Seven Wonders of the World.

Mauss \'mōs**, Marcel** (b. May 10, 1872, Épinal, Fr.—d. Feb. 10, 1950, Paris) French sociologist and anthropologist. Mauss was the nephew of Émile Durkheim, who contributed much to his intellectual formation and with whom he collaborated in such important works as *Suicide* (1897) and *Primitive Classification* (1901–02). His most influential independent work was *The Gift* (1925), a highly original comparative study of the relation between forms of gift exchange and social structure. He taught at the École Pratique des Hautes Études and Collège de France and cofounded the University of Paris's Institut d'Ethnologie. His views on ethnological theory and method influenced Claude Lévi-Strauss, A.R. Radcliffe-Brown, Bronisław Malinowski, and Edward Evans-Pritchard.

Mawlana See Jalal ad-Din ar-Rumi

mawlid \'maù-lid\ *or* **milad** \ˌmē-'lad\ In Islam, the birthday of a holy figure, especially Muhammad. His birthday is fixed by tradition as the 12th day of the month of Rabīʿ I (actually the day of his death). First celebrated by the Muslim faithful in the 13th century, Muhammad's birthday was preceded by a month of merrymaking, which ended with animal sacrifices and a torchlight procession. The day of the *mawlid* included a public sermon and a feast. Though *mawlid* festivities are considered

idolatrous by some Islamic fundamentalists, they continue to be widely celebrated throughout the Muslim world and have been extended to popular saints and the founders of Sufi brotherhoods.

Mawṣil, Al- See MOSUL

Maxim, Sir Hiram (Stevens) (b. Feb. 5, 1840, Sangerville, Maine, U.S.—d. Nov. 24, 1916, London, Eng.) U.S.-British inventor. Son of a Maine farmer, he was apprenticed to a carriage maker. He became chief engineer of the U.S. Electric Lighting Co. (1878–81), for which he introduced carbon filaments for electric lightbulbs. At his lab in London he began working on a fully automatic MACHINE GUN; in 1884 he succeeded with a design that used the recoil of the barrel to eject the spent cartridges and reload the chamber. He also developed his own smokeless GUNPOWDER, cordite. Soon every army was equipped with Maxim guns or adaptations. His other inventions included a hair-curling iron, a pneumatic gun, and an airplane (1894). His Maxim Gun Co. was eventually absorbed into Vickers, Ltd. His son Hiram Percy (1869–1936) invented the Maxim silencer for RIFLES, which he adapted to mufflers and other technologies, and designed the Columbia electric automobile.

Maximian \mak-'sim-ē-ən\ *in full* **Marcus Aurelius Valerius Maximianus** (b. c. AD 250, Sirmium, Pannonia Inferior—d. c. July 310) Roman emperor with DIOCLETIAN (286–305). Assigned the government of the West, he could not suppress revolts in Gaul and Britain; CONSTANTIUS I CHLORUS took charge of these, leaving him Italy, Spain, and Africa. Though known as a persecutor of Christians, he probably acted on Diocletian's orders. He reluctantly abdicated with Diocletian but recanted to support his son Maxentius's claim as caesar. Forced to abdicate again, he lived at the court of his son-in-law, CONSTANTINE I. After raising a failed revolt against Constantine, he committed suicide.

Maximilian *orig.* **Ferdinand Maximilian Joseph** (b. July 6, 1832, Vienna, Austria—d. June 19, 1867, near Querétaro, Mex.) Archduke of Austria and emperor of Mexico (1864–67). The younger brother of FRANCIS JOSEPH I of Austria-Hungary, he served in the Austrian navy and as governor-general of the Lombardo-Venetian kingdom. He accepted the offer of the Mexican throne, naively believing that the Mexicans had voted him their king. In fact, the offer was a scheme between Mexican conservatives, who wanted to overthrow Pres. BENITO JUÁREZ, and NAPOLEON III, who wanted to collect a debt from Mexico and had imperialist ambitions there. Intending to rule with paternal benevolence, Maximilian upheld Juárez's reforms, to the fury of the conservatives. The end of the American Civil War allowed the U.S. to intervene on Juárez's behalf; French forces that had been supporting Maximilian left at the request of the U.S., and Juárez's army retook Mexico City. Refusing to abdicate, Maximilian was defeated and executed.

Maximilian.
LIBRARY OF CONGRESS, WASHINGTON, D.C.

Maximilian I (b. April 17, 1573, Munich—d. Sept. 27, 1651, Ingolstadt, Bavaria) Duke of Bavaria (1597–1651) and elector from 1623. Succeeding his father as duke, he restored the duchy to solvency, revised the law code, and built an effective army. Opposed to the Protestant cause, he established the CATHOLIC LEAGUE (1610). In the THIRTY YEARS' WAR he gave military aid to Austria against the Palatine elector Frederick V and, with military victories by count von TILLY, obtained both territory and the electorship of Bavaria (1623). Threatened by an independent army under ALBRECHT W.E. VON WALLENSTEIN, he forced the general's dismissal in 1630. Maximilian later fought unsuccessfully against France and Sweden and made a separate peace to retain the electorship.

Maximilian I *orig.* **Maximilian Joseph** (b. May 27, 1756, Mannheim, Palatinate—d. Oct. 13, 1825, Munich) First king of Bavaria (1806–25). A member of the house of WITTELSBACH, in 1799 he inherited its territories as Maximilian IV Joseph, elector of Bavaria. Forced by Austria to enter the war against France, he signed a separate peace in 1801. Distrustful of Austria, he supported the French war effort (1805–09) through Bavaria's membership in the CONFEDERATION OF THE RHINE. He received territories by which he crowned himself king of Bavaria (1806). After 1813 he allied with Austria to guarantee the integrity of his kingdom and gave up sections of western Austria in return for territories on the western bank of the Rhine. Aided by his chief minister, count von Montgelas (1759–1838), Maximilian made Bavaria into an efficient, liberal state under a new constitution (1808) and charter (1818) that established a bicameral parliament.

Maximilian I (b. March 22, 1459, Wiener Neustadt, Austria—d. Jan. 12, 1519, Wels) German king and Holy Roman emperor (1493–1519). The eldest son of Emperor FREDERICK III and a member of the HABSBURG DYNASTY, he gained BURGUNDY's lands in the Netherlands by marriage in 1477 but was later forced to give Burgundy to LOUIS XI (1482). He retook most of the Habsburg lands in Austria from the Hungarians by 1490, and, after being crowned Holy Roman emperor, he drove the Turks from the empire's southeastern borders. He fought a series of wars against the French, helping to force them out of Italy in 1496 but losing Milan to them in 1515. He lost Switzerland as well but acquired the TIROL peacefully. He acquired Spain for the Habsburgs through his children's marriages, gained influence in Hungary and Bohemia, and built an intricate network of European alliances. A popular monarch, he encouraged culture and the arts.

Maximilian II (b. Nov. 28, 1811, Munich—d. March 10, 1864, Munich) King of Bavaria (1848–64). Son of King LOUIS I, he succeeded to the throne on his father's abdication in 1848. He proposed a league of smaller states as a "third force" in German affairs but was opposed by the dominant states of Austria and Prussia. He successfully introduced liberal reforms in Bavaria, including freedom of the press and ministerial responsibility. He made Munich a centre of culture and gave support to such scholars as LEOPOLD VON RANKE. He was succeeded by his son LOUIS II.

Maximilian II (b. July 31, 1527, Vienna, Austria—d. Oct. 12, 1576, Regensburg) Holy Roman emperor (1564–76). Son of the future emperor FERDINAND I, he was a humanist Christian who became compromise between Catholics and Protestants. He became king of Bohemia in 1562 and succeeded to the imperial throne in 1564. He extended religious tolerance and worked for reform of the Roman Catholic church. He failed to achieve his political goals; an unsuccessful campaign against the Turks ended in a truce in 1568 that compelled him to continue to pay tribute to the sultan.

maximum In mathematics, a point at which a FUNCTION's value is greatest. If the value is greater than or equal to all other function values, it is an absolute maximum. If it is merely greater than any nearby point, it is a relative, or local, maximum. In CALCULUS, the DERIVATIVE equals zero or does not exist at a function's maximum point. Techniques for finding maximum and minimum points motivated the early development of calculus and have made it easier to solve problems such as finding the dimensions of a container that will hold the most for a given amount of material used to make it. See also MINIMUM, OPTIMIZATION.

Maximus the Greek (b. 1480, Árta, Greece—d. 1556, near Moscow, Russia; feast day January 21) Greek scholar and linguist. Educated in Paris, Venice, and Florence, he became part of a circle of humanist scholars and was influenced by the Dominican reformer GIROLAMO SAVONAROLA. He became a Greek Orthodox monk and was chosen to translate Greek liturgical and theological texts into Russian, thus making possible the dissemination of Byzantine culture throughout Russia. In Moscow he became involved in a religious controversy when he joined a faction called the Nonpossessors, who advocated renunciation of property ownership by the church. Arrested for heresy in 1525, he was imprisoned for 20 years in a monastery. After his death he was venerated as a saint.

Maxwell, James Clerk (b. June 13, 1831, Edinburgh, Scot.—d. Nov. 5, 1879, Cambridge, Cambridgeshire, Eng.) Scottish physicist. He published his first scientific paper at age 14, entered the University of Edinburgh at 16, and graduated from Cambridge University. He taught at Aberdeen University, King's College London, and Cambridge (from 1871), where he supervised the building of Cavendish Laboratory. His most revolutionary achievement was his demonstration that light is an electromagnetic wave, and he originated the concept of ELECTROMAGNETIC RADIATION. His field equations (see MAXWELL'S EQUATIONS) paved the way for ALBERT EINSTEIN's special theory of relativity. He established the nature of Saturn's rings, did important work on colour perception, and produced the kinetic theory of gases. His ideas formed the basis for QUANTUM MECHANICS and ultimately for the modern theory of the structure of atoms and molecules.

Maxwell, (Ian) Robert *orig.* **Jan Ludvik Hoch** (b. June 10, 1923, Slatina-Selo, Czech.—d. Nov. 5, 1991, at sea off the Canary Islands) Czech-British publisher. Of Jewish origin, he lost many family members in the Holocaust but managed to reach Britain and become an army officer. After the war he founded Pergamon Press, which became a major publisher of trade journals and scientific books. In the 1980s he revived the British Printing Corp. and purchased the Mirror Group Newspapers, though his financial practices were officially questioned. Among the U.S. acquisitions of Maxwell Communications were the *New York Daily News* (1991) and the publishing house Macmillan. The revelation of fraudulent financial dealings aimed at bolstering his collapsing empire was followed by his death by drowning from his yacht in the Atlantic. It was assumed to have been a suicide.

Maxwell, William (b. Aug. 16, 1908, Lincoln, Ill., U.S.—d. July 31, 2000, New York, N.Y.) American editor and author. Maxwell taught English at the University of Illinois before joining the staff of *The New Yorker* magazine. In his 40 years there, he edited writers such as John Cheever, J.D. Salinger, Eudora Welty, and Mavis Gallant. He himself was the author of spare, evocative short stories and novels. Perhaps his best-known work is *The Folded Leaf* (1945), about the friendship of two small-town boys. Among his other works are the novels *The Château* (1961) and *So Long, See You Tomorrow* (1980) and the short-story collection *All the Days and Nights* (1995).

Maxwell's equations Four equations, formulated by James Clerk Maxwell, that together form a complete description of the production and interrelation of electric and magnetic fields. The statements of these four equations are (1) electric field diverges from electric charge, (2) there are no isolated magnetic poles, (3) electric fields are produced by changing magnetic fields, and (4) circulating magnetic fields are produced by changing electric fields and by electric currents. Maxwell based his description of electromagnetic fields on these four statements.

May beetle See June beetle

May Day In Europe, the day (May 1) for traditional springtime celebrations. It probably originated in pre-Christian agricultural rituals. Celebrations included a May king and queen, a Maypole, and people carrying trees, green branches, or garlands. May Day was designated an international labour day by the International Socialist Congress of 1899, and it remains the standard Labour Day worldwide, with a few exceptions, including Canada and the U.S. A major holiday in the Soviet Union and other communist countries, it was the occasion for important political demonstrations.

May Fourth Movement Chinese intellectual revolution and sociopolitical reform movement (1917–21). In 1915 young intellectuals inspired by Chen Duxiu began agitating for the reform and strengthening of Chinese society through acceptance of Western science, democracy, and schools of thought, one objective being to make China strong enough to resist Western imperialism. On May 4, 1919, reformist zeal found focus in a protest by Beijing's students against the Versailles Peace Conference's decision to transfer former German concessions in China to Japan. After more than a month of demonstrations, strikes, and boycotts of Japanese goods, the government gave way and refused to sign the peace treaty with Germany. The movement spurred the successful reorganization of the Nationalist Party and gave birth to the Chinese Communist Party. See also Treaty of Versailles.

maya \'mī-ə\ In Hinduism, a powerful force that creates the cosmic illusion that the phenomenal world is real. The word maya originally referred to the wizardry with which a god can make human beings believe in what turns out to be an illusion, and its philosophical sense is an extension of this meaning. The concept is especially important in the Advaita school of the orthodox system of Vedanta, which sees maya as the cosmic force that presents the infinite Brahman as the finite phenomenal world.

Maya \'mī-ə\ Group of Mesoamerican Indians who between AD 250 and 900 developed one of the Western Hemisphere's greatest civilizations. By AD 200 they had developed cities containing palaces, temples, plazas, and ball courts. They used stone tools to quarry the immense quantities of stone needed for those structures; their sculpture and relief carving were also highly developed. Mayan hieroglyphic writing survives in books and inscriptions. Mayan mathematics featured positional notation and the use of the zero; Mayan astronomy used an accurately determined solar year and precise tables of the positions of Venus and the Moon. Calendrical accuracy was important for the elaborate rituals and ceremonies of the Mayan religion, which was based on a pantheon of gods. Ritual bloodletting, torture, and human sacrifice were employed in an attempt to propitiate the gods, ensure fertility, and stave off cosmic chaos. At the height of its Classic period, Mayan civilization included more than 40 cities of 5,000–50,000 people. After 900 the civilization declined rapidly for unknown reasons. Descendants of the Maya are now subsistence farmers in southern Mexico and Guatemala. See also Chichén Itzá; Copán; Lacandón; Maya codices; Maya language; Quiché; Tikal; Tzeltal; Tzotzil; Uxmal.

Maya Codices Books in Mayan hieroglyphic writing that survived the Spanish conquest. They are made of fig-bark paper folded like an accordion, with covers of jaguar skin. Though most Mayan books were destroyed as pagan by Spanish priests, four are known to have survived: the Dresden Codex, probably dating from the 11th or 12th century, a copy of earlier texts of the 5th–9th century; the Madrid Codex, dating from the 15th century; the Paris Codex, slightly older than the Madrid Codex; and the Grolier Codex, discovered in 1971 and dated to the 13th century. They deal with astronomical calculations, divination, and ritual.

Maya languages *or* **Mayan languages** Family of about 30 American Indian languages and language complexes, spoken by more than three million people, mainly in southern Mexico and Guatemala. While some have few remaining speakers, Yucatec in Mexico and K'iche (Quiché), Kaqchikel (Cakchiquel), Mam, and Q'eqchi' (Kekchí) in Guatemala count speakers in the hundreds of thousands. Maya languages were recorded in an indigenous script (see Maya Codices; Mayan hieroglyphic writing), as well as in colonial documents in a Spanish-based orthography, including the *Popol Vuh* and the Yucatec prophetic texts known as the *Books of Chilam Balam*.

Mayakovsky \mə-ˌyə-'kȯf-skē**, Vladimir (Vladimirovich)** (b. July 19, 1893, Bagdadi, Georgia, Russian Empire—d. April 14, 1930, Moscow, Russia, U.S.S.R.) Russian poet. Repeatedly jailed for subversive activity, he began writing poetry during solitary confinement in 1909. On his release he became the spokesman for Futurism in Russia, and his poetry became conspicuously self-assertive and defiant. He was the leading poet of the Russian Revolution of 1917 and the early Soviet period, producing declamatory works saturated with politics and aimed at mass audiences, including "Ode to Revolution" (1918) and "Left March" (1919) and the drama *Mystery Bouffe* (performed 1921). Disappointed in love, increasingly alienated from Soviet reality, and denied a visa to travel abroad, he committed suicide at age 36.

Mayan \'mī-ən\ **hieroglyphic writing** System of writing used by people of the Maya civilization from about the 3rd century AD to the 17th century. Of the various scripts developed in pre-Columbian Mesoamerica, Mayan writing is by far the most elaborate and abundantly attested: about 800 signs have been inventoried in more than 5,000 instances (see Maya Codices). Signs—some representational, some quite abstract—are either logographic, representing words, or syllabic, representing consonant-vowel sequences. Typically, up to five signs are fit into tight square or rectangular clusters, which are further arranged into rows or grids. The language of Classic Period writing (c. AD 250–900) is generally thought to be Cholan, ancestral to several modern Maya languages; later inscriptions were in Yucatec. By the 1990s scholars had an accurate grasp of 60–70% of Mayan inscriptions, with some texts almost completely readable and some still quite opaque. Most inscriptions record significant events and dates in the lives of Mayan rulers.

Mayer, Louis B(urt) *orig.* **Eliezer Mayer** *or* **Lazar Mayer** (b. July 4, 1885, Minsk, Russian Empire—d. Oct. 29, 1957, Los Angeles, Calif., U.S.) Russian-born U.S. film executive. He immigrated to Canada and then the U.S. with his family and worked in his father's scrap-iron business from age 14. He bought a small nickelodeon near Boston in 1907, and by 1918 he owned the largest chain of movie theatres in New England. He founded a film production company in Hollywood in 1917 and merged it with other companies to form MGM in 1925. Under his leadership, MGM became Hollywood's largest and most prestigious studio, aided by his artistic director, Irving Thalberg. Mayer had under contract many of the outstanding screen stars of the day, including Greta Garbo, Clark Gable, and Judy Garland. He was considered the most powerful Hollywood executive until his forced retirement in 1951. He was the chief founder of the Academy of Motion Picture Arts and Sciences.

Mayer \'mī-ər**, Maria (Gertrude)** *orig.* **Maria (Gertrude) Goeppert** (b. June 28, 1906, Kattowitz, Ger.—d. Feb. 20, 1972, San

© 2006 Encyclopædia Britannica, Inc.

Diego, Calif, U.S.) German-born U.S. physicist. She immigrated to the U.S. in 1930, where she taught at various universities. She worked on the separation of URANIUM ISOTOPES for the MANHATTAN PROJECT. Her work in theoretical physics led to the explanation of properties of atomic nuclei based on a structure of "shells" occupied by protons and neutrons. For her work she was awarded a 1963 Nobel Prize, which she shared with Hans Jensen (1907–73) and EUGENE WIGNER.

Mayerling affair See RUDOLF

Mayfield, Curtis (b. June 3, 1942, Chicago, Ill., U.S.—d. Dec. 26, 1999, Roswell, Ga.) U.S. singer-songwriter and guitarist. He became a vocalist and guitarist with the Impressions in 1957. Together with Sam Gooden (bass) and Fred Cash (low tenor), Mayfield (high tenor) devised a much imitated vocal style. Mayfield was a self-taught guitarist, and when he tuned his instrument to a natural chord, he achieved a subtle lyricism that was also influential. Mayfield's songs, including "It's All Right" (1963), "People Get Ready" (1965), and "Choice of Colors" (1969), were inspirational and humanistic. The high point of his solo career (from 1970) was the influential soundtrack to *Superfly* (1972), and he became a major force in the development of the musical style known as funk. He was paralyzed when a lighting tower fell on him during a concert in 1990.

mayflower See TRAILING ARBUTUS

Mayflower Compact (1620) Document signed by 41 male passengers on the *Mayflower* before landing at PLYMOUTH (Massachusetts). Concerned that some members might leave to form their own colonies, WILLIAM BRADFORD and others drafted the compact to bind the group into a political body and pledge members to abide by any laws that would be established. The document adapted a church covenant to a civil situation and was the basis of the colony's government.

mayfly Any INSECT of the order Ephemeroptera, found around streams and ponds. The approximately 2,000 species are up to 1.6 in. (4 cm) long, have triangular membranous forewings, smaller round hind wings, and two or three long, threadlike tails. Wings are held vertically when at rest. Chewing mouthparts in the aquatic larvae are vestigial in the adult, which lives just long enough to mate and reproduce. Males "dance" in large swarms to attract females. The adult's entire life span is usually only a few hours (though at least one species lives as long as two days), and poets have used the mayfly as a symbol of life's ephemeral nature.

mayhem CRIME of willfully and permanently crippling, mutilating, or disfiguring any part of another's body. Some jurisdictions do not distinguish between mayhem and other types of battery. JAPANESE LAW treats all batteries similarly; INDIAN LAW divides bodily harms into "hurts" and "grievous hurts." In most U.S. states mayhem is encompassed by assault and aggravated assault.

Mayhew, Henry (b. 1812, London, Eng.—d. July 25, 1887, London) English journalist and sociologist. He studied law but soon turned to journalism. In 1841 he founded the highly successful *PUNCH*. A vivid and voluminous writer, he is best known for *London Labour and the London Poor* (1851–62), an evocation of the sights and sounds of the working-class districts of London, which influenced CHARLES DICKENS and other writers. He also wrote plays, farces, fairy tales, and novels, some in collaboration with his brother Augustus Septimus Mayhew (1826–75).

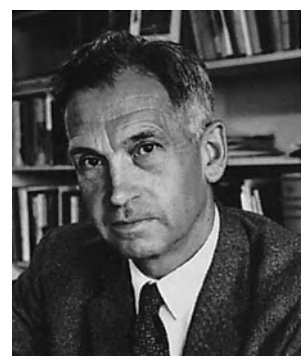
BBC HULTON PICTURE LIBRARY

Mayo family Family of U.S. physicians. William Worrall Mayo (b. May 31, 1819, near Manchester, Eng.—d. March 6, 1911, Rochester, Minn., U.S.) came to the U.S. in 1845. He opened a surgical practice in Rochester, Minn., in 1863, and in 1889 he opened St. Mary's Hospital with his two sons and the Sisters of St. Francis. His elder son, William James (b. June 29, 1861, Le Sueur, Minn.—d. July 28, 1939, Rochester), specialized in surgery of the abdomen, pelvis, and kidney and served as administrator. Charles Horace (b. July 19, 1865, Rochester—d. May 26, 1939, Chicago, Ill.), a gifted surgeon in all areas, originated modern procedures in goitre surgery, neurosurgery, and orthopedic surgery. About 1900 the partnership was changed to a voluntary association of physicians and specialists, later known as the Mayo Clinic. In 1915 the brothers established the Mayo Foundation for Medical Education and Research, which offers graduate training in medicine and related subjects.



Mayon \mä-'yōn\ **Volcano** *or* **Mount Mayon** Active volcano, southeastern LUZON, Philippines. One of the world's most perfect volcanic cones, it has a base 80 mi (130 km) in circumference and rises to 7,943 ft (2,421 m). It is popular with climbers and campers and is the centre of Mayon Volcano National Park, which occupies 21 sq mi (55 sq km). It has erupted more than 30 times since 1616; an eruption in 1993 killed 75 people. Its most destructive eruption was in 1814, when the town of Cagsawa was buried.

mayor Political leader of a municipal corporation. Mayors are either appointed or elected for a limited term. In Europe until the mid-19th century, most mayors were appointed by the central government; in France, they are still agents of the central government. In the U.S., they are either directly elected by the populace or chosen by an elected council. Some fulfill only ceremonial functions, executive power being held by a professional manager hired by the legislature. A mayor's powers may include the power to make appointments, veto legislation, administer budgets, and manage administrative functions. See also CITY GOVERNMENT.

Mayotte \mä-'yōt\ Southeasternmost island (pop., 2002 est.: 165,000) of the COMOROS archipelago, a French overseas territorial collectivity. Located northwest of Madagascar, it occupies an area of 144 sq mi (373 sq km); Mamoutzo is its chief town and capital designate. Dzaoudzi, the current capital, is its other main city and port. Most of its people are of Malagasy origin. Originally inhabited by descendants of BANTU and Malayo-Indonesian peoples, it was converted to Islam by Arab invaders in the 15th century. Taken by Malagasy people from Madagascar at the end of the 18th century, it came under French control in 1843. Together with the other Comoros islands and Madagascar, it became part of a single French overseas territory in the early 20th century. It has been administered separately since 1975, when the three northernmost islands of the Comoros declared independence.

maypole Tall wooden pole garlanded with flowers and greenery and often hung with ribbons that are woven into complex patterns by dancers in a ceremonial folk dance. The custom probably originated in ancient fertility rites that involved dancing around a living tree in the springtime. In many European countries, notably England, the pole is set up on May 1 as part of MAY DAY festivities. Similar ribbon dances were performed in India and in pre-Columbian Latin America.

Mayr \'mīr**, Ernst (Walter)** (b. July 5, 1904, Kempten, Ger.—d. Feb. 3, 2005, Bedford, Mass., U.S.) German-born U.S. biologist. He received a Ph.D. (1926) from the University of Berlin and immigrated to the U.S. in the early 1930s. While a curator at the American Museum of Natural History (1932–53), he wrote more than 100 papers on avian taxonomy. From 1953 to 1975 he taught at Harvard University. His early studies of speciation and of founder populations made him a leader in the development of the modern synthetic theory of EVOLUTION. In 1940 Mayr proposed a definition of species that won wide acceptance and led to the discovery of some previously unknown species. His influential works include *Systematics and the Origin of Species* (1942) and *The Growth of Biological Thought* (1982).

Mays, Willie (Howard) (b. May 6, 1931, Westfield, Ala., U.S.) U.S. baseball player. Mays played for the Birmingham Black Barons in the National Negro League when he was only 16. The "Say Hey Kid" later played principally for the New York (later San Francisco) Giants in the

© 2006 Encyclopædia Britannica, Inc.

major leagues (1951–72). A brilliant centre fielder and a powerful right-handed hitter, he ranks among the all-time top five in home runs (660), runs (2,062), and extra-base hits (1,323) and among the top 10 for runs batted in (1,903) and hits (3,283). Mays is considered one of the greatest all-around players in the history of the game.

Willie Mays.
UPI

Maysles \'mā-zəlz**, Al(bert) and David** (respectively b. Nov. 26, 1926, Brookline, Mass., U.S.; b. Jan. 10, 1932, Boston, Mass., U.S.—d. Jan. 3, 1987, New York, N.Y.) U.S. documentary filmmakers. Albert made his first documentary, *Psychiatry in Russia*, in 1955. In 1962 the brothers began to collaborate on documentaries in the CINÉMA VÉRITÉ style, which they called "direct cinema," and gained notoriety for their films *Salesman* (1969) and *Gimme Shelter* (1970), both made with Charlotte Zwerin. Their later films include *Christo's Valley Curtain* (1972), *Grey Gardens* (1975), and *Vladimir Horowitz* (1985).

Mazarin \ˌma-zə-'ra^{n}**, Jules Cardinal** *orig.* **Giulio Raimondo Mazarini** (b. July 14, 1602, Pescina, Abruzzi, Kingdom of Naples—d. March 9, 1661, Vincennes, France) Italian-French cardinal and statesman. A member of the papal diplomatic service (1627–34), he negotiated an end to the War of the Mantuan Succession between France and Spain. He served as papal nuncio to the French court (1634–36), where he admired cardinal de RICHELIEU. He worked for French interests in the papal court, then entered the service of France and became a naturalized French citizen (1639) and a cardinal (1641). After the deaths of Richelieu (1642) and LOUIS XIII (1643), Mazarin was appointed first minister of France by ANNE OF AUSTRIA, regent for LOUIS XIV, and he directed Louis's education. A highly influential adviser to the young king, he helped train a staff of able administrators. His foreign policy established France's supremacy among the European powers, effecting the Peace of WESTPHALIA (1648) and the Treaty of the PYRENEES (1659). A patron of the arts, Mazarin founded an academy of painting and sculpture and compiled a large library.

Mazatlán \ˌmä-sä-'tlän\ Port city (pop., 2000: 327,989), southwestern SINALOA state, north-central Mexico. It occupies a peninsula overlooking Olas Altas Bay on the Gulf of CALIFORNIA. It is Mexico's largest Pacific Ocean port, and its island-studded harbour is known for its fine sandy beaches. Lying diagonally across the gulf from the tip of BAJA CALIFORNIA, it provides a communications link between Baja and the mainland. Mazatlán, called the "Pearl of the Pacific," is a fishing centre and a popular tourist resort.

Mazda \'mäz-də\ **Motor Corp.** Japanese automotive manufacturer. Founded in 1920 as a cork plant, the firm was called Toyo Kogyo Co. from 1927 until 1984, when it adopted the name Mazda Motor Corp. It began producing trucks in 1931 and supplied the Japanese armed forces during World War II; its factory survived the atomic bombing of Hiroshima because it lay shielded behind a hill. In the 1960s it began manufacturing passenger cars and marketing them in the U.S. After enduring a slump in the 1970s, it became one of the largest auto manufacturers in Japan. Mazda has supplied axles and other automotive products to FORD MOTOR CO., and by the turn of the 21st century, Ford had acquired a significant ownership share in Mazda. Its headquarters are in Hiroshima.

Mazdakism \'maz-də-ˌki-zəm\ Dualistic religion that arose in Iran in the late 5th cent AD. Its origins are uncertain, and no Mazdakite scriptures survive. It is named for Mazdak, its main Persian proponent in the 5th century, who converted the Sasanid king Kavadh I. It held that there were two original principles, Light (or Good) and Darkness (or Evil), which accidentally became mixed, producing the world. Humans' duty was to strive to release Light in the world through moral conduct. Mazdakism was suppressed in the 6th century by Persian nobles and Zoroastrian clergy who objected to its tenets concerning the common holding of property and women, but it survived in secret until the 8th century. See also DUALISM, ZOROASTRIANISM AND PARSIISM.

maze See LABYRINTH

Mazia \'mā-zē-ə**, Daniel** (b. Dec. 18, 1912, Scranton, Pa., U.S.—d. June 9, 1996, Monterey, Calif.) U.S. cell biologist. He received his Ph.D. from the University of Pennsylvania. His research focused on various aspects of cell reproduction, including MITOSIS and regulation. He is best known for isolating the structure responsible for cell division, research that he carried out with Katsuma Dan (1905?–96) in 1951.

Mazowiecki \ˌmä-zō-'vyet-skē**, Tadeusz** (b. April 18, 1927, Płock, Pol.) Polish politician. After studying law, he cofounded and edited the independent Catholic monthly *Więź* (1958–81). A principal adviser to the SOLIDARITY labour movement, he was appointed its newspaper editor (1981) by LECH WAŁĘSA. After the 1989 national elections, he was appointed prime minister of a coalition government of Solidarity and communist members. He undertook radical economic reforms to develop a free-market economy, which helped stabilize Poland's consumer-goods market and increased exports but caused high unemployment. He lost his bid for president in 1990 and was replaced as prime minister in 1991.

mazurka \mə-'zər-kə\ Polish folk dance in ¾ time for a circle of couples, characterized by stamping feet and clicking heels, traditionally danced to the music of bagpipes. Originating in Masuria (northeastern Poland) in the 16th century, it became popular at the Polish court and spread to Russia and Germany, reaching England and France by the 1830s. The 50 piano mazurkas by FRÉDÉRIC CHOPIN reflected and extended the dance's popularity. It had no set figures and allowed improvisation among its more than 50 different steps.

Mazzini \mät-'sē-nē**, Giuseppe** (b. June 22, 1805, Genoa—d. March 10, 1872, Pisa, Italy) Italian patriot and a major figure in the making of modern Italy. A lawyer, he joined the secret independence group CARBONARI. After he was imprisoned for its activities, he moved to Marseille (1831), where he founded the patriotic movement YOUNG ITALY. He later expanded his plan for a world republican federation and in Switzerland founded Young Europe. In London (1837) he continued his revolutionary activities by correspondence with agents worldwide. He founded the People's International League (1847) and received support from English liberals. In 1848 he returned to Italy to help govern the short-lived Republic of Rome, but returned to England after the pope reestablished control in Rome. Mazzini founded the Friends of Italy (1851) and backed unsuccessful uprisings in Milan, Mantua, and Genoa. An uncompromising republican, he disapproved of the new united Kingdom of Italy (1861). See also RISORGIMENTO.

Mbabane \əm-bä-'bä-nā\ Capital and largest town (pop., 1998 est.: 60,000) of SWAZILAND. Located in western Swaziland, it developed near the cattle kraal of the Swazi king Mbandzeni in the late 19th century. The actual town was founded in 1902, when the British assumed control of Swaziland and set up an administrative headquarters there. A Mozambican railway link near Mbabane was established in 1964, primarily to export iron ore extracted in the region; production of the ore had virtually ceased by the late 1970s.

Mbeki \em-'bek-ē**, Thabo** (b. June 18, 1942, Idutywa, Transkei) President of South Africa (from 1999). The son of an anti-APARTHEID activist, he studied economics at Sussex University in Britain, then received military training in the Soviet Union. He was appointed deputy president by NELSON MANDELA following South Africa's first elections (1994) based on universal suffrage and soon took control of the government's day-to-day workings. Less charismatic than Mandela, Mbeki has been criticized for his views on the biology of AIDS. He has been particularly involved in South Africa's post-apartheid economic growth strategy.

mbira \em-'bir-ə\ *or* **thumb piano** African musical instrument consisting of a set of tuned metal or bamboo tongues attached to a board or

© 2006 Encyclopædia Britannica, Inc.

resonator. The tongues are depressed and released with the thumbs and fingers to produce melodies and song accompaniments. The mbira dates to at least the 16th century in Africa, and it was imported to Latin America by slaves.

Mboya \em-'bȯi-ə**, Tom** *orig.* **Thomas Joseph Mboya** (b. Aug. 15, 1930, Kilima Mbogo, near Nairobi, Kenya—d. July 5, 1969, Nairobi) Kenyan political leader. During the Mau Mau rebellion (1952–56) and the period leading up to Kenyan independence (1963), the Oxford-educated Mboya headed the Kenya Federation of Labour. In 1960 he helped found the dominant Kenyan African National Union Party (KANU). After independence he served in top administrative posts in Jomo Kenyatta's government. His assassination in 1969 shocked the nation and exacerbated tensions between the dominant Kikuyu and other ethnic groups, especially Mboya's own Luo.

Mbundu \em-'bůn-dü\ Group of Bantu-speaking peoples of north-central Angola. In the 15th century they founded the Ndongo kingdom, a rival of the Kongo kingdom. It was destroyed by the Portuguese in the late 1600s. In the 1970s the Mbundu provided the main support for the Marxist-oriented Popular Movement for the Liberation of Angola (MPLA), which assumed power in 1976. Today they number about 2.3 million.

MCA *in full* **Music Corporation of America** Entertainment conglomerate. It was founded in Chicago in 1924 by Jules Stein as a talent agency. In the 1960s it bought Decca Records and Universal Pictures, and today it produces films, music, and television shows. It was acquired by Matsushita of Japan in 1990.

McAdam, John (Loudon) (b. Sept. 21, 1756, Ayr, Ayrshire, Scot.—d. Nov. 26, 1836, Moffat, Dumfriesshire) Scottish inventor of the macadam road surface. He made an early fortune in his uncle's New York counting-house (1770–83). Back in Scotland, he noted the poor condition of the highways near his estate and undertook experiments in road making. He recommended that roads be raised above the adjacent ground for good drainage and covered, first with larger stones and then with smaller stones, the whole mass to be bound with fine gravel or slag. In 1823 his views were officially adopted, and in 1827 he was appointed Britain's Surveyor General of Metropolitan Roads. Macadamization was quickly adopted in other countries and did much to facilitate travel and communication.

McAdoo \'ma-kə-ˌdü**, William G(ibbs)** (b. Oct. 31, 1863, near Marietta, Ga., U.S.—d. Feb. 1, 1941, Washington, D.C.) U.S. public official. In 1892 he moved to New York, where he organized the Hudson and Manhattan Railway companies (later consolidated), which built tunnels under the Hudson River. A prominent supporter of Woodrow Wilson in the 1912 presidential campaign, he was appointed secretary of the treasury by Wilson in 1913; he married Wilson's daughter in 1914. During World War I he directed fund-raising drives that yielded $18 billion for the war effort. He was later director general of U.S. railroads (1917–19) and U.S. senator from California (1933–38).

McCarthy, Cormac *orig.* **Charles McCarthy, Jr.** (b. July 20, 1933, Providence, R.I., U.S.) U.S. novelist. He grew up in Tennessee and dropped out of the University of Tennessee to join the Air Force. He began writing in 1959. His novels, known for their natural observation, morbid realism, and violence, are in the Southern gothic tradition. They include *The Orchard Keeper* (1965), *Outer Dark* (1968), *Blood Meridian* (1985), and the widely read Border Trilogy (*All the Pretty Little Horses*, 1992; *The Crossing*, 1994; *Cities of the Plain*, 1999).

McCarthy, Eugene J(oseph) (b. March 29, 1916, Watkins, Minn., U.S.—d. Dec. 10, 2005, Washington, D.C.) U.S. politician. He taught at the College of St. Thomas in St. Paul, Minn., before being elected to the U.S. House of Representatives (1949–59) and later the Senate (1959–71). A liberal Democrat, he became an outspoken critic of the Vietnam War. In 1968 he ran for the Democratic Party presidential nomination. His initial successes convinced Pres. Lyndon B. Johnson not to seek reelection. After losing the nomination to Hubert H. Humphrey, McCarthy decided not to run for reelection to the Senate. He made another unsuccessful attempt at the Democratic nomination in 1972 and ran unsuccessfully for president as an independent in 1976. His presidential bids in 1988 and 1992 also failed.

McCarthy, John (b. Sept. 4, 1927, Boston, Mass., U.S.) U.S. computer scientist. He received his Ph.D. from Princeton University. A pioneer in the field of artificial intelligence, he created LISP in 1958. He also developed ideas about the processing characteristics of trees (as used in computing), as distinct from nets. He is a recipient of the Turing Award (1971), the Kyoto Prize (1988), and the National Medal of Science (1990).

McCarthy, Joseph R(aymond) (b. Nov. 14, 1908, near Appleton, Wis., U.S.—d. May 2, 1957, Bethesda, Md.) U.S. politician. He was a Wisconsin circuit judge (1940–42) before enlisting in the Marine Corps in World War II. In 1946 he upset Robert La Follette, Jr., to win election to the U.S. Senate. He remained little known until 1950, when he publicly charged that 205 communists had infiltrated the U.S. State Department. Reelected in 1952, he obtained the chairmanship of the Senate's permanent subcommittee on investigations, and for the next two years he investigated various government departments and questioned innumerable witnesses about their suspected communist affiliations. To his supporters, McCarthy was a dedicated patriot and a guardian of genuine Americanism; to his detractors, he was an irresponsible witch-hunter who was undermining the nation's traditions of civil liberties. The persecution of innocent persons on the charge of being communists and the forced conformity that this practice engendered in American public life came to be known as McCarthyism. His influence waned after 1954, when exposure of his truculent interrogative tactics in nationally televised hearings helped to turn public opinion against him. Later that year he was censured by the Senate for conduct "contrary to Senate traditions."

McCarthy, Mary (Therese) (b. June 21, 1912, Seattle, Wash., U.S.—d. Oct. 25, 1989, New York, N.Y.) U.S. novelist and critic. She served on the editorial staff of the *Partisan Review* from 1937 to 1948. She began writing fiction at the urging of her second husband, Edmund Wilson. Her work is noted for bitingly satiric commentaries on marriage, the impotence of intellectuals, and the role of women in contemporary urban America. Her novels include *The Company She Keeps* (1942); *The Group* (1963), her most popular work; *Birds of America* (1971); and *Cannibals and Missionaries* (1979). She also wrote two autobiographies, *Memories of a Catholic Girlhood* (1957) and *How I Grew* (1987).

McCartney, Sir (James) Paul (b. June 18, 1942, Liverpool, Eng.) British singer and songwriter. Born to a working-class family, he learned piano but switched to guitar after hearing American rock-and-roll recordings. In the mid-1950s he met John Lennon, with whom he formed the Quarrymen, which evolved into the Beatles. He and Lennon cowrote scores of songs, including some of the most popular songs of the 20th century. He released his first solo album in 1970. With his wife, the photographer Linda Eastman (1941–98), he formed the group Wings; their hit albums include *Band on the Run* (1973) and *Wings at the Speed of Sound* (1976). After the band dissolved, McCartney had a string of hits in the 1980s. In Rio de Janeiro in 1990, he set a world record by performing before a paying audience of more than 184,000. He was knighted in 1997.

McCarty, Maclyn (b. June 9, 1911, South Bend, Ind., U.S.—d. Jan. 2, 2005, New York, N.Y.) U.S. biologist. He received an M.D. (1937) at Johns Hopkins School of Medicine. With Oswald Avery and Colin M. MacLeod he provided the first experimental evidence that the genetic material of living cells is composed of DNA. In their classic experiments (1944), the introduction of certain material from one type of pneumococcus bacteria into another type transformed the receiving bacteria into the type from which the material had been taken. The substance responsible for the change was DNA.

McClellan, George B(rinton) (b. Dec. 3, 1826, Philadelphia, Pa., U.S.—d. Oct. 29, 1885, Orange, N.J.) U.S. Army officer. After graduating from West Point, he served in the Mexican War and then returned to West Point to teach military engineering. In 1855–56 he undertook a mission to the Crimea to study European methods of warfare. In 1857 he resigned his commission to become chief of engineering for the Illinois Central Railroad (1857); he became president of the Ohio and Mississippi Railroad in 1860. At the outbreak of the American Civil War he was commissioned in the regular army and placed in command of the department of the Ohio. Appointed general in chief of the army by Abraham Lincoln in 1861, he organized the army into an efficient fighting force but refused to take the offensive in the fall of that year, prompting Lincoln to issue his General War Order (1862) calling for forward movement of all armies. McClellan cautiously conducted the Peninsular Campaign but failed to take Richmond, and he fought indecisively in the Seven Days' Battles. At the Battle of Antietam he failed to destroy Robert E. Lee's army, and Lincoln removed him from command. In 1864 he was the unsuccessful

© 2006 Encyclopædia Britannica, Inc.

Democratic candidate for president against Lincoln. From 1872 to 1877 he was president of the Atlantic and Great Western Railroad.

McClintock, Barbara (b. June 16, 1902, Hartford, Conn., U.S.—d. Sept. 2, 1992, Huntington, N.Y.) U.S. geneticist. She received her doctorate from Cornell University. In the 1940s and '50s, her experiments with variations in the coloration of kernels of corn revealed that genetic information is not stationary. She isolated two control elements in genetic material and found not only that they moved but that the change in position affected the behaviour of neighbouring genes, and she suggested that these elements were responsible for the diversity in cells during an organism's development. Her pioneering research, whose importance was not recognized for many years, eventually resulted in her being awarded a 1983 Nobel Prize.

McClung, Clarence E(rwin) (b. April 6, 1870, Clayton, Calif., U.S.—d. Jan. 17, 1946, Swarthmore, Pa.) U.S. zoologist. He received his Ph.D. from the University of Kansas. His study of the mechanisms of heredity led to his hypothesis (1901) that an extra, or accessory, chromosome determined sex. The discovery of the sex-determining chromosome provided some of the earliest evidence that a given chromosome carries a definable set of hereditary traits. McClung also studied how the behaviour of chromosomes in the sex cells of different organisms affects their heredity.

McClung, Nellie *orig.* **Nellie Mooney** (b. Oct. 20, 1873, Chatsworth, Ont., Can.—d. Sept. 1, 1951, Victoria, B.C.) Canadian writer and reformer. After marrying in 1896, she became prominent in the TEMPERANCE MOVEMENT. Her *Sowing Seeds in Danny* (1908), a novel about life in a small western town, became a national best-seller. She lectured widely on WOMAN SUFFRAGE and other reforms in Canada and the U.S. and served in the Alberta legislature (1921–26).

McCormack, John (b. June 14, 1884, Athlone, County Westmeath, Ire.—d. Sept. 16, 1945, near Dublin) Irish-U.S. tenor. He toured with Dublin's cathedral choir as a boy, studied voice in Milan, and made his Italian debut in 1906. He debuted the next year in London in *Cavalleria rusticana*, and an international operatic career ensued, especially in the U.S., for the next decade. From 1918 he concentrated on recitals and recordings, ranging from German lieder to sentimental popular songs. His Irish songs were particularly beloved.

McCormick, Cyrus Hall (b. Feb. 15, 1809, Rockbridge county, Va., U.S.—d. May 13, 1884, Chicago, Ill.) U.S. industrialist and inventor. He is generally credited with the development (from 1831) of the mechanical REAPER, which revolutionized the harvesting of grain. By 1850 the McCormick reaper was known throughout the U.S.; its prizes and honours, including the Grand Medal of Honour at the 1855 Paris exposition, made it famous around the world. In 1902 the McCormick Harvesting Co. joined with other companies to form International Harvester Co., with McCormick's son Cyrus, Jr., as its first president.

Cyrus McCormick.
CULVER PICTURES

McCormick, Robert R(utherford) *known as* **Colonel McCormick** (b. July 30, 1880, Chicago, Ill., U.S.—d. April 1, 1955, Wheaton, Ill.) U.S. newspaper editor and publisher. He was a grandnephew of CYRUS H. MCCORMICK and grandson of JOSEPH MEDILL, editor and publisher of the *CHICAGO TRIBUNE*. He was president of the Chicago Tribune Co. from 1911 and sole editor and publisher of the *Tribune* from 1925. Under his direction the paper achieved the largest circulation among U.S. standard-sized newspapers and led the world in newspaper advertising revenue. His idiosyncratic editorials made him the personification of reactionary journalism in the U.S.

McCrea \mə-'krā**, Joel (Albert)** (b. Nov. 5, 1905, South Pasadena, Calif., U.S.—d. Oct. 20, 1990, Woodland Hills, Calif.) U.S. film actor. He worked in Hollywood as a stuntman and bit player before getting his first leading role in *The Silver Horde* (1930). His films—many of them westerns in which he portrayed a dependable, even-tempered man speaking in a resonant American twang—include *The Most Dangerous Game* (1932), *Wells Fargo* (1937), *Union Pacific* (1939), *Foreign Correspondent* (1940), *Sullivan's Travels* (1941), *The Virginian* (1946), and *Ride the High Country* (1962).

McCullers, Carson *orig.* **Lula Carson Smith** (b. Feb. 19, 1917, Columbus, Ga., U.S.—d. Sept. 29, 1967, Nyack, N.Y.) U.S. novelist and short-story writer. She studied at Columbia and New York universities and eventually settled in New York's Greenwich Village. A series of strokes she suffered as a child left her partly paralyzed. She typically set her stories in small Southern communities and depicted the inner lives of lonely people. Her novels include *The Heart Is a Lonely Hunter* (1940), perhaps her finest work; *Reflections in a Golden Eye* (1941); *The Member of the Wedding* (1946), which she adapted into a play (1950); and *The Ballad of the Sad Café* (1951), dramatized by EDWARD ALBEE in 1963. Each of these was adapted for film.

McCulloch, Hugh (b. Dec. 7, 1808, Kennebunk, Maine, U.S.—d. May 24, 1895, near Washington, D.C.) U.S. financier and statesman. After teaching school in Boston, he moved in 1833 to Fort Wayne, Ind., where he was a lawyer and then a banker. Appointed U.S. secretary of the treasury (1865–69), he attempted to return the U.S. to the gold standard by withdrawing from circulation the paper money that had been issued during the AMERICAN CIVIL WAR, but he was thwarted by public opposition. He was again secretary of the treasury from 1884 to 1885.

Hugh McCulloch
COURTESY OF THE LIBRARY OF CONGRESS, WASHINGTON, D.C.

McCulloch v. Maryland (1819) Decision of the SUPREME COURT OF THE UNITED STATES that affirmed the constitutional doctrine of Congress's implied powers. The case concerned the legitimacy of the authority of a newly created national bank to control the issuance of currency by the states, including Maryland. The unanimous opinion, written by JOHN MARSHALL, established that Congress possesses not only the powers expressly conferred on it by the Constitution but also the authority appropriate to the utilization of such powers, in this case the creation of such a bank. This doctrine, drawn from the "elastic clause" of Article 1, became a significant factor in the steady growth of federal powers. It also bolstered the power of JUDICIAL REVIEW established in *MARBURY V. MADISON* (1803).

McDonnell Douglas Corp. U.S. manufacturer of jet fighters, commercial aircraft, and space vehicles. It was formed in the 1967 merger of the McDonnell Aircraft Co. (founded 1939) and the Douglas Co. (1921). During World War II, Douglas contributed 29,000 warplanes, one-sixth of the U.S. airborne fleet. After the war, it dominated commercial air routes with its DC-6 and DC-7. With the development of commercial jets, Douglas began to lag behind BOEING CO. and sought a merger with McDonnell, which had grown quickly during World War II and had continued to be a major defense supplier, designing the first carrier-based jet fighter. After the merger McDonnell Douglas produced widely used jet fighters (including the F-4 Phantom, A-4 Skyhawk, F-15 Eagle, and F-18 Hornet) as well as LAUNCH VEHICLES and CRUISE MISSILES. It was bought by Boeing in 1997. See also LOCKHEED-MARTIN.

McEnroe, John (Patrick), Jr. (b. Feb. 16, 1959, Wiesbaden, W.Ger.) U.S. tennis player. He grew up in Douglaston, N.Y. An athletic serve-and-volley player, he won three consecutive U.S. Open singles titles (1979–81) and a fourth in 1984. He also won the Wimbledon singles in 1981, 1983, and 1984, as well as several doubles titles. Known for his temper tantrums and invective on court, he became the first player ejected from a grand-slam match in nearly 30 years.

McFadden, Daniel L. (b. July 29, 1937, Raleigh, N.C., U.S.) U.S. economist and winner of the 2000 NOBEL PRIZE in Economic Sciences, along with JAMES HECKMAN, for development of methods for analyzing individual or household behaviour. McFadden studied physics (B.S. 1957) and economics (Ph.D. 1962) at the University of Minnesota. He taught

© 2006 Encyclopædia Britannica, Inc.

economics at the University of California, Berkeley (1963–79 and from 1990), Yale University (1977–78), and the Massachusetts Institute of Technology (1978–91). In 1974 McFadden developed conditional logit analysis—a method for determining how people make choices that maximize the utility of their decisions. His work has helped predict usage rates for MASS TRANSIT, and his statistical methods have been applied to labour-force participation, health care, housing, and the environment.

McGill University Privately endowed but state-supported university in Montreal, Quebec, Canada. It was founded in 1821 through a gift left by the Scottish-born Canadian merchant James McGill (1744–1813). It is internationally known for its work in chemistry, medicine, and biology. In addition, it has faculties of agricultural and environmental sciences, arts, dentistry, education, engineering, law, management, music, religious studies, and science. The language of instruction is English, though students may write examinations in French.

McGillivray \mə-'gil-ə-ˌvrā**, Alexander** (b. c. 1759—d. Feb. 17, 1793, Pensacola, Fla.) Principal chief of the CREEK Indians in the years following the American Revolution. Of French and Creek descent, he was tutored by whites in Charleston, S.C., before being made a Creek chief. Distrustful of American land speculators, he signed a treaty (1784) with the Spanish in Florida putting the Creek under Spain's protection. After repeated U.S. entreaties, he agreed to American sovereignty over Creek lands as long as the Creek could remain there free of American encroachments.

McGovern, George S(tanley) (b. July 19, 1922, Avon, S.D., U.S.) U.S. politician. After earning a doctorate in history at Northwestern University, he taught at Dakota Wesleyan University in South Dakota. Active in Democratic politics from 1948, he was elected to the U.S. House of Representatives (1957–61) and the U.S. Senate (1963–81), where he held important hearings on hunger in the U.S. He was a leading critic of the U.S. role in the VIETNAM WAR. In 1972 he won the Democratic presidential nomination but lost the general election to Pres. RICHARD NIXON by a large margin. He was reelected to the Senate in 1974 but lost his seat in 1980. He returned to to teaching, lecturing, and writing and remained a prominent spokesman for liberal causes.

McGraw, John (Joseph) (b. April 7, 1873, Truxton, N.Y., U.S.—d. Feb. 25, 1934, New Rochelle, N.Y.) U.S. baseball player and manager. McGraw was a star infielder for the Baltimore National League team in the 1890s. His batting average of .391 in 1899 remains the highest ever for a third baseman. As manager of the New York Giants (1902–32), he led the team to 10 National League championships and 3 World Series titles (1905, 1921, 1922). For his shrewdness and veneer of harshness, he acquired the nickname "Little Napoleon."

John McGraw, 1910.
THE BETTMANN ARCHIVE

McGuffey, William Holmes (b. Sept. 23, 1800, Pennsylvania, U.S.—d. May 4, 1873, Charlottesville, Va.) U.S. educator remembered chiefly for his series of elementary readers. McGuffey taught in the Ohio frontier schools and then at Miami University (1826–36). His elementary school series, starting with *The Eclectic First Reader*, was published between 1836 and 1857. Collections of didactic tales, aphorisms, and excerpts from great books, the readers reflect McGuffey's view that the proper education of young people required their introduction to a wide variety of topics and practical matters. They became standard texts in nearly all states for the next 50 years and sold more than 125 million copies. In these years McGuffey also served as president of Cincinnati College (1836–39) and of Ohio University, Athens (1839–43). He was a founder of the common school system of Ohio. In 1845 he was elected to the chair of mental and moral philosophy at the UNIVERSITY OF VIRGINIA, Charlottesville, a position he held until his death.

McGwire, Mark (David) (b. Oct. 1, 1963, Pomona, Calif., U.S.) U.S. baseball player. McGwire played first base in college, then joined the Oakland Athletics in 1987 and quickly displayed the strength that would become his trademark. His 49 home runs hit during his first season in the majors set a record, and he was named the American League's Rookie of the Year. In 1989 his .343 postseason batting average guided Oakland to the World Series championship. Injuries plagued him in 1993–95. Traded to the St. Louis Cardinals in 1997, he hit 58 homers. In 1998 he topped ROGER MARIS's 37-year-old season record of 61 home runs. He and SAMMY SOSA thrilled fans with their home-run competition, and McGwire achieved the new record with 70; the record was broken in 2001 by BARRY BONDS (73). In 1999 McGwire hit 65 home runs. Following the 2001 season he retired from professional play.

McHugh, Jimmy *orig.* **James Francis McHugh** (b. July 10, 1894, Boston, Mass., U.S.—d. May 23, 1969, Beverly Hills, Calif.) U.S. song composer. McHugh became a TIN PAN ALLEY song plugger and began writing songs for Broadway and COTTON CLUB revues. His extensive work for Broadway and Hollywood included collaborations with FRANK LOESSER, JOHNNY MERCER, and especially DOROTHY FIELDS, with whom he wrote "I Can't Give You Anything but Love" and "On the Sunny Side of the Street."

McKay, Claude (b. Sept. 15, 1890, Jamaica, British West Indies—d. May 22, 1948, Chicago, Ill., U.S.) Jamaican-born U.S. poet and novelist. He published two volumes of Jamaican dialect verse before moving to the U.S. in 1912. With the publication of the poetry volumes *Spring in New Hampshire* (1920) and *Harlem Shadows* (1922), he emerged as the first and most militant voice of the HARLEM RENAISSANCE. An advocate of civil rights and racial solidarity, in his writings he searched among the common people for a distinctive black identity. His *Home to Harlem* (1928) was the most popular novel by an American black to that time. He lived abroad in various countries from 1922 to 1934.

McKellen, Sir Ian (Murray) (b. May 25, 1939, Burnley, Lancashire, Eng.) British actor. Educated at Cambridge University, he made his professional stage debut in 1961 and won acclaim as Richard II and Edward II at the Edinburgh Festival in 1969. He cofounded the Actors' Co. in 1971 but left in 1974 to join the Royal Shakespeare Co. A versatile and passionate actor, he has played in a repertory ranging from Elizabethan to contemporary. In 1981 he won a Tony Award for *Amadeus*. His films include *Plenty* (1985), *Scandal* (1988), *Richard III* (1995), and *Gods and Monsters* (1998), and in 2001 he played the wizard Gandalf in the film version of J.R.R. TOLKIEN's *Lord of the Rings*. He has been a vocal supporter of gay rights since 1988. He was knighted in 1991.

McKim, Charles Follen (b. Aug. 24, 1847, Chester County, Pa., U.S.—d. Sept. 14, 1909, St. James, Long Island, N.Y.) U.S. architect. He was educated at Harvard University and in Paris at the École des Beaux-Arts. In 1879 he joined William Rutherford Mead and STANFORD WHITE to found McKim, Mead & White, the most successful U.S. architectural firm of its time. Until 1887 the firm excelled at SHINGLE STYLE residences. In later years it championed the formal Renaissance tradition and its Classical antecedents, helping to inspire a Neoclassical revival. Among the widely admired examples of McKim's formal planning are the Boston Public Library (1887), the Columbia University Library (1893), the building program of the World's Columbian Exposition in Chicago (1893, with DANIEL H. BURNHAM and RICHARD MORRIS HUNT), and in New York City the Morgan Library (1903) and the magnificent Pennsylvania Railway Station (1904–10; demolished 1963).

McKinley, Mount *Athabascan* **Denali** \də-'nä-lē\ Highest mountain in North America. Located near the centre of the Alaska Range in south-central Alaska, U.S., and in DENALI NATIONAL PARK, it rises to 20,320 ft (6,194 m). The northern peak was first scaled in 1910, and in 1913 Hudson Stuck and Harry Karstens ascended the southern peak, the true summit. It was named Densmores Peak in 1889 after a prospector but was renamed in 1896 in honour of Pres. WILLIAM MCKINLEY.

McKinley, William (b. Jan. 29, 1843, Niles, Ohio, U.S.—d. Sept. 14, 1901, Buffalo, N.Y.) 25th president of the U.S. (1897–1901). He served in the AMERICAN CIVIL WAR as an aide to Col. RUTHERFORD B. HAYES, who later encouraged his political career. He served in the U.S. House of Representatives (1877–91), where he favoured protective tariffs; he was the principal sponsor of the McKinley Tariff of 1890. With the support of MARK HANNA, he won two terms as governor of Ohio (1892–96). As the Republican presidential candidate in 1896 he decisively defeated Demo-

© 2006 Encyclopædia Britannica, Inc.

crat William Jennings Bryan. In 1897 he signed the Dingley Tariff, the highest protective tariff in American history to that time. In 1898 the USS *Maine* exploded and sank in the harbour of Havana, Cuba, then a colony of Spain; believing the Spanish responsible, McKinley demanded independence for the island, which Spain refused. The U.S. easily won the brief Spanish-American War. McKinley supported ratification of the peace treaty that ceded the Spanish possessions of Puerto Rico, Guam, and the Philippines to the U.S., claiming that the U.S. had an obligation to assume responsibility for "the welfare of an alien people." Following his inauguration in 1901 he began a speaking tour of the western states, during which he urged control of the trusts and commercial reciprocity to boost foreign trade. On Sept. 6, 1901, he was fatally shot by an anarchist, Leon Czolgosz. He was succeeded by Theodore Roosevelt.

William McKinley
LIBRARY OF CONGRESS, WASHINGTON, D.C.

McLuhan \mək-'lü-ən**, (Herbert) Marshall** (b. July 21, 1911, Edmonton, Alta., Can.—d. Dec. 31, 1980, Toronto, Ont.) Canadian communications theorist and educator. He taught from 1946 at the University of Toronto and became popular for his aphorism "the medium is the message," which summarized his view of the potent influence of "hot media"—television, computers, and other electronic information disseminators—in shaping styles of thinking and thought, whether in sociology, art, science, or religion. He regarded the printed book, a "cool medium," as fated to disappear. His highly influential works include *The Gutenberg Galaxy* (1962), *Understanding Media* (1964), and *The Medium Is the Massage* (with Q. Fiore, 1967).

McMahon Line Frontier between Tibet and Assam in British India, negotiated between Tibet and Britain at the end of the Shimla (Simla) Conference in 1913–14. It was named for the chief British negotiator, Sir Henry McMahon. China refused to recognize the boundary on the grounds that Tibet, being subordinate to China, could not make treaties. A conflict in 1962 between India and China failed to resolve the border dispute; China still considers the boundary illegal.

McMaster University Privately endowed university in Hamilton, Ontario, Canada. It was founded in 1887 through a gift from Sen. William McMaster (1811–87). It offers undergraduate and graduate degree programs in the sciences, humanities, social sciences, business, engineering, and other fields. Campus resources include a nuclear reactor, education research facilities, and the Bertrand Russell Archives.

McMurdo Sound Bay, western extension of the Ross Sea, Antarctica. Lying at the edge of the Ross Ice Shelf, the channel is 92 mi (148 km) long and up to 46 mi (74 km) wide; it has been a major centre for Antarctic explorations. First discovered in 1841 by Scottish explorer James C. Ross, it served as one of the main access routes to the Antarctic continent. Ross Island, on the shores of the sound, was the site of headquarters for British explorers Robert Falcon Scott and Ernest Shackleton.

McMurtry, Larry (Jeff) (b. June 3, 1936, Wichita Falls, Texas, U.S.) U.S. novelist. The son of a rancher, he is noted for novels set in the American West, often in Texas. *The Last Picture Show* (1966) examines the isolation of small-town life. *Lonesome Dove* (1985, Pulitzer Prize) is part of an epic frontier series that also includes *Streets of Laredo* (1993), *Dead Man's Walk* (1995), and *Comanche Moon* (1997). His other novels include *Horseman, Pass By* (1961), *Terms of Endearment* (1975), and *Buffalo Girls* (1990). Many of his novels were adapted for film or television.

McNally, Terrence (b. Nov. 3, 1939, St. Petersburg, Fla., U.S.) U.S. dramatist. He worked as a newspaper reporter, as tutor for the children of John Steinbeck, and as stage manager at the Actors Studio. His plays, which often explore relationships and are characterized by dark humour, include *Bad Habits* (1971), *Master Class* (1995), *Love! Valour! Compassion!* (1995, Tony Award; film, 1997), and the controversial *Corpus Christi* (1998, Tony Award). He wrote the book for the musical *Kiss of the Spider Woman* (1993).

McNamara \'mak-nə-mar-ə**, Robert S(trange)** (b. June 9, 1916, San Francisco, Calif., U.S.) U.S. secretary of defense (1961–68). He graduated from the University of California at Berkeley (1937), earned a graduate degree at the Harvard Business School (1939), and later joined the Harvard faculty. He developed logistical and statistical systems for the military during World War II. After the war, he was one of the "Whiz Kids" hired to revitalize the Ford Motor Company, and in 1960 he became the first president of the company who was not a member of the Ford family. In 1961 he was appointed secretary of defense by John F. Kennedy. Though initially a supporter of U.S. involvement in the Vietnam War, by 1967 he advocated peace negotiations; his opposition to the bombing of North Vietnam caused him to lose influence with Pres. Lyndon B. Johnson. He resigned in 1968 to become president of the World Bank (1968–81).

McNeill, Don (b. Dec. 23, 1907, Galena, Ill., U.S.—d. May 7, 1996, Evanston, Ill.) U.S. radio entertainer. He entered radio in the 1920s as part of a singing team. In 1933 he took over as host of an NBC morning program in Chicago and created *The Breakfast Club*. Usually unscripted, it relied on listeners' comments, poems, and folksy humour. It was the longest-running show in radio network history when it ended in 1968.

McPhee, John (Angus) (b. March 8, 1931, Princeton, N.J., U.S.) U.S. journalist and nonfiction writer. He attended Princeton University. After working as an associate editor at *Time* (1957–64), he became a staff writer at *The New Yorker* in 1965. His nonfiction covers a wide variety of topics. His first book was on Bill Bradley; places he has written about include New Jersey, Alaska, the American West (several books), and Switzerland; other topics include the citrus industry, aeronautical engineering, the birch-bark canoe, and nuclear terrorism. He has taught journalism at Princeton since 1975. His later works include *Annals of the Former World* (1998, Pulitzer Prize).

McPherson, Aimee Semple *orig.* **Aimee Elizabeth Kennedy** (b. Oct. 9, 1890, near Ingersoll, Ont., Can.—d. Sept. 27, 1944, Oakland, Calif., U.S.) Canadian-born U.S. Pentecostal evangelist. Born on a farm, she began preaching at age 17, and in 1908 she went as a missionary to China with her husband, Robert Semple. After his death she came to the U.S., where her second marriage, to Harold McPherson, ended in 1918 when she became an itinerant evangelist and healer. She settled in Los Angeles and founded the International Church of the Foursquare Gospel. For nearly 20 years she preached to large audiences at her Angelus Temple; she also built a radio station, wrote books and pamphlets, and established about 200 missions. In 1926 she disappeared mysteriously for five weeks; on her reappearance her tale of kidnapping was greeted with skepticism. A third marriage ended in divorce, and she faced numerous trials for financial irregularities. She died from an accidental overdose of sleeping pills.

McQueen, (Terence) Steve(n) (b. March 24, 1930, Beech Grove, Ind., U.S.—d. Nov. 7, 1980, Juárez, Mex.) U.S. film actor. He served time in a reform school and a stint in the U.S. Marines before studying acting in New York City. He won notice on Broadway in *A Hatful of Rain* (1955) and made his screen debut in *Somebody up There Likes Me* (1956), then starred in the television series *Wanted: Dead or Alive* (1958–61). Cool and stoical, his loner heroes spoke through actions and rarely with words in films such as *The Great Escape* (1963), *The Sand Pebbles* (1966), *Bullitt* (1968), *The Thomas Crown Affair* (1968), *Papillon* (1973), and *The Towering Inferno* (1974).

McRae, Carmen (b. April 8, 1920, New York, N.Y., U.S.—d. Nov. 10, 1994, Beverly Hills, Calif.) U.S. singer and pianist. McRae was influenced by Billie Holiday and Sarah Vaughan. She began her career in 1943 singing at Minton's Playhouse in Harlem, absorbing the innovations of the first bebop musicians. Working as a soloist from the mid-1950s, McRae became one of the most accomplished scat singers and ballad interpreters in jazz.

mead Alcoholic beverage fermented from honey and water. It can be light or rich, sweet or dry, or even sparkling. Alcoholic drinks made from honey were common in ancient Scandinavia, Gaul, Teutonic Europe, and Greece; they were particularly common in northern Europe, where grapevines do not flourish. By the 14th century, ale and sweetened wine were surpassing mead in popularity. Today mead is made as a sweet or dry wine of low alcoholic strength. Spiced mead is called metheglin.

Mead, George Herbert (b. Feb. 27, 1863, South Hadley, Mass., U.S.—d. April 26, 1931, Chicago, Ill.) U.S. philosopher, sociologist, and social psychologist prominent in the development of PRAGMATISM. He studied at Oberlin College, graduated from Harvard University (B.A., 1888), and went on to study philosophy and psychology at the Universities of Leipzig and Berlin (1888–91). Mead then taught philosophy and psychology at the University of Michigan (1891–94) with JOHN DEWEY and CHARLES HORTON COOLEY. In 1894 he joined Dewey in moving to the University of Chicago and taught there the rest of his life. Mead's focus was the relationship between the self and society, particularly the emergence of the human self in the process of social interaction. His works include *The Philosophy of the Present* (1932) and *Mind, Self, and Society* (1934). See also INTERACTIONISM.

Mead, Lake Reservoir of the HOOVER DAM, on the Arizona-Nevada border in the U.S. One of the largest man-made lakes in the world, it was formed by the damming of the COLORADO RIVER. Lake Mead is 115 mi (185 km) long and 1–10 mi (1.6–16 km) wide; it has a capacity of over 31 million acre ft (38 billion cubic m), with a surface area of 229 sq mi (593 sq km). It was named after Elwood Mead, commissioner of reclamation. Lake Mead National Recreation Area (established 1936) has an area of 2,338 sq mi (6,055 sq km) and extends 240 mi (386 km) along the river.

Mead, Margaret (b. Dec. 16, 1901, Philadelphia, Pa., U.S.—d. Nov. 15, 1978, New York, N.Y.) U.S. anthropologist. She studied under FRANZ BOAS and RUTH BENEDICT at Columbia University and did fieldwork in Samoa before completing her Ph.D. (1929). The first and most famous of her 23 books, *Coming of Age in Samoa* (1928), presents evidence in support of cultural determinism with respect to the formation of personality or TEMPERAMENT. Her other books include *Sex and Temperament in Three Primitive Societies* (1935), *Male and Female* (1949), and *Culture and Commitment* (1970). Her theories caused later 20th-century anthropologists to question both the accuracy of her observations and the soundness of her conclusions. In her later years she became a prominent voice on such wide-ranging issues as women's rights and nuclear proliferation, and her great fame owed as much to the force of her personality and her outspokenness as to the quality of her scientific work. She served in curatorial positions at the American Museum of Natural History for over 50 years.

Meade, George G(ordon) (b. Dec. 31, 1815, Cádiz, Spain—d. Nov. 6, 1872, Philadelphia, Pa., U.S.) U.S. general in the AMERICAN CIVIL WAR. He was the son of a U.S. naval agent in Spain. After graduating from West Point in 1835, he worked as a surveyor. He reentered the army in 1842 and in 1861 was commissioned brigadier general in the Pennsylvania volunteers. He fought at Bull Run, Antietam, and Chancellorsville. Three days before the Battle of GETTYSBURG, he replaced JOSEPH HOOKER as commander of the Army of the Potomac. At Gettysburg he repulsed the Confederate attack but was criticized for failing to pursue ROBERT E. LEE's forces. From 1864 he was subordinate to Gen. ULYSSES S. GRANT, whom he served loyally. After the war he commanded several military departments.

meadowlark Any sharp-billed, plump songbird of the genus *Sturnella* (family Icteridae), 8–11 in. (20–28 cm) long. The two North American species are streaked brown above and have a yellow breast crossed by a black V; the short tail has distinctive white outer feathers. The eastern, or common, meadowlark (*S. magna*), from eastern Canada to Brazil, has a simple four-note whistle; the western meadowlark (*S. neglecta*), from western Canada to Mexico, has an intricate fluting song. Meadowlarks eat insects in summer and seeds in fall and winter. Their nests are grass domes hidden in fields.

mealybug Any insect of the family Pseudococcidae (order Homoptera). Not a true BUG, the mealybug is covered by a white sticky powder resembling cornmeal. The females, about 0.4 in. (1 cm) long, and "crawlers" (the active young) cluster along the veins and undersides of leaves, especially of citrus trees and potted plants; the males are active two-winged fliers. Common species are the citrus mealybug (*Pseudococcus citri*) and the citrophilus mealybug (*P. gahani*).

mean life In RADIOACTIVITY, the average lifetime of all the nuclei of a particular unstable atomic species. This time interval is the sum of the lifetimes of all the individual unstable nuclei in a sample, divided by the total number of unstable nuclei present. It is the reciprocal of the decay constant. For a given isotope, the mean life is always 1.443 times its HALF-LIFE. For example, lead-209 decays to bismuth-209 with a half-life of 3.25 hours and a mean life of 4.69 hours.

mean, median, and mode In mathematics, the three principal ways of designating the average value of a list of numbers. The arithmetic mean is found by adding the numbers and dividing the sum by the number of numbers in the list. This is what is most often meant by an average. The median is the middle value in a list ordered from smallest to largest. The mode is the most frequently occurring value on the list. There are other types of means. A geometric mean is found by multiplying all values in a list and then taking the root of that product equal to the number of values (e.g., the square root if there are two numbers). The geometric mean is typically used in cases of exponential growth or decline (see EXPONENTIAL FUNCTION). In STATISTICS, the mean of a RANDOM VARIABLE is its expected value—i. e., the theoretical long-run arithmetic mean of the outcomes of repeated trials, such as a large number of tosses of a die.

mean-value theorems In mathematics, two theorems, one associated with DIFFERENTIAL CALCULUS and one with INTEGRAL CALCULUS. The first proposes that any differentiable FUNCTION defined on an interval has a mean value, at which a TANGENT LINE is parallel to the line connecting the endpoints of the function's graph on that interval. For example, if a car covers a mile from a dead stop in one minute, it must have been traveling exactly a mile a minute at some point along that mile. In integral calculus, the mean value of a function on an interval is, in essence, the arithmetic mean (see MEAN, MEDIAN AND MODE) of its values over the interval. Because the number of values is infinite, a true arithmetic mean is not possible. The theorem shows how to find the mean value using a definite INTEGRAL. See also ROLLE'S THEOREM.

meander \mē-'an-dər\ Extreme U-bend in a stream, usually occurring in a series, that is caused by flow characteristics of the water. Meanders form in stream-deposited sediments and may stack up upstream of an obstruction, resulting in a gooseneck or extremely bowed meander. A cutoff may form through the gooseneck and allow the former meander bend to be sealed off as an OXBOW LAKE. Silt deposits may eventually fill the lake to form a MARSH or a meander scar.

Meanders, Owens River, near Mammoth Lakes, Calif.

meaning In philosophy and linguistics, the sense of a linguistic expression, sometimes understood in contrast to its referent. For example, the expressions "the morning star" and "the evening star" have different meanings, though their referent (Venus) is the same. Some expressions have meanings but no referents ("the present king of France") or referents but no meanings ("that"). The literal or conventional meaning of an expression may differ from what a speaker of that expression means by uttering it on a particular occasion; this is the case with similes, statements uttered ironically, and statements that convey various "conversational implicatures," as in the following examples: "She entered the house and shot him" implicates that she shot him in the house after she entered it, though this is not part of the sentence's literal meaning; "John has three sons" implicates that John has no more than three sons, though again the sentence does not literally say this. Other non-literal aspects of meaning include the potential for carrying out various "speech acts" (see SPEECH ACT THEORY); e.g., uttered in the appropriate circumstances, the sentence "I christen thee the *Joseph Stalin*," constitutes the act of naming a ship, and the sentence "I am cold" constitutes a request to close the window. See also PRAGMATICS; SEMANTICS.

Meany, George (b. Aug. 16, 1894, New York, N.Y., U.S.—d. Jan. 10, 1980, Washington, D.C.) U.S. labour leader. A plumber by trade, he joined the United Association of Plumbers and Steam Fitters in 1915 and rose through the ranks as a union official. He was elected secretary-treasurer of the American Federation of Labor (AFL) in 1939 and became its president in 1952. He led the merger of the AFL and the Congress of Industrial Organizations (CIO) in 1955, helping reconcile the two federations despite their competitiveness and long-standing differences. Conservative and anticommunist, as president of the AFL-CIO (1955–79) he steered the

© 2006 Encyclopædia Britannica, Inc.

U.S. labour movement away from radicalism. Feisty and often dictatorial, he expelled the Teamsters union from the AFL-CIO in 1957, and he lost the United Automobile Workers in 1967 after disputes with Walter Reuther. Meany wielded considerable influence in the Democratic Party through the 1970s.

measles *or* **rubeola** \ˌrü-bē-ˈō-lə, rü-ˈbē-ˈə-lə\ Highly contagious viral childhood disease. It initially resembles a severe cold with red eyes and fever; a blotchy rash and higher fever later develop. After recovery, patients have lifelong immunity. Adult patients tend to have more severe cases. Antibiotics now prevent death from secondary infections. Measles itself, for which there is no drug, requires only bed rest, eye protection, and steam for bronchial irritation. A vaccine developed in the 1960s proved not to give permanent immunity and is too heat-sensitive for use in tropical areas. The worldwide incidence of measles continues to rise. Research is currently directed toward development of a more stable vaccine. See also rubella.

measure theory In mathematics, a generalization of the concepts of length and area (see length, area, and volume) to arbitrary sets of points not composed of line segments or rectangles. A measure is any rule for associating a number with a set. The result must be nonnegative and also additive, meaning that the measure of two nonoverlapping sets equals the sum of their individual measures. This is simple enough for sets consisting of line segments or rectangles, but the measure of sets such as curved regions or intervals with missing points requires more abstract methods, including limits and upper and lower bounds.

measurement Association of numbers with physical quantities and natural phenomena by comparing an unknown quantity with a known quantity of the same kind. Weights and measures are standard quantities with which such comparisons are made. The earliest ones measured mass (weight), volume (liquid or dry measure), length, and area using units mostly based on dimensions of the human body. The cubit, representing the distance from elbow to fingertips, was the most widespread unit of measure in the ancient world. As such units were standardized, more were added, including units of temperature, luminosity, pressure, and electric current. Measurements made by the senses instead of by measurement devices are called estimates (see estimation).

meat Flesh and other edible parts of animals, particularly mammals, used for food. Not only the muscles and fat but also organs such as the liver, kidney, and heart are consumed as meat. Meat is valued as a complete-protein food, containing all the amino acids necessary for the human body. It is digested slowly, largely because of the presence of fats. Worldwide, pork is the most widely consumed meat; beef is second. Mutton and lamb, goat, venison, and rabbit are other common meats. The U.S. produces and consumes about a third of the world's meat, while much of the world's population eats little if any meat, though it is generally prized.

Mecca *Arabic* **Al-Makkah** \ˌäl-ˈmä-kə\ City (pop., 1992: 965,697), western Saudi Arabia. The holiest city of Islam, it was the birthplace of the Prophet Muhammad. It was his home until AD 622, when he was forced to flee to Medina (see also Hijrah); he returned and captured the city in 630. It came under the control of the Egyptian Mamlūk dynasty in 1269 and of the Ottoman Empire in 1517. King Ibn Saʿūd occupied it in 1925, and it became part of the Kingdom of Saudi Arabia. It is a religious centre to which Muslims must attempt a pilgrimage (see hajj) once during a lifetime; only Muslims may enter Mecca. Services related to pilgrimages are the main economic activity. It is the site of the Ḥaram Mosque, which contains the Kaʿbah.

mechanical advantage Force-amplifying effectiveness of a simple machine (lever, wedge, wheel and axle, pulley, or screw). The theoretical mechanical advantage of a system is the ratio of the force that performs the useful work to the force applied, assuming there is no friction in the system. In practice, the actual mechanical advantage will be less than the theoretical value by an amount determined by the amount of friction.

mechanical efficiency See efficiency

mechanical energy Sum of a system's kinetic energy (KE) and potential energy (PE). Mechanical energy is constant in a system that experiences no dissipative forces such as friction or air resistance. For example, a swinging pendulum that experiences only gravitation has greatest KE and least PE at the lowest point on the path of its swing, where its speed is greatest and its height least. It has least KE and greatest PE at the extremities of its swing, where its speed is zero and its height is greatest. As it moves, energy is continuously passing back and forth between the two forms. Neglecting friction and air resistance, the pendulum's mechanical energy is constant.

mechanical engineering Branch of engineering concerned with the design, manufacture, installation, and operation of engines, machines, and manufacturing processes. Mechanical engineering involves application of the principles of dynamics, control, thermodynamics and heat transfer, fluid mechanics, strength of materials, materials science, electronics, and mathematics. It is concerned with machine tools, motor vehicles, textile machinery, packaging machines, printing machinery, metalworking machines, welding, air conditioning, refrigerators, agricultural machinery, and many other machines and processes essential to an industrial economy.

mechanical system Any building service using machines. They include plumbing, elevators, escalators, and heating and air-conditioning systems. The introduction of mechanization in buildings in the early 20th century brought about major adjustments; the new equipment demanded floor space, and the design team began to include electrical and HVAC (heating, ventilating, and air-conditioning) engineers. Heating and cooling changed dramatically. Modern buildings, with their large heat gains, turned central heating into little more than a supplement. Heat removal is a much more serious burden, especially in warm weather. The roofs of high-rises are occupied by cooling towers and mechanical penthouses; entire floors are often dedicated to the containment of blowers, compressors, water chillers, boilers, pumps, and generators.

mechanics Science of the action of forces on material bodies. It forms a central part of all physical science and engineering. Beginning with Newton's laws of motion in the 17th century, the theory has since been modified and expanded by the theories of quantum mechanics and relativity. Newton's theory of mechanics, known as classical mechanics, accurately represented the effects of forces under all conditions known in his time. It can be divided into statics, the study of equilibrium, and dynamics, the study of motion caused by forces. Though classical mechanics fails on the scale of atoms and molecules, it remains the framework for much of modern science and technology.

mechanism In mechanical construction, the means of transmitting and modifying motion in a machine or an assembly of mechanical parts. The chief characteristic of the mechanism of a machine is that all members have constrained motion; that is, the parts can move only in certain ways in relation to each other. Despite its complexity, the mechanism of a machine can always be analyzed as a group of simple basic mechanisms, each of which contains members that transmit motion from one moving link to another. In general, motion is transmitted in one of three ways: by a wrapping connector such as a chain drive or belt drive, by direct contact as in a cam or gear, or by a pin-connected linkage.

mechanism Form of materialism that holds that all natural processes can be explained in terms of laws of matter in motion. Upholders of mechanism were mainly concerned with eliminating from science all occult entities, such as substantial form, that could not be empirically observed or mathematically treated. It thus opposed the use of teleological assumptions as explanatory principles in natural science (see teleology). See also atomism.

mechanization Use of machines, either wholly or in part, to replace human or animal labour. Unlike automation, which may not depend at all on a human operator, mechanization requires human participation to provide information or instruction. Mechanization began with human-operated machines to replace the handwork of craftspeople; today computers are frequently used to control mechanized processes.

mechanoreception \ˌme-kə-nō-ri-ˈsep-shən\ Ability to detect and respond to mechanical stimuli in one's environment. A slight deformation of a mechanoreceptive neuron causes an electric charge at its surface, activating a response. Mechanoreceptors in "pain spots" (pressure points) in the skin (probably clusters of nerve endings) vary in sensitivity. They respond to a wide range of stimuli, sometimes with a reflex (e.g., a pricked finger pulled away before the brain registers pain). The structures that respond to sound (see ear), sense orientation with respect to gravity (see inner ear), or detect the position and movement of limbs (see proprioception) are mechanoreceptors. Some animals have mechanoreceptors that detect water motion or air currents. See also sense.

Mecherino See Domenico Beccafumi

Meckel, Johann Friedrich (b. Oct. 17, 1781, Halle, Prussia—d. Oct. 31, 1833, Halle) German anatomist. He was the first to describe the embryonic cartilage (Meckel cartilage) that becomes part of the lower jaw in fishes, amphibians, and birds and also described a congenital pouch (Meckel diverticulum) of the small intestine. He wrote a treatise on pathological anatomy and an atlas of human abnormalities.

Med fly See MEDITERRANEAN FRUIT FLY

medal Piece of metal struck with a design to commemorate a person, place, or event. Medals can be of various sizes and shapes, ranging from large medallions to small plaques, or plaquettes. Most medals are made of gold, silver, bronze, or lead, the precious metals being used for the finer productions. The art of the medalist began in the mid-15th century with bronze medals of Italian Renaissance rulers and humanists. Some of the most beautiful were made by BENVENUTO CELLINI.

Henry IV and Marie de Medicis portrayed on the obverse side of a bronze-gilt medal by Guillaume Dupré, 1603; in the National Gallery of Art, Washington, D.C.

Medan \mā-'dän\ City (pop., 1995 est.: 1,843,919), northeastern Sumatra. After tobacco plantations were introduced in 1873, Medan became the commercial centre of an agricultural region where cash crops, including tobacco and rubber, were raised for export. It was made a city by the Dutch in 1886. It was occupied by the Japanese during World War II. The sultan of Deli's palace dates to the 19th century. Medan is the seat of the University of North Sumatra and the Islamic University of North Sumatra.

Medawar \'me-də-wər**, Sir Peter B(rian)** (b. Feb. 28, 1915, Rio de Janeiro, Braz.—d. Oct. 2, 1987, London, Eng.) Brazilian-born British zoologist. Educated at Oxford, he began transplant research in 1949. His finding (1953) that adult animals injected with foreign cells early in life accept skin grafts from the original donor or its twin lent support to MACFARLANE BURNET's hypothesis that cells learn, during and just after birth, to distinguish "own" from "foreign." He found that nonidentical cattle twins accept skin grafts from each other, proving that antigens "leak" between the embryos' yolk sacs, and showed with mice that each cell contains genetic antigens important to immunity. His work deflected immunology from dealing with the fully developed immunity mechanism to attempting to alter the mechanism itself (e.g., suppression of transplant rejection). He and Burnet shared a 1960 Nobel Prize.

Medea \mə-'dē-ə\ In GREEK MYTHOLOGY, the daughter of King Aeetes of Colchis. After helping JASON, leader of the ARGONAUTS, to obtain the Golden Fleece from her father, the two were married and she returned with him to Iolcos, where she killed the king who had deprived Jason of his inheritance. Forced into exile, the couple settled in Corinth. In EURIPIDES' tragedy *Medea*, Jason later deserts her for the daughter of King Creon, and Medea takes revenge by killing Creon, his daughter, and her own two children by Jason before fleeing to Athens.

Médecins Sans Frontières See DOCTORS WITHOUT BORDERS

Medellín \,mā-t͟hā-'yēn\ City (pop., 2003: 1,955,753), northwestern Colombia. It is one of the country's largest cities and is heavily industrialized. Founded in 1675 as a mining town, it grew rapidly after the completion of the PANAMA CANAL and the arrival of the railroad in 1914. It is now noted for its textile mills, clothing factories, and steel mills. It is one of Colombia's largest trading centres for coffee. It also became a centre for the illegal international distribution of narcotics (mainly cocaine) in the late 20th century.

Media \'mē-dē-ə\ Ancient country, Middle East. It was situated in present-day northwestern Iran and was home to the Medes, an Iranian people. In 625 BC Cyaxares united the area's tribes into a kingdom. In 614 BC he captured ASHUR and later defeated the Assyrian empire and seized territory in Iran, northern Assyria, and Armenia. In 550 BC it became part of the new Persian ACHAEMENIAN DYNASTY under CYRUS II. ALEXANDER THE GREAT occupied it in 330 BC. In the partition of his empire, southern Media was given to the Macedonians and then to the SELEUCIDS; northern Media became the kingdom of Atropatene, which passed to Parthia, Armenia, and Rome. In 226 BC the whole of Media passed to the SĀSĀNIANS, another Persian dynasty.

median See MEAN, MEDIAN, AND MODE

mediation In law, a nonbinding intervention between parties to promote resolution of a grievance, reconciliation, settlement, or compromise. It is used especially in labour disputes. In many industrialized countries, the government provides mediation services in order to protect the public interest. In the U.S., the National Mediation Board functions in this capacity. Mediation is also commonly used in international conflicts. See also ARBITRATION.

medical examiner See CORONER

medical imaging See DIAGNOSTIC IMAGING

medical jurisprudence *or* **legal medicine** Science of applying medical facts to legal problems. Routine tasks include filling out birth and death certificates, deciding insurance eligibility, and reporting infectious disease. Perhaps more significant is medical testimony in court. When merely relating observations, doctors are ordinary witnesses; interpreting facts based on medical knowledge makes them expert witnesses, required to present their opinions without bias toward the side that called them. Conflicts between medicine and law can occur, usually over medical confidentiality. See also FORENSIC MEDICINE.

Medicare and Medicaid U.S. government programs in effect since 1966. Medicare covers most people 65 or older and those with long-term disabilities. Part A, a hospital insurance plan, also pays for home health visits and hospice care. Part B, a supplementary plan, pays for doctors' services, tests, and other services. Requirements and benefits are complex. Patients pay deductibles and copayments. Medicaid, a joint federal-state program, covers low-income people under age 65 and those who have exhausted Medicare benefits. It pays for hospital care, doctors' services, nursing-home care, home health services, family planning, and screening. Participating states must offer Medicaid to all persons on public assistance but decide their own eligibility guidelines. Many physicians refuse to treat Medicaid patients because of low reimbursement levels.

Medici, Alessandro de' (b. 1510/11, Florence—d. Jan. 5–6, 1537, Florence) First duke of Florence (1532–37). A member of the elder branch of the MEDICI FAMILY, he was probably the illegitimate son of Cardinal Giulio de' Medici (later Pope CLEMENT VII). The pope made Cardinal Passerini regent in Florence for Alessandro, but they were forced to flee when the unpopular regency provoked a revolt in 1527. An agreement between the pope and Emperor CHARLES V restored the Medici in Florence (1530), and Alessandro was declared a hereditary duke (1532). A tyrannical ruler, he sought to solidify his control by marrying Charles V's daughter, MARGARET OF AUSTRIA, in 1536. In an unsuccessful attempt to cause a revolt, a distant cousin, Lorenzino de' Medici (1514–48), murdered Alessandro in 1537.

Medici \'me-də-ˌchē**, Cosimo de'** *known as* **Cosimo the Elder** (b. Sept. 27, 1389, Florence—d. Aug. 1, 1464, Careggi, near Florence) Founder of one of the main lines of the MEDICI FAMILY. The son of the Florentine banker Giovanni di Bicci de'Medici (1360–1429), Cosimo represented the Medici bank and handled papal finances, becoming the wealthiest man of his time. Another leading family, the Albizzi, had him imprisoned (1433) and tried to assassinate him, but a year later the Medici regained power in Florence, and Cosimo triumphantly returned. He was the architect of the Peace of LODI (1454). An alliance with the SFORZAS of Milan provided him with troops to crush a coup d'état in 1458, after which he created a Senate composed of 100 loyal supporters (the Cento). He was a patron of scholarship and the arts, including such figures as DONATELLO and FILIPPO BRUNELLESCHI.

Medici, Cosimo I de' See COSIMO I

Medici, Giovanni de' *orig.* **Lodovico** (b. April 6, 1498, Forli, Papal States—d. Nov. 30, 1526, Mantua, marquisate of Mantua) Italian general. A member of the younger branch of the MEDICI FAMILY, he was the son of Giovanni de' Medici, who died soon after his birth, and Caterina Sforza, of the powerful SFORZA FAMILY of Milan. He took his father's name, trained as a soldier, and fought for a Medici cousin, Pope LEO X, in 1516–17 and 1521. In the service of the French (1522, 1525) he fought with the army of the League of Cognac in 1526 and was mortally wounded in the battle

L | M | N

© 2006 Encyclopædia Britannica, Inc.

near Mantua. He was known as Giovanni dalle Bande Nere ("of the Black Bands") for the black banners his army (or bands) carried in mourning for Leo X after 1521.

Medici, Giuliano de' (b. 1479—d. March 17, 1516, Florence) Ruler of Florence (1512–13). A member of the elder branch of the MEDICI FAMILY, he was the son of Lorenzo de' MEDICI. In 1494 his brother, Piero de' Medici, was ousted as ruler of Florence by the republicans, aided by the French. In 1512 Pope JULIUS II demanded that Florence enter his Holy League against France and allow the exiled Medici to return to Florence. Giuliano returned as ruler (Piero having died in 1503) and used harsh measures to suppress a conspiracy. In 1513, after another brother became Pope LEO X, he went to Rome as a cardinal. In 1515 he received the French title of duke de Nemours.

Medici, Lorenzo de' *known as* **Lorenzo the Magnificent** (b. Jan. 1, 1449, Florence—d. April 9, 1492, Careggi, near Florence) Florentine statesman and patron of arts and letters. The grandson of COSIMO DE'MEDICI, he was the most brilliant of the MEDICI FAMILY. He ruled FLORENCE with his younger brother, Giuliano, from 1469. Giuliano was assassinated in 1478 by the Pazzi, a leading Florentine banking family, which was in league with Pope SIXTUS IV (who did not support the assassination) and the king of Naples. Lorenzo's direct appeal to the king allowed him to regain power in Florence, and he was sole ruler of the city until his death. His 13-year-old son Giovanni was created a cardinal by Pope Innocent VIII and later became pope as LEO X. Lorenzo used the Medici riches to patronize many artists, including SANDRO BOTTICELLI, LEONARDO DA VINCI, and MICHELANGELO, and he remains perhaps the most famous patron of all time. His policies bankrupted the Medici bank, but the political power of the Medici remained strong in Florence and Tuscany.

Lorenzo de' Medici, terra-cotta bust by Andrea del Verrocchio, c. 1485; in the National Gallery of Art, Washington, D.C.

COURTESY OF THE NATIONAL GALLERY OF ART, WASHINGTON, D.C., SAMUEL H. KRESS COLLECTION, 1943

Medici family Italian bourgeois family that ruled Florence and later Tuscany from c. 1430 to 1737. The family, noted for its often tyrannical rulers and its beneficent patrons of the arts, also provided the church with four popes (LEO X, CLEMENT VII, Pius IV, and Leo XI) and married into the royal families of Europe, notably in France (CATHERINE de Médicis and MARIE de Médicis). The effective founder of the family was Giovanni di Bicci de' Medici (1360–1429), a merchant who amassed great wealth in trade and was the virtual ruler of Florence from 1421 to 1429. From his two sons derived the major branches of the family. The so-called elder branch began with Cosimo de' MEDICI. His grandson, Lorenzo de' MEDICI, or Lorenzo the Magnificent, greatly expanded the family's power. His son Giuliano de' MEDICI became duke de Nemours. Another son, Giovanni, became Pope Leo X. Lorenzo's great-granddaughter was Catherine de Médicis. Another of Cosimo's grandsons, Giulio de' Medici (1478–1534) became pope as Clement VII. His probable illegitimate son, Alessandro de' MEDICI, a tyrant, was the last of the direct male line of the elder branch. The so-called younger branch of the family began with Giovanni's younger son Lorenzo de' Medici. His son Giovanni married Caterina Sforza of the powerful SFORZA FAMILY, and their son Giovanni de' MEDICI became a noted general. His son COSIMO I became duke of Florence, and Cosimo's son Francesco de' Medici (1541–87) was the father of Marie de Médicis. Cosimo I's grandson Cosimo II (1590–1621) gave up the family practice of banking and commerce. Cosimo II's grandson Cosimo III (1642–1723) was a weak ruler, under whom Tuscany's power declined. His son Gian Gastone de' Medici (1671–1737), who died without issue, was the last grand duke of Tuscany.

medicine Set of scientific fields related to prevention, DIAGNOSIS, and treatment of disease and maintenance of health, practiced in doctors' offices, HEALTH MAINTENANCE ORGANIZATION facilities, hospitals, and clinics. In addition to FAMILY PRACTICE, INTERNAL MEDICINE, and specialties for specific body systems, it includes research, PUBLIC HEALTH, EPIDEMIOLOGY, and PHARMACOLOGY. Each country sets its own requirements for medical degrees (M.D.'s) and licenses. Medical boards and councils set standards and oversee medical education. Boards of certification have stringent requirements for physicians seeking to practice a specialty and stress continuing education. Advances in therapy (see THERAPEUTICS) and diagnosis have raised complex legal and moral issues in areas such as ABORTION, EUTHANASIA, and patients' rights. Recent changes include treating patients as partners in their own care and taking cultural factors into consideration.

Medicine Bow Mountains Northwest section of the Front Range, in the central ROCKY MOUNTAINS, U.S. Averaging a height of 10,000 ft (3,050 m), the mountains run southeast for about 100 mi (160 km) from Medicine Bow, Wyo., to Cameron Pass, Colo., just northwest of ROCKY MOUNTAIN NATIONAL PARK. The highest summit, Medicine Bow Peak, reaches 12,014 ft (3,662 m). The name refers to the practices of local Indians, who collected wood for bows in the area and held ceremonial medicine dances.

medicine man Priestly healer or SHAMAN, especially among the American Indians. The medicine man (often a woman in some societies) commonly carries a kit of objects such as feathers, stones, or hallucinogenic plants that have magical associations. The work of healing often involves the extraction—by sucking, pulling, or other means—of offending substances from the patient's body. Singing, recitation of myths, and other ceremonies often accompany the healing rite.

Médicis, Catherine de See CATHERINE DE MÉDICIS

Médicis, Marie de See MARIE DE MÉDICIS

Medill \mə-'dil**, Joseph** (b. April 6, 1823, near Saint John, N.B., Can.—d. March 16, 1899, San Antonio, Texas, U.S.) Canadian-born U.S. editor and publisher. Born into a family of shipbuilders, he studied law in the U.S. and was admitted to the bar in 1846. He turned to newspaper publishing in 1849. As managing editor of the *Chicago Tribune* (from 1855), he set its antislavery editorial policy. He helped found the Republican Party (1854) and worked for ABRAHAM LINCOLN's nomination. As mayor of Chicago (1871–74), he helped establish the Chicago Public Library (1872–74). In 1874 he resigned as mayor and acquired a controlling share in the *Chicago Tribune*. Four of his grandchildren, including ROBERT MCCORMICK, also ran newspapers.

Medina *Arabic* **Al-Madīnah** \ˌal-mä-'dē-nə\ *ancient* **Yathrib.** City (pop., 1992: 608,295), western Saudi Arabia, north of MECCA. It developed from an oasis settled by Jews c. AD 135. In 622 the Prophet MUHAMMAD fled from Mecca to Medina (see HIJRAH). It served as capital of the Islamic state until 661. Held by the Ottoman Empire (1517–1804), it then was seized by the WAHHĀBIYYAH. An Ottoman-Egyptian force retook it in 1812. Ottoman rule ceased during World War I (1914–18), and in 1925 it fell to the forces IBN SAʿŪD. A sacred city of ISLAM, it is second only to Mecca as a place of Muslim pilgrimage; among its many mosques is the Prophet's Mosque, containing the tomb of Muhammad.

medina worm See GUINEA WORM

meditation Private religious devotion or mental exercise, in which techniques of concentration and contemplation are used to reach a heightened level of spiritual awareness. The practice has existed in all religions since ancient times. In Hinduism it has been systematized in the school of YOGA. One aspect of Yoga, *dhyana* (Sanskrit: "concentrated meditation"), gave rise to a school of its own among the Buddhists, becoming the basis of ZEN. In many religions, meditation involves verbal or mental repetition of a single syllable, word, or text (e.g., a MANTRA). Visual images (e.g., a MANDALA) or mechanical devices such as PRAYER WHEELS or ROSARIES can be useful in focusing concentration. In the 20th century, movements such as TRANSCENDENTAL MEDITATION emerged to teach meditation techniques outside a religious context.

Mediterranean fruit fly *or* **Med fly** FRUIT FLY (*Ceratitis capitata*) proven to be particularly destructive to citrus crops, at great economic cost. The Med fly lays up to 500 eggs in citrus fruits (except lemons and sour limes), and the larvae tunnel into the fruit, making it unfit for human consumption. Because of this pest, quarantine laws regulating fruit importation have been enacted worldwide.

Mediterranean Sea Inland sea enclosed by Europe, Africa, and Asia. Its west-east extent is approximately 2,500 mi (4,000 km), while its average north-south extent is about 500 mi (800 km). The Mediterranean Sea occupies an area of about 970,000 sq mi (2,510,000 sq km). It has a maximum depth of about 16,000 ft (4,900 m). In the west the Strait of GIBRAL-

© 2006 Encyclopædia Britannica, Inc.

tar connects the Mediterranean with the Atlantic Ocean. In the northeast the Sea of Marmara, the Dardanelles, and the Bosporus link it with the Black Sea. The Suez Canal connects the Mediterranean with the Red Sea in the southeast. A submarine ridge between Sicily and Africa divides the sea into eastern and western parts, which are subdivided into the Adriatic, Aegean, Tyrrhenian, Ionian, and Ligurian seas. Its largest islands are Majorca, Corsica, Sardinia, Sicily, Crete, Cyprus, and Rhodes. The Rhône, Po, and Nile rivers form its only large deltas.

Medusa In Greek mythology, the most famous of the monsters known as Gorgons. Anyone who looked directly at Medusa turned to stone. She was the only Gorgon who was mortal. The hero Perseus, looking only at her reflection in a shield given to him by Athena, killed her by cutting off her head. Perseus later gave the severed head to Athena, who placed it in her shield; according to another account, he buried it in the marketplace of Argos.

medusa \mi-'dü-sə\ In zoology, one of the two principal cnidarian body forms; the typical form of the jellyfish. Its name derives from its tentacles, resembling the snakes borne by Medusa in place of hair. The medusoid body is bell- or umbrella-shaped. Hanging downward from the center is a stalklike structure, the manubrium, bearing the mouth at its tip. The mouth opens into the main body cavity, which connects with radial canals extending to the outer rim of the bell. A free-swimming form, the medusa moves by rhythmic muscular contractions of the bell, providing a slow propulsive action against the water. The other principal cnidarian body type is the polyp.

Medusa stage of a jellyfish
TOM MCHUGH—PHOTO RESEARCHERS

Meegeren \'mā-k̲ə-rə,\ *English* \'mā-gə-rən**, Han van** *orig.* **Henricus Antonius van Meegeren** (b. Oct. 10, 1889, Deventer, Neth.—d. Dec. 30, 1947, Amsterdam) Dutch art forger. He forged at least 14 "Old Masters" and sold them at enormous profit; critics had hailed his *Christ and the Disciples at Emmaus* as a Johannes Vermeer masterpiece. His activities came to light after World War II, when a commission was established to restore to their owners artworks collected by Nazi leaders. Discovering a work purportedly by Vermeer among those amassed by Hermann Göring, the commission traced it to Meegeren. Charged with collaboration, he confessed. He died of a heart attack before his one-year sentence began.

meerkat *or* **suricate** Colonial species (*Suricata suricatta*) of the mongoose family (Herpestidae). It is a burrowing carnivore found in southwestern Africa that differs from mongooses in having four (rather than five) toes on each foot. Meerkats are noted for their constant vigilance for predators. This sentinel behaviour involves one member of the group finding an elevated position, standing on its hind legs, and alerting the group of danger when it is seen. The meerkat grows to a total length of 17–24 in. (43–60 cm). Insects and other small animals constitute most of its diet, but bulbous roots are also eaten for the water they contain. It is diurnal and easily tamed as a pet. The yellow mongoose (*Cynictis penicillata*) is sometimes called the red meerkat.

meerschaum \'mir-shəm, 'mir-ˌshȯm\ Fibrous hydrated magnesium silicate that is opaque and white, gray, or cream in colour. Also called sepiolite, meerschaum (German: "sea foam") is easily fashioned, and has been used in jewelry and for tobacco pipes. It is soft when first extracted, but it hardens on drying. Meerschaum is an alteration product of serpentine. The most important commercial deposit is the plain of Eskişehir, Tur., where it is found as irregular nodules in alluvial deposits; it also occurs in France, Greece, the Czech Republic, the U.S., and elsewhere.

megalith Huge, often undressed stone used in various types of Neolithic and Early Bronze Age monuments. The most ancient form of megalithic construction is probably the dolmen, a type of burial chamber consisting of several upright supports and a flat roofing slab. Another form is the menhir, a simple upright stone usually placed with others to form a circle, as at Stonehenge and Avebury in England, or a straight alignment, as at Carnac in France. The meaning of megalithic monuments remains largely unknown, but all share certain architectural and technical features suggesting that their creators sought to impose a conspicuously human design on the landscape and imbue it with cultural symbols. See also rock art.

megalopolis \ˌme-gə-'lä-pə-lis\ A major conurbation. Generally the term describes any densely populated social and economic entity encompassing two or more cities and the increasingly urbanized space between them. It particularly came to describe the urbanized region of the northeastern U.S. that arose in the second half of the 20th century. Stretching between the metropolitan areas of Boston on the northeast to Washington, D.C., on the southwest, it included the metropolitan areas of New York City, Philadelphia, and Baltimore, Md. The name, meaning "great city," was coined by French geographer Jean Gottmann.

Megalopolis \ˌme-gä-'lȯ-pȯ-lēs\ Ancient city, central Peloponnese, Greece. Occupying both banks of the Helisson River, it was founded in 371–368 BC by Epaminondas of Thebes as the seat of the Arcadian League. Attacked several times by Sparta, it joined the Achaean League in 234 BC. It declined rapidly after being plundered by Cleomenes III of Sparta in 223 BC, and by the 2nd century AD it lay in ruins. The nearby modern town lies in a rich lignite-bearing region that fuels thermal power stations.

Megara \'me-gə-rə\ Port city (pop., 1991: urban agglom., 20,403), Greece. Situated on the Saronic Gulf and west of Athens, it served as the capital of ancient Megaris. A maritime power, by the 7th century BC it had established colonies in Sicily, Chalcedon, Byzantium, Bithynia, and Crimea. During the Peloponnesian War (431–404 BC) it was subjugated by Athens and forced into financial ruin. In the 4th century AD it recovered some prosperity, but in 1500 it was depopulated by the Venetians. It was the birthplace of Eucleides, founder of the Megarian school of philosophy.

Megarian school \me-'gar-ē-ən\ *or* **Megarics** School of philosophy founded in Greece in the early 4th century BC by Eucleides of Megara (died c. 380 BC). It is noted more for its criticism of Aristotle and its influence on Stoic logic (see Stoicism) than for its doctrines. Among Eucleides' successors was Eubulides of Miletus, who criticized Aristotle's doctrines of categories, movement, and potentiality. Other Megarians were Diodorus Cronus (fl. 4th century BC) and Stilpo (fl.c. 380–300 BC); Stilpo taught Zeno of Citium, and Menedemus (339?–c. 265 BC). The school died out at the beginning of the 3rd century BC.

megaron \'me-gə-ˌrän\ In ancient Greece and the Middle East, an architectural form consisting of a porch, vestibule, and large hall with a central hearth. The megaron was found in all Mycenaean palaces and also in houses. It probably originated in the Middle East, later attaining the uniquely Aegean aspect of the open porch supported by columns.

Meghalaya \ˌmā-gə-'lā-ə\ State (pop., 2001 prelim.: 2,306,069), northeastern India. Occupying an area of 8,660 sq mi (22,429 sq km), it is bordered by Bangladesh and Assam state. Its few urban centres include Shillong, its capital. The tribal hill people of Meghalaya trace their origin to pre-Aryan times in India. The area came under nominal British rule in the 19th century; it was included in Assam and was made a separate state in 1972. Although it has vast mineral resources, its economy centres on agriculture.

Meghna River \'māg-nə\ River, Bangladesh. It is formed by the Surma River. Flowing south, it is joined southeast of Dhaka by the Padma River, which is formed from the waters of the Ganges and Brahmaputra rivers. After a course of about 164 mi (264 km) it empties into the Bay of Bengal through four mouths. A river of depth and velocity, it is navigable all year but often dangerous. At spring tide the sea rushes upriver in a single 20-ft (6-m) wave.

Megiddo \mi-'gi-dō\ City, ancient Palestine. It occupied a strategic location at the crossing of military and trade routes; it was also famous as a battlefield and is thought to be the biblical Armageddon. The first town was built early in the 4th millennium BC. It was captured by the Egyptian king Thutmose III c. 1468 BC. It later passed to the Israelites, and King Solomon rebuilt it as a military centre. British Gen. Edmund Henry Hynman Allenby defeated Ottoman forces near the site in 1918.

Meher Baba \'mā-hər-'bä-bä\ *orig.* **Merwan Sheriar Irani** (b. Feb. 25, 1894, Poona, India—d. Jan. 31, 1969, Ahmednagar) Indian spiritual master. Born into a Zoroastrian family of Persian descent, he created

© 2006 Encyclopædia Britannica, Inc.

a system of spiritual beliefs according to which the goal of life was to realize the oneness of God, from whom the whole universe emanates. Convinced that his calling was to awaken the world to that realization through love, he worked zealously with the poor and the physically and mentally ill. Though he attracted a sizable following in India and abroad, he did not try to establish a religion. For the last 44 years of his life he maintained silence, communicating by means of gestures and an alphabet board. His tomb at Meherabad is a place of pilgrimage.

Mehmed \me-'met\ **II** *byname* **Mehmed the Conqueror** (b. March 30, 1432, Adrianople, Thrace, Ottoman Empire—d. May 3, 1481, near Constantinople) Ottoman sultan (1444–46, 1451–81). His father, Murad II, abdicated in his favour when Mehmed was 12 but reclaimed the throne two years later in the aftermath of a Christian Crusade. Mehmed regained the throne when his father died (1451) and began to plan the conquest of Constantinople (ISTANBUL), the feat for which he is most renowned. In 1453 he captured the city and undertook returning it to its previous level of grandeur. In the next 25 years he conquered large sections of the Balkans. Under his reign, criminal and civil laws were codified in one body of law; he collected a library of Greek and Latin works and had eight colleges built.

Mei Juecheng (b. May 19, 1681, Xuan Cheng, Anhui province, China—d. Nov. 20, 1763, China) Chinese court official, mathematician, and astronomer. He learned mathematics from his grandfather MEI WENDING. In 1713 he joined the Mengyangzhai (imperial bureau created to synthesize Western and Chinese scientific knowledge) as one of the chief editors of *Lüli yuanyuan* (c. 1723; "Source of Mathematical Harmonics and Astronomy"). Purely a work of Chinese authorship, the *Lüli yuanyuan* reapportioned credit to Chinese scholars for many discoveries that earlier Jesuit-Chinese compendiums had credited to Europeans. Studying Western algebra enabled Mei to decipher Chinese mathematical treatises from the Song (920–1279) and Yuan (1206–1368) dynasties whose methods had been lost; this led him to expound a theory of the Chinese origin of Western knowledge. While now acknowledged as grossly overstated, Mei's views helped to revive interest in traditional Chinese mathematics and remained highly influential for many decades.

Mei Wending (b. 1633, Xuangcheng, Anhui province, China—d. 1721, China) Chinese writer on astronomy and mathematics whose work represented an association of Chinese and Western knowledge. In his comparative study, *Lixue yiwen* (c. 1701; "Inquiry on Mathematical Astronomy"), Mei tried to situate the new European knowledge properly within the historical framework of Chinese knowledge. In *Jihe bubian* ("Complements of Geometry") he calculated the volumes and relative dimensions of regular and semi-regular polyhedrons by traditional Chinese methods. Mei helped rehabilitate traditional Chinese mathematics. The comprehensive collection of his works, *Lisuan quanshu*, was published in 1723.

Meidias \'mā-dē-əs\ **Painter** (fl. c. 420–400 BC, Greece) Greek vase painter known for his theatrical "florid" style. A large hydria (water vessel) with scenes from the rape of the daughters of Leucippus and of Heracles in the garden of the Hesperides, now in the British Museum, is representative of his work.

Meier \'mī-ər**, Richard (Alan)** (b. Oct. 12, 1934, Newark, N.J., U.S.) U.S. architect. Educated at Cornell University, Meier's early experience included work with the firm of Skidmore, Owings & Merrill and with MARCEL BREUER. Early in his career he executed a series of spectacular private residences. These houses typically feature refinements of and variations on classic Modernist principles—pure geometry, open space, and an emphasis on light—and they often display a crisp whiteness that contrasts sharply with the natural setting; the Douglas House, Harbor Springs, Mich. (1973), is a dramatically sited example. Building upon the success of his residences, beginning in the mid 1970s Meier began to receive large public commissions. These structures are characterized by geometric clarity and order, which is often punctuated by curving ramps and railings, and by a contrast between the light-filled, transparent surfaces of public spaces and the solid white surfaces of interior, private spaces. His Getty Center in Los Angeles (1984–97), with its terraced gardens, is a resplendent acropolis in travertine stone. Meier received the 1984 Pritzker Architecture Prize.

Meiji \'mā-jē\ **Constitution** Constitution of Japan from 1890 to 1947. After the MEIJI RESTORATION (1868), Japan's leaders sought to create a constitution that would define Japan as a capable, modern nation deserving of Western respect while preserving their own power. The resultant document called for a bicameral parliament (the DIET) with an elected lower house and a prime minister and cabinet appointed by the emperor. The emperor was granted supreme control of the army and navy. A privy council composed of the Meiji leaders (see GENRO), created prior to the constitution, advised the emperor and wielded actual power. Voting restrictions, which limited the electorate to about 5% of the adult male population, were loosened over the next 25 years, resulting in universal male suffrage. Political parties made the most of their limited power in the 1920s, but in the 1930s the military was able to exert control without violating the constitution. After World War II, a U.S.-approved constitution stating that "sovereign power resides with the people" replaced the Meiji Constitution. See also ITŌ HIROBUMI.

Meiji emperor *orig.* **Mutsuhito** (b. Nov. 3, 1852, Kyōto, Japan—d. July 30, 1912, Tokyo) Emperor of Japan during whose reign (1867–1912) the Tokugawa shogunate was overthrown, Japan was transformed into a world power, and the imperial throne came to the forefront of the political scene after centuries of being overshadowed by shogunal rule. He believed in the need to modernize Japan along Western lines. Under the Meiji emperor the domains (*han*) and old class system were abolished, a new school system was introduced, and the MEIJI CONSTITUTION was promulgated. Also during his reign Taiwan was annexed after the SINO-JAPANESE WAR (1894–95), Korea was annexed (1910), and Japan defeated Russia in the RUSSO-JAPANESE WAR (1904–05). See also TOKUGAWA PERIOD; MEIJI PERIOD; MEIJI RESTORATION.

Meiji period (1868–1912) Period in Japanese history beginning with the enthronment of the MEIJI EMPEROR and ending with his death. It was a time of rapid modernization and westernization. Feudal domains were abolished and replaced with prefectures; DAIMYO and SAMURAI were relieved of their special privileges. Not all samurai were happy with the changes, and there were numerous rebellions, notably that of SAIGŌ TAKAMORI. To secure a strong central government, a national army was formed and universal conscription was enacted. A new agricultural tax was instituted to finance the new government, and a decimal currency was introduced. Eager to encourage economic growth, the government aided the textile industry, established railways and shipping lines, and founded an ironworks. Education was also reformed, and compulsory coeducational elementary schools were introduced. By 1912 the goals of the reforming movement called the MEIJI RESTORATION had been largely accomplished: the unequal treaties with Western powers had been revised, the country was developing well economically, and its military power had won the respect of the West. See also CHARTER OATH; MEIJI CONSTITUTION.

Meiji Restoration Overthrow of Japan's Tokugawa shogunate (see TOKUGAWA PERIOD) and restoration of direct imperial rule (through the MEIJI EMPEROR) in 1868. In the 19th century the shogunate's policy of isolation was challenged by Russia, England, and the U.S., making Japanese feudal leaders aware of Japan's vulnerability to superior Western firepower. After the visit of Commodore MATTHEW PERRY, the country was forced to sign a series of unequal treaties, which, as in China, gave Western nations special privileges in Japan. In response, young SAMURAI from feudal domains historically hostile to the Tokugawa regime took up arms against the government. In January 1868 they announced the restoration of the emperor to power, and in May 1869 the last Tokugawa forces surrendered. The revolutionaries had the emperor issue the CHARTER OATH, which promised a break with the feudal class restrictions of the past and a search for knowledge that could transform Japan into a "rich country with a strong military." The restoration ushered in the MEIJI PERIOD, a time of rapid modernization and Westernization. See also CHŌSHŪ; II NAOSUKE; ŌKUBO TOSHIMICHI; SAIGŌ TAKAMORI; SATSUMA; TOSA.

Meillet \me-'ye**, Antoine** (b. Nov. 11, 1866, Moulins, France—d. Sept. 21, 1936, Châteaumeillant) French linguist. He argued that any attempt to account for linguistic change must recognize that language is a social phenomenon. His *Introduction to the Comparative Study of the Indo-European Languages* (1903) explained the relationships of the INDO-EUROPEAN LANGUAGES to each other and to their parent tongue. Meillet suggested that languages that develop farther from a centre of common origin are less disturbed by changes at the point of origin and more likely to retain archaic characteristics. He produced authoritative grammars of classical ARMENIAN and Old Iranian and made notable contributions to Slavic studies.

Meinhof \'mīn-ˌhȯf**, Carl** (b. July 23, 1857, Barzwitz, near Schlawe, Pomerania, Prussia—d. Feb. 10, 1944, Greifswald, Ger.) German scholar of African languages. A specialist in the BANTU LANGUAGES who also studied KHOISAN and other African language families, he was one of the first

© 2006 Encyclopædia Britannica, Inc.

to treat African languages in terms of PHONETICS and MORPHOLOGY. His books include *Outline of the Phonetics of the Bantu Languages* (1899) and *Principles of the Comparative Grammar of the Bantu Languages* (1906).

Meinong \'mī-nȯŋ**, Alexius, Ritter (knight) von Handschuchsheim** (b. July 17, 1853, Lemberg, Galicia, Austrian Empire—d. Nov. 27, 1920, Graz, Austria) Austrian philosopher and psychologist. He taught at the University of Graz from 1889 until his death. Like his teacher FRANZ BRENTANO, Meinong considered INTENTIONALITY, or object-directedness, to be the basic feature of mental states. He maintained that objects of thought have a kind of character or nature (*Sosein*; sometimes rendered "subsistence") that is distinct from being, or existence (*Sein*), which they may lack; thus the golden mountain or the round square "subsist" as objects of thought, though they do not exist in the world of sense experience. Meinong's view briefly influenced BERTRAND RUSSELL. His major writings include *On Possibility and Probability* (1915) and *On Emotional Presentation* (1917).

meiosis \mī-'ō-səs\ *or* **reduction division** Division of a gamete-producing cell in which the NUCLEUS splits twice, resulting in four sex cells (gametes, or eggs and sperm), each possessing half the number of CHROMOSOMES of the original cell. Meiosis is characteristic of organisms that reproduce sexually and have a diploid set of nuclear chromosomes (see PLOIDY). Before meiosis, chromosomes replicate and consist of joined sister strands (chromatids). Meiosis begins as homologous paternal and maternal chromosomes line up along the midline of the cell. The chromosomes exchange genetic material by the process of crossing-over (see LINKAGE GROUP), in which chromatid strands from homologous pairs entangle and exchange segments to produce chromatids containing genetic material from both parents. The pairs then separate and are pulled to opposite ends of the cell, which then pinches in half to form two daughter cells, each containing a haploid set (half the usual number) of double-stranded chromosomes. In the second round of meiotic division, the double-stranded chromosomes of each daughter cell are pulled apart, resulting in four haploid gametes. When two gametes unite during fertilization, each contributes its haploid set of chromosomes to the new individual, restoring the diploid number. See also MITOSIS.

Meïr \mā-'ir\ (fl. 2nd century AD) Rabbi and scholar of Palestine. He fled Palestine during the persecutions that followed the BAR KOKHBA revolt in AD 132–35 but later returned and helped reestablish the SANHEDRIN. The patriarch of the Sanhedrin eventually threatened him with excommunication over a question of protocol, and he left for Asia Minor, where he had been born. Known for his great dialectical skill, he is cited repeatedly in the TALMUD and is remembered as the greatest of the *tannaim*, a group of masters of the Jewish oral law. Legends of his miraculous powers sprang up during the Middle Ages.

Meir \me-'ir**, Golda** *orig.* **Goldie Mabovitch** *later* **Goldie Myerson** (b. May 3, 1898, Kiev, Russian Empire—d. Dec. 8, 1978, Jerusalem) Ukrainian-born Israeli stateswoman, fourth prime minister of Israel (1969–74). Her family immigrated to Milwaukee, Wis., U.S., in 1906, where she became a leader of the Milwaukee Labor Zionist Party. In 1921 she and her husband immigrated to Palestine, where she emerged as a forceful negotiator with British authorities during World War II (1939–45). A signer of Israel's declaration of independence in 1948, she served in the Knesset (parliament; 1949–74) and held the posts of minister of labour (1949–56) and foreign minister (1956–66). As prime minister, she sought diplomatic solutions to ease the region's tensions. The failure of her government to anticipate an Arab attack during the Yom Kippur War of 1973 (see ARAB-ISRAELI WARS) led her to resign six months later.

Golda Meir
DENNIS BRACK/BLACK STAR

Meir of Rothenburg *orig.* **Meir ben Baruch** (b. c. 1215, Worms, Franconia—d. May 2, 1293, Ensisheim Fortress, Alsace) German Jewish scholar. After studying in France, he served as rabbi in several communities in Germany, notably Rothenburg, where he opened a Talmudic school. He became famous as an authority on rabbinic law, writing notes and commentary on the Talmud and acting for nearly half a century as the supreme court of appeals for Jews of Germany and surrounding countries. Persecution prompted him to flee Germany with a group of followers in 1286, but he was caught and imprisoned for the rest of his life in an Alsatian fortress.

Meissen porcelain \'mī-sᵊn\ German hard-paste, or true, PORCELAIN produced at the Meissen factory, near Dresden in Saxony (now Germany), from 1710 until the present day. It was the first successfully produced true porcelain in Europe and dominated the style of European porcelain until c. 1756. The high point of the Meissen factory was reached after 1731 with the modeling of JOHANN JOACHIM KANDLER. The onion pattern, introduced c. 1739, was widely copied. Meissen porcelain is marked with crossed blue swords.

Meissonier \ˌmā-sᵊn-'yā**, Juste-Aurèle** (b. 1693/95, Turin, Savoy—d. July 31, 1750, Paris, France) French goldsmith, designer, and architect. Appointed goldsmith and cabinetmaker to LOUIS XV in 1726, he became a leading originator of the influential ROCOCO STYLE. His highly inventive work included fantastic grottoes, animated metalwork designs, snuffboxes, watch cases, sword hilts, and tureens. His sketches for interior decoration, furniture, and goldsmith designs became widely known through engravings. Few of his architectural plans were realized.

meistersinger \'mī-stər-ˌsiŋ-ər, 'mī-stər-ˌziŋ-ər\ *German* **"master singer"** Any of certain German musicians and poets, chiefly of the artisan and trading classes, in the 14th to 16th centuries. These amateur guilds spread throughout Germany until most towns had one. Their main activity was monthly singing contests. Because of their educational aims of fostering morality and religious belief, they came to be instrumental in promulgating the Protestant message during the REFORMATION, though their music is not regarded as highly distinguished. The most famous meistersinger, Hans Sachs (1494–1576), devoted his art exclusively to the Lutheran cause after 1530.

Meitner \'mīt-nər**, Lise** (b. Nov. 7, 1878, Vienna, Austria—d. Oct. 27, 1968, Cambridge, Cambridgeshire, Eng.) German physicist. She worked at Berlin's Kaiser Wilhelm Institute (1912–38), also teaching at the University of Berlin (1926–38). At a laboratory that she set up with OTTO HAHN, the two isolated the radioactive isotope protactinium-231. In the 1930s, with Hahn and Fritz Strassmann (1902–80), she investigated the products of neutron bombardment of uranium. She left Germany in 1938 for Sweden. After Hahn and Strassmann demonstrated that barium appears in neutron-bombarded uranium, she and her nephew Otto Frisch (1904–79) explained the physical characteristics of this division and in 1939 proposed the term *fission* for the process. She shared the 1966 Enrico Fermi Award with Hahn and Strassmann. Element 109, meitnerium, is named in her honour.

Mekhilta \mə-'kil-tə\ Hebrew commentary on the Book of EXODUS. One of the exegetic commentaries known as the Halakhic Midrashim, the *Mekhilta* presents a composite of three kinds of materials concerning the Book of Exodus: exegeses of certain passages, propositional and argumentative essays on theological principles, and topical articles on the written and oral TORAH. It was produced by a Talmudic school founded by ISHMAEL BEN ELISHA c. AD 300 and known as the House of Ishmael. The name *Mekhilta* (Hebrew: "measure") refers to its use as a rule or norm for conduct. See also HALAKHAH, MIDRASH, TALMUD.

Meknès \mek-'nes\ City (pop., 1994: 459,958), north-central Morocco. It was one of Morocco's four imperial cities, founded in the 10th century by a Berber tribe. Originally a group of villages among olive groves, it became the Moroccan capital in 1673 under Maulāy Ismāʾīl, who built palaces and mosques that earned for Meknès the name "Versailles of Morocco." After his death it declined, and in 1911 it was occupied by the French. It is now a commercial centre for agricultural products, fine embroidery, and carpets.

Mekong \'mā-'kȯŋ\ **River** *Chinese* **Lancang Jiang** *or* **Lan-Ts'ang Chiang** \'län-'tsäŋ-'jē-'äŋ\ Longest river of Southeast Asia. Rising in

© 2006 Encyclopædia Britannica, Inc.

southern Qinghai province, China, it flows south through eastern Tibet and across the highlands of Yunnan province. It then forms part of the border between Myanmar (Burma) and Laos, as well as between Laos and Thailand. It runs through Laos and Cambodia before entering the South China Sea in a delta south of Ho Chi Minh City in Vietnam after a course of 2,700 mi (4,350 km). Vientiane, Laos, and Phnom Penh, Camb., stand on its banks. Since 1957 the Mekong Committee, an international effort, has initiated projects to harness the river for hydroelectricity and irrigation.

Melanchthon \mə-'laŋk-thən,\ *German* \mā-'länk̲-tȯn**, Philipp** *orig.* **Philipp Schwartzerd** (b. Feb. 15, 1497, Bretten, Palatinate—d. April 19, 1560, probably Wittenberg, Saxony) German Protestant reformer. His education in Germany was greatly influenced by humanist learning, and he was named professor of Greek at Wittenberg in 1518. A friend and defender of Martin Luther, Melanchthon was the author of *Loci communes* (1521), the first systematic treatment of the principles of the Reformation, and of the Protestant creed known as the Augsburg Confession (1530). He also reorganized the entire educational system of Germany, founding and reforming several of its universities. His willingness to compromise with Catholics on theological issues in his later years became controversial.

Philipp Melanchthon, engraving by Albrecht Dürer, 1526.
COURTESY OF THE STAATLICHE MUSEEN KUPERSTICHKABINETT, BERLIN

Melanesia \ˌme-lə-'nē-zhə\ Island group, South Pacific Ocean. A subdivision of Oceania, it lies northeast of Australia and south of the Equator and includes New Guinea, the Admiralty Islands, the Bismarck and Louisiade archipelagoes, the Solomon Islands, the Santa Cruz Islands, New Caledonia and the Loyalty Islands, Vanuatu, Fiji, Norfolk Island, and numerous others. Two distinct populations and cultures exist in the region. The Papuans, who have inhabited the area for 40,000 years, devised one of the earliest agricultural systems and developed the Papuan languages. Seafaring peoples with an Austronesian language and a Southeast Asian cultural tradition settled in the area about 3,500 years ago.

melanin \'me-lə-nən\ Any of several organic compounds, dark biological pigments that give coloration (shades of yellow to brown) to skin, hair, feathers, scales, eyes, and some internal tissues, notably the substantia nigra in the brain. In humans, melanins help protect the skin against the damaging effects of ultraviolet radiation, but melanoma may arise from cells that produce it. The amount in the skin depends on both genetic and environmental factors. Melanin is produced from the amino acid tyrosine; albinos lack the enzyme that catalyzes that reaction (see albinism).

melanism, industrial See industrial melanism

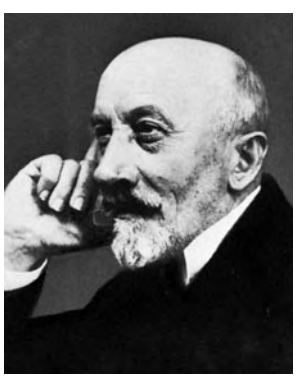
melanoma \ˌme-lə-'nō-mə\ Dark-coloured malignant tumour of skin cells that produce the protective skin-darkening pigment melanin. Melanomas are prone to metastasize (see cancer) and are associated with the highest death rate of any skin cancer. Removal, together with a collar of surrounding healthy skin, cures melanoma if done early. A common cause of melanoma is skin damage from sunlight. It is very rare in persons with dark skin.

melatonin \ˌme-lə-'tō-nən\ Hormone secreted by the pineal gland of most vertebrates. It appears to be important in regulating sleeping cycles; more is produced at night, and test subjects injected with it become sleepy. Melatonin may be involved in seasonal affective disorder. In mammals other than humans, melatonin may act as a cue to breeding and mating in season.

Melba, Dame Nellie *orig.* **Helen Porter Mitchell** (b. May 19, 1861, Richmond, near Melbourne, Austl.—d. Feb. 23, 1931, Sydney) Australian soprano. After study with Mathilde Marchesi (1821–1913) in Paris, she debuted in Brussels in *Rigoletto* (1887), and in the next six years she sang in all the major opera houses of the world. One of the most celebrated coloraturas in the years preceding World War I, she sang mostly at Covent Garden after 1902. Concentrating on a few Italian and French operas, she possessed abundant technique and vocal beauty. Two foods, Melba toast and peach Melba, were named for her.

Melbourne \'mel-bərn\ City (pop., 1999 est.: 3,417,200), capital of Victoria, southeastern Australia. Situated at the head of Port Phillip Bay and the mouth of the Yarra River, the area was discovered by Europeans in 1802 and incorporated into the colony of New South Wales. The first settlement was founded in 1835 by settlers from Tasmania, and in 1837 it was named for the British prime minister, Lord Melbourne. Made the capital of Victoria in 1851, it grew rapidly with the gold rush of the early 1850s. It served as the first capital of the Australian commonwealth (1901–27), until Canberra became the new capital. Second in size to Sydney, it is an industrial, commercial, and financial centre and the seat of several universities, including the University of Melbourne.

Melbourne, University of Public university in Melbourne, Austl. Founded as a liberal arts college in 1853, in subsequent decades it added schools or faculties of agriculture, architecture, commerce, dentistry, education, engineering, law, medicine, music, and veterinary medicine. It continued to expand during the 20th century, adding programs in nuclear science, applied economic research, and South and Southeast Asian studies.



Melbourne (of Kilmore), William Lamb, 2nd Viscount (b. March 15, 1779, London, Eng.—d. Nov. 24, 1848, Brocket, near Hatfield, Hertfordshire) British prime minister (1834, 1835–41). A lawyer, he entered the House of Commons in 1806 and the House of Lords in 1829. Although a Whig, he served in Tory governments as chief secretary for Ireland (1827–28) and advocated political rights for Roman Catholics. He served as home secretary (1830–34) in Earl Grey's Whig government, reluctantly supporting the Reform Bill of 1832. As prime minister (1834), he gained the support of Whigs and moderate Tories and opposed further parliamentary reform and efforts to repeal the Corn Laws. In his second administration (1835–41), he became the young Queen Victoria's valued chief political adviser. His firm stand in foreign policy averted war with France over Syria (1840). His wife, Lady Caroline Lamb (1785–1828), was a minor novelist, famous for her affair with Lord Byron in 1812–13.

Melchior \'mel-kē-ˌȯr**, Lauritz (Lebrecht Hommel)** (b. March 20, 1890, Copenhagen, Den.—d. March 18, 1973, Santa Monica, Calif., U.S.) Danish-U.S. tenor. He debuted as a baritone in 1913 but further study extended his range upward, and he made his tenor debut as Tannhäuser in 1918. Additional training readied him for Bayreuth, where he sang (1924–31), and he remained the preeminent Wagnerian tenor of his time, regularly singing (often opposite Kirsten Flagstad) at Covent Garden (until 1939) and the Metropolitan Opera (1926–50) and making many recordings.

Melchizedek \mel-'ki-zə-ˌdek\ Canaanite king and priest revered by Abraham. In the Book of Genesis, Abraham rescues his kidnapped nephew, Lot, from the Mesopotamians, and on returning from battle he meets Melchizedek, king of Salem (probably another name for Jerusalem), who gives him bread and wine and blesses him in the name of "God Most High." St. Paul's Epistle to the Hebrews treats Melchizedek as a foreshadowing of Christ.

Melfi \'mel-fē**, Constitutions of** *or* **Liber Augustalis** (1231) Legal code drawn up by Emperor Frederick II for the kingdom of Sicily. Based on Roman and canon law, the constitutions centralized royal administration, established greater efficiency in the courts, and rationalized civil and criminal procedures in the interests of justice.

Méliès \mā-'yes**, Georges** (b. Dec. 8, 1861, Paris, France—d. Jan. 21, 1938, Paris) French filmmaker. He was a professional magician and manager-director of the Théâtre Robert-Houdin in Paris when he saw the first movies made by Auguste and Louis Lumière in 1895. In his film experiments he exploited the basic camera tricks of slow motion, dissolve, and fade-out. The first to film fiction narratives, from 1899 to 1912 he made more than 400 films, which combined illusion, comic burlesque, and pantomime in fantasy productions, including *A Trip to the Moon* (1902). He also filmed reconstructed news events as an early form of

Méliès

newsreel. Overtaken by the commercial growth of the film industry, he was forced to sell his studio in 1913.

Melilla \mə-'lē-yä\ Spanish enclave and autonomous community (pop., 2001: 66,411), North Africa. It covers 5 sq mi (12 sq km) and is a military station and seaport. Located on Morocco's northern coast, it was successively colonized by the Phoenicians, Greeks, and Romans. It fell as a Berber town to Spain in 1497 and remained Spanish despite a long history of attack and siege. In the early 20th century Spain modernized its port and made it an administrative centre for Spanish Morocco. It was the first Spanish town to rise against the Popular Front government in 1936, helping to precipitate the Spanish Civil War. It was retained by Spain when Morocco achieved independence in 1956.

Mello, Fernando Collor de See Fernando Collor de Mello

Mellon, Andrew W(illiam) (b. March 24, 1855, Pittsburgh, Pa., U.S.—d. Aug. 26, 1937, Southampton, N.Y.) U.S. financier. He joined his father's banking house in 1874 and through the next three decades built up a financial empire by supplying capital for corporations in industries such as aluminum, steel, and oil. He helped found the Aluminum Co. of America (Alcoa) and the Gulf Oil Corp., and he joined Henry Clay Frick to found Union Steel Co. and Union Trust Co. By the early 1920s he was one of the richest men in the U.S. As secretary of the Treasury (1921–32) he persuaded Congress to lower taxes in order to encourage business expansion. He was praised for the economic boom of the 1920s but criticized during the Great Depression, and in 1932 he resigned to serve as ambassador to England. A noted art collector and philanthropist, Mellon donated an extensive art collection and $15 million to establish the National Gallery of Art.

melodrama Sentimental drama marked by extravagant theatricality, subordination of character development to plot, and focus on sensational incidents. It usually has an improbable plot that features such stock characters as the noble hero, the long-suffering heroine, and the hard-hearted villain, and it ends with virtue triumphing over vice. Written by such playwrights as Guilbert de Pixérécourt and Dion Boucicault, melodramas were popular in Europe and the U.S. during the 19th century. They often featured spectacular events such as shipwrecks, battles, fires, earthquakes, and horse races. Melodrama died out as a theatrical form in the early 20th century but remained popular in silent film. It can still be seen in contemporary film genres such as the action movie.

melody Rhythmic succession of single tones organized as an aesthetic whole. The melody is often the highest line in a musical composition. Melodies may suggest their own harmony or counterpoint. As fundamental as rhythm and metre (and more so than harmony), melody is common to all musical cultures.

melon Any of the seven groups of *Cucumis melo*, a trailing vine grown for its edible, sweet, musky-scented fruit. Members of the horticulturally diverse gourd family, melons are frost-tender annuals native to central Asia but widely grown in many cultivated varieties in warm regions worldwide. They have soft, hairy, trailing stems, large round to lobed leaves, yellow flowers, and large flat seeds. The fruits of the numerous cultivated varieties differ greatly in size, shape, surface texture, flesh colour, flavour, and weight. Examples include cantaloupe, honeydew, and casaba. Plants resembling true melons include the watermelon, the Chinese watermelon, the melon tree (see papaya), and the melon shrub, or pear melon (*Solanum muricatum*).

Melos \'mē-ˌläs\ *Greek* **Mílos** \'mē-ˌlȯs\ Island (pop., 1991: 4,302) of the Cyclades, Greece. It is 14 mi (23 km) long and occupies an area of 58 sq mi (151 sq km). Melos (Mílos) is the chief town. On the ancient acropolis of Adamanda, the *Venus de Milo* (now in the Louvre Museum) was found in 1820. The settlement of Phylakopi, dating from 1550 BC, was destroyed c. 1100 BC by Dorian settlers. In 416 BC Melos was conquered by Athens, which killed the entire male population in reprisal for the island's neutrality in the Peloponnesian War. Lysander later restored the island to the Dorians, but it never recovered its prosperity. Later, under Crusader rule, it formed part of the duchy of Naxos.

Melqart *or* **Melkarth** Phoenician god, the chief deity of Tyre and of two of its colonies, Carthage and Gadir (Cádiz, Spain). Probably a sun god, he was often depicted as a bearded figure wearing a high, rounded hat and a kilt; he held an Egyptian ankh as a symbol of life and an ax as a symbol of death. His sanctuary in Tyre was the scene of annual winter and spring festivals and is believed to have been the model for Solomon's temple in Jerusalem.

meltdown Occurrence in which a huge amount of thermal energy and radiation is released as a result of an uncontrolled chain reaction in a nuclear power reactor. The chain reaction that occurs in the reactor's core must be carefully regulated by control rods, which absorb neutrons, and a moderator, which reduces their energy. If the core becomes too hot, it can melt, releasing large amounts of radiation. See also Chernobyl accident.

melting point Temperature at which the solid and liquid states of a pure substance can exist in equilibrium. As heat is applied to a solid, its temperature increases until it reaches the melting point. At this temperature, additional heat converts the solid into a liquid without a change in temperature. The melting point of solid water (ice) is 32°F (0°C). Though the melting point of a solid is generally considered to be the same as the freezing point of the corresponding liquid, they may differ because a liquid may freeze into different crystal systems and impurities can lower the freezing point.

Melville, Herman *orig.* **Herman Melvill** (b. Aug. 1, 1819, New York, N.Y., U.S.—d. Sept. 28, 1891, New York City) U.S. writer. Born to a wealthy New York family that suffered great financial losses, Melville had little formal schooling and began a period of wanderings at sea in 1839. In 1841 he sailed on a whaler bound for the South Seas; the next year he jumped ship in the Marquesas Islands. His adventures in Polynesia were the basis of his successful first novels, *Typee* (1846) and *Omoo* (1847). After his allegorical fantasy *Mardi* (1849) failed, he quickly wrote *Redburn* (1849) and *White-Jacket* (1850), about the rough life of sailors. *Moby-Dick* (1851), his masterpiece, is both an intense whaling narrative and a symbolic examination of the problems and possibilities of American democracy; it brought him neither acclaim nor reward when published. Increasingly reclusive and despairing, he wrote *Pierre* (1852), which, intended as a piece of domestic "ladies" fiction, became a parody of that popular genre, *Israel Potter* (1855), *The Confidence-Man* (1857), and magazine stories, including "Bartleby the Scrivener" (1853) and "Benito Cereno" (1855). After 1857 he wrote verse. In 1866 a customs-inspector position finally brought him a secure income. He returned to prose for his last work, the novel *Billy Budd, Foretopman*, which remained unpublished until 1924. Neglected for much of his career, Melville came to be regarded by modern critics as one of the greatest American writers.

Melville Island One of the largest of the Parry Islands, in the Arctic Ocean, Canada. Located north of Victoria Island, it is 200 mi (320 km) long and 30–130 mi (50–210 km) wide, with an area of 16,274 sq mi (42,149 sq km). It has no human inhabitants, but it supports musk oxen and has natural-gas deposits. It was discovered in 1819 by William Parry.

Melville Island Island in the Timor Sea, off the coast of Northern Territory, Australia. It is 80 miles (130 km) long and 55 mi (88 km) wide, with an area of 2,240 sq mi (5,800 sq km). It was sighted by the Dutch in 1644; the British built Fort Dundas there in 1824. Melville Island, known to Aboriginals as Yermalner, is one of the few areas in Australia still occupied by its original Aboriginal peoples, the Tiwi, and in 1978 ownership of the island passed from the Australian government to the Tiwi Land Council.

Melville Sound See Viscount Melville Sound

membrane In biology, the thin layer that forms the outer boundary of a living cell or of an internal cell compartment. The outer boundary is the plasma membrane, and the compartments enclosed by internal membranes are called organelles. Biological membranes have a dual function: separation of vital but incompatible metabolic processes conducted in the organelles; and passage of nutrients, wastes, and metabolic products between organelles and between the cell and the outside environment. Membranes consist largely of a double layer of lipids in which are embedded large proteins, many of which transport ions and water-soluble molecules across the membrane. See also cytoplasm, eukaryote.

membrane structure Structure with a thin, flexible surface (membrane) that carries loads primarily through tensile stresses. There are two main types: tent structures and pneumatic structures. The Denver International Airport (1995) features a terminal building roofed by a white membrane stretched from steel masts.

Memel \'mā-məl\ **dispute** Post-World War I dispute over sovereignty of the former German Prussian territory of Memelland. Located on the Baltic Sea north of the Memel River, the area was mainly inhabited by Lithuanians. In 1919 at the PARIS PEACE CONFERENCE, the newly formed state of Lithuania requested annexation of the area. A commission recommended formation of a free state, but Lithuanian inhabitants of the region took over the government in 1923. Protests by the Allied Powers resulted in the signing of the Memel Statute to establish Memelland as an autonomous region within Lithuania.

Memling \'mem-liŋ**, Hans** *or* **Hans Memlinc** \'mem-liŋk\ (b. c. 1430/35, Seligenstadt, near Frankfurt am Main—d. Aug. 11, 1494, Bruges) Flemish painter. He settled in Bruges in 1465 and established a large workshop that became very successful and made him one of the city's wealthiest citizens. Though somewhat derivative of the works of contemporary Flemish painters (JAN VAN EYCK, DIRCK BOUTS, HUGO VAN DER GOES, and particularly ROGIER VAN DER WEYDEN), his art has great charm and a distinctive character. Memling's religious paintings and portraits of wealthy patrons (e.g., *Tommaso Portinari and His Wife*, c. 1468) were, and remain, enormously popular.

"Diptych with Madonna and Martin van Nieuwenhove" (left wing), oil on panel by Hans Memling, 1487; in the Memling-Museum, Brugge, Bel.

Memminger \'me-mən-jər**, Christopher G(ustavus)** (b. Jan. 9, 1803, Nayhingen, Württemberg—d. March 7, 1888, Charleston, S.C., U.S.) German-born U.S. public official. He immigrated to the U.S. in his teens and became a successful lawyer in Charleston, S.C. After South Carolina seceded from the Union (1860), he helped draft the provisional constitution of the Confederacy and was appointed its secretary of the treasury (1861–64). To raise money, he issued increasing amounts of paper currency, which depreciated greatly by 1863. Held responsible for the collapse of Confederate credit, he resigned in 1864. After receiving a presidential pardon, he returned to the practice of law.

Memnon In GREEK MYTHOLOGY, a king of the Ethiopians. The son of Tithonus (of the Trojan royal house) and Eos (Dawn), he fought bravely for his uncle PRIAM against the Greeks, and was slain by ACHILLES. Moved by the tears of Eos, ZEUS granted him immortality. His companions, changed into birds, came every year to fight and lament over his grave. In Egypt his name was connected with the colossal stone statues of AMENHOTEP III near THEBES; the harplike sounds these statues emitted when touched by the rays of the rising sun were believed to be the voice of Memnon responding to the greeting of his mother, Eos.

memoir History or record composed from personal observation and experience. Closely related to AUTOBIOGRAPHY, a memoir differs chiefly in the degree of emphasis on external events. Unlike writers of autobiography, who are concerned primarily with themselves as subject matter, writers of memoir usually have played roles in, or have closely observed, historical events, and their main purpose is describing or interpreting those events.

Memorial Day *or* **Decoration Day** U.S. holiday. Originally held (1868) in commemoration of soldiers killed in the AMERICAN CIVIL WAR, its observance later extended to all U.S. war dead. Most states conform to the federal practice of observing it on the last Monday in May, but some retain the traditional day of celebration, May 30. National observance is marked by the placing of a wreath on the Tomb of the Unknowns in Arlington National Cemetery. Flags, insignia, and flowers are placed on the graves of veterans in local cemeteries.

Memorial University of Newfoundland Canadian public university in St. John's, founded in 1925. It offers undergraduate and graduate programs in the sciences, arts and humanities, social sciences, business administration, education, engineering, medicine, and other fields. Campus facilities include centres for research in ocean resources, maritime history, and political economy.

memory In DIGITAL COMPUTERS, a physical device used to store such information as data or programs on a temporary or permanent basis. Most digital computer systems have two types of memory, the main memory and one or more auxiliary storage units. In most cases, the main memory is a high-speed RAM. Auxiliary storage units include HARD DISKS, FLOPPY DISKS, and magnetic tape drives. Besides main and auxiliary memories, other forms of memory include ROM and optical storage media such as VIDEODISCS and COMPACT DISCS (see CD-ROM).

memory Power or process of recalling or reproducing what has been learned or experienced. Research indicates that the ability to retain information is fairly uniform among normal individuals; what differs is the degree to which persons learn or take account of something to begin with and the kind and amount of detail that is retained. ATTENTION, MOTIVATION, and especially ASSOCIATION facilitate this process. Visual images are generally better remembered than are other forms of sense-data. Memory prodigies, or people with "photographic" or "eidetic" memories, often draw heavily on visual associations, including mnemonics. Many psychologists distinguish between short- and long-term memory. The former (variously said to last 10 seconds to 3 minutes) is less subject to interference and distortion than the latter. Long-term memory is sometimes divided into episodic (i.e., event-centred) and semantic (i.e., knowledge-centred) memory. Various models of memory have been proposed, from the Enlightenment notion of impressions made on brain tissues (restyled as "memory molecules" or coded "engrams" in the 20th century) to B.F. SKINNER's "black box" to more recent ideas concerning INFORMATION PROCESSING or the formation of neuronal groups. Disorders of or involving memory include ALZHEIMER DISEASE, AMNESIA, KORSAKOFF syndrome, POST-TRAUMATIC STRESS DISORDER, and senile dementia. See also HYPNOSIS.

Memphis Capital of ancient Egypt during the Old Kingdom (c. 2575–c. 2130 BC), located on the western bank of the NILE RIVER, south of modern CAIRO. Founded c. 2925 BC by Menes, it was by the 3rd dynasty a flourishing community. Despite the rivalry of Heracleopolis and THEBES, it remained important, particularly in the worship of PTAH. Beginning in the 8th century BC, it fell successively to Nubia, Assyria, Persia, and Macedonia under ALEXANDER THE GREAT. Its importance as a religious centre was undermined by the rise of Christianity and then of Islam. It was abandoned after the Muslim conquest of Egypt in AD 640. Its ruins include the great temple of Ptah, royal palaces, and an extensive necropolis. Nearby are the pyramids of SAQQARA and those at GIZA.

Memphis City (pop., 2000: 650,100), southwestern Tennessee, U.S. Situated above the Mississippi River where the borders of Arkansas, Mississippi, and Tennessee meet, it was founded in 1819 on the site of a CHICKASAW Indian village and a U.S. fort. It was incorporated as a city in 1826. A Confederate military centre at the start of the AMERICAN CIVIL WAR, it was captured by Union forces in 1862. In the 1870s yellow fever killed more than 5,000 residents, and the city was forced into bankruptcy. Rechartered in 1893, it was the state's largest city by 1900. Sites of interest include Beale Street, made famous by W.C. HANDY as the birthplace of the blues; and Graceland, the mansion of ELVIS PRESLEY. It is the seat of several educational institutions, including the University of Memphis.

Memphremagog \ˌmem-fri-'mā-ˌgäg**, Lake** Lake that crosses the U.S.-Canadian border. Extending from northern Vermont, U.S., into southern Quebec, Can., it is 27 mi (43 km) long and only 1–2 mi (1.5–3 km) wide for most of its length. It has several large bays, including Fitch Bay and Sargents Bay. At its northern end the lake drains into the St. François River. Its name is an Algonquian term meaning "where there is a big expanse of water."

Menai Strait \'mē-ˌnī\ Channel of the IRISH SEA separating the Isle of ANGLESEY from the mainland of northern Wales. It extends 15 mi (24 km) and varies in width from 600 ft (180 m) to 2 mi (3 km). Two famous bridges span the strait: THOMAS TELFORD's suspension road bridge of 1827 and ROBERT STEPHENSON's Britannia tubular railway bridge of 1849.

Menander \mə-'nan-dər\ (b. c. 342—d. c. 292 BC) Athenian dramatist. He produced his first play in 321 BC, and in 316 he won a festival prize with *Dyscolus* ("The Misanthrope"), the only one of his plays for which a complete text still exists. By the end of his career he had written more than 100 plays and had won eight victories at Athenian dramatic festivals. Menander was considered by ancient critics the supreme poet of Greek NEW COMEDY. He excelled at presenting characters such as stern fathers, young lovers, and intriguing slaves. As adapted by the Romans PLAUTUS and TERENCE, his plays influenced the later development of Renaissance comedy.

Mencius \'men-shē-əs\ *Chinese* **Mengzi** *or* **Meng-tzu** \'məŋ-'tsə\ *orig.* **Meng K'o** (b. c. 372—d. c. 289 BC) Chinese philosopher. The book *Mencius* contains statements on innate human goodness, a topic warmly debated by followers of Confucius up to modern times. That the four principles (*si duan*)—the feelings of commiseration, shame, courtesy, and right and wrong—are all inborn in humans was a self-evident truth to Mencius; the four principles, when properly cultivated, will develop into the four cardinal virtues of *ren* (benevolence), righteousness, decorum, and wisdom. His development of orthodox Confucianism earned him the title "second sage."

Mencius *or* **Mengzi** *or* **Meng-tzu** Chinese Confucian text concerning government, written by Mencius. The book maintains that the welfare of the common people comes before every other consideration. When a ruler no longer practices benevolence and righteousness, the mandate of heaven (his right to rule) is withdrawn and he should be removed. *Mencius* did not become a classic until the 12th century, when it was published by Zhu Xi together with Daxue, Zhongyong, and Lunyu (*Analects*) as the Four Books. See also Confucianism.

Mencken, H(enry) L(ouis) (b. Sept. 12, 1880, Baltimore, Md., U.S.—d. Jan. 29, 1956, Baltimore) U.S. controversialist, humorous journalist, and critic. Mencken worked on the staff of the *Baltimore Sun* for much of his life. With George Jean Nathan (1882–1958), he coedited *The Smart Set* (1914–23) and cofounded and edited (1924–33) the *American Mercury*, both important literary magazines. Probably the most influential U.S. literary critic in the 1920s, he often used criticism to jeer at the nation's social and cultural weaknesses. *Prejudices* (1919–27) collects many of his reviews and essays. In *The American Language* (1919; supplements 1945, 1948) he brought together American expressions and idioms; by the time of his death he was perhaps the leading authority on the language of the U.S.

Mendel \'men-dəl**, Gregor (Johann)** (b. July 22, 1822, Heinzendorf, Austria—d. Jan. 6, 1884, Brünn, Austria-Hungary) Austrian botanist and plant experimenter. He became an Augustinian monk in 1843 and later studied at the University of Vienna. In 1856, working in his monastery's garden, he began the experiments that led to his formulation of the basic principle of heredity. He crossed varieties of the garden pea that had maintained constant differences in such single alternative traits as tallness and dwarfishness, flower colour, and pod form. He theorized that the occurrence of the visible alternative traits of the plants, in the constant varieties and in their descendants, was due to the occurrence of paired elementary units of heredity, now known as genes. What was new in Mendel's interpretation of his data was his recognition that genes obey simple statistical laws. His system proved to be of general application and is one of the basic principles of biology. He achieved fame only after his death, through the work of Carl Erich Correns, Erich Tschermak von Seysenegg, and Hugo de Vries, who independently obtained similar results and found that both the experimental data and the general theory had been published 34 years previously.

Mendele Moykher Sforim \'men-də-lə-mō-'ker-sfä-'rēm\ *or* **Mendele Mokher Sefarim** \ˌsef-ə-'rēm\ *orig.* **Sholem Yankev Abramovitsh** *Yiddish* **"Mendele the Book Peddler"** (b. Nov. 20, 1835, Kopyl, near Minsk, Russia—d. Dec. 8, 1917, Odessa) Russian author. He lived much of his life in Ukraine, becoming a rabbi and head of a traditional school (Talmud Torah) at Odessa. His stories, written with lively humour and gentle satire, are invaluable in the study of Jewish life in Eastern Europe at the time when its traditional structure was giving way. His greatest work is *The Travels and Adventures of Benjamin the Third* (1875), a panorama of Jewish life in Russia. He is considered the founder of both modern Yiddish and modern Hebrew narrative literature and the creator of modern literary Yiddish.

Mendeleyev \ˌmen-də-'lā-əf**, Dmitry (Ivanovich) Mendeleyev** *also spelled* **Mendeleev** (b. Feb. 8, 1834, Tobolsk, Siberia, Russia—d. Feb. 2, 1907, St. Petersburg) Russian chemist. He taught at the University of St. Petersburg (1867–90) and later served as director of Russia's bureau of weights and measures. He made a fundamental contribution to chemistry by establishing in 1869 the principle of periodicity of the elements. His first periodic table was based on arranging the elements in ascending order of atomic weight and grouping them by similarity of properties. Mendeleyev's theory allowed him to predict the existence and atomic weights of several elements not discovered until years later.

Mendelsohn \'men-dəls-ˌzōn**, Erich** (b. March 21, 1887, Allenstein, Ger.—d. Sept. 15, 1953, San Francisco, Calif., U.S.) German architect. While studying architecture in Munich, he was influenced by the Blaue Reiter group of Expressionist artists. Mendelsohn's Einstein Tower, Potsdam (1919–21), a highly sculptural structure, reflects his early preoccupation with science fiction. In the 1920s he designed a number of imaginative structures, including the Schocken stores in Stuttgart (1927) and Chemnitz (1928), notable for their prominent use of glass in strongly horizontal compositions. He fled the Nazis in 1933 and eventually settled in the U.S.; his American works include the Maimonides Hospital, San Francisco (1946).

Mendelssohn (-Bartholdy), (Jakob Ludwig) Felix (b. Feb. 3, 1809, Hamburg—d. Nov. 4, 1847, Leipzig) German composer. Grandson of the philosopher Moses Mendelssohn, he grew up in a wealthy Jewish family that had converted to Protestantism. He began to compose at age 11; at 16 he wrote his first masterpiece, the *String Octet in E Flat Major* (1825), followed by the *Overture to A Midsummer Night's Dream* (1826). In 1829 he conducted the first performance in 100 years of Johann Sebastian Bach's *St. Matthew Passion*, greatly contributing to the Bach revival. He wrote the first of a series of elegant piano works, *Songs Without Words*, in 1830. His *Reformation* (1832) and *Italian* (1833) symphonies date from this period. He observed Classical models and practices while initiating key aspects of Romanticism, which exalted emotions and the imagination above rigid forms and traditions. After serving as music director of the Catholic city of Düsseldorf (1833–35), he took the parallel position in Protestant Leipzig. There he built up the Gewandhaus Orchestra, making Leipzig the musical capital of Germany. In his last decade he produced great works such as the *Scottish Symphony* (1842), the violin concerto (1844), and the oratorio *Elijah* (1846). His beloved sister, Fanny Mendelssohn Hensel (1805–47), had been considered his equal in musical talent as a girl, but she was discouraged from composing until her marriage to the painter Wilhelm Hensel (1794–1861); she eventually wrote more than 500 works. Her death was a severe shock to Mendelssohn; years of overwork simultaneously caught up with him, and he died six months after her.

Mendelssohn, Moses *orig.* **Moses ben Menachem** (b. Sept. 26, 1729, Dessau, Anhalt—d. Jan. 4, 1786, Berlin, Prussia) German Jewish philosopher and scholar. The son of an impoverished scribe, he began his career as a tutor but eventually won fame for his philosophical writings, which would become influential among the 19th-century U.S. Transcendentalists. He combined Judaism with the rationalism of the Enlightenment, becoming one of the principal figures in the Haskala, which helped bring Jews into the mainstream of European culture. His works include *Phädon* (1767), a defense of the immortality of the soul, and *Jerusalem* (1783), on the relationship of religion and the state. His friend Gotthold Lessing based the protagonist of his celebrated drama *Nathan the Wise* on Mendelssohn. He was the grandfather of the composer Felix Mendelssohn.

Mendenhall Glacier Blue ice sheet, 12 mi (19 km) long, 1.5 mi (2.4 km) wide, and more than 100 ft (30 m) high. It flows from the southern half of the huge Juneau Icefield, which lies in the Boundary Ranges in southeastern Alaska, U.S. A relic of the Little Ice Age (16th century to the mid-19th century), it recedes about 100–150 ft (30–45 m) a year. The adjacent Mendenhall Lake began to form about 1900 and is now 1.5 mi (2.4 km) long and 1 mi (1.6 km) wide.

Menderes \men-'der-əs**, Adnan** (b. 1899, Aydın, Ottoman Empire—d. Sept. 17, 1961, İmralı, Tur.) Turkish prime minister (1950–60). Son of an aristocrat, he entered parliament as a member of MUSTAFA KEMAL ATATÜRK's Republican People's Party (1930). In 1945 he cofounded the first opposition party, the Democrat Party, and won the premiership in the 1950, 1954, and 1957 elections. His policies included seeking closer ties with Muslim states, encouraging private enterprise, and lifting restraint on religious expression. Intolerant of critics, he instituted press censorship. In challenging Atatürk's ideals, he earned the enmity of the army and was overthrown (1960) and executed.

Menderes \ˌmen-de-'res\ **River** Name of two rivers in Turkey. The first (Turkish: Büyük Menderes) runs through southwestern Turkey. It empties into the AEGEAN SEA after a course of 363 mi (584 km). Its Classical name, Maeander (whence the English *meander*), is derived from the winding course of its lower reaches. The second (Turkish: Küçük Menderes) was known in antiquity as the Scamander; it rises in northwestern Turkey and flows 60 mi (97 km) west across the plain of ancient TROY, emptying into the DARDANELLES.

Mendès-France \ma^{n}-des-'frä^{n}s**, Pierre** (b. Jan. 11, 1907, Paris, France—d. Oct. 18, 1982, Paris) French politician and premier (1954–55). Born into a Jewish family, he became a lawyer and served in the Chamber of Deputies (1932–40). In World War II he was imprisoned by the VICHY government but escaped to London, where he joined the Free French air force and served in finance posts in CHARLES DE GAULLE's provisional government. As a legislator in postwar France (1946–58), he criticized government policies on economics and the wars in Indochina and North Africa. In 1954 he became premier; he ended France's involvement in Indochina and also helped effect autonomy for Tunisia. His proposed economic reforms led to his defeat in 1955. He sought without success to make the RADICAL-SOCIALIST PARTY the centre of the noncommunist left and opposed de Gaulle's presidency.

Menelaus \ˌme-nə-'lā-əs\ In GREEK MYTHOLOGY, the king of SPARTA and the younger son of ATREUS. When his wife, HELEN, was abducted by PARIS, he asked the other Greek kings to join him in an expedition against Troy, thus beginning the TROJAN WAR. He served under his brother AGAMEMNON. At the war's end he recovered Helen and brought her back to Sparta instead of killing her as he had intended. Having forgotten to appease the gods of defeated Troy, he endured a hard voyage home, and many of his ships were lost.

Menem \'me-nem**, Carlos (Saúl)** (b. July 2, 1930, Anillaco, Arg.) President of Argentina (1989–99). The son of Syrian immigrants, he converted to Roman Catholicism and joined the PERONIST movement in 1956. He held typical Peronist views, favouring nationalism, expansion of the government, large raises for wage earners, and tax breaks for businesses. By the time he took office, however, inflation had risen to 28,000% and Argentina was in crisis; he consequently abandoned his party orthodoxy in favour of a fiscally conservative policy and succeeded in stabilizing the economy. A flamboyant figure, he enjoyed great popularity despite his controversial pardoning of convicted human-rights violators connected with the period of military rule. In 2001 Menem was placed under house arrest after he was indicted for illegal arms dealing, but he was released in 2002.

Menéndez de Avilés \mə-'nen-dəs-dā-ˌä-və-'lās**, Pedro** (b. Feb. 15, 1519, Avilés, Spain—d. Sept. 17, 1574, Santander) Spanish conquistador. He ran away to sea at 14 and rose to captain of the Indies fleet (1554–63). He was sent to Florida to establish a colony and remove a potential threat to Spain's American possessions posed by a French settlement on the St. Johns River. In 1565 he entered the bay of St. Augustine, where he built a fort. He attacked the French colony at Fort Caroline and massacred its entire population, calling its members heretics. He then explored the Atlantic coast and built a string of forts, firmly establishing Spain's control of Florida.

Menéndez Pidal \mā-ˌnān-dāth-pē-'t͟häl**, Ramón** (b. March 13, 1869, La Coruña, Spain—d. Nov. 14, 1968, Madrid) Spanish language scholar. His work on the origins of the SPANISH LANGUAGE and his critical editions of literary texts generated a revival of the study of medieval Spanish poetry and chronicles. His writings include *Manual of Historical Spanish Grammar* (1904), *The Cid and His Spain* (1929), and *The Spaniards in Their History* (1947). He was twice president of the Spanish Academy.

Mengele \'meŋ-gə-lə**, Josef** (b. March 16, 1911, Günzburg, Ger.—d. Feb. 7, 1979, Enseada da Bertioga, near São Paulo, Braz.) German Nazi doctor. Influenced by the racial ideology of ALFRED ROSENBERG, in 1934 Mengele joined the research staff of the newly founded Institute for Hereditary Biology and Racial Hygiene. An ardent Nazi, he served in World War II as medical officer with the SS. In 1943 he was appointed chief doctor at AUSCHWITZ-Birkenau, where he selected incoming Jews for labour or extermination, becoming known as the "Angel of Death," and conducted medical experiments on inmates in pseudoscientific racial studies. After the war he escaped to South America, where he died in 1979 under the name of Wolfgang Gerhard, a Nazi he befriended in Brazil and whose identity he assumed.

Mengistu Haile Mariam \men-'gis-ˌtü-'hī-lē-'mȧr-yȧm\ (b. 1937, Kefa province, Eth.) Ethiopian army officer and head of state (1974–91). Mengistu headed a group of rebel soldiers that overthrew HAILE SELASSIE (1974). After assassinating his rivals, Mengistu became the new regime's acknowledged strongman. By 1978 he had crushed a major rebellion in Eritrea and, with Soviet and Cuban help, an invasion of the OGADEN region by the Somalis. In the 1980s he faced new rebellions in Eritrea and Tigray, and devastating droughts and famines drew attention to his failed agricultural policies. With the withdrawal of Soviet support in 1991, his power was weakened and he fled to Zimbabwe.

Mengs \'meŋs**, Anton Raphael** (b. March 22, 1728, Aussig, Bohemia—d. June 29, 1779, Rome, Papal States) German painter. After study in Dresden and Rome, he became painter to the Saxon court in Dresden in 1745. Back in Rome in the late 1740s and again in the early 1750s, he developed an enthusiasm for Classical antiquity. His fresco *Parnassus* (1760–61) at the Villa Albani helped establish the ascendancy of NEOCLASSICAL painting. He also worked extensively for the Spanish court in Madrid. He was regarded as Europe's greatest living painter in his day, but his reputation has since declined.

menhaden \men-'hā-d^{ə}n\ *or* **pogy** Any of several species of Atlantic coastal fishes (genus *Brevoortia* of the HERRING family), used for oil, fish meal (mainly for animal feed), and fertilizer. Menhaden have a deep body, sharp-edged belly, large head, and tooth-edged scales. Adults are about 15 in. (38 cm) long and weigh 1 lb (0.5 kg) or less. Dense schools of menhaden range from Canada to South America. When feeding, they swim with mouth agape and gill openings widespread to strain out plankton.

menhir \'men-ˌhir\ Type of ancient megalithic stone monument (see MEGALITH). Menhirs were simple upright stones, sometimes of great size, erected chiefly in Western Europe. Arrangements of menhirs often form vast circles, semicircles, or ellipses. Many were built in Britain, the best-known sites being STONEHENGE and Avebury in Wiltshire. Menhirs were also placed in parallel rows, called alignments, the most famous being the Carnac alignments in northwestern France, with 2,935 menhirs. These were probably used for ritual processions.

Menilek II \'men-ə-ˌlek\ *orig.* **Sahle Miriam** (b. Aug. 17, 1844, Ankober, Shewa, Eth.—d. Dec. 12, 1913, Addis Ababa) King of the semi-independent state of Shewa, or Shoa (1865–89), and emperor of Ethiopia (1889–1913). Captured and imprisoned for 10 years after his father, King Malakot of Shewa, was deposed by TEWODROS II, he escaped in 1865 and returned to Shewa to assume the title of *negus* (king). On the death of Emperor Yohannes IV (r. 1872–89), he ascended to the Ethiopian throne, taking his crown name from Menilek I, legendary son of Solomon and the queen of Sheba. When Italy sought to make Ethiopia a protectorate, Menilek roundly defeated its forces at the Battle of ADWA (1896). In later years he expanded the empire, initiated modern educational programs, and built up the country's infrastructure.

© 2006 Encyclopædia Britannica, Inc.

the town of Menindee, they are part of the Darling River Conservation Scheme. The lakes are flooded through creeks linking them with the Darling River. The total capacity of the Menindee Lakes Storage Scheme is 2 million acre-ft (2.47 billion cubic-m). Menindee is an Aboriginal word meaning "egg yolk."

meninges \mə-'nin-jēz\ Three fibrous membranes that surround the brain and spinal cord to protect the central nervous system. The pia mater, a very thin membrane, adheres to the surface of the brain and spinal cord. The subarachnoid space, containing cerebrospinal fluid, separates the pia mater from a second membrane, the arachnoid. Around the brain, fine filaments connect these two membranes, which are believed to be impermeable to fluid. The third membrane, the dura mater, is strong, thick, and dense. It envelops the arachnoid, covers the inside of the skull, and surrounds and supports the large venous channels carrying blood from the brain. Several septa divide it and support different parts of the brain. In the spine, the dura mater and the arachnoid mater are separated by the subdural space; the arachnoid and pia mater are separated by the subarachnoid space. The extradural space (between the dura mater and the wall of the vertebral canal) is the site of epidural anesthesia (see anesthesiology).

meningitis \ˌme-nən-'jī-təs\ Inflammation of the meninges. Bacteria (including meningococcus, among others), often from infection elsewhere, produce the most dangerous forms. Symptoms develop rapidly: vomiting, then severe bursting headache, then stiff neck. Young children may have convulsions. The patient may die within hours. Pus in cerebrospinal fluid can block brain passages and spinal spaces, leading to life-threatening hydrocephalus. Speedy diagnosis (by lumbar puncture) and treatment (with antibiotics) can prevent brain damage and death. Viral meningitis usually has a short course and requires no therapy.

meningococcus \mə-ˌniŋ-gə-'kä-kəs\ *Neisseria meningitidis*, the bacterium that causes meningococcal meningitis in humans, the only natural hosts in which it causes disease. Meningococci are spherical, frequently occur in pairs, and are strongly gram-negative (see gram stain). They enter the nasal passage and may cause no symptoms (up to 30% of the population may harbour them between epidemics), or they may enter the bloodstream and produce the symptoms of meningitis.

Menninger \'men-iŋ-ər\ **family** U.S. physicians and pioneers in psychiatric treatment. Charles Frederick Menninger (1862–1953) was born in Tell City, Ind., and began practicing medicine in Topeka, Kan., in 1889. He saw the benefit of group medical practice after visiting the Mayo family's clinic in 1908. His son Karl (1893–1990) was born in Topeka and received psychiatric training in Boston. In 1919 the two founded the Menninger Diagnostic Clinic for the practice of general medicine and psychiatry. With Charles's youngest son, William (1899–1966), they established the Menninger Sanitarium and Psychopathic Hospital (1925). Their belief that the mentally ill should be treated, not merely institutionalized, attracted attention and other scientists, and they made significant strides in establishing psychiatry as a legitimate science. In 1931 the sanitarium became the first training facility for nurses specializing in psychiatric care, and in 1933 it opened a neuropsychiatric residency program for physicians. They formed the Menninger Foundation in 1941 and the Menninger School of Psychiatry in Topeka four years later.

Menno Simonsz. \'sī-mənz, 'sē-mȯns\ *or* **Menno Simons** (b. 1496, Witmarsum, Friesland—d. Jan. 31, 1561, near Lübeck, Holstein) Dutch Anabaptist leader. Born into a peasant family, he was ordained a Roman Catholic priest, but, doubting the doctrine of transubstantiation, he came under the influence of Lutheranism and withdrew from the church in 1536. Convinced that infant baptism was wrong and that only people of mature faith were eligible for membership in the church, he became a leader in the peaceful wing of the Anabaptist movement in 1537. Pronounced a heretic, he was in constant danger of arrest for the rest of his life but continued to organize Anabaptist groups. He wrote and printed many theological works, and his followers founded the Mennonite Church.

Menno Simons, engraving by Christopher van Sichem, 1605–08.
COURTESY OF THE MENNONITE LIBRARY AND ARCHIVES, NORTH NEWTON, KANSAS

Mennonite \'me-nə-ˌnīt\ Member of a Protestant church named for Menno Simonsz. They trace their origins to the Swiss Brethren (established 1525), nonconformists who rejected infant baptism and stressed the separation of church and state. Persecution scattered them across Europe; they found political freedom first in the Netherlands and northern Poland, and from there moved to Ukraine and Russia. They first emigrated to North America in 1663. Many Russian Mennonites emigrated to the U.S. Midwest and to Canada in the 1870s when they lost their exemption from Russian military service. Today Mennonites are found in many parts of the world, especially in North and South America. Their creed stresses the authority of the Scriptures, the example of the early church, and baptism as a confession of faith. They value simplicity of life, and many refuse to swear oaths or serve in the military. The various Mennonite groups include the strictly observant Amish and Hutterites as well as the more moderate Mennonite church.

Menominee \mə-'nä-mə-ˌnē\ North American Indian people who live mostly in northeastern Wisconsin, U.S., in a small portion of their traditional territory along the Menominee River at the present-day Wisconsin-Michigan border. Their name is derived from an Ojibwa word meaning "person of the wild rice." Their language is a member of the Algonquian language family. At the time of first contact, the Menominee lived in villages of dome-shaped houses and collected wild plants, fished, and hunted to obtain food. Originally organized into clans, their social organization changed as a result of the fur trade, when they scattered in mobile bands. In 1852 the U.S. government moved most of the tribe to a reservation in Wisconsin. Sporadic uprisings occurred into the early 20th century, and political opposition was renewed in the 1960s and '70s. There are about 8,000 enrolled members of the Menominee.

menopause Final cessation of menstruation, ending female fertility. It usually begins between ages 45 and 55. A gradual decline in function of the ovaries reduces estrogen production. Ovulation becomes irregular and gradually ceases. The length of the menstrual cycle and periods may vary; flow may lessen or increase. Adjustment of the endocrine system to estrogen reduction causes hot flashes, often at night, with a warm sensation, flushing, and sweating; other symptoms, such as irritability and headaches, may be related more to reactions to aging. Removal or destruction of the ovaries to treat disease causes artificial menopause, with similar but more sudden effects. Changes in hormone balance usually cause no physical or mental disturbances. However, the protective effect of estrogen against osteoporosis and atherosclerosis is lost, and risks of fracture and coronary heart disease increase.

menorah \mə-'nōr-ə\ Multibranched candelabra used by Jews during the festival of Hanukkah. It holds nine candles (or has nine receptacles for oil). Eight of the candles stand for the eight days of Hanukkah—one is lit the first day, two the second, and so on. The ninth candle, or *shammash* ("servant") light—usually set in the centre and raised above the others—is used to light the others. The menorah is an imitation of the seven-branched golden candelabra of the Tabernacle, which signified the seven days of creation. The menorah is also an ancient symbol of Jewish identity and the official symbol of the modern state of Israel.

Roman soldiers carrying the menorah from the Temple of Jerusalem, AD 70; detail of a relief on the Arch of Titus, Rome, AD 81.
ALINARI/ART RESOURCE, NEW YORK

Menotti \mə-'nä-tē**, Gian Carlo** (b. July 7, 1911, Cadegliano, Italy) Italian-born U.S. composer, librettist, and stage director. Having written an opera by age 10, he spent his early teens absorbing the repertoire at La Scala. Arturo Toscanini recommended study at the Curtis Institute; there he met Samuel Barber, who would become his lifelong companion. In 1939 he produced the radio opera *The Old Maid and the Thief*; *The Island God* (1942) was an unsuc-

© 2006 Encyclopædia Britannica, Inc.

cessful commission for the Metropolitan Opera. *The Medium* (1946) had a Broadway run, and *The Consul* (1950, Pulitzer Prize) was also successful. The highly popular *Amahl and the Night Visitors* (1951), for television, was followed by *The Saint of Bleecker Street* (1955, Pulitzer Prize). In 1958 he founded the Festival of Two Worlds in Spoleto, Italy; it enjoyed great success, and in 1977 he founded a New World counterpart in Charleston, S.C.

Menshevik \'men-shə-vik\ Member of the non-Leninist wing of the Russian Social-Democratic Workers' Party. The group evolved in 1903 when L. Martov called for a mass party modeled after western European groups, as opposed to Vladimir Ilich Lenin's plan to restrict the party to professional revolutionaries. When Lenin's followers obtained a majority on the party central committee, they called themselves Bolsheviks ("those of the majority"), and Martov and his group became the Mensheviks ("those of the minority"). The Mensheviks played active roles in the Russian Revolution of 1905 and in the St. Petersburg soviet, but they became divided over World War I and later by the Russian Revolution of 1917. They attempted to form a legal opposition party but in 1922 were permanently suppressed.

Menshikov \'myen-shi-kȯf**, Aleksandr (Danilovich)** (b. Nov. 16, 1673, Moscow, Russia—d. Nov. 23, 1729, Berezov, Siberia, Russian Empire) Russian soldier and administrator. In 1686 he became an orderly for Peter I and soon was the tsar's favourite. Menshikov led troops to victories in the Second Northern War, including the Battle of Poltava, after which he received the title of field marshal (1709). As an administrator from 1714, he was criticized for corrupt practices as he amassed power and wealth. After Peter's death in 1725, Menshikov succeeded in having his ally Catherine I proclaimed empress, making him the virtual ruler of Russia. After her death in 1727, he arranged to have his daughter marry the young Tsar Peter II, but his enemies turned Peter against him and forced Menshikov's exile to Siberia.

menstruation Periodic discharge from the vagina of blood, secretions, and shed mucous lining of the uterus (endometrium). The endometrium prepares to receive a fertilized egg by thickening and producing secretions. If the egg released by the ovary is not fertilized, the endometrium breaks down and is expelled by contractions of the uterus. The first menstruation (menarche) occurs after other changes of puberty, usually at 11–13 years of age, apparently triggered by the passing of a weight threshold. Bleeding may be irregular or heavy at first. In adult women, menstrual periods begin at an average interval of 28 days and last about five days; some variation among women and in the same woman is normal. Uterine contractions are felt as cramps. The amount of blood lost is usually less than 1.7 oz (50 ml). Menstruation ends with menopause. Menstrual disorders include dysmenorrhea (painful menstruation) and amenorrhea (no bleeding), heavy or light bleeding, and uterine bleeding. See also premenstrual syndrome.

mental disorder Any illness with a psychological origin, manifested either in symptoms of emotional distress or in abnormal behaviour. Most mental disorders can be broadly classified as either psychoses or neuroses (see neurosis; psychosis). Psychoses (e.g., schizophrenia and bipolar disorder) are major mental illnesses characterized by severe symptoms such as delusions, hallucinations, and an inability to evaluate reality in an objective manner. Neuroses are less severe and more treatable illnesses, including depression, anxiety, and paranoia as well as obsessive-compulsive disorders and post-traumatic stress disorders. Some mental disorders, such as Alzheimer disease, are clearly caused by organic disease of the brain, but the causes of most others are either unknown or not yet verified. Schizophrenia appears to be partly caused by inherited genetic factors. Some mood disorders, such as mania and depression, may be caused by imbalances of certain neurotransmitters in the brain; they are treatable by drugs that act to correct these imbalances (see psychopharmacology). Neuroses often appear to be caused by psychological factors such as emotional deprivation, frustration, or abuse during childhood, and they may be treated through psychotherapy. Certain neuroses, particularly the anxiety disorders known as phobias, may represent maladaptive responses built up into the human equivalent of conditioned reflexes.

mental hygiene Science of maintaining mental health and preventing disorders to help people function at their full mental potential. It includes all measures taken to promote and preserve mental health: rehabilitation of the mentally disturbed, prevention of mental illness, and aid in coping in a stressful world. Community mental health acknowledges the relation between mental health, population pressures, and social unrest. It also deals with social problems, from drug addiction to suicide prevention. Treatment of the mentally ill through the ages has ranged from neglect, ill treatment, and isolation to active treatment and integration into the community, often in response to crusading reformers. Prevention of mental illness includes prenatal care, child-abuse awareness programs, and counseling for crime victims. Treatment includes psychotherapy, drug therapy, and support groups. One of the most important efforts is public education to combat the stigma still attached to mental illness and encourage those affected to seek treatment.

mental retardation Subaverage intellectual ability that is present from birth or infancy and is manifested by abnormal development, learning difficulties, and problems in social adjustment. A standardized intelligence test is a common method of identification. Individuals with IQ scores of 53–70 are usually classified as mildly retarded and are able to learn academic and pre-vocational skills with some special education. Those with scores of 36–52 are classified as moderately retarded and are able to learn functional academic skills and undertake semiskilled work under supervised conditions. Those in the severe (21–35) and profound (below 21) ranges require progressively more supervision or full-time custodial care. Mental retardation can be caused by genetic disorders (such as Down's syndrome), infectious diseases (such as meningitis), metabolic disorders, poisoning from lead, radiation, or other toxic agents, injuries to the head, and malnutrition.

menthol Crystalline organic compound of the isoprenoid family. It has a strong, minty, cooling odour and taste. It is obtained from the oil of the Japanese mint or made synthetically and is used in cigarettes, cosmetics, chest rubs, cough drops, toothpastes, and flavourings. Of its two optical isomers (see optical activity; isomerism), only l-menthol has the desirable cooling effect.

Menuhin \'men-yə-wən**, Yehudi, Lord Menuhin of Stoke d'Abernon** (b. April 22, 1916, New York, N.Y., U.S.—d. March 12, 1999, Berlin, Ger.) U.S.-born British violinist and conductor. Raised in San Francisco, he made his debut at age seven. In 1927 he studied with George Enescu (1881–1955) in Paris; he returned to perform to tremendous acclaim in New York the same year and went on to astound audiences worldwide with his precocious depth and proficiency. From 1959 he lived in London, but he did not become a British citizen until 1985. He directed the Bath Festival (1958–68) and the Gstaad Festival from 1956. In 1958 he founded his own chamber orchestra. Often accompanied by his pianist sister, Hephzibah (1920–81), he also made recordings with the sitarist Ravi Shankar.

Menzies \'men-ˌzēz**, Sir Robert (Gordon)** (b. Dec. 20, 1894, Jeparit, Victoria. Austl.—d. May 16, 1978, Melbourne) Australian statesman and prime minister (1939–41, 1949–66). A successful lawyer, he served as Australia's attorney general (1934–39). Leader of the United Australia Party, he served as prime minister (1939–41). He organized the Liberal Party in 1944 and again became premier in 1949. In the 1950s he fostered industrial growth in Australia and immigration from Europe. He strengthened military ties with the U.S. and encouraged the ANZUS Pact and Australia's membership in the Southeast Asia Treaty Organization. He retired in 1966 after the longest ministry in Australian history.

mer \'mer\ Among the Cheremi and Udmurt peoples of Russia, a sacred grove where people of several villages gathered periodically to hold religious festivals and sacrifice animals to nature gods. The groves where the mer festivals were held were not fenced (see lud) and did not have permanent altars. Mer festivals were infrequent; five years or more might elapse between them.

mercantile agency Specialized organization that supplies information on the creditworthiness and financial strength of business firms. The first such agency, the Mercantile Agency, was founded in New York City in 1841. It provided information to businesses that were expanding nationally and were unable to assess the credit history of prospective customers in distant locations. It changed its name to R. G. Dun & Co. after 1859 and merged with the Bradstreet Co. in 1933 to form Dun & Bradstreet, Inc., the best-known mercantile agency. Mercantile agencies may provide information on all types of business firms or may limit their investigations to firms in a particular line of trade or a particular region. Most agencies provide both general and special reports. General reports, issued periodically on all firms investigated by the agency, assign a rat-

© 2006 Encyclopædia Britannica, Inc.

ing to the firm's financial statement and creditworthiness. Special reports containing more detailed information are issued to clients of the agency on request. See also CREDIT BUREAU.

mercantile law See BUSINESS LAW

mercantilism Economic theory and policy influential in Europe from the 16th to the 18th century that called for government regulation of a nation's economy in order to increase its power at the expense of rival nations. Though the theory existed earlier, the term was not coined until the 18th century; it was given currency by ADAM SMITH in his *Wealth of Nations* (1776). Mercantilism's emphasis on the importance of gold and silver holdings as a sign of a nation's wealth and power led to policies designed to obtain precious metals through trade by ensuring "favourable" trade balances (see BALANCE OF TRADE), meaning an excess of exports over imports, especially if a nation did not possess mines or have access to them. In a favourable trade balance, payments for the goods or services had to be made with gold or silver. Colonial possessions were to serve as markets for exports and as suppliers of raw materials to the mother country, a policy that created conflict between the European colonial powers and their colonies, in particular fanning resentment of Britain in the North American colonies and helping bring about the American Revolution. Mercantilism favoured a large population to supply labourers, purchasers of goods, and soldiers. Thrift and SAVING were emphasized as virtues because they made possible the creation of CAPITAL. Mercantilism provided a favourable climate for the early development of CAPITALISM but was later severely criticized, especially by advocates of LAISSEZ-FAIRE, who argued that all trade was beneficial and that strict government controls were counterproductive.

Mercator \mər-'kā-tər**, Gerardus** *orig.* **Gerard Kremer** (b. March 5, 1512, Rupelmonde, Flanders—d. Dec. 2, 1594, Duisburg, Duchy of Cleve) Flemish cartographer. He received a master's degree in 1532 from the University of Louvain (Belgium), where he settled. By 24 he was a skilled engraver, calligrapher, and scientific-instrument maker. He and his colleagues made Louvain a centre for construction of maps, globes (terrestrial and celestial), and astronomical instruments. He was appointed court cosmographer to Duke Wilhelm of Cleve in 1564, and in 1569 he perfected what has become known as the Mercator projection, in which parallels and meridians are rendered as straight lines spaced so as to produce at any point an accurate ratio of latitude to longitude. It permitted mariners to steer a course over long distances, plotting straight lines without continually adjusting compass readings. While the meridians are equally spaced parallel vertical lines, the lines of latitude are spaced farther and farther apart as their distance from the Equator increases; on world maps the projection greatly enlarges areas distant from the Equator.

mercenary \'mər-sᵊn-ˌer-ē\ Hired professional soldier who fights for any state or nation without regard to political principles. From the earliest days of organized warfare, governments supplemented their military forces with mercenaries. After the Hundred Years' War (1337–1453), Swiss soldiers were hired out all over Europe by their own cantonal governments and won a high reputation. Rulers of the German state of Hesse also hired out their soldiers, and Hessian troops fought for the British in the AMERICAN REVOLUTION. Since the late 18th century, most mercenaries have been individual soldiers of fortune.

Mercer, Johnny *orig.* **John Herndon Mercer** (b. Nov. 18, 1909, Savannah, Ga., U.S.—d. June 25, 1976, Bel Air, Calif.) U.S. songwriter. After moving to New York City in the late 1920s, Mercer began to write lyrics while supporting himself as an actor. He later joined PAUL WHITEMAN's orchestra as singer and master of ceremonies. In 1939 he joined BENNY GOODMAN's *Camel Caravan* radio show. In 1942 Mercer cofounded Capitol Records. On Broadway, he collaborated with HAROLD ARLEN on *St. Louis Woman* (1946) and *Saratoga* (1959) and also provided lyrics for *Seven Brides for Seven Brothers* (1954), *Li'l Abner* (1956), and *Foxy* (1964). His songs for films won four Academy Awards. He collaborated with composers such as HOAGY CARMICHAEL, HENRY MANCINI, JEROME KERN, and JIMMY VAN HEUSEN and is credited with more than 1,000 lyrics, including those for "Ac-cent-tchu-ate the Positive," "One for My Baby," "Autumn Leaves," and "Moon River."

mercerization \ˌmər-sə-rə-'zā-shən\ Chemical treatment applied to COTTON fibres or fabrics to make them permanently able to accept dyes and various chemical finishes more easily. The method, patented in 1850 by the English calico printer John Mercer, also gives cotton cloth increased TENSILE STRENGTH and greater absorptive properties. Higher-quality cotton goods are usually mercerized. The treatment consists of dipping the yarn or fibre in a solution of sodium HYDROXIDE and then treating the material with water or acid to neutralize the sodium hydroxide.

merchandising Element of MARKETING concerned especially with the sale of goods and services to customers. One aspect of merchandising is ADVERTISING, which aims to capture the interest of the segment of the population most likely to buy the product. Merchandising also involves product display; companies provide retailers with display and promotional materials and negotiate shelf space for their products. The development of sales strategies includes the determination of pricing, discounts, and special offers; the invention of sales pitches; and the identification of avenues for sales, including store-based RETAILING and alternative means such as DIRECT-MAIL MARKETING, telemarketing, commercial Web sites, VENDING MACHINES, and door-to-door sales.

Merchant, Ismail See James IVORY

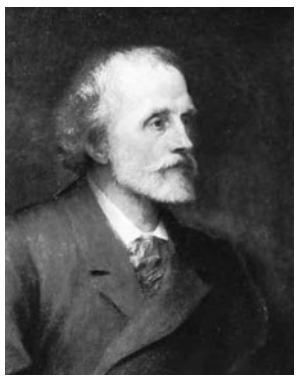
merchant marine Commercial ships of a nation, whether privately or publicly owned, and the personnel who operate such ships, as distinct from the personnel of naval vessels. Merchant ships are used to transport people, raw materials, and manufactured goods. Merchant fleets can be important economic assets for nations with limited natural resources or a small industrial base. By carrying the commerce of other nations on the seas, a merchant fleet contributes to its home nation's foreign-exchange earnings, promotes trade, and provides employment. The U.S. Merchant Marine Academy (founded 1943) is in Kings Point, N.Y.

Mercia \'mər-shə\ Ancient kingdom, central England. One of the Anglo-Saxon kingdoms of the Heptarchy, it comprised the border areas, corresponding to modern STAFFORDSHIRE, DERBYSHIRE, NOTTINGHAMSHIRE, and northern WEST MIDLANDS and WARWICKSHIRE. OFFA, who ruled from 757 to 796, created a single state from the River Humber to the English Channel. After Offa's death, Mercia declined, overshadowed by WESSEX. In 877 the Danes divided Mercia into English and Danish sections. After the reconquest of the Danish lands in the early 10th century, it came under the rule of Wessex.

Mercury In ROMAN RELIGION, the god of merchants, commonly identified with the Greek messenger of the gods, HERMES. His temple on Rome's Aventine Hill was dedicated in 495 BC. The goddess Maia was identified as his mother, and the two were honoured in a festival on May 15. Mercury is sometimes depicted holding a purse, symbolic of his business functions. More often he is given the attributes of Hermes and portrayed wearing winged sandals or a winged cap and carrying a CADUCEUS.

mercury *or* **quicksilver** Metallic chemical ELEMENT, chemical symbol Hg, atomic number 80. Mercury is the only elemental METAL that is liquid at ordinary temperatures, with a freezing point of −38 °F (−39 °C) and a boiling point of 674 °F (356.9 °C). Silvery white, dense, toxic (see MERCURY POISONING), and a good conductor of electricity, mercury is occasionally found free in nature but usually occurs as the red sulfide ore, CINNABAR (HgS). It has many uses—in dental and industrial AMALGAMS, as a CATALYST, in electrical and measuring apparatus and instruments (e.g., thermometers), as the CATHODE in electrolytic cells, in mercury-vapour lamps, and as a coolant and neutron absorber in NUCLEAR POWER plants. Many of mercury's compounds, in which it has VALENCE 1 or 2, are pigments, pesticides, and medicinals. It is a dangerous pollutant because it concentrates in animal tissues in increasing amounts up the food chain.

Mercury Innermost PLANET of the SOLAR SYSTEM. Its average distance from the Sun is about 36 million mi (58 million km), but its highly elliptical orbit carries it 7.5 million mi (12 million km) nearer to and farther from the Sun. It is the second-smallest major planet (after Pluto), having a diameter of about 3,030 mi (4,880 km) and a mass about one-eighteenth of Earth's. With the shortest period of revolution (only 88 Earth days) and the highest average orbital speed (30 mi/second, or 48 km/second) of any planet, it is aptly named after the fleet-footed Roman messenger god. It spins very slowly, making one complete rotation relative to the stars every 59 Earth days, while its solar day (from one sunrise to the next) is 176 Earth days, owing to its revolution around the Sun. Its surface is heavily cratered. Its most impressive feature is perhaps the 800-mi (1,300-km) Caloris Basin, formed by a huge METEORITE impact. Mercury also has steep cliffs that extend for hundreds of miles. The discovery of a magnetic field in its vicinity suggests it has a large iron core, which would account for a mean density almost as high as Earth's. Its atmosphere is



© 2006 Encyclopædia Britannica, Inc.

negligible; its surface gravity, about one-third that of Earth's, holds an exceedingly tenuous layer of gases. Temperatures at its surface change dramatically, ranging from a high that can exceed 800 °F (425 °C) on the sunward side to a low of about −290 °F (−180 °C) at the end of its night.

Mercury First series of U.S. manned spaceflights (1961–63), which began about three weeks after YURY A. GAGARIN became the first human in space. In May 1961 ALAN B. SHEPARD rode the first Mercury space capsule, Freedom 7, on a 15-minute, 302-mi (486-km) suborbital flight, attaining a maximum altitude of 116 mi (186 km). The first U.S. manned flight in orbit was that of the Friendship 7, carrying JOHN H. GLENN, JR., in February 1962; it completed three orbits. The last Mercury flight, Faith 7, launched in May 1963, was the longest, making 22 orbits in about 34 hours.

mercury poisoning Harmful effects of MERCURY compounds. Manufacture of paints, various household items, and pesticides uses mercury; the finished product and the waste products released into air and water may contain mercury. The aquatic FOOD CHAIN can concentrate organic mercury compounds in fish and seafood, which, if eaten by humans, can affect the central NERVOUS SYSTEM, impairing muscle, vision, and cerebral function, leading to PARALYSIS and sometimes death (see MINAMATA DISEASE). Acute mercury poisoning causes severe digestive-tract inflammation. Mercury accumulates in the kidneys, causing UREMIA and death. Chronic poisoning, from occupational inhalation or skin absorption, causes metallic taste, oral inflammation, blue gum line, extremity pain and tremor, weight loss, and mental changes (depression and withdrawal). Drugs containing mercury can cause sensitivity reactions, sometimes fatal. In young children, acrodynia (pink disease) is probably caused by an organic mercury compound in house paints.

Meredith, George (b. Feb. 12, 1828, Portsmouth, Hampshire, Eng.—d. May 18, 1909, Box Hill, Surrey) English novelist and poet. Though ostensibly launched on a law career at age 18, he concentrated instead on writing poems and articles and making translations. Because they brought in little money, he turned to writing prose. The novel *The Ordeal of Richard Feverel* (1859) is typical of his best work, rich in allusion, metaphor, lyrical prose, witty dialogue, and psychological insight. It failed to make him wealthy, and he was forced to begin reading manuscripts for a publisher. Writing in his spare time, he produced a comedy, *Evan Harrington* (1860), and a volume of poems, *Modern Love* (1862). He finally won critical and popular acclaim with the novels *The Egoist* (1879) and *Diana of the Crossways* (1885). His works are noted for their use of interior monologue and their treatment of women as equals of men.

George Meredith, detail of an oil painting by G.F. Watts, 1893; in the National Portrait Gallery, London.
COURTESY OF THE NATIONAL PORTRAIT GALLERY, LONDON

Meredith, James (Howard) (b. June 25, 1933, Kosciusko, Miss., U.S.) U.S. civil rights leader. He grew up in poverty in Mississippi, the most racially segregated state in the U.S. In 1961 he applied for admission to the all-white University of Mississippi. He won a legal battle to be admitted, but federal troops and Justice Department officials had to be brought in to enforce the court order. While participating in a voter-registration drive after his graduation from "Ole Miss," he was shot and wounded by a white supremacist.

merengue \mə-'reŋ-gā\ Couple dance from the Dominican Republic or Haiti, danced throughout Latin America. Originally a folk dance, it has become a ballroom dance, where it is danced with a limping step, the weight always on the same foot. Varieties include the jaleo and juangomero. Dominican merengue music became widely popular in the late 20th century.

mereology \ˌmir-ē-'ä-lə-jē\ Branch of LOGIC, founded by STANISŁAW LEŚNIEWSKI, that studies class expressions and the relations between parts and wholes. It rejects the hierarchy of sets generated in SET THEORY through the member-of relation and instead proposes a part-whole relationship. It has attracted philosophers of logic and mathematics who are nominalists (see UNIVERSAL), those who suspect set theory of being inherently Platonistic, and those who are otherwise suspicious of the complex entities proposed by, and the complicated assumptions needed for, set theory.

merganser *or* **fish duck** Any species of the DIVING DUCK genus *Mergus*. Essentially freshwater birds, they are classified as a sea duck (tribe Mergini). Mergansers have a long body and a narrow, serrated, hooked bill for catching fish. The males of all but the common merganser, or goosander (*M. merganser*), are crested. The common merganser, the hooded merganser (*M. cucullatus*), the red-breasted merganser (*M. serrator*), and the smew (*M. albellus*), a small, compact merganser with a short bill, live in northern regions; the only southern species is the Brazilian merganser (*M. octosetaceus*). Mergansers are called trash ducks because their flesh is rank. See also SHELDUCK.

Mergenthaler \'mər-gən-ˌthä-lər**, Ottmar** (b. May 11, 1854, Hachtel, Württemberg—d. Oct. 28, 1899, Baltimore, Md., U.S.) German-U.S. inventor. He immigrated to the U.S. in 1872. While working in a Baltimore machine shop he began experimenting with type molds, and in 1884 he patented the LINOTYPE typesetting machine. The reduced costs achieved by thus speeding up the typesetting process led to a dramatic expansion of all kinds of publishing.

merger Combination of two or more independent business corporations into a single enterprise, usually involving the absorption of one or more firms by a dominant firm. The dominant firm may purchase the other firm's assets with cash or SECURITIES, purchase the other firm's STOCK, or issue its own stock to the other firm's stockholders in exchange for their shares in the acquired firm (thus acquiring the other company's assets and liabilities). In horizontal mergers, both firms produce the same commodity or service for the same market. In vertical mergers, a firm acquires either a supplier or a customer. If the merged business is not related to that of the acquiring firm, the new corporation is called a conglomerate. The reasons for mergers are various: the acquiring firm may seek to eliminate a competitor, to increase its efficiency, to diversify its products, services, and markets, or to reduce its taxes.

Mergui Archipelago \mər-'gwē\ Group of more than 200 islands in the Andaman Sea off the coast of southeastern Myanmar. The largest island is Mali Kyun (Tavoy Island) at its northern end. Other major islands in the group include Kadan (King), Thayawthadangyi (Elphinstone), Daung (Ross), Saganthit (Sellore), Bentinck, Letsok-aw (Domel), Kanmaw (Kisseraing), Lanbi (Sullivan's), and Zadetkyi (St. Matthew's). Mountainous and jungle-covered, the islands are inhabited chiefly by the Selungs.

Mérida City (pop., 2000: 660,884), capital of YUCATÁN state, southeastern Mexico. It lies near the northwestern tip of the YUCATÁN PENINSULA, south of Progreso; its port is on the Gulf of Mexico. It was founded in 1542 on the site of the ancient MAYA city of T'ho. It has numerous colonial buildings and a 16th-century cathedral. Yucatán University and the Regional Technical Institute of Mérida are located there. It serves as a tourist base for trips to nearby Maya cities, including CHICHÉN ITZÁ, Dzibilchaltún, UXMAL, and Kabáh.

Mérida \'mā-rē-thä\ *ancient* **Emerita Augusta** Town (pop., 2001: 50,271), capital of the autonomous community of EXTREMADURA, western Spain. Situated on the northern bank of the Guadiana River, it was founded by the Romans in 25 BC. It served as the capital of the province of Lusitania and became one of the most important towns in Iberia. Occupied in AD 713 by the Moors, it was recaptured in 1228 by Alfonso IX of Leon, who granted it to the Knights of Santiago. It is known for its Roman ruins, including a bridge, an amphitheatre, and an aqueduct. The modern town's economy is based on agricultural trade and tourism.

Mérimée \mā-rē-'mā**, Prosper** (b. Sept. 28, 1803, Paris, France—d. Sept. 23, 1870, Cannes) French short-story writer and dramatist. In youth a student of languages and literatures, he wrote his first play, *Cromwell* (1922), at age 19. His passions were mysticism, history, and the unusual. His stories, often mysteries, were inspired mainly by Spanish and Russian sources, notably ALEKSANDR PUSHKIN; they include *Mateo Falcone* (1829), the collection *Mosaïque* (1833), and the novellas *Colomba* (1840) and *Carmen* (1845), the basis of GEORGES BIZET's opera. He also wrote works of history and archaeology, historical fiction, and literary criticism and carried on correspondences that were published posthumously. He became a senator in 1853.

Merino Breed of medium-sized SHEEP originating in Spain that has become prominent worldwide. It has a white face, white legs, and crimped fine-wool fleece. Known as early as the 12th century, it may have been a Moorish importation. Well adapted to semiarid climates and to nomadic pasturing, it has served as foundation stock for many sheep breeds and strains.

meristem \'mer-ə-ˌstem\ In plants, region of cells capable of division and growth. Meristems are classified by location as apical, or primary (at root and shoot tips), lateral, or secondary (in the vascular CAMBIUM and cork cambium), or intercalary (at internodes, stem regions between the places at which leaves attach, and at leaf bases, especially in certain monocots, e.g., grasses). Apical meristems give rise to the primary plant body. Lateral meristems provide increase in stem girth. Injured tissues can convert other cells to new meristem for wound healing.

Meristem
J.M. LANGHAM

Merkabah *or* **Merkava** \ˌmer-kä-'vä\ Throne or chariot of God, as described by EZEKIEL. It became an object of visionary contemplation for Jewish mystics in Palestine in the 1st century AD; in the 7th–11th century, Merkabah mysticism was centered in BABYLONIA. Merkabah mystics courted ecstatic visions that involved a dangerous ascent through celestial hierarchies to the throne of God. Hostile angels guarded the gates to the seven "heavenly dwellings," and a successful journey required magical formulas. The TALMUD warns that of four men who engaged in Merkabah, only one had a true vision; of the others, one died, one went mad, and one became an apostate.

Merkel, Angela *orig.* **Angela Dorothea Kasner** (b. July 17, 1954, Hamburg, W.Ger.) German politician and prime minister (2005–). Merkel, who grew up in East Germany, earned a doctorate in physics at the University of Leipzig (1978) and later settled in East Berlin, where she worked as a quantum chemist. In 1990, shortly before Germany's reunification, she joined the Christian Democratic Union (CDU). Elected as a Bundestag deputy later that year, she became the protégé of German Chancellor Helmut Kohl, who appointed her to several ministerial positions. In 1999 a finance scandal hit the CDU, and Merkel drew attention for her criticism of Kohl. The following year she was elected CDU leader. In 2005 the CDU and its sister party, the Christian Social Union, won the general election but failed to capture a majority. A deal was reached that gave Merkel the chancellorship in a coalition government. She was sworn in on Nov. 22, 2005, becoming the first woman to hold the office.

Merleau-Ponty \mer-lō-pōⁿ-'tē**, Maurice** (b. March 14, 1908, Rochefort, France—d. May 4, 1961, Paris) French philosopher. With JEAN-PAUL SARTRE and SIMONE DE BEAUVOIR he founded the journal *Les Temps Modernes* in 1945. From 1949 he taught at the Sorbonne. He was the leading exponent of PHENOMENOLOGY in France. Though greatly influenced by EDMUND HUSSERL, he rejected Husserl's theory of our knowledge of other persons, grounding his own view instead in bodily behaviour and perception. He defended Soviet communism until the Korean War, when he became disillusioned.

Merlin Magician and wise man in ARTHURIAN LEGEND. In GEOFFREY OF MONMOUTH's *History of the Kings of England*, Merlin was an adviser to King Arthur, with magical powers that recalled his Celtic origins. Later narratives made him a prophet of the GRAIL and gave him credit for the idea of the Round Table. In SIR THOMAS MALORY's *Morte Darthur* he brought Arthur to the throne and served as his mentor throughout his reign. His downfall was linked to his infatuation for an enchantress, who imprisoned him after learning the magic arts from him.

merlin *or* **pigeon hawk** Small blue-gray FALCON (*Falco columbarius*, family Falconidae), with a narrowly white-banded tail, found at high latitudes in Canada, the western U.S. south to Colorado, the British Isles, Scandinavia, and Iceland. Most migrate to just south of the breeding range, but some go as far as northern South America. The merlin inhabits wet, open country or conifer and birch woods. It usually lays its eggs on the ground in bushes, but may occupy an old rook or magpie nest in a tree. An aggressive hunter, it was once much used in FALCONRY.

Merlin (*Falco columbarius*).
ERIC HOSKING

Merman, Ethel *orig.* **Ethel Agnes Zimmerman** (b. Jan. 16, 1909, Astoria, N.Y., U.S.—d. Feb. 15, 1984, New York, N.Y.) U.S. singer and actress. Merman, who had never taken voice lessons, worked as a secretary before her first professional singing engagement in 1929. She made her stage debut in George and Ira Gershwin's *Girl Crazy* (1930) (see GEORGE GERSHWIN; IRA GERSHWIN). Her brassy, ebullient style and powerful voice made her a favoured performer for IRVING BERLIN, COLE PORTER, and others. In the mid-1930s Merman made her first Hollywood appearance, and she later starred on her own radio show. Her many Broadway successes include *Anything Goes* (1934), *Red, Hot and Blue* (1936), *Annie Get Your Gun* (1946), *Call Me Madam* (1950), and *Gypsy* (1959).

Meroë \'mer-ō-ˌwē\ City, ancient KUSH, northeastern Africa. Situated on the eastern bank of the NILE RIVER, north of modern Kabūshiyyah, Sudan, it was the southern administrative centre for the kingdom of Kush, beginning c. 750 BC. After the sack of Napata (c. 590), it became the capital of the kingdom. It included the region between the Nile and Atbara rivers, where the Meroitic language developed. It survived a Roman invasion but fell to Aksumite armies in the 4th century AD. The ruins of its temples and palaces still exist near Kabūshiyyah.

Merovingian \ˌmer-ə-'vin-jən\ **art** Visual arts produced under the MEROVINGIAN DYNASTY of the 5th–8th centuries AD. They consisted mainly of small-scale metalwork, little of which has survived, and several important manuscripts. The style blends Roman Classical style with native Germanic-Frankish traditions, which favoured abstraction and geometric patterning. The human figure was rarely attempted; artists were concerned primarily with surface design. Though modest, Merovingian art was influential long after the end of the dynasty.

Merovingian dynasty (476–750) Frankish dynasty considered the first French royal house. It was named for Merovech (fl. c. 450), whose son Childeric I (d. 482?) ruled a tribe of Salian FRANKS from his capital at Tournai. His son, CLOVIS I, united nearly all of Gaul in the late 5th century except Burgundy and present-day Provence. On his death the realm was divided among his sons, but by 558 it was united under his last surviving son, CHLOTAR I. The pattern of dividing and then reuniting the realm continued for generations. After the reign of DAGOBERT I (623–639), the authority of the Merovingian kings declined, and real power gradually came to rest in the hands of the mayors of the palace. In 751 the last Merovingian king, Childeric III, was deposed by PIPPIN III, the first of the CAROLINGIAN DYNASTY. See also BRUNHILD; CHILDEBERT II; CHILPERIC I; FREDEGUND; SIGEBERT I.

Merrick, David *orig.* **David Margulois** (b. Nov. 27, 1912, St. Louis, Mo., U.S.—d. April 25, 2000, London, Eng.) U.S. theatrical producer. He practiced law until 1949, when he became a producer in New York City. His first independent production, *Clutterbuck* (1949), was followed over the next 40 years by more than 85 other Broadway shows, including *Look Back in Anger* (1957), *The Entertainer* (1958), *Gypsy* (1959), *Oliver!* (1963), *Hello, Dolly!* (1964), and *42nd Street* (1980). Many of his productions were critical and commercial successes, and he was known for his skillful use of publicity.

Merrick, Joseph See ELEPHANT MAN

Merrill, Charles E(dward) (b. Oct. 19, 1885, Green Cove Springs, Fla., U.S.—d. Oct. 6, 1956, Southampton, N.Y.) U.S. investment banker. He held a series of jobs before joining a Wall Street firm in 1911. In 1914 he cofounded the investment-banking firm Merrill, Lynch & Co., which soon became the broker for some of the largest chain-store SECURITIES, including S.S. Kresge Co. and J.C. Penney Co. He helped create Safeway Stores in 1926 and founded *Family Circle* magazine six years later. Foreseeing the crash of 1929, he advised many of his clients to lighten their stock holdings. In the 1930s the firm focused on underwriting and invest-

© 2006 Encyclopædia Britannica, Inc.

ment banking, but in 1940 it returned to brokerage. The company (now Merrill Lynch, Pierce, Fenner & Smith), which had 115 offices in the U.S. at the time of Merrill's death, is today among the largest retail brokerage houses in the U.S. He was the father of poet James Merrill.

Merrill, James (Ingram) (b. March 3, 1926, New York, N.Y., U.S.—d. Feb. 6, 1995, Tucson, Ariz.) U.S. poet. Son of a founder of the investment firm Merrill Lynch, he attended Amherst College. Inherited wealth enabled him to devote his life to poetry. His lyric and epic poems are known for their fine craftsmanship, erudition, and wit. Many of his later works were stimulated by sessions with a Ouija board. His collections include *Nights and Days* (1966), the trilogy of *Divine Comedies* (1976, Pulitzer Prize), *Mirabell: Books of Number* (1978), and *Scripts for the Pageant* (1980), published together in *The Changing Light at Sandover* (1982). *A Different Person*, his memoir, was published in 1993. His last book of poetry, *A Scattering of Salts*, was published posthumously in 1995.

Merrimack River River, northeastern U.S. Rising in the White Mountains of central New Hampshire, it flows south into Massachusetts, then turns northeast and empties into the Atlantic Ocean after a total course of 110 mi (177 km). The main cities along the river include Concord, Manchester, and Nashua, N.H., and Lowell, Lawrence, and Haverhill, Mass.; they used the river to power their textile mills in the 19th century.

Mersey, River River, northwestern England. It flows west through the southern suburbs of Manchester and is joined by the Irwell in its canalized form as the Manchester Ship Canal. The Mersey is itself modified by the canal as far as Warrington, where it becomes tidal. At Runcorn it is joined by the Weaver, and it forms the Mersey Estuary, the harbour of Liverpool. It enters the Irish Sea after a course of 70 mi (110 km).

Mersey \'mər-zē\ **River** River, northern Tasmania, Australia. Fed by the Dasher and Fisher rivers, the Mersey flows 91 mi (146 km) north, east, and again north to enter an estuary at Latrobe and then empty into Bass Strait at Devonport. The stream cuts a gorge up to 2,000 ft (600 m) deep; its water is harnessed there for hydroelectric power.

Merseyside \'mər-zē-ˌsīd\ Metropolitan county (pop., 2001: 1,362,034), northwestern England. Located on the estuary of the River Mersey, it comprises five metropolitan boroughs: Knowsley, St. Helens, Sefton, Wirral, and the city of Liverpool. The areas to the north of the Mersey, including Liverpool, form part of the historic county of Lancashire, while the borough of Wirral to the south belongs to the historic county of Cheshire. In 1986 it lost its administrative functions, which it held from 1974, and it is now a geographic and ceremonial county without administrative authority. During the 17th century many ships sailing from Liverpool, its main harbour, were engaged in the West Indies slave trade. In the 19th century the area benefited from U.S. cotton imports. Merseyside residents possess a distinctive local dialect, "scouse," that provides the region with a strong identity. It was bombed heavily during World War II. It is famous for its contributions to national popular culture, from the Beatles to its football teams and its noted golf links.

Merton, Robert K(ing) *orig.* **Meyer R. Schkolnick** (b. July 4, 1910, Philadelphia, Pa., U.S.—d. Feb. 23, 2003, New York, N.Y.) U.S. sociologist. After receiving a Ph.D. from Harvard University in 1936, Merton taught there and at Tulane University before moving to Columbia University, where he was a professor from 1941 to 1979. His diverse interests included deviant behaviour, the sociology of science, and mass communications, and he generally advanced a functionalist approach to the study of society. He was awarded a National Medal of Science in 1994. Among his writings are *Mass Persuasion* (1946), *Social Theory and Social Structure* (1949), *On the Shoulders of Giants* (1965), and *The Sociology of Science* (1973). See also bureaucracy; functionalism.

Merton, Thomas *later* **Father M. Louis** (b. Jan. 31, 1915, Prades, France—d. Dec. 10, 1968, Bangkok, Thai.) U.S. monk and Roman Catholic writer. Educated in England, France, and the U.S., Merton taught English at Columbia University before entering a Trappist order in Kentucky. In 1949 he was ordained a priest. His early works, on spiritual themes, include poetry collections; the autobiographical *Seven Storey Mountain* (1948), which brought him international fame and led many readers to the monastic life; and *The Waters of Siloe* (1949), a history of the Trappists. In the 1960s his writings tended toward social criticism, Eastern philosophy, and mysticism. He was accidentally electrocuted at a monastic convention in Thailand.

Merv Ancient city, Central Asia. Lying near the modern town of Mary (formerly Merv) in Turkmenistan, it is mentioned in ancient Persian texts as Mouru and in cuneiform inscriptions as Margu and was the seat of a satrapy (province) of the Persian Achaemenian dynasty. Under the Arabs in the 7th century AD, it was rebuilt and served as a base for Muslim expansion into Central Asia. A great centre of Islamic learning under the caliphs of the ʿAbbāsid dynasty, it reached its zenith under the Seljuq sultan Sanjar (r. 1118–57). It was destroyed by the Mongols in 1221 and was rebuilt in the 15th century. It was occupied by the Russian Empire in 1884.

Merwin, W(illiam) S(tanley) (b. Sept. 30, 1927, New York, N.Y., U.S.) U.S. poet and translator. He attended Princeton University and earned critical acclaim with his first poetry collection, *A Mask for Janus* (1952). He became known for the spare style of his poetry, which often expresses concerns about the natural environment and our relation to it. His volumes include *The Lice* (1967), *The Carrier of Ladders* (1970, Pulitzer Prize), and *Travels* (1993). His translations, often collaborations with others, range from plays of Euripides and Federico García Lorca to epics to ancient and modern works from Chinese, Sanskrit, and Japanese.

Mesa \'mā-sə\ City (pop., 2000: 396,375), south-central Arizona, U.S., located near Phoenix. It was settled in 1878 by Mormons who used ancient Hohokam Indian canals for irrigation (see Hohokam culture); it was incorporated as a town in 1883 and as a city in 1930. A Salt River reclamation project enabled the community to grow fruit and raise other crops. The city grew rapidly through industrialization after World War II. It is the site of Mesa Community College and Mesa Southwest Museum.

mesa \'mā-sə\ (Spanish: "table") Flat-topped tableland with one or more steep sides, common in the Colorado Plateau regions of the U.S.; a butte is similar but smaller. Both are formed by erosion; during denudation, or downcutting and stripping, areas of harder rock in a plateau act as flat protective caps for portions of underlying land situated between such places as stream valleys, where erosion is especially active. This results in a table mountain (mesa) or fortress hill.

Mesa Verde \'mā-sə-'ver-dē\ **National Park** National park, southwestern Colorado, U.S. It was established in 1906 to preserve prehistoric Indian cliff dwellings. Occupying a high tableland area of 52,085 acres (21,078 hectares), it contains hundreds of pueblo ruins up to 13 centuries old. The most striking are multistoried apartments built under overhanging cliffs. Cliff Palace, the largest, was excavated in 1909 and contains hundreds of rooms, including kivas, the circular ceremonial chambers of the Pueblo Indians.

mescaline \'mes-kə-lin\ Hallucinogen, the active principle in the flowering heads of the peyote cactus. An alkaloid related to epinephrine and norepinephrine and first isolated in 1896, mescaline is usually extracted from the peyote and purified, but can also be synthesized. When it is taken as a drug, its hallucinogenic effects begin in two to three hours and may last over 12 hours; the hallucinations vary greatly among individuals and from one time to the next, but they are usually visual rather than auditory. Side effects include nausea and vomiting.

Meselson \'me-səl-sən**, Matthew Stanley** (b. May 24, 1930, Denver, Colo., U.S.) U.S. molecular biologist. He received his Ph.D. from California Institute of Technology; from 1964 he taught at Harvard University. He conducted research with Franklin Stahl that showed that, during cell division, DNA splits into its two component strands, each of which acquires a newly synthesized partner strand before passing into one of the daughter cells.

Meshed See Mashhad

Meslamtaea \ˌmes-lam-'tē-ə\ In Mesopotamian religion, the god of the city of Cuthah in Akkad. The name of his temple, Emeslam or Meslam ("luxuriant *mesu* tree"), may indicate that he was originally a tree god. Later he was identified as the ruler of the netherworld and the spouse of its queen, Ereshkigal. He was the son of Enlil, god of the atmosphere, and Ninlil, goddess of grain, and he often appears in hymns as a warrior. He sometimes visited terrible plagues on his people and their herds.

Mesmer \'mez-mər**, Franz Anton** (b. May 23, 1734, Iznang, Swabia—d. March 5, 1815, Meersburg) German physician. After studying medicine at the University of Vienna, he developed his theory of "animal magnetism," which held that an invisible fluid in the body acted according to the laws of magnetism and that disease was caused by obstacles to the free circulation of this fluid. In Mesmer's view, harmony

© 2006 Encyclopædia Britannica, Inc.

could be restored by inducing "crises" (trance states often ending in delirium or convulsions). In the 1770s he carried out dramatic demonstrations of his ability to "mesmerize" his patients using magnetized objects. Accused by Viennese physicians of fraud, he left Austria and settled in Paris (1778), where he also came under fire from the medical establishment. Though his theories were eventually discredited, his ability to induce trance states in his patients made him the forerunner of the modern use of HYPNOSIS.

Mesoamerican civilization Complex of aboriginal cultures that developed in parts of Mexico and Central America before the Spanish conquest in the 16th century. This civilization and the ANDEAN CIVILIZATION in South America constituted a New World counterpart to those of ancient Egypt, Mesopotamia, and China. Humans have been present in Mesoamerica from as early as 21,000 BC; a shift from hunting and gathering to agriculture, which began c. 7000 BC as the climate warmed with the end of the Ice Age, was completed by c. 1500 BC. The earliest great Mesoamerican civilization, the OLMEC, dates to c. 1150 BC. The Middle Formative period (900–300 BC) was a time of increased cultural regionalism and the rise of the ZAPOTEC people. Civilizations of the Late Formative and Classic periods (lasting until c. AD 900) include the MAYA and the civilization centred at TEOTIHUACÁN; later societies include the TOLTEC and the AZTEC. See also CHICHÉN ITZÁ; MIXTEC; MONTE ALBÁN; NAHUA; NAHUATL LANGUAGE; TENOCHTITLÁN; TIKAL.

Mesoamerican religions Religions of the pre-Columbian cultures of Mexico and Central America, notably the OLMEC, MAYA, TOLTEC, and AZTEC. All religions of Mesoamerica were polytheistic. The gods had to be constantly propitiated with offerings and sacrifices. The religions also shared a belief in a multilevel universe that had gone through five creations and four destructions by the time of the Spanish conquest. Mesoamerican religions heavily emphasized the astral bodies, particularly the sun, the moon, and Venus, and the observations of their movements by astronomer-priests were extraordinarily detailed and accurate. The Aztecs approached the supernatural through a complex calendar of ceremonies that included songs, dances, acts of self-mortification, and human sacrifices performed by a professional priesthood, in the belief that the welfare of the universe depended on offerings of blood and hearts as nourishment for the sun. The Mayan religion likewise called for human sacrifices, though on a smaller scale. Information on the astronomical calculations, divination, and ritual of the Mayan priests has been gathered from the MAYA CODICES. See also MESOAMERICAN CIVILIZATION.

Mesolithic \ˌme-zə-'li-thik\ **Period** *or* **Middle Stone Age** Ancient technological and cultural stage (c. 8000–2700 BC) between the PALEOLITHIC and NEOLITHIC periods in northwestern Europe. Mesolithic hunters, using a tool kit of chipped and polished stone together with bone, antler, and wooden tools, achieved a greater efficiency than their predecessors and were able to exploit a wider range of animal and vegetable food sources. Immigrant Neolithic farmers probably absorbed many indigenous Mesolithic hunters and fishers. There is no direct counterpart to the Mesolithic outside Europe, and the term is no longer used to reflect a hypothetical worldwide sequence of SOCIOCULTURAL EVOLUTION.

meson \'me-ˌzän\ Any member of a family of SUBATOMIC PARTICLES composed of a QUARK and an antiquark (see ANTIMATTER). Mesons are sensitive to the STRONG FORCE, have integral SPIN, and vary widely in MASS. Though unstable, many mesons last a few billionths of a second, long enough to be observed with particle detectors. They are readily produced in the collisions of high-energy subatomic particles (e.g., in COSMIC RAYS).

Mesopotamia Region between the TIGRIS and EUPHRATES rivers in the Middle East, constituting the greater part of modern Iraq. The region's location and fertility gave rise to settlements from c. 10,000 BC, and it became the cradle of some of the world's earliest civilizations and the birthplace of writing. It was first settled by the Sumerians, who were succeeded by the Akkadians and later by the Babylonians. Successive peoples came to dominate the region until the rise of the Persian Achaemenian dynasty in the 6th century BC. The Achaemenids were overthrown by Alexander the Great in the early 4th century BC, and Mesopotamia was ruled by the SELEUCID DYNASTY from c. 312 BC until the mid-2nd century BC, when it became part of the Parthian empire. In the 7th century AD the region was conquered by Muslim Arabs. The region's importance declined after the Mongol invasion in 1258. Rule by the Ottoman Empire over most of the region began in the 16th century. The area became a British mandate in 1920; the following year Iraq was established there.

Mesopotamian religions \ˌme-sə-pə-'tā-mē-ən\ Religious beliefs and practices of the Sumerians and Akkadians, and later of their successors, the Babylonians and Assyrians, who inhabited ancient MESOPOTAMIA. The deities of SUMER were usually associated with aspects of nature, such as fertility of the fields and livestock. The gods of ASSYRIA and BABYLONIA, rather than displacing those of Sumer and AKKAD, were gradually assimilated into the older system. Among the most important of the many Mesopotamian gods were ANU, the god of heaven; Enki, the god of water; and Enlil, the earth god. Deities were often associated with particular cities. Astral deities such as SHAMASH and SIN were also worshiped. The Mesopotamians were skilled astrologers who studied the movements of the heavenly bodies. Priests also determined the will of the gods through the observation of omens, especially by reading the entrails of sacrificed animals. The king functioned as the chief priest, presiding at the new-year festival held in spring, when the kingship was renewed and the triumph of the deity over the powers of chaos was celebrated.

Mesozoic \ˌme-zə-'zō-ik\ **Era** Second of the Earth's three major geologic eras and the interval during which the continental landmasses as known today were separated from the supercontinents LAURASIA and GONDWANA by CONTINENTAL DRIFT. It lasted from c. 248 to c. 65 million years ago and includes the TRIASSIC, JURASSIC, and CRETACEOUS periods. The Mesozoic saw the evolution of widely diversified and advanced flora and fauna, quite different from those that had developed earlier during the PALEOZOIC ERA or that would develop later during the CENOZOIC ERA.

mesquite \mə-'skēt\ Any of the spiny, deep-rooted shrubs or small trees that make up the genus *Prosopis* of the pea family (see LEGUME). Mesquites form extensive thickets in areas from South America to the southwestern U.S. Two races occur: one of tall trees (50 ft [15 m]), the other low and far-reaching, called running mesquite. Water-seeking roots grow as deep as 70 ft (20 m). Stems bear compound olive-green to white hairy leaves, then dense, cream-coloured CATKINS of flowers, followed by clusters of long, narrow, pale yellow beans. In warmer parts of the U.S., mesquites are considered pests and are eradicated. Cattle eat the beans, which contain a sweet pulp. The wood, formerly used in railroad ties, now has value only for unusual furniture and trinkets and as aromatic firewood.

Mesrob \mes-'rōp**, Saint** *or* **Saint Mesrop Mashtots** \mash-'tōts\ (b. c. 360, Hatsik, Armenia—d. Feb. 17, 440; Armenian feast day, February 19) Armenian theologian and linguist. A scholar of classical languages, he became a monk c. 395 and eventually founded several monasteries, spreading the Gospel in remote areas of Armenia. He systematized or invented the Armenian alphabet and sponsored the first translation of the Bible into Armenian (c. 410). He also wrote biblical commentaries and translated other theological works, and he helped establish Armenia's golden age of Christian literature. See also ARMENIAN LANGUAGE.

Messene \me-'sā-nā, mə-'sē-nē\ Ancient city, southwestern PELOPONNESE, Greece. It is located north of the modern city of the same name. Founded c. 369 BC as the site of the new capital of Messenia, Messene formed a strategic barrier against SPARTA, along with MEGALOPOLIS, MANTINEA, and ARGOS. It survived several Macedonian and Spartan sieges but fell to PHILIP II of Macedonia in 338 BC. Nothing is known of its history after the 2nd century BC.

Messenia \mə-'sē-nē-ə**, Gulf of** Gulf of the Ionian Sea, on the coast of the southwestern PELOPONNESE, Greece. On the west side of the gulf is the port of Koróni, originally settled by Argives after the First Messenian War (c. 735–715 BC) and reoccupied during the Middle Ages by refugees from the north. The French landed at the Gulf of Messenia in 1828 during the War of GREEK INDEPENDENCE to drive the Turks from the Peloponnese.

Messerschmitt, Willy (b. June 26, 1898, Frankfurt am Main, German Empire—d. Sept. 17, 1978, Munich, W.Ger.) German aircraft designer. From 1926 he was chief designer and engineer at the Bayerische Flugzeugwerke in Augsburg, Ger., which in 1938 became Messerschmitt AG. In 1939 his first military aircraft, the MESSERSCHMITT 109 (Me 109), set a speed record of 481 mph (775 km/hr). In World War II his factory produced 35,000 Me 109's for the German air force, as well as the Me 110 bomber, the Me 163 rocket-propelled plane, and the Me 262, the first combat jet. Under a postwar ban on aircraft production, his firm made prefab housing and sewing machines until 1958.

Messerschmitt 109 (Me 109) FIGHTER AIRCRAFT of Nazi Germany. Originally designed in 1934 by WILLY MESSERSCHMITT at the Bavarian Air-

© 2006 Encyclopædia Britannica, Inc.

plane Co. (BFW), it was also known as the Bf 109. Modified after seeing action in the Spanish Civil War, it became Germany's premier fighter for much of World War II. The model used in the BATTLE OF BRITAIN was a single-seat, single-engine monoplane with a top speed of 350 mph (570 kph) and a ceiling of 35,000 ft (10,500 m). It was faster in a dive than the British SPITFIRE but was limited in range by a small fuel capacity. By 1944 improved Allied fighters such as the P-51 had outstripped it.

Messiaen \mes-'yä^{n}**, Olivier (-Eugène-Prosper-Charles)** (b. Dec. 10, 1908, Avignon, France—d. April 27, 1992, Clichy, near Paris) French composer. At age 11 he entered the Paris Conservatoire, where he won five first prizes. In 1931 he became principal organist at the church of the Sainte-Trinité, where he would remain for 40 years. He wrote his *Quartet for the End of Time* in a German POW camp. After the war, he taught at the Conservatoire (1947–78), where his students included PIERRE BOULEZ, KARLHEINZ STOCKHAUSEN, and IANNIS XENAKIS. His main source of inspiration was his quasi-mystical devout Catholic faith. His love of nature is evident in his many works inspired by birdsong. He also was influenced rhythmically by his study of Indian music, and he systematically explored nontonal harmonic materials. Major works include *Vingt regards sur l'enfant Jésus* (1944) and *Catalogue d'oiseaux* (1958) for piano, *La Nativité du Seigneur* (1935) for organ, the *Turangalîla-symphonie* (1948), *Et expecto resurrectionem mortuorum* (1964), and the opera *Saint François d'Assise* (1983).

Olivier Messiaen.

messiah In JUDAISM, the expected king of the line of DAVID who will deliver the Jews from foreign bondage and restore Israel's golden age. The term used for the messiah in the Greek NEW TESTAMENT, *christos*, was applied to JESUS, who is accepted by Christians as the promised redeemer. Messiah figures also appear in various other religions and cultures; SHIITE Muslims, for example, look for a restorer of the faith known as the MAHDI, and MAITREYA is a redeeming figure in Buddhism.

Messier \mās-'yā,\ *English* \'me-sē-ˌā\ **catalog** List of about 109 STAR clusters, NEBULAE, and GALAXIES compiled by the French astronomer Charles Messier (1730–1817), who discovered many of them. Still a valuable guide to amateur astronomers, it was superseded by the New General Catalogue (NGC); both NGC and M reference numbers remain in common use.

Messina *ancient* **Zankle** City (pop., 2001 prelim.: 236,621), northeastern SICILY, Italy. Founded by Greeks in the 8th century BC, it was destroyed by Carthaginians in 397 BC. The Romans took the rebuilt city in 264 BC, precipitating the First PUNIC WAR. After the war it became a free city allied with Rome. It was taken successively by the Goths, Byzantines, Arabs, Normans, Spaniards, and finally (in 1860) Italians. Heavily bombed during World War II, it was rebuilt. It is now an important Italian port. Sites of interest include the cathedral and the university (founded 1548).

Messina, Antonello da See ANTONELLO DA MESSINA

Messina, Strait of *ancient* **Fretum Siculum** Channel between southern Italy and northeastern Sicily. It is 2 to 10 mi (3 to 16 km) wide. The city of MESSINA lies on its bank in SICILY, opposite Reggio di Calabria. Ferry service across the strait links Messina with the Italian mainland.

Mesta River See NÉSTOS RIVER

mestizo \mes-'tē-zō\ Any person of mixed blood. In Spanish America the term denotes a person of combined Indian and European extraction. In some countries, such as Ecuador, it has acquired social and cultural connotations: a pure-blooded Indian who has adopted European dress and customs is called a mestizo (or *cholo*). In Mexico the term's meaning has varied so greatly that it has been abandoned in census reports. In the Philippines it denotes a person of mixed foreign (e.g., Chinese) and native ancestry. See also LADINO.

metabolism \mə-'ta-bə-ˌli-zəm\ Sum of all the CHEMICAL REACTIONS that take place in every CELL of a living organism, providing energy for the processes of life and synthesizing new cellular material. The term *intermediary metabolism* refers to the vast web of interconnected chemical reactions by which all the cell's constituents, many rarely found outside it, are created and destroyed. Anabolic reactions use energy to build complex MOLECULES from simpler organic compounds (e.g., PROTEINS from AMINO ACIDS, CARBOHYDRATES from SUGARS, FATS from FATTY ACIDS and GLYCEROL); catabolic reactions break complex molecules down into simpler ones, releasing chemical energy. For most organisms, the energy comes ultimately from the Sun, whether they obtain it by PHOTOSYNTHESIS and store it in organic compounds or by consuming those organisms that do so. In some BACTERIA in special environments such as DEEP-SEA VENTS, the energy comes from chemical reactions instead. Energy is transferred within the cell and the organism by ATP; anabolic reactions consume it, and catabolic reactions generate it. Every cellular chemical reaction is mediated by a specific ENZYME. The process that breaks down a substance is usually not the reverse of the process that makes it, using a different enzyme. See also DIGESTION; FERMENTATION; GLYCOLYSIS; TRICARBOXYLIC ACID CYCLE.

Metabolist \mə-'ta-bə-list\ **school** Japanese architectural movement of the 1960s. TANGE KENZŌ launched the movement with his Boston Harbor Project design (1959), which included two gigantic A-frames hung with "shelving" for homes and other buildings. Led by Tange, ISOZAKI ARATA, Kikutake Kiyonori (b. 1928), and Kurokawa Kisho (b. 1934), the Metabolists focused on structures that combined high-tech imagery, BRUTALISM, and megastructures (multifunctional complexes that verge on self-containment). The Metabolist manifestos put out at the World Design Conference in 1960 paved the way for such later projects as PAOLO SOLERI's Arcosanti. Their advocacy of such devices as artificial land platforms above cities, which grew out of a desire for economy of land use, revolutionized architectural thinking.

Metacom \'me-tə-ˌkäm\ *or* **Metacomet** *or* **King Philip** (b. 1638, Massachusetts—d. Aug. 12, 1676, Rhode Island) Wampanoag Indian sachem (head of a confederation of Algonquian tribes). His father, MASSASOIT, had negotiated peace with the Pilgrims in 1621. Embittered by the subsequent humiliations to which he and his people were continually subjected by whites, Metacom in June 1675 led a confederation of Wampanoag, Narragansett, ABENAKI, Nipmuck, and MOHAWK warriors into battle. Known as King Philip's War, the ensuing conflict was the most brutal Indian war in New England history. After considerable loss of life and property on both sides, the confederation began to disintegrate, and food became scarce. Metacom returned to his ancestral home, where he was betrayed and killed in 1676 by an Indian informant allied with the colonists. He was beheaded and quartered, and his head was displayed on a pole for 25 years at Plymouth.

metal Any of a class of substances with, to some degree, the following properties: good heat and electricity conduction, malleability, ductility, high light reflectivity, and capacity to form positive IONS in solution and HYDROXIDES rather than ACIDS when their OXIDES meet water. About three-quarters of the ELEMENTS are metals; these are usually fairly hard and strong crystalline (see CRYSTAL) solids with high chemical reactivity that readily form ALLOYS with each other. Metallic properties increase from lighter to heavier elements in each vertical group of the PERIODIC TABLE and from right to left in each row. The most abundant metals are aluminum, iron, calcium, sodium, potassium, and magnesium. The vast majority are found as ORES rather than free. The cohesiveness of metals in a crystalline structure is attributed to metallic BONDING: The ATOMS are packed close together, with their very mobile outermost ELECTRONS all shared throughout the structure. Metals fall into the following classifications (not mutually exclusive and most not rigidly defined): ALKALI METALS, ALKALINE EARTH METALS, TRANSITION ELEMENTS, noble (precious) metals, platinum metals, lanthanide (RARE EARTH) metals, ACTINIDE metals, light metals, and heavy metals. Many have essential roles in NUTRITION or other biochemical functions, often in trace amounts, and many are toxic as both elements and compounds (see MERCURY POISONING, LEAD POISONING).

metal fatigue Weakened condition of METAL parts of MACHINES, vehicles, or structures caused by repeated stresses or loadings, ultimately resulting in FRACTURE under a STRESS much weaker than that necessary to cause fracture in a single application. Fatigue-resistant metals have been developed and their performance improved by surface treatments, and fatigue stresses have been significantly reduced in aircraft and other applications by designing to avoid stress concentrations.

© 2006 Encyclopædia Britannica, Inc.

metal point *or* **silverpoint** Method of drawing with a small sharpened metal rod—of lead, copper, gold, or most commonly silver—on specially prepared paper or parchment. Silverpoint produces a fine gray line that oxidizes to a light brown; the technique is best suited for small-scale work. It first appeared in medieval Italy and achieved great popularity in the 15th century. Albrecht Dürer and Leonardo da Vinci were its greatest exponents. It went out of fashion in the 17th century with the rise of the graphite pencil but was revived in the 18th century by the miniaturists and in the 20th century by Joseph Stella.

"Study of Hands," silverpoint heightened with white on pink grounded paper by Leonardo da Vinci; in Windsor Castle, Berkshire, Eng.
REPRODUCED BY GRACIOUS PERMISSION OF HER MAJESTY QUEEN ELIZABETH II

metallography \ˌme-tᵊl-ˈä-grə-fē\ Study of the structure of metals and alloys, particularly using microscopic and X-ray diffraction techniques. Visual and optical microscopic observation of metal surfaces and fractures can reveal valuable information about the crystalline, chemical, and mechanical makeup of the material. In electron microscopes a beam of electrons instead of a beam of light is directed onto the specimen. The development of transmission electron microscopes has made it possible to examine internal details of very thin metal foils. X-ray diffraction techniques are used to study phenomena related to the grouping of the atoms themselves. See also materials science, Henry C. Sorby.

metallurgy \ˈme-tᵊl-ˌər-jē\ Art and science of extracting metals from their ores and modifying the metals for use. Metallurgy usually refers to commercial rather than laboratory methods. It also concerns the chemical, physical, and atomic properties and structures of metals and the principles by which metals are combined to form alloys. Metals are extracted from crude ore in two phases, mineral processing (also known as ore dressing) and process metallurgy. In mineral processing, the ore is broken down to isolate the desired metallic elements from the crude ore. In process metallurgy, the resulting minerals are reduced to metal, alloyed, and made available for use. See also blast furnace; powder metallurgy; smelting.

metalogic \ˈme-tə-ˌlä-jik\ Study of the syntax and the semantics of formal languages and formal systems. It is related to, but does not include, the formal treatment of natural languages (e.g., English, Russian, etc.). Metalogic has led to a great deal of work of a mathematical nature in axiomatic set theory, model theory, and recursion theory (in which functions that are computable in a finite number of steps are studied).

metalwork Useful and decorative objects fashioned of various metals. The oldest technique is hammering. After c. 2500 BC, casting was also used, molten metal being poured into a mold and allowed to cool. Various decorative techniques are used. Gold and silver have been worked since ancient times. Gold and silver objects were in such demand in the 12th century that gold- and silversmiths organized guilds. High-quality gold and silver objects were produced in pre-Columbian America. Copper was worked in ancient Egypt and was widely used for household utensils in 17th–18th-century Europe. Both bronze and brass were widely used in ancient Greece. Pewter plates and tankards were made in the Middle Ages and remained popular until they were superseded by cheaper earthenware and porcelain in the 18th century. Wrought iron has been used for decorative hinges, gates, and railings since the 16th century. Lead has traditionally been used for roof coverings.

metamorphic rock Any of a class of rocks that result from the alteration of preexisting rocks in response to changing geological conditions, including variations in temperature, pressure, and mechanical stress. The preexisting rocks may be igneous, sedimentary, or other metamorphic rocks. The structure and mineralogy reflect the particular type of metamorphism that produced the rock and the composition of the parent rock. Metamorphic rocks are commonly classified by type of facies, predictable mineral assemblages associated with certain temperature and pressure conditions (see, e.g., granulite facies).

metamorphism Mineralogic and structural changes in solid rocks caused by physical conditions different from those under which the rocks originally formed. Changes produced by surface conditions such as compaction are usually excluded. The most important agents of metamorphism are temperature (from 300°–2,200°F, or 150°–1200°C), pressure (from 10 to several hundred kilobars, or 150,000 to several million lbs. per sq in.), and stress. Dynamic metamorphism results from mechanical deformation with little long-term temperature change. Contact metamorphism results from increases in temperature with minor differential stress, is highly localized, and may occur relatively quickly. Regional metamorphism results from the general increase, usually correlated, of temperature and pressure over a large area and a long period of time, as in mountain-building processes. See also metamorphic rock.

metamorphosis In biology, any striking developmental change of an animal's form or structure, accompanied by physiological, biochemical, and behavioral changes. The best-known examples occur among insects, which may exhibit complete or incomplete metamorphosis (see nymph). The complete metamorphosis of butterflies, moths, and some other insects involves four stages: egg, larva (caterpillar), pupa (chrysalis or cocoon), and adult. The change from tadpole to frog is an example of metamorphosis among amphibians; some echinoderms, crustaceans, mollusks, and tunicates also undergo metamorphosis.

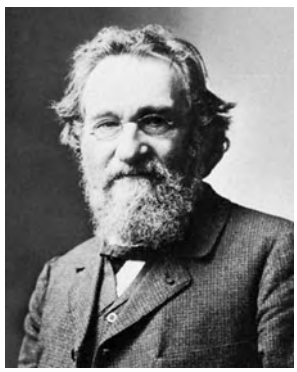
metaphor Figure of speech in which a word or phrase denoting one kind of object or action is used in place of another to suggest a likeness or analogy between them (as in "the ship plows the seas" or "a volley of oaths"). A metaphor is an implied comparison (as in "a marble brow"), in contrast to the explicit comparison of the simile ("a brow white as marble"). Metaphor is common at all levels of language and is fundamental in poetry, in which its varied functions range from merely noting a likeness to serving as a central concept and controlling image.

Metaphysical painting *Italian* **Pittura Metafisica** Style of painting that flourished c. 1910–20 in the works of the Italian painters Giorgio de Chirico and Carlo Carrà (1881–1966). The movement began with Chirico, whose dreamlike works with sharp contrasts of light and shadow often had a vaguely threatening, mysterious quality. Chirico, his younger brother Alberto Savinio, and Carrà formally established the school and its principles in 1917. Their representational but bizarre and incongruous imagery produces disquieting effects and had a strong influence on Surrealism in the 1920s.

Metaphysical poetry Highly intellectualized poetry written chiefly in 17th-century England. Less concerned with expressing feeling than with analyzing it, Metaphysical poetry is marked by bold and ingenious conceits (e.g., metaphors drawing sometimes forced parallels between apparently dissimilar ideas or things), complex and subtle thought, frequent use of paradox, and a dramatic directness of language, the rhythm of which derives from living speech. John Donne was the leading Metaphysical poet; others include George Herbert, Henry Vaughan, Andrew Marvell, and Abraham Cowley.

metaphysics Branch of philosophy that studies the ultimate structure and constitution of reality—i.e., of that which is real, insofar as it is real. The term, which means literally "what comes after physics," was used to refer to the treatise by Aristotle on what he himself called "first philosophy." In the history of Western philosophy, metaphysics has been understood in various ways: as an inquiry into what basic categories of things there are (e.g., the mental and the physical); as the study of reality, as opposed to appearance; as the study of the world as a whole; and as a theory of first principles. Some basic problems in the history of metaphysics are the problem of universals—i.e., the problem of the nature of universals and their relation to so-called particulars; the existence of God; the mind-body problem; and the problem of the nature of material, or external, objects. Major types of metaphysical theory include Platonism, Aristotelianism, Thomism, Cartesianism (see also dualism), idealism, realism, and materialism.

metasomatic \ˌme-tə-sō-ˈma-tik\ **replacement** Process of simultaneous solution and deposition in which one mineral replaces another. It is the method by which wood is petrified (silica replaces the wood fibres), minerals form pseudomorphs (new minerals that preserve the characteristic outward form of the earlier mineral that was replaced), or an ore mineral assemblage takes the place of an earlier rock type. Replacement minerals may themselves be replaced, and definite mineral successions have been established. Replacement deposits may be highly valuable ore deposits.



© 2006 Encyclopædia Britannica, Inc.

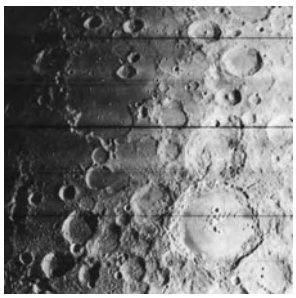
metastable \ˌme-tə-ˈstā-bəl\ **state** Excited state (see EXCITATION) of an ATOM, NUCLEUS, or other system that has a longer lifetime than the ordinary excited states and generally has a shorter lifetime than the ground state. It can be considered a temporary energy trap or a somewhat stable intermediate stage of a system of which the energy may be lost in discrete amounts. The many photochemical reactions of mercury are a result of the metastable state of mercury atoms, and RADIATION from metastable oxygen atoms accounts for the characteristic green colour of the aurora borealis and aurora australis.

Metastasio \ˌmā-tä-ˈstäz-yō**, Pietro** *orig.* **Antonio Domenico Bonaventura Trapassi** (b. Jan. 3, 1698, Rome—d. April 12, 1782, Vienna) Italian poet and opera librettist. His name was changed by his adoptive father, who left the youth enough money to embark on a career as a poet. His first libretto, *Didone abbandonata* (1724), was so successful that he was soon known throughout Italy. Important librettos such as *Enzio* (1728) and *Semiramide* (1729) soon followed. He was invited to Vienna as court poet by CHARLES VI. His 27 three-act librettos were set in more than 800 operas in the 18th and early 19th century by composers such as ANTONIO VIVALDI, GEORGE HANDEL, CHRISTOPH GLUCK, JOSEPH HAYDN, WOLFGANG AMADEUS MOZART, and LUIGI CHERUBINI.

Metaxas \ˌmet-äk-ˈsäs**, Ioannis** (b. April 12, 1871, Ithaca, Greece—d. Jan. 29, 1941, Athens) Greek general and premier (1936–41). He rose in the Greek army to become chief of staff (1913–17). An ardent monarchist, he left Greece when King CONSTANTINE I was deposed in 1917, but he returned in 1920. After the monarchy's fall in 1923, he led an opposition ultraroyalist party until the monarchy was restored in 1935. He was appointed premier in 1936 and, with royal authority, established a dictatorship. He suppressed political opposition, carried out some beneficial economic and social reforms, and brought a united country into the Western alliance in World War II.

Metchnikoff \ˈmech-ni-ˌkȯf**, Élie** *orig.* **Ilya Ilich Mechnikov** (b. May 16, 1845, near Kharkov, Ukraine, Russian Empire—d. July 16, 1916, Paris, France) Russian zoologist and microbiologist. In 1888 LOUIS PASTEUR offered him a post at the Pasteur Institute, and he succeeded Pasteur as director in 1895. Working with starfish, he discovered amoebalike cells in their systems that engulf foreign bodies such as bacteria. He established that phagocytes (as he named these cells, using the Greek for "devouring cells") are the first line of defense against acute infection in most animals. This phenomenon, now known as phagocytosis, is fundamental to immunology. He shared a 1908 Nobel Prize with PAUL EHRLICH.

Élie Metchnikoff.
H. ROGER-VIOLLET



metempsychosis See REINCARNATION

meteor *or* **shooting star** *or* **falling star** Streak of light in the sky that results when a particle or small chunk of stony or metallic matter from space enters Earth's ATMOSPHERE and is vapourized by FRICTION. The term is sometimes applied to the falling object itself, properly called a meteoroid. Most meteoroids, traveling at five times the speed of sound or more, burn up in the upper atmosphere, but a large one may survive its fiery plunge and reach the surface as a solid body (METEORITE). See also METEOR SHOWER.

meteor shower Entry into Earth's atmosphere of multiple meteoroids (see METEOR), traveling in parallel paths, usually spread over several hours or days. Most meteor showers come from matter released during passage of a COMET close to the Sun, and they recur annually as Earth crosses the comet's orbital path. Meteor showers are usually named for a constellation (e.g., Leonid for Leo) or star in their direction of origin. Most showers are visible as a few dozen meteors per hour, but occasionally Earth crosses an especially dense concentration of meteoroids, as in the great Leonid meteor shower of 1833, in which hundreds of thousands of meteors were seen in one night all over North America.

meteorite Any interplanetary particle or chunk of stony or metallic matter (meteoroid) that survives passage through Earth's atmosphere and strikes the ground or that reaches the surface of another planet or moon. On Earth the speed of entry—at least 7 mi/second (11 km/second)—generates enough FRICTION with the air to vaporize part or all of the meteoroid and produce a streak of light (METEOR). Though vast numbers of meteoroids enter Earth's atmosphere each year, only a few hundred reach the ground.

meteorite crater Depression that results from the impact of a METEORITE with a solid object in space. Impact craters have been discovered on Earth, the Moon, Mars, other planets and satellites, and asteroids; they probably occur on unprotected surfaces of similar bodies throughout the universe. Impact craters are much less common on Earth than on the Moon, partly because friction burns up most of the smaller bodies that enter Earth's atmosphere. Thus, any craters formed on Earth's surface tend to be larger than the average size of all entering meteorites.

Meteorite craters on the surface of the Moon, photographed by Lunar Orbiter IV
COURTESY OF NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

meteoritics \ˌmē-tē-ə-ˈri-tiks\ Study of the chemistry and mineralogy of METEORITE samples that have been collected on Earth and of METEORS as they pass through Earth's atmosphere. These studies provide information about the age of meteorites, the conditions under which they formed, where they come from, and the geological history of their bodies of origin, including comets, asteroids, Mars, and the Moon. The field of study is especially important for understanding the early history and evolution of the SOLAR SYSTEM.

meteorology Scientific study of atmospheric phenomena, particularly of the TROPOSPHERE and lower STRATOSPHERE. Meteorology entails the systematic study of weather and its causes, and provides the basis for WEATHER FORECASTING. See also CLIMATOLOGY.

methadone \ˈme-thə-ˌdōn\ Organic compound, a potent synthetic NARCOTIC drug, the most effective form of treatment for addiction to HEROIN and other narcotics (see DRUG ADDICTION). It has been widely used in heroin-addiction programs in the U.S. since the 1960s. Though addictive itself, it is easier to stop using than heroin. It also causes no euphoric effects and does not lead to development of tolerance, so increasing doses are not required. A person taking a daily maintenance dose does not experience either heroin withdrawal symptoms or a heroin rush from any attempt to resume heroin, so heroin's psychological hold on the user can be broken.

methanal See FORMALDEHYDE

methane *or* **marsh gas** Organic compound, chemical formula CH_4, colourless, odourless GAS that occurs in NATURAL GAS (called firedamp in coal mines) and from bacterial decomposition of vegetation in the absence of oxygen (including in the rumens of cattle and other RUMINANTS and in the gut of TERMITES). The simplest member of the PARAFFIN HYDROCARBONS, methane burns readily, forming CARBON DIOXIDE and WATER if supplied with enough OXYGEN for complete combustion or CARBON MONOXIDE if the oxygen is insufficient. Mixtures of 5–14% methane in air are explosive and have caused many mine disasters. The chief source of methane is natural gas, but it can also be produced from coal. Abundant, cheap, and clean, methane is used widely as a fuel in homes, commercial establishments, and factories; as a safety measure, it is mixed with trace amounts of an odorant to allow its detection. It is also a raw material for many industrial materials, including fertilizers, explosives, chloroform, carbon tetrachloride, and carbon black, and is the principal source of METHANOL.

methanol *or* **methyl alcohol** *or* **wood alcohol** Simplest of the ALCOHOLS, chemical formula CH_3OH. Once produced by destructive distillation of wood, it is now usually made from the METHANE in natural gas. Methanol is an important industrial material; its derivatives are used in great quantities for making a vast number of compounds, among them many important synthetic dyes, resins, drugs, and perfumes. It is also used in automotive antifreezes, in rocket fuels, and as a solvent. It is flammable

© 2006 Encyclopædia Britannica, Inc.

and explosive. A clean-burning fuel, it may substitute (at least in part) for GASOLINE. It is also used for DENATURATION of ETHANOL. A violent poison, it causes blindness and eventually death when drunk.

methionine \mə-'thī-ə-ˌnēn\ SULFUR-containing essential AMINO ACID, present in many common PROTEINS, particularly egg ALBUMIN. It is used in pharmaceuticals, in enriched foods, and as a nutritional supplement and feed additive.

Method acting See STANISLAVSKY METHOD

Methodism Protestant religious movement originated by JOHN WESLEY in 18th-century England. Wesley, an Anglican clergyman, underwent an epiphany in 1738 in which he felt an assurance of personal salvation, and he soon began open-air preaching. Methodism began as a movement to revitalize the Church of England and did not formally break with the church until 1795. The Methodists' well-organized system of church government combined a strong central authority with effective local organization and the employment of lay preachers. Especially successful among the working class in industrial areas, the movement expanded rapidly in the 19th century. The Methodist Episcopal Church was founded in the U.S. in 1784, and Methodist circuit riders won many followers on the frontier. British and U.S. missionaries have since spread Methodism throughout the world. Methodist doctrine emphasizes the power of the Holy Spirit, the need for a personal relationship with God, simplicity of worship, and concern for the underprivileged.

Methodius, St. See Sts. CYRIL AND METHODIUS

Methuselah \mə-'thü-zə-lə\ Biblical patriarch who lived to the age of 969. The son of Enoch, he is mentioned in GENESIS as a descendant of Seth, the son of Adam and Eve begotten after CAIN. He is remembered as the world's oldest human being. He was the father of Lamech and grandfather of NOAH; his later descendants included ABRAHAM, JACOB, and DAVID.

methyl alcohol See METHANOL

metic \'me-tiks\ (Greek, *metoikos*) Any resident foreigner, including freed slaves, in ancient Greece. Although metics were free, they lacked full benefits of citizenship. For a small tax they enjoyed the protection of the law and most of a citizen's duties, including supporting public funds, financing festivals, and serving in the military, but they could neither marry a citizen nor own land. They were found in most states, Sparta being an exception. In Athens they represented one-third of the free population.

Métis \mā-'tēs\ In Canadian history, a person of mixed Indian and French or Scottish ancestry. The first Métis were the offspring of local Indian women and European fur traders in the Red River area of what is now southern Manitoba. They call themselves the Forgotten People. Their language, Michif, is a French and Cree trade language. Only a small percentage of people can speak Michif, although attempts are being made to preserve it. For more than half a century the Métis cultivated a distinctive way of life and came to think of themselves as a nation. The Métis culture, particularly clothing, artwork, music, and dance, can be characterized as colourful and unique. They resisted the Canadian takeover of the Northwest in 1869, established a provisional government under the leadership of LOUIS RIEL, and in 1870 negotiated a union with Canada that resulted in the establishment of the province of Manitoba. In 2003 Canada granted the Métis legal recognition as a native group, with the same broad hunting rights as full-status Indians. By the early 21st century the estimated number of Métis in western Canada was more than 550,000.

metre Basic unit of length in the METRIC SYSTEM and the INTERNATIONAL SYSTEM OF UNITS. In 1983 the General Conference on Weights and Measures decided that the accepted value for the speed of light would be exactly 299,792,458 metres per second, so the metre is now defined as the distance traveled by light in a vacuum in 1/299,792,458 second. One metre is equal to about 39.37 in. in the U.S. Customary System.

metre In poetry, the rhythmic pattern of a poetic line. Various principles have been devised to organize poetic lines into rhythmic units. Quantitative verse, the metre of Classical Greek and Latin poetry, measures the length of time required to pronounce syllables, regardless of their stress; combinations of long and short syllables form the basic rhythmic units. Syllabic verse is most common in languages that are not strongly accented, such as French or Japanese; it is based on a fixed number of syllables within a line. Accentual verse occurs in strongly stressed languages, such as the Germanic; only stressed syllables within a line are counted. Accentual-syllabic verse is the usual form in English poetry; it combines syllable counting and stress counting. The most common English metre, iambic pentameter, is a line of 10 syllables, or 5 iambic feet; each foot contains an unstressed syllable followed by a stressed syllable. FREE VERSE does not follow regular metrical patterns. See also PROSODY.

metre See RHYTHM AND METRE

metric space In mathematics, a set of objects equipped with a concept of distance. The objects can be thought of as points in space, with the distance between points given by a DISTANCE FORMULA, such that: (1) the distance from point A to point B is zero if and only if A and B are identical, (2) the distance from A to B is the same as from B to A, and (3) the distance from A to B plus that from B to C is greater than or equal to the distance from A to C (the triangle inequality). Two- and three-dimensional EUCLIDEAN SPACES are metric spaces, as are INNER PRODUCT SPACES, VECTOR SPACES, and certain topological spaces (see TOPOLOGY).

metric system International decimal system of weights and measures, based on the METRE (m) for length and the kilogram (kg) for mass, originally adopted in France in 1795. All other metric units were derived from the metre, including the gram (g) for weight (1 cc of water at its maximum density) and the litre (l, or L) for capacity (0.001 cu m). In the 20th century, the metric system became the basis for the INTERNATIONAL SYSTEM OF UNITS, which is now used officially almost worldwide.

metrical foot See metrical FOOT

Metro-Goldwyn-Mayer, Inc. See MGM

metrology \me-'trä-lə-jē\ Science of MEASUREMENT. Measuring a quantity means establishing its ratio to another fixed quantity of the same kind, known as the unit of that kind of quantity. A unit is an abstract idea, defined either by reference to a randomly chosen material standard or to a natural phenomenon. For example, the METRE, the standard of length in the METRIC SYSTEM, was formerly defined (1889–1960) by the separation of two lines on a particular metal bar, but it is now defined as the distance traveled by light in a vacuum in 1/299,792,458 second. See also INTERNATIONAL SYSTEM OF UNITS.

Metropolitan Museum of Art Most comprehensive collection of art in the U.S. and one of the foremost in the world. It was incorporated in New York City in 1870, and the present building in Central Park on Fifth Avenue was opened in 1880. The Metropolitan was built with the private fortunes of businessmen; today it is owned by the city but supported mainly by private endowment. Its outstanding Egyptian, Mesopotamian, East Asian, Middle Eastern, Greek and Roman, European, pre-Columbian, and U.S. collections include—in addition to paintings, sculpture, and graphic arts—architecture, glass, ceramics, textiles, metalwork, furniture, arms and armour, and musical instruments. It also incorporates a Costume Institute and the Thomas J. Watson Library, one of the world's greatest art and archaeology reference collections. Much of the medieval collection is housed at The Cloisters in Manhattan's Fort Tryon Park; its building (1938) incorporates parts of medieval monasteries and churches.

Metropolitan Opera Leading U.S. opera company, based in New York City. Founded by a group of millionaires who had failed to get boxes at the Academy of Music, it opened in 1883. The Met soon outlived its frivolous origin, becoming the American equivalent of LA SCALA in Milan and second to no opera house in the world in the quality of the singers it attracted. Originally sited at Broadway and 39th Street, it moved into its new home at LINCOLN CENTER FOR THE PERFORMING ARTS in 1966.

Metsys \'met-sīs**, Quentin** (b. c. 1465/66, Louvain, Brabant—d. 1530, Antwerp) Flemish artist. According to tradition, Metsys (whose name was also spelled Massys and Matsys) was trained as a blacksmith but studied painting after falling in love with an artist's daughter. He was admitted to the Antwerp artists' guild in 1491. His most celebrated paintings are two large triptych altarpieces, *The Holy Kinship* (1507–09) and *The Entombment of Christ* (1508–11), both of which exhibit strong religious feelings and precision of detail. He painted many notable portraits, including one of DESIDERIUS ERASMUS. He was the first important painter of the Antwerp school, and the first Flemish artist to effect a genuine synthesis of the northern European and Italian RENAISSANCE traditions.

Metternich \'me-tər-ˌnik\ **(-Winneburg-Beilstein), Klemens (Wenzel Nepomuk Lothar), prince von** (b. May 15, 1773, Coblenz, archbishopric of Trier—d. June 11, 1859, Vienna, Austria) Austrian statesman. He served in the diplomatic service as Austrian minister

© 2006 Encyclopædia Britannica, Inc.

in Saxony (1801–03), Berlin (1803–05), and Paris (1806–09). In 1809 Francis I of Austria (see Emperor Francis II) appointed him minister of foreign affairs, a position he would retain until 1848. He helped promote the marriage of Napoleon and Francis's daughter Marie-Louise. By skillful diplomacy and deceit, he kept Austria neutral in the war between France and Russia (1812) and secured its position of power before finally allying with Prussia and Russia (1813). In gratitude for his diplomatic achievements, the emperor created Metternich a hereditary prince. As the organizer of the Congress of Vienna (1814–15), he was largely responsible for the policy of balance of power in Europe to ensure the stability of European governments. After 1815 he remained firmly opposed to liberal ideas and revolutionary movements. He was forced to resign by the revolution of 1848. He is remembered for his role in restoring Austria as a leading European power.

Metz \'metz\ *French* \'mes\ City (pop., 1999 est.: 123,776), northeastern France. It derives its name from the Mediomatrici, a Gallic tribe who made the city their capital. Fortified by the Romans, it became a bishopric in the 4th century AD. It passed to Frankish rule in the 5th century and became the capital of Lorraine in 843. It prospered as a free town within the Holy Roman Empire. Taken by the French in 1552, it was formally ceded to France in 1648. It fell to German rule in 1871 but was returned to France after World War I. It is the birthplace of Paul Verlaine.

Porte des Allemands (Gate of the Germans), Metz, France.
P. SALOU—SHOSTAL

Meuse River \'mœz,\ *English* \'myüz\ *Dutch* **Maas** \'mäs\ River, western Europe. It rises in northeastern France and flows north into Belgium, where it forms part of the border between Belgium and The Netherlands. It divides at Venlo, Neth., one branch flowing into the Hollandsch Canal (an outlet of the North Sea) and another joining the Waal River to become the Merwede River, which eventually empties into the North Sea. The Meuse is 590 mi (950 km) long, and it is an important waterway in western Europe. Its valley was the scene of heavy fighting in World War I. The crossing of the Meuse was critical to Germany's invasion of France in 1940 in World War II.

mews Row of stables and coach houses with living quarters above, built behind houses, especially in 17th–18th-century London. Most have been converted into modernized dwellings. The term originally referred to the royal stables in London, built where the king's hawks once stayed at molting ("mew") time.

Mexicali City (pop., 2000 est.: 550,000), capital of Baja California (Norte) state, northwestern Mexico. It lies in the Mexicali Valley, an extension of the Imperial Valley of the U.S., in northeastern Baja California. It extends across the Mexico-U.S. border to Calexico, Calif. Its name, formed from the first two syllables of Mexico and California, was chosen as a gesture of international friendship. Its economy is chiefly based on tourism and the processing and distribution of cotton, fruits, vegetables, and cereals. It is the seat of the Autonomous University of Baja California.

Mexican process See patio process

Mexican Revolution (1910–20) Lengthy struggle that began with the overthrow of Porfirio Díaz, whose elitist and oligarchic policies had caused widespread dissatisfaction. Francisco Madero, Pancho Villa, Pascual Orozco, and Emiliano Zapata amassed supporters, and in 1911 Madero was declared president, but his slow-paced reforms alienated both former allies and foes. He was deposed by Gen. Victoriano Huerta, whose own drunken and despotic dictatorship quickly fell to Villa, Venustiano Carranza, and Álvaro Obregón. Carranza declared himself president in 1914 over Villa's objections and, after further bloodshed, prevailed. He oversaw the writing of the liberal constitution of 1917 but did little to implement its key provisions; in 1920 he was killed while fleeing a rebellion. With the election of the reform-minded Obregón, the revolutionary period ended, though sporadic clashes continued until Lázaro Cárdenas took office in 1934.

Mexican War *or* **Mexican-American War** (1846–48) War between the U.S. and Mexico. It grew from a border dispute after the U.S. annexed Texas in 1845; Mexico claimed that the southern border of Texas was the Nueces River, while the U.S. claimed it was the Rio Grande. A secret mission by John Slidell to negotiate the dispute and purchase New Mexico and California for up to $30 million was aborted when Mexico refused to receive him. In response to the snub, Pres. James Polk sent troops under Zachary Taylor to occupy the disputed land between the two rivers. In April 1846 Mexican troops crossed the Rio Grande and attacked Taylor's troops; Congress approved a declaration of war in May. Ordered to invade Mexico, Taylor captured Monterrey and defeated a large Mexican force under Antonio Santa Anna at the Battle of Buena Vista in February 1847. Polk then ordered Gen. Winfield Scott to move his army by sea to Veracruz, capture the city, and march inland to Mexico City. Scott followed the plan, meeting resistance at Cerro Gordo and Contreras, and entered Mexico City in September. Under the Treaty of Guadalupe Hidalgo, Mexico ceded to the U.S. nearly all of present New Mexico, Utah, Nevada, Arizona, California, Texas, and Colorado for $15,000,000 and U.S. assumption of its citizens' claims against Mexico. Casualties included about 13,000 American deaths, all but 1,700 of which were caused by disease. The war, which made a national hero of Taylor, reopened the slavery-extension issue supposedly settled by the Missouri Compromise.

Mexico *officially* **United Mexican States** Country, southern North America. The Rio Grande forms part of its northeastern border with the U.S. Area: 758,449 sq mi (1,964,375 sq km). Population (2005 est.): 107,029,000. Capital: Mexico City. More than three-fifths of Mexico's people are mestizos, about one-fifth are American Indians, and the bulk of the rest are of European ancestry. Languages: Spanish (official); more than 50 Indian languages are spoken. Religion: Christianity (predominantly Roman Catholic; also Protestant). Currency: Mexican peso. Mexico has two major peninsulas, the Yucatán in the southeast and Baja California in the northwest. The high Mexican Plateau forms the core of the country and is enclosed by mountain ranges: the Sierra Madre Occidental, the Sierra Madre Oriental, and the Cordillera Neo-Volcánica. The last has the country's highest peak, the volcano Citlaltépetl, which reaches 18,406 ft (5,610 m). Mexico has a mixed economy based on agriculture, manufacturing, and the extraction of petroleum and natural gas. About one-eighth of the land is arable; major crops include corn, wheat, rice, beans, coffee, cotton, fruits, and vegetables. Mexico is the world's largest producer of silver, bismuth, and celestite. It has significant reserves of oil and natural gas. Manufactures include processed foods, chemicals, transport vehicles, and electrical machinery. It is a republic with two legislative houses; its head of state and government is the president. Humans may have inhabited Mexico for more than 20,000 years, and the area produced a string of great early civilizations, including the Olmec, Toltec, and Maya. The Aztec empire, another important civilization located in Mexico, was conquered in 1521 by Spanish explorer Hernán Cortés, who established Mexico City on the site of the Aztec capital, Tenochtitlán. Francisco de

© 2006 Encyclopædia Britannica, Inc.

Montejo conquered the remnants of Maya civilization in 1526, and Mexico became part of the Viceroyalty of New Spain. In 1821 rebels negotiated independence from Spain, and in 1823 a new congress declared Mexico a republic. In 1845 the U.S. voted to annex Texas, initiating the Mexican War. Under the Treaty of Guadalupe Hidalgo in 1848, Mexico ceded a vast territory in what is now the western and southwestern U.S. The Mexican government endured several rebellions and civil wars in the late 19th and early 20th centuries (see Mexican Revolution). During World War II (1939–45) it declared war on the Axis Powers, and in the postwar era it was a founding member of the United Nations (1945) and the Organization of American States (1948). In 1993 it ratified the North American Free Trade Agreement. The election of Vicente Fox to the presidency (2000) ended 71 years of rule by the Institutional Revolutionary Party. See table on opposite page.

México \'me-hē-ˌkō\ State (pop., 2000: 13,096,686), central Mexico. It covers 8,245 sq mi (21,355 sq mi), and its capital is Toluca. Almost completely surrounding the Federal District and Mexico City, it contains many preconquest ruins, including Tenayuca, Malinalco, and Teotihuacán. The average elevation exceeds 10,000 ft (3,000 m), which creates a cool climate. The population density is the highest of any Mexican state. The economy is based on agriculture and manufacturing.

Mexico, Gulf of Gulf, southeastern coast of North America, connected to the Atlantic Ocean by the Straits of Florida and to the Caribbean Sea by the Yucatán Channel. Covering an area of 600,000 sq mi (1,550,000 sq km), it is bounded by the U.S., Mexico, and Cuba. It has a maximum depth, in the Mexico Basin, of 17,070 ft (5,203 m). The Gulf Stream enters it from the Caribbean Sea and flows out to the Atlantic. The Mississippi and the Río Grande are the major rivers draining into the gulf. Its major ports are Veracruz in Mexico, and Galveston, New Orleans, Pensacola, and Tampa in the U.S.

Mexico, National Autonomous University of Mexican government-financed university in Mexico City, founded in 1551. The original university building, dating from 1584, was demolished in 1910, and the university was moved to a new campus in 1954. Between 1553

*Claimed the presidency as early as 1914.

and 1867 the university was controlled by the Roman Catholic church. After 1867, independent professional schools of law, medicine, engineering, and architecture were established by the government. The university was given administrative autonomy in 1929. It offers a broad range of programs in all major academic and professional subjects.

Mexico City *Spanish* **Ciudad de México** \ˌsyü-'thäth-thā-'me-hē-ˌkō\ City (pop., 2000: city, 8,605,239; 2003 metro. area est., 18,660,000), capital of Mexico. Located at an elevation of 7,350 ft (2,240 m), it is officially coterminous with the Federal District, which occupies 571 sq mi (1,477 sq km). Mexico City is one of the world's largest cities and one of the world's fastest-growing metropolitan areas. It generates about one-third of Mexico's industrial production. It lies on an ancient lake bed, the site of the Aztec capital, Tenochtitlán, which was taken by the Spanish explorer Hernán Cortés in 1521. It was the seat of the Viceroyalty of New Spain throughout the colonial period. Captured by Mexican revolutionaries under Gen. Agustín de Iturbide in 1821, it was seized by the U.S. in 1847 during the Mexican War and by the French (1863–67) under Maximilian. It was greatly improved during the rule of Porfirio Díaz (1876–80, 1884–1911). In 1985 it was struck by a severe earthquake that killed at least 7,000 people. The old city centre, the Zócalo, has many historic buildings, including the Metropolitan Cathedral (built on the site of an Aztec temple) and the National Palace (built on the ruins of the palace of Montezuma II). Its educational institutions include the National Autonomous University of Mexico (founded 1551), the College of Mexico, and the Ibero-American University. The city was designated a UNESCO World Heritage Site in 1987.

Meyer \'mī-ər**, Adolf** (b. Sept. 13, 1866, Niederweningen, Switz.—d. March 17, 1950, Baltimore, Md., U.S.) Swiss-born U.S. psychiatrist. He immigrated to the U.S. in 1892 and taught principally at Johns Hopkins University (1910–41). He developed a concept of human behaviour—ergasiology, or psychobiology—that sought to integrate psychological and biological study. Meyer emphasized accurate case histories, suggested a role of childhood sexual feelings in mental problems in the years preceding wide recognition of Sigmund Freud's theories, and decided that mental illness results essentially from personality dysfunction rather than brain pathology. He became aware of the importance of social environment in mental disorders, and his wife interviewed patients' families in what is considered the first psychiatric social work.

Meyerbeer \'mī-ər-ˌbār**, Giacomo** *orig.* **Jakob Liebmann Meyer Beer** (b. Sept. 5, 1791, Tasdorf, near Berlin, Ger.—d. May 2, 1864, Paris, Fr.) German composer. Brother of the astronomer Wilhelm Beer and the playwright Michael Beer, he achieved early success as a pianist. After he studied vocal writing in Italy, his Italian operas were well received. In Paris from c. 1825, he undertook work on a libretto by Eugène Scribe, and his *Robert le Diable* (1831) was one of opera's greatest triumphs from its premiere. Three later grand operas also became part of the international repertoire: *Les Huguenots* (1836), *Le Prophète* (1849), and *L'Africaine* (1864). Richard Wagner's criticism of Meyerbeer's "desertion" of German music, tainted by jealousy and anti-Semitism, led to neglect of his music for many years, but Meyerbeer exercised unmistakable influence on both Giuseppe Verdi and Wagner himself.

Meyerhof \'mī-ər-ˌhōf**, Otto** (b. April 12, 1884, Hanover, Ger.—d. Oct. 6, 1951, Philadelphia, Pa., U.S.) German biochemist. His work on glycolysis remains a basic contribution to the understanding of muscle action, despite the need for later revision. He shared with Archibald V. Hill (1886–1977) a 1922 Nobel Prize for his research on metabolism in muscle. His chief published work was *The Chemical Dynamics of Life Phenomena* (1924).

Meyerhold \'mī-ər-ˌhōlt**, Vsevolod (Yemilyevich)** (b. Feb. 9, 1874, Penza, Russia—d. Feb. 2, 1940, Moscow) Russian theatrical producer and director. He acted with the Moscow Art Theatre in 1898 and formulated his avant-garde theories of symbolic theatre. Opposed to the naturalism of Konstantin Stanislavsky, he directed plays in a nonrepresentational style that became known as biomechanics. After 1908 he staged plays in St. Petersburg that drew from commedia dell'arte and Asian theatre. He was noted for his direction of *The Magnificent Cuckold* (1920) and for his controversial production of *The Queen of Spades* (1935). Condemned by Soviet critics for his artistic individuality and opposition to Socialist Realism, he was arrested and imprisoned in 1939 and was probably executed.

mezzotint \'met-sō-ˌtint\ (from Italian *mezza tinta*, "halftone") Engraving produced by pricking the surface of a metal plate with innumerable small holes that will hold ink. When the engraving is printed, the ink produces large areas of tone with soft, subtle gradations. Engraved or etched lines are often introduced to give the design greater definition. Mezzotint was invented in Holland by German-born Ludwig von Siegen in the 17th century but thereafter was practiced primarily in England. Its adaptability to making colour prints made it ideal for the reproduction of paintings. After the invention of photography, it was rarely used. In recent years the technique has been revived, especially by U.S. and Japanese printmakers.

Mfecane \em-fe-'kä-nā\ ("The Crushing") Series of Zulu and other Nguni wars and forced migrations in the early 19th century that changed the demographic, social, and political configuration of southern and central Africa. Set in motion by the rise of the Zulu military kingdom under Shaka, it took place in the context of drought, social unrest, and competition for trade. Ethnic group was set against ethnic group in an ever-increasing radius, resulting in the creation of large refugee populations as well as the establishment of new kingdoms under the Basuto, Gaza, Ndebele, and Swazi peoples.

MGM *in full* **Metro-Goldwyn-Mayer, Inc.** U.S. corporation and film studio. It was formed when the film distributor Marcus Loew, who bought Metro Pictures in 1920, merged it with the Goldwyn production company in 1924 and with Louis B. Mayer Pictures in 1925. Louis B. Mayer was executive head of the studio for 25 years, assisted by production manager Irving Thalberg. It reached its peak in the 1930s and '40s, when it had most of Hollywood's famous stars under contract. It produced such hits as *Grand Hotel* (1932), *The Philadelphia Story* (1940), *Gaslight* (1944), *Ben-Hur* (1959), *Doctor Zhivago* (1965), and *2001: A Space Odyssey* (1968). It was especially celebrated for its lavish musicals, including *The Wizard of Oz* (1939), *On the Town* (1949), *An American in Paris* (1951), *Singin' in the Rain* (1952), and *Gigi* (1958). MGM began to decline in the 1950s and sold off many of its assets in the 1970s. It diversified into hotels and casinos and later merged with United Artists Corp. as MGM/UA Entertainment. In 1986 it was bought by Ted Turner, who resold the production and distribution units. Various transfers of ownership led to its purchase in 1992 by Crédit Lyonnais, which restored the name MGM Inc. It was subsequently bought by Tracinda Corp.

MI5 *in full* **Military Intelligence (Unit 5)** British Security Service. Originally organized in 1909 to counter German espionage, in 1931 it assumed wider responsibility for assessing threats to national security, including communist subversion and subsequently fascism. Today the Security Service Act (1989) forms its statutory basis. As Britain's domestic-security intelligence agency, its purpose is to protect the country against threats such as terrorism, espionage, and subversion. Since the passing of the Security Service Act (1996), its role has been expanded to include supporting law-enforcement agencies in the field of organized crime.

Miami North American Indian people who live mostly in Oklahoma and Indiana, U.S. They call themselves Twitwee (Twatwa), which to them represents the call of the crane. The name Miami is a derivation of their Ojibwa name, Oumami, meaning "People of the Peninsula." Their traditional homeland is spread across Illinois, northern Indiana, and Ohio. The Miami language belongs to the Algonquian family. The staple of the Miami diet was corn, though they also hunted bison. Each village consisted of mat-covered dwellings and a large house in which councils and ceremonies were held. A secret medicine society conducted rites aimed

© 2006 Encyclopædia Britannica, Inc.

at ensuring tribal welfare. In the 19th century the Miami ceded most of their lands to the U.S., with one band remaining in Indiana and the rest removing to a reservation in Oklahoma. In the 2000 U.S. census some 3,800 people claimed sole Miami descent. See also Little Turtle.

Miami City (pop., 2000: 362,470), southeastern Florida, U.S., situated on Biscayne Bay at the mouth of the Miami River. The southernmost large city in the continental U.S., it has a beach 7 mi (11 km) long. A Spanish mission was founded near the site in 1567, but permanent settlement did not begin until 1835, when U.S. forces built Fort Dallas for the removal of Seminole Indians to the West. The arrival of the railway in 1896 spurred development, and Miami was incorporated the same year. The city has been damaged by occasional hurricanes, notably in 1926 and 1935. Nearly 300,000 Cuban refugees have arrived since 1959 (see Cuba), establishing "Little Havana" within the city. It is a major resort and retirement centre, and its port handles the world's largest number of cruise-ship passengers. It is also a banking centre. Educational institutions include the University of Miami and Florida International University.

Miami Beach City (pop., 2000: 87,933), southeastern Florida, U.S. It is situated on an island across Biscayne Bay from Miami. Until 1912 the site was a mangrove swamp. John S. Collins and Carl F. Fisher pioneered real estate development and built a bridge across the bay; the area was dredged to form an island measuring 7.4 sq mi (19 sq km), with an 8-mi (13-km) beach. The city, incorporated in 1915, is now a luxury resort and convention centre. It is connected with Miami by several causeways and is noted for its Art Deco architecture.

mica \'mī-kə\ Any of a group of hydrous potassium, aluminum silicate minerals that exhibit a two-dimensional sheet, or layer, structure. A very abundant variety of mica is muscovite; two other common varieties are biotite and phlogopite. Micas have various industrial uses. The varieties that contain little iron are used as thermal or electrical insulators in appliances and in such electrical devices as capacitors. In ground form, micas are used in the manufacture of wallpaper, roofing paper, and paint. Ground micas also serve as lubricants, absorbents, and packing material.

mica, black See biotite

Micah \'mī-kə\ (fl. 8th century BC) One of the 12 Minor Prophets in the Bible, traditional author of the book of Micah. (His prophecy is part of a larger book, The Twelve, in the Jewish canon.) He probably began to prophesy before the fall of the northern kingdom of Israel in 721 BC. Modern scholars usually attribute the book's first three chapters, which predict judgment from God on idolaters and unjust leaders, to Micah. Much of the rest, which promises the establishment of a kingdom of peace in Zion, probably dates from several centuries later.

Michael In the Bible and the Qur'ān, one of the archangels. The captain of the heavenly hosts, he was invoked by early Christian armies against the heathen. In Christian tradition he is thought to escort the soul into the presence of God at the time of death. In art he is depicted as a warrior, sword in hand, in triumph over a dragon. His feast day, known in England as Michaelmas, is September 29. See also Mīkā'īl.

Michael (b. Oct. 25, 1921, Sinaia, Rom.) King of Romania. After his father, the future king Carol II, had been excluded from the royal succession (1926), Michael was proclaimed king under a three-member regency. Carol reclaimed the throne in 1930, and Michael was reduced to crown prince. With Carol's abdication in 1940, Michael again became king but was in effect a prisoner of the military dictator Ion Antonescu. In 1944 he helped lead the coup that overthrew the military regime and severed Romania's ties with the Axis powers. He strongly opposed the communists' subsequent rise to power, but was forced to abdicate in 1947. He went into exile in Switzerland and became an executive with a U.S. brokerage firm. In 1997 his Romanian citizenship was restored; he subsequently visited the country and sought the return of property holdings that were confiscated.

Michael *or* **Michael Romanov** \rō-'mä-nəf, 'rō-mə-ˌnäf\ *Russian* **Mikhail Fyodorovich Romanov** (b. July 22, 1596—d. July 23, 1645, Moscow) Tsar of Russia (1613–45) and founder of the Romanov dynasty. A young nobleman elected as tsar after the chaotic Time of Troubles, he allowed his mother's relatives to direct the government early in his reign. They restored order to Russia and made peace with Sweden (1617) and Poland (1618). In 1619 his father, released from captivity in Poland, returned to Russia and became coruler. Michael's father dominated the government, increasing contact with western Europe and strengthening central authority and serfdom. After his death in 1633, Michael's maternal relatives once again held sway.

Michael VIII Palaeologus \ˌpā-lē-'äl-ə-gəs\ (b. 1224 or 1225—d. Dec. 11, 1282, Thrace) Nicaean emperor (1259–61) and Byzantine emperor (1261–82), founder of the Palaeologan dynasty. Appointed regent for the six-year-old son of Theodore II (1258), he seized the throne and blinded the rightful heir. He recovered Constantinople from the Latins (1261) and allied with the pope against his rivals, briefly reuniting Greek and Roman churches in 1274 (see Councils of Lyon). In 1281 the new pope, Martin IV, excommunicated him and declared Charles of Anjou's planned campaign against Byzantium to be a holy Crusade against the schismatic Greeks. The Sicilian Vespers prevented Charles's expedition and thus saved Byzantium from a second occupation by the Latins.

Michael Cerularius \ˌker-ü-'lär-ē-əs\ (b. c. 1000, Constantinople—d. Jan. 21, 1059, Madytus, near Constantinople) Greek Orthodox patriarch of Constantinople (1043–58). He thwarted Constantine IX's efforts to ally the Byzantine and Roman empires against the Normans, and he closed Latin churches in Constantinople that refused to use the Greek language and liturgy (1052). When negotiations broke down between Michael and the papal legates sent by Leo IX, each side excommunicated the other, initiating the Schism of 1054. Michael forced Constantine to support the schism, but in 1058 he was exiled by Constantine's successor.

Michelangelo (di Lodovico Buonarroti) (b. March 6, 1475, Caprese, Republic of Florence—d. Feb. 18, 1564, Rome, Papal States) Italian sculptor, painter, architect, and poet. He served a brief apprenticeship with Domenico Ghirlandaio in Florence before beginning the first of several sculptures for Lorenzo de' Medici. After Lorenzo's death in 1492, he left for Bologna and then for Rome. There his *Bacchus* (1496–97) established his fame and led to a commission for the *Pietà* (now in St. Peter's Basilica), the masterpiece of his early years, in which he demonstrated his unique ability to extract two distinct figures from one marble block. His *David* (1501–04), commissioned for the cathedral of Florence, is still considered the prime example of the Renaissance ideal of perfect humanity. On the side, he produced several Madonnas for private patrons and his only universally accepted easel painting, *The Holy Family* (known as the *Doni Tondo*). Attracted to ambitious sculptural projects, which he did not always complete, he reluctantly agreed to paint the ceiling of the Sistine Chapel (1508–12). The first scenes, depicting the story of Noah, are relatively stable and on a small scale, but his confidence grew as he proceeded, and the later scenes evince boldness and complexity. His figures for the tombs in Florence's Medici Chapel (1519–33), which he designed, are among his most accomplished creations. He devoted his last 30 years largely to the *Last Judgment* fresco in the Sistine Chapel, to writing poetry (he left more than 300 sonnets and madrigals), and to architecture. He was commissioned to complete St. Peter's Basilica, begun in 1506 and little advanced since 1514. Though it was not quite finished at Michelangelo's death, its exterior owes more to him than to any other architect. He is regarded today as among the most exalted of artists.

Jules Michelet, detail of an oil painting by Thomas Couture; in the Carnavalet Museum, Paris.
GIRAUDON—ART RESOURCE

Michelet \mēsh-'le**, Jules** (b. Aug. 21, 1798, Paris, France—d. Feb. 9, 1874, Hèyres) French nationalist historian. He taught history and philosophy before he was appointed head of the historical section of the Record Office in 1831. His time there provided him with unique resources for his life's work, the 17-volume *Histoire de France* (1833–67). His method, an attempt to resurrect the past by immersing his own personality in his narrative, resulted in a historical synthesis of great dramatic power, though the 11 volumes that appeared from 1855 to 1867 are distorted by his hatred of priests and kings, hasty or abusive treatment of documents, and mania for symbolic interpretation. His other works

© 2006 Encyclopædia Britannica, Inc.

include the vivid and impassioned *Histoire de la révolution française*, 7 vol. (1847–53). In his later years he wrote a series of lyrical books on nature, displaying his superb prose style.

Michelin \ˌmē-shə-ˈlaⁿ\ *in full* **Compagnie Générale des Etablissments Michelin** Leading French manufacturer of tires and other rubber products. It was founded in 1888 by the Michelin brothers, André (1853–1931) and Édouard (1859–1940), to manufacture tires for bicycles and horse-drawn carriages. It introduced pneumatic tires for automobiles in the 1890s and soon became one of the major European tire producers. Michelin opened its first foreign plant in Turin in 1906 and has since expanded production in many countries; it was reorganized as a HOLDING COMPANY in 1951. It also publishes a famous series of travel guides and road maps. Its headquarters are at Clermont-Ferrand.

Michelson \ˈmī-kəl-sən**, A(lbert) A(braham)** (b. Dec. 19, 1852, Strelno, Prussia—d. May 9, 1931, Pasadena, Calif., U.S.) Prussian-born U.S. physicist. His family immigrated to the U.S. in 1854. He studied at the U.S. Naval Academy and in Europe and later taught principally at the University of Chicago (1892–1931), where he headed the physics department. He invented the interferometer, with which he used light to make extremely precise measurements. He is best remembered for the MICHELSON-MORLEY EXPERIMENT, undertaken with Edward W. Morley (1838–1923), which established that the speed of light is a fundamental constant. Using a more refined interferometer, Michelson measured the diameter of the star Betelgeuse, the first substantially accurate determination of the size of a star. In 1907 he became the first American scientist to receive a Nobel Prize.

Michelson-Morley experiment Attempt to detect the VELOCITY of the Earth with respect to ether, a hypothetical medium in space formerly proposed to carry light waves. It was first performed in Berlin in 1881 by A.A. MICHELSON and refined in the U.S. in 1887 by Michelson and Edward W. Morley (1838–1923). The procedure assumed that if the speed of light were constant with respect to the ether, the motion of the Earth could be detected by comparing the speed of light in the direction of the Earth's motion and the speed of light at right angles to the Earth's motion. No difference was found, and the result discredited the ether theory. As a result, ALBERT EINSTEIN proposed in 1905 that the speed of light is a universal constant.

Michener \ˈmich-nər**, James A(lbert)** (b. Feb. 3, 1907?, New York, N.Y., U.S.—d. Oct. 16, 1997, Austin, Texas) U.S. novelist and short-story writer. Michener was a foundling discovered in Doylestown, Pa., and he was raised as a Quaker. From 1944 to 1946 he was a naval historian in the South Pacific, the setting of his early fiction; his *Tales of the South Pacific* (1947, Pulitzer Prize) was adapted as the Broadway musical *South Pacific* (1949; film, 1958). He is best known for epic and detailed novels drawing on extensive research, including *Hawaii* (1959; film, 1966), *Iberia* (1968), *Centennial* (1974), *Chesapeake* (1978), *Space* (1982), and *Mexico* (1992).

Michigan State (pop., 2000: 9,938,444), midwestern U.S. Surrounded almost entirely by the GREAT LAKES, it is divided into two large land segments: the Upper and Lower peninsulas. The Lower Peninsula is bordered to the south by Indiana and Ohio; the Upper Peninsula is bounded by Wisconsin to the west. Michigan, including the Great Lakes, covers 96,716 sq mi (250,493 sq km); its capital is LANSING. The western region of the Upper Peninsula is a rugged upland rich in minerals, and the remainder of the state consists of lowlands and rolling hills. The area was originally inhabited by ALGONQUIAN-speaking Indians. The French arrived in the 17th century, founding SAULT STE. MARIE in 1668 and DETROIT in 1701; fur trading was their primary activity. The English gained control of Michigan in 1763 following the FRENCH AND INDIAN WAR, and it passed to the U.S. in 1783. It was included in the NORTHWEST TERRITORY in 1787 and in Indiana Territory in 1800. Michigan Territory was organized on the Lower Peninsula in 1805. Though surrendered to the British in the WAR OF 1812, U.S. rule was restored in 1813 by the victory of OLIVER HAZARD PERRY at the Battle of Lake Erie. A boundary dispute with Ohio, known as the Toledo War, was settled by U.S. President Andrew Jackson, with Michigan receiving the Upper Peninsula and statehood as compensation. In 1837 it became the 26th U.S. state. Throughout the AMERICAN CIVIL WAR, it made major contributions to the Union cause. In the 20th century its economy was dominated by the automotive industry.

Michigan, Lake Third largest of the five GREAT LAKES and the only one lying wholly within the U.S. Bordered by the states of Michigan, Wisconsin, Illinois, and Indiana, it connects with Lake HURON through the Straits of MACKINAC in the north. It is 321 mi (517 km) long and up to 118 mi (190 km) wide, with a maximum depth of 923 ft (281 m); it occupies an area of 22,300 sq mi (57,757 sq km). The first European to discover it was the French explorer JEAN NICOLET in 1634; the explorer LA SALLE brought the first sailing ship there in 1679. It now attracts international shipping as part of the Great Lakes–St. Lawrence Seaway. The name is derived from the Algonquian word *michigami* or *misschiganin*, meaning "big lake."

Michigan, University of U.S. state university with its main campus in Ann Arbor and branch campuses in Flint and Dearborn. It originated as a preparatory school in Detroit in 1817 and moved to Ann Arbor in 1837. Today it is one of the nation's leading research universities, consisting of a college of literature, science, and the arts and numerous graduate and professional schools. Special facilities include a nuclear reactor, a hospital complex, an aerospace engineering laboratory, a Great Lakes research centre, and the Gerald R. Ford Presidential Library.

Michizane See SUGAWARA MICHIZANE

Michoacán \ˌmē-chō-ä-ˈkän\ State (pop., 2000: 3,985,667), southwestern Mexico. It covers 23,138 sq mi (59,928 sq km), and its capital is MORELIA. Bounded by the Pacific Ocean, it rises from a narrow coastal plain to the SIERRA MADRE. Important cities include Morelia, Uruapan, Zamora, and Pátzcuaro. In the 1530s the Dominican Vasco de Quiroga established the first successful missions among the Tarascan Indians around Lake Pátzcuaro. The state lies in an area of great volcanic activity; Mount Jorullo was formed by an eruption in 1759, and PARÍCUTIN was created by an eruption that lasted nearly a decade (1943–52). Michoacán produces a wide range of forest products and tropical crops.

Mickey Mouse Famous character of WALT DISNEY's animated cartoons. He was introduced in *Steamboat Willie* (1928), the first animated cartoon with sound. Mickey was created by Disney, who also provided his high-pitched voice, and was usually drawn by the studio's head animator, Ub Iwerks. Noted for his overlarge head and round black ears, he became the star of more than 100 cartoon shorts. The *Mickey Mouse Club* was one of the most popular television shows for children in the U.S. in the 1950s, and the signature black cap with mouse ears worn by the show's stars became one of the most widely distributed items in merchandising history.

Mickiewicz \mʸēts-ˈkʸe-vʸēch**, Adam (Bernard)** (b. Dec. 24, 1798, Zaosye, near Nowogródek, Belorussia, Russian Empire—d. Nov. 25, 1855, Constantinople, Tur.) Polish poet. A lifelong apostle of Polish national freedom and one of Poland's greatest poets, Mickiewicz was deported to Russia for his revolutionary activities in 1823. His *Poetry*, 2 vol. (1822–23), was the first major Polish Romantic work; it contained two parts of *Forefathers' Eve*, a cycle combining folklore and mystic patriotism. Mickiewicz left Russia in 1829 and eventually settled in Paris. There he wrote *The Books of Our Pilgrimage* (1832), a prose interpretation of the history of the Poles; and his masterpiece, the poetic epic *Pan Tadeusz* (1834), which describes the life of the Polish gentry in the early 19th century.

Micmac *or* **Mi'kmaq** North American Indian people living in Quebec, Nova Scotia, Newfoundland, New Brunswick, and Prince Edward Island, Can.; and in Aroostook, Maine, and near Boston, Mass., U.S. The Micmac comprise the largest of the Indian tribes of Canada's eastern Maritime Provinces. Early chronicles describe them as fierce and warlike, but they were among the first Indians to accept Jesuit teachings and intermarry with the settlers of New France. The Micmac formed a confederacy of several CLANS. In winter they hunted caribou, moose, and small game; in summer they fished, gathered shellfish, and hunted seals. They were expert canoeists. In the 17th–18th centuries they were allies of the French against the English. Estimates of the current population vary. The total population of Micmac in the U.S. and Canada is probably about 20,000.

Micon \ˈmī-ˌkän\ *or* **Mikon** (fl. 5th century BC, Greece) Greek painter and sculptor. A contemporary and pupil of POLYGNOTUS, he joined him in developing the treatment of space and perspective in Greek painting. Micon is known for the mural painting on the Stoa Poikile (Painted Stoa [portico]) on the agora at Athens and for the paintings at the Theseum at Athens. His innovations in spatial elaboration helped initiate the decline of Greek pottery painting.

microbiology Scientific study of microorganisms, a diverse group of simple life-forms including PROTOZOANS, ALGAE, MOLDS, BACTERIA, and VIRUSES. Microbiology is concerned with the structure, function, and classification of these organisms and with ways of controlling and using their activities. Its foundations were established in the later 19th century, with the work of LOUIS PASTEUR and ROBERT KOCH. Since then, many disease-causing microorganisms have been identified and means of controlling their harmful effects have been developed. In addition, means of channeling the activities of various microorganisms to benefit medicine, industry, and agriculture have been discovered. Molds, for example, produce ANTIBIOTICS, notably PENICILLIN. See also BACTERIOLOGY, GENETIC ENGINEERING.

microchip See INTEGRATED CIRCUIT

microcircuit See INTEGRATED CIRCUIT

microclimate Climatic condition in a relatively small area, within a few feet above and below the Earth's surface and within canopies of vegetation. Microclimates are affected by such factors as temperature, humidity, wind and turbulence, dew, frost, heat balance, evaporation, the nature of the soil and vegetation, the local topography, latitude, elevation, and season. Weather and climate are sometimes influenced by microclimatic conditions, especially by variations in surface characteristics.

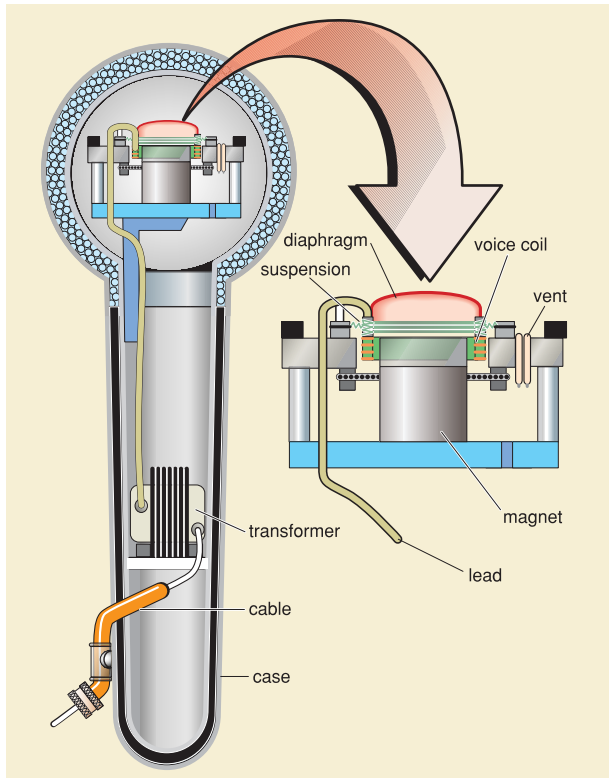
microcline Common FELDSPAR mineral, one form of potassium aluminosilicate ($KAlSi_3O_8$) that occurs in many rock types. Green specimens are called amazonstone and may be used as gems. It is an end-member composition in the alkali feldspar series. See also ORTHOCLASE.

micrococcus \ˌmī-krō-'kä-kəs\ Any of the spherical BACTERIA that make up the genus *Micrococcus*. Widespread in nature, these gram-positive (see GRAM STAIN) cocci (see COCCUS) are usually not considered to cause disease. They are normal inhabitants of the human body and may even be essential in keeping the balance among the various microorganisms found on the skin. Some species are found in the dust of the air, in soil, in marine waters, and on the skin of vertebrates. Certain species are found in milk and can result in spoilage.

microcomputer Small DIGITAL COMPUTERS whose CPU is contained on a single integrated SEMICONDUCTOR chip. As large-scale and then very large-scale integration (VLSI) have progressively increased the number of TRANSISTORS that can be placed on one chip, the processing capacity of microcomputers has grown immensely. The PERSONAL COMPUTER is the most common example of a microcomputer, but high-performance microcomputer systems are widely used in business, in engineering, and in "smart" machines in manufacturing. See also INTEGRATED CIRCUIT, MICROPROCESSOR.

microeconomics Study of the economic behaviour of individual consumers, firms, and industries and the distribution of total production and income among them. It considers individuals both as suppliers of LAND, LABOUR, and CAPITAL and as the ultimate consumers of the final product, and it examines firms both as suppliers of products and as consumers of labour and capital. Microeconomics seeks to analyze the MARKET or other mechanisms that establish relative prices among goods and services and allocate society's resources among their many possible uses. See also MACROECONOMICS.

microelectromechanical system (MEMS) Miniature devices formed by combining mechanical parts and electronic circuits, typically on a semiconductor chip, with dimensions from tens to a few hundred micrometres (millionths of a metre). Common applications for MEMS include sensors, actuators, and process-control units.



micromanipulation See MICROSURGERY

micrometer (caliper) \mī-'krä-mə-tər\ Instrument for making precise linear measurements of dimensions such as diameters, thicknesses, and lengths of solid bodies. It consists of a C-shaped frame with a movable jaw operated by a screw. The accuracy of the measurements depends on the accuracy of the screw-nut combination.

Micronesia Island group, western Pacific Ocean. A subdivision of OCEANIA, it comprises KIRIBATI, GUAM, NAURU, the Northern MARIANAS, the Federated States of MICRONESIA, the MARSHALL ISLANDS, and PALAU. Located mostly north of the Equator, Micronesia includes the westernmost of the Pacific Islands.

Micronesia, Federated States of Island country, western Pacific Ocean. It comprises the four states Yap, Chuuk (Truk), Pohnpei (Ponape), and Kosrae, all in the CAROLINE ISLANDS. Area: 271 sq mi (701 sq km). Population (2005 est.): 113,400. Capital: PALIKIR, on Pohnpei, the largest island. The people are Micronesian. Languages: Malayo-Polynesian languages, English. Religion: Christianity (mostly Roman Catholic; also Protestant). Currency: U.S. dollar. The islands and atolls extend about 1,750 mi (2,800 km) east-west and about 600 mi (965 km) north-south. U.S. government grants constitute the main source of revenue; subsistence farming and fishing are the principal economic activities. Micronesia is a republic in free association with the U.S.; it has one legislative house, and its head of state and government is the president. The islands were probably settled by people from eastern Melanesia some 3,500 years ago. They were colonized by Spain in 1886 and came under Japanese rule after World War I. They were captured by U.S. forces during World War II, and in 1947 they became part of the UN Trust Territory of the Pacific Islands, administered by the U.S. The islands became an internally self-governing federation in 1979. In 1982 it signed a compact of free association with the U.S., which is responsible for Micronesia's defense.

microphone Device for converting sound waves into electric power that has wave characteristics essentially similar to those of the sound. By proper design, a microphone may be given directional characteristics so that it will pick up sound primarily from a single direction, from two directions, or more or less uniformly from all directions. In addition to their use in telephone transmitters, microphones are most widely applied in hearing aids, sound-recording systems (principally magnetic and digital tape recorders), and public-address systems.

In a moving-coil microphone, sound waves cause the diaphragm to vibrate, and this oscillating motion causes a wire voice coil to move back and forth through a magnetic field, generating a current that varies in proportion to the original sound wave. This varying current is transmitted through a wire lead to a transformer, which converts it to a current that can be carried by wire cable to a recorder or loudspeaker.

© MERRIAM-WEBSTER INC.

microprocessor Miniature electronic device that contains the arithmetic, logic, and control circuitry needed to function as a DIGITAL COMPUTER'S CPU. Microprocessors are INTEGRATED CIRCUITS that can interpret and execute program instructions as well as handle arithmetic operations. Their development in the late 1970s enabled computer engineers to

© 2006 Encyclopædia Britannica, Inc.

develop MICROCOMPUTERS. Microprocessors led to "intelligent" terminals, such as bank ATMs and point-of-sale devices, and to automatic control of much industrial instrumentation and hospital equipment, programmable microwave ovens, and electronic games. Many automobiles use microprocessor-controlled ignition and fuel systems.

microprogramming Process of writing microcode for a MICROPROCESSOR. Microcode is low-level code that defines how a microprocessor should function when it executes MACHINE-LANGUAGE instructions. Typically, one machine-language instruction translates into several microcode instructions. On some computers, the microcode is stored in ROM and cannot be modified; on some larger computers, it is stored in EPROM and therefore can be replaced with newer versions.

microscope Instrument that produces enlarged images of small objects, allowing them to be viewed at a scale convenient for examination and analysis. Formed by various means, the image is received by direct imaging, electronic processing, or a combination of these methods. The most familiar type of microscope is the optical, or light, microscope, in which LENSES are used to form the image. Other types of microscopes use the wave nature of various physical processes, the most important being the electron microscope (see ELECTRON MICROSCOPY), which uses a beam of ELECTRONS in its image formation. Crude microscopes date to the mid-15th century, but not until 1674 were the powerful microscopes of A. VAN LEEUWENHOEK able to detect phenomena as small as protozoa.

Microsoft Corp. U.S. computer firm, the leading developer of personal-computer software systems and applications. Microsoft, headquartered in Redmond, Wash., also publishes books and multimedia titles and manufactures hardware. It was founded in 1975 by BILL GATES and Paul G. Allen (b. 1954), who adapted BASIC for use on PERSONAL COMPUTERS. They licensed versions of it to various companies, developed other programming languages, and in 1981 released MS-DOS for the IBM PC. The subsequent adoption of MS-DOS by most other personal-computer manufacturers generated vast revenues for Microsoft, which became a publicly owned corporation in 1986. It issued the first version of Microsoft Word, its popular word-processing program, in 1983, and Microsoft Windows, a GRAPHICAL USER INTERFACE for MS-DOS-based computers, in 1985. In 2001 Microsoft released Xbox, a video game console that quickly captured second place in the $10 billion video gaming market. In 2002 Microsoft launched Xbox Live, a BROADBAND gaming network for their consoles.

microsurgery *or* **micromanipulation** Surgical technique for operating on minute structures, with specialized, tiny precision instruments under observation through a microscope, sometimes equipped with cameras to show the operation on a monitor. Microsurgery permits operations that were once impossible—surgery on the delicate bones of the inner and middle ear, reattachment of severed limbs or digits, repair of the retina, and removal of tumours intricately embedded in vital structures.

microtubule \ˌmī-krō-ˈtü-byül\ Tubular structure enclosed by a membrane found within animal and plant cells. Of varying length, they have several functions. They help give shape to many cells and are major components of cilia and flagella, participate in the formation of the spindle during cell division (MITOSIS), and assist the movement of vesicles from the cell bodies of nerve cells toward the ends of those cells' long extensions (axons) and back to the cell bodies.

microwave Portion of the ELECTROMAGNETIC SPECTRUM that is situated between RADIO WAVES and INFRARED RADIATION. Microwaves have wavelengths ranging from 30 cm to 1 mm, corresponding to frequencies from about 1 gigahertz (10^9 Hz) to 1 terahertz (10^{12} Hz). They are the principal carriers of television, telephone, and data transmissions between stations on Earth and between the Earth and satellites. RADAR beams are short pulses of microwaves used to locate ships and planes, track weather systems, and determine the speeds of moving objects. Microwaves are absorbed by water and fat in foodstuffs and produce heat from the inside (see microwave oven). Materials such as glass and ceramics do not absorb microwaves, and metals reflect them. See also MASER.

microwave oven Appliance that cooks food by means of high-frequency ELECTROMAGNETIC RADIATION. A microwave oven is a relatively small, boxlike oven that raises the temperature of food by subjecting it to a high-frequency ELECTROMAGNETIC FIELD. The microwaves are absorbed by water, fats, sugars, and certain other molecules, whose resulting vibrations produce heat. The heating thus occurs inside the food, without warming the surrounding air. This process greatly reduces cooking time; baking and other tasks that may require an hour or more in a conventional oven can be completed in minutes in a microwave oven.

Mid-Atlantic Ridge Submarine ridge lying along the floor of the central Atlantic Ocean. It is a long mountain chain running about 10,000 mi (16,000 km) in a north-south direction, curving from the Arctic Ocean to the southern tip of Africa. The mountains sometimes reach above sea level, forming such islands or island groups as Ascension, SAINT HELENA, and Tristan da Cunha.

mid-ocean ridge See OCEANIC RIDGE

Midas \ˈmī-dəs\ In Greek and Roman legend, a king of PHRYGIA. Midas captured the satyr Silenus but treated him kindly, and as a reward was granted a wish by DIONYSUS. He asked that everything he touched turn to gold; but after turning his daughter to gold when she embraced him, he asked to be released from his wish. In another legend Midas was invited to judge a music contest between APOLLO and the satyr Marsyas. When Midas decided against Apollo, Apollo punished him by giving him donkey's ears. See also SATYR AND SILENUS.

Midas See MISSILE DEFENSE ALARM SYSTEM

Middle Ages Period in European history traditionally dated from the fall of the ROMAN EMPIRE to the dawn of the RENAISSANCE. In the 5th century the Western Roman Empire endured declines in population, economic vitality, and the size and prominence of cities. It also was greatly affected by a dramatic migration of peoples that began in the 3rd century. In the 5th century these peoples, often called barbarians, carved new kingdoms out of the decrepit Western Empire. Over the next several centuries these kingdoms oversaw the gradual amalgamation of barbarian, Christian, and Roman cultural and political traditions. The longest-lasting of these kingdoms, that of the Franks, laid the foundation for later European states. It also produced CHARLEMAGNE, the greatest ruler of the Middle Ages, whose reign was a model for centuries to come. The collapse of Charlemagne's empire and a fresh wave of invasions led to a restructuring of medieval society. The 11th–13th centuries mark the high point of medieval civilization. The church underwent reform that strengthened the place of the pope in church and society but led to clashes between the pope and emperor. Population growth, the flourishing of towns and farms, the emergence of merchant classes, and the development of governmental bureaucracies were part of cultural and economic revival during this period. Meanwhile, thousands of knights followed the call of the church to join the CRUSADES. Medieval civilization reached its apex in the 13th century with the emergence of GOTHIC ARCHITECTURE, the appearance of new religious orders, and the expansion of learning and the university. The church dominated intellectual life, producing the SCHOLASTICISM of St. THOMAS AQUINAS. The decline of the Middle Ages resulted from the breakdown of medieval national governments, the great papal schism, the critique of medieval theology and philosophy, and economic and population collapse brought on by famine and disease.

Middle Congo See Republic of the CONGO

Middle East *or* **Mideast** *or* **Near East** Geographic region where Europe, Africa, and Asia meet. It is an unofficial and imprecise term that now generally encompasses the lands around the southern and eastern shores of the Mediterranean Sea—notably Egypt, Jordan, Israel, Lebanon, and Syria—as well as Iran, Iraq, and the countries of the Arabian Peninsula. Afghanistan, Libya, Turkey, and The Sudan are sometimes also included. The term was formerly used by Western geographers and historians to describe the region from the Persian Gulf to Southeast Asia; Near East is sometimes used to describe the same area.

Middle English Vernacular spoken and written in England c. 1100–1500, the descendant of OLD ENGLISH and the ancestor of Modern English. It can be divided into three periods: Early, Central, and Late. The Central period was marked by the borrowing of many Anglo-Norman words and the rise of the London dialect, used by such poets as JOHN GOWER and GEOFFREY CHAUCER in a 14th-century flowering of English literature. The dialects of Middle English are usually divided into four groups: Southern, East Midland, West Midland, and Northern.

Middle West See MIDWEST

Middlebury College Private liberal arts college in Middlebury, Vt., founded in 1800. It is known for its curriculum emphasizing writing, literature, and modern languages. Middlebury sponsors the Bread Loaf Writers' Conference, an annual gathering for established and aspiring authors.

© 2006 Encyclopædia Britannica, Inc.

Middlesbrough \'mi-dᵊlz-brə\ Town and unitary authority (pop., 2001: 134,487), geographic county of North Yorkshire, historic county of Yorkshire, England. Situated on the southern bank of the River Tees, it was formed in 1830 with the arrival of the railway to the site of a new coal-exporting port. Its development was later fostered by the discovery of ironstone nearby.

Middlesex Historic county, southeastern England, situated along the River Thames. Its earliest settlements date from 500 BC; Belgic tribes arrived in the 1st century BC, followed by the Romans, who established outposts along the river. It was colonized by Saxons in the early 5th century AD. Situated between the East and West Saxons, it obtained its name (meaning "middle Saxons") by AD 704. Middlesex was established as an administrative county in 1888. In 1965 Greater London incorporated parts from the former county.

Middleton, Thomas (b. April? 1580, London, Eng.—d. July 4, 1627, Newington Butts, Surrey) British playwright. Middleton studied at Oxford University and had written three books of poetry by 1600. He learned to write plays by collaborating with John Webster and others on works for the producer Philip Henslowe. His tragedies *Women Beware Women* (c. 1621) and *The Changeling* (1622, with William Rowley) are considered his masterpieces. His comedies, which picture a society dazzled by money, include *Michaelmas Terme* (c. 1605), *A Trick to Catch the Old-one* (1608), *A Mad World, My Masters* (1608), *A Chast Mayd in Cheapeside* (c. 1613), and *A Game at Chess* (1625).

middot \mē-'dōt\ In Jewish biblical interpretation, the principles used to explicate the meaning of biblical words or passages. The middot are used especially to determine the bearing that a passage has on a new question or situation. The first known middot were compiled by Hillel in the 1st century BC; others were compiled by Ishmael ben Elisha (c. AD 100) and Eliezer ben Yose the Galilaean (c. AD 150). Among the best-known are the *kol wa-homer* ("how much more"), in which the interpreter proceeds from a minor to a major premise, and the *gezera shawa* (comparison of similar expressions or laws), in which an inference is made by analogy.

Mideast See Middle East

Midgard In Norse mythology, the dwelling place of humankind. According to legend, it was made from the body of the first created being, the giant Aurgelmir (Ymir). The gods killed him and rolled his body into the central void of the universe, forming the land from his flesh, the oceans from his blood, the mountains from his bones, and so on. Aurgelmir's skull, held up by four dwarfs, became the dome of the heavens. The sun, moon, and stars were made of scattered sparks caught in the skull.

midge Any of a group of tiny dipterans, sometimes called gnats and classified as nonbiting (family Chironomidae), biting (family Ceratopogonidae), or gall (family Cecidomyiidae) midges. Nonbiting midges resemble mosquitoes but are harmless. Humming swarms can be found around water in late afternoon. The often blood-red, aquatic larvae (bloodworms) are important food for aquatic animals. Biting midges (no-see-ums) are the smallest bloodsucking insect (about 0.04 in., or 1 mm, long). Punkies or sand flies (genera *Culicoides* and *Leptoconops*) attack humans but do not transmit disease; many species attack other insects. Gall-midge larvae cause tissue swellings (galls) in plants.

Midge (Chironomidae)
N.A. CALLOW/EB INC.

Midgley, Thomas, Jr. (b. May 18, 1889, Beaver Falls, Pa., U.S.—d. Nov. 2, 1944, Worthington, Ohio) U.S. engineer and chemist. After studying at Cornell University, he worked as an industrial researcher and administrator. In 1921 he discovered the effectiveness of tetraethyl lead as an antiknock additive for gasoline. He also discovered dichlorodifluoromethane, a refrigerant sold commercially as Freon-12 (see Freon), which with related compounds came into universal use as refrigerants and later as aerosol propellants. Midgley conducted extensive research on natural and synthetic rubbers and discovered one of the first catalysts for "cracking" (breaking down) hydrocarbons.

Midhat Pasha \mid-'hät-pä-'shä\ (b. October 1822, Constantinople, Ottoman Empire—d. May 8, 1883, Al-Ṭā'if, Arabian Peninsula) Civil servant and grand vizier of the Ottoman Empire. As governor of Niš and Baghdad, his successful reforms earned the respect of the sultan Abdülaziz, who in 1872 appointed him grand vizier, a post he held only three months. In 1876 he helped depose Abdülaziz and eventually replaced him with Abdülhamid II. Again appointed grand vizier, he was dismissed after six months. Afterward, he was banished but later was recalled and made governor of Smyrna. He then was arrested and convicted for Abdülaziz's death. His death sentence was commuted to permanent exile. See also Tanzimat.

MIDI \'mi-dē\ *in full* **Musical Instrument Digital Interface** Protocol for transmission of musical data between digital components, such as synthesizers and a computer's sound card. MIDI uses 8-bit asynchronous serial transmission with a data rate of 31.25 kilobytes per second. The transmitted data do not directly represent musical sound but specify various aspects (pitch, loudness, starting and stopping points in time). The data are then applied to waveforms stored digitally on a computer chip to create a specific sound.

Midrash \mē-'dräsh, 'mi-ˌdräsh\ In Judaism, a large collection of writings that examine the Hebrew Bible in the light of oral tradition. Midrashic activity reached its height in the 2nd century AD with the schools of Ishmael ben Elisha and Akiba ben Joseph. The Midrashim are divided into two groups: Halakhah, which clarify legal issues; and Haggadah, nonlegal writings intended simply to enlighten. The Midrashim are extensively quoted in the Talmud.

Midway *formerly* **Brooks Islands** Unincorporated U.S. territory, central Pacific Ocean. Midway consists of two coral islands, Eastern and Sand islands, with a total land area of 2 sq mi (5 sq km); there is no permanent population. Claimed for the U.S. in 1859 by Capt. N.C. Brooks, the islands were formally annexed in 1867. Their location, over 1,300 mi (2,100 km) northwest of Honolulu, gave them strategic importance for U.S. forces during World War II, and in 1941 the U.S. Navy established an air and submarine base there. The Battle of Midway (1942) took place in nearby waters. Midway also served as a commercial air base. Its airfield was closed in 1993.

Midway, Battle of (June 3–6, 1942) Major World War II naval battle between the U.S. and Japan. Japanese naval forces under Yamamoto Isoroku sought to seize Midway Island by engaging the numerically inferior U.S. Pacific fleet. U.S. intelligence had broken the Japanese naval code, and the U.S. prepared for the assault by mobilizing about 115 land-based aircraft as well as three aircraft carriers. On June 3 its bombers began striking Japan's carrier force. Japan was unable to match the U.S. air power and, after heavy losses, abandoned efforts to land on Midway. The battle brought the Pacific naval forces of Japan and the U.S. to approximate parity and marked the turning point of the war between the two countries.

Midwest *or* **Middle West** Region, northern and central U.S., lying midway between the Appalachian and Rocky mountains, and north of the Ohio River. As defined by the federal government, it comprises the states of Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin. It includes much of the Great Plains, the region of the Great Lakes, and the upper Mississippi River valley.

midwifery \mid-'wif-ər-ē\ Art of attending women in childbirth. It is known to date to ancient biblical, Greek, and Roman times. It declined in the Middle Ages, when childbirth carried high mortality for mothers and infants, but advanced considerably in the 17th–19th century. Later, with advances in obstetrics and gynecology, most women gave birth in hospitals. In the 1960s, the natural childbirth movement, feminism, and other factors renewed interest in the personal care given by midwives. In the U.S., certified nurse-midwives (CNMs)—registered nurses trained in midwifery—accept only low-risk patients. If problems develop, a physician is called. CNMs also provide pre- and postnatal care and reproductive health advice. Lay midwives usually have no formal training, are unlicensed, and deliver (at home) about three-fourths of infants born throughout the world, mostly in developing countries and rural areas of developed nations.

Mies van der Rohe \ˌmēs-ˌvan-də-'rō-ə**, Ludwig** *orig.* **Maria Ludwig Michael Mies** (b. March 27, 1886, Aachen, Ger.—d. Aug. 17, 1969, Chicago, Ill., U.S.) German-born U.S. architect and designer. Mies learned masonry from his father and later worked in the office of

© 2006 Encyclopædia Britannica, Inc.

Peter Behrens. His first great work was the German Pavilion for the 1929 International Exposition in Barcelona, Spain, a travertine platform with chromed steel columns and spaces defined by planes of extravagant onyx, marble, and frosted glass. The steel-and-leather Barcelona chair he designed for the space went on to become a 20th-century classic. He was director of the Bauhaus in 1930–33, first in Dessau and then, during its final months, in Berlin. After moving to the U.S. in 1937, he became director of the School of Architecture at Chicago's Armour Institute (now the Illinois Institute of Technology), where he designed the school's new campus (1939–41). The International Style, with Mies its undisputed leader, reached its zenith during the next 20 years. His other projects included Chicago's Lake Shore Drive Apartments (1949–51), and the Seagram Building (1956–58, with Philip Johnson) in New York City. These buildings, steel skeletons sheathed in glass curtain-wall facades, exemplify Mies's dictum that "less is more." His later works include Berlin's New National Gallery (1963–68). Modernist steel-and-glass office buildings influenced by his work were built all over the world over the course of the 20th century.

Miescher \'mē-shər**, Johann Friedrich** (b. Aug. 13, 1844, Basel, Switz.—d. Aug. 26, 1895, Davos) Swiss biologist. In 1869 he discovered a substance containing both phosphorus and nitrogen in the nuclei of white blood cells found in pus. The substance, first named nuclein because it seemed to come from cell nuclei, became known as nucleic acid after Miescher separated it into a protein and an acid component. He also was one of the earliest researchers to propose that it is the carbon dioxide concentration (rather than the oxygen concentration) in the blood that regulates breathing.

Mieszko \'myesh-kō\ **I** (b. c. 930—d. May 25, 992) Prince or duke of Poland (963?–992). He accepted Christianity from Rome (966) to avoid forced conversion by the Germans and the incorporation of Poland into the Holy Roman Empire. He expanded Poland southward into Galicia and northward as far as the Baltic Sea.

Mifune \mi-'fü-nā\ **Toshirō** (b. April 1, 1920, Tsingtao, Shantung province, China—d. Dec. 24, 1997, Mitaka, near Tokyo, Japan) Japanese film actor. After serving in the Japanese army in World War II, he made his screen debut in *These Foolish Times* (1947). He followed it with *Drunken Angel* (1948) and achieved international fame in *Rashomon* (1950). He acted in more than 100 films and was known internationally for his energetic, flamboyant portrayals of samurai characters in the films of Kurosawa Akira, including *Seven Samurai* (1954), *The Hidden Fortress* (1958), *Yojimbo* (1961), and *Sanjuro* (1962); he also played legendary samurai Miyamoto Musashi in three films. His other films include *Throne of Blood* (1957), *The Lower Depths* (1957), *Red Beard* (1965), and *Midway* (1976).

MiG \'mig\ Any member of a family of Russian military fighter aircraft produced by a design bureau founded in 1939 by Artem Mikoyan and Mikhail Gurevich. The early MiGs, built in World War II, were propeller-driven. The MiG-15, first flown in 1947, was among the best of the early jet fighters; it saw extensive combat in the Korean War. The MiG-21, a lightweight, single-engine interceptor introduced in 1955, became the principal fighter of North Vietnam and was built for more than 40 other countries. More modern jets include the MiG-29, a single-seat, twin-engine air-to-air fighter that can also be used for ground attack.

MiG *officially* **ANPK imeni A.I. Mikoyana** *formerly* **OKB-155** Russian design bureau that is the country's major producer of jet fighters. The company originated in 1939 within another Soviet design bureau as a department under Artem Mikoyan and his deputy, Mikhail Gurevich. Three years later it became the independent bureau OKB-155. Its first design, a single-engine interceptor (first flown 1940), eventually bore the name MiG-1 ("MiG" being an acronym based on "Mikoyan" and "Gurevich"). After World War II it produced the first Soviet jet fighter, the MiG-9 (1946), and followed on with some of the U.S.S.R.'s most notable high-speed aircraft (see MiG [fighter aircraft]). The last major fighters designed under Mikoyan (died 1970) were the variable-wing MiG-23 (entered service 1972), and the MiG-25 (introduced 1970; capable of about Mach 3). The organization later produced several new designs, including the MiG-29 and MiG-31 (both first flown in the 1970s). In the late 1980s its formal name became ANPK imeni A.I. Mikoyana. In the 1990s, after the breakup of the Soviet Union, MiG was consolidated with several other major firms into the giant state-owned aerospace complex VPK MAPO. MiG diversified modestly into the civilian passenger plane market and continued to develop advanced fighter concepts, including the 1.42 (1.44I) multifunctional fifth-generation fighter (first flown 2000).

Mighty Five, The see Five, The

migmatite \'mig-mə-ˌtīt\ Rock composed of a metamorphic host material that is streaked or veined with granite; the name means "mixed rock." Many migmatites probably represent partial fusion of the metamorphic host; some components of the rock are fused and gather to produce the streaks of granite. Migmatite also can form near large intrusions of granite when some of the magma is injected into neighbouring metamorphic rocks.

migraine Recurrent vascular headache, usually on one side of the head. Severe throbbing pain is sometimes accompanied by nausea and vomiting. Some migraine patients have warning symptoms (an "aura") before the headache, including visual disturbance, weakness, numbness, or dizziness. If a stimulus (e.g., a particular food or drink) is found to trigger attacks, avoidance can prevent them. Drugs may be taken as an attack begins (to abort it) or daily by patients with very frequent attacks (to prevent them or reduce their severity).

migrant labour Semiskilled or unskilled workers who move from one region to another, offering their services on a temporary, usually seasonal, basis. In North America, migrant labour is generally employed in agriculture and moves seasonally from south to north following the harvest. In Europe and the Middle East, migrant labour usually involves urban rather than agricultural employment and calls for longer periods of residence. The migrant labour market is often disorganized and exploitative. Many workers are supervised by middlemen such as labour contractors and crew leaders, who recruit and transport them and dispense their pay. Labourers commonly endure long hours, low wages, poor working conditions, and substandard housing. In some countries, child labour is widespread among migrant labourers, and even in the U.S. those children who do not work often do not go to school, since schools are usually open only to local residents. Workers willing to accept employment on these terms are usually driven by even worse conditions in their home countries. Labour organizing is made difficult by mobility and by low rates of literacy and political participation, though some migrant labourers in the U.S. have been unionized. See also Cesar Chavez.

migration, human Permanent change of residence by an individual or group, excluding such movements as nomadism and migrant labour. Migrations may be classed as internal or international and as voluntary or forced. Voluntary migration is usually undertaken in search of a better life; forced migrations include expulsions during war and the transportation of slaves or prisoners. The earliest humans migrated from Africa to all the continents except Antarctica within about 50,000 years. Other mass migrations include the forced migration of 20 million people as slaves from Africa to North America in the 16th–19th centuries and the Great Atlantic Migration of 37 million people from Europe to North America between 1820 and 1980. War-related forced migrations and refugee flows continue to be very large, as are voluntary migrations from developing nations to industrialized ones. Internal migrations have tended to be from rural areas to urban centers.

mihrab \'mē-rəb\ *Arabic* **miḥrāb** Semicircular prayer niche in the *qiblah* wall (the wall facing Mecca) of a mosque, reserved for the prayer leader (*imām*). The mihrab originated in the reign of the Umayyad caliph al-Walīd I (705–715), when the famous mosques at Medina, Jerusalem, and Damascus were built. It was adapted from the prayer niches common in Coptic Christian monasteries. Mihrabs are usually ornately decorated.

Mikāʾīl \mi-'käl\ In Islam, the counterpart of the biblical archangel Michael. Mīkāʾīl is mentioned only once in the Qurʾān, but, according to legend, he and Jibrīl were the first angels to obey God's order to worship

© 2006 Encyclopædia Britannica, Inc.

Adam. The two are credited with purifying Muhammad's heart before his ascension to heaven (see *mirʿāj*). Mīkāʾīl is said to have been so shocked at the sight of hell when it was created that he never laughed again. He is also believed to have helped the Muslims win their first significant military victory in Arabia in 624.

Mikan \'mī-kən**, George (Lawrence)** (b. June 18, 1924, Joliet, Ill., U.S.—d. June 1, 2005, Scottsdale, Ariz.) U.S. basketball player and executive. He was an outstanding centre at DePaul University, where he also took his law degree. Standing about 6 ft 10 in. (2.08 m) tall, he was the first of the dominant big men in post-World War II professional basketball. He played for the Minneapolis Lakers (now the Los Angeles Lakers) in 1947–54 and 1955–56, leading them to six championships. He was later named the first commissioner of the American Basketball Association (1967–69). An Associated Press poll in 1950 named him the greatest basketball player of the first half of the 20th century.

Mikołajczyk \ˌmē-kȯl-'ī-chik**, Stanisław** (b. July 18, 1901, Holsterhausen, near Gelsenkirchen, Ger.—d. Dec. 13, 1966, Washington, D.C., U.S.) Polish statesman. He cofounded the Peasant Party and served as its leader (1931–39). After the German invasion of Poland (1939), he fled to London, where he served in the Polish government-in-exile as prime minister (1943–44). He returned in 1945 and became second deputy premier in the communist-dominated provisional government. He tried to effect a democratic government, but persecution of the noncommunist Peasant Party forced him to flee in 1947 to Britain and then the U.S.

Mikon See Micon

Mikoyan \ˌmē-kō-'yän**, Anastas (Ivanovich)** (b. Nov. 25, 1895, Sanain, Armenia—d. Oct. 21, 1978, Moscow, Russia, U.S.S.R.) Russian statesman. After joining the Bolsheviks in 1915, he became a party leader in the Caucasus. His support of Joseph Stalin earned him a post on the Communist Central Committee (1923). He was commissar of trade from 1926, a member of the Politburo from 1935, and deputy premier (1946–64), directing the country's trade. He supported Nikita Khrushchev's rise to power and became his close adviser and a first deputy premier of the Soviet Union. He was chairman of the Presidium of the Supreme Soviet (1964–65).

milad See Mawlid

Milan \mə-'lan, mə-'län\ *Italian* **Milano** \mē-'lä-nō\ Capital (pop., 2001 prelim.: 1,182,693), Lombardy region, northern Italy. The area was settled by the Gauls c. 600 BC. Known as Mediolanum, it was conquered by the Romans in 222 BC. Attacked in AD 452 by Attila and in 539 by the Goths, it fell to Charlemagne in 774. Milan's power grew in the 11th century, but it was destroyed by the Holy Roman Empire in 1162. Rebuilt as part of the Lombard League in 1167, Milan achieved independence in 1183. In 1450 Francesco Sforza founded a new dynasty there; after 1499 it was ruled alternately by the French and the Sforza family until 1535, when the Habsburgs obtained it. Napoleon took power in 1796, and in 1805 it became the capital of his kingdom of Italy. It was incorporated into unified Italy in 1860. Milan was heavily damaged during World War II but was rebuilt. It is Italy's most important economic centre, with industrial development and textile manufacturing. It is noted for its fashion industry and production of electronic goods and is also Italy's financial centre. Its historic sites include the medieval Duomo, Europe's third largest cathedral; the Palazzo di Brera (1651); the 15th-century monastery that houses Leonardo da Vinci's *Last Supper*; and La Scala opera house.

Milan Decree (Dec. 17, 1807) Economic policy in the Napoleonic Wars. It was part of the Continental System invoked by Napoleon to blockade trade with the British. It expanded the blockade of continental ports to those of neutral ships trading with Britain and eventually affected U.S. shipping.

mildew Conspicuous mass of threadlike hyphae (see mycelium) and fruiting structures produced by various fungi (division Mycota; see fungus). Mildew grows on cloth, fibres, leather goods, and plants, using these substances as food for growth and reproduction. Downy mildew and powdery mildew are plant diseases that affect hundreds of species.

mile Any of various units of distance, including the statute mile of 5,280 ft (1.61 km). It originated from the Roman *mille passus*, or "thousand paces," which measured 5,000 Roman ft (4,840 English ft [1,475 km]). A nautical mile is the length on the Earth's surface of one minute of arc or, by international definition, 1,852 m (6,076.12 ft [1.1508 statute mi]); it remains in universal use in both marine and air transportation. A knot is one nautical mile per hour. See also International System of Units; metric system.

Miletus \mī-'lē-təs\ Ancient Greek city of western Anatolia. Before 500 BC it was the greatest Greek city in the east. Distinguished as a commercial and colonial power, it was also known for its intellectual figures, including Thales, Anaximander, Anaximenes, and Hecataeus. Ruled by Greek tyrants, it later passed successively under the control of Lydia and the Persian Achaemenian dynasty. About 499 BC Miletus led the Ionian revolt that sparked the Persian Wars, and it was destroyed by the Persians in 494 BC. After the Greeks defeated the Persians, it joined the Delian League. It fell to Alexander the Great in 334 BC but retained its commercial importance. By the 6th century AD its two harbours had silted up, and it was eventually abandoned. Now an archaeological site, it is located near the mouth of the Menderes River.

Milford Sound Inlet of the Tasman Sea, southwestern coast of South Island, New Zealand. About 2 mi (3 km) wide, the sound extends inland for 12 mi (19 km). It was named by a whaler in the 1820s for its resemblance to Milford Haven in Wales. It is the northernmost fjord in Fiordland National Park and is the site of Milford Sound town, one of the region's few permanently inhabited places.

Milhaud \mē-'yō**, Darius** (b. Sept. 4, 1892, Aix-en-Provence, France—d. June 22, 1974, Geneva, Switz.) French composer. Milhaud studied at the Paris Conservatoire, then at the Schola Cantorum with Vincent d'Indy. He became known as one of Les Six, a group of young French composers. His music is characterized by polytonality (simultaneous use of different keys), as in *Saudades do Brazil* (1921); though dissonant, his compositions retain a lyrical quality. The influence of jazz is audible in his best-known work, the ballet *The Creation of the World* (1923). He wrote many ballets, operas, and film scores in the 1920s, culminating in the grand opera *Christophe Colomb* (1928). Milhaud had a longtime association with the Aspen Music Festival, which he helped found in 1949.

miliaria \ˌmi-lē-'ar-ē-ə\ Inflammatory skin disorder, with multiple small sites at sweat pores. Blockage of ducts causes sweat to escape into various levels of the skin and produce different inflammatory reactions. The most common type, known as prickly heat, results when sweat escapes into the epidermis. Pinhead blisters or pimplelike bumps occur mostly on the trunk and limbs and cause itching and burning. It mainly affects infants in tropical climates. See also perspiration, sweat gland.

Military Academy, U.S. See United States Military Academy

military engineering Art and practice of designing and building military works and of building and maintaining lines of military transport and communications. It includes both tactical support (see tactics) on the battlefield, including construction of fortifications and demolition of enemy installations, and strategic support (see strategy) away from the front lines, such as construction or maintenance of airfields, ports, roads, railroads, bridges, and hospitals. Its most notable feat in ancient times was the Great Wall of China. The preeminent military engineers of the ancient Western world were the Romans, who maintained their power by constructing not only forts and garrisons but roads, bridges, aqueducts, harbors, and lighthouses. See also civil engineering.

military government Administration of territory by an occupying power. The definition does not cover military forces stationed in neutral or friendly territory that share administrative responsibilities with local civil authorities. Military government must also be distinguished from military law and martial law. Its control lasts until it either gives up power voluntarily or is overthrown. The term is popularly used for rule of a country by its own military, whether it comes to power through a coup d'état or is the legitimate governing body.

military law Law prescribed by statute for governing the armed forces and their civilian employees. It in no way relieves military personnel of their obligations to their country's civil code or to the codes of international law. Mutiny, insubordination, desertion, misconduct, and other offenses injurious to military discipline constitute violations of military law; offenders may be subject to court-martial. Lesser offenses may be penalized summarily by a commanding officer (e.g., through the withdrawal of privileges or the cancellation of liberty).

military unit Group of a prescribed size with a specific combat role within a larger military organization. The chief units in the ancient world

© 2006 Encyclopædia Britannica, Inc.

were the Greek PHALANX and the Roman LEGION. Modern units originated in the 16th–18th century, when professional armies reemerged in Europe after the end of the Middle Ages. Since then the basic units—company, BATTALION, BRIGADE, and division—have remained in use. The smallest unit today is the squad, which has 7–14 soldiers and is led by a sergeant. Three or four squads make up a PLATOON, and two or more platoons make up a company, which has 100–250 soldiers and is commanded by a captain or a major. Two or more companies make up a battalion, and several battalions form a brigade. Two or more brigades, along with various specialized battalions, make up a division, which has 7,000–22,000 troops and is commanded by a major general. Two to seven divisions make up an army corps, commanded by a lieutenant general, which with 50,000–300,000 troops is the largest regular army formation, though in wartime two or more corps may be combined to form a field army (commanded by a general), and field armies in turn may be combined to form an army group.

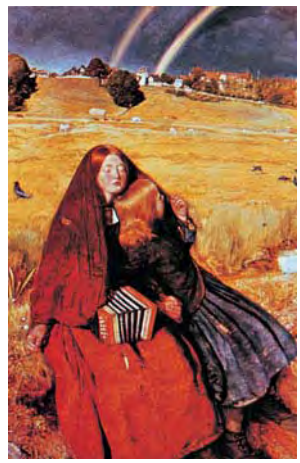
militia \mə-'li-shə\ Military organization of citizens with limited military training who are available for emergency service, usually for local defense. In many countries the militia is of ancient origin. The Anglo-Saxons required every able-bodied free male to serve. In colonial America it was the only defense against hostile Indians when regular British forces were not available. In the AMERICAN REVOLUTION the militia, called the Minutemen, provided the bulk of the American forces. Militias played a similar role in the WAR OF 1812 and the AMERICAN CIVIL WAR. State-controlled volunteer militias in the U.S. became the National Guard. British militia units, begun in the 16th century for home defense and answerable to the county sheriff or lord lieutenant, were absorbed into the regular army in the 20th century. Today various paramilitary organizations, from U.S. white supremacists to revolutionaries in the developing world, use the term *militia* to accentuate their populist origins.

milk Liquid secreted by the mammary glands of female mammals to nourish their young. The milk of domesticated animals is also an important food source for humans. Most milk consumed in Western countries is from cows; other important sources include sheep, goats, water buffalo, and camels. Milk is essentially an emulsion of FAT and PROTEIN in water, along with dissolved sugar, minerals (including CALCIUM and PHOSPHORUS), and VITAMINS, particularly VITAMIN B COMPLEX. Commercially processed cow's milk is commonly enriched with vitamins A and D. Many countries require PASTEURIZATION to protect against naturally occurring and artificially introduced microorganisms. Cooling further prevents spoilage (souring and curdling). Fat from whole milk (about 3.5% fat content) can be removed in a separator to produce CREAM and leave low-fat milk (1–2% fat) or skim milk (0.5% fat). Milk is usually homogenized, forced under high pressure through small openings to distribute the fat evenly. It may also be condensed, evaporated, or dehydrated for preservation and ease of transport. Other dairy products include BUTTER, CHEESE, and YOGURT.

Milk, Harvey (Bernard) *orig.* **Glimpy Milch** (b. May 22, 1930, Woodmere, Long Island, N.Y., U.S.—d. Nov. 27, 1978, San Francisco, Calif.) U.S. political leader. After graduating from college, he served in the U.S. Navy and was discharged in 1955 (although Milk claimed that he was dishonourably discharged due to his homosexuality, military records do not support the allegation). He later settled in San Francisco and soon gained a following as a leader of the city's gay community. In 1977 he was elected to the city's Board of Supervisors, becoming one of the first openly gay elected officials in U.S. history. In 1978 Milk and the city's mayor, George Moscone (1929–78), were shot and killed in City Hall by Dan White, a conservative former city supervisor. At White's murder trial, his attorneys argued that his judgment had been impaired by eating junk food (a tactic later derided as the "Twinkie defense"); his conviction on the less serious charge of voluntary manslaughter sparked riots in the city. Milk was the subject of numerous books and movies, including the 1984 documentary *The Times of Harvey Milk*, which received an Academy Award.

Milken, Michael R. (b. July 4, 1946, Encino, Calif., U.S.) U.S. financier and entrepreneur. He studied at the University of Pennsylvania's Wharton School and went to work in 1969 for what was to become Drexel Burnham Lambert Inc., an investment-banking company. In 1971 he became head of its bond-trading department. He persuaded many of his clients to invest in JUNK BONDS issued by new or financially troubled companies; the capital he raised financed a new class of "corporate raiders" who carried out numerous mergers, acquisitions, hostile takeovers, and leveraged buyouts in the 1980s. By the end of the decade, the junk-bond market was worth $150 billion, and Drexel was a leading financial firm. In 1986 its client Ivan Boesky, convicted of INSIDER TRADING, implicated Milken and the firm in his dealings. Charged with securities fraud and heavily fined, Drexel declared bankruptcy in 1990 when the junk-bond market collapsed. Milken pled guilty to securities fraud the same year and was sentenced to 10 years in prison and a $600-million fine; released after 22 months, he since made a second fortune.

milkweed family Family Asclepiadaceae, composed of about 2,000 species of flowering herbaceous plants or shrubby climbers in more than 280 genera. Most family members have milky juice, podlike fruits, and tufted silky-haired seeds that drift on wind currents to new locations for sprouting. Common milkweed (*Asclepias syriaca*) and bloodflower (*A. curassavica*) often are cultivated as ornamentals. *Hoya carnosa*, commonly called wax plant because of its waxy white flowers, is often grown indoors as a potted plant. The family also includes some SUCCULENTS, some PITCHER PLANTS, and BUTTERFLY WEED.



Milky Way Galaxy Large spiral GALAXY (roughly 150,000 light-years in diameter) that contains Earth's SOLAR SYSTEM. It includes the multitude of stars whose light is seen as the Milky Way, the irregular luminous band that encircles the sky defining the plane of the galactic disk. The Milky Way system contains hundreds of billions of stars and large amounts of interstellar gas and dust. Because the dust obscures astronomers' view of many of its stars, large areas could not be studied before the development of INFRARED ASTRONOMY and radio astronomy (see RADIO AND RADAR ASTRONOMY). Its precise constituents, shape, and true size and mass are still not known; it is believed to contain large amounts of DARK MATTER and a massive BLACK HOLE at its core. The Sun lies in one of the Galaxy's spiral arms, about 27,000 light-years from the centre.

Mill, James (b. April 6, 1773, Northwater Bridge, Forfarshire, Scot.—d. June 23, 1836, London, Eng.) Scottish philosopher, historian, and economist. After studying at the University of Edinburgh and teaching, he went to London in 1802, where he met JEREMY BENTHAM and became a major promulgator of Bentham's UTILITARIANISM. He wrote for several journals, including the *Edinburgh Review* (1808–13), and contributed articles on government and education to the *Encyclopaedia Britannica*. He helped found London University in 1825. After completing his *History of British India* (3 vol., 1817), he was appointed an official in India House (1819) and later became head of the examiner's office (1830). His criticism of British rule led to changes in the government of India. His *Elements of Political Economy* (1821) summarized the views of DAVID RICARDO, and his *Analysis of the Phenomena of the Human Mind* (1829) associated psychology with utilitarianism, a doctrine continued by his son, JOHN STUART MILL. Mill is considered the founder of philosophical radicalism.

Mill, John Stuart (b. May 20, 1806, London, Eng.—d. May 8, 1873, Avignon, France) British philosopher and economist, the leading expositor of UTILITARIANISM. He was educated exclusively and exhaustively by his father, JAMES MILL. By age 8 he had read in the original Greek Aesop's *Fables*, Xenophon's *Anabasis*, and all of Herodotus, and he had begun a study of Euclid's geometry; at age 12 he began a thorough study of scholastic logic. In 1823 he cofounded the Utilitarian Society with JEREMY BENTHAM, though he would later significantly modify the utilitarianism he inherited from Bentham and his father to meet the criticisms it encountered. In 1826 he and Bentham cofounded London University (now University College). From 1828 to 1856 he was an assistant examiner in India House, where from 1836 he was in charge of the East India Company's relations with the Indian states. In the 1840s he published his great systematic works in logic and political economy, chiefly *A System of Logic* (2 vol., 1843) and *Principles of Political Economy* (2 vol., 1848). As head of the examiner's office in India House from 1856 to 1858 he wrote a defense of the company's government of India when the transfer of its powers was proposed. In 1859 he published *On Liberty*, a trenchant defense of individual freedom. His *Utilitarianism* (1863) is a closely reasoned attempt to answer objections to his ethical theory and to address misconceptions about it; he was especially insistent that "utility" include the pleasures of the imagination and the gratification of the higher emotions and that his system include a place for settled rules of conduct. In 1869 he published *The Subjection of Women* (written 1861), now the classical theoretical statement of the case for woman suffrage. Prominent as a publicist in the reforming age of the 19th century, he remains of lasting interest as a logician and ethical theorist. See also MILL'S METHODS.

Millais \'mi-ˌlā, mi-'lā**, Sir John Everett** (b. June 8, 1829, Southampton, Hampshire, Eng.—d. Aug. 13, 1896, London) British painter and illustrator. In 1848 he became a founding member of the PRE-RAPHAELITES, a group founded in opposition to contemporary academic painting. His period of greatest achievement came in the 1850s, with *The Return of the Dove to the Ark* (1851) and one of his greatest public successes, *The Blind Girl* (1856), a tour de force of Victorian sentiment and technical facility. He was popular as a portraitist and also as a book illustrator, notably for the novels of ANTHONY TROLLOPE.

The Blind Girl, oil painting by Sir John Everett Millais, 1856; in the Birmingham City Museum and Art Gallery, Birmingham, Eng.

Milland \mi-'land**, Ray** *orig.* **Reginald Truscott-Jones** (b. Jan. 3, 1907, Neath, Glamorganshire, Wales—d. March 10, 1986, Torrance, Calif., U.S.) Welsh-born U.S. actor. He made his film debut in 1929 and moved to Hollywood in 1930. The debonair romantic leading man in many movies of the 1930s and '40s, he won acclaim for his performance as an alcoholic writer in *The Lost Weekend* (1945, Academy Award) and also played dramatic parts in *The Big Clock* (1948), *Something to Live For* (1952), and *Dial M for Murder* (1954). In his later years, he generally only played minor roles. He also directed several movies in the 1950s and early '60s.

Millay, Edna St. Vincent (b. Feb. 22, 1892, Rockland, Maine, U.S.—d. Oct. 19, 1950, Austerlitz, N.Y.) U.S. poet and dramatist. Her work is filled with the imagery of the Maine coast and countryside. In the 1920s, when she lived in Greenwich Village, she came to personify the romantic rebellion and bravado of youth. Among her volumes are *Renascence* (1917); *A Few Figs from Thistles* (1920); *The Harp Weaver* (1923, Pulitzer Prize); *The Buck in the Snow* (1928), which introduced a more sombre tone; the sonnet sequence *Fatal Interview* (1931); and *Wine from These Grapes* (1934).

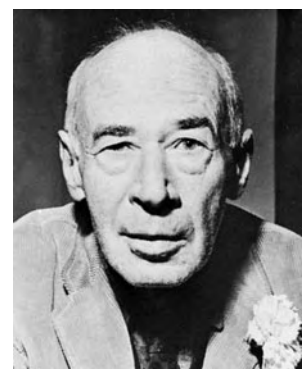
Mille, Agnes de See AGNES DE MILLE

millefleurs tapestry \mēl-'flərz\ *French* **"thousand flowers"** TAPESTRY characterized by a background motif of many small flowers. Most millefleurs tapestries show secular scenes or allegories. They are thought to have been made first in the Loire district of France in the mid-15th century. As they became popular, they were produced in many parts of France and the Low Countries until the end of the 16th century.

millennialism *or* **millenarianism** Belief in the millennium of Christian prophecy (Revelation 20), the 1,000 years when Christ is to reign on earth, or any religious movement that foresees a coming age of peace and prosperity. There are two expressions of millennialism. Premillennialism holds that the Second Coming of Christ will occur before the millennium and will initiate the final battle between good and evil, which will be followed by the establishment of the 1,000-year kingdom on earth or in heaven. Postmillennialism maintains that Jesus will return after the creation of the millennial kingdom of peace and righteousness, which prepares the way for the Second Coming. Throughout the Christian era, periods of social change or crisis have tended to lead to a resurgence in millennialism. The legend of the last emperor and the writings of JOACHIM OF FIORE are important examples of medieval millennialism, and, during the Reformation, ANABAPTISTS, Bohemian Brethren, and other groups held millennial beliefs. It is now associated especially with such Protestant denominations as the ADVENTISTS, JEHOVAH'S WITNESSES, and MORMONS. In a broader sense, many non-Christian traditions, including PURE LAND BUDDHISM and the GHOST DANCE religion, are understood as millennialist.

millennium Period of 1,000 years. The GREGORIAN CALENDAR, put forth in 1582 and subsequently adopted by most countries, did not include a year 0 in the transition from BC (years before Christ) to AD (those since his birth). Thus, the 1st millennium is defined as spanning years 1–1000 and the 2nd years 1001–2000. Although numerous popular celebrations marked the start of the year 2000, the 21st century and 3rd millennium AD began on Jan. 1, 2001.

millennium bug See Y2K BUG



miller *or* **owlet moth** Any of the more than 20,000 MOTH species in the LEPIDOPTERAN family Noctuidae, common worldwide. Some species have a 1-ft (30-cm) wingspan, the largest of any moth, but most species have a wingspan of 1.5 in. (4 cm) or less. The wings are usually dull-coloured. Both larvae and adults of most species feed at night. Adults feed on fruits, sap, and nectar. The larvae of many species are agricultural pests (e.g., CUTWORM, BOLLWORM) that feed on foliage and seeds, bore into stems and fruits, and eat or sever roots. A few species prey on SCALE INSECTS.

Miller, Arthur (b. Oct. 17, 1915, New York, N.Y., U.S.—d. Feb. 10, 2005, Roxbury, Conn.) U.S. playwright. He began writing plays while a student at the University of Michigan. His first important play, *All My Sons* (1947), was followed by his most famous work, *Death of a Salesman* (1949, Pulitzer Prize), the tragedy of a man destroyed by false values that are in large part the values of his society. Noted for combining social awareness with a searching concern for his characters' inner lives, Miller wrote many other plays, including *The Crucible* (1953), which uses a plot about the Salem witch trials to attack McCarthyism, *A View from the Bridge* (1955), *After the Fall* (1964), *The Last Yankee* (1992), and *Resurrection Blues* (2002). He also wrote short stories, essays, and the screenplay for *The Misfits* (1961), which starred his second wife, MARILYN MONROE.

Miller, George A(rmitage) (b. Feb. 2, 1920, Charleston, W.Va., U.S.) U.S. psychologist. He taught at Harvard, Rockefeller, and Princeton universities. He is known for his work in cognitive psychology, particularly communication and psycholinguistics. In *Plans and the Structure of Behavior* (with Eugene Galanter and Karl Pribram, 1960), Miller examined how knowledge is accumulated and organized into a practical "image" or plan. His other works, including *Language and Communication* (1951) and *The Science of Words* (1991), focus on the psychology of language and communication. He received the National Medal of Science in 1991.

Miller, (Alton) Glenn (b. March 1, 1904, Clarinda, Iowa, U.S.—d. Dec. 16, 1944, at sea) U.S. trombonist and leader of one of the most popular dance bands of the SWING era. Miller formed his band in 1937. His music was characterized by the precise execution of arrangements that featured a clarinet leading the saxophone section. Miller disbanded in 1942 to join the war effort by leading a military band. He was traveling from London to Paris by plane when the craft disappeared over the English Channel and was never recovered. His recordings of numbers such as "Moonlight Sonata," "Chattanooga Choo-Choo," "In the Mood," and "String of Pearls" are classics of the era.

Miller, Henry (Valentine) (b. Dec. 26, 1891, New York, N.Y., U.S.—d. June 7, 1980, Pacific Palisades, Calif.) U.S. writer and perennial bohemian. Miller wrote about his Brooklyn, N.Y., childhood in *Black Spring* (1936). *Tropic of Cancer* (1934), a monologue about his life as an impoverished expatriate in Paris, and *Tropic of Capricorn* (1939), which draws on his earlier New York phase, were banned as obscene in the U.S. and Britain until the 1960s. *The Air-Conditioned Nightmare* (1945) is a critical account of a tour of the U.S. He settled on the California coast, where he became the centre of a colony of admirers and wrote his *Rosy Crucifixion* trilogy, *Sexus*, *Plexus*, and *Nexus* (U.S. ed., 1965).

Miller, Jonathan (Wolfe) (b. July 21, 1934, London, Eng.) British director, writer, and actor. After earning a medical degree at Cambridge University, he made his professional stage debut at the Edinburgh Festival in the hit satirical revue *Beyond the Fringe* (1960). As a director of plays, he gained notoriety for

© 2006 Encyclopædia Britannica, Inc.

his controversial interpretations of classic works. His innovative opera productions, such as PYOTR TCHAIKOVSKY's *Eugene Onegin*, for the English National Opera and other groups have become internationally celebrated. He wrote the BBC medical series *The Body in Question* (1977) and *States of Mind* (1982).

Miller, Neal E(lgar) (b. Aug. 3, 1909, Milwaukee, Wis., U.S.—d. March 23, 2002, Hamden, Conn.) U.S. psychologist. He earned his Ph.D. from Yale University and remained at Yale's Institute of Human Relations to continue his experiments on learning. In *Social Learning and Imitation* (1941) and *Personality and Psychotherapy* (1950), he and John Dollard presented a theory of motivation based on the satisfaction of psychosocial drives, combining elements of earlier reinforcement theories of behaviour and learning. Miller suggested that behaviour patterns were produced through the modification of biologically or socially derived drives by conditioning and reinforcement. He taught at Rockefeller University (1966–81).

Millerand \mēl-'rä^{n}**, Alexandre** (b. Feb. 10, 1859, Paris, France—d. April 7, 1943, Versailles) French politician. He was an editor of socialist journals (1883–98) and served in the Chamber of Deputies from 1885 to 1920. He implemented reforms while serving in various governments as minister of commerce (1899–1901), public works (1909–10), and war (1912–15). He became premier in 1920, and, as leader of a moderate coalition, was elected president of France (1920–24). After advocating a revision of the constitution to strengthen the power of the presidency, he was forced to resign by the CARTEL DES GAUCHES. He served in the Senate from 1927 to 1940.

millet Any of various GRASSES (family Poaceae, or Gramineae), that produce small edible seeds used as forage crops and as food CEREALS. Most millets range in height from 1 to 4 ft (0.3 to 1.3 m). Except for pearl millet (*Pennisetum glaucum*, or *P. americanum*), seeds remain enclosed in hulls after threshing. Cultivated in China since at least the 3rd millennium BC, millets are today an important food staple in much of Asia, Russia, and western Africa. High in carbohydrates, they are somewhat strong in taste and cannot be made into leavened bread, so they are consumed mainly in flatbreads and porridges or prepared and eaten much like rice. In the U.S. and western Europe they are used chiefly for pasture or to produce HAY.

millet \mə-'let\ Turkish term referring to an autonomous religious community under the OTTOMAN EMPIRE (c. 1300–1923). Each millet was responsible to the central government for obligations such as taxes and internal security and also had responsibility for social and administrative functions not provided by the state. Beginning in 1856, a series of secular legal reforms known as the TANZIMAT ("Reorganization") eroded much of their administrative autonomy.

Millet \mē-'yā,\ *English* \mi-'lā**, Jean-François** (b. Oct. 4, 1814, Gruchy, France—d. Jan. 20, 1875, Barbizon) French painter. Born to a peasant family, he studied with a painter in Paris, but when one of his two submissions to the Salon was rejected (1840), he returned to Cherbourg, where initially he painted mostly portraits. His first success came with *The Milkmaid* (1844), and in 1848 another peasant scene, *The Winnower*, was shown at the Salon. In 1849 he settled in the village of Barbizon. Because he continued to exhibit peasant scenes that emphasized the labours of rustic life, he was accused of being a socialist, but his aims were not political. His *Angelus* (1859) became one of the most popular paintings of the 19th century. In his later life he was linked with the BARBIZON SCHOOL.

Millikan, Robert (Andrews) (b. March 22, 1868, Morrison, Ill., U.S.—d. Dec. 19, 1953, San Marino, Calif.) U.S. physicist. He received his doctorate from Columbia University and taught physics at the University of Chicago (1896–1921) and the California Institute of Technology (from 1921). To measure electric charge, he devised the MILLIKAN OIL-DROP EXPERIMENT. He verified ALBERT EINSTEIN's photoelectric equation and obtained a precise value for the Planck constant. He was awarded a 1923 Nobel Prize.

Millikan oil-drop experiment \'mil-ə-kən\ First method for direct measurement of the ELECTRIC CHARGE of a single ELECTRON, originally performed in 1909 by ROBERT MILLIKAN. He used a microscope to measure the rate of descent of tiny oil droplets directed through the top of a box. By halting the descent of droplets carrying their own electric charge by means of precisely adjusting the voltage between the box's metal top and bottom, he discovered that the electric charges on the drops were all whole-number multiples of a lowest value, the elementary electric charge itself, and thus that electric charge exists in basic natural units.

milling See FULLING

milling machine MACHINE TOOL that rotates a circular tool with numerous cutting edges arranged symmetrically about its axis, called a milling cutter. The metal workpiece is usually held in a vise clamped to a table that can move in three perpendicular directions. Cutters of many shapes and sizes are available for a wide variety of milling operations. Milling machines cut flat surfaces, grooves, shoulders, inclined surfaces, dovetails, and T-slots. Various form-tooth cutters are used for cutting concave forms and convex grooves, for rounding corners, and for cutting gear teeth.

millipede Any of about 10,000 species of the ARTHROPOD class Diplopoda, found worldwide. Most species live in and eat decaying plant matter. Some injure living plants, and a few are predators and scavengers. Millipedes are 1–11 in. (2.5–28 cm) long and have from 11 to more than 100 diplosomites, double segments formed from the fusion of two segments. The head is legless; the next three segments have one pair of legs each; and the remaining segments have two pairs each. In defense, millipedes do not bite; most species tuck headfirst into a tight coil, and many secrete a pungent, toxic liquid or gas.

Mills, Billy *in full* **William Mervin Mills** (b. June 30, 1938, Pine Ridge, S.D., U.S.) U.S. athlete. Part Oglala Sioux, he spent his early years on a reservation in Pine Ridge and was orphaned at age 12. At the University of Kansas he excelled in track. He became the first American to win an Olympic gold medal in the 10,000-m race (1964), in an electrifying upset victory over Australian Ron Clarke. In 1965 he set an outdoor world record in the 6-mi run and U.S. records in the 10,000-m and indoor 3-mi races.

Mills, C(harles) Wright (b. Aug. 28, 1916, Waco, Texas, U.S.—d. March 20, 1962, Nyack, N.Y.) U.S. sociologist. After studying at the University of Texas (B.A., M.A., 1939) and the University of Wisconsin (Ph.D., 1941), Mills joined the faculty of Columbia University; there he became associated with the theories of MAX WEBER and with issues regarding the role of intellectuals in modern life, and he contributed to the development of a critical sociology in the U.S. and abroad. Mills believed social scientists should shun "abstracted empiricism" and become activists on behalf of social change. His radical analysis of U.S. business and society appeared in *White Collar* (1951) and *The Power Elite* (1956); other works include *The Causes of World War Three* (1958) and *The Sociological Imagination* (1959). A colourful public figure, he wore black leather and rode a motorcycle. His death at 45 resulted from heart disease.

Mill's methods Five methods of experimental reasoning distinguished by JOHN STUART MILL in his *System of Logic* (1843). Suppose one is interested in determining what factors play a role in causing a specific effect, E, under a specific set of circumstances. The method of agreement tells us to look for factors present on all occasions when E occurs. The method of difference tells us to look for some factor present on some occasion when E occurs and absent on an otherwise similar occasion when it does not. The joint method of agreement and difference combines the two previous methods. The method of residues applies when part of E is explicable by reference to known factors, and tells us to attribute the "residue" to the remaining circumstances under which E occurs. The method of concomitant variation is used when E can be present in various degrees; if we identify a factor F, such as temperature, whose variations are positively or negatively correlated with variations in E, for instance, size, then we can infer that F is causally connected with E.

millstone Either of two flat, round stones used for grinding grain to make flour. The stationary bottom stone is carved with shallow grooved channels that radiate from the centre. The upper stone rotates horizontally, and has a central hole through which grain is poured. The channels of the bottom stone lead the grain onto the flat grinding section, called the land, and to the edge, where it emerges as flour. The best millstones are made from French buhrstone, quarried near Paris. In the U.S., quartz conglomerate, quartzite, sandstone, or granite is used. Stone-ground flour accounts for only a small proportion of milled flour today.

Milne \'miln**, A(lan) A(lexander)** (b. Jan. 18, 1882, London, Eng.—d. Jan. 31, 1956, Hartfield, Sussex) English writer. He joined the

staff of *Punch* in 1906 and produced successful light comedies and a memorable detective novel, *The Red House Mystery* (1922), before verses written for his son Christopher Robin grew into the collections *When We Were Very Young* (1924) and *Now We Are Six* (1927), which became beloved classics. Stories about the adventures of Christopher Robin and the toy animals Pooh, Piglet, Kanga, Roo, Tigger, Rabbit, Owl, and Eeyore are told in the immensely popular *Winnie-the-Pooh* (1926) and *The House at Pooh Corner* (1928).

COURTESY OF THE NATIONAL PORTRAIT GALLERY, LONDON

Milne Bay Inlet of the South Pacific Ocean, Papua New Guinea. Located at the southeastern end of the island of New Guinea, the bay is 30 mi (50 km) long and 6–8 mi (10–13 km) wide. A Spanish explorer charted the bay in 1606; it was named by the British for Adm. Alexander Milne in 1873. European interest in it increased during the 1889–99 gold rush. Samarai, an island in the China Strait, became a boomtown from which prospectors spread through the islands of Milne Bay and to the mainland. As a Japanese base of operations in World War II, Milne Bay was the scene of Japan's first major setback in 1942, and it served as an Allied base for the remainder of the war.

Milner, Alfred *later* **Viscount Milner (of St. James's and Cape Town)** (b. March 23, 1854, Giessen, Hesse-Darmstadt—d. May 13, 1925, Sturry Court, near Canterbury, Kent, Eng.) British high commissioner in South Africa (1897–1905). At the crucial Bloemfontein Conference with Pres. Paul Kruger (1899), Milner advocated granting full citizenship to the Uitlanders (British residents in the Transvaal) after five years' residence. Kruger opposed the policy but was prepared to make concessions. Milner was not, claiming that "war has got to come"; Boer forces invaded Natal four months later, marking the beginning of the South African War. Milner later served as secretary for war (1916–19) and colonial secretary (1919–21).

Milon \'mī-ˌlän\ **of Croton** *or* **Milo of Croton** (fl. late 6th century BC) Ancient Greek athlete. The most renowned wrestler of antiquity, he won numerous Olympic and Pythian games. His name has long been synonymous with extraordinary strength, and he is said to have carried an ox on his shoulders across the Olympic stadium.

Milošević \mi-'lō-sə-ˌvich**, Slobodan** (b. Aug. 29, 1941, Požarevac, Serbia, Yugos.—found dead March 11, 2006, The Hague, Neth.) Serbian nationalist politician and president of Serbia (1989–97). He joined the Communist Party at age 18 and later became head of the state-owned gas company and president of a major Belgrade bank. Advised by his wife, a communist ideologue, he became head of the Communist Party in Belgrade (1984) and later in Serbia (1987). He replaced party leaders with his supporters, and in 1989 the Serbian assembly named him president of the republic. He maintained his power by repression and control of the mass media. He abrogated the constitutional autonomy of the Albanian province of Kosovo in 1989, which contributed to the secessionist movements in Slovenia, Croatia, and Macedonia and the breakup of Yugoslavia in 1991. He then supported Serbian militias fighting Muslims in Bosnia and Croatia (see Bosnian conflict) but later signed a peace agreement (1995) on behalf of the Bosnian Serbs. In 1999, after pro-independence insurgents began killing Serbian police and politicians, he retaliated with ruthless attacks on the province (see Kosovo conflict). NATO responded with a massive bombing campaign of Serbian targets. The subsequent ethnic cleansing of the province by troops under Milošević's command drove hundreds of thousands of Albanian Kosovars to other countries as refugees and earned him worldwide loathing as a war criminal. In 2000 he was defeated in national elections. The following year he was arrested and extradited to The Netherlands to stand trial for genocide, war crimes, and crimes against humanity. The trial began in February 2002 but was frequently delayed because of Milošević's poor health. On March 11, 2006, he was found dead in his prison cell.

Miłosz \'mē-lȯsh**, Czesław** (b. June 30, 1911, Šateiniai, Lith., Russian Empire—d. Aug. 14, 2004, Kraków, Pol.) Polish-U.S. author, translator, and critic. Miłosz was a socialist by the time he published his first book of verse at age 21. During the Nazi occupation of Poland, he was active in the resistance. After serving briefly as a diplomat for communist Poland, he immigrated to the U.S., where he taught for decades at the University of California at Berkeley; he became a naturalized U.S. citizen in 1970. His poetry, including such collections as *Bells in Winter* (1978), is noted for its classical style and preoccupation with philosophical and political issues. His well-known essay collection *The Captive Mind* (1953) condemned the accommodation of many Polish intellectuals to communism. U.S. critic Helen Vendler wrote that Miłosz's *Treatise on Poetry* (1957) seemed to her "the most comprehensive and moving poem" of the latter half of the 20th century. He was awarded the Nobel Prize for Literature in 1980.

Milstein \'mil-ˌstīn, 'mil-ˌstēn**, César** (b. Oct. 8, 1927, Bahía Blanca, Arg.—d. March 24, 2002, Cambridge, Cambridgeshire, Eng.) Argentinian-born British immunologist. In 1975 Milstein and Georges Köhler (1946–95) fused short-lived, highly specific lymphocytes with the cells of a myeloma, a type of tumour that can reproduce indefinitely. The hybrid cells, like lymphocytes, secreted antibody to a single antigen and, like myeloma cells, perpetuated themselves. This enabled production of large quantities of pure antibodies against single antigenic characteristics (monoclonal antibodies). Milstein, Köhler, and Niels K. Jerne (1911–94) shared the Nobel Prize in 1984.

Miltiades \mil-'tī-ə-ˌdēz\ **the Younger** (b. c. 554, Athens—d. probably 489 BC, Athens) Athenian general. He was sent by Hippias to strengthen Athenian control of the sea routes from the Black Sea and made himself a petty tyrant there. He fought the Scythians with Darius I in 513 and supported the Persians until the Ionian revolt (499–494). When the revolt failed, he fled to Athens and led the Athenian army to victory at the Battle of Marathon (490). He was put on trial and fined the next year for a failed naval expedition meant to punish Paros for collaborating with Persia; he died in prison soon after from a gangrenous wound.

Milton, John (b. Dec. 9, 1608, London, Eng.—d. Nov. 8, 1674, Chalfont St. Giles, Buckinghamshire) English poet. A brilliant youth, Milton attended Cambridge University (1625–32), where he wrote poems in Latin, Italian, and English; these included "L'Allegro" and "Il Penseroso", both published later in *Poems* (1645). During 1632–38 he engaged in private study—writing the masque *Comus* (1637) and the extraordinary elegy "Lycidas" (1638)—and toured Italy. Concerned with the Puritan cause in England, he spent much of 1641–60 pamphleteering for civil and religious liberty and serving in Oliver Cromwell's government. His best-known prose is in the pamphlets *Areopagitica* (1644), on freedom of the press, and *Of Education* (1644). He lost his sight c. 1651, and thereafter dictated his works. His disastrous first marriage ended with his wife's death in 1652; two later marriages were more successful. After the Restoration he was arrested as a noted defender of the Commonwealth but was soon released. In *Paradise Lost* (1667), his epic masterpiece on the Fall of Man written in blank verse, he uses his sublime "grand style" with superb power; his characterization of Satan is a supreme achievement. He further expressed his purified faith in God and the regenerative strength of the individual soul in *Paradise Regained* (1671), an epic in which Christ overcomes Satan the tempter, and *Samson Agonistes* (1671), a tragedy in which the Old Testament figure conquers self-pity and despair to become God's champion. Considered second only to William Shakespeare in the history of English-language poetry, Milton had an immense influence on later literature; though attacked early in the 20th century, he had regained his place in the Western canon by mid century.

Milwaukee City (pop., 2000: 596,974) and lake port, southeastern Wisconsin, U.S. The state's largest city, it is situated on Lake Michigan. Visited by French missionaries and fur traders in the 17th century, it was called *Mahn-a-waukee Seepe* ("Gathering Place by the River") by local Indians. Although settled in 1800, the town did not develop until the Indians relinquished their claims in 1831–33. Milwaukee was formed in 1839 and incorporated in 1846. It was a centre of German immigration until c. 1900. It is a major Great Lakes port, shipping especially grain; it also produces electrical machinery. It has several educational institutions, including Marquette University and the University of Wisconsin-Milwaukee.

Milyukov \mʸil-yü-'kȯf**, Pavel (Nikolayevich)** (b. Jan. 27, 1859, Moscow, Russia—d. March 3, 1943, Aix-les-Bains, France) Russian poli-

© 2006 Encyclopædia Britannica, Inc.

tician and historian. He taught history at Moscow University until 1895 and wrote the acclaimed *Outlines of Russian Culture* (3 vol., 1896–1903). A liberal who admired the political values of democratic countries, he cofounded the progressive Constitutional Democratic Party in 1905 and led the party in the Duma (1907–17). In 1917 he helped form the provisional government under Prince Georgy Y. Lvov and served briefly as minister of foreign affairs. He tried to form a moderate coalition against the Bolsheviks but was forced to leave Russia and eventually settled in Paris.

Mimamsa \mē-'mäm-sä\ Probably the earliest of the six orthodox systems (darshans) of Indian philosophy. Mimamsa is fundamental to Vedanta and has deeply influenced Hindu law. Its aim is to give rules for the interpretation of the Vedas and to provide a philosophical justification for the observance of Vedic ritual. The earliest work of the system, the *Mimamsa-sutra* of Jaimini (c. 4th century BC), was followed by the writings of a long line of interpreters and teachers, notably Kumarila Bhatta and Prabhakara Mishra (8th century). Kumarila is credited with using Mimamsa to defeat Buddhism in India; Prabhakara was a realist who believed that sense perceptions were true.

Mimana See Kaya

mime and pantomime Dramatic performance in which a story is told solely by expressive body movement. Mime appeared in Greece in the 5th century BC as a comic entertainment that stressed mimetic action but included song and spoken dialogue. A separate Roman form developed from c. 100 BC and centred on crude and licentious subjects. Roman pantomime differed from Roman mime by its loftier themes and its use of masks, which called for expression through posture and hand gestures. Mime was also important in Asian drama from ancient times, and it is an element in major Chinese and Japanese dramatic forms (e.g., Nō theatre). The Roman tradition of pantomime was modified in the 16th-century commedia dell'arte, which in turn influenced the 18th-century French and English comic interludes that developed into 19th-century pantomime, a children's entertainment emphasizing spectacle. Modern Western mime developed into a purely silent art in which meanings are conveyed through gesture, movement, and expression. Famous mimes include Jean-Gaspard Deburau, Étienne Decroux (who developed a systematic language of gesture), and Marcel Marceau. Charlie Chaplin was an accomplished mime, as were Sid Caesar and the circus clown Emmett Kelly.

Marcel Marceau, French mime, as Bip, a character of his own invention, playing the violin.
RONALD A. WILFORD ASSOCIATES, INC.

mimicry Similarity between organisms that confers a survival advantage on one. In Batesian mimicry, an organism lacking defenses mimics a species that does have defenses. In Müllerian mimicry, all species in a group are similar even though all individually have defenses. In aggressive mimicry, a predatory species mimics a benign species so that it can approach its prey without alarming it, or a parasitic species mimics its host. Some plant species mimic the colour patterns and scents of animals for the purposes of pollination and dispersal. Mimicry differs from camouflage in that camouflage hides the organism, whereas mimicry benefits the organism only if the organism is detected.

Mimir \'mē-mir\ In Norse mythology, the wisest of the gods of the tribe Aesir. He was also believed to be a water spirit. Mimir was sent by the Aesir as a hostage to the rival gods (the Vanir), but he was decapitated and his head was returned to the Aesir. Odin preserved the head in herbs and gained knowledge from it. Other tales claim that Mimir lived by a well beneath the roots of Yggdrasill, the world tree, and that he was a smith who taught the hero Siegfried his craft.

mimosa \mə-'mō-sə\ Any member of the more than 450 species that make up the genus *Mimosa* in the family Mimosaceae, native to tropical and subtropical areas throughout both hemispheres. Most are herbaceous plants or undershrubs; some are woody climbers; a few are small trees. They are often prickly. Mimosas are widely cultivated for the beauty of their foliage and for their interesting response to light and mechanical stimuli: the leaves of some species droop in response to darkness and close up their leaflets when touched. The name comes from this "mimicking" of animal sensibility. The roots of some species are poisonous; others contain skin irritants. Many acacias are commonly but incorrectly called mimosas. See also sensitive plant.

Min River River, central Fujian province, southeastern China. Rising in the mountains near the Fujian-Jiangxi border, it flows southeast to empty into the China Sea after a course of 358 mi (577 km). The arrival of a railway system in 1957 increased its use for navigation, and there are transshipment points along it.

Min River River, Sichuan province, south-central China. Rising in the Min Mountains of northern Sichuan, it flows southward along the western side of the Sichuan Basin and empties into the Yangtze River (Chang Jiang) at Yibin. It is navigable for most of its 350-mi (560-km) course.

Minamata disease \ˌmi-nə-'mä-tə\ Disease first identified in 1956 in Minamata, Japan. A fishing port, Minamata was also the home of Nippon Chisso Hiryo Co., a manufacturer of chemical fertilizer, carbide, and vinyl chloride. Methyl mercury discharged from the factory contaminated fish and shellfish, which in turn caused illness in the local inhabitants who consumed them and birth defects in their children. The sometimes fatal disease was the first whose cause was recognized as industrial pollution of seawater. It aroused worldwide concern and stimulated the development of the environmental movement.

Minamoto Yoritomo \ˌmē-nä-'mō-tō-ˌyò-rē-'tō-mō\ (b. 1147, Japan—d. Feb. 9, 1199, Kamakura) Founder of the Kamakura shogunate, or *bakufu*. A member of the Minamoto warrior clan, Yoritomo was banished in his youth as a consequence of his father's revolt against the reigning Taira family. In exile Yoritomo found support for his cause in Hōjō Tokimasa (see Hōjō family), and in 1185 he defeated the Taira. In 1192 the cloistered emperor (see *insei*) granted him the title of shogun, which made him the supreme authority over all military forces in the country. He established his own governors (*shugo*) and stewards (*jitō*) throughout Japan, thereby creating a governmental infrastructure in competition with, and gradually superseding, that of the imperial court. He was thus able to rule without actually overthrowing the emperor, a pattern that was to be emulated by future shogunates. See also Kamakura period; Gempei War.

Minamoto Yoshitsune \ˌmē-nä-'mō-tō-ˌyò-shēt-'sùn-ā\ (b. 1159, Japan—d. June 15, 1189, Fort Koromogawa, Mutsu province, Japan) Charismatic half brother of Minamoto Yoritomo who helped bring him victory against the Taira family (see Taira Kiyomori). He was raised in a monastery but ran away at 15 to join Yoritomo. On Yoritomo's orders, Yoshitsune seized Kyōto and then attacked and defeated the remaining Taira forces along Japan's Inland Sea. Yoritomo became jealous of Yoshitsune and, though Yoshitsune eluded him for several years, eventually was able to have him killed. The Japanese have long considered Yoshitsune to be the epitome of the underdog hero; many legends, stories, kabuki plays, and even films celebrate his adventures with his faithful follower, the monk Benkei. See also Gempei War.

Minangkabau \ˌmē-näŋ-kä-'baù\ Any member of the largest ethnic group on the island of Sumatra, Indon. Though Muslim, the Minangkabau are matrilineal. Traditionally, the wife remained with her maternal relatives after marriage; her husband continued to live with his mother but visited his wife. The domestic unit, a community house, held a head woman, her sisters, their daughters, and their children and visiting husbands. Today that kinship structure has declined, and more men have left their villages to establish their own households with wives and children. Traditional Minangkabau are farmers, and their crafts include wood carving, metalwork, and weaving. Some migrated to Malaya (Peninsular Malaysia) in the 1850s to participate in the rapid expansion of Malayan tin mining; over time immigrants switched to farming, and in the 20th century they came to control most of Malaya's retail trade. The Minangkabau number two to five million.

Minas Basin \'mī-nəs\ Eastern inlet of the Bay of Fundy, into central Nova Scotia. Up to 25 mi (40 km) wide and more than 50 mi (80 km)

© 2006 Encyclopædia Britannica, Inc.

long, it has some of the highest tides in the world; fluctuations exceeding 50 ft (15 m) have been recorded. Samuel de Champlain named it "Le Bassin des Mines" in 1604 after the mineral deposits found along its shores.

Minch, the Sea channel between the Outer Hebrides islands and the northwestern coast of Scotland. Its width varies from 25 to 45 mi (40 to 70 km), and it has great depth and a rapid current. Little Minch, its southern extension, lies between the island groups of the Outer and Inner Hebrides.

mind, philosophy of Branch of philosophy that studies the nature of mind and its various manifestations, including intentionality, sensation and sense perception, feeling and emotion, traits of character and personality, the unconscious, volition, thought, memory, imagination, and belief. It is distinguished from empirical studies of the mind (e.g., psychology, biology, physiology, sociology, and anthropology) by its method, which emphasizes the analysis and clarification of concepts. See also cognitive science.

mind-body problem Metaphysical problem of the relationship between mind and body. The modern problem stems from the thought of René Descartes, who is responsible for the classical formulation of dualism. Descartes's interactionism had many critics even in his own day. Thomas Hobbes denied the existence of mental substance. Materialism of a sort was also supported by Descartes's correspondent Pierre Gassendi (1592–1655). Benedict de Spinoza posited a single substance of which the mental and the material are attributes; his theory is known as psycho-physical parallelism. More recent views include the double-aspect theory, identity theory, eliminative materialism (which denies the reality of the familiar categories of mental state posited in so-called folk psychology), and theories of supervenience.

Mindanao \ˌmin-də-ˈnä-ˌō, ˌmin-də-ˈnaù\ Island (pop., 2000: 16,136,921), southern Philippines. The second largest island in the Philippines, it has an area of 36,537 sq mi (94,630 sq km); it is 324 mi (521 km) long and 293 mi (471 km) wide. It is mountainous and contains active volcanoes, including Mount Apo, the highest peak in the Philippines. The rare monkey-eating eagle is unique to the island. Islam spread throughout Mindanao in the 16th century. It was visited by Ferdinand Magellan in 1521. It was later claimed by Spain, but the resistance of its Muslim inhabitants kept it largely independent of Spanish authority. The autonomous region of Muslim Mindanao, in the western and southwestern portions of the island, was created in 1990.

Mindanao River *formerly* **Cotabato River** \ˌkō-tä-ˈbä-tō\ Main river of central Mindanao, Philippines. It meanders northwest to enter Illana Bay in two tributaries, the Cotabato and Tamentaka, after a 200-mi (320-km) course. The river system waters a fertile basin and is a major inland-transportation artery.

Mindon \ˈmin-ˈdòn\ (b. 1814, Amarapura, Myanmar—d. Oct. 1, 1878, Mandalay) King of Myanmar (Burma; r. 1853–78). He came to power after the Second Anglo-Burmese War. He was unable to persuade the British to return Pegu (in southern Myanmar) and was also forced to make large economic concessions. Domestically, his reign was a time of numerous reforms and great cultural and religious flowering. In 1857 he built the new capital, Mandalay, with palaces and monasteries that are masterpieces of traditional Myanmar architecture. He held the Fifth Buddhist Council there in 1871 in an effort to revise and purify the Pali scriptures.

Mindoro Island (pop., 2000: 1,062,068), west-central Philippines. It is separated from Luzon on the north by the Verde Island Passage. It is 80 mi (130 km) long and 50 mi (80 km) wide, with an area of 3,759 sq mi (9,735 sq km). First visited by the Spanish in 1570, it came under U.S. rule in 1901. It was occupied by the Japanese during World War II. The tamaraw, a small water buffalo, is unique to the island.

Mindszenty \mēnd-ˈshen-tē**, József** *orig.* **Pehm József** (b. March 29, 1892, Csehimindszent, near Szombathely, Austria-Hungary—d. May 6, 1975, Vienna, Austria) Hungarian cardinal who opposed fascism and communism. Ordained a priest in 1915, he was arrested as an enemy of totalitarian governments in 1919 and again in 1944. He was appointed primate of Hungary in 1945 and made a cardinal in 1946. Refusing to permit Hungary's Roman Catholic schools to be secularized by the communists, he was arrested in 1948 and convicted of treason the next year. Sentenced to life imprisonment, he was freed in the Hungarian Revolution (1956). When the communists regained control, he sought asylum in the U.S. embassy in Budapest and lived there for 15 years, refusing Vatican requests to leave Hungary. He relented in 1971, settled in Vienna, and was retired as primate of Hungary in 1974.

mine See land mine, submarine mine

Miner, Jack *orig.* **John Thomas Miner** (b. April 10, 1865, Dover Centre, Ohio, U.S.—d. Nov. 3, 1944, Kingsville, Ont., Can.) Canadian naturalist. After moving to Canada in 1878, he established a bird sanctuary in 1904 on his farm in Kingsville, Ont. Banding more than 50,000 ducks between 1910 and 1915, he made the first complete banding records of North American birds. In 1931 his friends established the Jack Miner Migratory Bird Foundation to ensure the continuation of his work. He received the Order of the British Empire in 1943.

mineral Any naturally occurring homogeneous solid that has a definite (but not fixed) chemical composition and a distinctive internal crystal structure. Minerals are usually formed by inorganic processes. Synthetic equivalents of various minerals, such as emeralds and diamonds, are manufactured for commercial purposes. Although most minerals are chemical compounds, a small number (e.g., sulfur, copper, gold) are elements. Minerals combine with each other to form rocks. For example, granite consists of the minerals feldspar, quartz, mica, and amphibole in varying amounts. Rocks are generally, therefore, an intergrowth of various minerals.

mineral processing *or* **ore dressing** Mechanical treatment of crude ores to separate the valuable minerals. Mineral processing was at first applied only to ores of precious metals but later came to be used to recover other metals and nonmetallic minerals. It is also used during coal preparation to enrich the value of raw coal. The primary operations are comminution and concentration. Comminution is carried out by large jaw crushers and by smaller cylindrical grinding mills. Common methods of concentration are gravity separation and flotation separation. Gravity methods include jigging (ground ore is fed into a pulsating body of water so that the heavier mineral fractions settle out, leaving lighter wastes at the top) or washing the ore down inclined planes, spirals, or shaking tables so that mineral and waste fractions settle in different areas. See also beneficiation; mining.

mineralogy Scientific study of minerals, including their physical properties, chemical composition, internal crystal structure, occurrence and distribution in nature, and origins or conditions of formation. Mineralogic studies range from description and classification of new or rare minerals to analysis of crystal structure and laboratory or industrial synthesis of mineral species. The methods employed include physical and chemical identification tests, determination of crystal symmetry and structure, optical examination, X-ray diffraction, and isotope analysis.

Minerva In Roman religion, the goddess of handicrafts, the professions, the arts, and, later, war. She was commonly identified with the Greek Athena. Some scholars believe that worship of Minerva began when Athena's cult was introduced at Rome from Etruria. Minerva was one of the Capitoline triad, along with Jupiter and Juno, and her shrine in Rome was a meeting place for craftsmen's guilds. The worship of Minerva attained its greatest vogue under the emperor Domitian, who claimed her special protection.

minesweeper Naval vessel used to clear submarine mines from an expanse of water. In naval warfare, they are used to clear mines from sealanes to protect merchant shipping as well as to clear paths for warships to engage in battle or amphibious warfare. The earliest examples used sweeping wires with sawlike projections to cut the cables anchoring submarine mines and allow them to rise to the surface, where they would be destroyed by gunfire. The wide use of magnetic mines (set off by the magnetic field of steel ships) in the Korean War led to wood-hulled minesweepers.

Ming dynasty (1368–1644) Chinese dynasty that provided an interval of native rule between eras of Mongol and Manchu dominance. The Ming, one of the most stable but autocratic of dynasties, extended Chinese influence farther than did any other native rulers of China. Under the Ming, the capital of China was moved from Nanjing to Beijing, and the Forbidden City was constructed. Naval expeditions led by Zheng He paved the way for trade with Southeast Asia, India, and eastern Africa. During the Ming dynasty, novels were written in the vernacular, while philosophy benefited from the work of Wang Yangming in Neo-Confucianism. Ming monochrome porcelain became famous throughout the world, with imitations created in Vietnam, Japan, and Europe.

Minggantu *Chinese* **Ming Antu,** *Mongolian* **Minganto** (b. ?—d. c. 1763) Chinese astronomer and mathematician. A Mongolian of the Plain White Banner (see BANNER SYSTEM), Minggantu first appeared in official Chinese records in 1712 as a student in the Imperial Astronomical Bureau. He spent his whole career there, at a time when Jesuit missionaries were in charge of calendar reforms. He took part in the compilation of the imperially commissioned *Lüli yuanyuan* (c. 1723; "Source of Mathematical Harmonics and Astronomy"), and from 1737 to 1742 he worked with the Jesuits on the revision of its astronomical section. In 1759 he became director of the Imperial Astronomical Bureau. He left an unfinished mathematical manuscript, the *Geyuan milü jiefa* ("Quick Methods for the Circle's Division and Precise Ratio"), which his student Chen Jixin completed in 1774.

Mingus, Charles (b. April 22, 1922, Nogales, Ariz., U.S.—d. Jan. 5, 1979, Cuernavaca, Mex.) U.S. JAZZ composer, bassist, and bandleader. Mingus played in the groups of LIONEL HAMPTON, DUKE ELLINGTON, and Red Norvo, ultimately working with many of the innovators of BEBOP. In 1953 he organized the Jazz Workshop ensemble, which played a spirited combination of loosely arranged passages and improvisation, incorporating elements of the BLUES and free jazz. As a pioneering bandleader and virtuoso bassist, Mingus remained an uncompromising and innovative force in jazz for the rest of his career. He was one of the most important and colourful figures in modern jazz.

Minhow See FUZHOU

miniature painting Small, detailed painting, usually a portrait, executed in watercolour on vellum (parchment), prepared card, copper, or ivory that can be held in the hand or worn as a piece of jewelry. The name derives from the *minium*, or red lead, used to emphasize initial letters in medieval illuminated manuscripts. Combining the traditions of illumination and the Renaissance medal, it flourished from the early 16th to the mid-19th century. The earliest datable examples were painted in France by JEAN CLOUET THE YOUNGER at the court of FRANCIS I; in England H. Holbein the Younger produced masterpieces in miniature under HENRY VIII and inspired a long tradition of the practice, known as "limning." NICHOLAS HILLIARD served as miniature painter to ELIZABETH I for more than 30 years. In the 17th–18th centuries, painting in enamel on metal became popular in France. In Italy ROSALBA CARRIERA introduced the use of ivory (c. 1700) as a luminous surface for transparent pigments, stimulating a great revival of the medium in the late 18th century. By the mid-19th century miniature paintings were regarded as luxury items and rendered obsolete by the new medium of photography.

Minimalism Twentieth-century movements in art and music characterized by extreme simplicity of form and rejection of emotional content. In the visual arts, Minimalism originated in New York City in the 1950s as a form of abstract art and became a major trend in the 1960s and '70s. The Minimalists believed that a work of art should be entirely self-referential; personal elements were stripped away to reveal the objective, purely visual elements. Leading Minimalist sculptors include CARL ANDRE and DONALD JUDD; Minimalist painters include ELLSWORTH KELLY and AGNES MARTIN. In music, Minimalism arose in the 1960s. It employs a steady pulsing beat, incessant repetition of tones and chords with only gradual changes in their components, a slow rate of harmonic change, and little or no counterpoint. Its principal antecedents are the musics of India and Southeast Asia. Its most important early practitioners include La Monte Young (b. 1935), Terry Riley (b. 1935), whose *In C* (1964) is perhaps its most seminal work, STEVE REICH, PHILIP GLASS, and JOHN ADAMS.

minimum In mathematics, a point at which the value of a function is lowest. If the value is less than or equal to all other function values, it is an absolute minimum. If it is merely less than at any nearby point, it is a relative, or local, minimum. In CALCULUS, the DERIVATIVE equals zero or does not exist at a function's minimum point. See also MAXIMUM, OPTIMIZATION.

minimum wage Wage rate established by COLLECTIVE BARGAINING or by government regulation, specifying the lowest rate at which workers may be employed. A legal minimum wage is one mandated by government for all workers in an economy, with few exceptions. Privately negotiated minimum wages determined by collective bargaining apply to a specific group of workers in the economy, usually in specific trades or industries. The modern minimum wage, combined with compulsory arbitration of labour disputes, first appeared in Australia and New Zealand in the 1890s. In 1909 Britain established trade boards to set minimum wage rates in certain trades and industries. The first minimum wage in the U.S. (which applied only to women) was enacted by Massachusetts in 1912. Minimum wage laws or agreements now exist in most nations.

mining Excavation of materials from the Earth's crust, including those of organic origin, such as coal and petroleum. Modern mining is costly and complicated. First, a mineral vein that can likely produce enough of the desired substance to justify the cost of extraction must be located. Then the size of the vein or deposit is determined, and mining engineers decide the best way to mine it. Most of the world's yearly mineral production is extracted by surface mining, which includes open-pit mining, strip mining, and quarrying. For ore bodies that lie a considerable distance below the surface, underground mining must be considered. In both techniques, excavating and extracting mineral substances involve costly combinations of drilling, blasting, hoisting, and hauling, as well as measures for health and safety and reduction of environmental impact.

mink Either of two species of nocturnal, semiaquatic carnivores in the WEASEL family (Mustelidae) that are trapped and raised commercially for their pelts. American mink (*Mustela vison*), found throughout North America except in arid parts of the southwestern U.S., is 17–29 in. (43–74 cm) long and weighs up to 3.5 lb (1.6 kg). The Eurasian species (*M. lutreola*) is slightly smaller. The rich brown coat consists of a dense, soft underfur overlaid with glossy guard hairs. Except for furs in the rare mutant colours produced by crossbreeding, wild mink fur is more valuable than "ranch mink."

American mink (*Mustela vison*). KARL H. MASLOWSKI

Minkowski \miŋ-'kȯf-skē**, Oskar** (b. Jan. 13, 1858, Aleksotas, Russian Empire—d. July 18, 1931, Fürstenberg an der Havel, Ger.) German physiologist and pathologist. While researching DIABETES MELLITUS in 1884, he found that beta-hydroxybutyric acid and a decrease in blood bicarbonate cause diabetic acidosis (low blood pH) and that diabetic coma is accompanied by decreased blood carbon dioxide and can be treated by alkali therapy. Experiments on dogs with Joseph von Mering (1849–1908) led Minkowski to propose that the pancreas is the source of an "antidiabetic" substance, now known to be insulin. He also demonstrated that the liver produces bile pigments and uric acid.

Minneapolis City (pop., 2000: 382,618), eastern Minnesota, U.S. The state's largest city, it is situated on the MISSISSIPPI RIVER near the mouth of the MINNESOTA RIVER. With ST. PAUL across the river it forms the Twin Cities metropolitan area. Visited by French missionary LOUIS HENNEPIN in 1680, the area developed as a military outpost. On the eastern bank was the village of St. Anthony (inc. 1855), on the western bank, Minneapolis village (inc. 1856). In 1872 the two merged as the city of Minneapolis, which developed as a centre of the lumber and flour-milling industries. Still a grain market for the surrounding agricultural region, it is also a manufacturing centre. Its educational institutions include the University of Minnesota.

Minnelli, Vincente (b. Feb. 28, 1910, Chicago, Ill., U.S.—d. July 25, 1986, Los Angeles, Calif.) U.S. film director. He was a stage manager and costume designer from age 16, achieved success as a Broadway director c. 1935, and moved to Hollywood in 1940. He combined a daring use of colour with imaginative camera work in films such as *Cabin in the Sky* (1943), *Meet Me in St. Louis* (1944), *The Pirate* (1948), *An American in Paris* (1951), and *Gigi* (1958, Academy Award), infusing a new sophistication and vitality into filmed musicals. He also made several notable dramas, including *Father of the Bride* (1950), *The Bad and the Beautiful* (1952), and *Lust for Life* (1957). He was married to JUDY GARLAND (1945–51). Their daughter, the singer and actress Liza Minnelli (b. 1946), won a Tony Award for her performance in *Flora, the Red Menace* (1965) and an Oscar for *Cabaret* (1972).

minnesinger \'mi-nə-ˌsiŋ-ər, 'mi-nə-ˌziŋ-ər\ (from German, *Minne*: "love") Any of certain German poet-musicians, c. 1150–c. 1325, parallel to the TROUBADOURS and TROUVÈRES. Like their French counterparts, the minnesingers' subjects were not limited to love but also included politics and ethics. Originally members of the high nobility, minnesingers later came from the emerging middle class and had an economic as well as social interest in singing. WALTHER von der Vogelweide, Neidhardt von Reuental (c. 1180–c. 1250), and TANNHÄUSER were among the most famous of the minnesingers.

© 2006 Encyclopædia Britannica, Inc.

Minnesota State (pop., 2000: 4,919,479), midwestern U.S. Bordered by Canada and the U.S. states of Wisconsin, Iowa, South Dakota, and North Dakota, it covers 86,943 sq mi (225,182 sq km); its capital is St. Paul. The most northerly of the 48 contiguous U.S. states, it has extensive woodlands, fertile prairies, and numerous lakes. Before European settlement, the region was inhabited by the Ojibwa (Chippewa) and the Dakota (Sioux) tribes. French explorers arrived in search of the Northwest Passage in the mid 17th century. The northeastern portion passed to the British in 1763 and then to the U.S. in 1783, becoming part of the Northwest Territories in 1787. The southwestern portion was acquired by the U.S. in 1803 as part of the Louisiana Purchase, and the northwestern portion was ceded to the U.S. by the British by treaty in 1818. The first permanent U.S. settlement was made in 1819, when Fort Snelling was founded. The Minnesota Territory, established in 1849, included present-day Minnesota and the eastern sections of North and South Dakota. Minnesota became the 32nd U.S. state in 1858. The Sioux Uprising in southern Minnesota in 1862 resulted in the death of 500 civilians, soldiers, and Indians. Commercial iron-ore production began in 1884, and after the huge iron reserves of the Mesabi Range were discovered in 1890, the population at Duluth and Superior grew rapidly. Today agriculture, especially grains, meat, and dairy products, is the basis of the economy. Mineral resources include iron ore, granite, and limestone.

Minnesota Mining & Manufacturing Co. See 3M

Minnesota River River, southern Minnesota, U.S. Rising on the South Dakota–Minnesota boundary, it flows southeast then turns northeast to join the Mississippi River just south of St. Paul, after a course of 332 mi (534 km). Once known as the St. Peter or St. Pierre, it was important to early explorers and fur traders.

minnow Small fishes, especially of the carp family (Cyprinidae), as well as some rockfish (family Umbridae) and killifishes (family Cyprinodontidae). The numerous species of North American cyprinid minnows are freshwater fishes, 2.4–12 in. (6–30 cm) long. Many are valuable as food for fishes, birds, and other animals and as live bait. The bluntnose (*Pimephales notatus*) and fathead (*P. promelas*) minnows, the common shiner, and the American roach are good bait species. The term also refers to the young of many large fish species. The minnow of Europe and northern Asia (*Phoxinus phoxinus*) is about 3 in. (7.5 cm) long and varies from golden to green.

Mino da Fiesole \'mē-nō-dä-fyā-'zō-lā\ (b. 1429, Poppi, Republic of Florence—d. 1484, Florence) Italian sculptor. Probably trained in Florence, he was active both in Florence and Rome, where he created monuments (especially wall tombs) and busts of cardinals and other prominent individuals. Among the earliest Renaissance portrait sculptures, his works were greatly admired in the 19th century but are now considered less inspired than those of Desiderio da Settignano, Antonio Rossellino (1427–79), and other eminent contemporaries.

Minoan \mi-'nō-ən\ Any member of a non-Indo-European people who flourished (c. 3000–c. 1100 BC) on the island of Crete during the Bronze Age. The sea was the basis of their economy and power. Their sophisticated culture, based at Knossos, was named for the legendary King Minos. It represented the first high civilization in the Aegean area. The Minoans exerted great influence on the Mycenaean culture of the Greek islands and mainland. Minoan culture reached its peak c. 1600 BC and was noted for its cities and palaces, extended trade contacts, and use of writing (see Linear A and Linear B). Its art included elaborate seals, pottery, and, notably, the vibrant frescoes decorating palace walls, which depicted both religious and secular scenes, including goddesses reflective of a matriarchal religion. Palace ruins show evidence of paved streets and piped water. Familiar Minoan art motifs are the snake (symbol of the goddess) and the bull and leaping dancer, also of mystical significance.

Minos \'mī-nəs\ In Greek legend, a king of Crete, the son of Zeus and Europa. He gained the throne with the aid of Poseidon and also became ruler of the Aegean islands. His wife Pasiphaë fell in love with a bull and gave birth to the Minotaur, which was imprisoned in the Labyrinth. Minos waged war against Athens and exacted a tribute of youths and maidens to feed the Minotaur until Theseus killed the monster with the aid of Minos's daughter Ariadne. Minos was killed in Sicily when boiling water was poured over him as he was taking a bath. Many scholars now consider that Minos was a royal or dynastic title for the priestly rulers of Bronze Age, or Minoan, civilization in Knossos (Minoan means "of Minos").

Minot \'mī-nət\, George (Richards) (b. Dec. 2, 1885, Boston, Mass., U.S.—d. Feb. 25, 1950, Brookline, Mass.) U.S. physician. He received his medical degree from Harvard University. He reversed anemia in dogs (induced by excessive bleeding) with a diet of raw liver; subsequently he and William Murphy (1894–1987) found that eating raw liver reversed pernicious anemia in humans. They shared a Nobel Prize in 1934 with George Whipple for their treatment of the previously invariably fatal disease. He and Edwin Joseph Cohn prepared liver extracts that, taken orally, were the main treatment for pernicious anemia until 1948, when vitamin B_{12} was isolated.

Minotaur \'mi-nə-ˌtȯr\ In Greek mythology, a monster of Crete with the body of a man and the head of a bull. It was the offspring of Pasiphaë, wife of King Minos, and a snow-white bull sent by Poseidon and intended for sacrifice. When Minos kept it instead, the god punished him by making his wife fall in love with the bull. The Minotaur (whose name means "Minos bull") was imprisoned in the Labyrinth built by Daedalus. After defeating Athens in a war, Minos forced the Athenians to send human tribute to be devoured by the Minotaur. The third year the tribute was sent, Theseus volunteered to go, and with the help of Ariadne he killed the monster.

Minsk Capital (pop., 2001 est.: 1,699,000) and largest city of Belarus. Settled before 1067, it became the seat of a principality in 1101. It passed to Lithuania in the 14th century and later to Poland. Annexed by Russia in the second partition of Poland in 1793, it became a provincial centre. Minsk was occupied by French troops in 1812. It grew in importance as an industrial centre after the arrival of the railways in 1870. During World War I it was occupied first by the Germans and then by the Poles. It was almost entirely destroyed in World War II, especially during the Soviet advance in 1944. Once the capital of the Belorussian S.S.R., it remained the capital when Belarus gained independence in 1991. It is the country's administrative and industrial centre.

Minsky, Marvin (Lee) (b. Aug. 9, 1927, New York, N.Y., U.S.) U.S. computer scientist. He received a Ph.D. from Princeton University and joined the faculty at MIT, where he remained for his entire career. His research contributed to advances in artificial intelligence, cognitive psychology, neural networks (he built the first neural-network simulator in 1951), and the theory of Turing machines. A pioneer in robotics, he built some of the first mechanical hands with tactile sensors, visual scanners, and accompanying software and computer interfaces. He influenced many robotic projects outside MIT and worked to build into machines the human capacity for commonsense reasoning. In his *The Society of Mind* (1987), 270 interconnected one-page ideas reflect the structure of his theory. He received the Turing Award in 1969.

minstrel Wandering musician of the Middle Ages, often of low status. The term (and equivalents such as Latin *ioculator* and French *jongleur*) was applied in medieval times to people ranging from singing beggars to traveling musicians hired by towns for special occasions to court jesters. The modern folksinger is a descendant. See also minstrel show.

minstrel show Form of entertainment popular in the U.S. in the 19th and early 20th centuries. It originated in the 1830s with the popular white performer Thomas D. Rice, known as "Jim Crow," who wore the stylized makeup called blackface and performed songs and dances in a stereotyped imitation of African Americans. Blackfaced white minstrel troupes were particularly popular in the U.S. and England in 1840–80 and included groups such as the Christy Minstrels, who played on Broadway for 10 years and had songs composed for them by Stephen Foster. The minstrel show included an opening chorus and frequent exchanges of jokes between the emcee, Mr. Interlocutor, and the end men, Mr. Tambo (who played the tambourine) and Mr. Bones (who rattled the bones), interspersed with ballads, comic songs, and instrumental numbers (usually on the banjo and violin), as well as individual acts, soft-shoe dances, and specialty numbers. Minstrel troupes composed of African Americans were formed after the Civil War; in general, minstrel shows were the only theatrical medium in which black performers of the period could support themselves. Minstrel shows had effectively disappeared by the early 20th century, but the effects of their racial stereotyping persisted in performance mediums well into mid century.

mint In botany, any strong-scented herb of the genus *Mentha*, composed of about 25 species of perennial herbs, and certain related genera of the mint family (Lamiaceae, or Labiatae), which contains about 3,500 species of flowering plants in about 160 genera. Mints are important to humans as herb plants useful for flavour, fragrance, and medicinal prop-

© 2006 Encyclopædia Britannica, Inc.

erties. True mints have square stems, oppositely arranged aromatic leaves. Small flowers usually pale purple, pink, or white, are arranged in clusters, either forming separate whorls or crowded together in a terminal spike. All *Mentha* species contain volatile oil in resinous dots in the leaves and stems. Included in this genus are PEPPERMINT, SPEARMINT, MARJORAM, ROSEMARY, and THYME; other members of the mint family include LAVENDER, HYSSOP, and CATNIP.

mint In economics, a place where coins are made according to exact compositions, weights, and dimensions, usually specified by law. The first state mint was probably established by the Lydians in the 7th century BC. The art spread through the Aegean Islands into Italy and other Mediterranean countries, as well as to Persia and India. The Romans laid the foundations of modern minting standards. Coining originated independently in China in the 7th century BC and spread to Japan and Korea. In medieval Europe, mints proliferated as every feudal authority—kings, counts, bishops, and free cities—exercised the mint privilege; the wide variation in coinage that resulted often handicapped commerce. Most countries now operate only one mint, though the U.S. has two active mints, in Philadelphia and Denver. Proof sets of coins for coin collectors are minted in San Francisco. Countries not large or prosperous enough to establish a national mint have their coins struck in foreign mints. Many mints perform functions other than minting, notably refining precious metals and manufacturing medals and seals. See also CURRENCY, MONEY.

minuet \ˌmin-yə-'wet\ Dignified couple dance derived from a French folk dance, dominant in European court ballrooms in the 17th–18th century. Using small, slow steps to music in ¾ time, dancers often performed choreographed figures combined with stylized bows and curtsies. The most popular dance of the 18th-century aristocracy, it fell from favour after the French Revolution in 1789. It was of great importance in art music; commonly incorporated into the SUITE c. 1650–1775, it was the only dance form retained in the SYMPHONY, SONATA, STRING QUARTET, and other multimovement art-music genres up to c. 1800.

Minuit \'min-yə-wət**, Peter** (b. c. 1589, Wesel, Kleve—d. June 1638, Caribbean Sea) Dutch colonial governor of New Netherland. In 1626 the Dutch West India Co. named him director general of the colony on MANHATTAN Island. According to legend, to legitimize Dutch occupation of the island he persuaded the Indians to sell it for a handful of trinkets worth about 60 guilders ($24). At the island's southern tip he founded New Amsterdam. He was recalled to Holland (1631) and later was sent to establish the colony of New Sweden on Delaware Bay, where he again purchased land from the Indians and built Fort Christina (later Wilmington, Del.) in 1638.

minuscule \'mi-nəs-ˌkyül, mi-'nəs-ˌkyül\ Lowercase letters in CALLIGRAPHY, in contrast to MAJUSCULE, or uppercase letters. Unlike majuscules, minuscules are not fully contained between two real or hypothetical lines; their stems can go above or below the line. Developed by ALCUIN in the 8th century, it allowed the division of writing into sentences and paragraphs by beginning sentences with capital letters and ending them with periods. The script was originally rounded, but gradually the strokes became heavier until it became what is now known as Gothic or BLACK LETTER SCRIPT.

minuteman Colonial soldier of the AMERICAN REVOLUTION. Minutemen were first organized in Massachusetts in September 1774, when revolutionary leaders sought to eliminate Tories, or British sympathizers, from the militia by replacing all officers. One-third of the members of each new regiment was to be ready for military duty "at a minute's warning." Their first great test took place at the Battles of LEXINGTON AND CONCORD. On July 18 the Continental Congress recommended that other colonies organize minuteman units.

Minuteman missile U.S. ICBM first deployed in 1962. Its three generations—the Minuteman I (1962–73), the Minuteman II (1966–95), and the Minuteman III (from 1970)—have constituted most of the land-based nuclear arsenal of the U.S. since the 1960s. They were the first U.S. ICBMs to be based in underground silos, use solid fuel, and be fitted with multiple independently targeted reentry vehicles (see MIRV). Under the terms of the STRATEGIC ARMS REDUCTION TALKS, the Minuteman II force was dismantled and the Minuteman III scheduled for downgrading to a single warhead.

Miocene \'mī-ə-ˌsēn\ **Epoch** Major division of the TERTIARY PERIOD, from 23.8 to 5.3 million years ago. The extensive fossil record of terrestrial life during the Miocene provides a fairly complete picture of the development of vertebrates, especially mammals. Miocene mammals were essentially modern, and half of the known modern families are present in the Miocene record. The horse evolved, mainly in North America, and advanced primates, including apes, were present in southern Europe. Some interchange of faunas occurred in the Northern Hemisphere between the Old and New Worlds. Free communication was possible between Africa and Eurasia, but South America and Australia remained isolated.

Miquelon See SAINT-PIERRE AND MIQUELON

Mir Russian SPACE STATION. It consists of a core module launched in 1986 and five additional modules launched separately over the next decade and attached to the core unit to create a large, versatile space laboratory. The third generation of Russian space stations (see SALYUT), Mir featured six docking ports for modules and other spacecraft, expanded living quarters, more power, and modernized research equipment. It supported human habitation between 1986 and 2000, including an uninterrupted stretch of occupancy of almost 10 years, and it hosted a series of U.S. astronauts in 1995–98 as part of a Mir-SPACE SHUTTLE cooperative endeavour. In 1995, Valery Polyakov (b. 1942) set a world endurance record of nearly 438 days in space aboard Mir. In March 2001 the abandoned station was brought down in a controlled reentry, with the surviving pieces falling into the Pacific Ocean.

Mīr Sayyid ʿAlī (fl. 16th century) Persian miniature painter. Born in Tabrīz, he went to India about 1545. He and fellow countryman ʿABD AL-ṢAMAD instructed the artists of the imperial atelier, most of them Indians, and thereby helped to found the school of MUGHAL PAINTING. He supervised part of the production of the illustrations to the Mughal manuscript *Dāstān-e Amīr Ḥamzeh* ("Stories of Amir Hamzeh"). The few paintings by him that have survived reveal that he was a highly gifted painter, wielding a delicate brushstroke and great powers of observation.

Mira Bai \'mē-rä-'bä-ē\ (b. 1450?, Kudaki, India—d. 1547?, Dwarka, Gujarat) Rajput princess and Hindu mystic whose songs are popular in northern India. According to legend, Mirabai dedicated her life to KRISHNA after her husband's death. She received sadhus and pilgrims at her private temple dedicated to Krishna and composed songs of devotion to him, unorthodox pursuits for a widow. Her poems allude to two attempts on her life, both foiled miraculously. When a delegation of Brahmans sought to return her to her husband's kingdom, she disappeared. Only two poems bearing her signature can be dated before the 18th century, but her story is the most familiar among those of northern Indian saints.

Mirabeau \mē-rä-'bō**, Honoré-Gabriel Riqueti, count de** *orig.* **Honoré-Gabriel Riqueti** (b. March 9, 1749, Bignon, near Nemours, France—d. April 2, 1791, Paris) French politician and orator. Son of the economist Victor Riqueti (1715–89), he suffered his father's disfavour; often imprisoned for intrigues and wild behaviour (1774–80), he wrote several essays on prison life. In 1789 he was elected to the ESTATES GENERAL from the Third Estate. A skilled orator, he was popular with the people and was influential in the early years of the FRENCH REVOLUTION. He advocated a constitutional monarchy and tried to mediate between the absolute monarchists and the revolutionaries. He was elected president of the National Assembly in 1791, but he died shortly thereafter.

Mirabéllo, Gulf of Gulf of the AEGEAN SEA on the northern coast of CRETE, Greece. The gulf is separated by a promontory from the Bay of Sitías on the east. Olonte and Lato are ruined Classical settlements; at Gourniá and on the islets of Psíra and Mókhlos are the remains of Late MINOAN I (1600–1450 BC) settlements.

miracle Extraordinary event attributed to a supernatural power. Belief in miracles exists in all cultures and nearly all religions. The UPANISHADS assert that the experience of religious insight and transformation is the only "miracle" worth considering, but popular HINDUISM attributes miraculous powers to the ascetic yogis. CONFUCIANISM had little room for miracles. DAOISM, however, mingled with Chinese folk religion to produce a rich crop of miracles. Though BUDDHA Gautama deprecated his own miraculous powers as devoid of spiritual significance, accounts of his miraculous birth and life were later woven into his legend and into those of later Buddhist saints. Miracles are taken for granted throughout the Hebrew scriptures and were fairly common in the Greco-Roman world. The NEW TESTAMENT records miracles of healing and other wonders performed by JESUS. Miracles also attest to the holiness of Christian saints. MUHAMMAD renounced miracles as a matter of principle (the QUR'ĀN was the great

© 2006 Encyclopædia Britannica, Inc.

miracle), but his life was later invested with miraculous details. Muslim popular religion, particularly under the influence of SUFISM, abounds in miracles and wonder-working saints.

miracle play Type of vernacular drama performed in the Middle Ages, presenting a real or fictitious account of the life, miracles, or martyrdom of a saint. The genre evolved from the LITURGICAL DRAMAS of the 10th–11th centuries, which were intended to enhance church calendar festivals. By the 13th century the plays were separated from church services and performed at public festivals by members of craft guilds and other amateur actors. Most miracle plays concerned either the Virgin Mary or St. NICHOLAS, both of whom had active cults in the Middle Ages. See also MORALITY PLAY; MYSTERY PLAY.

mirage \mə-'räzh\ In optics, the deceptive appearance of a distant object caused by the bending of light rays (REFRACTION) in layers of air of varying density. Under certain conditions, such as over a stretch of pavement or desert air heated by intense sunshine, the air cools rapidly with elevation and therefore increases in density and refractive power. Sunlight reflected down from the upper portion of an object will be directed through the cool air in the normal way; although the light would not be seen ordinarily because of the angle, it curves upward after it enters the rarefied hot air near the ground, thus being refracted to the observer's eye as though it had originated below the heated surface. When the sky is the object of the mirage, the land is mistaken for a lake or sheet of water.

mi'raj \'mi-räj\ In Islamic tradition, the ascension of MUHAMMAD into heaven. One night, according to the tradition, Muhammad was visited by two archangels, who opened his body and purified his heart of all doubt, error, and paganism. He was carried to heaven, where he ascended the seven levels to reach the throne of God. Along the way he and the archangel JIBRĪL met the prophets ADAM, Yaḥyā (JOHN THE APOSTLE), ʿĪsā (JESUS), Yūsuf (JOSEPH), Idrīs, Ḥarūn (AARON), Mūsā (MOSES), and Ibrāhīm (ABRAHAM) and visited hell and paradise. He learned that he was more highly regarded by God than all the other prophets. The *miʿraj* is popularly celebrated with readings of the legend on the 27th day of Rajab, called the *Laylaṯ al-Mirāj* ("Night of the Ascension").

Miranda \mi-'ran-də**, Carmen** *orig.* **Maria do Carmo Miranda da Cunha** (b. Feb. 9, 1909, Lisbon, Port.—d. Aug. 5, 1955, Beverly Hills, Calif., U.S.) Brazilian singer and actress. In the 1930s she was the most popular recording artist in Brazil, where she appeared in five films. Recruited by a Broadway producer, she starred in *The Streets of Paris* (1939), then made her U.S. film debut in *Down Argentine Way* (1940). Typecast as the "Brazilian Bombshell" and given such caricatural roles as "The Lady in the Tutti-Frutti Hat" in *The Gang's All Here* (1943), she became the highest-paid female performer in the U.S. during World War II. Her final U.S. film was *Scared Stiff* (1953).

Miranda \mē-'rän-dä**, Francisco de** (b. March 28, 1750, Caracas—d. July 14, 1816, Cádiz, Spain) Venezuelan revolutionary who helped pave the way for his country's independence. He joined the Spanish army but fled to the U.S. in 1783, where he met leaders of the AMERICAN REVOLUTION and formed plans for the liberation of South America, which he envisioned ruled by an Incan emperor and a bicameral legislature. He launched an unsuccessful invasion of Venezuela in 1806 and returned at the request of SIMÓN BOLÍVAR to fight again in 1810. He assumed dictatorial powers in 1811 when independence was declared but succumbed to a Spanish counterattack and signed an armistice. Fellow revolutionaries, viewing his surrender as traitorous, thwarted his attempt to escape. He died in a Spanish prison cell.

Miranda v. Arizona (1966) U.S. Supreme Court decision that specified a code of conduct for police during interrogations of criminal suspects. *Miranda* established that the police are required to inform arrested persons that they have the right to remain silent, that anything they say may be used against them, and that they have the right to an attorney. The case involved a claim by the plaintiff that the state of Arizona, by obtaining a confession from him without having informed him of his right to have a lawyer present, had violated his rights under the Fifth Amendment regarding SELF-INCRIMINATION. The 5-to-4 decision shocked the law-enforcement community; several later decisions limited the scope of the Miranda safeguards. See also rights of the ACCUSED.

Mirim \mē-'rēm\ **Lagoon** *Spanish* **Laguna Merín** \mā-'rēn\ Tidewater lake separating eastern Uruguay from the extreme southern tip of Brazil. It is about 118 mi (190 km) long and 30 mi (48 km) across at its widest point, covering an area of 1,542 sq mi (3,994 sq km). A low, marshy bar 10–35 mi (17–59 km) wide and containing small lagoons separates it from the Atlantic Ocean. It is navigable by shallow-draft vessels.

Miró \mē-'rō**, Joan** (b. April 20, 1893, Barcelona, Spain—d. Dec. 25, 1983, Palma de Mallorca) Spanish (Catalan) artist. He attended a commercial school and worked as an office clerk until a mental breakdown persuaded his artisan father to permit him to study art. From the beginning he sought to express concepts of nature metaphorically. From 1919 on he lived alternately in Spain and Paris, where he came under the influence of DADAISM and SURREALISM. The influence of PAUL KLEE is apparent in his "dream pictures" and "imaginary landscapes" of the late 1920s, in which linear configurations and patches of colour look almost as though they had been set down randomly. His mature style evolved from the tension between this fanciful, poetic impulse and his vision of the harshness of modern life. He worked extensively in lithography and produced numerous murals, tapestries, and sculptures for public spaces.

Joan Miró, photograph by Yousuf Karsh, 1966.
KARSH/WOODFIN CAMP AND ASSOCIATES

MIRV \'mərv\ *in full* **multiple independently targeted reentry vehicle** Any of several nuclear warheads carried on the front end of a ballistic missile. The technique allows separately targeted nuclear warheads to be released from the missile on different trajectories, thus attacking several targets from only one launcher. MIRVed ballistic missiles were first deployed by the U.S. and then the Soviet Union in the 1970s, followed by Britain and France in the 1980s and possibly China in the 1990s. Because multiple warheads represent a significant increase in firepower, they have often been an issue in arms control negotations. The STRATEGIC ARMS REDUCTION TALKS commit both the U.S. and Russia to limit the number of MIRVs on some missiles.

miscarriage *or* **spontaneous abortion** Spontaneous expulsion of an EMBRYO or FETUS from the UTERUS before it can live outside the mother. More than 60% are caused by an inherited defect in the fetus, which might result in a fatal abnormality. Other causes may include acute infectious disease, especially if it reduces the fetus's oxygen supply; abnormalities of the uterus that have physical or hormonal origins; and death of the fetus from umbilical-cord knotting. The main sign of impending miscarriage is vaginal bleeding.

misdemeanour See FELONY AND MISDEMEANOUR

Mises \'mē-zes**, Ludwig (Edler) von** (b. Sept. 29, 1881, Lemberg, Austria-Hungary—d. Oct. 10, 1973, New York, N.Y., U.S.) Austrian-U.S. economist whose theories followed those of the AUSTRIAN SCHOOL OF ECONOMICS. He taught at the University of Vienna (1913–38) before immigrating to the U.S. and joining the New York University faculty (1945–69). In *The Anti-Capitalistic Mentality* (1956), an examination of U.S. socialism, he dealt with the opposition to the free market by intellectuals, who, in his view, bear an unwarranted resentment toward mass demand, which is the basis of prosperity in big business.

Mishima \'mē-shē-mä\ **Yukio** *orig.* **Hiraoka Kimitake** (b. Jan. 14, 1925, Tokyo, Japan—d. Nov. 25, 1970, Tokyo) Japanese writer. Having failed to qualify physically for military service in World War II, Mishima worked in a Tokyo factory and after the war studied law. He won acclaim with his first novel, *Confessions of a Mask* (1949). Many of his characters are obsessed with unattainable ideals and erotic desires, as in *The Temple of the Golden Pavilion* (1956). His epic *The Sea of Fertility*, 4 vol. (1965–70), is perhaps his most lasting achievement. He strongly opposed Japan's close ties to the West in the postwar era (notably the new constitution that forbade rearmament) and yearned to preserve Japan's martial spirit and reverence for the emperor. In a symbolic gesture of these beliefs, he died by committing SEPPUKU (ritual disembowelment) after seizing a military headquarters. He is often considered one of Japan's most important 20th-century novelists.

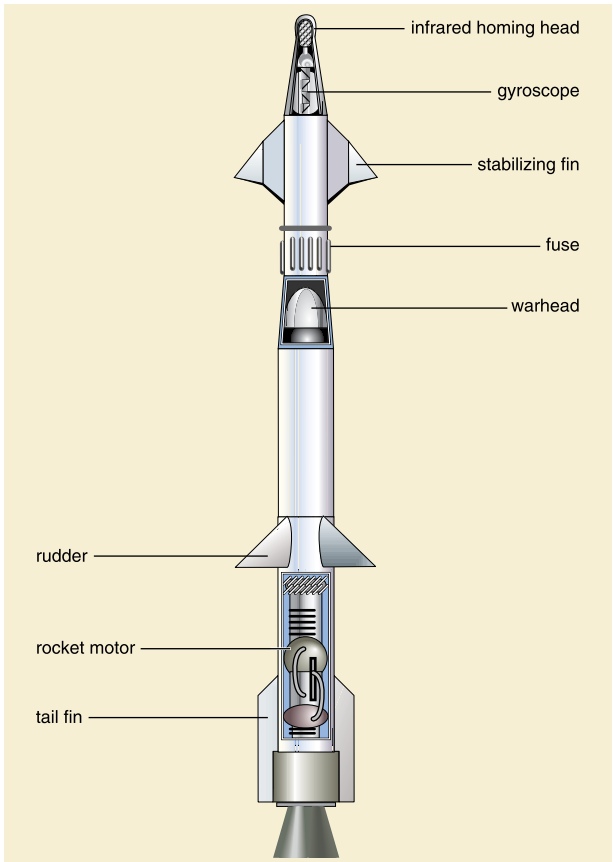
Mishna *or* **Mishnah** \mēsh-'nä, 'mish-nə\ Oldest authoritative collection of Jewish oral law, supplementing the written laws in the Hebrew Scriptures. It was compiled by a series of scholars over two centuries and was given final form in the 3rd century AD by JUDAH HA-NASI. Annotations by later scholars in Palestine and Babylonia resulted in the GEMARA; the Mishna and Gemara are usually said to make up the TALMUD. The Mishna has six major sections, on daily prayer and agriculture, SABBATH and other religious ritual, married life, civil and criminal law, the Temple of JERUSALEM, and ritual purification.

Mishne Torah \mēsh-'ne-tō-'rä\ Extensive commentary on the TALMUD, composed in the 12th century by MOSES MAIMONIDES. Its 14 volumes deal with laws covering such subjects as ethical conduct, civil affairs, torts, marriage and divorce, and gifts to the poor. Maimonides intended the Mishne Torah to combine religious law and philosophy and to serve as a vehicle for teaching rather than merely to prescribe conduct.

Miskito Coast See MOSQUITO COAST

Miskolc \'mish-ˌkōlts\ City (pop., 2001: 184,125), northeastern Hungary. It lies on the eastern margin of the Avas Hills. Caves in the limestone hills, inhabited from prehistoric times, now serve as cellars for the wine-making industry. Settled by Germanic tribes, Sarmatians and Avars, the town was conquered by the Hungarians in the 10th century. It was invaded by the Mongols in the 13th century. It became a free city in the 15th century. A major industrial centre, it produces iron and steel. Historic buildings include a 13th-century Gothic church.



misrepresentation In law, any false or misleading expression of fact, usually with the intent to deceive or defraud. It most commonly occurs in insurance and real-estate contracts. False advertising may also constitute misrepresentation. Any contract that contains or constitutes a misrepresentation is usually rendered void, and the injured party may insist that the misrepresentation be made good.

missile ROCKET-propelled weapon designed to deliver an explosive warhead with great accuracy at high speed. Missiles vary from small tactical weapons effective out to only a few hundred feet to much larger strategic weapons with ranges of several thousand miles. They were not developed in any significant way until after World War II. Almost all contain some form of guidance and control mechanism and are therefore often called GUIDED MISSILES. An unguided military missile, as well as any launch vehicle used to penetrate the upper atmosphere or place a satellite in space, is usually called a rocket. A propeller-driven underwater missile is called a TORPEDO, and a guided missile powered along a low, level flight path by an air-breathing jet engine is called a CRUISE missile. With the development of ICBMs, missiles became central to COLD WAR strategy. See also ANTIBALLISTIC MISSILE, MINUTEMAN MISSILE, V-1 MISSILE, V-2 MISSILE. See illustration opposite.

Missile Defense Alarm System (Midas) Any of a series of unmanned U.S. military satellites developed to provide warning of surprise attacks by Soviet intercontinental ballistic missiles (ICBM). Midas was the first such warning system in the world. Launched in the early 1960s, the reconnaissance satellites were equipped with infrared sensors capable of detecting the heat of a ballistic missile's rocket exhaust shortly after firing.

mission Organized effort to spread the Christian faith. St. PAUL evangelized much of Asia Minor and Greece, and the new religion spread rapidly along the trade routes of the Roman Empire. The advance of Christianity slowed with the disintegration of the Roman Empire after AD 500 and the growth of Arab power in the 7th–8th century, but Irish and Anglo-Saxon missionaries continued to spread the faith in western and northern Europe, while missionaries of the Greek church in Constantinople worked in eastern Europe and Russia. Missions to Islamic areas and Asia began in the medieval period, and when Spain, Portugal, and France established overseas empires in the 16th century, the Roman Catholic church sent missionaries to the Americas and the Philippines. A renewed wave of Roman Catholic missionary work in the 19th century focused on Africa and Asia. Protestant churches were slower to undertake foreign missions, but in the 19th and early 20th century there was a great upsurge in Protestant missionary activity. Missionary work continues today, though it is often discouraged by the governments of former European colonies that have won independence.

Mission style *or* **Spanish Mission style** Style of the missions established by Spanish Franciscans in Florida, Texas, Arizona, New Mexico, and especially California (1769–1823). Their portals were often handsomely ornate, but the overall impression is one of simple geometric volumes of white stucco complemented by sharply incised windows and simplified interior details. Mission style also commonly refers to a style largely created in the early 20th century by GUSTAV STICKLEY, who marketed a line of plain, heavy oak furnishings inspired by those of the Spanish missions, as well as a series of house designs to suit modest incomes.

Components of an infrared-homing ("heat-seeking") air-to-air missile.

Mississauga \ˌmi-sə-'sȯ-gə\ City (pop., 2001: 612,925), southeastern Ontario, Canada. Situated at the western end of Lake ONTARIO, southwest of TORONTO, it was settled in the early 19th century on land purchased from the Mississauga Indians. Mississauga became a town in 1968 and a city in 1974. Both a residential suburb of Toronto and an important industrial centre, it is also the site of the Lester B. Pearson International Airport.

Mississippi State (pop., 2000: 2,844,658), south-central U.S. Lying on the Gulf of Mexico, it is bordered by Tennessee, Alabama, Louisiana, and Arkansas. It covers 47,695 sq mi (123,530 sq km); its capital is JACKSON. Its landscape ranges from hills and pine woods to plains and river lowlands. Before European settlement, the area was inhabited by several Indian tribes, including the CHOCTAW, Natchez, and Chickasaw. It became part of French-controlled Louisiana, and Biloxi was settled in 1699. The northern portion was ceded to the U.S. in 1783; the southern portion was included in the Mississippi Territory (created 1798), which expanded in 1804 to include most of the present-day state. Mississippi became the 20th U.S. state in 1817. A plantation-based economy using slave labour developed in the 1820s. It seceded from the Union in 1861 and gave the Confederacy its president, JEFFERSON DAVIS. The Union capture of VICKSBURG in 1863 proved a turning point in the AMERICAN CIVIL WAR. It was readmitted to the Union in 1870 and adopted a constitution aimed at blocking RECONSTRUCTION in 1890. The state became a battleground in the struggle against

© 2006 Encyclopædia Britannica, Inc.

racial segregation in the 1960s: the state's effort to block the admission of James Meredith to the University of Mississippi triggered riots in 1962; local civil rights leader Medgar Evers was murdered in 1963. After 1969, when the federal government ordered the integration of the state's segregated school system, Mississippi's long-standing racial traditions began a gradual change. Today, its economy is based on agricultural products, including cotton and soybeans. Manufactured goods include textiles and electrical equipment.

Mississippi River River, central U.S. It rises at Lake Itasca in Minnesota and flows south, meeting its major tributaries, the Missouri and the Ohio rivers, about halfway along its journey to the Gulf of Mexico. It enters the Gulf southeast of New Orleans, after a course of 2,350 mi (3,780 km). It is the largest river in North America, and with its tributaries it drains an area of 1.2 million sq mi (3.1 million sq km). Spanish explorer Hernando de Soto was the first European to discover the river in 1541. French explorers Louis Jolliet and Jacques Marquette traveled down it in 1673 as far as the Arkansas River. French explorer La Salle reached the delta in 1682 and claimed the entire Mississippi region for France, as Louisiana. France kept control over the upper river, but the lower portion passed to Spain in 1769. It was designated the western boundary of the U.S. in 1783. France sold it to the U.S. in 1803 as part of the Louisiana Purchase. During the American Civil War, Union forces captured Vicksburg, Miss., in 1863, breaking the Confederate hold on the river. As the central river artery of the U.S., it is one of the busiest commercial waterways in the world.

Mississippian culture Last major prehistoric cultural development in North America, c. AD 800–1550. It spread over much of the southeast and the mid-continent, especially in the major river valleys. It was based on intensive cultivation of corn, beans, squash, and other crops. Each large town dominated a group of satellite villages. Each had a central ceremonial plaza with one or more pyramidal or oval earthen mounds surmounted by a temple, a pattern indicating a connection to Central America. The immense Cahokia Mounds near present-day Collinsville, Ill., U.S., was the culture's largest urban centre. Craftwork was executed in copper, shell, stone, wood, and clay. The culture had already begun to decline by the time Europeans first penetrated the southeast. See also Southeastern Indian; Woodland culture.

Mississippian Period In North America, an interval of geologic time roughly equivalent to what is internationally designated the Early Carboniferous Period (354–323 million years ago). Because the rocks associated with this period are typified by those in the Mississippi valley, some U.S. geologists prefer the designation Mississippian to the European term Early Carboniferous.

Missouri State (pop., 2000: 5,595,211), midwestern U.S. Bordered by Iowa, Illinois, Kentucky, Tennessee, Arkansas, Oklahoma, Kansas, and Nebraska, it covers 69,709 sq mi (180,546 sq km); its capital is Jefferson City. The Missouri River runs from west to east across the state. The area north of it has rolling hills and fertile plains, the area south has deep valleys and swift streams. The region was originally inhabited by various Indian peoples, one of which, the Missouri, gave the state its name. The first permanent European settlement was made in 1735 at Ste. Genevieve by French hunters and lead miners. St. Louis was founded in 1764. The U.S. gained control of the region in 1803 as part of the Louisiana Purchase. It was part of Louisiana Territory in 1805 and Missouri Territory in 1812. An influx of U.S. settlers occurred after the War of 1812. Missouri became the 24th state in 1821, but only after the Missouri Compromise allowed its admission as a slave state. It suffered much tension between slaveholders and abolitionists, evidenced in the Dred Scott decision in 1857. Missouri remained in the Union during the American Civil War, though its citizens fought on both sides. After the war, its economic growth expanded and was celebrated in the St. Louis Exhibition of 1904. After World War II, its economy shifted from agriculture to manufacturing. It leads the nation in lead production, based mainly in the Ozarks region.

Missouri Compromise (1820) Act passed by the U.S. Congress admitting Missouri to the Union as the 24th state. After the territory requested statehood without slavery restrictions, Northern congressmen tried unsuccessfully to attach amendments restricting further slaveholding. When Maine (originally part of Massachusetts) requested statehood, a compromise led by Henry Clay allowed Missouri admission as a slave state and Maine as a free state, with slavery prohibited from then on in territories north of Missouri's southern border. Clay's compromise appeared to settle the slavery-extension issue but highlighted the sectional division.

Missouri Plan Method of selecting judges that originated in the state of Missouri and was later adopted elsewhere. Designed to overcome the weaknesses of the elective system, the plan permits the governor to select a judge from a list of nominees recommended by a special commission, but requires that the judge be approved in a public referendum after serving a period of time.

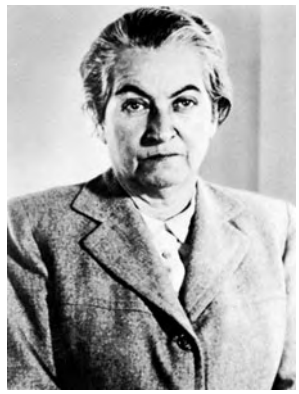
Missouri River River, central U.S. The longest tributary of the Mississippi River, it rises in the Rocky Mountains of southwestern Montana. It flows east to central North Dakota and south across South Dakota, forming sections of the South Dakota–Nebraska boundary, the Nebraska-Iowa boundary, the Nebraska-Missouri boundary, and the Kansas-Missouri boundary. It then meanders east across central Missouri to join the Mississippi River north of St. Louis, after a total course of 2,315 mi (3,726 km). It has been nicknamed "Big Muddy" because of the amount of silt that it carries. The first Europeans to visit its mouth were French explorers Jacques Marquette and Louis Jolliet in 1673. The first exploration of the river from its mouth to its headwaters was made in 1804–05 by the Lewis and Clark Expedition. Since the mid 20th century, programs have been instituted along its banks to check its turbulent flooding and to harness it for irrigation.

Missouri River, Little See Little Missouri River

Misti \'mēs-tē\ **Volcano** *Spanish* **Volcán Misti** Volcano, Andes Mountains, southern Peru. It is flanked by Chachani and Pichupichu volcanoes and rises to 19,098 ft (5,821 m) above sea level, towering over the city of Arequipa. Its pristine snowcapped cone is thought to have had religious significance for the Incas, and it has inspired legends and poetry. Now dormant, it last erupted during an earthquake in 1600.

mistletoe Any of many species of semiparasitic green plants of the families Loranthaceae and Viscaceae, especially those of the genera *Viscum*, *Phoradendron*, and *Arceuthobium*, all members of the Viscaceae family. *V. album*, the traditional mistletoe of literature and Christmas celebrations, is found throughout Eurasia. This yellowish evergreen bush (2–3 ft, or 0.6–0.9 m, long) droops on the branch of a host tree. The thickly crowded, forking branches bear small leathery leaves and yellowish flowers, which produce waxy-white berries containing poisonous pulp. A modified root penetrates the bark of the host tree and forms tubes through which water and nutrients pass from the host to the slow-growing but persistent parasite. The North American counterpart is *P. serotinum*. Mistletoe was formerly believed to have magical and medicinal powers, and kissing under hanging mistletoe was said to lead inevitably to marriage.

Leaves and berries of American mistletoe (*Phoradendron serotinum*)
JOHN H. GERARD



Mistral \mē-'strål**, Frédéric** (b. Sept. 8, 1830, Maillane, France—d. March 25, 1914, Maillane) French poet. A leader of the 19th-century revival of Provençal, Mistral cofounded the Félibrige, an influential association for maintaining the customs and language of Provence and later the whole of southern France. He devoted 20 years to creating a scholarly dictionary of Provençal. His literary output includes lyrics; short stories; *Memoirs of Mistral* (1906), his best-known work; and long narrative poems, including *Mirèio* (1859) and *The Song of the Rhône* (1897), his two greatest works. He shared the 1904 Nobel Prize for Literature with José Echegaray.

Mistral \mēs-'träl**, Gabriela** *orig.* **Lucila Godoy Alcayaga** (b. April 7, 1889, Vicuña, Chile—d. Jan. 10, 1957, Hempstead, N.Y., U.S.) Chilean poet. Mistral combined writing with a career as a cultural minister and diplomat and as a professor in the U.S. Her reputation as a poet was established in 1914 when she won a prize for three "Sonnets of Death." Her passionate lyrics, with love of children and of the downtrodden as principal themes, are collected in such volumes as *Desolación* (1922), *Tala* (1938), and *Lagar* (1954). In 1945 she became the first Latin American woman to win the Nobel Prize for Literature.

Mitanni \mi-'ta-nē\ Ancient kingdom of upper MESOPOTAMIA. It extended from the EUPHRATES RIVER nearly to the TIGRIS RIVER and flourished from about 1500 to 1360 BC. Founded by Indo-Iranians who settled among the Hurrian peoples of the region, it competed with Egypt for control of Syria. Under King Saustatar in the 15th century BC, the soldiers of Mitanni looted the Assyrian palace in ASHUR. In the mid-14th century BC, Wassukkani, its capital, was sacked by the Hittites, and the kingdom became part of the HITTITE empire as Hanigalbat. Shortly afterward it was made an Assyrian province.

Mitchell, Arthur (b. March 27, 1934, New York, N.Y., U.S.) U.S. dancer, choreographer, and director of the Dance Theatre of Harlem. He studied at the High School for the Performing Arts in New York City. He began dancing in Broadway musicals and worked with several ballet companies before joining the NEW YORK CITY BALLET in 1956 as its first African American dancer. He created roles in several of GEORGE BALANCHINE's ballets, including *A Midsummer Night's Dream* (1962) and *Agon* (1967), before leaving the company in 1972. In 1968 he cofounded a ballet school, and its company, the Dance Theatre of Harlem, made its debut in 1971. He has continued as its director and choreographer.

Mitchell, Billy *orig.* **William Mitchell** (b. Dec. 29, 1879, Nice, France—d. Feb. 19, 1936, New York, N.Y., U.S.) French-born U.S. aviator. He enlisted in the army and served in the Spanish-American War. He became the top U.S. air commander in World War I, initiating mass-bombing formations and leading an attack involving 1,500 planes. An outspoken advocate of a separate air force, he foresaw the replacement of the battleship by the bomber. When a navy dirigible was lost in a storm (1925), he accused the U.S. war and navy departments of incompetence; charged with insubordination, he was court-martialed and suspended from duty. He resigned in 1926 but continued to champion air power and to warn of advances by foreign air forces. In 1948 he was posthumously honoured by the new U.S. Air Force with a special medal.

Mitchell, John (Newton) (b. Sept. 5, 1913, Detroit, Mich., U.S.—d. Nov. 9, 1988, Washington, D.C.) U.S. public official. A prominent attorney in New York City, he practiced with RICHARD NIXON after their firms merged in 1967. In 1968 he managed Nixon's successful presidential campaign. As U.S. attorney general (1969–72), he was criticized for prosecuting war protesters, approving wiretaps without court authorization, and attempting to block publication of the PENTAGON PAPERS. He resigned to direct Nixon's reelection campaign but was soon caught up in the WATERGATE SCANDAL. Convicted of conspiracy, obstruction of justice, and perjury, he served 19 months in prison.

Mitchell, Joni *orig.* **Roberta Joan Anderson** (b. Nov. 7, 1943, Fort McLeod, Alta., Can.) Canadian singer and songwriter. Mitchell studied art in Calgary, where she began to sing in clubs. She eventually settled in Laurel Canyon, Calif., U.S. Several early songs, including "Both Sides Now" and "Woodstock," became hits for other artists. While her early recordings, such as *Clouds* (1969) and *Blue* (1971), were folk-oriented and reflected the idealism of the time, later releases, including *Court and Spark* (1974), *Hejira* (1976), *Mingus* (1979, with CHARLES MINGUS) and *Turbulent Indigo* (1994), were marked by strong pop and jazz influences. Her notably original lyrics and musical settings made her one of the preeminent female songwriters of the late 20th century.

Mitchell, Margaret (b. Nov. 8, 1900, Atlanta, Ga., U.S.—d. Aug. 16, 1949, Atlanta) U.S. writer. Mitchell attended Smith College and then wrote for *The Atlanta Journal* before spending 10 years writing her one book, *Gone with the Wind* (1936, Pulitzer Prize; film, 1939). A story of the American Civil War and Reconstruction from the white Southern point of view, it was almost certainly the largest-selling novel in the history of U.S. publishing to that time. A parody of the book, as told from a slave's point of view, *The Wind Done Gone* by Alice Randall, was published in 2001.

Mitchell, Mount Peak, western North Carolina, U.S. The highest U.S. peak east of the Mississippi River, it rises to 6,684 ft (2,037 m). It is situated in North Carolina's Black Mountains, part of the BLUE RIDGE system, within Mount Mitchell State Park and the Pisgah National Forest. Formerly called Black Dome, it was renamed for Elisha Mitchell, who surveyed it as the highest point in the eastern U.S. in 1835; he died on the mountain and is buried at its summit.

Mitchell, Peter Dennis (b. Sept. 29, 1920, Mitcham, Surrey, Eng.—d. April 10, 1992, Bodmin, Cornwall) British chemist. He discovered how the distribution of ENZYMES in mitochondrial membranes helps them use energy from HYDROGEN IONS to convert ADP to ATP. He received a 1978 Nobel Prize for formulating the chemiosmotic theory, which explains how energy is generated in the mitochondria of living cells.

Mitchell, Wesley C(lair) (b. Aug. 5, 1874, Rushville, Ill., U.S.—d. Oct. 29, 1948, New York, N.Y.) U.S. economist. Educated at the University of Chicago under THORSTEIN VEBLEN and JOHN DEWEY, he later taught at several universities, including Columbia (1913–19, 1922–44). He helped found the National Bureau of Economic Research in 1920 and was its director of research until 1945. His work greatly influenced the development of quantitative studies of economic behaviour in the U.S. and abroad, and he was the foremost expert of his day on BUSINESS CYCLES.

Mitchell River River, northern QUEENSLAND, Australia. Rising in the Eastern Highlands, it flows for 350 mi (560 km) northwest across Cape York Peninsula to the Gulf of CARPENTARIA. Fed by several rivers, it varies seasonally and may be dry for three months each year. It was explored in 1845 by Ludwig Leichhardt and was named for Thomas Mitchell, surveyor general for New South Wales. Crocodiles abound along its banks.

Mitchum, Robert (Charles Duran) (b. Aug. 6, 1917, Bridgeport, Conn., U.S.—d. July 1, 1997, Santa Barbara county, Calif.) U.S. film actor. Expelled from high school in New York City, he spent his teenage years wandering the country and working odd jobs. After joining an acting company in California, he made his screen debut in 1943, acting in several Hopalong Cassidy westerns. He won praise for his role in *The Story of G.I. Joe* (1945). With his trademark sleepy-eyed, tough-guy appearance, he usually played loners and villains, in movies (many of them B movies that have grown in critical esteem over time) such as *Out of the Past* (1947), *The Lusty Men* (1952), *The Night of the Hunter* (1955), *Thunder Road* (1958), *Cape Fear* (1962), *The Friends of Eddie Coyle* (1973), and *Farewell, My Lovely* (1975). In his later years, he starred in the television miniseries *Winds of War* (1983) and *War and Remembrance* (1988–89).

mite Any of about 20,000 species of tiny ARACHNIDS (subclass Acari, sometimes Acarina or Acarida). Species range from microscopic to 0.25 in. (6 mm) long. Mites live in water and soil, on plants, and as plant and animal parasites. Both parasitic and nonparasitic forms transmit plant and animal diseases. Itch mites (family Sarcoptidae), which burrow into the skin of humans and animals, cause the highly contagious disease scabies. A few species transmit tapeworms to cattle. Grain mites (family Glycyphagidae) damage stored products and irritate the skin of those who handle the products. House dust allergy is caused by species of the common genus *Dermatophagoides*. See also CHIGGER.

Red velvet mite (*Dinothrombium;* magnified about five times)

ily, she became known for her witty satiric novels of upper-class life, including the quasi-autobiographical *The Pursuit of Love* (1945), *Love in a Cold Climate* (1949), *The Blessing* (1951), and *Don't Tell Alfred* (1960). A volume of essays she coedited, *Noblesse Oblige* (1956), popularized the distinction between linguistic usages that are "U" (upper-class) and "non-U." Her sister Jessica (1917–96) was a noted writer on U.S. society whose best-known book was *The American Way of Death* (1963).

Mithra \mē-'trȧ, 'mith-rə\ In Indo-Iranian myth, the god of light. He was born bearing a torch and armed with a knife, beside a sacred stream and under a sacred tree, a child of the earth itself. He soon rode, and later killed, the life-giving cosmic bull, whose blood fertilizes all vegetation. This deed became the prototype for a bull-slaying fertility ritual. As god of light, Mithra was associated with the Greek HELIOS and the Roman Sol Invictus. The first written reference to Mithra dates to 1400 BC. See also MITHRAISM.

Mithradates VI Eupator \ˌmith-rə-'dā-tēz...'yü-pə-ˌtȯr\ *known as* **Mithradates the Great** *Latin* **"Born of a Noble Father"** (d. 63 BC, Panticapaeum) King of PONTUS (120–63 BC) and enemy of Rome. As a boy he was coruler with his mother from c. 120, then overthrew her to become sole ruler in 115. He gradually conquered areas along the western and southern regions of the Black Sea. He waged three wars against Rome, called the Mithradatic Wars (88–85, 83–82, 74–63). Though he originally seemed a champion to Greeks seeking relief from the Roman threat, his defeat by SULLA (86) destroyed that hope. When it became necessary, he extorted money and supplies from his Greek territories in Asia Minor. Greek revolts led to cruel reprisals. Greece turned to Rome after 86 but suffered under the harsh demands of both until Mithradates was conclusively defeated by POMPEY. He was one of the few leaders to successfully challenge Roman expansion in Asia.

Mithraism \'mith-rə-ˌi-zəm\ Ancient Iranian religion based on the worship of MITHRA, the greatest of Iranian deities before the coming of ZOROASTER in the 6th century BC. It spread from India through Persia and the Hellenic world; in the 3rd–4th century AD, soldiers of the Roman empire carried it as far west as Spain, Britain, and Germany. The most important Mithraic ceremony was the sacrifice of the bull, an event associated with the creation of the world. Mithraic ceremonies were held by torchlight in subterranean caverns. A form of Mithraism in which the old Persian ceremonies were given a Platonic interpretation was popular in the 2nd–3rd century AD in the Roman empire, where Mithra was honored as the patron of loyalty to the emperor. After CONSTANTINE I accepted CHRISTIANITY in the early 4th century, Mithraism rapidly declined.

Mitla \'mēt-lä\ Village and archaeological site, OAXACA state, southern Mexico. It lies at an elevation of 4,855 ft (1,480 m), surrounded by the mountains of the SIERRA MADRE del Sur. It was established as a sacred burial site by the ZAPOTEC, who used it until c. AD 900. The Mixtec moved down from northern Oaxaca sometime between 900 and 1500 and took possession of Mitla. The modern village, composed of thatched huts and adobe houses, serves as a base for the study of the ruins.

Mito \'mē-tō\ Japanese *HAN* (domain) belonging to one of the three branches of the Tokugawa family from which the SHOGUN was chosen during the TOKUGAWA PERIOD. During the 19th century, nationalists from Mito adopted the slogan "Sonnō jōi" ("Revere the emperor, expel the barbarians"). Tokugawa Nariaki (1800–60), DAIMYO of Mito at the time of Commodore MATTHEW PERRY's mission to Japan, called for Japan's continued isolation, supported by greater national unity and military renovation. See also II NAOSUKE; MEIJI RESTORATION; YOSHIDA SHŌIN.

mitosis \mī-'tō-səs\ Cell division, or reproduction, in which a cell gives rise to two genetically identical daughter cells. Strictly applied, the term describes the duplication and distribution of CHROMOSOMES. Prior to mitosis, each chromosome is replicated, producing two strands (chromatids) attached at a centromere. During mitosis, the membrane around the cell's nucleus dissolves and the chromatids of each chromosome are separated and pulled to each end of the cell. As the nuclear membrane re-forms around each set of chromosomes, the cytoplasm of the parent cell begins to divide to form two daughter cells. Following mitosis, the cell membrane pinches in to separate the daughter cells. Mitosis is essential to life because it provides new cells for growth and for replacement of worn-out cells. It may take minutes or hours, depending on the kind of cells and species of organisms. It is influenced by time of day, temperature, and chemicals. See also CENTROMERE, MEIOSIS.

Stages of mitosis. A. Prophase. Replicated chromosomes, consisting of two daughter strands (chromatids) attached by a centromere, coil and contract. Two pairs of specialized organelles (centrioles) begin to move apart, forming a bridge of hollow protein cylinders known as microtubules (spindle fibres) between them. Microtubules also extend in a radial array (aster) from the centrioles to the poles of the cell. B. Late prophase. As the centrioles move apart, the nuclear membrane breaks down and microtubules extend from each centromere to opposite sides or poles of the cell. C. Metaphase. The centromeres align in a plane midway between the poles known as the equator, or metaphase plate. During late metaphase, each centromere divides into two, freeing sister chromatids from each other. D. Anaphase. Sister chromatids are drawn to opposite ends as centromeric microtubules shorten and polar microtubules lengthen, causing the poles to move farther apart. E. Telophase. Chromosomes uncoil, microtubules disappear, and the nuclear membrane re-forms around each set of daughter chromosomes. The cytoplasm begins to pinch in to create two daughter cells.

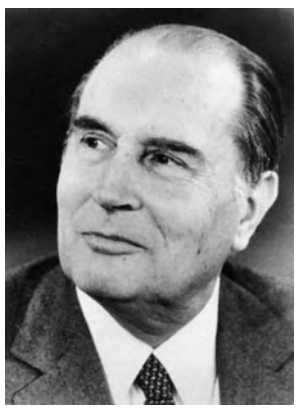
Mitra In Vedic HINDUISM, one of the gods in the category of Adityas, or sovereign principles of the universe. He represents friendship, integrity, harmony, and all other qualities necessary to maintain order in human existence. He is usually paired with Varuna, the guardian of the cosmic

L M N

© 2006 Encyclopædia Britannica, Inc.



order, whose powers he complements as guardian of the human order. As spirit of the day, he is sometimes associated with the sun. His Iranian counterpart is MITHRA.

Mitre \'mē-trā**, Bartolomé** (b. June 26, 1821, Buenos Aires—d. Jan. 18, 1906, Buenos Aires) President of Argentina (1862–68). An exiled critic of the dictator JUAN MANUEL DE ROSAS, he helped defeat Rosas by leading Uruguayan forces against him, then led a successful campaign to make Buenos Aires the capital of a united Argentina. Once elected president, he suppressed the rural CAUDILLOS, extended mail and telegraph service, organized public finances, established new courts, and founded the newspaper *La Nación* (1870) and the Argentine Academy of History. See also JUSTO JOSÉ DE URQUIZA.

Mitscher \'mich-ər**, Marc A(ndrew)** (b. Jan. 26, 1887, Hillsboro, Wis., U.S.—d. Feb. 3, 1947, Norfolk, Va.) U.S. naval officer. A graduate of the U.S. Naval Academy at Annapolis, Md. (1910), Mitscher qualified as the 33rd naval pilot in 1916. In the years that followed, he helped develop naval aviation and integrate it into the fleet. In World War II he commanded the aircraft carrier *Hornet* in the Battle of MIDWAY. He later commanded aircraft carrier attacks in the battles of the Philippine Sea and LEYTE GULF and at IWO JIMA and OKINAWA. In 1946 he was promoted to admiral and made commander in chief of the U.S. Atlantic fleet.

Mitsubishi Corp. Loose consortium of independent Japanese companies. The first Mitsubishi company was a trading and shipping concern established in 1873 by Iwasaki Yataro. Several subsidiaries were created after World War I, and by the 1930s Mitsubishi was Japan's second-largest *ZAIBATSU*. During World War II it was a major military contractor, its best-known product being the ZERO fighter plane. By the end of the war Mitsubishi controlled some 200 companies. The *zaibatsu* was broken up by U.S. occupation forces, and the STOCK of the subsidiary firms was sold to the public. After the occupation, the independent Mitsubishi companies began to reassociate. The group today consists of hundreds of worldwide subsidiaries and affiliates organized into several business groups such as chemicals, electronics, and machinery.

Mitterrand \mē-tə-'rä^{n}**, François (-Maurice-Marie)** (b. Oct. 26, 1916, Jarnac, France—d. Jan. 8, 1996, Paris) President of France (1981–95). After serving in World War II, he was elected to the National Assembly (1946) and held cabinet posts in 11 Fourth Republic governments (1947–58). Moving to the political left, he opposed CHARLES DE GAULLE's government and ran unsuccessfully against him in 1965 but won 32% of the vote. In 1971 he became secretary of the FRENCH SOCIALIST PARTY and made it the majority party of the left, which led to his election as president in 1981. With a leftist majority in the National Assembly, he introduced radical economic reforms, which were modified when a right-wing majority regained power in 1986. Reelected president in 1988, he strongly promoted European integration. His domestic policy was less successful, and France experienced high unemployment. In 1991 he appointed Edith Cresson (b. 1934) prime minister, the first French woman to hold that office (1991–92). A defeat for the Socialists in the legislative elections of 1993 further moderated Mitterrand's policies.

François Mitterrand.

Mix, Tom *orig.* **Thomas Hezikiah Mix** (b. Jan. 6, 1880, Mix Run, Pa., U.S.—d. Oct. 12, 1940, near Florence, Ariz.) U.S. film actor. He worked as a cowhand and a deputy sheriff and served in the army and in the Texas Rangers before joining a Wild West show in 1906. He made his screen debut as a roughriding hero in 1910 and soon became a star of silent westerns. Over the years his horse, Tony, became almost as famous as Mix himself. Mix appeared in more than 200 one- and two-reelers and feature films, many of which he also produced or directed. His career declined with the coming of sound.

Mixco \'mēsh-kō\ City (pop., 1994: 209,791), south-central Guatemala. It is a western suburb of GUATEMALA CITY and supplies the capital with produce.

Mixtec \mēs-'tek\ Indian population in southern Mexico. They attained a high degree of civilization in AZTEC and pre-Aztec times, leaving behind written records. Today they practice shifting cultivation and also hunt, fish, herd, and gather wild foods. Their crafts include ceramics and weaving. Nominally Roman Catholic and active in church brotherhoods (*cofradías*), they blend pre-Christian beliefs and practices with Catholic rituals.

Mizoguchi Kenji \ˌmē-zō-'gù-chē-'ken-jē\ (b. May 16, 1898, Tokyo, Japan—d. Aug. 24, 1956, Kyōto) Japanese film director. After studying painting, he became an actor at the Nikkatsu studio in 1919 and made his debut as a director in 1922. His early films include *Street Sketches* (1925), *Tokyo March* (1929), *Osaka Elegy* (1936), and *The Story of the Last Chrysanthemums* (1939). His pictorially beautiful films, of which he made more than 80, often dealt with the conflict between modern and traditional values. He won international acclaim for *Ugetsu monogatari* (1953), an allegorical commentary on postwar Japan. He was also noted for his films about women, including *The Love of Actress Sumako* (1947), *Women of the Night* (1948), and *Street of Shame* (1956).

Mizoram \mi-'zȯ-rəm\ State (pop., 2001 prelim.: 891,058), northeastern India. Occupying an area of 8,139 sq mi (21,081 sq km), it is bounded by MYANMAR (Burma) and BANGLADESH and the states of TRIPURA, ASSAM, and MANIPUR. It is largely mountainous; its capital is AIZAWL. The various ethnic groups of Mizoram are known collectively as the Mizo (Lushai), and they speak a variety of Tibeto-Burman dialects. They were in revolt against India for decades, and the establishment of Mizoram as a union territory in 1972 failed to appease them. The conflict was settled in 1987 with the promotion of Mizoram to statehood and the election of a Mizo-led state government. The economy is based on agriculture.

Mizuno Tadakuni \mē-'zùn-ō-ˌtä-dä-'kü-nē\ (b. July 19, 1794, Edo [Tokyo], Japan—d. March 12, 1851, Edo) Chief adviser to the 12th Tokugawa SHOGUN, Tokugawa Ieyoshi (r. 1837–53). In the face of social and economic decline, Mizuno tried to implement a series of reforms that would return late TOKUGAWA-PERIOD Japan to the martial simplicity of the early days of the shogunate. He enacted sumptuary laws, canceled SAMURAI debts, decreed a price and wage cut, and tried to force unauthorized peasant migrants to leave the cities and return to the countryside. These so-called Tempo Reforms failed, and Mizuno was removed from office.

Mjollnir \'myœl-nir, 'myòl-nir\ In Norse myth, the hammer of THOR and the symbol of his power. Forged by dwarfs, the hammer never failed Thor as a weapon or as an instrument of sanctification. It had many magical qualities, including the ability to return to Thor's hand after it had been thrown. It was stolen by the giant Thrym, who asked as ransom the hand of FREYJA. When Freyja refused to go to Thrym, Thor, masquerading as Freyja, managed to seize the hammer, which had been brought out to consecrate Freyja as Thrym's bride, and slaughtered Thrym and the other giants.

Mjøsa \'mœ-sä**, Lake** Lake, southeastern Norway. It lies north of OSLO, at the southern end of Gudbrands Valley. The country's largest lake, it serves as a link between the LÅGEN RIVER to the north and the Vorma-Glåma river system to the south. Occupying an area of 142 sq mi (368 sq km), it is 62 mi (100 km) long and 1 to 9 mi (1.6 to 14 km) wide. Lillehammer, at its northern end, and Hamar, on its eastern shore, are the largest lakeshore towns.

Mo-tzu See MOZI

moa Any of 13–25 species of extinct RATITE of New Zealand constituting the order Dinornithiformes. Species ranged from turkey-sized to 10 ft (3 m) high. Moas were swift runners that defended themselves by kicking. They were hunted for their flesh (eaten as food), bones (used as weapons and ornaments), and eggs (used for water vessels). The larger moas were probably extinct by the late 17th century; a few smaller species may have survived into the 19th century. Moas browsed and grazed on seeds, fruits, leaves, and grasses. They laid a single large egg in a hollow in the ground.

Moab \'mō-ˌab\ Kingdom, ancient Palestine. Located east of the DEAD SEA in what is now southwestern Jordan, it was bounded by EDOM and the land of the Amorites. The MOABITES were closely related to the Israelites but were sometimes at war with them and sometimes allied to them. The Moabite Stone, found at DIBON, recorded the 9th-century-BC victories of the Moab king Mesha, especially those over Israel. Moab was conquered by the BABYLONIANS in 582 BC.

© 2006 Encyclopædia Britannica, Inc.

Moabites \'mō-ə-ˌbīts\ Semitic people who lived in the highlands east of the Dead Sea (now in W-central Jordan). The Moabites' culture dates from the late 14th century BC to 582 BC, when they were conquered by the Babylonians. According to the Old Testament, they were descended from Moab, a son of Lot. Though their language, religion, and culture were closely related to those of the Israelites, the Moabites were not part of the Israelite community. David's great-grandmother Ruth was a Moabite. The Moabite Stone, a stela discovered in 1868, is the only written document of any length that survives from Moab; it tells of King Omri of Israel's reconquest of Moabite lands, which the Moabites ascribed to the anger of their god, Chemosh. See also Dibon.

moai \'mō-ˌī\ **figure** Small wooden statue of uncertain religious significance, carved on Easter Island. The figures, thought to represent ancestors who live on in the form of skeletons, are of two types: *moai kavakava* (male), with a beaklike nose and goatee and occasionally an animal or a human figure incised on the head; and *moai paepae* (female), which have a flat, relieflike quality and large eyes. They were sometimes used for fertility rites but more often for harvest celebrations, when the first picking of fruits was heaped around them as offerings.

Mobil Corp. Former name of one of the largest U.S. holding companies, primarily engaged in petroleum operations but with major interests in chemical products and retailing. Mobil's roots are in two 19th-century oil companies, Vacuum Oil Co. (founded 1866) and Standard Oil Co. of New York (or Socony, 1882). Their 1931 merger created Socony-Vacuum Corp., which became Socony Mobil Oil Corp. (1955) and then Mobil Oil Corp. (1966). In 1974 Mobil Corp., the holding company, was created when Mobil Oil Corp. bought Marcor Inc. in an effort to diversify. By 1988 Mobil had sold Marcor's major non-oil-related portions, including Montgomery Ward, to refocus on petroleum products. Mobil Oil Corp. developed a full range of petroleum operations from exploration to marketing, with major production in the Gulf of Mexico, California, the Atlantic coast, Alaska, the North Sea, and Saudi Arabia. It merged with Exxon Corp. to become Exxon Mobil Corp. in 1999.

Mobile \'mō-ˌbēl, mō-'bēl\ City (pop., 2000: 198,915), southwestern Alabama, U.S. Situated on Mobile Bay at the mouth of the Mobile River, the site was explored by Spaniards in 1519. French colonists built a fort near the river's mouth in 1702. It served as the capital of French Louisiana until about 1719. It was ceded to the British in 1763 and captured by the Spanish during the American Revolution. It was seized by the U.S. during the War of 1812 and incorporated as a town in 1819. During the American Civil War it was an important Confederate port, but Federal forces won the Battle of Mobile Bay and captured the city. The state's only seaport, it is a major industrial and manufacturing centre and the site of several institutions of higher education.

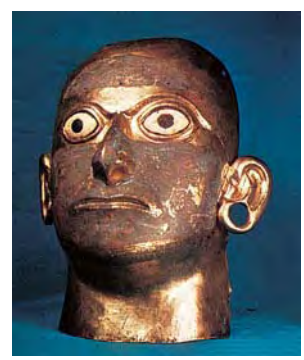
mobile \'mō-ˌbēl\ Abstract sculpture that has moving parts, driven either by motors or by the natural force of air currents. Its revolving parts create a new visual experience of constantly changing volumes and forms. The term was initially suggested by Marcel Duchamp for a 1932 Paris exhibition of such works by Alexander Calder, who became the mobile's greatest exponent.

Lobster Trap and Fish Tail, mobile of painted steel wire and sheet aluminum by Alexander Calder, 1939; in the Museum of Modern Art, New York City.
COLLECTION, THE MUSEUM OF MODERN ART, NEW YORK, GIFT OF THE ADVISORY COMMITTEE

Mobile Bay Inlet of the Gulf of Mexico, extending 35 mi (56 km) north to the mouth of the Mobile River in southwestern Alabama, U.S. It is 8–18 mi (13–29 km) wide and enters the gulf through a dredged channel between Dauphin Island and Mobile Point. During the American Civil War it was the scene of the Battle of Mobile Bay.

Mobile Bay, Battle of (Aug. 5, 1864) Naval engagement in the American Civil War. The Union fleet under David Farragut sailed into Mobile Bay, Ala., breaching the protective string of mines (torpedoes) and engaging the Confederate ironclad *Tennessee*. After a two-hour battle, the Union fleet won control of the bay. With the surrender of nearby Fort Morgan, the former Confederate port of Mobile was sealed off from Confederate blockade runners.

mobilization Organization of a nation's armed forces for active military service in time of war or other national emergency. It includes recruiting and training, building military bases and training camps, and procuring and distributing weapons, ammunition, uniforms, equipment, and supplies. Full mobilization involves summoning all of a nation's resources to support the military effort; for example, civilians may gather raw materials needed by the military, conserve scarce resources such as gasoline for military use, or sell war bonds to fund the war effort.



Möbius \'mœ-bē-ùs,\ *English* \'mō-bē-əs**, August Ferdinand** (b. Nov. 17, 1790, Schulpforta, Saxony—d. Sept. 26, 1868, Leipzig) German mathematician and theoretical astronomer. He began teaching at the University of Leipzig in 1815, and established his reputation with many publications. His mathematical papers are chiefly concerned with geometry. He introduced homogeneous coordinates into analytic geometry and dealt with geometric transformations, in particular projective transformations. He was a pioneer in topology; in a memoir discovered after his death he discussed the properties of one-sided surfaces, including the famous Möbius strip.

Mobutu Sese Seko \mə-'bü-tü-'sā-sā-'sā-kō\ *orig.* **Joseph-Désiré Mobutu** (b. Oct. 14, 1930, Lisala, Belgian Congo—d. Sept. 7, 1997, Rabat, Mor.) President of Zaire (now the Democratic Republic of the Congo), 1965–97. Mobutu served in the Belgian Congolese army and as a journalist before joining Patrice Lumumba in independence negotiations in Brussels in 1960. When independence was achieved, the coalition government of Pres. Joseph Kasavubu and Premier Lumumba put Mobutu in charge of defense. In a rift between Kasavubu and Lumumba, Mobutu helped Kasavubu seize control. Four years later, in a power struggle between Pres. Kasavubu and then Premier Moise Tshombe, Mobutu removed Kasavubu in a coup and assumed the presidency. He established single-party rule and Africanized all European names, changing his own to Mobutu Sese Seko ("All-Powerful Warrior"). His repressive regime failed to spur economic growth; corruption, mismanagement, and neglect led to decline, while Mobutu himself amassed one of the largest personal fortunes in the world. He was overthrown by Laurent Kabila in 1997 and died in exile in Morocco.

mocambo See quilombo

moccasin Either of two species of pit viper: the water moccasin or the Mexican moccasin (*Agkistrodon bilineatus*). The Mexican moccasin, or cantil, is a dangerous snake of lowland regions from the Rio Grande to Nicaragua. About 3 ft (1 m) long, it is brown or black with narrow, irregular, whitish bars on its back and sides. See also copperhead.

Moche \'mō-chā\ Dominant civilization on the northern coast of present-day Peru in the 1st–8th centuries AD. The name comes from the great site of Moche in the Moche River valley, which was apparently the capital of the Moche peoples. Their settlements extended along northern Peru's hot, arid coast from the Lambayeque River valley south to the Nepeña River valley. They irrigated extensively, and their agriculture supported many urban centres, which featured stepped pyramids. They were skilled metalworkers and produced sophisticated craft goods, including fine mold-made pottery. The cause of their demise is unknown. See also Andean civilization.

Mask of copper and gold alloy with eyes of shell, found in the Huaca de la Luna, Moche River valley about 400 BC–AD 600; in the Linden-Museum, Stuttgart, Ger.
FERDINAND ANTON

mockingbird Any of several New World birds of a family (Mimidae) known for their mimicry of birdsong. The common, or northern, mockingbird (*Mimus polyglottos*) can imitate the songs of 20 or more species within 10 minutes. About 10 in. (27 cm) long, it is gray, with darker, white-marked wings and tail. It ranges from

© 2006 Encyclopædia Britannica, Inc.

the northern U.S. to Brazil; it has been introduced into Hawaii and thrives in suburban areas. It sings from perches, even at night, and vigorously defends its territory. Other *Mimus* species range from Central America to Patagonia, and the blue mockingbird (genus *Melanotis*) inhabits much of Mexico. Various subspecies of the Galápagos mockingbird (genus *Nesomimus*) inhabit the different islands.

Moctezuma II See Montezuma II

modal \'mō-dᵊl\ logic Formal systems incorporating modalities such as necessity, possibility, impossibility, contingency, strict implication, and certain other closely related concepts. The most straightforward way of constructing a modal logic is to add to some standard nonmodal logical system a new primitive operator intended to represent one of the modalities, to define other modal operators in terms of it, and to add axioms and/or transformation rules involving those modal operators. For example, one may add the symbol L, which means "It is necessary that," to classical propositional calculus; thus, Lp is read as "It is necessary that p." The possibility operator M ("It is possible that") may be defined in terms of L as $Mp = \neg L\neg p$ (where $\neg$ means "not"). In addition to the axioms and rules of inference of classical propositional logic, such a system might have two axioms and one rule of inference of its own. Some characteristic axioms of modal logic are: (A1) $Lp \supset p$ and (A2) $L(p \supset q) \supset (Lp \supset Lq)$. The new rule of inference in this system is the Rule of Necessitation: If p is a theorem of the system, then so is Lp. Stronger systems of modal logic can be obtained by adding additional axioms. Some add the axiom $Lp \supset LLp$; others add the axiom $Mp \supset LMp$.

mode In music, any of a variety of concepts used to classify scales and melodies. In Western music, the term is particularly used for the medieval church modes. Keys in tonal music are normally said to be in either major or minor mode, depending particularly on the third degree of the scale. Indian ragas can be regarded as modes. The concept of mode may involve much more than simply a classification of scales, extending to embrace an entire vocabulary of melodic formulas and perhaps other aspects of music that traditionally occur in tandem with a given set of formulas. The term *mode* has also been used for purely rhythmic patterns such as those of the Ars Antiqua, which were based on ancient Greek poetic metres.

mode See mean, median, and mode

Model T Automobile built by the Ford Motor Co. from 1908 until 1927, the first widely affordable mass-produced car. Assembly-line production methods introduced by Henry Ford in 1913 enabled the price of this five-seat touring car to drop from $850 in 1908 to $300 in 1925. Over 15 million Model T's were built. The car was offered in several body styles, all mounted on a standard chassis. Various colors were initially available, but after 1913 its sole color was black. It was replaced by the popular Model A in 1928.

modem \'mō-ˌdəm\ Electronic device that converts digital data into analog (modulated-wave) signals suitable for transmission over analog telecommunications circuits (e.g., traditional phone lines) and demodulates received analog signals to recover the digital data transmitted. The "modulator/demodulator" thus makes it possible for existing communications channels to support a variety of digital communications, including e-mail, Internet access, and fax transmissions. An ordinary modem, operating over traditional phone lines, has a data transmission speed limit of about 56 kilobits per second. ISDN lines allow communications at over twice that rate, and cable modems and DSL lines have transmission rates of over a million bits per second.

modem, cable See cable modem

Modena \'mò-dā-nä\ City (pop., 2001 prelim.: 175,442), Emilia-Romagna region, northern Italy. It lies between the Secchia and Panaro rivers, northwest of Bologna. An ancient Etruscan city, it was made a Roman colony in 183 BC. It was attacked and pillaged by the Huns under Attila and later by the Lombards. It passed to the house of Este in 1288. It was taken by France in 1796 and made part of Napoleon's kingdom of Italy in 1805. It reverted to Este rule in 1815 before joining unified Italy in 1860. The automobile industry is important to its economy; it is also an agricultural market centre. Sites of interest include the 11th-century cathedral and the university (founded 1175).

modern dance Theatrical dance that developed in the U.S. and Europe in the 20th century as a reaction to traditional ballet. Precursors included Loie Fuller and Isadora Duncan. Formal teaching of modern dance began with the establishment of the Denishawn schools by Ruth St. Denis and Ted Shawn in 1915. Many of their students, principally Doris Humphrey and Martha Graham, further contributed to modern dance's definition as a technique based on principles of fall and recovery (Humphrey) and of contraction and release (Graham). Movement often stressed the expression of emotional intensity and contemporary subjects rather than focusing on the formal, classical, and often narrative aspects of ballet. Later developments included a revolt in the 1950s against Graham's expressionism, led by Merce Cunningham, whose choreography included ballet technique and the element of chance. See also Agnes de Mille; Hanya Holm; José Limón; Alwin Nikolais; Anna Sokolow; Paul Taylor; Twyla Tharp.

Modern Jazz Quartet (MJQ) U.S. jazz ensemble. It was founded in 1951 by pianist John Lewis (1920–2001), vibraphonist Milt Jackson (1923–99), drummer Kenny Clarke (1914–85), and bassist Ray Brown (1926–2002). They originally worked together as the rhythm section for Dizzy Gillespie's big band in 1946. The quartet established a reserved and subtle approach to the modern jazz innovations of the mid-1940s, incorporating elements of classical chamber music with original compositions and jazz standards. Percy Heath (1923–2005) replaced Brown in 1952, and Connie Kay (1927–94) replaced Clarke in 1955. The group disbanded in 1974 but reunited for annual tours beginning in the 1980s. Upon Kay's death, Percy's brother Albert ("Tootie") Heath (b. 1935) joined the group.

Modernism In the arts, a radical break with the past and concurrent search for new forms of expression. Modernism fostered a period of experimentation in the arts from the late 19th to the mid-20th century, particularly in the years following World War I. In an era characterized by industrialization, rapid social change, advances in science and the social sciences (e.g., Darwinism, Freudian theory), Modernists felt a growing alienation incompatible with Victorian morality, optimism, and convention. The Modernist impulse is fueled in various literatures by industrialization and urbanization, by the search for an authentic response to a much-changed world. Among English-language writers, the best-known Modernists are T.S. Eliot, James Joyce, Gertrude Stein, and Virginia Woolf. Composers, including Arnold Schoenberg, Igor Stravinsky, and Anton Webern, sought new solutions within new forms and used as-yet-untried approaches to tonality. In dance a rebellion against both balletic and interpretive traditions had its roots in the work of Émile Jaques-Delcroze, Rudolf Laban, and Loie Fuller. Each of them examined a specific aspect of dance—such as the elements of the human form in motion or the impact of theatrical context—and helped bring about the era of modern dance. In the visual arts the roots of Modernism are often traced back to painter Édouard Manet, who beginning in the 1860s broke away from inherited notions of perspective, modeling, and subject matter. The avant-garde movements that followed—including Impressionism, Post-Impressionism, Cubism, Futurism, Expressionism, Constructivism, De Stijl, and Abstract Expressionism—are generally defined as Modernist. Over the span of these movements, artists increasingly focused on the intrinsic qualities of their media—e.g., line, form, and colour—and moved away from inherited notions of art. By the beginning of the 20th century, architects also had increasingly abandoned past styles and conventions in favour of a form of architecture based on essential functional concerns. In the period after World War I these tendencies became codified as the International style, which utilized simple, geometric shapes and unadorned facades and which abandoned any use of historical reference; the buildings of Ludwig Mies van der Rohe and Le Corbusier embodied this style. After World War II the style manifested itself in clean-lined, unadorned glass skyscrapers and mass housing projects.

Modernismo Spanish-language literary movement of the late 19th–early 20th century, founded by Rubén Darío. Reacting against the sentimental romantic writers then popular in Latin America, *modernistas* wrote on exotic themes and often about artificial worlds—the ancient past, the distant Orient, and the lands of childhood fancy and sheer creation. With "art for art's sake" as their creed, they brought about the greatest revitalization of language and poetic technique in Spanish since the 17th century. Its adherents included Peru's José Santos Chocano (1875–1934) and Cuba's José Martí. Though the movement was over by 1920, its influence continued well into the 20th century.

modernization Transformation of a society from a rural and agrarian condition to a secular, urban, and industrial one. It is closely linked with industrialization. As societies modernize, the individual becomes increasingly important, gradually replacing the family, community, or occupational group as the basic unit of society. Division of labour, characteristic

© 2006 Encyclopædia Britannica, Inc.

of industrialization, is also applied to institutions, which become more highly specialized. Instead of being governed by tradition or custom, society comes to be governed according to abstract principles formulated for that purpose. Traditional religious beliefs often decline in importance, and distinctive cultural traits are often lost.

Modersohn-Becker \'mō-dər-ˌzōn-'be-kər**, Paula** *orig.* **Paula Becker** (b. Feb. 8, 1876, Dresden, Ger.—d. Nov. 30, 1907, Worpswede) German painter. After studying art in London and Paris, she became one of the first artists to introduce French Post-Impressionism into German art. While her early work is meticulously naturalistic, her later paintings, such as *Self-Portrait with a Camellia* (1907), combine a lyrical naturalism with the broad areas of simplified colour characteristic of Paul Gauguin and Paul Cézanne. Since her painting is more concerned with the expression of her inner feelings than with the accurate portrayal of reality, she is frequently called an Expressionist. She died at 31 while giving birth to her first child.

Self-Portrait with a Camellia, oil on canvas by Paula Modersohn-Becker, 1907; in the Museum Folkwang, Essen, Germany.
COURTESY OF THE MUSEUM FOLKWANG, ESSEN, GERMANY.

Modesto City (pop., 2000: 188,856), central California, U.S., east of San Francisco. Founded in 1870 by the Central Pacific Railway, it was called Modesto (Spanish: "modest") when W.C. Ralston, a railway director, modestly declined to have the community named in his honour. It was incorporated as a city in 1884. It is a shipping centre for the surrounding agricultural region that includes fruit, nut orchards, and wineries.

Modigliani \ˌmō-dēl-'yä-nē**, Amedeo** (b. July 12, 1884, Livorno, Italy—d. Jan. 24, 1920, Paris, France) Italian painter and sculptor. After studying art in Italy, he settled in Paris (1906), where he exhibited several paintings at the Salon des Indépendants in 1908. Following the advice of Constantin Brancusi, he studied African sculpture and in 1912 exhibited 12 stone heads whose simplified and elongated forms reflect African influence. When he returned to painting, his portraits and nudes—characterized by asymmetry of composition, elongation of the figure, and a simplification of outline—reflected the style of his sculpture. By almost eliminating chiaroscuro, he achieved a sculptural quality by the strength of his contours and the richness of juxtaposed colours. In 1917 he began painting a series of female nudes that, with their warm, glowing colours and sensuous, rounded forms, are among his best works. His work reflects his lifelong admiration for Italian Renaissance masters, as well as the influence of Paul Cézanne and Brancusi. He died at 35 of tuberculosis.

Self-portrait by Amedeo Modigliani, oil on canvas, 1919; in the Museum of Contemporary Art of the University of São Paulo, Brazil.

Modigliani \ˌmō-dēl-'yä-nē**, Franco** (b. June 18, 1918, Rome, Italy—d. Sept. 25, 2003, Cambridge, Mass., U.S.) Italian-born U.S. economist. He fled fascist Italy for the U.S. in 1939 and earned a doctorate from the New School for Social Research in 1944. He taught at several universities, including the Massachusetts Institute of Technology (1962–88; thereafter professor emeritus). His work on personal savings prompted him to formulate the life-cycle theory, which asserts that individuals build up savings during their younger working lives for use during their own old age and not as an inheritance for their descendants. In order to analyze financial markets, he invented a technique for calculating the value of a company's expected future earnings that became a basic tool in corporate decision making and finance. He received the Nobel Prize in 1985.

Modoc \'mō-ˌdäk\ North American Plateau Indian people living mostly in Oregon, U.S. Their language is of Penutian language stock, and their traditional homeland is south of the Cascade Range in northern California. Their economy was based on hunting and gathering, and they lived much like their closely related neighbours the Klamath. In 1864 the U.S. government forced the Modoc to live on Klamath lands, giving rise to the Modoc War of 1872–73. About 80 families retreated to the California Lava Beds but eventually surrendered and were removed to Oklahoma. Survivors were permitted to return to Oregon in 1909. Together with the Klamath and the Yahooskin band of Snake Indians, they form an entity known as the Klamath Tribes. About 500 people claimed sole Modoc descent in the 2000 U.S. census.

modulation In electronics, a technique for impressing information (voice, music, picture, or data) on a radio-frequency carrier wave by varying one or more characteristics of the wave in accordance with the signal. There are various forms of modulation, each designed to alter a particular characteristic of the carrier wave. The most commonly altered characteristics include amplitude (see AM), frequency (see FM), phase, pulse sequence, and pulse duration.

modulation In music, the transition from one mode or key to another. There are three principal methods of modulation in classical harmony: diatonic, in which a pivot chord is common to both keys; chromatic, in which the notes of the pivot chord are altered by a semitone; and enharmonic, in which the notes of the pivot chord, while retaining their original tones, simply assume different names. Modulation may be transitory, as in the course of thematic development, or structural, contributing to the harmonic definition of the form.

module \'mä-ˌjül\ In architecture, a unit adopted to regulate the dimensions, proportions, or construction of the parts of a building. Modules based on the diameter of a column were used in Classical architecture. In Japanese architecture, room sizes were determined by combinations of standard rice mats called tatami. Both Frank Lloyd Wright and Le Corbusier used modular proportioning systems. Standardized modular design reduces waste, lowers costs, and offers ease of erection, flexible arrangement, and variety of use; however, most architects and producers of building materials continue to use modules based on their own special needs and interests.

modulus, bulk See bulk modulus

modus ponens and modus tollens \'mō-dəs-'pō-nənz...'tò-ləns\ (Latin: "method of affirming" and "method of denying") In logic, two types of inference that can be drawn using a hypothetical proposition—i.e., from a proposition of the form "If p, then q" (symbolically $p \supset q$). Modus ponens refers to inferences of the form $p \supset q$; p, therefore q. Modus tollens refers to inferences of the form $p \supset q$; $\neg q$, therefore, $\neg p$. An example of modus tollens is the following: "If an angle is inscribed in a semicircle, then it is a right angle; this angle is not a right angle; therefore, this angle is not inscribed in a semicircle."

Moeris \'mir-əs**, Lake** Extinct lake, northern Egypt. It once occupied the Al-Fayyūm depression, now the site of the much smaller Lake Qārūn. Its waters began falling in Paleolithic times as a result of silt accumulation in the channel that flowed from the Nile River. During the Middle Kingdom (c. 2040–1786 BC), dredging renewed access to the Nile's waters. Land-reclamation projects in the 3rd century BC drained the lake, opening 450 sq mi (1,200 sq km) of alluvial soil that was irrigated by canals. The region declined after the first two centuries of Roman rule.

Moero, Lac See Lake Mweru

Moesia \'mē-shə\ Province of the Roman Empire, southeastern Europe. Bordered by the Danube River and the Black Sea, it was conquered by Rome

© 2006 Encyclopædia Britannica, Inc.

(30–28 BC) and became a Roman province in AD 15. During the Dacian Wars (AD 85–89) it was divided into two provinces: Moesia Superior and Moesia Inferior. Despite barbarian invasions, it remained part of the Eastern Roman Empire until the 7th century, when it was occupied by Slavs and Bulgarians.

Mogadishu \ˌmō-gə-ˈdē-shü\ City (pop., 1999 est.: metro. area, 1,162,000), capital of SOMALIA, located north of the Equator on the Indian Ocean. Founded in the 10th century by Arab settlers, it carried on trade with the Arab states and later with the Portuguese. It fell under control of the sultan of Zanzibar in 1871. Italy leased the port in 1892 and purchased it in 1905. Subsequently the capital of Italian SOMALILAND and of the Somalia trust territory, it became the capital of independent Somalia in 1960. Civil war, beginning in the 1980s, caused widespread destruction in the city.

Mogilyov See MAHILYOW

Mogollon \ˌmō-gə-ˈyōn\ **culture** Complex of North American Indians who lived in what is now southeastern Arizona and southwestern New Mexico, U.S., c. 200 BC–AD 1200. The first pottery in the Southwest was made by the Mogollon; its high quality from the beginning suggests that the craft may have been imported from Mexico. The early economy was based on gathering wild plant foods and hunting small game. Corn cultivation emerged c. AD 500. At this time houses also became more elaborate, being constructed of stone masonry. In the final, or Mimbres, period (1050–1200), new patterns of house design (multilevel PUEBLOS centred on a plaza) and pottery (crisp black-on-white designs of animals or geometric lines) emerged, suggesting contact with the ANASAZI peoples to the north. For unknown reasons, Mogollon culture came to an end in the 13th century.

Mogul dynasty See MUGHAL DYNASTY

Mohammed, Warith Deen *orig.* **Wallace D. Muhammad** (b. Oct. 30, 1933, Detroit, Mich., U.S.) U.S. religious leader. The son of ELIJAH MUHAMMAD, head of the NATION OF ISLAM, Mohammed assumed leadership of the organization when his father died in 1975. He reformulated the Nation's teachings, rejecting the beliefs that white people were "blue-eyed devils" and that Elijah Muhammad was a prophet, and moved the Nation toward orthodox SUNNI Islam. In 1976 Mohammed renamed the organization the World Community of al-Islam in the West; the name was changed to the American Muslim Mission in 1978 and to the Muslim American Society in 1985. He also changed his own name to Warith Deen Mohammed. A minority led by LOUIS FARRAKHAN split from Mohammed in 1978 and reestablished the Nation of Islam according to the precepts of Elijah Muhammad. In 2000 Mohammed and Farrakhan recognized each other as fellow Muslims. See also ISLAM.

Mohave See MOJAVE

Mohawk North American Indian people, the easternmost group of the IROQUOIS CONFEDERACY, living in Canada and the U.S. Their language is a member of the IROQUOIAN LANGUAGE family. Their name for themselves is Kahniakehake, which means "People of the Flint" and within the confederacy they were considered to be the "Keepers of the Eastern Door." The Mohawk lived near what is now Schenectady, N.Y. They were semisedentary; women practiced corn agriculture, while men hunted during the fall and winter and fished during the summer. Related families lived together in LONGHOUSES. Most Mohawk sided with the British in both the FRENCH AND INDIAN WAR and the American Revolution, in the latter under JOSEPH BRANT. They number more than 35,000 and have a wide reputation as structural ironworkers; many have been hired in the building of major bridges.

Mohawk River River, east-central New York, U.S. The HUDSON RIVER's largest tributary, it flows 148 mi (238 km) south and east to join the Hudson at Waterford, north of Troy. The Mohawk Valley (Mohawk Trail) was the historic route of westbound pioneers through the APPALACHIAN MOUNTAINS into the GREAT LAKES region. The Five Nations of the IROQUOIS CONFEDERACY lived in the valley, which was a major battleground during the FRENCH AND INDIAN WAR and the AMERICAN REVOLUTION.

Mohegan \mō-ˈhē-gən\ ALGONQUIAN-speaking North American Indian people who once inhabited the area of southeastern Connecticut, U.S. They later seized land in Massachusetts and Rhode Island from other tribes. Their economy was based on corn cultivation, hunting, and fishing. In the 17th century the Mohegan and the PEQUOT tribes were ruled jointly by a Pequot chief, but a rebellion led to Mohegan independence and the destruction of the Pequot. Having made an alliance with the English, the Mohegan were the only important tribe remaining in southern New England after KING PHILIP'S WAR (1675–76). Today there is a remnant (approx. 1,000) near Norwich, Conn.

Mohenjo Daro Ancient city on the bank of the Indus River, in present-day southern Pakistan. At about 3 mi (5 km) in circuit, it was the largest city of the INDUS CIVILIZATION in the 3rd–2nd millennium BC, and it probably served as the capital of an extensive state. It was fortified, and its citadel contained, according to archaeological finds, an elaborate bath, a granary, and two halls of assembly.

Mohican \mō-ˈhē-kən\ *or* **Mahican** \mə-ˈhē-kən\ North American Indian people living mostly in northeastern Wisconsin, U.S. Their original territory was the upper Hudson River valley above the Catskill Mountains. Their name for themselves is Muh-he-con-neok, meaning "The People of the Waters That Are Never Still." The Mahican consisted of five major divisions governed by hereditary sachems (chiefs) assisted by elected counselors. They lived in strongholds of 20–30 houses situated on hills or in woodlands. In 1664 they were forced by the MOHAWK to move to what is now Stockbridge, Mass., where they became known as the Stockbridge Indians. Later they moved to Wisconsin. Some 1,200 people claimed sole Mohican descent in the 2000 U.S. census. James Fenimore COOPER drew a romanticized portrait of the declining Mohican in *The Last of the Mohicans* (1826).

Mohism See MOZI

Moho \ˈmō-ˌhō\ *or* **Mohorovičić** \ˌmō-hə-ˈrō-və-ˌchich\ **discontinuity** Boundary between the Earth's CRUST and its MANTLE. The Moho lies at a depth of about 22 mi (35 km) below continents and about 4.5 mi (7 km) beneath the oceanic crust. Modern instruments have determined that the velocity of SEISMIC WAVES increases rapidly at this boundary. The Moho was named for ANDRIJA MOHOROVIČIĆ.

Moholy-Nagy \ˈmō-hȯi-ˈnädʸ**, László** (b. July 20, 1895, Bacsbarsod, Hung.—d. Nov. 24, 1946, Chicago, Ill., U.S.) Hungarian painter, photographer, and art teacher. After studying law in Budapest, he went to Berlin in 1919, and in 1923 he took charge of the metal workshop of the BAUHAUS as well as the *Bauhausbook* series of publications. As a painter and photographer he worked predominantly with light. His "photograms" were composed directly on film, and his "light modulators" (oil paintings on transparent or polished surfaces) included mobile light effects. As an educator, he developed a widely accepted curriculum to develop students' natural visual gifts instead of specialized skills. Fleeing Nazi Germany in 1935, he went to London and then to Chicago, where he organized and headed the New Bauhaus.

Mohorovičić, Andrija (b. Jan. 23, 1857, Volosko, Croatia, Austrian Empire—d. Dec. 18, 1936, Zagreb, Yugos.) Croatian meteorologist and geophysicist who discovered the boundary between the Earth's CRUST and the MANTLE, later named the Mohorovičić discontinuity, or MOHO. A professor at the Main Technical School in Zagreb, he was also director of its meteorologic observatory from 1892. From observations of SEISMIC WAVES, he deduced that the solid Earth consists of an outer and inner layer and that between them lies a distinct boundary. He also devised a technique for locating earthquake epicentres and calculated the travel time of seismic waves. He was an early advocate of earthquake-resistant construction.

Mohs \ˈmōz\ **hardness** Rough measure of the resistance of a smooth surface to scratching or abrasion, expressed in terms of a scale devised by German mineralogist Friedrich Mohs in 1812. Minerals are ranked in comparison with the Mohs scale, which is made up of 10 minerals that have been given arbitrary hardness values on a scale from 1 (least hard, or talc) to 10 (hardest, or diamond). See table on following page.

Moi \ˈmȯi**, Daniel (Toroitich) arap** (b. 1924, Sacho, Kenya Colony) Five-term president of Kenya (1978–2002). Trained as a teacher, Moi served in the cabinet and as vice president (1967–78) under Pres. JOMO KENYATTA before succeeding him as president. Head of the dominant Kenya African National Union (KANU) party, he governed autocratically, finally permitting multiparty elections in 1991, when international pressure forced his hand. His subsequent electoral victories (1992, 1997) led to civil unrest and charges of stealing the elections. During his time in office some sectors of the economy grew, but critics have attributed this to the strong political patronage system. Under Kenya's constitution, Moi was

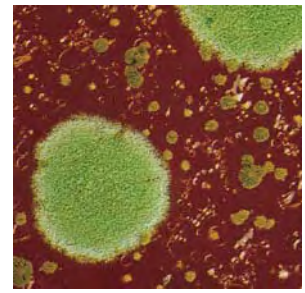
Mohs Hardness Scale

Mineral	Mohs no.	Other materials	Description
Talc	1		very easily scratched by the fingernail; has a greasy feel
Gypsum	2	~2.2 fingernail	can be scratched by the fingernail
Calcite	3	~3.2 copper penny	very easily scratched with a knife and just scratched with a copper coin
Fluorite	4		very easily scratched with a knife but not as easily as calcite
Apatite	5	~5.1 pocketknife ~5.5 glass plate	scratched with a knife with difficulty
Orthoclase	6	~6.5 steel needle	cannot be scratched with a knife, but scratches glass with difficulty
Quartz	7	~7.0 streak plate	scratches glass easily
Topaz	8		scratches glass very easily
Corundum	9		cuts glass
Diamond	10		used as a glass cutter

not allowed to stand in the 2002 presidential election and was succeeded by the winner, opposition candidate Mwai Kibaki.

Moiseyev \mȯi-'sā-ef**, Igor (Aleksandrovich)** (b. Jan. 21, 1906, Kiev, Ukraine, Russian Empire) Russian dancer, choreographer, and founder-director of the State Academic Folk Dance Ensemble, popularly called the Moiseyev Ensemble. He joined the Bolshoi Ballet in 1924. In 1936 he became head choreographer at Moscow's Theatre of Folk Art, and he later founded the State Academic Folk Dance Ensemble, in which ballet professionals performed dances from all U.S.S.R. republics. His choreography combined authentic folk-dance steps with theatrical effects, and he created more than 170 dances for the ensemble. The ensemble served as a model for other countries in subsequently forming their own folk-dance ensembles.

Mojave \mō-'hä-vē\ *or* **Mohave** North American Indian farmers living mostly in Arizona, U.S. The Mojave language is a member of the Yuman language family. The traditional territory of the people was the Mojave Desert along the lower Colorado River. This valley was a patch of green surrounded by barren desert. In addition to farming, the Mojave fished, hunted, and gathered wild plants. The essential social unit was the patrilineal family. There were no settled villages; wherever there was suitable floodland for farming, the Mojave built scattered houses. They believed in a supreme creator and attached great significance to dreams, considered the source of all special powers. About 1,500 Mojave live on or near the Colorado River reservation in Arizona.



Mojave \mō-'hä-vē\ **Desert** *or* **Mohave Desert** Arid region, southeastern California, U.S. Occupying more than 25,000 sq mi (65,000 sq km), it extends from the Sierra Nevada to the Colorado Plateau and merges with the Great Basin Desert to the north and the Sonoran Desert to the south and southeast. Together with the Sonoran, Great Basin, and Chihuahuan deserts it forms the North American Desert. The Mojave Desert receives an average annual rainfall of 5 in. (13 cm). It is the location of Joshua Tree National Park.

moksha *or* **moksa** \'mōk-shə\ In Hinduism and Jainism, the ultimate spiritual goal, the soul's release from the bonds of transmigration. The soul, once entered upon a bodily existence, remains trapped in a chain of successive rebirths until it has attains the perfection or enlightenment that allows it release. The methods by which release is sought and attained differ from one philosophical school to the next, but most schools consider moksha to be the highest purpose of life.

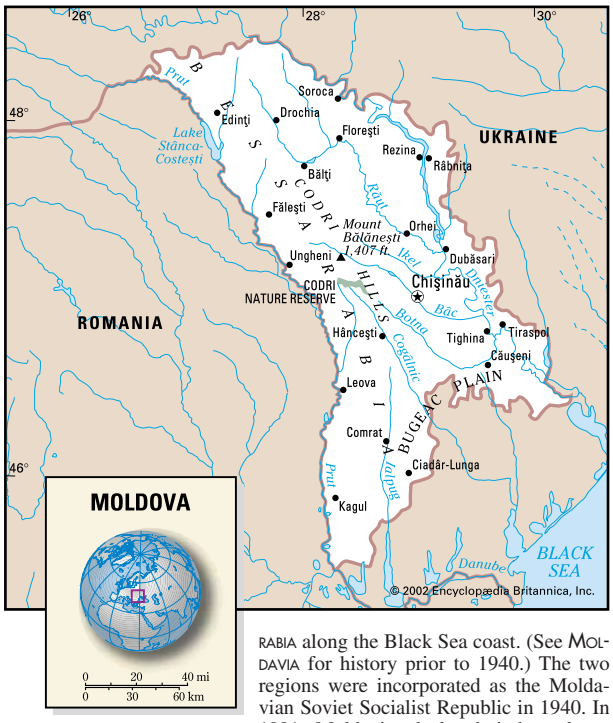
mol See mole

Molcho \'mȯl-k̲ō**, Solomon** *orig.* **Diogo Pires** (b. c. 1500, Portugal—d. 1532, Mantua) Portuguese Jewish martyr. Born into a Marrano family, he became royal secretary in a Portuguese high court of justice. When an Arabian adventurer, David Reubeni (d. c. 1532), arrived in Portugal, mystic visions convinced Pires that Reubeni was a herald of the messiah. After circumcising himself and changing his name, he preached the coming of the messiah in Turkey, Palestine, and Rome. In 1532 he and Reubeni were imprisoned by Charles V and turned over to the Inquisition. Molcho refused to recant his faith and was burned at the stake.

mold In biology, a conspicuous mass of mycelium and fruiting structures produced by various fungi (division Mycota; see fungus). Molds of the genera *Aspergillus*, *Penicillium*, and *Rhizopus* are associated with food spoilage and plant diseases, but some have beneficial uses, as in the manufacture of antibiotics (e.g., penicillin) and certain cheeses. *Neurospora*, or orange bread mold, has been invaluable in the study of biochemical genetics. Water molds live in fresh or brackish water or wet soils, absorbing dead or decaying organic matter. See also slime mold.

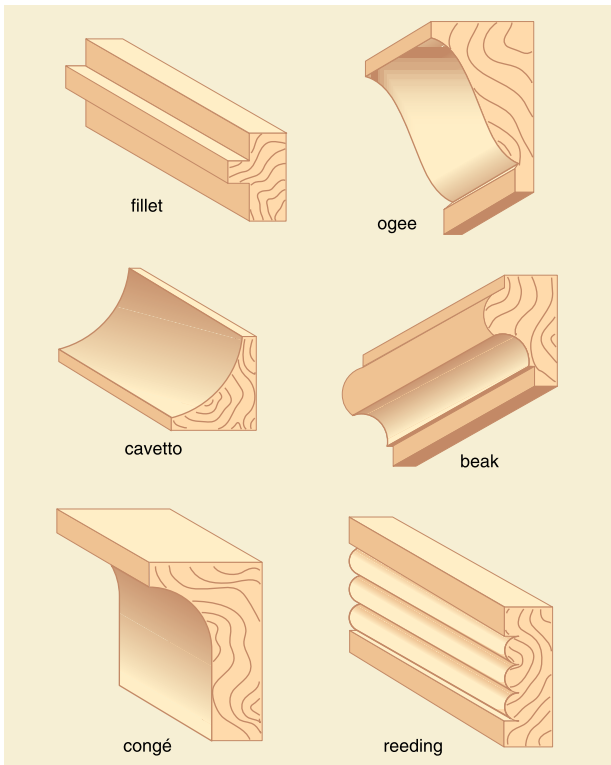
Mold on surface of jelly
INGMAR HOLMASEN

mold In manufacturing, a cavity or surface in which a fluid or plastic substance is shaped into a desired finished product. A molten substance, such as metal or plastic, is poured or forced into a mold and allowed to harden. Molds are made of various materials, depending on the application; sand is frequently used for metal casting, hardened steel for molds for plastic materials, and plaster for various purposes. See also ingot, patternmaking, tool and die making.



Mold Town (pop., 1995 est.: 9,000), historic and present county of Flintshire, northeastern Wales. Situated between the industrial centres of Deeside and Wrexham, it grew up around a motte-and-bailey castle built by the Normans in the 12th century. In the area native Briton Christians had defeated the pagan Picts and Scots in a battle waged in AD 430. Long a market hub, it is the administrative centre and historic county seat of Flintshire.

Moldavia \mäl-'dā-vē-ə\ Former principality, southeast-central Europe. Located on the lower Danube River, it was founded in the 14th century by the Vlachs and achieved independence in 1349. In the mid-16th century it was part of the Ottoman Empire. In 1774 it came under Russian control; it soon lost its northwestern territory, Bukovina, to Austria and its eastern portion and Bessarabia to Russia. In 1859 Moldavia and Walachia formed the state of Romania. In 1918 the territories earlier ceded by Moldavia joined Romania. In 1924 the Soviet Union created a Moldavian Autonomous Soviet Socialist Republic on territory east of the Dniester River, within the Ukrainian S.S.R. See also Moldova.



molding In architecture and the decorative arts, a defining, transitional, or terminal element that serves to contour or outline edges and surfaces. The surface of a molding may be plain or modeled with recesses and reliefs, which either maintain a constant profile along its length or are set in rhythmically repeated patterns. Types of flat or angular moldings are the fascia, chamfer (or bevel), and fillet (narrow band). Single curved moldings include the cavetto (concave, with a quarter-circle profile), scotia (deep concave), flute (grooved), ovolo (convex, with a quarter-circle profile), torus (semicircular convex), roll (rounded convex), and astragal (narrow semicircular convex). Among the most common compound moldings are the projecting, double-curved cyma recta or ogee, often used as a crown molding, and the cyma reversa, used for crown or base. The profiles of moldings are traditionally enhanced by flower or leaf forms, geometric motifs, or spirals. See illustration opposite.

Moldova \mȯl-'dȯ-və\ *officially* **Republic of Moldova** Country, northeastern Balkan Peninsula, southeastern Europe. It is bordered by Ukraine and Romania. Area: 13,068 sq mi (33,845 sq km). Population (2005 est.): 4,206,000. Capital: Chişinău. Nearly half the population is Moldovan; there also are large numbers of Russians and Ukrainians, especially in the Transnistria region, east of the Dniester River. Languages: Romanian (officially designated as Moldovan), Russian, Ukrainian. Religions: Christianity (mostly Eastern Orthodox, also other Christians); also Islam. Currency: leu. Most of Moldova is a fertile region lying between the Dniester and Prut rivers; the northern and central regions of the country are forested. The economy is based on agriculture; the major farm products are grapes, winter wheat, corn, and dairy products. Industry is centred on food processing. Moldova is a republic with one legislative body; its head of state is the president, and the head of government is the prime minister. The area of present-day Moldova consists of that part of the historic principality of Moldavia lying east of the Prut River (part of Romania before 1940) and, adjoining it on the south, the region of Bessa-

© 2006 Encyclopædia Britannica, Inc.

RABIA along the Black Sea coast. (See MOLDAVIA for history prior to 1940.) The two regions were incorporated as the Moldavian Soviet Socialist Republic in 1940. In 1991 Moldavia declared independence from the Soviet Union. It adopted the Romanian spelling of Moldova, having earlier legitimized use of the Roman rather than the Cyrillic alphabet. Moldova was admitted to the UN in 1992. In 2000 it abandoned its semipresidential form of government to become a parliamentary republic.

Examples of common molding styles.

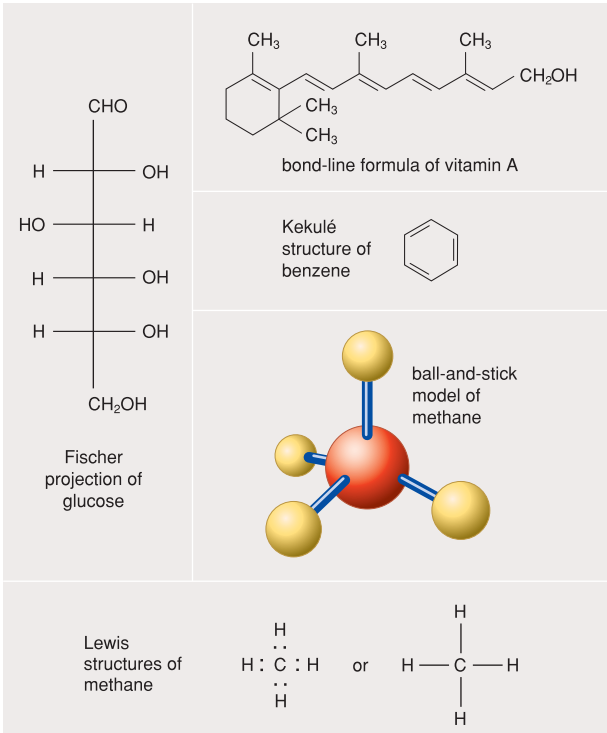
mole *or* **mol** \'mōl\ Standard unit for measuring everyday quantities of such minute entities as ATOMS or MOLECULES. For any substance, the number of atoms or molecules in a mole is AVOGADRO'S NUMBER (6.02×10^{23}) of particles. Defined exactly, it is the amount of pure substance containing the same number of chemical units that there are in exactly 12 g of CARBON-12. For each substance, a mole is its ATOMIC WEIGHT, MOLECULAR WEIGHT, or FORMULA WEIGHT in GRAMS. The number of moles of a solute in a litre of SOLUTION is its molarity (M); the number of moles of solute in 1,000 g of SOLVENT is its molality (m). The two measures differ slightly and have different uses. See also STOICHIOMETRY.

mole Any burrowing, often blind INSECTIVORE in the family Talpidae (including 42 species of true moles) or Chrysochloridae (18 species of golden moles). Most species have short legs and tail, a pointed head, velvety grayish fur, no external ears, and a strong odour. They range from 3.5 to 8 in. (9 to 20 cm) long. The forelimbs are rotated outward like oars and have broad or pointed claws on the toes. Moles are active day and night, digging surface tunnels in search of earthworms, grubs, and other invertebrates and excavating deep (10 ft [3 m]), vented burrows (molehills) for occupancy. The star-nosed mole (*Condylura cristata*) of northeastern North America has 22 pink, tentacle-like touch organs radiating from its muzzle.



mole Pigmented flat or fleshy SKIN mark, made up mostly of cells that produce MELANIN, which gives moles their light to dark brown or black colour and, in the dermis, a bluish cast. Thicker moles also contain nerve elements and connective tissue. Moles often begin in childhood, usually as flat spots between the dermis and epidermis. Those that remain there are more likely to become malignant. Most move into the dermis and become slightly raised. In children, moles may undergo changes resembling cancer but are benign. Malignant MELANOMA can begin in moles but almost never before puberty. During pregnancy, moles may enlarge and new ones may appear. Moles sometimes disappear with age. The term *nevus* refers to a congenital skin mark, whereas a mole may develop after birth. Epidermal nevi are usually the same colour as the surrounding skin.

molecular biology Field of science concerned with the chemical structures and processes of biological phenomena at the molecular level. Having developed out of the related fields of BIOCHEMISTRY, GENETICS, and BIOPHYSICS, the discipline is particularly concerned with the study of PROTEINS, NUCLEIC ACIDS, and ENZYMES. In the early 1950s, growing knowledge of the structure of proteins enabled the structure of DNA to be described. The discovery in the 1970s of certain types of enzymes that can cut and recombine segments of DNA (see RECOMBINATION) in the CHROMOSOMES of certain bacteria made recombinant-DNA technology possible. Molecular biologists use that technology to isolate and modify specific GENES (see GENETIC ENGINEERING).

molecular weight MASS of a molecule of a substance, based on 12 as the atomic weight of CARBON-12. It is calculated in practice by summing the ATOMIC WEIGHTS of the atoms making up the substance's molecular formula. The molecular weight of a hydrogen molecule (chemical formula H_2) is 2 (after rounding off); for many complex organic molecules (e.g., PROTEINS, POLYMERS) it may be in the millions.

molecule Smallest identifiable unit into which a pure substance can be divided and retain its composition and chemical properties. Division into still smaller parts, eventually ATOMS, involves destroying the BONDING that holds the molecule together. For NOBLE GASES, the molecule is a single atom; all other substances have two (diatomic) or more (polyatomic) atoms in a molecule. The atoms are the same in ELEMENTS, such as hydrogen (H_2), and different in COMPOUNDS, such as glucose ($C_6H_{12}O_6$). Atoms always combine into molecules in fixed proportions. Molecules of different substances can have the same constituent atoms, either in different proportions, as in carbon monoxide (CO) and carbon dioxide (CO_2), or bonded in different ways (see ISOMER). The COVALENT BONDS in molecules give them their shapes and most of their properties. (The concept of molecules has no significance in solids with IONIC BONDS.) ANALYSIS with modern techniques and computers can determine and display the size, shape, and CONFIGURATION of molecules, the positions of their nuclei and electron clouds, the lengths and angles of their bonds, and other details. ELECTRON MICROSCOPY can even produce images of individual molecules and atoms. See also MOLECULAR WEIGHT. See illustration on following page.

© 2006 Encyclopædia Britannica, Inc.

Several methods of representing a molecule's structure. In Lewis structures, element symbols represent atoms, and dots represent electrons surrounding them. A pair of shared electrons (covalent bond) may also be shown as a single dash. The ball-and-stick model better illustrates the spatial arrangement of the atoms. For aromatic compounds, the Kekulé structure is common, in which each bond is represented by a dash, carbon atoms are implied where two or more lines meet, and hydrogen atoms are usually omitted. Bond-line formulas, similar to the Kekulé structure, are often used for complex nonaromatic organic compounds. Sugars are often drawn as Fischer projections, in which the carbon "backbone" is drawn as a straight vertical line, with carbon atoms implied where horizontal lines intersect the vertical one.

Moley, Raymond (Charles) (b. Sept. 27, 1886, Berea, Ohio, U.S.—d. Feb. 18, 1975, Phoenix, Ariz.) U.S. educator and political adviser. He taught political science at Columbia University from 1923 to 1954. In the 1920s he prepared studies of criminal justice in a number of cities for New York Gov. Franklin D. Roosevelt. When Roosevelt was preparing for his 1932 presidential campaign, Moley formed the Brain Trust to advise him on national issues. Moley wrote many of Roosevelt's campaign speeches and coined the term New Deal. From 1937 to 1968 he was a contributing editor of *Newsweek* magazine.

Molière \mōl-'yer\ *orig.* **Jean-Baptiste Poquelin** (baptized Jan. 15, 1622, Paris, France—d. Feb. 17, 1673, Paris) French playwright, actor, and director. The son of a prosperous upholsterer, he left home to become an actor in 1643, joining forces with the Béjart family. He cofounded the troupe known as the Illustre Théâtre and toured the French provinces (1645–58), writing plays and acting in them. After his troupe was established in a permanent theatre in Paris under the patronage of Louis XIV, he won acclaim in the court and among bourgeois audiences for his comedy *The Affected Young Ladies* (1659). His other major plays include *The School for Wives* (1662), *Tartuffe* (1664; initially banned by religious authorities), *The Misanthrope* (1666), *The Miser* (1669), *The Bourgeois Gentleman* (1670), and *The Imaginary Invalid* (1673). His plays compose a portrait of all levels of 17th-century French society and are marked by their good-humoured and intelligent mockery of human vices, vanities, and follies. Despite his success, he never ceased to act and direct. Taken ill during a performance, he died of a hemorrhage within a day and was denied holy burial. He is considered the greatest French dramatist and the father of modern French comedy.

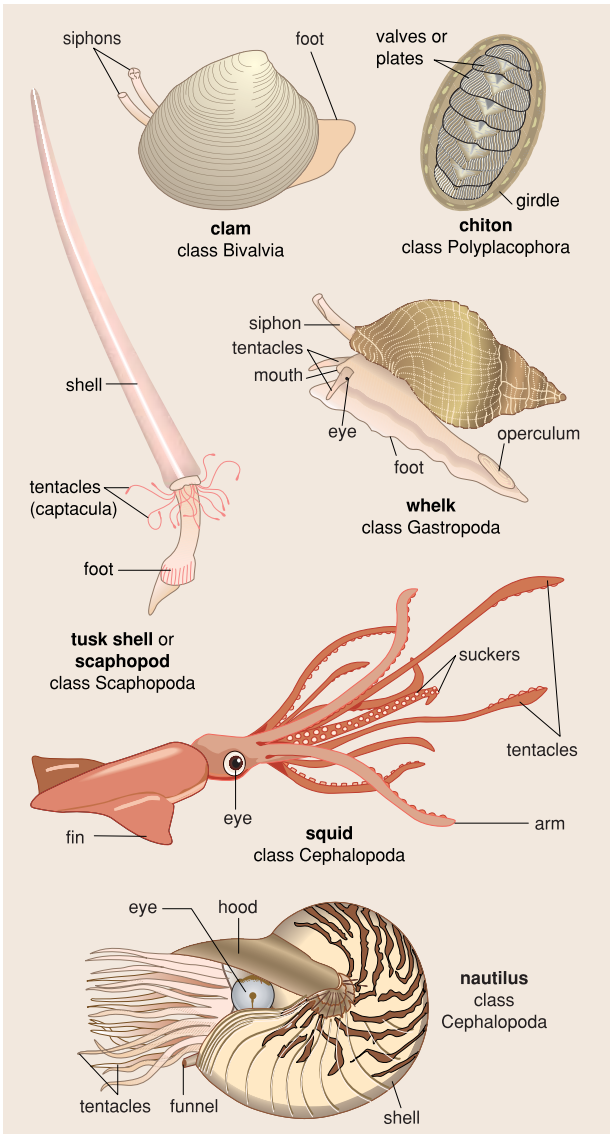
Molise \mō-'lē-zā\ Autonomous region (pop., 2001 prelim.: 316,548), south-central Italy. Its western sector is part of the Apennines, and the remainder consists mostly of low mountains and hills. Under Lombard rule during the early Middle Ages, it was controlled by the duchy of Benevento. In the 13th century it successively came under Angevin, Spanish, and Bourbon rulers. In 1860 it was joined to Abruzzi to form Abruzzi e Molise, which was incorporated into the Kingdom of Italy. In 1965 Abruzzi e Molise was divided back into the separate regions of Abruzzi and Molise. It is one of Italy's most rural regions; its capital, Campobasso, is the only city of any size.

Mollet \mò-'le**, Guy** (b. Dec. 31, 1905, Flers-de-l'Orne, France—d. Oct. 3, 1975, Paris) French politician. An English teacher in Arras, he joined the Socialist Party in 1921 and became head of the socialist teachers' union in 1939. After serving in World War II, he was elected to the Chamber of Deputies and became secretary-general of the Socialist Party (1946–69). With Pierre Mendès-France, he led the Republican Front to victory and became premier (1956–57). Failures in dealing with the Algerian rebellion and the Suez Crisis led to the government's defeat, but Mollet continued to serve as a deputy and as mayor of Arras.

Mollet
HARLINGUE/H. ROGER-VIOLLET

mollusk *or* **mollusc** Any of some 75,000 species of soft-bodied invertebrate animals (phylum Mollusca), many of which are wholly or partly enclosed in a calcium carbonate shell secreted by the mantle, a soft covering formed from the body wall. Between the mantle and the body is the mantle cavity. Mollusks occur in most habitats from the deep sea to high mountains. Living mollusks are usually grouped into eight classes: Gastropoda (see gastropod), Bivalvia or Pelecypoda (see bivalve), Cephalopoda (see cephalopod), Scaphopoda (tusk shells), Aplacophora (Solenogasters), Caudofoveata (sometimes included in the Aplacophora order), Polyplacophora (chitons), and Monoplacophora. Mollusks are economically important as food, and their shells are widely used in jewelry and decorative items. See illustration opposite.

Molly Maguires (1862–76) Secret organization of U.S. coal miners in Pennsylvania and West Virginia. To protest poor working conditions and employment discrimination in the 1860s, the Irish-American miners formed a group named for an Irish widow who had led antilandlord agitators in Ireland. Acts of sabotage and terrorist murders in the coalfields were blamed on the group, and mine owners hired a Pinkerton detective, James McParlan, to infiltrate the organization. Based on his testimony in the widely publicized trials (1875–77), 10 "Mollies" were convicted of murder and hanged.



Molnár \'mōl-ˌnär**, Ferenc** (b. Jan. 12, 1878, Budapest, Hung.—d. April 1, 1952, New York City, N.Y., U.S.) Hungarian writer. He published his first stories at age 19 and achieved his first success with the play *The Devil* (1907). Among his other plays, some adapted as films, are *Liliom* (1909), which was also adapted as the musical *Carousel*; *The Swan* (1920); and *The Red Mill* (1923). Some of his stories, especially those in *Music* (1908), are masterpieces that reveal the problems of the poor. Of his many novels, only *The Paul Street Boys* (1907) was a success.

Moloch \'mō-ˌlōk, 'mä-lək\ Ancient Middle Eastern deity to whom children were sacrificed. The laws given to Moses by God expressly forbade the Israelites to sacrifice children to Moloch, as the Egyptians and Canaanites did. A shrine to Moloch outside the walls of Jerusalem was destroyed during the reign of Josiah the reformer.

Molotov \'mò-lə-ˌtȯf**, Vyacheslav (Mikhaylovich)** *orig.* **Vyacheslav Mikhaylovich Skryabin** (b. March 9, 1890, Kukarka, Russia—d. Nov. 8, 1986, Moscow, Russia, U.S.S.R.) Soviet political leader. A member of the Bolsheviks from 1906, he worked in provincial Communist Party organizations from 1917. A staunch supporter of Joseph Stalin, he became secretary of the Central Committee in 1921. Promoted to the Politburo in 1926, he purged the Moscow party organization of anti-Stalinists (1928–30). He served as prime minister (1930–41) and as the country's foreign minister (1939–49, 1953–56). He

© 2006 Encyclopædia Britannica, Inc.

negotiated the German-Soviet Nonaggression Pact in 1939, and in World War II he ordered the production of the crude bottle bombs later called "Molotov cocktails." He arranged the alliances with the U.S. and Britain and was the Soviet spokesman at the Allied conferences during and after the war. After being dismissed in 1956 by Nikita Khrushchev, Molotov joined an unsuccessful attempt to depose Khrushchev (1957) and lost all his party offices; in 1962 he was expelled from the Communist Party.

Representative mollusks. Bivalves have a shell with two halves. Filter feeders, they take in food and water through a tubular siphon. In the clam, a muscular foot is used for burrowing and creeping. The chitons, typically found adhering to rocks and shells, have shells divided into eight overlapping plates. Tusk shells, or scaphopods, are burrowing mollusks with a shell open at both ends; with the larger end buried in the sand, they feed on microorganisms captured by the tentacles. The whelks, like most gastropods (univalves), have a single shell, which is usually coiled; when threatened, the body can be pulled into the shell, which is closed by a plate (operculum). Cephalopods have a well-developed head and a foot divided into numerous tentacles. The two long tentacles of the squid are used to capture prey, and the short arms transfer food to the mouth. The nautilus is the only cephalopod that has retained an exterior shell; by regulating the amount of gas and fluid in the interior chambers, it can regulate its buoyancy.

© MERRIAM-WEBSTER INC.

molting Shedding or casting off of an animal's outer layer or covering and formation of its replacement. Regulated by hormones, molting occurs throughout the animal kingdom. It includes the shedding and replacement of horns, hair, skin, and feathers and the process by which a nymph or other organism sheds an external skeleton for the purpose of growth or change in shape.

Moltke, Helmuth (Johannes Ludwig) von (b. May 25, 1848, Gersdorff, Mecklenburg—d. June 18, 1916, Berlin, Ger.) German soldier. A nephew of Helmuth von Moltke, he rose rapidly in the German army and served as adjutant to his uncle from 1882. He was appointed quartermaster general in 1903 and chief of the German general staff in 1906. At the outbreak of World War I, he applied the Schlieffen Plan, devised by his predecessor, but his inability to revise the plan to cope with tactical and command errors contributed to the halt of the German offensive in the Battle of the Marne (1914). He was relieved of his command shortly after and died a broken man two years later.

Moltke \'mōlt-kə**, Helmuth (Karl Bernhard), count von** (b. Oct. 26, 1800, Parchim, Mecklenburg—d. April 24, 1891, Berlin, Ger.) Prussian general. He joined the Prussian army in 1822 and was appointed to its general staff in 1832. After a stint as adviser to the Turkish army (1835–39), he traveled widely and wrote several books on history and travel. In 1855 he served as personal aide to the Prussian prince Frederick William (later Frederick III), then was selected as chief of the Prussian general staff (1857–88). Highly intelligent and militarily creative, he reorganized the Prussian army and devised new strategic and tactical command methods for modern mass armies. He directed the strategies that produced victories in the Prussian and German wars against Denmark (1864), against Austria in the Seven Weeks' War (1866), and against France in the Franco-Prussian War (1870–71). He was created count in 1870 and field marshal in 1871.

Moluccas \mō-'lə-kəz\ *Indonesian* **Maluku** \mä-'lü-kü\ Island group (pop., 1999 est.: 2,223,000), eastern Indonesia, lying between Sulawesi and New Guinea. The Moluccas comprise three large islands (Halmahera, Ceram, and Buru) and many smaller ones. Their combined area is about 30,066 sq mi (77,871 sq km). They constitute the Indonesian provinces of Maluku and North Maluku; the provincial capitals are, respectively, Ambon and Ternate. The population is ethnically diverse, including Malays and Papuans and people of Dutch, Portuguese, and Javanese descent. Known as the "Spice Islands," the Moluccas were part of the Asian spice trade before being discovered by the Portuguese in 1511, and they were fought over by the Spanish, English, and Dutch, eventually coming under the Dutch. Occupied by the Japanese during World War II, the islands were afterward incorporated into the state of East Indonesia and then into the Republic of Indonesia in 1949.

molybdenum \mə-'lib-də-nəm\ Metallic chemical element, one of the transition elements, chemical symbol Mo, atomic number 42. It is a silvery gray, relatively rare metal with a high melting point (4,730 °F [2,610 °C]) that does not occur uncombined in nature. Since molybdenum and its alloys have useful strength at temperatures that melt most other metals and alloys, they are used in high-temperature steels. Applications include reaction vessels; aircraft, missile, and automobile parts; and electrodes, heating elements, and filament supports. Some molybdenum compounds (in which it has various valences) are used as pigments and catalysts. Molybdenum disulfide is a solid lubricant, used alone or added to greases and oils.

Mombasa \mōm-'bä-sə\ City (pop., 1989: 461,753), Kenya, located on the island of Mombasa off the southern coast of Kenya. The island has an area of 5.5 sq mi (14.25 sq km) and is linked to the mainland by causeway, bridge, and ferry; the city includes a mainland area of 100 sq mi (259 sq km). Founded by Arab traders in the 11th century, it was visited in 1498 by the Portuguese navigator Vasco da Gama. With its strategic position for the Indian Ocean trade, it was continually fought over, passing among the Arabs, Persians, Portuguese, and Turks until 1840, when Zanzibar gained control. It came under British administration in 1895 and was the capital of the East Africa Protectorate until 1907. It is Kenya's chief port and second largest city; it is also a major agricultural market.

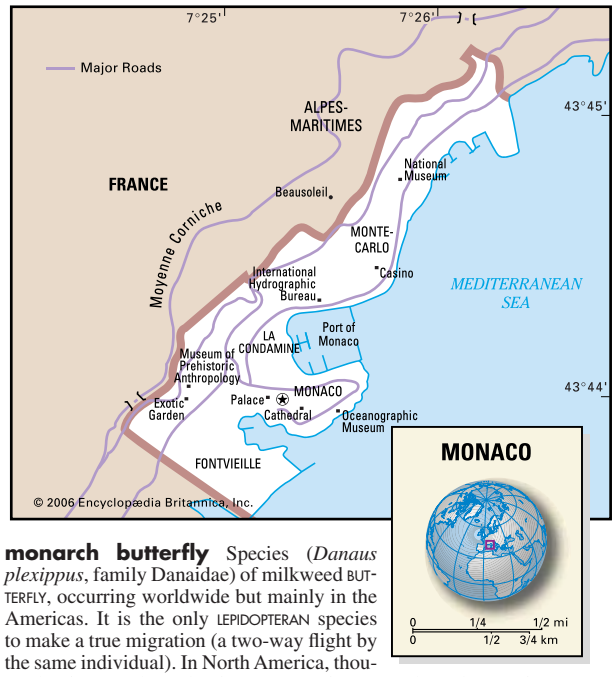
moment See torque

momentum Product of the mass of a particle and its velocity. Newton's second law of motion states that the rate of change of momentum is proportional to the force acting on the particle. Albert Einstein showed that the mass of a particle increases as its velocity approaches the speed of light.

© 2006 Encyclopædia Britannica, Inc.

At the speeds treated in classical MECHANICS, the effect of speed on the mass can be neglected, and changes in momentum are the result of changes in velocity alone. If a constant force acts on a particle for a given time, the product of the force and the time interval, the impulse, is equal to the change in momentum. For any array of several objects, the total momentum is the sum of the individual momenta. See also ANGULAR MOMENTUM.

Mommsen \'mȯm-zən**, (Christian Matthias) Theodor** (b. Nov. 30, 1817, Garding, Schleswig—d. Nov. 1, 1903, Charlottenburg, near Berlin, German Empire) German historian and writer. After studying law, he did research in Italy and became a master of epigraphy, the study and interpretation of inscriptions. In 1848 he became a professor of law at Leipzig, but he was soon dismissed for his participation in liberal political activities; he later held teaching posts elsewhere. He remained politically minded all his life. He is most famous for his *History of Rome*, 4 vol. (1854–56, 1885), considered his masterpiece. He edited the *Corpus Inscriptionum Latinarum* (from 1863), a comprehensive collection of Latin inscriptions that greatly advanced understanding of life in the ancient world. His *Roman Constitutional Law*, 3 vol. (1871–88), represented the first codification of Roman law. His lifetime scholarly output was immense, his publications numbering almost 1,000. He received the 1902 Nobel Prize for Literature.



Mon \'mȯn\ Any member of a people thought to have originated in western China and currently living in the eastern delta region of Myanmar (Burma) and in west-central Thailand. They have lived in their present area for the last 1,200 years and brought Myanmar its writing (Pali) and its religion (Buddhism). Rice and teak are their most important agricultural products. Today they number more than 1.1 million. See also DVARAVATI; MON KINGDOM.

Mon-Khmer \'mōn-kə-'mer\ **languages** Family of about 130 AUSTROASIATIC LANGUAGES, spoken by more than 80 million people in South and Southeast Asia. VIETNAMESE has far more speakers than all other Austroasiatic languages combined. Other languages with many speakers are Muong, with about a million speakers in northern Vietnam; KHMER; Kuay (Kuy), with perhaps 800,000 speakers; and Mon, spoken by more than 800,000 people in southern Myanmar and parts of Thailand. Of all the Mon-Khmer languages, only Mon, Khmer, and Vietnamese have written traditions dating earlier than the 19th century. Old Mon, which is attested from the 7th century, was written in a script of South Asian origin that was later adapted by the Burmese (see MON KINGDOM; INDIC WRITING SYSTEMS). Typical phonetic features of Mon-Khmer languages are a large vowel inventory and lack of TONE distinctions.

Mon kingdom Kingdom of the MON people, who were powerful in Myanmar (Burma) in the 9th–11th centuries, in the 13th–16th centuries, and briefly in the mid-18th century. By 825 they had founded their capital city, Thaton, and the city of Pegu. The Mon kingdom was defeated by the Burman kingdom of PAGAN. When Pagan fell to the Mongols (1287), the Mon regained their independence and their former territory. They were defeated again in 1539. They reestablished Pegu briefly in the 18th century, but it was destroyed by Alaungpaya (see ALAUNGPAYA DYNASTY) in 1757. See also DVARAVATI.

Monaco \'mä-nə-ˌkō\ *officially* **Principality of Monaco** Independent principality, southern Europe, on the Mediterranean Sea near the France-Italy border. Area: 0.75 sq mi (1.95 sq km). Population (2005 est.): 32,700. Nearly half of Monaco's population are French citizens; minorities include Italians and Britons; less than one-fifth of the population are of Monegasque descent. Language: French (official). Religions: Christianity (predominantly Roman Catholic [official]); also Judaism. Currency: euro. Inhabited since prehistoric times, the area was known to the Phoenicians, Greeks, Carthaginians, and Romans. In 1191 the Genoese took possession of it. In 1297 the reign of the Grimaldi family began. The Grimaldis allied themselves with France except for the period from 1524 to 1641, when they were under the protection of Spain. France annexed Monaco in 1793, and it remained under French control until the fall of NAPOLEON, when the Grimaldis returned. In 1815 it was put under the protection of Sardinia. A treaty in 1861 called for the sale of the towns of Menton and Roquebrune to France and the establishment of Monaco's independence. Monaco, situated along the CÔTE D'AZUR, is one of Europe's most luxurious resorts, known for its MONTE-CARLO gambling centre, international sports-car races, and beaches. In 1997 the 700-year rule of the Grimaldis, then under Prince RAINIER, was celebrated. See map above.

Monaco, Lorenzo See LORENZO MONACO

monarch butterfly Species (*Danaus plexippus*, family Danaidae) of milkweed BUTTERFLY, occurring worldwide but mainly in the Americas. It is the only LEPIDOPTERAN species to make a true migration (a two-way flight by the same individual). In North America, thousands of monarchs gather in autumn, migrate southward, sometimes more than 1,800 mi (2,900 km), and return north in spring. The distinctive coloration of the adult's wings (reddish brown, with black veins, a black border, and two rows of spots) warns predators of its bad taste. Several other species derive protection by mimicking its coloration.

monarchy Undivided SOVEREIGNTY or rule by a single person, who is the permanent head of state. The term is now used to refer to countries with hereditary sovereigns. The monarch was the ideal head of the new nation-states of the 16th and 17th centuries; his powers were nearly unlimited (see ABSOLUTISM), though in Britain PARLIAMENT was able to restrict the sovereign's freedom of action, particularly through the MAGNA CARTA (1215) and the BILL OF RIGHTS (1689). The old idea that the monarch represented (within the limits of his dominions) the rule of God over all things culminated in the 17th century in the doctrine of the divine right of KINGS (see DIVINE KINGSHIP), exemplified by LOUIS XIV. Monarchical absolutism adapted to the ENLIGHTENMENT by evolving into "benevolent despotism," as typified by the rule of CATHERINE II of Russia. The FRENCH REVOLUTION dealt absolute monarchy a crushing blow, and World War I effectively destroyed what remained of it, the rulers of Russia, Germany, and Austria-Hungary being held responsible for the war and postwar misery. The institution developed into the CONSTITUTIONAL MONARCHY in western Europe, though absolute (or near-absolute) monarchies continue to exist in the Middle East.

monarchy, constitutional See CONSTITUTIONAL MONARCHY

monastery Local community or residence of a religious order, particularly an order of monks. Christian monasteries originally developed in Egypt, where the monks first lived as isolated hermits and then began to coalesce in communal groups. Monasteries were later found throughout the Christian world and often included a central space for church, chapels, fountain, and dining hall. In the MIDDLE AGES they served as centres of worship and learning and often played an important role for various European rulers. The *vihara* was an early type of Buddhist monastery, consisting of an open court surrounded by open cells accessible through an entrance porch. Originally built in India to shelter monks during the rainy season, *viharas* took on a sacred character when small STUPAS and images of the Buddha were installed in the central court. In western India, *viharas* were often excavated into rock cliffs. See also ABBEY.

monasticism Institutionalized religious movement whose members are bound by vows to an ascetic life of prayer, meditation, or good works. Members of monastic orders (monks) are usually celibate, and they live apart from society either in a community of monks or nuns or as religious

© 2006 Encyclopædia Britannica, Inc.

recluses. The earliest Christian monastic communities were founded in the deserts of Egypt, most notably by the hermit St. Anthony of Egypt (251–356). It was given its more familiar cenobitic form by St. Pachomius (c. 290–346). St. Basil the Great composed a very influential rule for the eastern church, and John Cassian (360–465) helped spread monasticism to western Europe. The Benedictine order, founded by St. Benedict of Nursia in the 6th century, called for moderation of ascetic practices and established worship services at regular hours. Throughout the Middle Ages, monasticism played a vital role not only in spreading Christianity but also in preserving and adding to literature and learning. It underwent periodic reforms, notably by the Cluniacs in the 10th century and the Cistercians in the 12th century, and saw the founding of mendicant orders such as the Dominicans and Franciscans. Monasticism has also been important in Eastern religions. In early Hindu times (c. 600–200 BC) there were hermits who lived in groups (ashrams), though they did not lead a strictly organized communal life. Jainism may be the first religion to have had an organized monastic life, which was characterized by extreme asceticism. Buddhist monks observe a moderate rule that avoids extremes of self-indulgence and self-mortification.

Monck \'məŋk**, George, 1st duke of Albermarle** (b. Dec. 6, 1608, Great Potheridge, Devon, Eng.—d. Jan. 3, 1670, London) English general. He served with the Dutch army against the Spanish in the Netherlands (1629–38) and later suppressed a rebellion in Ireland (1642–43). He fought in Ireland and Scotland in the English Civil Wars, then served in Scotland as commander (1650) and governor (1654). Appointed a general at sea (1652) in the Anglo-Dutch Wars, he played a leading part in the English naval victories. In 1660 he was the chief architect of the Restoration of the Stuart monarchy, for which he was created duke of Albemarle.

Mond, Ludwig (b. March 7, 1839, Kassel, Hesse-Kassel—d. Dec. 11, 1909, London, Eng.) German-British chemist and industrialist. After immigrating to England in 1862, he improved the Solvay process for making sodium carbonate (soda ash) and developed a process for extracting nickel from its ores. He was a founder of the important chemical firm Brunner, Mond and Co. and of the Mond Nickel Co.

Mondale, Walter F(rederick) (b. Jan. 5, 1928, Ceylon, Minn., U.S.) U.S. politician. He was active in Minnesota's Farmer-Labor Party and worked for Hubert H. Humphrey's U.S. Senate campaign in 1948. After graduating from the University of Minnesota law school in 1956, he was Minnesota's attorney general from 1960 to his appointment in 1964 to fill Humphrey's unexpired Senate term when Humphrey won election as vice president under Lyndon B. Johnson. He won election to the Senate in 1966 and reelection in 1972. In 1976 he was elected vice president under Jimmy Carter. In 1984 he won the Democratic presidential nomination but lost the election to Ronald Reagan. He resumed his law practice and later served as ambassador to Japan (1993–96). In 2002 he campaigned for a seat in the U.S. Senate after Paul Wellstone, a Minnesota senator, died in a plane crash days before the election; Mondale was narrowly defeated.

Monde \'mōⁿd**, Le** *French* **"The World"** Daily newspaper published in Paris, one of the most important and widely respected newspapers in the world. It was established in 1944, just after the German army left the city, as an independent organ free of government or private subsidies. Covering national and world news in depth from the start, it soon earned a reputation for accuracy and independence. Its writers present their own views, with the result that the paper reveals no consistent ideological outlook, causing it to earn both praise and criticism from every part of the French political spectrum.

Mondino de' Luzzi \mōn-'dē-nō-dā-'lüt-sē\ *Latin* **Mundinus** (b. c. 1270, Bologna, Italy—d. c. 1326, Bologna) Italian physician and anatomist. Mondino reintroduced the systematic teaching of anatomy, abandoned for many centuries, into the medical curriculum and did dissections at public lectures. His *Anathomia Mundini* (1316, printed 1478) was the standard handbook for dissectors until the time of Andreas Vesalius. Though it followed Galen's teachings slavishly, with sometimes inaccurate descriptions of internal organs, it inaugurated a new era in the dissemination of anatomical knowledge.

Mondrian \'mȯn-drē-ˌän**, Piet** *orig.* **Pieter Cornelis Mondriaan** (b. March 7, 1872, Amersfoort, Neth.—d. Feb. 1, 1944, New York, N.Y., U.S.) Dutch painter. At the insistence of his father, headmaster of a Calvinist school, he obtained an education degree, but then immediately began taking painting lessons. His first paintings were exhibited in 1893; his early work reflected the influence of avant-garde trends such as Post-Impressionism and Cubism. In 1917 Mondrian and three other painters founded the art periodical and the movement known as De Stijl. The group advocated a style called "neoplasticism," which entailed complete rejection of visually perceived reality as subject matter and the restriction of a pictorial language to its most basic elements of the straight line, primary colours, and the neutrals of black, white, and gray. He painted in this style for the next 20 years, until he fled war-torn Paris for London and then New York City in 1940. Inspired by the city's pulsating life and the new rhythms of musical forms such as jazz, he replaced his austere patterns with a series of small squares and rectangles that coalesced into a flow of colourful vertical and horizontal lines. His late masterpieces (e.g., *Broadway Boogie-Woogie*, 1942–43) express this new vivacity. The consistent development of Mondrian's art toward complete abstraction was an outstanding feat in the history of modern art, and his work foreshadowed the rise of abstract art in the 1940s and '50s.

moneran See bacteria, prokaryote

Monet \mō-'nā**, Claude** (b. Nov. 14, 1840, Paris, France—d. Dec. 5, 1926, Giverny) French landscape painter. Monet spent his early years in Le Havre, where his first teacher, Eugène Boudin, taught him to paint in the open air. Moving to Paris, he formed lifelong friendships with other young painters, including Pierre-Auguste Renoir, Alfred Sisley, and Paul Cézanne. Beginning in the mid 1860s, Monet pursued a new style; rather than trying to reproduce faithfully the scene before him in detail, he recorded on the spot the impression that relaxed, momentary vision might receive. In 1874 he helped organize an independent exhibition, apart from the official Salon, of work he and his friends produced in this style. One of Monet's works at the exhibition, *Impression: Sunrise* (1872), inspired the journalist Louis Leroy to give the group its name. Throughout the 1870s, Monet and the other Impressionists explored this style and exhibited together. By 1881 the original group had begun to disintegrate; only Monet continued with the same fervour to carry on the scrutiny of nature. In his mature works Monet developed his method of producing a series of several studies of the same motif (e.g., haystacks, 1891, and Rouen Cathedral, 1894), changing canvases as the light or his interest shifted. In 1893, in the garden at his home in Giverny, Monet created the water-lily pond that inspired his most famous works, the lyrical *Nymphéas* (waterlilies) paintings. Wildly popular retrospective exhibitions of his work toured the world during the last decades of the 20th century and established his unparalleled public appeal, sustaining his reputation as one of the most significant and popular figures in the modern Western painting tradition.

monetarism School of economic thought that maintains that the money supply is the chief determinant of economic activity. Milton Friedman and his followers promoted monetarism as an alternative to Keynesian economics (see John Maynard Keynes); their economic theories became influential in the 1970s and early 1980s. Monetarism holds that a change in the money supply directly affects and determines production, employment, and price levels, though its influence is evident only over a long and often variable period of time. Fundamental to the monetarist approach is the rejection of fiscal policy in favour of "monetary rule." Friedman and others asserted that fiscal measures such as tax-policy changes or increased government spending have little significant effect on the fluctuations of the business cycle. They argued that government intervention in the economy should be kept to a minimum and asserted that economic conditions would change before specific policy measures designed to address them could take effect. Steady, moderate growth of the money supply, in their view, offered the best hope of assuring a constant rate of economic growth with low inflation. U.S. economic performance in the 1980s cast doubts on monetarism, and the proliferation of new types of bank deposits made it difficult to calculate the money supply.

monetary policy Measures employed by governments to influence economic activity, specifically by manipulating the money supply and interest rates. Monetary and fiscal policy are two ways in which governments attempt to achieve or maintain high levels of employment, price stability, and economic growth. Monetary policy is directed by a nation's central bank. In the U.S., monetary policy is the responsibility of the Federal Reserve System, which uses three main instruments: open-market operations, the discount rate, and reserve requirements. In the post-World War II era, economists reached a consensus that, in the long run, inflation results when the money supply grows at too rapid a rate. See also monetarism.

© 2006 Encyclopædia Britannica, Inc.

money Commodity accepted by general consent as a medium of economic exchange. It is the medium in which PRICES and values are expressed; it circulates from person to person and country to country, thus facilitating trade. Throughout history various commodities have been used as money, including seashells, beads, and cattle, but since the 17th century the most common forms have been metal coins, paper notes, and bookkeeping entries. In standard economic theory, money is held to have four functions: to serve as a medium of exchange universally accepted in return for goods and services; to act as a measure of value, making possible the operation of the price system and the calculation of COST, PROFIT, and loss; to serve as a standard of deferred payments, the unit in which loans are made and future transactions are fixed; and to provide a means of storing wealth not immediately required for use. Metals, especially gold and silver, have been used for money for at least 4,000 years; standardized coins have been minted for perhaps 2,600 years. In the late 18th and early 19th century, banks began to issue notes redeemable in gold or silver, which became the principal money of industrial economies. Temporarily during World War I and permanently from the 1930s, most nations abandoned the GOLD STANDARD. To most individuals today, money consists of coins, notes, and bank deposits. In terms of the economy, however, the total MONEY SUPPLY is several times as large as the sum total of individual money holdings so defined, since most of the deposits placed in banks are loaned out, thus multiplying the money supply several times over. See also SOFT MONEY.

money, quantity theory of Economic theory relating changes in the price level to changes in the quantity of money. It has often been used to analyze the factors underlying INFLATION and DEFLATION. The quantity theory was developed in the 17th and 18th centuries by philosophers such as JOHN LOCKE and DAVID HUME and was intended as a weapon against MERCANTILISM. Drawing a distinction between MONEY and wealth, advocates of the quantity theory argued that if the accumulation of money by a nation merely raised prices, the mercantilist emphasis on a favourable BALANCE OF TRADE would only increase the supply of money without increasing wealth. The theory contributed to the ascendancy of FREE TRADE over PROTECTIONISM. In the 19th–20th centuries it played a part in the analysis of BUSINESS CYCLES and in the theory of rates of FOREIGN EXCHANGE.

money market Set of institutions, conventions, and practices whose aim is to facilitate the lending and borrowing of money on a short-term basis. The money market is, therefore, different from the capital market, which is concerned with medium- and long-term CREDIT. The transactions that occur on the money market involve not only banknotes but assets that can be turned into cash at short notice, such as short-term government SECURITIES and BILLS OF EXCHANGE. Though the details and mechanism of the money market vary greatly from country to country, in all cases its basic function is to enable those with surplus short-term funds to lend and those with the need for short-term credit to borrow. This function is accomplished through middlemen who provide their services for a profit. In most countries the government plays a major role in the money market, acting both as a lender and borrower and often using its position to influence the MONEY SUPPLY and INTEREST rates according to its MONETARY POLICY. The U.S. money market covers financial instruments ranging from bills of exchange and government securities to funds from CLEARINGHOUSES and CERTIFICATES OF DEPOSIT. In addition, the FEDERAL RESERVE SYSTEM provides considerable short-term credit directly to the banking system. The international money market facilitates the borrowing, lending, and exchange of currencies between countries.

money order Certificate requiring the issuer to pay a certain sum of MONEY on demand to a specific person or organization. Money orders provide a fast, safe, and convenient means of transferring small sums of money. They are issued by governments (usually through postal authorities), banks, and other qualified institutions to buyers who pay the issuer the face amount of the money order plus a service charge. Because they are exchangeable for cash on demand, they are a generally accepted means of payment. The AMERICAN EXPRESS CO. began issuing money orders in 1882; the company also created the first traveler's checks nine years later. See also CURRENCY.

money supply Liquid assets held by individuals and banks. The money supply includes coins, CURRENCY, and demand deposits (checking accounts). Some economists consider time and savings deposits to be part of the money supply because such deposits can be managed by governmental action and are nearly as liquid as currency and demand deposits. Other economists believe that deposits in mutual savings banks, SAVINGS AND LOAN ASSOCIATIONS, and CREDIT UNIONS should be counted as part of the money supply. CENTRAL BANKS regulate the money supply to stabilize their national economies. See also MONETARY POLICY.

Möngke \'mȯŋ-kā\ (b. 1208, Mongolia—d. 1259, Sichuan province, China) MONGOL leader. Grandson of GENGHIS KHAN and brother of KUBLAI KHAN, he was elected great khan in 1251. Under Möngke, the MONGOLS conquered Iran, Iraq, and Syria as well as the Thai kingdom of Nan-chao and the area of present-day Vietnam. He died before the Mongols could complete the conquest of China, which happened under the reign of Kublai.

Mongkut \ˌmȯŋ-'küt\ *or* **Phrachomklao** \ˌprä-ˌkȯm-'klaù\ *or* **Rama IV** (b. Oct. 18, 1804, Bangkok, Siam—d. Oct. 15, 1868, Bangkok) King of Siam (Thailand; r. 1851–68). The 43rd child of King Rama II, he was a Buddhist monk and scholar before he ascended the throne. His reformed Buddhism grew into the Thammayut order, which today occupies the intellectual centre of Thai Buddhism. Mongkut's intellectual pursuits also brought him into contact with Western thought. As king, he fully opened Siam to Western commerce and combined tolerance and shrewdness to help ensure its survival as an independent nation. The reminiscences of an English governess employed in his household became the basis for the musical comedy *The King and I*.

Mongo Any of several peoples living in the African equatorial forest. They speak a dialect of a common language, Mongo or Nkundo, which belongs to the NIGER-CONGO LANGUAGE family. The Mongo traditionally cultivated cassava and bananas in addition to hunting, fishing, and gathering. Mongo religion emphasizes ANCESTOR WORSHIP and nature spirits; it also features magic and witchcraft. Their art has been mainly oral, and they have a rich talking-drum and song literature. They number some five million.

Mongol Member of an Asian people originally from the Mongolian plateau who share a common language and a nomadic tradition of herding sheep, cattle, goats, and horses. In the 10th–12th centuries the Khitans (see LIAO DYNASTY), Juchen (Chin dynasty), and TATARS, all Mongol peoples, ruled in MONGOLIA, but Mongol power was greatest in the 13th century, when GENGHIS KHAN, his sons (including ÖGÖDEI), and his grandsons BATU and KUBLAI KHAN, created one of the world's largest empires. It declined greatly in the 14th century, when China was lost to the MING DYNASTY, and the GOLDEN HORDE was defeated by Muscovy. Ming incursions effectively ended Mongol unity, and by the 15th–16th centuries only a loose federation existed. Today the plateau is divided between independent Mongolia and Chinese-controlled INNER MONGOLIA. Other Mongols live in Siberia. Tibetan Buddhism is the principal Mongol religion.

Mongol dynasty See YUAN DYNASTY

Mongolia *or* **Outer Mongolia** Country, north-central Asia, between Russia and China. Area: 603,909 sq mi (1,564,116 sq km). Population (2005 est.): 2,550,000. Capital: ULAANBAATAR. Some four-fifths of the population are Mongols; minorities consist of Kazakhs, Russians, and Chinese. Languages: Khalkha Mongolian, Turkic languages, Russian, Chinese. Religions: traditional beliefs, Buddhism, Islam. Currency: tugrik. Mongolia has an average elevation of about 5,200 ft (1,580 m) above sea level. Three mountain ranges stretch across the north and west: the Altai, the Hangayn (Khangai), and the Hentiyn (Khentei). The south and east are occupied by the GOBI DESERT. Livestock raising, especially sheepherding, accounts for nearly three-fourths of the total value of agricultural production; wheat is the major crop. Mongolia's rich mineral resources include coal, iron ore, and copper. Mongolia is a republic with one legislative house; its chief of state is the president, and the head of government is the prime minister. In Neolithic times it was inhabited by small groups of hunters and nomads. During the 3rd century BC it became the centre of the XIONGNU tribal league. Turkic-speaking peoples held sway in the 4th–10th centuries AD. In the early 13th century GENGHIS KHAN united the Mongol tribes and conquered Central Asia. His successor, ÖGÖDEI, conquered the JIN DYNASTY of CHINA in 1234. KUBLAI KHAN established the YUAN (Mongol) dynasty in China in 1279. The Mongols were confined to their original homeland in the steppes after the 14th century. Ligdan Khan (ruled 1604–34) attempted to unite Mongol tribes against the MANCHU, but after his death the Mongols became part of the Chinese QING DYNASTY. After the fall of the Qing in 1912, Mongol princes, supported by Russia, declared Mongolia's independence from China, and in 1921 the Soviet Red Army helped drive off Chinese and Russian forces. The Mongolian

© 2006 Encyclopædia Britannica, Inc.

People's Republic was established in 1924. The country adopted a new constitution in 1992 and shortened its name to Mongolia.

Mongolian languages Family of about eight ALTAIC LANGUAGES spoken by five to seven million people in central Eurasia. All Mongolian languages are relatively closely related; those languages whose speakers left the core area in Mongolia the earliest tend to be the most divergent. The most remote language is Mogholi (Moghul, Mongol), now spoken by fewer than 200 people in western Afghanistan. Less divergent are the languages of several ethnic groups in northwestern China, eastern Qinghai, and adjacent parts of Gansu and Inner Mongolia, altogether spoken by fewer than 500,000 people. The core languages are Mongolian proper, the dominant dialect in the Republic of Mongolia and the basis of Modern Standard Mongolian, and a group of peripheral dialects. The core group of Mongolian speakers traditionally have used Classical Mongolian as their literary language; it is written in a vertical alphabetic script borrowed from the UIGHURS (see TURKIC LANGUAGES). Modern Mongolian was written in this script until 1946, when the People's Republic of Mongolia introduced a script using a modified CYRILLIC ALPHABET. With political democratization in the 1990s, the old script has been revived. In Inner Mongolia it has been in continuous use.

Mongoloid See RACE

mongoose Any of the 37 species of CARNIVORES constituting the family Herpestidae, found in Africa, Asia, and southern Europe. RUDYARD KIPLING's famous "Rikki-tikki-tavi" was an Indian, or gray, mongoose (*Herpestes edwardsii*); the MEERKAT is also a member of the mongoose family. Species range from 7 to 35 in. (17 to 90 cm) long, excluding the furry 6–12-in. (15–30-cm) tail. Mongooses have short legs, a pointed nose, and small ears. Most species are active during the day. The gray to brown fur may have light flecks or dark markings. Mongooses live in burrows, alone, in pairs, or in large groups, and they eat small mammals, birds, reptiles, eggs, and fruit. A few species are semiaquatic. Though not immune to venom, some species attack and kill poisonous snakes by cracking the skull with a powerful bite.

monism \'mō-ˌni-zəm\ In METAPHYSICS, the doctrine that the world is essentially one substance or contains only one kind of substance. Monism is opposed both to DUALISM and to PLURALISM. Examples of monism include MATERIALISM, PANTHEISM, and metaphysical IDEALISM. See also BENEDICT DE SPINOZA.

monitor IRONCLAD warship originally designed for use in shallow harbours and rivers to blockade the Confederate states in the AMERICAN CIVIL WAR. The original ironclad, built by JOHN ERICSSON, was named *Monitor* Its innovative design included minimal exposure above the waterline, a heavily armoured deck and hull, and a revolving gun turret. The inconclusive Battle of the MONITOR AND MERRIMACK (1862) was the first between ironclad warships. Never seaworthy, the *Monitor* sank during a gale off Cape Hatteras that same year, but the U.S. Navy built many improved monitors during the war. The British navy kept its monitors in service as late as World War II.

Monitor and Merrimack, Battle of the (March 9, 1862) Naval engagement in the AMERICAN CIVIL WAR at Hampton Roads, Va. The *Merrimack*, originally a federal frigate, had been salvaged by the Confederates, fitted with iron armor, and renamed the *Virginia*. It sank several wooden Union warships before meeting the Union's *Monitor*. After a four-hour battle, both ships were damaged, but each side claimed victory. Both ships were destroyed later in 1862, the *Virginia* by its crew to avoid capture and the *Monitor* in a storm. The battle is notable as history's first duel between ironclad warships and as the beginning of a new era in naval warfare.

monitor lizard Any of about 30 species of LIZARDS (genus *Varanus*, family Varanidae), found in the Old World tropics and subtropics. Most have an elongated head and neck, a heavy body, a long tail, and well-developed legs. The smallest monitor grows to 8 in. (20 cm), but several species (e.g., the KOMODO DRAGON) are very large. The two-banded, or water, monitor (*V. salvator*), of South Asia, grows to 9 ft (2.7 m). The perenty (*V. giganteus*), of Australia, grows to 8 ft (2.4 m). The so-called earless monitor (*Lanthanotus borneensis*), a rare lizard of Borneo and the only species of the family Lanthanotidae, grows to 16 in. (40 cm) long.

monk See MONASTICISM

Monk, Meredith (Jane) (b. Nov. 20, 1942, Lima, Peru) Peruvian-born U.S. composer and performance artist. She was raised in Connecticut and New York and attended Sarah Lawrence College. She soon formed her first group, The House (1968), to explore extended vocal techniques (many learned from study of other cultures) in combination with dance, film, theatre, and other elements, in genre-defying works such as *Juice* (1969). One of the original creators of PERFORMANCE ART, she has remained unique and unclassifiable.

Monk, Thelonious (Sphere) (b. Oct. 10, 1917, Rocky Mount, N.C., U.S.—d. Feb. 17, 1982, Englewood, N.J.) U.S. JAZZ pianist and composer. Monk grew up in New York City. He worked as the house pianist at Minton's Playhouse in New York (1940–43), where the expanding harmonic vocabulary of BEBOP was developed. He performed with COLEMAN HAWKINS, Cootie Williams (1908?–85), and DIZZY GILLESPIE before making recordings under his own name beginning in 1947. His highly idiosyncratic, percussive playing made frequent use of sharp dissonances and insistent rhythms unusual in jazz. His best-known composition, "'Round Midnight," has become a jazz standard.

monkey Any member of two tropical anthropoid PRIMATE groups: OLD WORLD monkeys and NEW WORLD monkeys. Almost all species are tropical or subtropical, and almost all are diurnal. Most species are arboreal, using all four limbs to leap from tree to tree. They can sit upright and stand erect. Most species run along branches rather than swinging arm over arm like the APES. Monkeys are highly social omnivores, organized in clans as large as several hundred individuals headed by an old male. Sexually mature males of all species are always potent, and all nonpregnant females have a monthly menstrual cycle. Most species bear a single young, which is reared by the mother for years.

monkey puzzle tree Evergreen ornamental and timber CONIFER (*Araucaria araucana*) of the family Araucariaceae, native to the Andes Mountains of South America. The tree may grow to 150 ft (45 m) in height and 5 ft (1.5 m) in diameter. The rigid, overlapping, needle-pointed leaves are spirally arranged on stiff branches, which form a tangled, prickly network that discourages animals from climbing the tree. The NORFOLK ISLAND PINE is a relative.

Monkey puzzle tree (*Araucaria araucana*).

monkeypox Viral disease of both animals and humans that causes symptoms similar to those of SMALL-

© 2006 Encyclopædia Britannica, Inc.

POX, though less severe. The monkeypox virus is usually found in primates and rodents in Central and West Africa but has spread to other parts of the world through the export of infected small mammals. It can be transmitted to humans through an animal bite and from person to person through prolonged close contact. Symptoms of the disease include fever, headache, general malaise and fatigue, and swollen lymph nodes. A rash of raised bumps appears on the infected person's face and body. Treatment is limited to alleviating symptoms. Outbreaks are contained by isolating patients and controlling the trade of animals.

monkfish Any of 10–12 species (genus *Squatina*, family Squatinidae) of SHARKS having a flattened head and body, with winglike pectoral and pelvic fins that make them resemble RAYS. The tail bears two dorsal fins, and behind each eye is a prominent spiracle. Monkfish grow up to 6.25 ft (2.5 m) long. They inhabit tropical and warm temperate waters of continental shelves worldwide. The angelfish, or angel shark (*S. squatina*), is often caught for food in European waters. The term monkfish is also used for the unrelated food species of the genus *Lophius*, bottom-dwelling goosefish with enormous mouths and "fishing rod" lures extending from their heads.

Monmouth \'män-məth**, James Scott, duke of** *orig.* **James Fitzroy** *or* **James Crofts** (b. April 9, 1649, Rotterdam, Neth.—d. July 15, 1685, London, Eng.) British military leader. The illegitimate son of CHARLES II of England, he lived in Paris with his mother. In 1662 he was brought to England as a favourite of the king, who created him duke of Monmouth. He married the Scottish heiress Anne Scott, duchess of Buccleuch, and took her surname. A member of the king's guard from 1668, he commanded troops in the ANGLO-DUTCH WAR and against Scottish rebels in 1679. He was championed for the royal succession by the anti-Catholic Whigs, but after the unsuccessful RYE HOUSE PLOT he took refuge in the Netherlands (1684). Returning after Charles's death to challenge JAMES II, he and his army of peasants were defeated, and he was captured and beheaded.

Monnet \mȯ-'nā**, Jean** (b. Nov. 9, 1888, Cognac, France—d. March 16, 1979, Houjarray) French economist and diplomat. He managed his family's brandy business before becoming a partner of an investment bank (1925). In World War II he chaired a Franco-British economic committee and proposed a Franco-British union. In 1947 he created and directed the successful Monnet Plan to rebuild and modernize France's economy. In 1950, with ROBERT SCHUMAN, he proposed the plan for the EUROPEAN COAL AND STEEL COMMUNITY, predecessor of the EUROPEAN ECONOMIC COMMUNITY and the EUROPEAN UNION, and served as its first president (1952–55). He was also the founder and president of the action committee for the United States of Europe (1955–75).

monocot See COTYLEDON, FLOWERING PLANT

Monod \mȯ-'nō**, Jacques (Lucien)** (b. Feb. 9, 1910, Paris, France—d. May 31, 1976, Cannes) French biochemist. In 1961 he and FRANCOIS JACOB proposed the existence of messenger RNA (mRNA), theorizing that the messenger carries the information encoded in the base sequence to the RIBOSOMES, where the sequence of bases of the messenger RNA is translated into the sequence of amino acids of a protein. In advancing the concept of gene complexes that they called OPERONS, they suggested the existence of a class of genes that regulate the function of other genes by regulating the synthesis of mRNA. The two shared a 1965 Nobel Prize with André Lwoff (1902–94).

monody \'mä-nə-dē\ Accompanied solo song style of the early 17th century. It represented a reaction against the contrapuntal style (based on the combination of simultaneous melodic lines) of the 16th-century MADRIGAL and MOTET. Ostensibly in an attempt to emulate ancient Greek music, composers placed renewed emphasis on proper articulation as well as expressive interpretation of texts, and they thus replaced COUNTERPOINT with simply accompanied RECITATIVE. This resulted in a decisive distinction between melody and accompaniment, which coincides with the early appearance of basso CONTINUO. A collection of songs published by GIULIO CACCINI in 1602 exemplifies early monody. See also OPERA; RECITATIVE.

monogram Originally a cipher consisting of a single letter, later a design or mark consisting of two or more letters intertwined. The letters thus interlaced may be either all the letters of a name or the initial letters of the given names and surname of a person for use on notepaper, seals, or elsewhere. Many early Greek and Roman coins bear the monograms of rulers or towns. Most famous is the sacred monogram, which is formed by the conjunction of the first two Greek letters of ΧΡΙΣΤΟΣ (Christ), usually with the α (alpha) and ω (omega) of the Apocalypse on each side of it. The Middle Ages were extremely prolific in inventing ciphers for ecclesiastical, artistic, and commercial use. Related devices are the colophons used for identification by publishers and printers, the HALLMARKS of goldsmiths and silversmiths, and the logos adopted by corporations.

monomer \'mä-nə-mər\ MOLECULE of any of a class of mostly organic compounds that can react with other molecules of the same or other compounds to form very large molecules (POLYMERS). The essential feature of monomer molecules is the ability to form chemical bonds (see BONDING) with at least two other monomer molecules (polyfunctionality). Those able to react with two others can form only chainlike polymers; those able to react with three or more can form cross-linked, network polymers. Examples of monomers (and their polymers) are styrene (polystyrene), ETHYLENE (POLYETHYLENE), and AMINO ACIDS (PROTEINS).

Monongahela \mə-ˌnän-gə-'hē-lə\ **River** River, northern West Virginia, U.S. It flows north past Morgantown into Pennsylvania and joins the ALLEGHENY RIVER at PITTSBURGH to form the OHIO RIVER, after a total course of 128 mi (206 km). In its upper reaches it is used for hydroelectric power. Made navigable by means of locks for 106 mi (170 km), it serves as a major barge route.

mononucleosis \ˌmä-nō-ˌnü-klē-'ō-səs**, infectious** *or* **glandular fever** Common infection, caused by EPSTEIN-BARR VIRUS. It occurs most often at ages 10–35. Infected young children usually have little or no illness but become immune. Popularly called "the kissing disease," it is spread mostly by oral contact with exchange of saliva. It usually lasts 7–14 days. The most common symptoms are malaise, sore throat, fever, and lymph-node enlargement. Liver involvement is usual but rarely severe. The spleen often enlarges and in rare cases ruptures fatally. Less frequent features include rash, PNEUMONIA, ENCEPHALITIS (sometimes fatal), MENINGITIS, and peripheral NEURITIS. Relapse and second attacks are rare. Diagnosis may require blood analysis. There is no specific therapy.

monophony \mə-'nä-fə-nē\ Music consisting of a single unaccompanied melodic line. The concept often also includes melody that is accompanied by a drone or by drumming. GREGORIAN CHANT and BYZANTINE CHANT constitute the oldest written examples of monophonic repertory.

Monophysite heresy \mə-'nä-fə-ˌsīt\ (5th–6th century AD) Doctrine that emphasized the single nature (the term means literally "of one nature") of Christ, as a wholly divine being rather than part-divine and part-human. Monophysitism began to appear in the 5th century; though condemned as a heresy at the Council of CHALCEDON (451), it was tolerated by such Byzantine leaders as JUSTIN II, THEODORA, and ZENO, resulting in a full-fledged schism between East and West. Several Monophysite churches, including the COPTIC ORTHODOX CHURCH, were founded in the 6th century.

monopolistic competition Market situation in which many independent buyers and sellers may exist but competition is limited by specific market conditions. The theory was developed almost simultaneously by Edward Hastings Chamberlin in his *Theory of Monopolistic Competition* (1933) and JOAN V. ROBINSON in her *Economics of Imperfect Competition* (1933). It assumes product differentiation, a situation in which each seller's goods have some unique properties, thereby giving the seller some monopoly power. See also MONOPOLY; OLIGOPOLY.

monopoly Exclusive possession of a market by a supplier of a product or service for which there is no substitute. In the absence of competition, the supplier usually restricts output and increases PRICE in order to maximize PROFITS. The concept of pure monopoly is useful for theoretical discussion but is rarely encountered in actuality. In situations where having more than one supplier is inefficient (e.g., for electricity, gas, or water), economists refer to "natural monopoly" (see PUBLIC UTILITY). For monopoly to exist there must be a barrier to the entry of competing firms. In the case

© 2006 Encyclopædia Britannica, Inc.

of natural monopolies, the government creates that barrier. Either local government provides the service itself, or it awards a franchise to a private company and regulates it. In some cases the barrier is attributable to an effective PATENT. In other cases the barrier that eliminates competing firms is technological. Large-scale, integrated operations that increase efficiency and reduce production costs confer a benefit on firms that adopt them and may confer a benefit on consumers if the lower costs lead to lower product prices. In many cases the barrier is a result of anticompetitive behaviour on the part of the firm. Most free-enterprise economies have adopted laws to protect consumers from the abuse of monopoly power. The U.S. ANTITRUST LAWS are the oldest examples of this type of monopoly-control legislation; public-utility law is an outgrowth of the English common law as it pertains to natural monopolies. Antitrust law prohibits MERGERS and acquisitions that lessen competition. The question asked is whether consumers will benefit from increased efficiency or be penalized with a lower output and a higher price. See also OLIGOPOLY.

monoprint See MONOTYPE

monopsony \mə-'näp-sə-nē\ In economic theory, market situation in which there is only one buyer. An example of pure monopsony is a firm that is the only buyer of labour in an isolated town; such a firm would be able to pay lower wages to its employees than it would if other firms were present. Though cases of pure monopsony are rare, monopsonistic elements are found wherever there are many sellers and few purchasers.

monorail Electric railway that runs on a single rail either above or under the railway cars. The first systems were introduced in the early 20th century; the earliest probably opened in 1901 in Wuppertal, Germany. Short-run monorails have since been built in such cities as Tokyo and Seattle. Because of higher costs and slower speeds than conventional rail systems, the monorail has not gained wide support. High-speed monorail vehicles that use magnetic levitation have been undergoing research for many years.

monosaccharide \ˌmä-nə-'sa-kə-ˌrīd\ Any of the simple SUGARS that serve as building blocks for CARBOHYDRATES. They are classified based on their backbone of carbon (C) atoms: Trioses have three carbon atoms, tetroses four, pentoses five, hexoses six, and heptoses seven. The carbon atoms are bonded to hydrogen atoms (—H), hydroxyl groups (—OH; see FUNCTIONAL GROUP), and carbonyl groups (—C=O), whose combinations, order, and CONFIGURATIONS allow a large number of stereoisomers (see ISOMER) to exist. Pentoses include xylose, found in woody materials; arabinose, found in GUMS from conifers; ribose, a component of RNA and several VITAMINS; and deoxyribose, a component of DNA. Important hexoses include GLUCOSE, GALACTOSE, and FRUCTOSE. Monosaccharides combine with each other and other groups to form a variety of disaccharides, POLYSACCHARIDES, and other carbohydrates.

monosodium glutamate (MSG) White crystalline substance, a sodium SALT of the amino acid GLUTAMIC ACID. MSG is used to intensify the natural flavour of meats and vegetables. It elicits a unique taste, called in Japan *umami*, different from the four basic tastes. Originally derived from seaweed and first used in Japan in 1908, it has become a common ingredient in Chinese and Japanese cooking. MSG in large amounts may have physical effects, including an allergic reaction commonly called "Chinese restaurant syndrome."

monotheism \'mä-nə-ˌthē-ˌi-zəm\ Belief in the existence of one god. It is distinguished from POLYTHEISM. The earliest known instance of monotheism dates to the reign of AKHENATON of Egypt in the 14th century BC. Monotheism is characteristic of JUDAISM, CHRISTIANITY, and ISLAM, all of which view God as the creator of the world, who oversees and intervenes in human events, and as a beneficent and holy being, the source of the highest good. The monotheism that characterizes Judaism began in ancient Israel with the adoption of Yahweh as the single object of worship and the rejection of the gods of other tribes and nations without, initially, denying their existence. Islam is clear in confessing one, eternal, unbegotten, unequaled God, while Christianity holds that a single God is reflected in the three persons of the Holy TRINITY.

monotreme \'mä-nə-ˌtrēm\ Any of three living species of egg-laying MAMMALS (order Monotremata): the PLATYPUS and two species of ECHIDNA. Monotremes are found only in Australia, Tasmania, and New Guinea. Except for their egg laying, they have mammalian characteristics, such as mammary glands, hair, and a complete diaphragm. They lack teats; the young suck milk through pores on the mother's skin. The earliest fossil monotremes, found in Australia, are only about 2 million years old and differ little from present species. Monotremes probably originated from a line of mammal-like reptiles different from the line that gave rise to placental mammals and MARSUPIALS.

monotype *or* **monoprint** In art PRINTMAKING, a technique prized because of its unique textural qualities. Monotypes are made by drawing with printer's ink or oil paint onto glass or a plate of metal or stone. The drawing is then pressed by hand onto a sheet of absorbent paper or printed on an etching press. The pigment remaining on the plate is usually insufficient to make another print unless the original design is reinforced. Subsequent prints invariably differ from the first, because variations in repainting and printing are inevitable. In the 19th century, WILLIAM BLAKE and EDGAR DEGAS experimented with the technique.

Monro family Family of Scottish physicians. Three generations of the family made the University of Edinburgh an international centre of medical teaching, holding the chair of anatomy for 126 years (1720–1846) without interruption. Alexander *primus* (b. Sept. 8, 1697, London, Eng.—d. July 10, 1767, Edinburgh, Scot.) lectured in anatomy and surgery; his anatomical preparations were outstanding, and, though not a surgeon, he advanced many new ideas for instruments and dressings. His son Alexander *secundus* (b. May 22, 1733, Edinburgh—d. Oct. 2, 1817, Edinburgh) began lecturing in his second year of medical study; of the three, he is judged the greatest teacher and anatomist, and his research also covered pathology and physiology. Alexander *tertius* (b. Nov. 5, 1773, Edinburgh—d. March 10, 1859, Craiglockheart, near Edinburgh) relied largely on the notes handed down to him.

Monroe, Bill *orig.* **William Smith Monroe** (b. Sept. 13, 1911, Rosine, Ky., U.S.—d. Sept. 9, 1996, Springfield, near Nashville, Tenn.) U.S. singer, songwriter, and mandolin player, inventor of the BLUEGRASS style. Monroe began to play professionally in 1927 and later toured with his brother Charlie. They made their first recordings in 1936 and recorded 60 songs over the next two years. He formed the Blue Grass Boys in 1939. His bluegrass sound emerged fully in 1945, when banjoist Earl Scruggs (b. 1924) and guitarist LESTER FLATT joined his band. The Blue Grass Boys established the classic makeup of a bluegrass group—mandolin, fiddle, guitar, banjo, and upright bass—and bequeathed its name to the genre itself. Monroe continued to perform until shortly before his death.

Monroe, Harriet (b. Dec. 23, 1860, Chicago, Ill., U.S.—d. Sept. 26, 1936, Arequipa, Peru) U.S. editor. She worked on various newspapers in the city as an art and drama critic while privately writing verse and verse plays. In 1912 she founded *POETRY* magazine, securing the backing of wealthy patrons and inviting contributions from a wide range of poets. Monroe's open-minded editorial policy and awareness of the importance of the Modernist revolution in contemporary poetry made her a major influence in its development.

Monroe, James (b. April 28, 1758, Westmoreland county, Va.—d. July 4, 1831, New York, N.Y., U.S.) Fifth president of the U.S. (1817–25). After serving in the AMERICAN REVOLUTION, he studied law under THOMAS JEFFERSON, then governor of Virginia. From 1783 to 1786 he served in the Congress under the ARTICLES OF CONFEDERATION. In 1790 he was elected to the U.S. Senate, where he opposed the adminstration of GEORGE WASHINGTON. He nevertheless became Washington's minister to France in 1794, though he was recalled two years later for misleading the French about U.S. politics. From 1799 to 1802 he served as governor of Virginia. In 1803 Pres. Jefferson sent him to France to help negotiate the LOUISIANA PURCHASE; he was then appointed minister to Britain (1803–07). He returned to Virginia and was again elected governor in 1810, though he resigned the office after 11 months to serve as U.S. secretary of state (1811–17) and secretary of war (1814–15). He

© 2006 Encyclopædia Britannica, Inc.

served two terms as president, presiding in a period that became known as the Era of Good Feelings. He oversaw the Seminole War of 1817–18 and the acquisition of the Floridas (1819–21), and he signed the Missouri Compromise (1820). With Secretary of State John Quincy Adams, he developed the principles of U.S. foreign policy later called the Monroe Doctrine.

Monroe, Marilyn *orig.* **Norma Jean Mortenson** (b. June 1, 1926, Los Angeles, Calif., U.S.—d. Aug. 5, 1962, Los Angeles) U.S. film actress. She endured a loveless childhood and a brief teenage marriage. After working as a photographer's model, she made her screen debut in 1948 and won bit parts in *The Asphalt Jungle* (1950) and *All About Eve* (1950). She achieved stardom as a blonde sex symbol in the comedies *Gentlemen Prefer Blondes* (1953), *How to Marry a Millionaire* (1953), and *The Seven Year Itch* (1955). After studying at the Actors Studio, she starred in more-ambitious films, including *Bus Stop* (1956), *Some Like It Hot* (1959), and *The Misfits* (1961). Her private life, which included marriages to Joe DiMaggio and Arthur Miller, was widely publicized. She died at age 36 of an apparently self-administered barbiturate overdose. Her vulnerability and sensuousness combined with her death raised her to the status of an American cultural icon.

Marilyn Monroe.
BROWN BROTHERS

Monroe Doctrine U.S. foreign-policy statement first enunciated by Pres. James Monroe on Dec. 2, 1823, declaring the Western Hemisphere off-limits to European colonization. Concerned that the European powers would attempt to restore Spain's former colonies, he declared, inter alia, that any attempt by a European power to control any nation in the Western Hemisphere would be viewed as a hostile act against the U.S. It was reiterated in 1845 and 1848 by Pres. James K. Polk to discourage Spain and Britain from establishing footholds in Oregon, California, or on Mexico's Yucatán Peninsula. In 1865 the U.S. massed troops on the Rio Grande to back up demands that France withdraw from Mexico. In 1904 Pres. Theodore Roosevelt added the Roosevelt Corollary, stating that in the event of flagrant wrongdoing by a Latin American state, the U.S. had the right to intervene in its internal affairs. As the U.S. became a world power, the Monroe Doctrine came to define the Western Hemisphere as a U.S. sphere of influence. See also Good Neighbor Policy.

Monrovia Port city (pop., 1999 est.: metro. area, 479,000), capital of Liberia, located on the Atlantic coast. It was founded in 1822 by the American Colonization Society as a settlement for freed U.S. slaves and named for Pres. James Monroe. Bushrod Island contains the artificial harbour and free port of Monrovia, the only such port in West Africa. It is Liberia's largest city and its administrative and commercial centre. Many of the city's buildings were damaged during the civil war that began in 1990, and its increased population includes many formerly rural people displaced by the war. It is the seat of the University of Liberia.

Monsarrat \ˌmän-sə-ˈrat**, Nicholas (John Turney)** (b. March 22, 1910, Liverpool, Eng.—d. Aug. 8, 1979, London) British novelist. Trained in law, he served with the Royal Navy (1940–46), chiefly on dangerous Atlantic convoy runs. He put his experience to account in such books as *H.M. Corvette* (1942) and his best-known work, *The Cruel Sea* (1951), a best-seller that vividly captures life aboard a small ship in wartime. His later work includes *The Story of Esther Costello* (1953) and *Smith and Jones* (1963).

monsoon Major wind system that seasonally reverses its direction (e.g., one that blows for six months from the northeast and six months from the southwest). The most prominent examples occur in Africa and southern Asia. The primary cause of monsoons is the difference between annual temperature trends over land and sea. Seasonal changes in temperature are large over land but small over oceans. A monsoon blows from cold toward warm regions: from sea toward land in summer and from land toward sea in winter. Most summer monsoons produce copious amounts of rain; winter monsoons tend to cause drought.

Mont, Allen Du See Allen B. Du Mont

Mont Blanc See Mont Blanc

Mont-Saint-Michel \mōⁿ-saⁿ-mē-ˈshel\ Rocky, almost circular islet rising out of Mont-Saint-Michel Bay between Brittany and Normandy, northwestern France. It only becomes an island at high tide. Around its base are medieval walls and towers, above which rise the village's clustered buildings, with an ancient abbey crowning the mount. Over the centuries it has been a pilgrimage center, fortress, and prison. The fine abbey church has an imposing 11th-century Romanesque nave and an elegant Flamboyant-style Gothic choir. The exterior walls of the Gothic monastery building combine the power of a military fortress and the simplicity of a religious building. Some of the houses bordering the island's narrow, winding streets date back to the 15th century.

montage \mänˈtäzh\ *French* **"mounting"** Pictorial technique in which cut-out illustrations, or fragments of them, are arranged together and mounted on a support, producing a composite picture made from several different pictures. It differs from collage in using only ready-made images chosen for their subject or message. The technique is widely used in advertising. Photomontage uses photographs only. In motion pictures, montage is the sequential assembling of separate pieces of thematically related film by the director, film editor, and visual and sound technicians, who cut and fit each part with the others to produce visual juxtapositions and complex audio patterns.

Montagnais and Naskapi \ˌmän-tən-ˈyā...ˈnas-kə-pē\ Two related North American Indian peoples living in Quebec and Labrador, Can. They speak almost identical Algonquian dialects. The Montagnais, whose name is French, meaning "Mountaineers," traditionally occupied a large forested area above the northern shores of the Gulf of St. Lawrence. They lived in birch-bark wigwams and subsisted on moose, salmon, eel, and seal. The Naskapi, whose name is derived from a Montagnais word meaning "savage," lived farther north on the Labrador plateau, where they hunted caribou and fished. Both groups used canoes in summer and sleds and snowshoes in winter. Religious belief centred on *manitou*, or supernatural power; much importance was attached to nature and animal spirits. The basic social unit was the nomadic band. Both groups now call themselves Innu—not to be confused with Inuit (see Eskimo)—meaning "People." Together the Montagnais and Naskapi total some 20,000, the vast majority of whom are Montagnais.

Montagnard \ˌmōⁿ-ˌtän-ˈyär\ *French* **"Mountain Man"** Radical deputy in the National Convention during the French Revolution. The Montagnards were so called because they sat on the higher benches (the "Mountain") above the uncommitted deputies of the "Plain." The Montagnards emerged in 1792 as opponents of the moderate Girondins and later associated with the radical Jacobin Club in the Committee of Public Safety. After the Thermidorian Reaction, many Montagnards were executed or purged from the convention, and they became a minority called the *crête* ("crest").

Montagu \ˈmän-tə-ˌgyü**, Lady Mary Wortley** *orig.* **Lady Mary Pierrepont** (baptized May 26, 1689, London, Eng.—d. Aug. 21, 1762, London) English writer, the most colourful Englishwoman of her time. A prolific letter writer, Montagu is remembered chiefly for 52 superb letters chronicling her stay in Constantinople, where her husband was ambassador from 1716 to 1718. On their return, they introduced the Middle Eastern practice of smallpox vaccination into England. Also a poet, essayist, feminist, and eccentric, she was a friend of John Gay and Alexander Pope, who later turned against and satirized her. Among her writings are six "town eclogues," witty adaptations of Virgil; a lively attack on Jonathan Swift (1734); and essays dealing with feminism and the moral cynicism of her time.

Montaigne \mōⁿ-ˈtenʸ,\ *English* \mänˈtān**, Michel (Eyquem) de** (b. Feb. 28, 1533, Château de Montaigne, near Bordeaux, France—d. Sept. 23, 1592, Château de Montaigne) French courtier and author. Born into the minor nobility, Montaigne received an excellent Classical education (speaking only Latin up to age 6) before studying law and serving as counselor at the Bordeaux Parliament. There he met the lawyer Étienne de La Boétie, with whom he formed an extraordinary friendship; the void left by La Boétie's death in 1563 likely led Montaigne to begin his writing career. He retired to his château in 1571 to work on his *Essais* (1580, 1588), a series of short prose reflections on many subjects that form

© 2006 Encyclopædia Britannica, Inc.

one of the most captivating and intimate self-portraits ever written. At once deeply critical of his time and deeply involved in its struggles, he sought understanding through self-examination, which he developed into a description of the human condition and an ethic of authenticity, self-acceptance, and tolerance. Though most of his later years were devoted to writing, he occasionally served as mediator in episodes of religious conflict in his region and beyond, and served as mayor of Bordeaux during the troubled period 1581–85. See also ESSAY.

Montale \mōn-'tä-lā**, Eugenio** (b. Oct. 12, 1896, Genoa, Italy—d. Sept. 12, 1981, Milan) Italian poet, prose writer, editor, and translator. Montale began his literary activities after World War I, cofounding a journal, writing for other journals, and serving as a library director in Florence. His first book of poems, *Cuttlefish Bones* (1925), expressed the bitter pessimism of the postwar period. He was identified with HERMETICISM in the 1930s and '40s, and his works became progressively introverted and obscure. With *The Storm and Other Poems* (1956) his writing showed the increasing skill, warmth, and directness characteristic of his late period. His stories and sketches were collected in *The Butterfly of Dinard* (1956). He received the Nobel Prize for Literature in 1975.

Montalembert \mōⁿ-tä-läⁿ-'ber**, Charles (-Forbes-René), count de** (b. April 15, 1810, London, Eng.—d. March 13, 1870, Paris, France) French politician and historian. He began his political career as a journalist for several Catholic journals, became a leader of the liberal Roman Catholics in the July monarchy, and was a member of the House of Peers (1835–48). A champion of civil and religious liberties, he opposed NAPOLEON III's policies after 1851. He wrote such historical works as *The Catholic Interest in the 19th Century* (1852), *The Political Future of England* (1856), and *Monks of the West* (1863–77).

Montana State (pop., 2000: 902,195), northwestern U.S. Bordered by Canada and the U.S. states of North Dakota, South Dakota, Wyoming, and Idaho, it covers 147,046 sq mi (380,849 sq km); its capital is HELENA. Montana straddles the GREAT PLAINS to the east and the ROCKY MOUNTAINS to the west. Unique among the states, its rivers flow into three of the continent's primary watersheds: the Pacific, the Gulf of Mexico, and Hudson Bay. At the time of European settlement the region was inhabited by various Indian tribes, including the CHEYENNE, BLACKFOOT, NEZ PERCÉ, and CROW. Most of Montana was obtained by the U.S. through the LOUISIANA PURCHASE of 1803. The western part was disputed until 1846, when Britain relinquished its claim to the area. The LEWIS AND CLARK EXPEDITION explored Montana in 1804–06. St. Mary's Mission, established in 1841 by Roman Catholic missionaries, became the first permanent town as Stevensville. Gold was discovered in the early 1860s; grazing of cattle and sheep was introduced later that decade, leading to bitter battles with the Indians, whose hunting grounds were destroyed. Montana Territory was established in 1864. Though the U.S. troops of GEORGE ARMSTRONG CUSTER were defeated and slain at the Battle of the LITTLE BIGHORN in 1876, the Indians ceased fighting in 1877 and were placed on reservations. Montana became the 41st state in 1889. Vast deposits of copper were found in the 1890s, and mining was the economic mainstay for almost a century. The state's economy now emphasizes tourism.

Montana, Joe *in full* **Joseph Clifford Montana, Jr.** (b. June 11, 1956, New Eagle, Pa., U.S.) U.S. football quarterback. He played for the University of Notre Dame, leading his team to the national championship in 1977. Playing with the San Francisco 49ers from 1979 to 1993, he led the team to Super Bowl championships in 1982, 1985, 1989, and 1990. He maintained one of the highest passing-completion rates in the NFL, with a career average of 63.2. His career totals for passes completed (3,409), yards passing (40,551), and touchdown passes (273) are among the highest on record. He finished his career with the Kansas City Chiefs (1993–95) and was inducted into the Pro Football Hall of Fame in 2000.

Montand \mōⁿ-'täⁿ**, Yves** *orig.* **Ivo Livi** (b. Oct. 13, 1921, Monsummano Alto, Italy—d. Nov. 9, 1991, Senlis, France) Italian-born French actor and singer. Raised in Marseille, he was the protégé of the famous chanteuse EDITH PIAF in the late 1940s. He married the actress Simone Signoret (1921–85) in 1951. International renown came with his appearance in the film *Wages of Fear* (1953). In Hollywood he starred opposite MARILYN MONROE in *Let's Make Love* (1960), and their romantic affair was widely publicized. His later films included *Z* (1969), *Jean de Florette*, and *Manon of the Spring* (both 1987). For most of his life he was known as a supporter of left-wing causes. He enjoyed great success as a singer, especially in France.

Montañés \ˌmōn-tän-'yās**, Juan (de) Martínez** (b. March 16, 1568, Alcalá la Real, Jaén, Spain—d. June 18, 1649, Sevilla) Spanish sculptor. After studying in Granada, he established his studio in Sevilla (Seville) and was instrumental in the transition from MANNERISM to the BAROQUE. He became known as *el dios de la madera* ("the god of wood") because of his great skill at wood carving. His output and influence over 50 years were enormous. Montañés is remembered for his wood altars and altar figures covered with polished gold and coloured paint, which are realistic yet idealized. His work influenced not only the sculptors and altar makers of Spain and Latin America but also the Spanish painters of his century.

Montanism \'män-tə-ˌni-zəm\ Heretical Christian movement founded in AD 156 by Montanus. Having converted to Christianity, Montanus fell into a trance and began to prophesy. Others joined him, and the movement spread through Asia Minor. The Montanists held that the HOLY SPIRIT was speaking through Montanus and that the Second Coming was imminent. The bishops of Asia Minor excommunicated the Montanists (c. 177), but the movement continued in the East as a separate sect; it also flourished in Carthage, where its most illustrious convert was TERTULLIAN. It had almost died out by the 5th–6th century, though some remnants survived into the 9th century.

Montcalm \mänt-'kälm\ **(de Saint-Véran), Louis-Joseph de Montcalm-Grozon, marquis de** (b. Feb. 28, 1712, Château de Candiac, France—d. Sept. 14, 1759, Quebec) French military leader. He joined the French army at age 12 and fought in several European conflicts. In 1756 he was placed in command of French troops in North America, but his commission excluded most military resources in Canada. He forced the British to surrender their post at Oswego and captured Fort William Henry (1757). At the Battle of TICONDEROGA (1758), he repulsed an attack by 15,000 British troops with a force of just 3,800 men. Promoted to lieutenant general, he received authority over military affairs in Canada. In 1759 a British force of 8,500 troops under Gen. JAMES WOLFE marched on Quebec; in the ensuing Battle of QUEBEC, Montcalm fought with conspicuous gallantry and was mortally wounded.

Monte Albán \'mōn-tā-ˌäl-'bän\ Ridgetop site of the ruins of the ancient centre of ZAPOTEC culture, located near Oaxaca, Mex. Construction at the site began around the 8th century BC. Monte Albán reached its height AD 250–700. The site contains great plazas, truncated pyramids, a *tlachtli* court for an ancient ballgame, underground passageways, and about 170 tombs, the most elaborate yet uncovered in the New World. The great plaza atop the highest hill is flanked by four platforms; two temples stand on the platform to the south. In its final phase, Monte Albán was inhabited by the MIXTEC.

Monte-Carlo Resort (pop., 2000: 15,507), one of the four sections (*quartiers*) of MONACO. It is situated northeast of Nice on the French RIVIERA. In 1856 Charles III of Monaco granted a charter allowing a joint-stock company to build a casino, which opened in 1861. The district around it, called Monte-Carlo, became a luxurious playground for the world's wealthy. The government took over the casino's operating company in 1967.

Monte Carlo method Statistical method of approximating the solution of complex physical or mathematical systems. The method was adopted and improved by JOHN VON NEUMANN and STANISLAW ULAM for simulations of the ATOMIC BOMB during the MANHATTAN PROJECT. Because the method is based on random chance, it was named after a gambling resort.

Monte Cassino Principal monastery of the BENEDICTINE order, located in Latium, central Italy. It was founded c. 529 by St. BENEDICT OF NURSIA and reached its peak under Desiderius (later Pope VICTOR III), who was abbot 1058–87. Its buildings were destroyed by the Lombards (c. 581), the Arabs (883), an earthquake (1349), and World War II bombardment (1944), but were rebuilt each time. It was reconsecrated in 1964.

Montego \män-'tē-gō\ **Bay** Seaport (pop., 2000 est.: 89,859), northwestern Jamaica, located northwest of KINGSTON. It lies on the site of a large ARAWAK village visited by CHRISTOPHER COLUMBUS in 1494. The Spanish, ousted by the British after 150 years, destroyed most of the original buildings. One of Jamaica's largest cities, it is a commercial centre and busy port. It is also a popular tourist resort noted for its white sandy beaches.

Montenegro \ˌmōn-tā-'nā-grō\ Constituent republic of SERBIA AND MONTENEGRO. Area: 5,333 sq mi (13,812 sq km). Population (2003): 620,145.

© 2006 Encyclopædia Britannica, Inc.

The capital is Podgorica. The republic's name ("Black Mountain") refers to its ancient stronghold near the Adriatic Sea, Mount Lovcen, which rises to 5,738 ft (1,749 m). Montenegro's landscape ranges from arid hills to forests and fertile valleys. The majority of its population are Montenegrins who follow the Eastern Orthodox Church; there are sizable Muslim and Albanian minorities. Under the Roman Empire the region was part of the province of Illyricum. Settled by Slavs in the 7th century, it was incorporated in the Serbian empire in the late 12th century. It retained its independence following the defeat of the Serbians by the Ottoman Empire in 1389 at the Battle of Kosovo. Often at war with the Ottomans and Albanians, it began an alliance with Russia early in the 18th century. In the Balkan Wars of 1912–13, it cooperated against the Ottoman Empire. It supported Serbia during and after World War I. It was then absorbed into Serbia; the union became part of the Kingdom of Serbs, Croats, and Slovenes (from 1929, Yugoslavia). During World War II Montenegro was occupied by the Italians and was the scene of heavy fighting. In 1946 the federal constitution of the new Yugoslavia made Montenegro one of Yugoslavia's six nominally autonomous federated units. In 1992, one year after the breakup of Yugoslavia, Montenegro and Serbia combined as the new Federal Republic of Yugoslavia. In 2003, following agitation for independence in Montenegro, the Serbian, Montenegrin, and Yugoslav parliaments ratified a new constitutional agreement that maintained the federation; the accord renamed the country Serbia and Montenegro and gave Montenegro significant autonomy over its own affairs.

Monterrey City (pop., 2000: 1,110,997), capital of Nuevo León state, northern Mexico. It lies at an elevation of about 1,750 ft (530 m). It was founded in 1579, but its growth was slow until the late 19th century. In 1846 it was taken by U.S. Gen. Zachary Taylor in the Mexican War. In 1882 rail connections were established with Laredo, Texas, U.S., and in 1930 construction began on the Inter-American Highway, leading to the development of large-scale smelting and heavy-industry enterprises. It has several institutions of higher education.

Montesquieu \ˌmän-təs-ˈkyü**, Charles-Louis de Secondat, baron de (La Brède et de)** (b. Jan. 18, 1689, Château La Brède, near Bordeaux, France—d. Feb. 10, 1755, Paris) French philosophe and satirist. Born into a noble family, he held public office in Bordeaux from 1714. His satirical *Persian Letters* (1721) was hugely successful. From 1726 he traveled widely to study social and political institutions. His magnum opus, the enormous *The Spirit of the Laws* (1750), contained an original classification of governments by their manner of conducting policy, an argument for the separation of the legislative, judicial, and executive powers, and a celebrated but less influential theory of the political influence of climate. The work profoundly influenced European and American political thought and was relied on by the framers of the U.S. Constitution. His other works include *Causes of the Greatness and Decadence of the Romans* (1734).

Montessori \ˌmän-tə-ˈsȯr-ē**, Maria** (b. Aug. 31, 1870, Chiaravalle, near Ancona, Italy—d. May 6, 1952, Noordwijk aan Zee, Neth.) Italian educator. Montessori took a degree in medicine (1894) and worked in a clinic for retarded children before going on to teach at the University of Rome. In 1907 she opened her first children's school, and for the next 40 years she traveled throughout Europe, India, and the U.S., lecturing, writing, and setting up Montessori schools. Today there are hundreds of such schools in the U.S. and Canada alone; their principal focus is on preschool education, but some provide elementary education to grade 6. The Montessori system is based on belief in children's creative potential, their drive to learn, and their right to be treated as individuals. It relies on the use of "didactic apparatuses" to cultivate hand-eye coordination, self-directedness, and sensitivity to prematheatical and preliterary instruction.

Monteverdi \ˌmän-tə-ˈver-dē**, Claudio (Giovanni Antonio)** (baptized May 15, 1567, Cremona, Duchy of Milan—d. Nov. 29, 1643, Venice) Italian composer. The first of his nine books of madrigals appeared in 1587, the second in 1590. He visited the court of the Gonzagas in Mantua, and his next book (1592) shows freer use of dissonance and close coordination of music and words. He married in 1599 and settled in Mantua. Attacked in 1600 for the even freer dissonance in his newest works, he replied that music now had two "practices," the stricter first practice for sacred works and the more expressive second practice for secular music. It was his first opera, *Orfeo*, performed in 1607, that finally established him as a composer of large-scale music rather than of exquisite miniature works. In 1610 he completed his great *Vespers*. Having long tried to obtain his release from Mantua, he was finally granted it in 1612, and the next year he was put in charge of music at San Marco Basilica, Venice. After the first opera house opened in Venice (1637), he wrote his last three operas, including *Il ritorno d'Ulisse in patria* (1640) and the remarkable *Incoronazione di Poppea* (1643). Monteverdi is the first great figure of Baroque music, a remarkable innovator who synthesized the elements of the new style to create the first Baroque masterpieces of both sacred and secular music.

Montevideo \ˌmän-tə-vi-ˈdā-ō\ Port city (pop., 2004: 1,383,416), capital of Uruguay. Situated on the northern shore of the Río de la Plata estuary, it was founded by the Spanish in 1726 to stem the Portuguese advance into the area from Brazil. From 1807 to 1830 it was alternately occupied by British, Spanish, Argentine, Portuguese, and Brazilian forces. It became the capital of newly independent Uruguay in 1830. A major seaport of South America, it is the commercial, political, and cultural centre of Uruguay. It is the site of Uruguay's only institutions of higher education, which include the Universidad de la República and the Universidad del Trabajo del Uruguay.

Montez \ˈmän-ˌtez**, Lola** *orig.* **Marie Dolores Eliza Rosanna Gilbert** (b. 1818, Limerick, Ire.—d. Jan. 17, 1861, New York, N.Y., U.S.) Irish adventuress and dancer who achieved notoriety as the mistress of King Louis I of Bavaria. After a few dance lessons in Spain, she toured Europe, billing herself as a Spanish dancer. While in Munich in 1846, she became Louis's mistress and influenced him toward supporting liberal and anti-Jesuit policies. Her power over the king provoked angry reactions in the government in 1848, forcing her to flee and causing his abdication. After further tours, she settled in New York City.

Montezuma II *or* **Moctezuma II** (b. 1466—d. c. June 30, 1520, Tenochtitlán, near modern Mexico City) Ninth emperor of the Aztecs. In 1502 he inherited from his uncle an empire of five to six million people that stretched from present-day Mexico to Nicaragua. Aztec belief in the prophesied return of the god Quetzalcóatl, whose description the conquistador Hernán Cortés resembled, contributed to his downfall. Cortés, who had made alliances with tribes eager to be rid of Aztec domination, held Montezuma prisoner in Tenochtitlán, and he died in custody.

Montezuma Castle National Monument National monument, central Arizona, U.S. Situated in the Verde River valley, it occupies an area of 2.6 sq mi (6.7 sq km). Declared a national monument in 1906, it is the site of the country's best-preserved pre-Columbian Pueblo Indian cliff dwellings. The "castle" is a five-story, 20-room adobe brick structure, dating from c. AD 1100, built into the cliff face about 80 ft (24 m) above the valley floor. To the northeast is Montezuma Well, a large sinkhole rimmed with communal dwellings.

Montfort \mōⁿ-ˈfȯr**, Simon de** (b. 1165?—d. June 25, 1218, Toulouse, France) French leader of the Albigensian Crusade. From 1209 he led a Crusade against the Cathari heretics, and he became governor of the lands he conquered in southern France. The fourth Lateran Council gave him Toulouse (1215), but Raymond VI, count of Toulouse, refused to accept defeat, and Montfort was killed while besieging the city. His eldest son ceded the Montfort lands in southern France to King Louis VIII.

Montfort, Simon de *later* **Earl of Leicester** (b. c. 1208, Montfort, Ile-de-France, France—d. Aug. 4, 1265, Evesham, Worcestershire, Eng.) The second son of Simon de Montfort, he gave up Montfort lands in France but revived the family claim to the English earldom of Leicester. His marriage to Henry III's sister (1238) offended the barons and led to his temporary exile. Simon distinguished himself on a Crusade to the Holy Land (1240–42) and joined Henry's failed invasion of France (1242). Sent to pacify Gascony (1248), he was censured for his harsh methods there and recalled. He joined the other leading barons in forcing Henry to accept the Provisions of Oxford. When Louis IX annulled the Provisions, Simon defeated and captured Henry (1264) and summoned (1265) what became the beginning of the modern Parliament. He governed England for less than a year before being defeated and killed by Henry's son Edward.

Montgolfier \mōⁿ-gȯl-ˈfyā**, Joseph-Michel; and Montgolfier, Jacques-Étienne** (respectively b. Aug. 26, 1740, Annonay, France—d. June 26, 1810, Balaruc-les-Bains; b. Jan. 6, 1745, Annonay, France—d. Aug. 2, 1799, en route from Lyon to Annonay) French designers of the hot-air balloon. The brothers discovered that heated air collected in a lightweight bag would cause the bag to rise. In 1783 they demonstrated their discovery with a balloon that rose 3,000 ft (1,000 m) and remained

© 2006 Encyclopædia Britannica, Inc.

aloft 10 minutes. Later that year they sent a sheep, a duck, and a rooster up as passengers, and they followed that experiment with the first manned untethered balloon flight.

Montgomery City (pop., 2000: 201,568), capital of Alabama, U.S. The site was inhabited by Indian mound builders in prehistoric times. About 1717 the French built Fort Toulouse on the river above the present site of Montgomery. The city was founded in 1819 and named for Gen. Richard Montgomery; it became the state capital in 1846. In 1861, during the American Civil War, it served briefly as the capital of the Confederacy; it was captured by Union troops in 1865. It was a centre of the civil rights movement, notably the protests organized by Martin Luther King, Jr. Located southeast of Birmingham, it serves as the commercial centre of an agricultural region, trading in cotton and livestock and producing fertilizer. It is the seat of Alabama State University and several other institutions of higher education.

Montgomery (of Alamein), Bernard Law Montgomery, 1st Viscount (b. Nov. 17, 1887, London, Eng.—d. March 24, 1976, near Alton, Hampshire) British general in World War II. Educated at Sandhurst, he distinguished himself in World War I and remained in the army, becoming known as a tough and efficient leader. In World War II he commanded the British army in the North Africa Campaign and forced the German retreat from Egypt after the Battle of El Alamein (1942). He commanded troops in the Allied invasion of Sicily and Italy (1943) and in the Normandy Campaign, leading the British-Canadian army group across northern France and into northern Germany. Promoted to field marshal, he became chief of the imperial staff (1946–48) and later deputy commander of NATO (1951–58). A cautious, thorough strategist, "Monty" often exasperated fellow Allied commanders, including Dwight D. Eisenhower, but his insistence on complete readiness ensured his popularity with his troops.

Montgomery, L(ucy) M(aud) (b. Nov. 30, 1874, Clifton, P.E.I., Can.—d. April 24, 1942, Toronto, Ont.) Canadian novelist. She worked as a teacher and journalist before achieving worldwide success with *Anne of Green Gables* (1908). The sentimental story of a spirited orphan girl, it drew on her childhood experiences and the rural life of her native Prince Edward Island. Six sequels, following Anne through motherhood, were less successful. Montgomery also produced another series of juvenile books, several collections of stories, and two books for adults.

Montgomery, Wes *orig.* **John Leslie Montgomery** (b. March 6, 1923/25, Indianapolis, Ind., U.S.—d. June 15, 1968, Indianapolis) U.S. jazz guitarist. He began playing guitar in his teens, and his principal early inspiration was the late-swing guitarist Charlie Christian. Montgomery was a member of Lionel Hampton's band (1948–50) before forming a small group with his brothers. His finest recordings are small-group efforts made after 1959, although he achieved commercial success using accompanying orchestras in the 1960s. His unconventional technique, using his thumb rather than a plectrum, made possible his frequent use of octaves and chords in solos. He was probably the most influential guitar improviser in modern jazz.

Montgomery Ward & Co. Former U.S. retail merchandising company. It was founded in Chicago in 1872 by Aaron Montgomery Ward (1844–1913), who bought merchandise wholesale and sold it directly to farmers. He distributed the world's first mail-order catalog and offered a money-back guarantee. The company opened its first retail stores in 1926, and by 1930 retail sales exceeded catalog sales. It ended its mail-order business in 1985, and in 1997 it scaled back operations after filing for bankruptcy protection. Another bankruptcy in December 2000 caused the company to close its 250 stores and go out of business the following year. See also direct-mail marketing; Sears, Roebuck and Company.

Montherlant \mōⁿ-ter-'läⁿ**, Henry (-Marie-Joseph-Millon) de** (b. April 21, 1896, Paris, France—d. Sept. 21, 1972, Paris) French novelist and dramatist. Born into a noble family, he wrote stylistically concise works that reflect his own egocentric and autocratic personality. His major work of fiction is a cycle of four novels (1936–39) translated as *The Girls*, which describes the relationship between a libertine novelist and his adoring female victims. In the 1940s he turned to theatre; his best dramatic works include *Malatesta* (1946), *Port-Royal* (1954), and *La Guerre civile* (1965).

Monticello \ˌmän-tə-'se-lō, ˌmän-tə-'che-lō\ Home of Thomas Jefferson, located southeast of Charlottesville, Va. Designed by Jefferson and constructed 1768–1809, it is one of the finest examples of the early Classical Revival style in the U.S. Jefferson took the floor plan of the house from an English pattern book; the facade was influenced by the work of Andrea Palladio. The final structure is a three-story brick-and-frame building with 35 differently shaped rooms. An octagonal dome dominates the structure; below it, a balustrade runs around the roof's edge.

Montmorency \mōⁿ-mȯ-räⁿ-'sē\ *English* \ˌmänt-mə-'ren-sē**, Anne, duke de** (b. March 15, 1493, Chantilly, France—d. Nov. 12, 1567, Paris) French soldier and constable of France. Named for his godmother, Queen Anne of Brittany, he served three kings—Francis I, Henry II, and Charles IX—in war and peace. He fought in numerous wars in northern Italy and southern France against Emperor Charles V and in campaigns against the Huguenots. In 1529 he helped negotiate the Peace of Cambrai between France and Charles V. He was created constable of France in 1538, and he became a duke and peer in 1551. Wounded at the Battle of Saint-Denis, he died two days later.

Montpelier \mänt-'pēl-yər\ City (pop., 2000: 8,035), capital of Vermont, U.S. Named for Montpellier, France, it commanded the main pass through the Green Mountains and was chartered in 1781 by proprietors from Massachusetts and western Vermont. It became the state capital in 1805 and defeated attempts by other cities, including Burlington, to succeed it as capital. In addition to providing state government services, it bases its economy on financial services and the local ski industry. It is the site of a campus of Norwich University/Vermont College and was the birthplace of Adm. George Dewey.

Montpellier \mōⁿ-pel-'yā\ City (pop., 1999: 225,392), southern France, near the Mediterranean coast. Founded in the 8th century, it later came under control of Aragon and the king of Majorca. It developed as a trading station for spice imports in the 10th century and acquired a charter in 1141. It reverted to France in the 14th century and served as a Huguenot stronghold until its capture by Louis XIII in 1622. It then became the administrative capital of the Languedoc region. The city's schools of medicine and law date from the 12th century, and the University of Montpellier was founded in 1220. The city is a tourist centre, and its industries include food processing and electronics. Historic sites include France's oldest botanical gardens (founded 1593) and a 14th-century Gothic cathedral.

Montreal \ˌmän-trē-'ȯl\ City (pop., 2001: metro. area, 3,426,350), southeastern Canada. It occupies about one-third of Île de Montréal (Montreal Island), near the confluence of the Ottawa and St. Lawrence rivers. The metropolitan area encompasses Montréal and other islands, as well as both shores of the St. Lawrence. It is built on the slopes of a mountain, Mont-Royal, from which the city's name is derived. English and French are spoken throughout the city, which is the chief centre of French-Canadian industry and culture. The site was occupied by the Huron Indian settlement of Hochelaga when visited by French explorer Jacques Cartier in 1535. The first European settlement was founded by the French in 1642 and was given the name Ville-Marie de Montréal. Rapid colonization based on the fur trade began in the first half of the 18th century, and the city soon grew beyond its walls. It surrendered to British forces in 1760 and, with all of New France, became part of the British North American empire in 1763. Montreal served as the capital of Canada from 1844 to 1849. It is one of Canada's chief ports for both oceangoing and inland shipping. It is Canada's second-largest city and a major cultural centre, with a complex of theatre and concert halls and several museums. It is the seat of the English-language McGill University and Concordia University, and of the French-language University de Montréal and the University du Québec à Montréal.

Montreal, University of Canadian public French-language university founded in Montreal, Quebec, in 1878. It provides instruction in the arts and sciences, education, law, medicine, theology, architecture, social work, criminology, and other fields. Affiliated schools include a polytechnic school and a school of advanced business studies.

Montreux \'mōⁿ-'trœ\ Resort town (pop., 2000: 22,455), western Switzerland, on the eastern shore of Lake Geneva. It was formed by the merger in 1962 of the villages of Le Châtelard, Les Planches, and Veytaux. The nearby 13th-century Château de Chillon was made famous by Lord Byron's poem "Prisoner of Chillon." It hosts a popular annual jazz festival.

Montreux \mōⁿ-'trœ\ **Convention** (1936) Agreement concerning the Dardanelles strait. In response to Turkey's request to refortify the area,

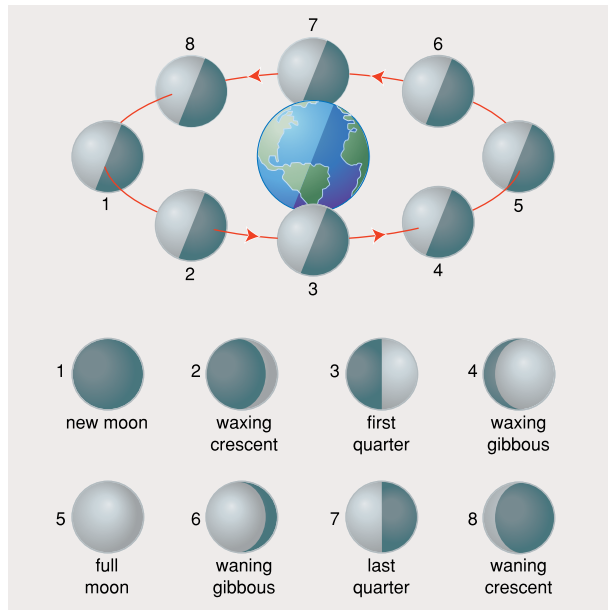
© 2006 Encyclopædia Britannica, Inc.

the signers of the Treaty of Lausanne and others met in Montreux, Switz., and agreed to return the zone to Turkish military control. The convention allowed Turkey to close the straits to all warships when it was at war and to permit merchant ships free passage. See also Straits Question.

Montrose \män-'trōz**, James Graham, 5th earl and 1st marquess of** (b. 1612—d. May 21, 1650, Edinburgh, Scot.) Scottish general in the English Civil Wars. He served in the Covenanter army that invaded northern England (1640) but remained a royalist. Appointed lieutenant-general by Charles I (1644), he led his royalist army of Highlanders and Irish to victories in major battles in Scotland. After Charles's defeat in 1645, Montrose fled to the European continent. He returned to Scotland in 1650 with 1,200 men, but he was defeated, captured, and hanged.

Montserrat Island (pop., 2001 est.: 3,600) and British crown colony, West Indies. Situated in the eastern Caribbean Sea, it occupies an area of 40 sq mi (102 sq km); it is 11 mi (18 km) long and 7 mi (11 km) wide. It was visited and named by Christopher Columbus in 1493 and was colonized by the British and Irish in 1632. France later held it briefly, but from 1783 it remained British. Its colonial economy was based on cotton and sugar plantations that used African slave labour. It was part of the colony of Leeward Islands from 1871 to 1956 and then of the Federation of the West Indies from 1958 to 1962. It was rebuilt after a devastating hurricane in 1989. A major eruption of the Soufrière Hills volcano in 1996 led to the evacuation of the southern half of the island and the abandonment of its capital, Plymouth. By 1998 more than two-thirds of its mid-1990s population had left the island.

Monty Python('s Flying Circus) British comedy troupe. The innovative group, formed in the early 1960s, came to prominence in the 1970s, first on television and later in films. Its members, most of whom met while attending the University of Cambridge, included Graham Chapman (1941–89) and John Cleese (coauthors of most of their skits and films) as well as Terry Jones (b. 1942), Terry Gilliam (b. 1940), Eric Idle (b. 1943), and Michael Palin (b. 1943). The troupe's parodies of British life and television and their array of absurd characters surprised and delighted international audiences. Their films include *Monty Python and the Holy Grail* (1975) and *Monty Python's Life of Brian* (1979).



Monumentum Ancyranum \ˌmän-yù-'men-təm-ˌan-sir-'ā-nəm\ (after AD 14) Latin and Greek inscription on the temple of Rome and Augustus at Ancyra (Ankara, Tur.). Known as the *Res gestae divi Augusti* ("Achievements of the Divine Augustus"), it represents the official account of his reign. It was composed by Augustus himself, who directed in his will that it be engraved on pillars at his mausoleum in Rome. The originals are missing, the copies at Ancyra being two of many.

monzonite \män-'zō-ˌnīt, 'män-zə-ˌnīt\ Type of igneous rock that contains abundant and approximately equal amounts of plagioclase and potash feldspar, as well as other minerals. The type region is Monzoni, Italy, in the Italian Tirol; similar rocks have been described from Montana, Norway, Sakhalin Island, and other localities. Monzonite is not rare, but it generally occurs in rather small, heterogeneous masses mixed with diorites, pyroxenites, or gabbros.

mood *or* **mode** In grammar, a category that reflects the speaker's view of an event's reality, likelihood, or urgency. Often marked by special verb forms (inflections), moods include the indicative, for factual or neutral situations (e.g., "You did your work"); the imperative, to convey commands or requests ("Do your work"); and the subjunctive. The subjunctive's functions vary widely. It may express doubt, possibility, necessity, desire, or future time. In English it often indicates a condition contrary to fact (e.g., "If he were to work here, he would have to learn to be punctual").

Moody, Dwight L(yman) (b. Feb. 5, 1837, East Northfield, Mass., U.S.—d. Dec. 22, 1899, Northfield, Mass.) U.S. Protestant evangelist. Raised on a farm in Massachusetts, he moved first to Boston, where he converted to evangelical Christianity in 1856, and then to Chicago, where he prospered in business. He gave up business in 1860 and engaged in missionary work with the YMCA (1861–73). He founded Moody Church and preached in the slums, emphasizing literal interpretation of the Bible and the need to prepare for the Second Coming. In 1870 he teamed up with the hymn writer Ira D. Sankey (1840–1908), and they began a series of highly popular revival tours in Britain and the U.S. Moody founded the Northfield School (1879), the Mount Hermon School (1881), and the Chicago Bible Institute (1889; now the Moody Bible Institute).

Moon Sole natural satellite of Earth, which it orbits from west to east at a mean distance of about 238,900 mi (384,400 km). It is less than one-third the size of Earth (diameter about 2,160 mi, or 3,476 km, at its equator), about one-eightieth as massive, and about two-thirds as dense. Its surface gravity is about one-sixth that of Earth, and its gravitational pull is largely responsible for Earth's tides. The Moon shines by reflected sunlight, but its albedo is only 7.3%. It rotates on its axis in about 29.5 days, in exactly the time it takes to orbit Earth, and it therefore always presents the same face to Earth. However, that face is lit by the Sun at different angles as the Moon revolves around Earth, causing it to display different phases over the month, from new to full. Most astronomers believe the Moon formed from a cloud of fragments ejected into Earth orbit when a Mars-sized body struck the proto-Earth early in the solar system's history. Its surface has been studied by telescope since Galileo first observed it in 1609 and firsthand by a total of 12 U.S. astronauts during the six successful lunar landing missions of the Apollo program. The dominant process affecting the surface has been impacts, both from micrometeorite bombardment, which grinds rock fragments into fine dust, and from meteorite strikes, which produced the craters profusely scattered over its surface mostly early in its history, over four billion years ago. The maria (see mare) are huge, ancient lava flows. In the late 1990s unmanned spacecraft found possible signs of water ice near the Moon's poles. More generally, a moon is any natural satellite orbiting a planet or other nonstellar body.

As the Moon revolves around Earth, the amount of its illuminated half seen from Earth slowly increases and decreases (waxes and wanes). The cycle takes about 29½ days.

Moon, Sun Myung (b. Jan. 6, 1920, Kwangju Sangsa Ri, P'yŏngan-puk province, Korea) South Korean religious leader. Convinced that he was designated by God as a successor to Jesus, Moon began to preach a new religion, loosely based on Christianity, in North Korea in 1946. After being imprisoned by North Korean authorities, he escaped or was released and went to South Korea, where he founded the Unification Church in 1954 and built a multimillion-dollar business empire. In 1973 he moved his headquarters to Tarrytown, N.Y., U.S., where he became the focus of controversies over fund-raising techniques, tax evasion, and the indoctrination of followers (popularly called Moonies). In 1982 Moon was convicted of tax evasion, sentenced to 18 months in prison, and fined $25,000. He has also suffered from a damaging exposé by his daughter-in-law. In the 1990s the church began operations in Brazil, where its purchase of large tracts of rainforest has been widely criticized.

Moor Any member of the Muslim population of Spain, of mixed Arab, Spanish, and Berber origins. North African Muslims (called by their Latin name Mauri—i.e., natives of Roman Mauretania) invaded Spain in the 8th century and, under the UMAYYAD and ALMORAVID dynasties, created the great Arab Andalusian civilization in such cities as Córdoba, Toledo, Granada, and Sevilla. The Christian reconquest of Spain under ALFONSO VI began in the 11th century; from then until the Moors' final defeat in 1492 and for another century thereafter, many Moors settled as refugees in North Africa. See also MUDEJARS.

Moore, Archie *orig.* **Archibald Lee Wright** (b. Dec. 13, 1913, Benoit, Miss., U.S.—d. Dec. 9, 1998, San Diego, Calif.) U.S. boxer. Moore began boxing in the 1930s but had difficulty advancing because contending fighters thought him too formidable. In 1952 he defeated Joey Maxim to win the world light-heavyweight championship. He held the crown until 1962, when he was disqualified for failing to meet the leading contender, Harold Johnson. From 1936 to 1963 he fought 229 bouts and won 194 of them, 141 by knockouts. He later became a film actor and youth worker.

Moore, Brian (b. Aug. 25, 1921, Belfast, N.Ire.—d. Jan. 10, 1999, Malibu, Calif., U.S.) Irish-born Canadian novelist. Moore immigrated to Canada in 1948 and was a writer for the *Montreal Gazette* from 1952. He is best known for his first novel, *The Lonely Passion of Judith Hearne* (1955; film, 1987), about an aging spinster whose pretensions to gentility are gradually dissolved in alcoholism. His later novels include *The Luck of Ginger Coffey* (1960), *The Emperor of Ice Cream* (1965), *The Doctor's Wife* (1976), and *The Magician's Wife* (1998). His novels were very different from each other in voice, setting, and incident but alike in their lucid, elegant, and vivid prose.

Moore, Clement Clarke (b. July 15, 1779, New York, N.Y., U.S.—d. July 10, 1863, Newport, R.I.) U.S. scholar remembered for the ballad that begins "'Twas the night before Christmas." Moore cofounded General Theological Seminary and taught Oriental and Greek literature there (1821–50). He is said to have composed "A Visit to St. Nicholas" to amuse his children on Christmas 1822, and it was published anonymously in the *Troy* (N.Y.) *Sentinel*, on Dec. 23, 1823. In 2000 it was determined that the poem was probably the work of Henry Livingston, Jr. (1748–1828).

Moore, Ely (b. July 4, 1798, near Belvidere, N.J., U.S.—d. Jan. 27, 1860, Lecompton, Kansas Territory) U.S. publisher. A printer and newspaper editor, he was elected the first president of New York's federation of craft unions (1833). The following year he was elected chairman of the National Trades Union, which joined with TAMMANY HALL to elect him to the U.S. House of Representatives. In the House he helped generate support for the 10-hour workday. When his second term expired in 1839, he became surveyor of the port of New York and then editor of the *Warren Journal* in New Jersey.

Moore, G(eorge) E(dward) (b. Nov. 4, 1873, London, Eng.—d. Oct. 24, 1958, Cambridge, Cambridgeshire) British philosopher, one of the founders of ANALYTIC PHILOSOPHY. While a fellow at the University of Cambridge (1898–1904), he published two influential papers, "The Nature of Judgment" (1899) and "The Refutation of Idealism" (1903), that did much to break the hold of absolute IDEALISM on British philosophy. Also published during this period was his major ethical work, *Principia Ethica* (1903), in which he argued that "good" is a simple and unanalyzable quality that is knowable by direct apprehension. His intuitionism was the dominant metaethical position in Britain for the next 30 years, and it exerted considerable influence within the BLOOMSBURY GROUP of artists and intellectuals. In epistemology, Moore is remembered for his "common sense" philosophy, according to which human beings know to be true many propositions about themselves and the world that are inconsistent with idealist and skeptical doctrines (e.g., "The Earth has existed for many years"). His general position was that, because no argument for idealism or skepticism is as certain as the commonsense view, idealism and skepticism can be rejected out of hand. He was professor of philosophy at Cambridge from 1925 to 1939. From 1921 to 1947 he edited the journal *Mind*.

Moore, Henry (b. July 30, 1898, Castleford, Eng.—d. Aug. 31, 1986, Much Hadham) English sculptor and graphic artist. The son of a coal miner, he was enabled to study at the Royal College of Art by a rehabilitation grant after being wounded in World War I. His early works were strongly influenced by the Mayan sculpture he saw in a Paris museum. From c. 1931 on he experimented with abstract art, combining abstract shapes with the human figure and at times leaving the human figure behind altogether. When materials grew scarce during World War II, he concentrated on drawings of Londoners sheltering from bombs in Underground stations. Commissions for a *Madonna and Child* and a family group turned his style from abstraction to the more humanistic approach that became the basis of his international reputation. He returned to experimentation in the 1950s with angular, pierced standing figures in bronze. Much of his work is monumental, and he is particularly well known for a series of reclining nudes. Among his major commissions were sculptures for UNESCO's Paris headquarters (1957–58), Lincoln Center (1963–65), and the National Gallery of Art (1978).

Moore, Marianne (Craig) (b. Nov. 15, 1887, St. Louis, Mo., U.S.—d. Feb. 5, 1972, New York City, N.Y.) U.S. poet. She attended Bryn Mawr College and later settled in Brooklyn, N.Y., with her mother. After 1919 she devoted herself to writing, contributing poetry and criticism to many journals. She edited the influential journal *The Dial* (1925–29). Her poetry volumes include *Observations* (1924) and *Collected Poems* (1951, Pulitzer and Bollingen Prizes, National Book Award). In her highly disciplined poems she distilled moral and intellectual insights from close observation of objective detail, especially in the animal world, often in innovative stanzaic forms. In her much-anthologized "Poetry" (1921) she called for poems that present "imaginary gardens with real toads in them." In her late years the winningly eccentric Moore, in her cape and tricornered hat, became an icon of sprightly gentility.

Marianne Moore, 1957
IMOGEN CUNNINGHAM

Moore, Mary Tyler (b. Dec. 29, 1936, Brooklyn, New York, N.Y., U.S.) U.S. television and film actress. She studied dance and appeared in commercials and in minor roles on television before costarring in the hit *Dick Van Dyke Show* (1961–66; two Emmy Awards). She achieved even greater success as the star of *The Mary Tyler Moore Show* (1970–77; four Emmy Awards), which became the most popular situation comedy of the 1970s. She also won an Emmy for her role in the television miniseries *Stolen Babies* (1993). Her films include *Ordinary People* (1980) and *Flirting with Disaster* (1996).

Moore, Stanford (b. Sept. 4, 1913, Chicago, Ill., U.S.—d. Aug. 23, 1982, New York, N.Y.) U.S. biochemist. He shared a 1972 Nobel Prize with Christian Anfinsen (1916–95) and William Stein (1911–80) for research on the molecular structures of PROTEINS. He is best known for his applications of CHROMATOGRAPHY to the analysis of AMINO ACIDS and PEPTIDES obtained from proteins and biological fluids and for the use of those analyses in determining the structure of the ENZYME ribonuclease.

Moore, Thomas (b. May 28, 1779, Dublin, Ire.—d. Feb. 25, 1852, Wiltshire, Eng.) Irish poet, satirist, composer, and singer. Moore graduated from Trinity College and studied law in London, where he became a close friend of Lord BYRON and PERCY BYSSHE SHELLEY. His collections *Irish Melodies* and *National Airs* (1807–34) consist of 130 original poems set to folk melodies, including "The Minstrel Boy," "Believe Me, if All Those Endearing Young Charms," and "The Last Rose of Summer." Performed by Moore for London's aristocracy, they aroused sympathy and support for Irish nationalists. His reputation among his contemporaries rivaled that of Byron and WALTER SCOTT. His poem *Lalla Rookh* (1817), a romantic Oriental fantasy, became the most translated poem of its time. In 1824 he was entrusted with Byron's memoirs; he burned them, presumably to protect Byron. He later published biographies of Byron and others, as well as a *History of Ireland* (1827).

moorhen *or* **common gallinule** Bird of the migratory GALLINULE species (*Gallinula chloropus*, family Rallidae) of Europe, Africa, and eastern North America. Moorhens are blackish and have a scarlet frontal shield (fleshy plate on the forehead). In North America, the moorhen is sometimes called the Florida gallinule.

moose Largest species (*Alces alces*) in the DEER family (Cervidae), found in northern North America and Eurasia. It is called ELK in Europe. Moose

have long legs, a bulbous and mobile muzzle, short neck and tail, and a brown, shaggy, coarse coat. They stand 5–7 ft (1.5–2 m) tall and weigh up to 1,800 lb (820 kg). Males have enormous flattened, tined antlers that are shed and regrown annually. Moose wade in forest-edged lakes and streams, eating submerged aquatic plants, and browse on leaves, twigs, and bark. They are usually solitary, but North American moose often assemble in bands in winter. They range throughout the Canadian coniferous forests and those of the northern U.S. They have been protected from extermination by regulation of hunting. See also WAPITI.

Moose River River, northeastern Ontario, Canada. It flows northeast for more than 60 mi (100 km) to empty into JAMES BAY. A wide stream, it is actually the estuary for several rivers, including the Abitibi and Mattagami.

moraine \mə-'rān\ Accumulation of rock debris (till) carried or deposited by a GLACIER. The material may range in size from blocks or boulders to sand and clay, is unstratified when dropped by the glacier, and shows no sorting or bedding. Several kinds of moraines are recognized, depending on how they are deposited by the glacier; these include lateral moraines along the margins of the glacier and terminal moraines at its leading edge.

Medial moraine of Gornergletscher (Gorner Glacier) in the Pennine Alps near Zermatt, Switz.

moral psychology In psychology, study of the development of the moral sense—i.e., of the capacity for forming judgments about what is morally right or wrong, good or bad. The U.S. psychologist Lawrence Kohlberg hypothesized that people's development of moral standards passes through several levels. At the early level, that of preconventional moral reasoning, the child uses external and physical events (such as pleasure or pain) as the source for moral decisions; his standards are based strictly on what will avoid punishment or bring pleasure. At the intermediate level, that of conventional moral reasoning, the child or adolescent views moral standards as a way of maintaining the approval of authority figures, chiefly his parents, and acts in accordance with their precepts. At the third level, that of postconventional moral reasoning, the adult bases his moral standards on principles that he himself has evaluated and accepts as inherently valid, regardless of society's opinion. Beginning in the 1970s Kohlberg's work was criticized by psychologists and philosophers influenced by feminism. According to Carol Gilligan, Kohlberg's stages are inherently sexist, because they equate moral maturity with an orientation toward moral problems that is socially instilled in males but not in females. Whereas the male "ethic of rights and justice" treats morality in terms of abstract principles and conceives of moral agents as essentially autonomous, acting independently of their social situations according to general rules, the female "ethic of care" treats morality in terms of concrete bonds to particular individuals based on feelings of care and responsibility and conceives of moral agents as connected and interdependent through their feelings of care and responsibility for each other.

Morales \mō-'rä-lās**, Luis de** (b. c. 1509, Badajoz, Spain—d. May 9, 1586, Badajoz) Spanish painter. He lived all his life in Badajoz, leaving only for occasional commissions. He is considered Spain's greatest MANNERIST painter and is known especially for his emotional religious paintings. He always worked on panels, often depicting such subjects as the Ecce Homo, the Pietà, and the Virgin and Child. His paintings show the influence of LEONARDO DA VINCI and RAPHAEL and are marked by detailed execution and the anguished asceticism of 16th-century Spain.

morality play Allegorical drama of 15th–16th-century Europe. The plays' characters personified moral qualities (such as charity or vice) or abstractions (such as death or youth). One of the main types of vernacular drama of its time, it provided a transition from LITURGICAL DRAMA to professional secular drama. The plays were short works, usually performed by semiprofessional acting troupes that relied on public support. *Everyman* (c. 1495), featuring Everyman's summons by Death and his journey to the grave, is considered the greatest morality play. See also MIRACLE PLAY; MYSTERY PLAY.

Morandi \mȯ-'rän-dē**, Giorgio** (b. July 20, 1890, Bologna, Italy—d. June 18, 1964, Bologna) Italian painter and etcher. He first exhibited his paintings with the FUTURISTS and was closely associated with the METAPHYSICAL PAINTERS, but he is identified with neither school. He repeatedly returned to the subject matter of simple, geometric still lifes of bottles, jars, and boxes; by returning to the same subject matter, he was able to move past content to an exploration of pure form (i.e., line, colour, shape). His contemplative approach gave his landscapes and still lifes a delicacy of tone and subtlety of design. As instructor of etching at Bologna's Academy of Fine Arts (1930–56), he had a profound influence on Italian graphic artists.

Morava River \'mȯ-rä-vä\ *German* **March** \'märk\ River, eastern Czech Republic. It rises in mountains and flows south to enter the DANUBE RIVER just above BRATISLAVA, Slovakia, after a course of 227 mi (365 km). In its lower course it first divides the Czech Republic from Slovakia and then divides Slovakia from Austria. It gives its name to MORAVIA, the area around it.

Morava River River, Serbia, Serbia and Montenegro. Formed by the confluence of the South (Južna) Morava and West (Zapadna) Morava rivers, it flows north to enter the DANUBE RIVER, after a course of 137 mi (221 km). The total area of the Morava River basin is 14,457 sq mi (37,444 sq km), corresponding almost to the political definition of SERBIA.

Moravia \mə-'rā-vē-ə\ Region, central Europe. Bounded by Bohemia, Silesia, Slovakia, and northeastern Austria and crossed by the MORAVA RIVER, it was inhabited from the 4th century BC. It was dominated by the Avars in the 6th and 7th centuries AD and later settled by Slavic tribes, and in the 9th century it became the state of Great Moravia and included BOHEMIA as well as parts of modern Poland and Hungary. It was destroyed by the MAGYARS in 906. In 1526 it came under HABSBURG rule. After the Revolution of 1848 Moravia became an Austrian crown land with its capital at BRNO. In 1918 it was incorporated into the new state of Czechoslovakia. Germany annexed parts of it in 1938; after World War II they were restored to Czechoslovakia. It was included in the Czech Socialist Republic created in 1968 and in the CZECH REPUBLIC in 1993.

Moravia \mō-'räv-yä**, Alberto** *orig.* **Alberto Pincherle** (b. Nov. 28, 1907, Rome, Italy—d. Sept. 26, 1990, Rome) Italian journalist, novelist, and short-story writer. He worked as a journalist in Turin and as a foreign correspondent in London. *Time of Indifference* (1929), his first novel, is a scathing study of middle-class moral corruption. His works were censored by BENITO MUSSOLINI's fascists and placed on the *INDEX LIBRORUM PRO-*

© 2006 Encyclopædia Britannica, Inc.

HIBITORUM. Later important novels, many of them portrayals of social alienation and loveless sexuality, include *The Conformist* (1951; film, 1971), *Two Women* (1957; film, 1961), and *The Empty Canvas* (1960). His books of short stories include *Roman Tales* (1954) and *More Roman Tales* (1959). He was married to the writer Elsa Morante (1918–85).

Moravian Church Protestant denomination founded in the 18th century. It traces its origins to the Unity of Brethren, a 15th-century HUSSITE movement in Bohemia and Moravia. The original Brethren movement was eroded by persecution, but it was renewed in 1722 at Herrnhut, a theocratic community established in Saxony. In America the Moravians founded Bethlehem, Pa. (1740), and several other settlements, and carried out missionary work among the Indians. The Moravians ordain bishops but are governed by synods of elected representatives; they are guided by the Bible as their only rule of faith and worship.

moray \mə-'rā, 'mȯr-ˌā\ Any of about 80 species (family Muraenidae) of shallow-water EELS inhabiting all tropical and subtropical seas. They live among reefs and rocks and hide in crevices. Their skin is thick, smooth, scaleless, and usually vividly marked or coloured. Most species lack pectoral fins. Morays have a wide mouth and strong, sharp teeth for seizing and holding prey (chiefly other fishes). They attack humans only when disturbed. Most species are less than 5 ft (1.5 m) long, but *Thyrsoidea macrurus*, of the Pacific Ocean, may grow to more than 11 ft (3.5 m). Morays are sometimes eaten, but their flesh may be toxic and can cause illness or death if consumed.

Green moray (*Gymnothorax funebris*). CARLETON RAY/PHOTO RESEARCHERS

Moray Firth \'mər-ē\ Inlet of the NORTH SEA, northeastern Scotland. It extends inland for 39 mi (63 km) and is 16 mi (29 km) wide at its widest point. Its inner reaches are divided by a peninsula, the Black Isle, into two smaller inlets, Cromarty Firth and the Firth of Inverness; the city of INVERNESS lies there.

Mordecai \'mȯr-də-ˌkī\ In the biblical book of Esther, the cousin or guardian of ESTHER. Mordecai was a Jew who offended Haman, minister of King Ahasuerus. Haman persuaded the king to order Mordecai's execution and the destruction of all the Jews in the Persian empire, but Esther, Ahasuerus's beloved Jewish queen, pleaded for him to change his mind, and Ahasuerus ordered Haman hanged, named Mordecai to his position, and allowed the Jews to strike out against their enemies. The deliverance of the Jews of Persia from destruction is celebrated in the festival of PURIM.

More, Saint Thomas (b. Feb. 7, 1477, London, Eng.—d. July 6, 1535, London; canonized May 19, 1935; feast day June 22) English statesman and humanist. He studied at Oxford and was successful as a lawyer from 1501. He served as an undersheriff of London (1510–18) and endeared himself to Londoners as a fair judge and consultant. He wrote the notable *History of King Richard III* (1513–18) and the renowned *Utopia* (1516), which was an immediate success with humanists, including DESIDERIUS ERASMUS. In 1517 More was named to the king's council, and he became HENRY VIII's secretary and confidant. In 1523 he was elected speaker of the House of Commons. He wrote *A Dialogue Concerning Heresies* (1529) to refute heretical writings. After the fall of Cardinal WOLSEY (1529), More succeeded him as lord chancellor, but he resigned in 1532 when he could not affirm Henry's divorce from Catherine. He also refused to accept the Act of SUPREMACY. In 1534 More was charged with high treason and imprisoned in the Tower of London, where he wrote his *Dialogue of Comfort Against Tribulation*. In 1535 he was tried and sentenced to death by hanging, which the king commuted to beheading.

Moreau \mȯ-'rō**, Gustave** (b. April 6, 1826, Paris, France—d. April 18, 1898, Paris) French painter. He developed a distinctive style in the SYMBOLIST mode, becoming known for his erotic paintings of mythological and religious subjects. Such works as *Oedipus and the Sphinx* (1864) and *Dance of Salome* (1876) have often been described as decadent. He made a number of technical experiments, including scraping his canvases; his nonfigurative paintings, done in a loose manner with thick impasto, have led some to call him a herald of ABSTRACT EXPRESSIONISM.

Moreau, Jeanne (b. Jan. 23, 1928, Paris, France) French film actress. At age 20 she became the youngest member of the COMÉDIE-FRANÇAISE. She made her screen debut in *The Last Love* (1949) and won acclaim for her roles in LOUIS MALLE's *Frantic* (1957) and *The Lovers* (1958). Though not conventionally beautiful, she became noted for her sensuality and sophistication. She starred in *Moderato cantabile* (1960), *La notte* (1961), and *Jules et Jim* (1961), playing a woman loved by two men in the movie that established her as an international star, and later in *The Trial* (1962), *Diary of a Chambermaid* (1964), and *The Bride Wore Black* (1968). She also directed films, including *Lumière* (1976) and *L'Adolescente* (1978).

Morehouse College Private, historically black, men's liberal arts college in Atlanta, Ga. It was founded as the Augusta Institute, a seminary, in 1867 and renamed in 1913 in honour of Henry L. Morehouse, an administrator. It offers programs in business, education, humanities, and physical and natural sciences. It is part of an educational consortium in which six institutions, including SPELMAN COLLEGE, exchange faculty, students, facilities, and curricula. Notable alumni include MARTIN LUTHER KING, JR., civil rights leader JULIAN BOND, and filmmaker SPIKE LEE.

morel \mə-'rel\ Any of various species of edible MUSHROOMS in the genera *Morchella* and *Verpa*. Morels have a convoluted or pitted head, or cap, vary in shape, and occur in diverse habitats. The edible *M. esculenta*, found in woods during early summer, is among the most highly prized edible fungi. The bell morel (*Verpa*), an edible mushroom with a bell-shaped cap, is found in woods and in old orchards in early spring. False morels, or lorchels, are represented by the genera *Gyromitra* and *Helvella*. Most species of *Gyromitra* are poisonous.

Morelia \mō-'rāl-yä\ City (pop., 2000: 549,996), capital of MICHOACÁN state, west-central Mexico. It was founded in 1541 as Valladolid, at the site of a Tarascan Indian settlement. It replaced Pátzcuaro as the provincial capital in 1582. During the Mexican wars for independence it served briefly as the base of operations for the revolution; in 1828 its name was changed from Valladolid to Morelia in honor of revolutionary leader José María Morelos. It is the commercial centre of an agricultural region. Its educational institutions include the University of Michoacán and the Colegio San Nicolás (1540), Mexico's oldest institution of higher learning.

Morelos \mō-'rā-lōs\ State (pop., 2000: 1,555,296), central Mexico. It covers 1,911 sq mi (4,950 sq km), and its capital is Cuernavaca. Located on the southern slope of the central Mexican plateau, it is one of the country's most flourishing agricultural states, with valleys that produce a variety of agricultural products. It was named for José María Morelos and was the birthplace of EMILIANO ZAPATA, both of whom were heroes of Mexico's wars for independence.

Moreton \'mōr-tᵊn\ **Bay** Inlet of the Pacific Ocean, southeastern coast of QUEENSLAND, Australia. It is 65 mi (105 km) long and 20 mi (32 km) wide, and it serves as the gateway to BRISBANE. In 1770 British navigator Capt. JAMES COOK named the bay (misspelling it) for the earl of Morton. The first settlement on the mainland was a penal colony established at Redcliffe in the early 19th century.

Morgan Breed of light HORSE founded by a Vermont horse (foaled 1793, died 1821) named after his owner, Justin Morgan (1747–1797). The "Justin Morgan horse," a blend of THOROUGHBRED, ARABIAN, and other elements, was a compact, heavily muscled, short-legged horse of great style, energy, and endurance. Because he alone founded the breed, he is the world's best example of prepotency (ability to pass one's traits to one's offspring). Modern Morgans are used mostly for riding. They are 14.1–15.2 hands (57–61 in., 145–155 cm) high, weigh 900–1,100 lbs (400–500 kg), and resemble the Arabian in conformation and endurance.

Morgan, Daniel (b. 1736, Hunterdon county, N.J.—d. July 6, 1802, Winchester, Va., U.S.) American Revolutionary army officer. He was commissioned a captain of the Virginia riflemen and fought under BENEDICT ARNOLD in the unsuccessful assault on Quebec (1775). In 1777 he joined Gen. HORATIO GATES in the Battle of Saratoga. In 1780 he was made brigadier general and fought in the South, defeating a large British force at Cowpens, S.C. In 1794 he led Virginia militiamen to help suppress the WHISKEY REBELLION.

Morgan, Sir Henry (b. 1635, Llanrhymney, Glamorgan, Wales—d. Aug. 25, 1688, probably Lawrencefield, Jam.) Welsh buccaneer. In the second ANGLO-DUTCH WAR, he commanded buccaneers against the Dutch colonies in the Caribbean. After capturing Puerto Príncipe in Cuba and sacking the city of Portobelo, he set out in 1670 with 36 ships and 2,000 buccaneers to capture the major Spanish colonial city of Panamá, defeated a large Spanish force, and sacked and burned the city. On the return journey, he

© 2006 Encyclopædia Britannica, Inc.

deserted his followers and took most of the booty. In 1674 he was knighted and sent to Jamaica as deputy governor. An exaggerated account of Morgan's exploits created his popular reputation as a bloodthirsty pirate.

Morgan, J(ohn) P(ierpont) (b. April 17, 1837, Hartford, Conn., U.S.—d. March 31, 1913, Rome, Italy) U.S. financier. The son of a financier, he began his career as an accountant in 1857 and became an agent for his father's banking company in 1861. In 1871 he was named a partner in the firm of Drexel, Morgan, which became the chief source of U.S. government financing. In 1895 it became J.P. Morgan and Co. In the 1880s and '90s Morgan reorganized several major railroads, notably the Erie Railroad and the Northern Pacific. He was instrumental in achieving railroad rate stability and discouraging overly chaotic competition, and he became one of the world's most powerful railroad magnates, controlling about 5,000 mi (8,000 km) of railway by 1902. After the panic of 1893, Morgan formed a syndicate to supply the U.S. Treasury's depleted gold reserves. He led the financial community in averting a general financial collapse following the stock-market panic of 1907. He financed a series of giant industrial consolidations, organizing the mergers that formed General Electric, United States Steel Corp., and International Harvester Co. (see Navistar International Corp.). A noted art collector, he donated many artworks to the Metropolitan Museum of Art; his book collection and the building that housed it became the Pierpont Morgan Library in New York City.

Morgan, J(ohn) P(ierpont), Jr. (b. Sept. 7, 1867, Irvington, N.Y., U.S.—d. March 13, 1943, Boca Grande, Fla.) U.S. banker and financier. He joined J.P. Morgan and Co. in 1892 and took control of it in 1913 on the death of his father, J.P. Morgan. In World War I he served as purchasing agent in the U.S. for the British and French governments and organized the underwriting of more than $1.5 billion in Allied bonds. He pooled funds with other bankers in an unsuccessful attempt to prevent the crash of 1929. The Banking Act of 1933 compelled his firm to separate its investment-banking and commercial-banking activities. Morgan, Stanley and Co. became a new investment-banking firm, while Morgan himself remained head of J.P. Morgan & Co., which was from then on strictly a commercial-banking firm.

Morgan, Joe *in full* **Joseph Leonard Morgan** (b. Sept. 19, 1943, Bonham, Texas, U.S.) U.S. baseball player. Morgan was named Rookie of the Year in 1965, his first full season with the Houston Astros. During each of his eight seasons with the Cincinnati Reds (1972–79) he made the All-Star team as second baseman. He was named the National League's Most Valuable Player in 1975 and 1976, when he led the Reds to consecutive World Series championships. He broke Rogers Hornsby's record for home runs by a second baseman, with 266 (later broken by Ryne Sandberg with 277). In 1990 Morgan was inducted into the Baseball Hall of Fame.

Morgan, John (b. June 10, 1735, Philadelphia, Pa., U.S.—d. Oct. 15, 1789, Philadelphia) U.S. medical educator. He studied medicine in Europe before returning to the American colonies to found their first medical school in 1765 at the University of Pennsylvania. As North America's first professor of medicine, he required a liberal education of his students and separated medicine, surgery, and pharmacology into distinct disciplines, policies widely opposed by colonial physicians. He was made head of the army's medical system in 1775; however, the Continental Congress did not let him organize the system and dismissed him in 1777, holding him responsible for the war's high death rate. Though absolved in 1779, he never recovered, and he died an impoverished recluse.

Morgan, Julia (b. Jan. 20, 1872, San Francisco, Calif., U.S.—d. Feb. 2, 1957, San Francisco) U.S. architect. She received an engineering degree from the University of California at Berkeley. The first female architecture student at the École des Beaux-Arts in Paris (1898), she later became California's first licensed woman architect. Morgan then commenced 40 years of architectural work that resulted in some 800 buildings, most of them in California, particularly in San Francisco. She opened her own architectural office in 1904, and the devastation of the San Francisco earthquake of 1906 provided her with the opportunity to design hundreds of homes and many churches, office buildings, and educational buildings in the Bay area. She is best remembered for designing William Randolph Hearst's private castle at San Simeon (1919–38).

Morgan, Lewis Henry (b. Nov. 21, 1818, near Aurora, N.Y., U.S.—d. Dec. 17, 1881, Rochester, N.Y.) U.S. ethnologist and a principal founder of scientific anthropology. Morgan developed a deep interest in the American Indians and in 1846 was eventually adopted by the Seneca. His *Systems of Consanguinity and Affinity of the Human Family* (1871) was a world survey of kinship systems that sought to establish connections between cultures and particularly to establish the Asiatic origin of the American Indians. This work led to a comprehensive theory of sociocultural evolution, set forth in *Ancient Society* (1877). He claimed that advances in social organization arose primarily from changes in food production and that society had progressed from a hunting-and-gathering stage ("savagery") to one of settled agriculture ("barbarism") to modern "civilization." This theory, with the related theory that society originated in a state of sexual promiscuity and advanced through various forms of family life before culminating in monogamy, is now obsolete. For many years, however, Morgan was the dean of American anthropology, and his pioneering ideas influenced the theories of Karl Marx and Friedrich Engels, among others.

Morgan, Thomas Hunt (b. Sept. 25, 1866, Lexington, Ky., U.S.—d. Dec. 4, 1945, Pasadena, Calif.) U.S. zoologist and geneticist. He received his doctorate from Johns Hopkins University. As a professor at Columbia University (1904–28) and California Institute of Technology (1928–45), he conducted important research on heredity. Like many of his contemporaries, Morgan found Charles Darwin's theory of natural selection implausible because it could not be tested experimentally, and he objected to Mendelian and chromosome theories, arguing that no single chromosome could carry specific hereditary traits. His opinion changed as a result of his studies of *Drosophila*. He developed the hypothesis of sex-linked traits. He adopted the term *gene* and concluded that genes were possibly arranged in a linear fashion on chromosomes. He was awarded the Nobel Prize in 1933. See also Calvin Blackman Bridges.

Morgan le Fay ("Morgan the Fairy") Enchantress in Arthurian legend. Skilled in the arts of healing and changing shape, she ruled Avalon, the island where King Arthur retreated to be healed of his wounds after his last battle. She had learned her magic powers from books and from Merlin. In other stories she is Arthur's sister and enemy, and seduces him to produce a son who later kills Arthur.

Morgenthau \'mȯr-gən-ˌthȯ**, Henry, Jr.** (b. May 11, 1891, New York, N.Y., U.S.—d. Feb. 6, 1967, Poughkeepsie, N.Y.) U.S. public official. He was editor of *American Agriculturist* (1922–33) and a close friend of Franklin D. Roosevelt. As secretary of the treasury in Roosevelt's cabinet (1934–45), he was responsible for financing the programs of the New Deal and the enormous military expenditures of World War II. Over $370 billion was spent during the period, three times more money than was spent by the 50 previous secretaries of the treasury. He resigned after Roosevelt's death and retired to his farm.

Morghāb \mȯr-'gäb\ **River** *or* **Murgab River** \mȯr-'gäb\ River, northwestern Afghanistan and southeastern Turkmenistan. It flows generally west and then north into Turkmenistan and is about 600 mi (970 km) long. It forms the border between Turkmenistan and Afghanistan for several miles. North of Mary (Merv), it disappears into the sands of the Karakum Desert.

Mörike \'mœ-rē-kə**, Eduard Friedrich** (b. Sept. 8, 1804, Ludwigsburg, Württemberg—d. June 4, 1875, Stuttgart) German lyric poet. A clergyman, Mörike suffered all his life from psychosomatic illnesses and retired at age 39, supplementing his pension by lecturing on literature. His small literary output includes the novel *Maler Nolten* (1832), fairy tales, and *Mozart on the Way to Prague* (1856), a humorous examination of the problems of artists in a world uncongenial to art. His best works are his exquisite lyrics, notably the "Peregrina" poems, which immortalize a youthful love, and sonnets to a onetime betrothed; many were set to music by Hugo Wolf.

Morison, Samuel Eliot (b. July 9, 1887, Boston, Mass., U.S.—d. May 15, 1976, Boston) U.S. biographer and historian. He taught at Harvard University for 40 years. To give authenticity to his writings on maritime history, he undertook numerous voyages and during wartime served on 12 ships as a commissioned officer in the U.S. Naval Reserve. His works include *Admiral of the Ocean Sea* (1942, Pulitzer Prize), on Christopher Columbus; *John Paul Jones* (1959, Pulitzer Prize); the monumental *History of U.S. Naval Operations in World War II*, 15 vol. (1947–62); and *The Oxford History of the American People* (1965).

Morison, Stanley (b. May 6, 1889, Wanstead, Essex, Eng.—d. Oct. 11, 1967, London) English typographer, scholar, and historian of printing.

© 2006 Encyclopædia Britannica, Inc.

He attained much of his printing and typographic experience by working for publishing houses. He served as editor of the influential typographic journal *The Fleuron* (1926–30). He worked for *The Times* (London) in various capacities, including editor of *The Times Literary Supplement* (1929–60). He is best known as the designer of Times New Roman, which was adopted as *The Times*'s basic typeface in 1932, and went on to become the most successful new typeface of the 20th century.

Morisot \mȯ-rē-'zō**, Berthe** (b. Jan. 14, 1841, Bourges, France—d. March 2, 1895, Paris) French painter and printmaker. Granddaughter of Jean-Honoré Fragonard, she studied with Camille Corot, but the major influence over her work was Édouard Manet, whose brother she later married. She exhibited regularly with the Impressionists. None of her exhibits proved commercially successful, but she outsold Claude Monet, Pierre-Auguste Renoir, and Alfred Sisley. Her colouring was delicate and subtle, often with a subdued emerald glow, and her subjects were often members of her family. She is best known for her extremely loose brushwork and for the sensitivity she brought to her female subjects.

Morita \mȯ-'rē-tə**, Akio** (b. Jan. 26, 1921, Nagoya, Japan—d. Oct. 3, 1999, Tokyo) Japanese entrepreneur, cofounder of Sony Corp. The son of an old sake-brewing family, Morita was trained as a physicist. In 1946 he and Ibuka Masaru cofounded the Tokyo Telecommunications Engineering Corp., which changed its name to Sony Corp. in 1958. Primarily responsible for finances and marketing, Morita adopted U.S. advertising techniques and established Sony's first U.S. plant in 1972. He became chief executive officer in 1971 and chairman of the board in 1976, in which post he served until 1994. Under his direction Sony became a world-renowned manufacturer of consumer electronics.

Morley (of Blackburn), John Morley, Viscount (b. Dec. 24, 1838, Blackburn, Eng.—d. Sept. 23, 1923, Wimbledon, London) English politician and historian. He worked as a journalist in London from 1860, mainly as editor of the liberal *Fortnightly Review* (1867–82). A supporter of William E. Gladstone, Morley served in the House of Commons (1883–95, 1896–1908). As chief secretary for Ireland (1886, 1892–95), he helped prepare the Irish Home Rule bills. As secretary for India (1905–10), he brought elected Indian representation into the government. He also wrote acclaimed historical works, including biographies of Gladstone, Voltaire, Jean-Jacques Rousseau, and Oliver Cromwell.

Morley, Thomas (b. 1557/58, Norwich, Norfolk, Eng.—d. October 1602, London) English composer, organist, and music theorist. He was educated at Oxford and studied with William Byrd. Though he composed a number of anthems and psalms, he is best known for his secular songs, including those published in the *First Booke of Ayres* (1600), and for the treatise *A Plaine and Easie Introduction to Practicall Musick* (1597). By editing and printing several anthologies of Italian music (often reworked), he was instrumental in bringing the Italian madrigal to England. He also edited *The Triumphes of Oriana* (published 1603), the most significant collection of English madrigals.

Mormon Member of the Church of Jesus Christ of Latter-day Saints or of a sect closely related to it (e.g., the Community of Christ). The Mormon religion was founded by Joseph Smith, who claimed to have received an angelic vision telling him of the location of golden plates containing God's revelation; this he published in 1830 as the *Book of Mormon*. Smith and his followers accepted the Bible as well as the Mormon sacred scriptures but diverged significantly from orthodox Christianity, especially in their assertion that God exists in three distinct entities as Father, Son, and Holy Spirit. Mormons also believe that faithful members of the church will inherit eternal life as gods. Other unique doctrines include the belief in preexisting souls waiting to be born and in salvation of the dead through retroactive baptism. The church became notorious for its practice of polygamy, though it was officially sanctioned only between 1852 and 1890. Smith and his followers migrated from Palmyra, N.Y., to Ohio, Missouri, and finally Illinois, where Smith was killed by a mob in 1844. In 1846–47, under Brigham Young, the Mormons made a 1,100-mi (1,800-km) trek to Utah, where they founded Salt Lake City. In the early 21st century, the church had a worldwide membership of nearly 10 million, swelled yearly by the missionary work that church members, both men and women, are encouraged to perform.

Mormon, Book of Holy scripture of the Mormons, supplemental to the Bible. First published in 1830, it is held by all branches of Mormonism to be a divinely inspired work translated by the founder of their religion, Joseph Smith. It relates the history of a tribe of Hebrews who migrated from Jerusalem to America c. 600 BC. They eventually split into two groups: the Lamanites, who were ancestors of the American Indians; and the Nephites, who were instructed by Jesus before being destroyed by the Lamanites. The prophet Mormon recorded their history on gold tablets, which were buried and remained hidden for centuries. Moroni, Mormon's son, appeared to Smith in angelic form and revealed their location.

morning-glory family Family Convolvulaceae, composed of about 1,400 species of flowering plants in 50 genera, widely cultivated for their colourful, funnel-shaped flowers. Most are twining and erect herbaceous plants; a few are woody vines, trees, or shrubs. The family is widespread in both tropical and temperate areas. Most popular morning glories are of the genus *Ipomoea*, as is the sweet potato. Several species of bindweeds are agricultural pests. The seeds of two species, *Rivea corymbosa* and *I. violacea*, contain hallucinogenic compounds of historical interest.

Morny \mȯr-'nē**, Charles-Auguste-Louis-Joseph, duke de** (b. Oct. 21, 1811, Paris, France—d. March 10, 1865, Paris) French politician. Half brother of Louis-Napoléon (later Napoleon III), Morny devoted himself to Parisian society and to making a fortune before serving in the Chamber of Deputies (1842–48, 1849). Appointed minister of the interior in 1851, he organized the plebiscite that made Louis-Napoléon dictator. As president of the legislature (1856–65), he tried unsuccessfully to persuade Napoleon III to give France more liberty.

Moro Any member of several Muslim peoples living in the southern Philippines. The Moros, who constitute about 5% of the Philippine population, are not ethnically different from other Filipinos, but, with a separate Islamic faith and local cultures, they have been the object of prejudice and neglect. They have a centuries-long history of conflict with ruling powers: first with Roman Catholic Spanish colonialists (16th–19th century), later with U.S. occupation troops, and finally with the independent Philippine government. Although the Moro National Liberation Front—which espoused Moro separatism and led a violent insurgency in the late 1960s and '70s—split into factions at the end of the 1970s, the insurgency continued. Provisions for the expansion of the Autonomous Region of Muslim Mindanao, established in the late 1980s, were included in a 1996 treaty, but some separatists continue to hold out for complete independence.

Moro, Aldo (b. Sept. 23, 1916, Maglie, Italy—d. May 9, 1978, near or in Rome) Italian politician and premier of Italy (1963–64, 1964–66, 1966–68, 1974–76, 1976). A professor of law at the University of Bari, he was elected to the legislature in 1946. He served in several cabinet posts, then became secretary of the Christian Democrat Party (1959–63). As premier of Italy, he included socialists in his coalition governments. In 1976 he became president of the Christian Democrats and remained influential in Italian politics. In 1978 he was kidnapped in Rome by the Red Brigades; after the government refused to release Red Brigades members on trial in Turin, he was murdered by his captors.

Moroccan crises (1905–06, 1911) Two European incidents centring on Germany's attempt to block France's control of Morocco and to restrict French power. While visiting Tangier in 1905, the German emperor William II issued a statement of support for Moroccan independence, which caused international panic. The crisis was resolved at the Algeciras Conference (1906), which recognized France's special political interests in Morocco. The second crisis occurred in 1911 when a German gunboat arrived in Agadir, ostensibly to protect German economic interests during a local uprising. The French objected and made preparations for war, as did Britain, but a settlement was negotiated that gave France rights to a protectorship over Morocco. In return, Germany acquired part of the French Congo.

Morocco *officially* **Kingdom of Morocco** Country, North Africa. Area: 177,117 sq mi (458,730 sq km). Population (2005 est.): 31,478,000. Capital: Rabat. Arabized Berbers (Amazigh) are the country's largest ethnolinguistic group; there are French, Spanish, and Bedouin minorities. Languages: Arabic (official), Berber, French. Religion: Islam (official; mostly Sunni). Currency: dirham. Morocco is a mountainous country with an average elevation of 2,600 ft (800 m) above sea level. A mountain chain known as the Rif runs along the northern coast; the Atlas Mountains rise in the country's centre and include Mount Toubkal (13,665 ft [4,165 m]), Morocco's highest peak. The area is a zone of severe seismic activity, and earthquakes are frequent. Fertile lowlands support agriculture; major crops include barley, wheat, and sugar beets. Morocco is one of the world's largest suppliers of phosphate. Its industrial centre is Casablanca,

© 2006 Encyclopædia Britannica, Inc.

the largest city. It is a constitutional monarchy with two legislative houses; its chief of state and head of government is the king, assisted by the prime minister. The Berbers entered Morocco near the end of the 2nd millennium BC. PHOENICIANS established trading posts along the Mediterranean coast during the 12th century BC, and CARTHAGE had settlements along the Atlantic coast in the 5th century BC. After the fall of Carthage, the region's leaders became loyal allies of Rome, and in AD 42 it was annexed by the Romans as part of the province of MAURETANIA. It was invaded by Muslims in the 7th century. The ALMORAVID DYNASTY conquered it and the Muslim areas of Spain in the mid-11th century; the ALMOHAD DYNASTY overthrew the Almoravids in the 12th century and in turn were conquered by the MARĪNID DYNASTY in the 13th century. After the fall of the Marīnids in the mid-15th century, the Sa'dī dynasty ruled for a century, beginning c. 1550. Attacks by BARBARY COAST pirates compelled Europeans to enter the area; the French fought Morocco over the boundary with Algeria, Europeans obtained trading rights in 1856, and the Spanish seized part of Moroccan territory in 1859. Morocco was a French protectorate from 1912 until its independence in 1956. In the 1970s it reasserted claim to the Spanish Sahara (see WESTERN SAHARA), and in 1976 Spanish troops withdrew from the region, leaving behind the Algerian-supported Saharan guerrillas of the POLISARIO movement. Relations with Mauritania and Algeria deteriorated, and fighting over the region continued. Attempts at mediation have been made by the international community.

Moroni Town (pop., 1995: 340,168), capital of the COMOROS Islands, located on Grande Comore (Njazidja) island in the Indian Ocean. Founded by Arabic-speaking settlers, it is the largest settlement of the Comoros and has served as the capital since 1958. The port of Moroni consists of a small quay in a natural cove. The town retains an Arabic character and has several mosques, including Chiounda, a pilgrimage centre.

morpheme In linguistics, the smallest grammatical unit of speech. It may be an entire word (*cat*) or an element of a word (*re-* and *-ed* in *reappeared*). In so-called isolating languages, like Vietnamese, each word contains a single morpheme; in languages such as English, words often contain multiple morphemes. The study of morphemes is included in MORPHOLOGY.

Morpheus In Greek and Roman mythology, the god of dreams. He was one of the sons of Hypnos (Somnus), god of sleep. Morpheus sent human shapes of all kinds to the dreamer, while his brothers Phobetor and Phantasus sent the forms of animals and inanimate objects.

morphine HETEROCYCLIC COMPOUND, NARCOTIC ANALGESIC ALKALOID originally isolated from OPIUM. It is among the most powerful naturally occurring compounds in its ability to reduce pain and distress; its calming effect protects the system against exhaustion in traumatic SHOCK, internal HEMORRHAGE, CONGESTIVE HEART FAILURE, and other debilitating conditions. Morphine is usually given by injection but may be taken by mouth. Its most serious drawback is its addictiveness; many doctors are reluctant to use amounts adequate to relieve severe pain, even though short-term use in such cases rarely leads to DRUG ADDICTION. This remains controversial even in terminal cases, when addiction is arguably irrelevant; another issue in such cases is that large doses depress RESPIRATION and may thus hasten death.

morpho Any species of New World tropical brush-footed BUTTERFLIES in the genus *Morpho* (family Nymphalidae). Microscopic ridges on the wing scales break up and reflect light, producing the iridescent blue of the males of some species. The generally duller-coloured females have broader, less graceful wings. The hairy larvae feed on plants and live and pupate in a communal web. Some species have poisonous hairs that can cause a rash on human skin. Morphos are raised commercially in South America for use in jewelry, lamp shades, pictures, and tray inlays.

Morpho butterfly (*Morpho nestira*).
APPEL COLOR PHOTOGRAPHY

morphology \mȯr-'fä-lə-jē\ In biology, the study of the size, shape, and structure of organisms in relation to some principle or generalization. Whereas ANATOMY describes the structure of organisms, morphology explains the shapes and arrangement of parts of organisms in terms of such general principles as evolutionary relations, function, and development.

morphology In linguistics, the internal construction system of words and its study. Languages vary widely in the number of MORPHEMES a word can have. English has many words with multiple morphemes (e.g., *replacement* is composed of *re-*, *place*, and *-ment*). Many American Indian languages have a highly complex morphology; other languages, such as Chinese, have a simple one. Morphology includes the grammatical processes of inflection, marking categories like person, tense, and case (e.g., the *-s* in *jumps* marks the third-person singular in the present tense), and derivation, the formation of new words from existing words (e.g., *acceptable* from *accept*).

Morrill Act See LAND-GRANT COLLEGE ACT OF 1862

Morris, Gouverneur (b. Jan. 31, 1752, Morrisania house, Manhattan—d. Nov. 6, 1816, Morrisania house) American statesman and financial expert. He was admitted to the bar (1771) and served in the New York Provincial Congress (1775–77) and the Continental Congress (1778–79). He distrusted the democratic tendencies of colonists who wanted to break with England, but his belief in independence led him to join their ranks. As assistant superintendent of finance (1781–85), he proposed the decimal coinage system that became the basis for U.S. currency. A delegate to the CONSTITUTIONAL CONVENTION, he helped write the final draft of the CONSTITUTION OF THE UNITED STATES. He served as minister to France (1792–94) and as a U.S. Senator (1800–03), and he was the first chairman of the Erie Canal commission (1810–16).

Morris, Mark (b. Aug. 29, 1956, Seattle, Wash., U.S.) U.S. dancer and choreographer. He formed the Mark Morris Dance Group in 1980. It was the resident company at the Théâtre Royal de la Monnaie in Brussels (1988–91), returned to the U.S. in 1991, and made its permanent home in Brooklyn in 2001. Known for his daring style, he has choreographed many works for his own company as well as for opera productions and television performances, including *The Hard Nut* (1991), his modernized version of *The Nutcracker*.

Morris, Robert (b. Jan. 31, 1734, Liverpool, Merseyside, Eng.—d. May 8, 1806, Philadelphia, Pa., U.S.) British-born American financier and politician. He immigrated to join his father in Maryland in 1747 and entered a Philadelphia mercantile firm the following year. As a member of the Continental Congress in the AMERICAN REVOLUTION, he practically controlled the financial operations of the war from 1776 to 1778, borrowing money from the French, requisitioning from the states, and even advancing money from his own pocket. He established the Bank of North

© 2006 Encyclopædia Britannica, Inc.

America (1781) and served as U.S. superintendent of finance (1781–84) under the Articles of Confederation. He was a delegate to the Annapolis Convention and the Constitutional Convention and served in the U.S. Senate (1789–95). After investing heavily in land speculation, he went bankrupt and spent more than three years in a debtors' prison before his release in 1801.

Morris, Robert (b. Feb. 9, 1931, Kansas City, Mo., U.S.) U.S. artist. His first one-man exhibition of paintings was held in San Francisco in 1957. In 1960, while living in New York City, he began producing large, monochromatic geometric sculptures, groups of which he exhibited in specific spatial relationships. His work of this period greatly affected the Minimalist movement, which sought to reduce art to its essence by eliminating personal expression and historical allusion. From the late 1960s, however, Morris moved toward a more spontaneous, if anonymous, expressiveness. He experimented in a wide variety of forms, including the "happening"; "dispersal pieces," in which materials were strewn in apparent randomness on the gallery floor; and environmental projects. His work of the 1970s showed a preoccupation with paradoxes of mental and physical imprisonment.

Morris, William (b. March 24, 1834, Walthamstow, near London, Eng.—d. Oct. 3, 1896, Hammersmith) British painter, designer, craftsman, poet, and social reformer, founder of the Arts and Crafts Movement. Born into a wealthy family, he studied medieval architecture at Oxford. He was apprenticed to an architect, but visits to Europe turned him toward painting. In 1861, with Dante Gabriel Rossetti, Edward Burne-Jones, Ford Madox Brown, and others, he founded Morris, Marshall, Faulkner & Co., an association of "fine art workmen" based on the medieval guild. They produced furniture, tapestry, stained glass, fabrics, carpets, and most notably wallpaper designs. In 1891 Morris founded the Kelmscott Press, and over the next seven years it produced 53 titles in 66 volumes; its *Works of Geoffrey Chaucer* is one of the greatest examples of the art of the printed book. Though he sought to produce fine art objects for the masses, only the rich could afford his expensive handmade products. A utopian socialist, he did much to develop British socialism; in 1884 he formed the Socialist League. In 1877 he founded the Society for the Protection of Ancient Buildings, one of the world's first preservationist groups. He wrote several volumes of poetry and many prose romances, as well as the four-volume epic *Sigurd the Volsung* (1876). His works and writings revolutionized Victorian taste, and he ranks as one of the largest cultural figures of 19th-century Britain.

William Morris, drawing by C.M. Watts.
THE MANSELL COLLECTION

Morris dance Ritual folk dance mainly danced in rural England from about the 15th century. The name, a variant of "Moorish," possibly arose in reference to the dancers' blacking their faces as part of the ritual disguise. It is principally a fertility dance, performed especially in the spring. Danced by groups of men often dressed in white and wearing bells on their legs, the steps are varied and intricate and are maintained in a jog-trot while handkerchiefs are waved in both hands. It calls for individual characters such as a hobbyhorse and a fool.

Morris Jesup, Cape Cape, in the Peary Land region, northern Greenland, on the Arctic Ocean. Situated 440 mi (710 km) from the North Pole, it is one of the world's most northerly points of land. Robert E. Peary was the first explorer to reach it in 1900; it was named for Morris K. Jesup, a merchant-banker who financed polar expeditions.

Morrison, Jim *orig.* **James Douglas Morrison** (b. Dec. 8, 1943, Melbourne, Fla., U.S.—d. July 3, 1971, Paris, France) U.S. rock singer and songwriter. He studied film at the University of California in Los Angeles, where he met Ray Manzarek (b. 1935); with Robbie Krieger (b. 1946) and John Densmore (b. 1945), they formed the psychedelic rock group the Doors, taking their name from Aldous Huxley's book on mescaline, *The Doors of Perception*. The dark-edged eroticism of Morrison's baritone voice and pseudo-poetic lyrics helped make the band one of rock's most potent, controversial, and theatrical acts. Their popular hits of the 1960s included "Light My Fire" and "Hello I Love You." Morrison was known for his drinking and drug use and outrageous stage behaviour. In 1971 he left the Doors to write poetry and moved to Paris, where he died of heart failure.

Morrison, Toni *orig.* **Chloe Anthony Wofford** (b. Feb. 18, 1931, Lorain, Ohio, U.S.) U.S. writer. She studied at Howard and Cornell universities, taught at various universities, and worked as an editor before publishing *The Bluest Eye* (1970), a novel dealing with some of the shocking realities of the lives of poor blacks, and *Sula* (1973). The brilliant *Song of Solomon* (1977) brought her national attention. Her later novels include *Tar Baby* (1981), *Beloved* (1987, Pulitzer Prize), *Jazz* (1992), and *Paradise* (1998). The African American experience, particularly that of women, is the principal theme of her fiction. Her use of fantasy, her sinuous poetic style, and her interweaving of mythic elements give her stories texture and great power. She was awarded the Nobel Prize for Literature in 1993.

Morristown National Historical Park Historical park, Morristown, N.J., U.S. In the American Revolution the Continental army under George Washington had its main winter campsite there in 1776–77 and 1779–80. Established in 1933, the park covers 1,684 acres (682 hectares). It includes the house that served as Washington's headquarters and other artifacts of the Revolution.

Morrow, Dwight W(hitney) (b. Jan. 11, 1873, Huntington, W.Va., U.S.—d. Oct. 5, 1931, Englewood, N.J.) U.S. lawyer and diplomat. He practiced law in New York City (1905–14), helping draft a workers' compensation law (1911). He became a partner in J.P. Morgan & Co. (1914–27) and organized the Kennecott Copper Corp. During World War I he was an adviser to the Allied Maritime Transport Council, and after the war he helped devise a national aviation policy. He served as ambassador to Mexico (1927–30). He briefly served in the U.S. Senate (1931) before his death. His daughter Anne married Charles A. Lindbergh.

Morse, Carlton E. (b. June 4, 1901, Jennings, La., U.S.—d. May 24, 1993, Sacramento, Calif.) U.S. radio writer and producer. He worked as a newspaper reporter before joining NBC radio as a writer in 1930. Morse wrote, directed, and produced many radio programs, including the highly popular soap opera *One Man's Family* (1932–59; television, 1949–52), the drama *I Love a Mystery* (1939–44, 1949–52), and the soap opera *The Woman in My House* (1951–59).

Morse, Samuel F(inley) B(reese) (b. April 27, 1791, Charlestown, Mass., U.S.—d. April 2, 1872, New York, N.Y.) U.S. painter and inventor. The son of a distinguished geographer, he attended Yale University and studied painting in England (1811–15). He returned home to work as an itinerant painter; his portraits still rank among the finest produced in the U.S. He cofounded the National Academy of Design and served as its first president (1826–45). Independent of similar efforts in Europe, he developed an electric telegraph (1832–35), believing his to be the first. He developed the system of dots and dashes that became known internationally as Morse code (1838). Though denied support from Congress for a transatlantic telegraph line, he received congressional support for the first U.S. telegraph line, from Baltimore to Washington; on its completion in 1844 he sent the message "What hath God wrought!" His patents brought him fame and wealth.

Morse code System for representing letters, numerals, and punctuation marks by a sequence of dots, dashes, and spaces. It is transmitted as electrical pulses of varied lengths or analogous mechanical or visual signals, such as flashing lights. The original system was invented by Samuel F.B. Morse in 1838 for his telegraph; the International Morse Code, a simpler and more precise variant with codes for letters with diacritic marks, was devised in 1851. With minor changes, this code has remained in use for certain types of radiotelegraphy, including amateur radio.

mortar Short-range artillery piece with a short barrel and low muzzle velocity that fires an explosive projectile in a high-arched trajectory. Large mortars were used against fortifications and in siege operations from medieval times through World War I. Since 1915, small portable models have been standard infantry weapons, especially for mountain or trench warfare. Medium mortars, with a caliber of about 3–4 in. (70–90 mm), a range of up to about 2.5 mi (4 km), and a bomb weight of up to 11 lbs (5 kg), are now widely used.

© 2006 Encyclopædia Britannica, Inc.

mortar Material used in building construction to bond brick, stone, tile, or concrete blocks into a structure. The ancient Romans are credited with its invention. Mortar consists of sand mixed with cement and water. The resulting substance must be sufficiently flexible to flow slightly but not collapse under the weight of the masonry units. Before the 19th-century invention of PORTLAND CEMENT, masons used thin joints of lime mortar, which required greater precision than the thicker joints of portland-cement mortar and were not as strong. For tilework, a very thin mortar called grout is used. Pointing is the process of finishing a masonry joint.

mortgage In Anglo-American law, the method by which a debtor (mortgagor) conveys an interest in property to a creditor (mortgagee) as security for the payment of a money debt. The modern mortgage has its roots in medieval Europe. Originally, the mortgagor gave the mortgagee ownership of the land on the condition that the mortgagee would return it once the mortgagor's debt was paid off. Over time, it became the practice to let the mortgagor remain in possession of the land; it then became the mortgagor's right to remain in possession of the land so long as there was no default on the debt.

Morton, James Douglas, 4th earl of (b. c. 1516—d. June 2, 1581, Edinburgh, Scot.) Scottish nobleman. Appointed chancellor by MARY, QUEEN OF SCOTS, in 1563, he conspired with other Protestant nobles to murder Mary's adviser DAVID RICCIO and probably was involved in the murder of Lord DARNLEY. He led the nobles that drove Mary's husband, the earl of Bothwell, from Scotland and forced her to abdicate in favour of her infant son, James (later JAMES I of England). He became regent for James in 1572 and restored the rule of law to Scotland. Resented by the other nobles, he was forced to resign in 1578; he was later charged with complicity in Darnley's murder and executed.

Morton, Jelly Roll *orig.* **Ferdinand Joseph La Menthe** (b. Oct. 20, 1890, New Orleans, La., U.S.—d. July 10, 1941, Los Angeles, Calif.) U.S. pianist and the first important composer in jazz. In his youth Morton was apparently active as a gambler, pool shark, and procurer. A pioneer RAGTIME piano player, he toured the country as a pianist from 1904, making his first recordings in Chicago in 1923 with his ensemble the Red Hot Peppers. An exponent of the New Orleans tradition, Morton achieved success integrating elements of ragtime with improvised and arranged ensemble passages, often on his own compositions such as "King Porter Stomp." By the early 1930s Morton's fame had been overshadowed by that of LOUIS ARMSTRONG and other emerging innovators.

Mosaddeq \'mōs-ad-ˌdek**, Mohammad** (b. 1880, Tehrān, Ṣafavid Persia—d. March 5, 1967, Tehrān, Iran) Iranian politician and nationalist leader. After law school in Switzerland, he served in the government until Reza Khan became shah (1925). After Reza Shah was deposed in 1941, Mosaddeq was reelected to the parliament (1944). Following Mosaddeq's successful nationalization of the British-owned Anglo-Iranian Oil Company, Mohammad Reza Shah PAHLAVI (r. 1941–79) was virtually forced to appoint him premier (1951). Tension between the monarch and the premier crested, however, and the shah attempted to dismiss him in 1953. The resulting unrest forced the shah to flee the country until a coup, backed by British and U.S. intelligence services, drove Mosaddeq from power. Convicted of treason, he spent three years in prison and the rest of his life under house arrest.

mosaic Surface decoration of small coloured components—such as stone, glass, tile, or shell—closely set into an adhesive ground. Mosaic pieces, or tesserae, are usually small squares, triangles, or other regular shapes. Mosaics cannot create the variations of light and shadow that paintings can, but glass tesserae can achieve a greater brilliance, especially those to which gold and silver foil have been applied. This technique was responsible for the great shimmering mosaics of the Byzantine period. The earliest known mosaics date from the 8th century BC and were made of pebbles, a technique refined by the Greeks in the 5th century. The Romans used mosaics widely, particularly for floors. Pre-Columbian Americans favoured mosaics of garnet, turquoise, and mother-of-pearl, which usually encrusted shields, masks, and cult statues.

Mosby \'mōz-bē**, John Singleton** (b. Dec. 6, 1833, Edgemont, Va., U.S.—d. May 30, 1916, Washington, D.C.) U.S. guerrilla leader. He joined the Confederate cavalry in the AMERICAN CIVIL WAR and was a scout with JEB STUART's troops. He led guerrilla units, called Mosby's Rangers, on raids on Union outposts in northern Virginia and Maryland, disrupting supply and communication lines. His capture of a Union general and 100 of his men behind federal lines (1863) earned him promotion to colonel. After the war he resumed his law practice, and he later served as U.S. consul to Hong Kong (1878–85) and as assistant attorney in the U.S. Justice Department (1904–10).

Mosca \'mō-skä**, Gaetano** (b. April 1, 1958, Palermo, Sicily, Kingdom of the Two Sicilies—d. Nov. 8, 1941, Rome, Italy) Italian political theorist. Educated at the University of Palermo, he taught constitutional law there (1885–88) and at the Universities of Rome (1888–96) and Turin (1896–1908). A member of the Italian chamber of deputies from 1908, he was made senator for life by VICTOR EMMANUEL III in 1919. In works such as *The Ruling Class* (1896) he argued that, historically and properly, society has been governed by minorities, whether military, religious, oligarchic, or aristocratic.

Mosconi, Willie *in full* **William Joseph Mosconi** (b. June 27, 1913, Philadelphia, Pa., U.S.—d. Sept. 16, 1993, Haddon Heights, N.J.) U.S. pocket billiards player. The son of a billiards parlor owner, Mosconi began playing professionally in the early 1930s. Known for his accurate rapid-fire shooting, he was world champion 15 times between 1941 and 1957 and once had a run of 526 consecutive balls.

Moscow \'mäs-kō, 'mäs-kaù\ *Russian* **Moskva** \màs-'kvà\ Capital and largest city (pop., 2001 est.: 8,546,000) of Russia. It is located on both sides of the MOSKVA RIVER in western Russia, about 400 mi (640 km) southeast of ST. PETERSBURG and about 600 mi (970 km) east of Poland. Inhabited since Neolithic times, the site was first mentioned as a village in 1147 and became the capital of the principality of Moscow (Muscovy) in the late 13th century. It expanded in the 15th and 16th centuries under its grand dukes IVAN III and IVAN IV and became the capital of a united Russia (1547–1712). In 1812 it was occupied by the French under NAPOLEON and was almost entirely destroyed by fire. In 1918 it became the capital of the UNION OF SOVIET SOCIALIST REPUBLICS and expanded greatly. It suffered much damage from German bombing in World War II. In 1993 it was the scene of armed conflict between opposing government factions after the dissolution of parliament by BORIS YELTSIN. The spiritual home of the Russian Orthodox church for more than 600 years, it is a political, industrial, transportation, and cultural centre. Its most notable structure is the KREMLIN, a medieval fortress on the Moskva with RED SQUARE along its eastern wall. The Lenin Mausoleum is nearby, and St. Basil's Cathedral is at the southern end of the square. Moscow is also home to the Bolshoi Theatre, MOSCOW STATE UNIVERSITY, and many other institutions of higher education.

Moscow Art Theatre Russian theatre specializing in theatrical naturalism. It was founded in 1898 by KONSTANTIN STANISLAVSKY (as artistic director) and Vladimir Nemirovich-Danchenko (administrative director) with the goal of replacing old-fashioned histrionic acting and heavy-handed staging with a simpler and truer style. It opened with ALEKSEY TOLSTOY's *Tsar Fyodor Ioannovich* and won its first major success with ANTON CHEKHOV's *The Seagull*. Along with other plays by Chekhov, the theatre mounted new works by writers such as MAKSIM GORKY and MAURICE MAETERLINCK. Its company received acclaim on European and U.S. tours in 1922 and influenced later theatrical development worldwide. Since 1939 it has been known as the Moscow Academic Art Theatre.

Moscow River See MOSKVA RIVER

Moscow school School of late medieval Russian icon and mural painting. It succeeded the NOVGOROD SCHOOL as the dominant school of painting when Moscow rose to a leading position in the movement to expel the Mongols. The school flowered first under the influence of the painter Theophanes the Greek (c. 1330/40–1405), who moved to Moscow from Novgorod c. 1400 and introduced complexity of composition, subtle colour, and almost impressionistic rendering of figures. His most distinguished successor was ANDREI RUBLEV. From 1430 to the end of the century, Moscow grew in prestige and sophistication as the Mongols were driven out of Russia. When Constantinople fell to the Turks in 1453, Moscow became the

centre of Eastern Orthodoxy, and the new prestige of the Russian Orthodox church led to a new didactic iconography that expounded mysteries, rites, and dogma. By the 17th century the Stroganov school of Moscow artists assumed the leadership of Russian art.

Moscow State University *in full* **Lomonosov Moscow State University** Government-operated university in Moscow, Russia. Founded in 1755 by the linguist Mikhail Lomonosov with support from Elizabeth, empress of Russia, it is the oldest, largest, and most prestigious university in Russia. By the late 19th century it had established itself as a major centre of scientific research and scholarship. Moscow State University supports more than 350 departments, a number of research institutes and laboratories, several observatories, and various affiliated museums. Its library ranks among the largest in Russia (9 million volumes).

Moselle River *or* **Mosel River** \mō-'zel,\ *German* \'mō-zəl\ River, western Europe, about 340 mi (545 km) long. Rising in northeastern France, it flows north, forming part of the border between Germany and Luxembourg, then northeast into the Rhine River at Koblenz, Ger. In this part of the valley are the vineyards that produce the famous Moselle wines. The river, which is navigable for most of its course, passes Nancy, Metz, and Thionville in France and Trier in Germany. Among its chief tributaries are the Orne and the Saar.

Moser-Pröll \'mō-zər-'prōl**, Annemarie** *orig.* **Annemarie Pröll** (b. March 27, 1953, Kleinarl, Austria) Austrian downhill skier. She began skiing at age 4. She won downhill and slalom silver medals in the 1972 Winter Olympics and a downhill gold medal in 1980. She holds the all-time record of six women's World Cup championships, including five in succession (1971–75). She established a career record for both men and women in individual World Cup races won (59).

Moses (fl. 14th–13th century BC) Prophet of Judaism. According to the Book of Exodus, he was born in Egypt to Hebrew parents, who set him afloat on the Nile in a reed basket to save him from an edict calling for the death of all newborn Hebrew males. Found by the pharaoh's daughter, he was reared in the Egyptian court. After killing a brutal Egyptian taskmaster, he fled to Midian, where Yahweh (God) revealed himself in a burning bush and called Moses to deliver the Israelites from Egypt. With the help of his brother Aaron, Moses pleaded with the pharaoh for the Israelites' release. The pharaoh let them go after Yahweh had visited a series of plagues on Egypt, but then sent his army after them. Yahweh parted the waters of the Red Sea to allow the Israelites to pass, then drowned the pursuing Egyptians. Yahweh made a covenant with the Israelites at Mount Sinai and delivered the Ten Commandments to Moses, who continued to lead his people through 40 years of wandering in the wilderness until they reached the edge of Canaan. He died before he could enter the Promised Land. Authorship of the first five books of the Bible (see Torah) is traditionally ascribed to him.

Moses, Edwin (b. Aug. 31, 1955, Dayton, Ohio, U.S.) U.S. track-and-field athlete. He went to Morehouse College on an academic scholarship but starred in track. He won the gold medal for the 400-m hurdle in the 1976 and 1984 Olympics and set four successive world records in the event between 1976 and 1983.

Moses, Grandma *orig.* **Anna Mary Robertson** (b. Sept. 7, 1860, Greenwich, N.Y., U.S.—d. Dec. 13, 1961, Hoosick Falls, N.Y.) U.S. painter. She began to produce embroidery pictures after her husband died in 1927. When arthritis impaired her embroidering, she turned to painting. She had her first exhibition in a drugstore in 1938 at age 78. She went on to produce more than 1,000 nostalgic, naively executed scenes of turn-of-the-century rural life (e.g., *Catching the Thanksgiving Turkey*, *Over the River to Grandma's House*). By 1939 her pictures were being exhibited internationally, and from 1946 they were regularly reproduced on holiday greeting cards.

Moses, Robert (b. Dec. 18, 1888, New Haven, Conn., U.S.—d. July 29, 1981, West Islip, N.Y.) U.S. public official. He began his long career in public service in New York City's bureau of municipal research. In 1919 Gov. Alfred E. Smith appointed him chief of staff of the New York state reconstruction commission and, in 1924, head of both the New York and Long Island state park commissions. For 40 years in these and related positions, Moses supervised the vast expansion of the park system and the construction of numerous roads, bridges, tunnels, and housing projects in and around the city, reshaping it on a grand scale in often controversial ways.

Moses de León *orig.* **Moses ben Shem Tov** (b. c. 1240, León—d. 1305, Arevalo) Reputed author of the Sefer ha-Zohar, the most important work of Jewish mysticism. Little is known of his life, though he is believed to have lived in Guadalajara (the centre for Spanish adherents of the Kabbala) until 1290 and later to have traveled widely. He represented the *Zohar* as an ancient book that he had discovered, but it is more likely a work of his own authorship.

moshav \mō-'shäv\ (Hebrew: "settlement") Israeli cooperative community that combines privately farmed land and communal marketing, sometimes with light industry as well. The land on a moshav belongs to the state or the Jewish National Fund. The first successful moshavim were organized in the 1920s. New immigrants were directed to these settlements in the early years of the State of Israel. See also kibbutz.

Moshoeshoe \mō-'shwā-ˌshwā\ *or* **Mshweshwe** \em-'shwā-ˌshwā\ (b. c. 1786, near the upper Caledon River, northern Basutoland—d. March 11, 1870, Thaba Bosiu, Basutoland) Founder and first paramount chief of Sotho (later Basutoland; now Lesotho). In the 1830s and '40s he carefully played off British and Boer interests against one another. Involved in a series of wars, he proved a skillful tactician. In 1868 the British annexed Sotho, and Moshoeshoe's power waned. His descendant Moshoeshoe II (1938–96) was the first king of independent Lesotho.

Moskva \mȯs-'kvä\ **River** *or* **Moscow River** River, flowing through Moscow province and part of Smolensk province, western Russia. The river is 312 mi (502 km) long and drains an area of 6,800 sq mi (17,600 sq km). It runs through the city of Moscow to join the Oka River just below Kolomna. The river flows southeast through the Volga basin. It is navigable from Moscow and is an important source of the city's water supply.

Mosley, Sir Oswald (Ernald), 6th Baronet (b. Nov. 16, 1896, London, Eng.—d. Dec. 3, 1980, Orsay, near Paris, France) English politician and fascist. He served in the House of Commons (1918–31) as, successively, a Conservative, an Independent, and a Labourite. After a visit to Italy, he founded the British Union of Fascists in 1932. With his followers, he distributed anti-Semitic propaganda, conducted hostile demonstrations in the Jewish sections of eastern London, and wore Nazi-style uniforms. During World War II he was interned (1940–43) with his wife, Diana Guinness, a sister of Jessica and Nancy Mitford and friend of Adolf Hitler. In 1948 Mosley founded the Union Movement, an amalgam of right-wing book clubs.

mosque Islamic public place of prayer. The *masjid jāmiʿ*, or "congregational mosque," is the centre of community worship and the site of Friday prayer services. Though the mosque—originally a sacred plot of ground—has been influenced by local architectural styles, the building has remained essentially an open space, usually roofed, with a minaret sometimes attached. Statues and pictures are not permitted as decoration. The *minbar*, a seat at the top of steps placed at the right of the mihrab, is used by the preacher (*khaṭīb*) as a pulpit. Occasionally there is also a *maqṣūrah*, a box or wooden screen originally used to shield a worshiping ruler from assassins. The minaret, originally any elevated place but now usually a tower, is used by the muezzin (crier) to proclaim the call to worship five times each day. During prayer, Muslims orient themselves toward the *qiblah* wall, which is invariably oriented toward the Kaʿbah in Mecca. The mosque has traditionally been the centre of social, political, and educational life in Islamic societies.

Mosque of Omar See Dome of the Rock

mosquito Any of 2,500 dipteran species in the family Culicidae. The females of most species require a blood meal to mature their eggs. Through bloodsucking, females of various species (genera *Aedes*, *Anopheles*, and *Culex*) transmit human diseases, including dengue fever, encephalitis, filariasis, malaria, yellow fever, and elephantiasis. The adult has a long proboscis, a slender, elongated body, and long, fragile legs. The males (and sometimes the females) feed on plant juices. The female's characteristic sound is made by the vibration of thin membranes on the thorax. The females lay their eggs on the surface of a body of usu-

ally stagnant water, and the eggs hatch into aquatic larvae (wrigglers). In the far north larvae pass the winter frozen into ice. The wrigglers are eaten by fishes and aquatic insects, the adults by birds and dragonflies. Control measures have included elimination of breeding sites, application of surface films of oil to clog the larvae's breathing tubes, and use of larvicides.

Mosquito Coast *or* **Miskito Coast** Region along the coast of eastern Nicaragua and Honduras. It comprises a lowland about 40 mi (65 km) wide that skirts the Caribbean Sea for about 225 mi (360 km). It was visited by CHRISTOPHER COLUMBUS in 1502, but Europeans had little contact with the area until the rise of the buccaneers in the 17th century, after which England established a protectorate there. It is named for the Miskito Indians. Spain, Nicaragua, and the U.S. disputed England's protectorate until the CLAYTON-BULWER TREATY (1850). In 1894 the region was incorporated into Nicaragua, but the northern part was granted to Honduras in 1960 by the International Court of Justice. The chief town is Bluefields, at the mouth of the Escondido River in Nicaragua.

moss Any of at least 12,000 species of small, spore-bearing land plants in the BRYOPHYTE division, found worldwide except in salt water. Mosses are simple and ancient plants that have survived nearly unchanged since the PERMIAN PERIOD (290–248 million years ago). Commonly found in moist, shady locations (e.g., forest floors), mosses may range in size from microscopic to more than 40 in. (1 m) long. They prevent erosion and release nutrients from the substrates on which they grow. The life cycle shows clear ALTERNATION OF GENERATIONS between the sexual GAMETOPHYTE, with stemlike and leaflike structures that produce eggs and swimming sperm, and the SPOROPHYTE, a raised stalk that ends in a spore case (sporangium). Mosses also reproduce asexually by branching. The economically important genus *Sphagnum* forms PEAT. Many so-called mosses are not bryophytes, including Irish moss (a red form of ALGAE); beard moss, Iceland moss, oak moss, and reindeer moss (all LICHENS); Spanish moss (a name used variously for a lichen or an air plant of the pineapple family); and club moss (an evergreen herb of the family Lycopodiaceae).

Moss, Stirling (b. Sept. 17, 1929, London, Eng.) British Formula One racing driver. He won his first event in 1950 in England and went on to win scores of races, including the British Grand Prix and the Monaco Grand Prix (three times). In 1962 an accident ended his career. In all he won 16 Grand Prix events and is considered the greatest driver never to win a world championship.

Mossad \mō-'säd\ *Hebrew* **Mossad Merkazi le-Modiin U-letafkidim Meyuhadim ("Central Institute for Intelligence and Security")** Most important of Israel's major intelligence agencies. The Mossad carries out foreign espionage and covert political and paramilitary operations. Its director reports directly to the prime minister. It has enjoyed considerable success in operations against the country's Arab neighbours and Palestinian organizations, and it has an excellent reputation internationally for its effectiveness. Its secret agents are credited with the apprehension of ADOLF EICHMANN in Argentina, the execution of the killers of Israeli athletes at the 1972 Olympics, and the rescue of Israeli hostages in the ENTEBBE INCIDENT. In the late 20th and early 21st centuries, the Mossad was criticized for its treatment of detainees, many of whom were allegedly tortured and killed while in custody, and for its efforts to assassinate some Palestinian political leaders.

Mossi \'mȯ-sē\ People of Burkina Faso and other parts of western Africa, mainly Mali and Togo. They speak Mooré, a GUR language of the NIGER-CONGO family. Mossi society, organized as in the former MOSSI STATES (c. 1500–1895), is divided into royalty, nobles, commoners, and formerly slaves. The *morho naba* ("big lord") occupies a court in OUAGADOUGOU. In the colonial era the Mossi acted as trading intermediaries between the forest states and the cities of the Niger. Today most of the nearly six million Mossi are sedentary farmers.

Mossi states Complex of independent western African kingdoms (c. 1500–1895) around the headwaters of the VOLTA RIVER, within present-day Burkina Faso and Ghana. Though tradition held that their ancestors came from the east, perhaps in the 13th century, the kingdoms' origins are obscure. The MOSSI people harassed the empires of MALI and SONGHAI and vied for control of the NIGER RIVER. From c. 1400 the states acted as trading intermediaries between the forest states and the cities of the Niger. They remained independent until the French invasions of the late 19th century.

most-favoured-nation treatment Guarantee of same trading opportunities (i.e., tariff concessions) already granted to the most favoured nation (MFN). It is a method of establishing equal trading opportunities among states by making originally bilateral agreements multilateral. Attempts to guarantee equal trading opportunities were incorporated into commercial treaties as far back as the early 17th century. The Anglo-French treaty signed in 1860 became the model for many later TRADE AGREEMENTS, establishing a set of interlocking tariff concessions (see TARIFF) later extended worldwide by most-favoured-nation treatment. MFN treatment has always applied primarily to the duties charged on imports, but specific provisions have extended the principle to other areas of economic contact, including property rights, PATENTS, and COPYRIGHTS. See also GENERAL AGREEMENT ON TARIFFS AND TRADE; RECIPROCITY; WORLD TRADE ORGANIZATION.

Mostel \mä-'stel**, Zero** *orig.* **Samuel Joel Mostel** (b. Feb. 28, 1915, New York, N.Y., U.S.—d. Sept. 8, 1977, Philadelphia, Pa.) U.S. actor. He initially worked both on Broadway and in film, but after being blacklisted in Hollywood after 1955, he worked principally in theatre in New York City. He gave acclaimed performances in *Ulysses in Nighttown* (1958) and *Rhinoceros* (1961), and he had lead roles in the musicals *A Funny Thing Happened on the Way to the Forum* (1962) and *Fiddler on the Roof* (1964). His later films included MEL BROOKS's *The Producers* (1968) and *The Front* (1976), a film about the blacklisting era. Mostel was also a serious painter throughout his life.

Mosul \mō-'sül, 'mō-səl\ *Arabic* **Al-Mawṣil** \ˌál-maù-'sēl\ City (pop., 2003 est.: 1,800,000), northwestern IRAQ. Located across the TIGRIS RIVER from the ruins of ancient NINEVEH, which it succeeded, Mosul prospered until 1258, when it was ravaged by the MONGOLS. It was a centre of the OTTOMAN EMPIRE (c. 1534–1918). After World War I (1914–18) it was occupied by the British and in 1926 was ceded to Iraq. The country's second largest city and a chief commercial centre in the northwest, it has manufacturing (cement, textiles) and an oil refinery and nearby oil fields. It has many ancient buildings, some dating from the 13th century, including the Great Mosque and the Red Mosque.

Motagua \mō-'tä-gwä\ **River** River, eastern Guatemala. It is the country's longest river, flowing about 250 mi (400 km) east and northeast into the Gulf of Honduras near the Honduran border. Locally the river is called the Silbapec near its source and the Río Grande farther downstream. It is a major transportation artery for bananas, coffee, and other crops raised in its eastern valleys.

motel Hotel designed for persons traveling by automobile, with convenient parking space provided (the name blends the words "motor hotel"). Originally usually consisting of a series of separate or attached roadside cabins, motels serve commercial and business travelers and persons attending conventions and business meetings as well as vacationers and tourists. By 1950 the automobile was the principal mode of travel in the U.S., and motels were built near large highways, just as hotels had been built near railroad stations.

motet Latin choral composition, generally in one movement. Its origins are in the 13th century, when words (French *mots*) began to be added to originally wordless polyphonic lines in settings of plainchant. It grew directly out of the clausula, a polyphonic decoration of a portion of ORGANUM, but it soon split off to become a separate composition, while retaining a meaningless fragment of chant text and melody in the tenor part. The upper texts often became a confusing mixture of sacred and secular—and even anticlerical—poems, indicating its intended performance in courtly as well as ecclesiastical settings. The motet was the most important musical genre of the 13th century and an essential vehicle for the development of polyphony. In the Renaissance, sacred motets, now employing a single text, were written by composers such as JOSQUIN des Prez, ORLANDE DE LASSUS, and WILLIAM BYRD, though it remains unclear how often they were performed in church settings. In the 17th–18th centuries, motets were written by JEAN-BAPTISTE LULLY, MARC-ANTOINE CHARPENTIER, HEINRICH SCHÜTZ, and JOHANN SEBASTIAN BACH. After c. 1750 the genre declined, and its distinguishing characteristics became diffuse.

moth Any of several thousand LEPIDOPTERAN species, found in all but polar habitats. Moths are chiefly nocturnal and have a stouter body, duller colouring, and proportionately smaller wings than BUTTERFLIES. They have distinctive feathery antennae and, when at rest, fold their wings, wrap them around the body, or hold them extended at their sides. Wingspans range from less than 1 in. (2.5 cm) to about 1 ft (30 cm). The life cycle has four stages: egg, LARVA (caterpillar, or worm), PUPA (chrysalis), and adult (imago). Both larvae and adults of most species are plant eaters, and

many seriously damage forests, agricultural crops, and fabrics. See also BAGWORM MOTH; GYPSY MOTH; HAWK MOTH; LUNA MOTH; MILLER; SATURNIID MOTH; SILKWORM MOTH; TIGER MOTH; TUSSOCK MOTH.

Mother Goose Fictitious old woman, reputedly the source of the body of traditional children's songs and verses known as NURSERY RHYMES. Often pictured as a beak-nosed, sharp-chinned old woman riding on the back of a flying gander, she was first associated with nursery rhymes in *Mother Goose's Melody* (1781), published by the successors of JOHN NEWBERY. The name apparently derived from the title of CHARLES PERRAULT's collection of fairy tales *Ma Mère l'oye* (1697; "My Mother Goose"). The persistent rumour that Mother Goose was an actual Boston woman is false.

Mother Jones See Mary Harris JONES

Mother Lode Country Former gold-rush belt, SIERRA NEVADA foothills, central California, U.S. It was about 150 mi (240 km) long but only a few miles wide. The GOLD RUSH was sparked by the 1848 discovery of placer gold on JOHN SUTTER's property. The term *mother lode* evolved from the miners' concept of one main quartz vein with subsidiary offshoot veins. Exhaustion of the main gold streaks and a government-enforced price structure for gold caused mining operations to cease there in the 1930s. The area is dotted with scores of ghost camps and old mining towns.

Mother's Day and Father's Day Holidays. In the U.S. a nationwide observance of Mother's Day was suggested by Anna Jarvis of Grafton, W.Va., and in 1908 formal observances were held in churches in Grafton and Philadelphia. By 1911 every state celebrated the occasion on the second Sunday in May. It was formalized by Congress in 1914. In Britain, Mother's Day is celebrated in mid-Lent as Mothering Sunday. During the Middle Ages a custom developed of allowing those who had moved away to visit their home parishes and their mothers on Laetare Sunday, the fourth Sunday of Lent. Many other countries also celebrate the holiday on this date, while some mark the observance at other times of the year. Father's Day was first celebrated in 1910 in Spokane, Wash., through efforts of Sonora Dodd and the YMCA. Celebrated on the third Sunday in June, it became a legal holiday in 1972. Both days were originally largely religious holidays but have been commercialized with the sending of greeting cards and the giving of gifts.

Motherwell, Robert (b. Jan. 24, 1915, Aberdeen, Wash., U.S.—d. July 16, 1991, Provincetown, Mass.) U.S. painter, writer, and teacher. He received an art scholarship at 11, but he earned degrees from Stanford and Harvard before deciding to become a serious painter. He espoused ABSTRACT EXPRESSIONISM from the beginning of his career, and his erudite writings were largely responsible for the intellectual tone of the movement. In his *Elegy to the Spanish Republic* painting series, begun in 1949 and continued over three decades, he developed a limited repertory of simple, serene black forms that were applied to the picture plane in a way that created a sense of slow, solemn movement. Though he worked in various styles, his reputation rests on his pioneering work as a founder and principal exponent of Abstract Expressionism.

Motherwell, photograph by Arnold Newman, 1959

motion Change in position of a body relative to another body or with respect to a frame of reference or coordinate system. Motion occurs along a definite path, the nature of which determines the character of the motion. Translational motion occurs if all points in a body have similar paths relative to another body. Rotational motion occurs when any line on a body changes its orientation relative to a line on another body. Motion relative to a moving body, such as motion on a moving train, is called relative motion. Indeed, all motions are relative, but motions relative to the Earth or to any body fixed to the Earth are often assumed to be absolute, as the effects of the Earth's motion are usually negligible. See also BROWNIAN MOTION; PERIODIC MOTION; SIMPLE HARMONIC MOTION; SIMPLE MOTION; UNIFORM CIRCULAR MOTION.

motion, equation of Mathematical formula that describes the MOTION of a body relative to a given frame of reference, in terms of the position, VELOCITY, or ACCELERATION of the body. In classical MECHANICS, the basic equation of motion is Newton's second law (see NEWTON'S LAWS OF MOTION), which relates the force on a body to its MASS and ACCELERATION. When the force is described in terms of the time interval over which it is applied, the velocity and position of the body can be derived. Other equations of motion include the position-time equation, the velocity-time equation, and the acceleration-time equation of a moving body.

motion picture *or* **movie** Series of still photographs on film, projected in rapid succession onto a screen. Motion pictures are filmed with a movie camera, which makes rapid exposures of people or objects in motion, and shown with a movie projector, which reproduces sound synchronized with the images. The principal inventors of motion-picture machines were THOMAS ALVA EDISON in the U.S. and the LUMIÈRE brothers in France. Film production was centred in France in the early 20th century, but by 1920 the U.S. had become dominant. As directors and stars moved to HOLLYWOOD, movie studios expanded, reaching their zenith in the 1930s and '40s, when they also typically owned extensive theatre chains. Moviemaking was marked by a new internationalism in the 1950s and '60s, which also saw the rise of the independent filmmaker. The sophistication of special effects increased greatly from the 1970s. The U.S. film industry, with its immense technical resources, has continued to dominate the world market to the present day. See also COLUMBIA PICTURES; MGM; PARAMOUNT COMMUNICATIONS; RKO; UNITED ARTISTS; WARNER BROTHERS.

motion sickness Sickness caused by contradiction between external data from the eyes and internal cues from the balance centre in the INNER EAR. For example, in seasickness the inner ear senses the ship's motion, but the eyes see the still cabin. This stimulates stress hormones and accelerates stomach muscle contraction, leading to dizziness, pallor, cold sweat, and nausea and vomiting. Minimizing changes of speed and direction may help, as may reclining, not turning the head, closing the eyes, or focusing on distant objects. Drugs can prevent or relieve motion sickness but may have side effects. Pressing an ACUPUNCTURE point on the wrist helps some people.

motion study See TIME-AND-MOTION STUDY

motivation Factors within a human being or animal that arouse and direct goal-oriented behaviour. Motivation has long been a central subject of study in psychology. Early researchers, influenced by CHARLES DARWIN, ascribed much of animal and human behaviour to INSTINCT. SIGMUND FREUD believed that much of human behaviour was also based on irrational instinctive urges or unconscious motives. WALTER B. CANNON proposed that basic human drives served homeostatic functions by directing energies toward the reduction of physiological tensions. Behavioral psychologists, in contrast, stress the importance of external goals in prompting action, while humanistic psychologists examine the role of felt needs. Cognitive psychologists have found that a motive sensitizes a person to information relating to that motive: a hungry subject, for example, will perceive food stimuli as larger than other stimuli. See also BEHAVIOUR GENETICS; HUMAN NATURE; LEARNING.

Motley, Marion (b. June 5, 1920, Leesburg, Ga., U.S.—d. June 27, 1999, Cleveland, Ohio,) U.S. gridiron football player. He played fullback and linebacker for South Carolina State University and the University of Nevada. In 1946 he helped desegregate professional football by joining the Cleveland Browns as a fullback. A bruising rusher, he established himself as a running back and helped the Browns to five consecutive league championships (All-American Football Conference, 1946–49; NFL, 1950).

Motocross racing
KINNEY JONES

motocross Form of motorcycle racing in which cyclists compete on a closed course marked out over natural or simulated rough terrain. Courses vary widely but must be 1.5–5 km (1–3 mi) in length, with steep inclines, hairpin turns, and mud. Motorcycles are grouped into

© 2006 Encyclopædia Britannica, Inc.

classes according to engine displacement (e.g., 125-, 250-, 500-cc). It is probably the most physically demanding motorcycle sport.

Motoori Norinaga \ˌmō-tō-ˈō-rē-ˌnō-rē-ˈnä-gä\ (b. June 21, 1730, Matsuzaka, Japan—d. Nov. 5, 1801, Matsuzaka) Japanese Shintō scholar. Trained as a physician, he came under the influence of the Kokugaku movement, which stressed the importance of Japan's literary heritage. The critical methods he used in his commentaries on Japanese classics provided the theoretical foundation of the modern Shintō revival. Rejecting Buddhist and Confucian interpretations, he traced the genuine spirit of Shintō to Japanese myths and sacred traditions. He reaffirmed the ancient Japanese concept of *musubi* (the mysterious power of all creation and growth), which has become one of the main tenets of modern Shintō.

motorcycle Bicycle or tricycle propelled by an INTERNAL COMBUSTION ENGINE. The first motor tricycle was built in 1884 in England, and the first gasoline-engine motorcycle was built by GOTTLIEB DAIMLER in 1885. Motorcycles were widely used after 1910, especially by the armed forces in World War I. After 1950 a larger, heavier motorcycle was used mainly for touring and sport competitions. The moped, a light, low-speed motor bicycle that can also be pedaled, was developed mainly in Europe, and the sturdier Italian-made motor scooter also became popular for its economy.

motorcycle racing Sport of running motorcycles on tracks, closed circuits, or natural terrain. The main types are (1) road racing, conducted on a course made up wholly or partly of public roads; (2) trials, conducted both on and off the highway; (3) speedway racing, conducted on a short, flat, oval dirt track; (4) drag racing, conducted on a straight quarter-mile strip of pavement; (5) hill climbs, conducted on a large dirt mound; and (6) MOTOCROSS. The first international road race took place in Douran, France, in 1905. The most famous race is the Tourist Trophy, established on Britain's Isle of Man in 1907. Motorcycle racing in North America began in 1903; since 1937 the Daytona 200-mi (320-km) race has been the leading U.S. race.

Motorola, Inc. U.S. manufacturer of wireless communications, electronic systems, and semiconductors. The company was founded in 1928 in Chicago by brothers Paul and Joseph Galvin as the Galvin Manufacturing Corp. In 1930 Galvin introduced a low-cost automobile radio under the brand name Motorola, later adding Motorola police radios, home radios, phonographs, two-way radios, and television sets. The company changed its name to Motorola in 1947. Foreseeing a future demand for transistors, Motorola became a leading manufacturer of them in 1958, after licensing a transistor design from Bell Laboratories. Transistor technology led to the development of microprocessors, which Motorola marketed to computer makers in 1974. Although the company worked with IBM Corp. and Apple Computer in 1993 to develop the first consumer RISC (reduced-instruction-set computing) chip, Motorola realized greater success as a producer of embedded microprocessors—ubiquitous in kitchen appliances, pagers, video games, and handheld personal computers. Motorola was also a leader in the development of cellular telephone systems, and many of its cell phone designs became status symbols.

Motown U.S. recording company that gave its name to the hugely popular style of SOUL MUSIC that it created in the 1960s. It was founded in Detroit, Mich., in 1959 by the songwriter Berry Gordy, Jr. (b. 1929). (Motown, a contraction of "Motor Town," refers to Detroit's automotive industry.) It scored its first nationwide hits with "Shop Around" (1960) by the Miracles (see SMOKEY ROBINSON) and "Please Mr. Postman" (1961) by the Marvelettes. Its roster soon included the Temptations, the Four Tops, the SUPREMES, MARVIN GAYE, and STEVIE WONDER. The songwriting team Holland-Dozier-Holland (see BRIAN AND EDDIE HOLLAND) helped create the "Motown sound," which typically featured lyrical ballads sung to an infectiously rhythmic accompaniment. Motown became one of the most successful black-owned businesses and one of the most influential independent record companies in U.S. history. Later Motown names included the Isley Brothers, Gladys Knight and the Pips, and, in 1969, the Jackson 5 (see MICHAEL JACKSON). Motown continued to produce best-selling recordings by new artists such as Lionel Richie into the 1980s. Gordy moved the company headquarters to Los Angeles in 1971, and he finally sold the label to MCA in 1988.

Mott, Lucretia *orig.* **Lucretia Coffin** (b. Jan. 3, 1793, Nantucket, Mass., U.S.—d. Nov. 11, 1880, near Abington, Pa.) U.S. social reformer and women's rights advocate. She attended a Quaker boarding school near Poughkeepsie, N.Y., where she later taught. In 1811 she married a fellow teacher, James Mott, and she became an official Quaker minister in 1821. The Motts were active in the antislavery campaign, and Lucretia lectured widely on social reform. In 1848 she and ELIZABETH CADY STANTON organized the SENECA FALLS CONVENTION, and she thereafter devoted her attention primarily to women's rights, writing articles and lecturing widely. After the AMERICAN CIVIL WAR, she also worked for voting rights for freedmen. See also ABOLITIONISM; WOMAN SUFFRAGE.

Moultrie \ˈmül-trē, ˈmōl-trē**, William** (b. Dec. 4, 1730, Charleston, S.C.—d. Sept. 27, 1805, Charleston, S.C., U.S.) American Revolutionary officer. He served in the provincial assembly of South Carolina (1752–62) and gained military experience fighting the Cherokee. In the American Revolution he took command of a log fort on Sullivan's Island in Charleston harbour, where he repulsed a British attack in 1776. The fort was named in his honour, and he was made a brigadier general. He fought the British at Beaufort, S.C. (1779), but surrendered with the fall of Charleston (1780). He later served as governor of South Carolina (1785–87, 1792–94).

Mound Builders See HOPEWELL CULTURE

Mount, William Sidney (b. Nov. 26, 1807, Setauket, N.Y., U.S.—d. Nov. 19, 1868, Setauket) U.S. painter. He was apprenticed at 17 to his older brother as a sign painter. After studying drawing at the National Academy of Design, he painted historical subjects, but he later turned to genre painting and achieved immediate success with such works as *Rustic Dance After a Sleigh Ride* (1830). His portrayals of country life, affectionate and humorous without being sentimental, are a valuable record of his time. He was one of the first and most notable U.S. genre painters.

Mount Aspiring National Park Park, western SOUTH ISLAND, New Zealand. Established in 1964, it has an area of 1,223 sq mi (3,167 sq km), including much of the SOUTHERN ALPS and Mount Aspiring (9,932 ft [3,027 m]). Its southern boundary is FIORDLAND NATIONAL PARK. The park's landscape is varied, including glaciers, mountains, gorges, waterfalls, and passes, and it is the source of headwaters of seven major rivers. Birds common in the park include the tui, bellbird, fantail, and gray warbler. It is part of a regional UNESCO WORLD HERITAGE SITE designated in 1990.

Mount Cook National Park Park, west-central SOUTH ISLAND, New Zealand. Established in 1953, it has an area of 270 sq mi (700 sq km) and shares a western boundary with Westland National Park. It extends along the crest of the SOUTHERN ALPS. There are some 27 peaks higher than 10,000 ft (3,000 m) in the park, including Mount Cook (Aoraki, Aorangi), the highest point in New Zealand at 12,316 ft (3,754 m). More than one-third of the park is covered by permanent snow and glacial ice. It is part of a regional UNESCO WORLD HERITAGE SITE designated in 1990.

Mount Holyoke College Private liberal arts college for women in South Hadley, Mass. Founded by Mary Lyon as a female seminary in 1837, it was one of the first institutions of higher education for women in the U.S. Baccalaureate courses are taught in the humanities, science and mathematics, and social sciences. Mount Holyoke is part of an educational consortium with AMHERST, Hampshire, and SMITH colleges and the University of Massachusetts at Amherst.

Mount of Olives See Mount of OLIVES

Mount Rushmore National Memorial Colossal sculpture, BLACK HILLS, southwestern South Dakota, U.S. Sculptures of the heads of presidents GEORGE WASHINGTON, THOMAS JEFFERSON, THEODORE ROOSEVELT, and ABRAHAM LINCOLN are carved on the granite face of the mountain, which is 5,725 ft (1,745 m) high. The four heads, each about 60 ft (18 m) high, represent, respectively, the nation's independence, democratic process, leadership in world affairs, and equality. The memorial was dedicated in 1927. Work on it was carried out during 1927–41 under the direction of GUTZON BORGLUM.

Mount Vernon Home and burial place of GEORGE WASHINGTON. It is located in northern Virginia, U.S., on the POTOMAC RIVER near WASHINGTON, D.C. The estate was inherited by Washington in 1752. Near the 18th-century Georgian mansion is a plain brick tomb, built at Washington's direction, that holds his remains and those of his wife and several family members. After the U.S. government declined to buy it, in 1858 the Mount Vernon Ladies' Association of the Union raised $200,000 and purchased the house and 200 acres (80 hectares) of the estate; the association still maintains the site.

© 2006 Encyclopædia Britannica, Inc.

Mount Wilson Observatory Astronomical OBSERVATORY located atop Mount Wilson, near Pasadena, California, U.S. Founded in 1904 by George Ellery Hale (1868–1938), it was operated jointly with PALOMAR OBSERVATORY as Hale Observatories (1948–80). Its largest optical telescope, with a diameter of 100 in. (2.5 m), enabled EDWIN HUBBLE and his associates to discover evidence of an EXPANDING UNIVERSE and to estimate its size.

mountain Landform that rises well above its surroundings, generally exhibiting steep slopes, a relatively confined summit area, and considerable local relief (inequalities of elevation). Mountains are considered larger than hills, but the term has no standardized geologic meaning. Mountains are formed by the folding, faulting, or upwarping of the Earth's surface due to the movement of plates (see PLATE TECTONICS) or by the emplacement of volcanic rock onto the surface. For example, the Himalayan Mountains where India meets the Eurasian Plate were formed by a collision between plates that caused extreme compressional folding and the uplifting of large areas. The mountain ranges around the Pacific basin are attributed to the sinking of one plate beneath another. See also PLATEAU.

mountain ash Any of several shrubs or trees of the genus *Sorbus*, in the ROSE family, native to the Northern Hemisphere. They are widely cultivated as ornamentals for their white flower clusters and bright-orange fruits. Most noteworthy are the handsome American mountain ash, or dogberry (*S. americana*), and European mountain ash (*S. aucuparia*), also called rowan, or quickbeam. The European species grows to 60 ft (18 m), twice as high as the American species.

mountain goat *or* **Rocky Mountain goat** RUMINANT (BOVID species *Oreamnos americanus*) of the Yukon to the northern Rockies that is more closely related to ANTELOPES than to GOATS. Stocky, with a hump at the withers, mountain goats stand about 40 in. (1 m) at the shoulder. Both sexes bear short, hollow, slightly backward-curving, black horns. The shaggy, coarse white hair covers a thick, woolly underfur, and a beard frames the slender muzzle. The hooves are black. Mountain goats are agile climbers and can leap more than 12 ft (3.5 m). They live in small bands above the timberline, eating moss, lichen, and scrub foliage.

Mountain goat (*Oreamnos americanus*)
EARL KUBIS—ROOT RESOURCES

mountain laurel Flowering evergreen shrub (*Kalmia latifolia*) of the HEATH FAMILY, occurring in most mountainous regions of eastern North America. It grows to about 3–18 ft (1–6 m) in height and has oval leaves. The rosy, pink, or white flowers appear in large clusters above the foliage. The shrub is popular in landscape plantings.

mountain lion See COUGAR

mountain sheep See BIGHORN

mountaineering *or* **mountain climbing** Sport of attaining, or attempting to attain, high points in mountainous regions, mainly for the joy of the climb. The pleasures of mountaineering lie not only in the conquest of the peak but also in the physical and spiritual satisfactions brought about through intense personal effort, ever-increasing proficiency, and contact with natural grandeur. The greater rewards do not come without considerable risk and danger. The first great peak ascended in modern times was Mont BLANC, in 1786. Other Alpine peaks followed, capped by the ascent of the MATTERHORN in 1865. By the 1910s, most peaks of the Andes, the Rockies, and other Western Hemisphere ranges had been climbed, including Mount MCKINLEY (1913). Beginning in the 1930s a series of successful ascents of mountains in the Himalayas occurred; the summits of many of the Himalayan mountains were not reached until the 1950s, however. Of these climbs, the best known is the 1953 ascent of Mount EVEREST by EDMUND HILLARY and TENZING NORGAY. In the 1960s mountaineering became an increasingly technical sport, emphasizing the use of specialized anchoring, tethering, and grappling gear in the ascent of vertical rock or ice faces.

Mountbatten (of Burma), Louis Mountbatten, 1st Earl *orig.* **Louis Francis Albert Victor Nicholas, prince of Battenberg** (b. June 25, 1900, Frogmore House, Windsor, Eng.—d. Aug. 27, 1979, Donegal Bay, off Mullaghmore, County Sligo, Ire.) British statesman and naval commander. Son of Prince Louis of BATTENBERG and great-grandson of Queen VICTORIA, he entered the Royal Navy in 1913 and became an aide to the prince of Wales in 1921. In World War II he was allied commander for Southeast Asia (1943–46) and directed the recapture of Burma. Appointed viceroy of India (1947), he administered the transfer of power from Britain to the independent nations of India and Pakistan and served as the first governor-general of India (1947–48). He became first sea lord (1955–59) and chief of the United Kingdom Defense Staff (1959–65). In 1979, while on a sailing visit to Ireland, he was assassinated by Irish terrorists who planted a bomb on his boat.

Mounties See ROYAL CANADIAN MOUNTED POLICE

mourning dove Species (*Zenaida macroura*) of PIGEON (family Columbidae), the common wild pigeon of North America. They have long, pointed tails, and the sides of the neck are violet and pink. Their name comes from their call's haunting, mournful tone. Mourning doves are migratory; the northernmost populations migrate the farthest south. They are popular game birds. See also DOVE.

Mourning dove (*Zenaida macroura*)
ALVIN E. STAFFAN—THE NATIONAL AUDUBON SOCIETY COLLECTION/PHOTO RESEARCHERS

mouse Any of many species (family Muridae) of small, scampering RODENTS. They are distinguished from RATS principally by their smaller size. Mice are basically Asian in origin, but species have been introduced worldwide. Species in other rodent families (e.g., DEER MOUSE, POCKET MOUSE) are called mice without scientific basis. Mice eat grains, roots, fruit, grass, and insects. They can become pests but are mostly beneficial; they are the main prey of most furbearers and of predators that might otherwise take more valuable prey. The white laboratory mouse is a form of HOUSE MOUSE. See also FIELD MOUSE.

House mouse (*Mus musculus*).
INGMAR HOLMASEN

mouse Hand-controlled electromechanical device for interacting with a DIGITAL COMPUTER that has a GRAPHICAL USER INTERFACE. The mouse can be moved around on a flat surface to control the movement of a cursor on the computer display screen. Equipped with one or more buttons, it can be used to select text, activate programs, or move items around the screen by quickly pressing and releasing one of the buttons ("clicking") or by keeping a button depressed while moving the device ("clicking and dragging").

mouse deer See CHEVROTAIN

Mouskos, Mikhai Khristodolou See MAKARIOS III

Mousterian \mü-'stir-ē-ən\ **industry** Tool culture traditionally associated with the NEANDERTHALS in Europe, western Asia, and northern Africa during the early fourth (Würm) glacial period (c. 40,000 BC). The Mousterian tool assemblage included small hand axes made from disk-shaped cores; flake tools such as scrapers and points; toothed, sawlike instruments produced by making notches on a flake; and round limestone balls, believed to have served as bolas. Wooden spears were used to hunt large game such as the MAMMOTH and woolly rhinoceros. Mousterian implements disappeared abruptly from Europe with the passing of the Neanderthals.

mouth *or* **oral cavity** *or* **buccal cavity** \'bək-əl\ Orifice through which food and air enter the body. It opens to the outside at the lips and empties into the throat at the rear and is bounded by the lips, cheeks, hard and soft PALATES, and glottis. Its chief structures are the teeth (see TOOTH), TONGUE, and PALATE. It is the site of CHEWING and SPEECH formation. The mouth is lined by mucous membranes containing small GLANDS that, along with the SALIVARY GLANDS, keep it moist and clear of food and other debris.

Moyle District (pop., 2001: 15,933), Northern Ireland. It stretches along the northern coast of Ireland and includes Rathlin Island and part of the Antrim Mountains. A cave on Rathlin Island is said to have been the hiding place of ROBERT I in 1306. BALLYCASTLE is Moyle's administrative seat. The Giant's Causeway, along the coastal cliffs, and five of the nine Glens of Antrim are in Moyle.

Moynihan, Berkeley George Andrew *later* **Baron Moynihan (of Leeds)** (b. Oct. 2, 1865, Malta—d. Sept. 7, 1936, Carr Manor, Leeds, Yorkshire, Eng.) British surgeon and teacher of medicine. He wrote or cowrote authoritative monographs on surgery to treat diseases of various abdominal organs, as well as *Abdominal Operations* (1905), a standard text for two decades, and *Duodenal Ulcer* (1910), which secured his reputation as a clinical scientist. He stressed obtaining medical evidence from living bodies on the operating table rather than from autopsies. He helped found the *British Journal of Surgery* (1913) and organizations to promote nationwide and international communication among surgeons and specialists. He was raised to the peerage in 1929.

Moynihan, Daniel Patrick (b. March 16, 1927, Tulsa, Okla., U.S.—d. March 26, 2003, Washington, D.C.) U.S. scholar and politician. He grew up in poverty in New York City. After serving in the U.S. navy in World War II, he attended Tufts University, where he earned a doctorate in 1961. From 1961 to 1965 he worked at the U.S. Labor Department, where he cowrote a controversial report that attributed the educational problems of African Americans to the instability of urban African American families. He taught at Harvard (1966–77) and held advisory posts in the administration of RICHARD NIXON. He was ambassador to India (1973–75) and U.S. representative to the UN (1975–76). He ran successfully for the U.S. Senate from New York in 1976; though he was a Democrat, his candidacy was opposed by many Democratic liberals. Reelected three times, he retired in 2001. In 2000 he received the Presidential Medal of Freedom.

Mozambique \ˌmō-zäm-'bēk\ *officially* **Republic of Mozambique** *formerly* **Portuguese East Africa** Country, southeast coast of Africa. Area: 313,661 sq mi (812,379 sq km). Population (2005 est.): 19,407,000. Capital: MAPUTO. The great majority of the people are Bantu-speaking Africans. Ethnolinguistic groups include the Makua, Tsonga, Malawi, Shona, and YAO peoples. Languages: Portuguese (official), BANTU, SWAHILI. Religions: traditional beliefs, Christianity, Islam. Currency: metical. Mozambique may be divided into two broad regions: the lowlands in the south and the highlands in the north, separated by the ZAMBEZI RIVER. It has a centrally planned, developing economy based on agriculture, international trade, and light industry. Some industries were nationalized after 1975. Mozambique is a republic with one legislature; its head of state and government is the president. Inhabited in prehistoric times, it was settled by Bantu peoples c. the 3rd century AD. Arab traders occupied the coastal region from the 14th century, and the Portuguese controlled the area from the early 16th century. The slave trade later became an important part of the economy and, although outlawed in the mid-18th century, continued illegally. In the late 19th century, private trading companies began to administer parts of the inland areas. It became an overseas province of Portugal in 1951. An independence movement became active in the 1960s, and, after years of war, Mozambique was granted independence in 1975. A single-party state under Frelimo (the Mozambique Liberation Front), it was wracked by civil war in the 1970s and '80s. In 1990 a new constitution ended its Marxist collectivism and introduced privatization, a market economy, and multiparty government. A peace treaty was signed with the rebels in 1992.

Mozambique Channel Strait, western Indian Ocean. Located between Madagascar and Mozambique, it is about 950 mi (1,530 km) long, 250–625 mi (400–1,000 km) wide, and has a maximum depth of 10,000 ft (3,000 m). An important shipping route for eastern Africa, it receives all major Madagascar rivers and fronts the ports of Mahajanga and Toliara in Madagascar. Along the Mozambican coast are the mouth of the ZAMBEZI RIVER and the ports of MAPUTO and BEIRA.

Mozarabic \mō-'zar-ə-bik\ **art** Architecture and religious arts of the Mozarabs, Christians who lived in the Iberian Peninsula after the Arab invasion of 711. Exposure of the conquered Christians to Islamic culture and art forms proved influential, and their art became a synthesis of the two traditions. The subject matter is Christian, but the style shows the assimilation of Islamic decorative motifs and forms. Islamic influence is seen especially in Mozarabic architecture, with its horseshoe-shaped arches and ribbed domes. Through the emigration of Mozarabs, Islamic influence in the arts spread northward into the rest of Europe.

Mozart \'mōt-ˌsärt**, Wolfgang Amadeus** *orig.* **Johannes Chrysostomus Wolfgangus Theophilus Mozart** (b. Jan. 27, 1756, Salzburg, Archbishopric of Salzburg—d. Dec. 5, 1791, Vienna) Austrian composer. Son of the violinist and composer Leopold Mozart (1719–87), he was born the year of the publication of Leopold's best-selling treatise on violin playing. He and his older sister, Maria Anna (1751–1829), were prodigies; at age five he began to compose and gave his first public performance. From 1762 Leopold toured throughout Europe with his children, showing off the "miracle that God allowed to be born in Salzburg." The first round of touring (1762–69) took them as far as France and England, where Wolfgang met JOHANN CHRISTIAN BACH and wrote his first symphonies (1764). Tours of Italy followed (1769–74); there he first saw the string quartets of JOSEPH HAYDN and wrote his own first Italian opera. In 1775–77 he composed his violin concertos and his first piano sonatas. His mother died in 1779. He returned to Salzburg as cathedral organist and in 1781 wrote his opera seria *Idomeneo*. Chafing under the archbishop's rule, he was released from his position in 1781; he moved in with his friends the Weber family and began his independent career in Vienna. He married Constanze Weber, gave piano lessons, and wrote *The Abduction from the Seraglio* (1782) and many of his great piano concertos. The later 1780s were the height of his success, with the string quartets dedicated to Haydn (who called Mozart the greatest living composer), the three great operas on LORENZO DA PONTE's librettos—*The Marriage of Figaro* (1786), *Don Giovanni* (1787), and *Così fan tutte* (1790)—and his superb late symphonies. In his last year he composed the opera *The Magic Flute* and his great *Requiem* (left unfinished). Despite his success, he always lacked money (possibly because of gambling debts and a fondness for fine clothes) and had to borrow heavily from friends. His death at age 35 may have resulted from a kidney infection. No other composer left such an extraordinary legacy in so short a lifetime.

Mozi *or* **Mo-tzu** \'mō-'dzə\ (b. 470?, China—d. 391? BC, China) Chinese philosopher. Originally a follower of CONFUCIUS, Mozi evolved a doctrine of universal love that gave rise to a religious movement called Mohism. Like Confucius, he spent much of his life traveling from one feudal state to another in search of a prince who would allow him to put his teachings into practice. The *Mozi*, the principal Mohist work, condemned offensive war and urged people to lead a simple life harmful to none. Mohism won a considerable body of followers, but it died out after the 2nd century BC.

MP3 *abbreviation of* **MPEG-1, audio layer 3** Standard technology and format for the compression of audio signals into very small computer files. For example, sound data from a COMPACT DISC (CD) can be compressed to one-twelfth the original size without sacrificing sound quality. Because of small file size and ease of production from CD sources, the MP3 format is very popular for transmitting music files over the INTERNET. Although recording companies have sued many WEB SITES for facilitating the exchange of such copyrighted material, many now provide sample songs in MP3 format to promote CD sales, and some musicians bypass recording companies and issue their songs over the Internet in MP3 format only. See also DATA COMPRESSION.

MRI See MAGNETIC RESONANCE IMAGING

MS See MULTIPLE SCLEROSIS

MS-DOS \ˌem-ˌes-ˈdȯs\ *in full* **Microsoft Disk Operating System** OPERATING SYSTEM for PERSONAL COMPUTERS. MS-DOS was based on DOS, developed in 1980 by Seattle Computer Products. MICROSOFT CORP. bought the rights to DOS in 1981, and released MS-DOS with IBM's PC that year. Thereafter, most manufacturers of personal computers licensed MS-DOS as their operating system; by the early 1990s more than 100 million copies had been sold. WINDOWS, a GRAPHICAL USER INTERFACE program based on MS-DOS, became a popular alternative with the release of Version 3.0 in 1990; Windows 95 fully integrated the operating system and the graphical interface.

MSG See MONOSODIUM GLUTAMATE

MTV *in full* **Music Television** U.S. cable television network, established in 1980 to present videos of musicians and singers performing new rock music. MTV won a wide following among rock-music fans worldwide and greatly affected the popular-music business. Soon virtually every major pop or rock performer was making videos to be shown on MTV, and the reception of their videos directly affected future sales. The network later expanded to include original programming such as the animated *Beavis and Butthead* and the reality series *Real World*, separate international networks (e.g., MTV Europe, MTV Latin America, and MTV Russia), and the MTV Video Music Awards. MTV is controlled by the media conglomerate Viacom Inc.

Muʿāwiyah \mü-ˈä-wē-yə\ **I** (b. c. 602, Mecca, Arabian Peninsula—d. April/May 680, Damascus, Syria) First caliph (661–680) of the UMAYYAD DYNASTY. Born into a clan that initially rejected MUHAMMAD's preaching, he accepted Islam only after Muhammad had conquered Mecca. As governor of Damascus he built up the Syrian army until it was strong enough to resist attacks of the BYZANTINE EMPIRE. He opposed the leadership of ʿAlī, the fourth caliph, and eventually took the field against him. He claimed the caliphate after ʿAlī's death. To win the loyalty of non-Syrian Arabs, he introduced methods by which the tribes could keep the caliph informed of their interests. He channeled tribal aggressiveness into anti-Byzantine campaigns and in North Africa sent forces that captured Tripolitania and Ifrīqiyyah. To administer his large empire, he adopted Roman and Byzantine procedures, employing Christian bureaucrats whose families had served in Byzantine governments. By securing his son as his successor, he established hereditary rule. Though disparaged by later Muslim historians for deviating from Muhammad's leadership style and by Shīʿites for his role in usurping the authority of ʿAlī and his family, he is often portrayed in the Arabic literary tradition as the ideal ruler.

Ḥosnī Mubārak, 1982.
BARRY IVERSON/GAMMA

Mubārak \mü-ˈbä-räk**, Ḥosnī** (b. May 4, 1928, Al-Minūfiyyah governorate, Egypt) President of Egypt (from 1981). He attended a Soviet air academy and, as air force commander (from 1972), planned Egypt's opening moves in the 1973 ARAB-ISRAELI WAR. Named vice president in 1975, he became president on ANWAR EL-SĀDĀT's assassination in 1981. He maintained relations with Israel while working to restore Egypt to its traditional position as the most influential of the Arab states. In the 1990s Mubārak's government faced a rise in domestic terrorism, and he survived several assassination attempts. In 2005 he easily won Egypt's first multicandidate presidential election.

Mucha \ˈmü-ˌkä**, Alphonse** *orig.* **Alfons Maria Mucha** (b. July 24, 1860, Ivančice, Moravia, Austrian Empire—d. July 14, 1939, Prague, Czech.) Czech painter and designer. After study in Prague, Munich, and Paris, he became the principal designer of posters advertising the stage appearances of SARAH BERNHARDT; he designed sets and costumes for her as well. His many opulent posters and magazine illustrations made him one of the foremost designers in the ART NOUVEAU style. In 1922, after Czechoslovakia had become independent, he settled in Prague and designed the new republic's stamps and banknotes.

"Cycles Perfecta," poster by Alphonse Mucha to advertise an English brand of bicycle, 1902.
POSTERS PLEASE, INC.

muckraker Any of a group of U.S. writers identified with pre-World War I reform and exposé literature. The term, first used derisively, originated in an allusion THEODORE ROOSEVELT made in 1906 to a passage in JOHN BUNYAN's *Pilgrim's Progress* about a man with a muckrake who "could look no way but downward." Later it took on favourable connotations of social concern and exposure of corruption and injustice. The movement emerged from the YELLOW JOURNALISM of the 1890s and from popular magazines, such as a 1903 issue of *McClure's Magazine* with articles by LINCOLN STEFFENS, Ray Stannard Baker (1870–1946), and IDA TARBELL on municipal government, labour, and trusts. The best-known muckraking novel is UPTON SINCLAIR's *The Jungle* (1906).

mudang \ˈmü-ˌdäŋ\ In Korean religion, a priestess who effects cures, tells fortunes, soothes spirits of the dead, and wards off evil. Her male counterpart is called a *paksu*. The principal occasion for a performance by a *mudang* is the *kut*, a trance ritual in which singing and dancing invite happiness and repel evil. The *kut* addresses a series of gods or spirits, such as the gods of childbirth, harvest, and households. After an altar is set on the floor and offerings are made, the *mudang* goes into a trance, during which the god is said to arrive, to be placated, and then to communicate a message intended for the client.

Mudejar \mü-ˈthā-här\ (from Arabic *mudajjan*: "permitted to remain") Any member of a group of Muslims who remained in Spain after the Christian reconquest of the Iberian Peninsula (11th–15th century). In return for payment of a tax, the Mudejars were a protected minority, allowed to keep their religion, language, and customs. They formed separate communities in larger towns, where they were subject to their own Muslim laws. By the 13th century they had begun to use Spanish, which they wrote in Arabic characters. After 1492 they were forced to leave Spain or convert to Christianity, and by the early 17th century more than three million Spanish Muslims had been expelled.

mudflow Flow of water that contains large amounts of suspended particles and silt. Mudflows usually occur on steep slopes where vegetation is too sparse to prevent rapid erosion, but they can also occur on gentle slopes under certain conditions. Factors other than slope include heavy precipitation in a short period and easily erodible material.

Mudge, Thomas (b. September 1715, Exeter, Devon, Eng.—d. Nov. 14, 1794, Newington Place, Surrey) British watchmaker. In 1765 he invented the lever escapement, the most dependable and widely used device for regulating the movement of the spring-driven WATCH. He later worked to improve the marine CHRONOMETER.

mudor suan \mü-ˈdōr-shü-ˈän\ Ceremony in which the Votyaks or Udmurts (peoples of the Ural Mountains) consecrated a new family or

© 2006 Encyclopædia Britannica, Inc.

clan shrine when the ancestral home was too small to accommodate all its members and a new site had to be blessed. The main ceremony consisted of taking ashes from the hearth of the ancestral shrine (*kuala*) and transferring them to the shrine at the new location, which was then considered a subsidiary of the ancestral *kuala*.

mudra \mù-'drä\ In BUDDHISM and HINDUISM, a symbolic gesture of the hands and fingers used in ceremonies, dance, sculpture, and painting. Hundreds of mudras are used in ceremony and dance, often in combination with movements of the wrists, elbows, and shoulders. In ceremonies, especially in Buddhism, a mudra acts as a kind of seal, affirming a mystical or magical vow or utterance, such as a prayer to ward off evil. A mudra often accompanies the utterance of a MANTRA.

mufti \'mu̇f-tē\ Islamic legal authority charged with issuing an opinion (fatwa) in answer to an inquiry by a judge or a private individual. Such a judgment requires extensive knowledge of the QUR'ĀN and the ḤADĪTH as well as of legal precedents. During the Ottoman Empire the mufti of Istanbul was Islam's chief legal authority, presiding over the whole judicial and theological hierarchy. The development of modern legal codes in Islamic countries has significantly reduced the authority of mufti, and they now deal only with questions of personal status such as inheritance, marriage, and divorce.

Mugabe \mù-'gä-bā**, Robert (Gabriel)** (b. Feb. 21, 1924, Kutama, Southern Rhodesia) First prime minister (1980–87) and executive president (from 1987) of Zimbabwe. With JOSHUA NKOMO, Mugabe led a Marxist-inspired guerrilla war that forced the white-dominated government of IAN SMITH to accept universal elections, which Mugabe's party, Zimbabwe African National Union (ZANU), easily won. He formed a coalition government with Nkomo's Zimbabwe African People's Union (ZAPU), but he removed Nkomo in 1982. In 1984 the two parties were merged as ZANU–Patriotic Front, as Mugabe moved to convert Zimbabwe from a parliamentary democracy into a one-party socialist state. His rule was marked by violence and intimidation and by a decreasing tolerance of political opposition.

Muggeridge, Malcolm (Thomas) (b. March 24, 1903, Croydon, Surrey, Eng.—d. Nov. 24, 1990, Hastings, East Sussex) British journalist and social critic. A lecturer in Cairo in the late 1920s, he worked for newspapers in the 1930s before serving in British intelligence during World War II. He then resumed his journalistic career, including a stint as editor of *Punch* (1953–57). An outspoken and controversial iconoclast, he targeted liberalism and other aspects of contemporary life with his stinging wit and elegant prose. He was early an avowed atheist but moved gradually to embrace Roman Catholicism at age 79. He wrote some 30 books, including satiric novels and religious accounts, and from the 1950s was a popular interviewer, panelist, and documentarian on British television.

Mughal \'mü-gəl\ **architecture** Building style that flourished in India under the Mughal emperors from the mid16th to the late 17th century. The Mughal period marked a striking revival of Islamic architecture in northern India, where Persian, Indian, and various provincial styles were fused to produce works of great refinement. White marble and red sandstone were favoured materials. Most of the early Mughal buildings used arches only sparingly, relying on post-and-beam construction. The use of the double dome, a recessed archway inside a rectangular *fronton* (arena), and parklike surroundings are typical of the SHAH JAHAN period (1628–58), when Mughal design reached its zenith. Symmetry and balance between the parts of a building were stressed, as was delicate ornamental detail. Important Mughal undertakings include the TAJ MAHAL and the palace-fortress at Delhi (begun 1638).

Mughal \'mü-gəl\ **dynasty** *or* **Mogul** \'mō-gəl\ **dynasty** Muslim dynasty that ruled most of northern India from the early 16th to the mid-18th century. The dynasty's rulers, descended from TIMUR and GENGHIS KHAN, included unusually talented rulers over the course of seven generations, and the dynasty was further distinguished by its emperors' efforts to integrate Hindus and Muslims into a united Indian state. Prominent among the Mughal rulers were the founder, BĀBUR (r. 1526–30); his grandson AKBAR (r. 1556–1605); and SHAH JAHĀN. Under AURANGZEB (r. 1658–1707) the empire reached its greatest extent, but his intolerance sowed the seeds for its decline. It broke up under pressure from factional rivalries, dynastic warfare, and the invasion of northern India in 1739 by NĀDIR SHAH.

Mughal painting Style of painting, confined mainly to book illustrations and miniatures, that evolved in India during the MUGHAL DYNASTY (16th–19th centuries). In the initial phases the technique often involved a team of artists: one determined the composition, a second did the actual colouring, and a specialist in portraiture worked on individual faces. Probably the earliest example of Mughal painting is the illustrated folktale *Tuti-nameh* ("Tales of a Parrot"). Essentially a court art, it flourished under the emperors' patronage and declined when they lost interest. See also MUGHAL ARCHITECTURE.

P. CHANDRA

Mugwump Member of the reform faction of the early REPUBLICAN PARTY. In 1884 the Mugwumps refused to support the Republican presidential candidate, JAMES BLAINE, whom they considered politically corrupt, and campaigned instead for Democratic nominee GROVER CLEVELAND, whom they saw as a reformer. The term, derived from an Indian word for "war leader," had been used in political slang to mean "kingpin" and was applied to the breakaway group by a New York newspaper. In U.S. political slang *mugwump* came to mean any independent voter; the term was later adopted in England.

Muhammad *or* **Mohammed** (b. c. 570, Mecca, Arabia—d. June 8, 632, Medina) Arab prophet who established the religion of ISLAM. The son of a merchant of the ruling tribe, he was orphaned at age six. He married a rich widow, Khadījah, with whom he had six children, including Fāṭimah, a daughter. According to tradition, in 610 he was visited by the angel Gabriel, who informed Muhammad that he was the messenger of God. His revelations and teachings, recorded in the QUR'ĀN, are the basis of Islam. He began to preach publicly c. 613, urging the rich to give to the poor and calling for the destruction of idols. He gained disciples but also acquired enemies, whose plan to murder Muhammad forced him to flee MECCA for MEDINA in 622. This flight, known as the HIJRAH, marks the beginning of the Islamic era. Muhammad's followers defeated a Meccan force in 624; they suffered reverses in 625 but repelled a Meccan siege of Medina in 627. He won control of Mecca by 629 and of all Arabia by 630. He made his last journey to Mecca in 632, establishing the rites of the HAJJ, or pilgrimage to Mecca. He died later that year and was buried at Medina. His life, teachings, and miracles have been the subjects of Muslim devotion and reflection ever since.

Muhammad I Askia \mù-'hä-mȧd...ȧs-'kē-ə\ *or* **Muhammad Ture** \'tu̇r-ˌā\ (d. March 2, 1538, Gao, Songhai empire) West African statesman and military leader. In 1493, after wresting power from SONNI 'ALĪ's son Sonni Baru, Muhammad created an Islamic state whose civil code was the Qur'ān and whose official writing was Arabic. He set up an exemplary administration and remained in power until overthrown by his son, Askia Mūsā, in 1528.

Muḥammad V *orig.* **Sīdī Muḥammad ibn Yūsuf** (b. Aug. 10, 1909, Fès, Mor.—d. Feb. 26, 1961, Rabat) Sultan (1927–57) and king (1957–61) of Morocco. On his father's death, he was appointed sultan of French-ruled Morocco over his two brothers, largely because the French expected him to be more compliant. His nationalist feelings were subtly expressed throughout his rule. He protected Moroccan Jews from the Vichy occupation in World War II (1939–45). In 1953 the French exiled him for two years, but sustained nationalist pressure forced them to let him return. In 1956 he negotiated independence from France; the following year he took the title of king.

Muhammad, Elijah *orig.* **Elijah Poole** (b. Oct. 7, 1897, Sandersville, Ga., U.S.—d. Feb. 25, 1975, Chicago, Ill.) U.S. black separatist and leader of the NATION OF ISLAM. The son of sharecroppers and former slaves, he moved to Detroit in 1923. He joined the Nation of Islam and established its second temple, in Chicago; on the disappearance of its founder, Wallace D. Fard, in 1934, he became head of the movement. He was jailed for advocating draft evasion during World War II, but he continued to build membership of the Black Muslims in the postwar era. His relentless call for a separate nation for African Americans, whom he declared to be Allah's

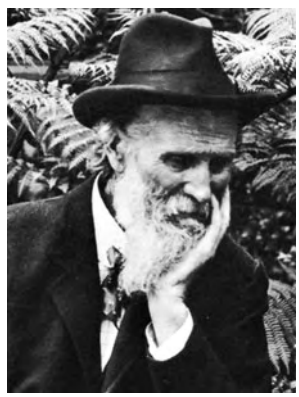
chosen people, prompted his most famous disciple, Malcolm X, to break with the group in 1964. He moderated his views in his later years.

Muḥammad ʿAbd al-Raʾūf al-Qudwah al-Ḥusaynī See Yāsir ʿArafāt



Muḥammad ʿAlī (b. 1769, Kavala, Macedonia, Ottoman Empire—d. Aug. 2, 1849, Alexandria, Egypt) Viceroy of Egypt (1805–48) for the Ottoman Empire and founder of the dynasty that ruled Egypt until 1953. He reorganized Egyptian society in the aftermath of the Napoleonic occupation, eliminating the remnants of the Mamlūks (see Mamlūk dynasty), restricting native merchants and artisans, and stamping out peasant rebellions. He nationalized most land, introduced the cultivation of cash crops, and attempted to develop modern industry, but his efforts were undermined by a lack of trained workers, the deleterious effects of excessive taxation, and a common disaffection with peasant conscription. He succeeded in securing for his family the hereditary right to rule Egypt and The Sudan (1841), which opened the way to eventual independence from Ottoman domination. See also ʿAbbās I.

Muḥammad ibn ʿAbd al-Karīm al-Khaṭṭābī See Abd el-Krim

Muḥammad ibn Tughluq \mu̇-ˈhä-mȧd-ˌi-bən-ˌtəg-ˈlək\ (b. c. 1290, Delhi, India—d. March 20, 1351, Sonda) Second sultan (r. 1325–51) of the Tughluq dynasty, who briefly extended the rule of the Delhi sultanate of northern India over most of the subcontinent. He transferred the capital from Delhi to Deogir (now Daulatabad) in an attempt to consolidate his hold on southern India; the resultant migration of northerners to the south spread the Urdu language there. He tried to enlist the services of the *ʿulamāʾ* (Muslim clerics) but was rebuffed; his overtures to the Sufis met a similar fate. His agricultural innovations included crop rotation and state farms as well as improvements in irrigation. Though he desired to create a more equitable social order, his harshness undermined his authority: during his reign he contended with 22 rebellions.

Muḥāsibī \mu̇-ˌhä-sē-ˈbē, mu̇-ˌḵä-sē-ˈbē**, al-** (b. c. 781, Al-Baṣrah—d. 857, Baghdad) Sufi theologian. He was reared in Baghdad in a prosperous family. He evolved a rationalist theology, advancing his ideas in didactic conversations with his pupils and in books written in the form of dialogues. His principal work minimized asceticism and acts of outward piety in favour of inward self-examination. Near the end of his life, he was persecuted as a heretic, but he was later seen as having anticipated the doctrines of Muslim orthodoxy.

Muhlenberg family \ˈmūē-lən-ˌberk,\ *English* \ˈmyü-lən-ˌbərg\ Distinguished U.S. family associated with the state of Pennsylvania and the Lutheran church. Henry Melchior Mühlenberg (1711–87) emigrated to Pennsylvania from Germany and served as overseer of all the Lutheran churches from New York to Maryland; in 1748 he founded the first Lutheran synod in America. His eldest son, John Peter Gabriel (1746–1807), was a Lutheran minister, a brigadier general in the Continental Army, and a member of Congress. Frederick Augustus Conrad (1750–1801), the second son, was a Lutheran minister who served in the Continental Congress and later became the first Speaker of the House of Representatives. William Augustus (1796–1877), grandson of Frederick Augustus Conrad, became an Episcopal priest and was the founder of St. Paul's College on Long Island and St. Luke's Hospital in New York City. Frederick Augustus Muhlenberg (1818–1901), nephew of the earlier Frederick Augustus, was a Lutheran clergyman and educator who served as the first president of Muhlenberg College in Allentown.

John Muir.
COURTESY OF THE LIBRARY OF CONGRESS, WASHINGTON, D.C.

Muir \ˈmyu̇r**, John** (b. April 21, 1838, Dunbar, East Lothian, Scot.—d. Dec. 24, 1914, Los Angeles, Calif., U.S.) U.S. naturalist and conservationist. Muir emigrated from Scotland with his family to Wisconsin in 1849. An 1867 accident caused him to abandon an industrial career and devote himself to nature. He began his efforts to establish a federal forest conservation policy in 1876. His writings swung public opinion in favour of Pres. Grover Cleveland's proposal for national forest reservations and influenced Pres. Theodore Roosevelt's conservation program, and he was largely responsible for establishing Sequoia and Yosemite national parks (1890). He was the chief founder and first president of the Sierra Club (1892–1914). In 1908 the U.S. government established the Muir Woods National Monument in Marin Co., California.

Muir Woods National Monument National woodland, northern California, U.S. A virgin stand of coastal redwoods, it covers an area of 554 acres (224 hectares) near the Pacific coast, northwest of San Francisco. Some of the trees are more than 300 ft (90 m) high, 15 ft (5 m) in diameter, and 2,000 years old. The park, established in 1908, was named in honour of the naturalist John Muir.

Muisca See Chibcha

mujahideen \mü-ˌja-hi-ˈdēn\ *Arabic* **mujāhidūn ("those engaged in jihad")** In its broadest sense, those Muslims who proclaim themselves warriors for the faith. Its Arabic singular, *mujāhid*, was not an uncommon personal name from the early Islamic period onward. However, the term did not gain popular currency as a collective or plural noun referring to "holy warriors" until the 18th century in India, where it became associated with Muslim revivalism. In the 20th century the term was used most commonly in Iran and Afghanistan. In Iran the Mojāhedin-e Khalq ("Mujahideen of the People"), a group combining Islamic and Marxist ideologies, engaged in a long-term guerrilla war against the leadership of the Islamic republic. The name was most closely associated, however, with members of a number of guerrilla groups operating in Afghanistan that opposed invading Soviet forces and eventually toppled the Afghan communist government during the Afghan War (1979–92). Rival factions thereafter fell out among themselves precipitating the rise of one faction, the Taliban. Like the term *jihad*—to which it is lexicographically connected—the name has been used rather freely, both in the press and by Islamic militants themselves, and often has been used to refer to any Muslim groups engaged in hostilities with non-Muslims or even with secularized Muslim regimes.

Mukden See Shenyang

Mukden Incident \ˈmu̇k-dən\ (1931) Seizure of the Manchurian city of Mukden (now Shenyang, China). Responding to Russian pressure from the north and to the increasingly successful unification of China by Chiang Kai-shek, the Japanese garrison in Manchuria used the pretext of an explosion along its railway to occupy Mukden. With reinforcements from the Japanese colony of Korea, its army had occupied all of Manchuria within three months. The Chinese withdrew and allowed the Japanese to establish the state of Manchuguo.

mulberry family Family Moraceae, composed of about 1,000 species of deciduous or evergreen trees in about 40 genera, found mostly in tropical and subtropical regions. Plants of the family contain a milky latex and produce multiple fused fruits. Edible fruits grow on the common mulberry (genus *Morus*), fig (in the largest genus, *Ficus*), and breadfruit. Silkworms (see silkworm moth) feed almost exclusively on the leaves of the white mulberry (*M. alba*). Among the ornamentals in the family are the paper mulberry and the Osage orange (*Maclura pomifera*). Other species include the India rubber tree, which is often placed in office lobbies, and the wide-spreading banyan tree.

mule Offspring of a male ass and a female horse. The less common cross of a female ass and a male horse is called a hinny. Most mules are sterile. The mule resembles the horse in height and in shape of neck and croup (rump); it resembles the ass in its long ears, small hooves, and short mane. The coat is usually brown or bay. Mules are 12–17.5 hands (50–70 in., 120–180 cm) high and weigh 600–1,500 lbs (275–700 kg). They have been used as pack animals for at least 3,000 years because of their ability to withstand hardships.

North America that lives alone or in small groups at high altitudes in summer and lower altitudes in winter. Mule deer stand 3–3.5 ft (90–105 cm) and are yellowish brown in summer, grayish brown in winter. The tail is white with a black tip, except on the black-tailed deer (*O. h. columbianus*), a Pacific Northwest subspecies. The male's antlers fork twice above a short tine near the base; a mature male normally has five tines on each antler. It is related to the WHITE-TAILED DEER.

mullah \'mə-lə\ Muslim title applied to a scholar or religious leader, especially in the Middle East and the Indian subcontinent. It means "lord" and has also been used in North Africa as an honorific attached to the name of a king, sultan, or member of the nobility. The title is now given to a variety of religious leaders, including teachers in religious schools, scholars of canon law, leaders of prayer in the mosques (IMAMS), and reciters of the QUR'ĀN (QURRĀ'). The word can also refer to the entire class that upholds the traditional interpretation of Islam.

Muller \'mə-lər**, Hermann Joseph** (b. Dec. 21, 1890, New York, N.Y., U.S.—d. April 5, 1967, Indianapolis, Ind.) U.S. geneticist. He attended Columbia University. The possibility of consciously guiding human evolution provided the initial motivation for his research, leading him to work in the Soviet Union's Institute of Genetics. He later assisted the Republican forces in the Spanish Civil War before returning to the U.S. in 1940; he thereafter taught principally at Indiana University (1945–67). In 1926 he first induced genetic mutations through the use of X rays, and he demonstrated that mutations are the result of breakages in chromosomes and of changes in individual genes. His receipt of the Nobel Prize in 1946 increased his opportunities to publicize the dangers posed by accumulating spontaneous mutations in the human gene pool as a result of industrial processes and radiation, and he devoted much energy to increasing public awareness of the genetic dangers of radiation.

Müller \'mʉ̄-lər**, Johannes Peter** (b. July 14, 1801, Koblenz, France—d. April 28, 1858, Berlin, Ger.) German physiologist, comparative anatomist, and natural philosopher. He studied at the Universities of Bonn and Berlin and later taught at both. His discovery that each sense organ responds to stimuli differently implied that external events are perceived only by the changes they produce in sensory systems. His investigations in physiology, evolution, and comparative anatomy contributed to knowledge of reflexes, the secretion and coagulation processes, the composition of blood and lymph, vision, and hearing. His studies of tumour cell structure began to establish pathological histology as a branch of science.

mullet Any of fewer than 100 species (family Mugilidae) of abundant, commercially valuable schooling fishes found in brackish or fresh waters throughout tropical and temperate regions. Mullets frequent shallow, inshore areas, searching the sand or mud for microscopic plants and small animals. They are silvery and 1–3 ft (30–90 cm) long, with large scales, a short snout, a cigar-shaped body, a forked tail, and two distinct dorsal fins, the first containing four stiff spines. The common, or striped, mullet (*Mugil cephalus*), cultivated in some areas, is a well-known species found worldwide.

Mulligan, Gerry *orig.* **Gerald Joseph Mulligan** (b. April 6, 1927, Queens Village, Long Island, N.Y., U.S.—d. Jan. 20, 1996, Darien, Conn.) U.S. JAZZ saxophonist, pianist, composer, arranger, and bandleader. He worked as staff arranger for GENE KRUPA's band in 1946, later writing arrangements and playing for the MILES DAVIS nonet's *Birth of the Cool* recordings (1949). Mulligan became one of the best-known exponents of cool jazz (see BEBOP). In 1952 he formed a pianoless quartet featuring trumpeter CHET BAKER.

Mullis, Kary B(anks) (b. Dec. 28, 1944, Lenoir, N.C., U.S.) U.S. biochemist. He received his doctorate from the University of California at Berkeley. In 1983 he invented the POLYMERASE CHAIN REACTION, with which scientists can determine the order of nucleotides in a gene, use genetic fingerprinting to identify individuals by their DNA patterns, study evolution, and make medical diagnoses. He did his prizewinning research at Cetus Corp. and later became a freelance consultant. He shared a 1993 Nobel Prize with Michael Smith (b. 1932). He is known for his free-wheeling personal style and his iconoclastic opinions and writings, including *Dancing Naked in the Mind Field* (1998).

Mulroney \məl-'rü-nē**, (Martin) Brian** (b. March 20, 1939, Baie-Comeau, Que., Can.) Prime minister of Canada (1984–93). The son of an electrician in a paper-and-pulp town, he grew up bilingual in English and French. He began practicing law in Montreal in 1965. In 1974 he served on a commission to investigate crime in Quebec's construction industry. From 1977 to 1983 he was president of the Iron Ore Company. Elected leader of the PROGRESSIVE CONSERVATIVE PARTY in 1983, he became prime minister when the party defeated the Liberals in the general election in 1984. Creating a coalition of Quebec nationalists and western conservatives, he advocated unification while recognizing Quebec as a "distinct society." He sought U.S. cooperation on acid rain and trade policies and helped negotiate NAFTA. He retired from politics in 1993.

Brian Mulroney, 1993.
RICK FRIEDMAN/BLACK STAR

Multan \mʉl-'tän\ City (pop., 1998: 1,182,000), central Pakistan, near the CHENAB RIVER. An ancient city, it was taken by ALEXANDER THE GREAT in 326 BC. It fell to the Muslims c. AD 712. For three centuries it remained the outpost of ISLAM in what was then India. It was subject to the Delhi sultanate and the Mughal Empire and was captured by the Afghans (1779) and the Sikhs (1818) before being subjugated by the British (1849–1947). It is a commercial and industrial centre, with textile mills, glass factories, and cottage industries, including pottery and camelskin work. It is the site of many Muslim shrines and an ancient Hindu temple.

multimedia Computer-delivered electronic system that allows the user to control, combine, and manipulate different types of media, such as text, sound, video, computer graphics, and animation. The most common multimedia machine consists of a PERSONAL COMPUTER with a sound card, MODEM, digital speaker unit, and CD-ROM. Interactive multimedia systems under commercial development include CABLE TELEVISION services with computer interfaces that enable viewers to interact with TV programs; high-speed interactive audiovisual communications systems, including video game consoles, that rely on digital data from FIBRE-OPTIC lines or digitized wireless transmission; and VIRTUAL REALITY systems that create small-scale artificial sensory environments.

multinational corporation Any corporation registered and operating in more than one country at a time, usually with its headquarters in a single country. A firm's advantages in establishing itself multinationally include both vertical and horizontal economies of scale (reductions in cost that result from an expanded level of output). Critics usually regard the multinational corporation as destructive of local economies abroad and as prone to monopolistic practices. See also CONGLOMERATE.

multiple birth Birth of more than one child from one pregnancy. Twins are most common, born in 1 of about every 80 pregnancies. Identical twins develop from a single fertilized egg, which splits into two genetically identical embryos (though physical traits may be modified during their development); they occur randomly but are more likely in older mothers. Incomplete or late division results in CONJOINED TWINS. Fraternal twins develop from two eggs fertilized by two sperm and are no more genetically alike than are other siblings. Most common among persons of African ancestry and least common among those of Asian ancestry, fraternal twins seem to run in families. Repeated twinning produces triplets, quadruplets, and so on; these multiples may be identical, fraternal, or a combination. The use of fertility drugs has increased the number of high-order multiple births. Medical and psychological "twin studies" compare fraternal and identical twins to learn about genetic influences on various characteristics and diseases.

multiple integral In CALCULUS, the INTEGRAL of a FUNCTION of more than one variable. As the integral of a function of one variable over an interval results in an area, the double integral of a function of two variables calculated over a region results in a volume. Functions of three variables have triple integrals, and so on. Like the single integral, such constructions are useful in calculating the net change in a function that results from changes in its input values.

multiple personality disorder See DISSOCIATIVE IDENTITY DISORDER

multiple sclerosis \sklə-'rō-səs\ Disease of the BRAIN and SPINAL CORD in which gradual, patchy destruction of the myelin sheath of nerve fibres

© 2006 Encyclopædia Britannica, Inc.

causes interruption or disordered transmission of nerve impulses. Its early symptoms may include limb weakness or trembling, visual problems, sensory disturbances, unsteady walking, and defective bladder control, which come and go irregularly. Attacks grow more severe, and some symptoms become permanent, sometimes with eventual complete PARALYSIS. Average survival from onset is about 25 years, but a rare acute form progresses over months. The cause remains uncertain and treatment unsatisfactory. Corticosteroids may ease symptoms. MS may be due to a delayed immune response that attacks the myelin sheaths; suggested causes include various common viruses. Dietary causes have also been suggested.

multiplexing Process of transmitting multiple (but separate) signals simultaneously over a single channel or line. Because the signals are sent in one complex transmission, the receiving end has to separate the individual signals. The two main types of multiplexing methods are time-division multiplexing (TDM) and frequency-division multiplexing (FDM). In TDM (typically used for digital signals) a device is given a specific time slot during which it can use the channel. In FDM (typically used for analog signals) the channel is subdivided into subchannels, each with a different frequency width that is assigned to a specific signal. Optical-fibre networks can use DWDM (dense wavelength-division multiplexing), in which different data signals are sent in different wavelengths of light in the fibre-optic medium.

multiplier In economics, a numerical coefficient showing the effect of a change in one economic variable on another. One macroeconomic multiplier, the autonomous expenditures multiplier, relates the impact of a change in total national investment on the nation's total income; it equals the ratio of the change in total income to the change in investment. If, for example, the total investment in an economy is increased by $1 million, a chain reaction of increases in consumption is set off. Producers of raw materials used in the investment projects and workers employed in the projects gain $1 million in income. If they spend on average three-fifths of that income, $600,000 will be added to the incomes of others. The makers of the goods they buy will in turn spend three-fifths of their new income on consumption. The process continues such that the amount by which total income increases may be computed by an algebraic formula. In this case, the multiplier equals $1/(1 - 3/5)$, or 2.5. This means that a $1 million increase in investment creates a $2.5 million increase in total income. Other multipliers include the money multiplier, which measures money creation resulting from a change in MONETARY POLICY; the government spending multiplier, which measures the change in national income resulting from changes in FISCAL POLICY; and the tax multiplier, which measures the changes in national income resulting from a change in taxes. The concept of the multiplier process was popularized in the 1930s by JOHN MAYNARD KEYNES as a means of measuring the effect of government spending.

multiprocessing Mode of computer operation in which two or more processors (see CPU) are connected and are active at the same time. In such a system, each processor is executing a different program or set of instructions, thus increasing computation speed over a system that has only one processor (which means only one program can be executed at a time). Because the processors must sometimes access the same resource (as when two processors must write to the same disk), a system program called the task manager has to coordinate the processors' activities.

multitasking Mode of COMPUTER operation in which the computer works on multiple tasks at the same time. A task is a computer program (or part of a program) that can be run as a separate entity. On a single-processor system, the CPU can perform preemptive (also called time slicing or time sharing) multitasking, where it executes part of one program, then switches to another program, and then returns to the first one. On MULTIPROCESSING systems, each processor can handle a separate task.

Mumbai \'məm-ˌbī\ *formerly* **Bombay** City (pop., 2001 prelim.: city, 11,914,398; metro. area, 16,368,084), capital of MAHARASHTRA state, western India. Located partly on Mumbai Island, it is flanked by Mumbai Harbour and the ARABIAN SEA. It is India's principal port on that sea and one of the largest and most densely populated cities in the world. The town was acquired by the Portuguese in 1534. It was ceded to the English as part of the dowry of CATHERINE OF BRAGANZA, who married CHARLES II in 1661. Granted to the British EAST INDIA COMPANY in 1668, it became the company's headquarters in 1672, and in 1708 it was made the centre of British authority in India. After the opening of the SUEZ CANAL in 1869, Mumbai grew to be the largest distributing entrepôt in India. It remains India's economic hub and the heart of financial and commercial activity, its cultural and education centre, and headquarters of its film industry.

Mumford, Lewis (b. Oct. 19, 1895, Flushing, N.Y., U.S.—d. Jan. 26, 1990, Amenia, N.Y.) U.S. architectural critic, urban planner, and cultural historian. After studying at the City College of New York and at the New School for Social Research, he taught at various universities and wrote for *THE NEW YORKER*, *The Dial*, and other magazines. In works such as *Technics and Civilization* (1934), *The City in History* (1961), and *The Myth of the Machine* (3 vol., 1967–70), Mumford analyzed the effects of technology and urbanization on human societies, criticizing the dehumanizing tendencies of modern technological society and urging that it be brought into harmony with humanistic goals and aspirations. See also URBAN PLANNING.

mumming play *or* **mummers' play** Traditional dramatic entertainment. Mumming plays, which feature the death of a champion who is restored to life by a doctor, are still performed in a few villages of England and Northern Ireland. Originally mummers were bands of masked persons who during winter festivals in Europe paraded through the streets and entered houses to dance or play dice in silence. Thus the name has been connected with words such as *mumble* and *mute* and non-English words meaning "mask." Mumming plays probably have links with primitive ceremonies marking important stages in the agricultural year.

mummy Body embalmed or preserved for burial in the manner of the ancient Egyptians. The process varied from age to age in Egypt, but it always involved removing the internal organs, treating the body with resin, and wrapping it in linen bandages. (In later Egyptian times, the organs were replaced after treatment.) Among the many other peoples who practiced mummification were those of the TORRES STRAIT, near Papua New Guinea, and the INCAS.

mumps *or* **epidemic parotitis** \ˌpar-ə-ˈtīt-əs\ Acute contagious viral disease with inflammatory swelling of the SALIVARY GLANDS. Epidemics often occur, mostly among 5- to 15-year-olds. Cold symptoms with low fever are followed by swelling and stiffening in front of the ear, often on both sides. This rapidly spreads toward the neck and under the jaw. Pain is seldom severe, with little redness, but chewing and swallowing are difficult. During recovery in patients past puberty, other glands may be affected, but usually not seriously. The testes may atrophy, but sterility is very rare. While inflammation of the brain and MENINGES is fairly common, chances of recovery are good. Mumps needs no special treatment, and patients usually develop immunity. Vaccination can prevent it.

Muna \ˈmü-nə\ **Island** Island, east-central Indonesia. Located in the Flores Sea off the southeastern coast of CELEBES (Sulawesi), it is 63 mi (101 km) long and 35 mi (56 km) wide and has an area of 1,124 sq mi (2,911 sq km). It has a hilly, forested surface, rising to 1,460 ft (445 m). The Muna, a Muslim people who speak an Austronesian language, practice a simple agriculture, growing rice and tubers. The hoglike babirusa and the marsupial cuscus are found on the island. The main town and principal port is Raha, on the northeastern coast.

Munaẓẓamat al-Taḥrīr al-Filasṭīniyyah See PALESTINE LIBERATION ORGANIZATION

Munch \ˈmůŋk**, Edvard** (b. Dec. 12, 1863, Løten, Norway—d. Jan. 23, 1944, Ekely) Norwegian painter and printmaker. His life and art were marked by the deaths of both parents, his brother, and his sister during his childhood, and the mental illness of another sister. He received little formal training, but the encouragement of a circle of artists in Christiania (now Oslo) and exposure to IMPRESSIONISM and POST-IMPRESSIONISM helped him develop a highly original style. It was principally through his work of the 1890s, a series of paintings on love and death in which he gave form to mysterious

Edvard Munch, self-portrait, lithograph, 1895; in the Albertina, Vienna
COURTESY OF THE ALBERTINA, VIENNA

© 2006 Encyclopædia Britannica, Inc.

and dangerous psychic forces, that he made crucial contributions to modern art. *The Scream* (1893), his most famous work, is often seen as a symbol of modern humanity's spiritual anguish. His etchings, lithographs, drypoints, and woodcuts closely resemble his paintings in style and subject matter. After a nervous breakdown in 1908–09, therapy lent his work a more positive, extroverted tone, but his art never recovered its former intensity. His work influenced the proponents of German Expressionism.

Munda \'mən-də**, Battle of** (45 BC) Conflict that ended the Roman civil war between the forces of Pompey the Great and Julius Caesar. The two forces met in Spain, where the late Pompey's sons had seized Córdoba in revolt. Caesar lured the Pompeians from their high ground to do battle; when the rebels maneuvered a contingent to meet a cavalry charge, it was mistaken for a retreat by their army, which broke and fled, and Caesar claimed victory.

Munda \'mün-də\ **languages** Family of about 17 languages spoken in India, Bangladesh, and Nepal that together with Mon-Khmer comprises the Austroasiatic superfamily. Munda languages are spoken by more than seven million people, all members of tribal groups living mainly in hilly and forested regions. Most significant are Santali, with more than four million speakers concentrated in northern Orissa, southern and eastern Bihar, northwestern Bengal, and the Nepal-Assam border; Ho, with about 750,000 speakers mainly in Bihar and Orissa; Mundari, with about 850,000 speakers scattered over northeastern India; and Korku, the westernmost Munda language, spoken by about 320,000 in southern Madhya Pradesh and northern Maharashtra. Munda languages differ from all other Austroasiatic languages in complexity of morphology and in having basic subject-object-verb rather than subject-verb-object word order.

Mundell, Robert A(lexander) (b. Oct. 24, 1932, Kingston, Ont., Can.) Canadian-born economist who received the Nobel Prize in Economic Sciences in 1999 for his work on monetary dynamics and optimum currency areas. Mundell earned degrees from the University of British Columbia (B.A., 1953), the University of Washington (M.A., 1954), and the Massachusetts Institute of Technology (Ph.D., 1956). He taught economics at the University of Chicago (1956–57) and Columbia University (1974–). Through research for the International Monetary Fund, Mundell analyzed the effect of exchange rates on monetary policies. In 1961 he theorized that an economic region characterized by free movement of labour and trade could support a single currency. His theories contributed to the creation of the euro, the single currency adopted by the European Union on Jan. 1, 1999.

Munich \'myü-nik\ *German* **München** \'mün-kən\ City (pop., 2002 est.: city, 1,227,958; metro. area, 1,893,715), capital of Bavaria, Germany. Located along the Isar River, it was founded c. 1158 at the site of an ancient monastery. It became the capital of Bavaria under the ruling Wittelsbach family. The city developed as a centre of music and theatre through the 19th century. After World War I it became a centre of right-wing political ferment; it was the site of the 1923 Beer Hall Putsch, Adolf Hitler's attempted rising against the Bavarian government, and subsequent Nazi Party activities. It was the site for the signing of the 1938 Munich agreement. In World War II it suffered heavily from Allied bombing. Some medieval structures survived, including the cathedral and town hall. Today Munich is a trade, cultural, educational, and industrial centre known for its many museums and for manufacturing and beer and ale brewing.

Munich, University of *German in full* **Ludwig-Maximilians Universität München** Autonomous university supported by the state of Bavaria, Germany. It was founded in Ingolstadt in 1472 and modeled after the University of Vienna. During the Protestant Reformation it was a centre of Roman Catholic opposition to Martin Luther. In 1799 schools of economics and political science were added, and in 1826 it moved to Munich, where agricultural and technical programs were founded.

Munich agreement (1938) Settlement reached by Germany, France, Britain, and Italy permitting German annexation of Czechoslovakia's Sudetenland. Adolf Hitler's threats to occupy the German-populated part of Czechoslovakia stemmed from his avowed broader goal of reuniting Europe's German-populated areas. Though Czechoslovakia had defense treaties with France and the Soviet Union, both countries agreed that areas in the Sudetenland with majority German populations should be returned. Hitler demanded that all Czechoslovaks in those areas depart; when Czechoslovakia refused, Britain's Neville Chamberlain negotiated an agreement permitting Germany to occupy the areas but promising that all future differences would be resolved through consultation. The agreement, which became synonymous with appeasement, was abrogated when Hitler annexed the rest of Czechoslovakia the next year.

Munich Putsch See Beer Hall Putsch

Muñoz Marín \mün-'yōs-mə-'rēn**, Luis** (b. Feb. 18, 1898, San Juan, P.R.—d. April 30, 1980, San Juan) Statesman and four-term governor of Puerto Rico (1948–64). Educated in the U.S., he became editor of the newspaper *La Democracia* and was elected to the Puerto Rican senate in 1932. Early in his career he advocated independence from the U.S., but later he worked closely with the U.S.-appointed governor to improve conditions in Puerto Rico. He achieved success with Operation Bootstrap, a program for rapid economic growth. When Puerto Rico received the right to elect its own governor in 1948, he was overwhelmingly elected and repeatedly reelected. He achieved his goal of making Puerto Rico a commonwealth.

Muñoz Rivera \'mün-yōs-rē-'ver-ä**, Luis** (b. July 17, 1859, Barranquitas, P.R.—d. Nov. 15, 1916, Santurce) Puerto Rican statesman, publisher, and patriot. In 1889 he founded the newspaper *La Democracia*, which crusaded for Puerto Rican self-government. He was instrumental in obtaining Puerto Rico's charter of home rule from Spain in 1897. He was president of the first autonomist cabinet, but he resigned after Spain ceded Puerto Rico to the U.S. His son Luis Muñoz Marín was governor of Puerto Rico.

Munro \mən-'rō**, Alice** *orig.* **Alice Anne Laidlaw** (b. July 10, 1931, Wingham, Ont., Can.) Canadian writer. She is known for exquisitely drawn short stories, usually set in rural Ontario and peopled by characters of Scotch-Irish stock. Her collections *Dance of the Happy Shades* (1968), *Who Do You Think You Are?* (1978), and *The Progress of Love* (1986) won the Governor General's Award for Fiction. Her other collections include *Something I've Been Meaning to Tell You* (1974), *The Moons of Jupiter* (1982), *Friend of My Youth* (1986), *Open Secrets* (1994), *The Love of a Good Woman* (1998), and *Hateship, Friendship, Courtship, Loveship, Marriage* (2001).

Munsey, Frank Andrew (b. Aug. 21, 1854, Mercer, Maine, U.S.—d. Dec. 22, 1925, New York City, N.Y.) U.S. newspaper and magazine publisher. He managed a telegraph office before moving to New York City, where he founded *Golden Argosy* (1882), later renamed *Argosy Magazine*; and *Munsey's Magazine* (1889), the first inexpensive, general-circulation, illustrated magazine in the U.S. He acquired several newspapers in Baltimore and New York, some of which disappeared in profitable mergers. He viewed his publications purely as moneymaking enterprises and maintained colourless editorial policies. He left most of his large fortune to the Metropolitan Museum of Art in New York City.

Münster \'mün-stər\ City (pop., 2002 est.: 267,197), western Germany. Founded in 804 as a bishopric, it was named Münster in 1068 and was chartered in 1137. A member of the Hanseatic League from the 13th century, it was seized by the Anabaptists in 1535. The Peace of Westphalia was signed in Münster in 1648, and in 1815 Münster became the capital of Prussian Westphalia. Although it suffered heavy damage in World War II, most of its historic buildings were restored or rebuilt, including the 13th-century cathedral and 14th-century town hall. It is a centre of Westphalian culture.

Munster Province (pop., 2002 prelim.: 1,101,266), southern Ireland. It has an area of 9,315 sq mi (24,127 sq km). The region was ruled by a southern clan, which gradually extended its power over Munster by c. AD 400. In the 10th century Vikings invaded and eventually settled in Waterford and Limerick. After the 12th-century Anglo-Norman invasion, it was ruled by the feudal families of Fitzgerald and Butler. It now comprises the counties of Clare, Cork, Kerry, Limerick, Tipperary (North Riding and South Riding), and Waterford.

Chinese muntjac (*Muntiacus reevesi*)
KENNETH W. FINK—ROOT RESOURCES

muntjac \'mənt-ˌjak\ *or* **barking deer** Any of about seven species of solitary, nocturnal deer, native to

© 2006 Encyclopædia Britannica, Inc.

Asia and introduced into England and France, that constitute the genus *Muntiacus* (family Cervidae). Named for their cry, most species stand 15–25 in. (40–65 cm) high, weigh 33–77 lbs (15–35 kg), and are grayish, reddish, or brown. Males have tusklike upper canine teeth and short one-branched antlers. Bony ridges extend from the antler base onto the face. The giant muntjac (88–110 lbs, or 40–50 kg) was discovered in northern Vietnam in 1993–94. Fea's muntjac (*M. feae*), of Myanmar and Thailand, is endangered, and other muntjac species are threatened.

Müntzer \'mənt-sər**, Thomas** *or* **Thomas Munzer** (b. sometime before 1490, Stolberg, Thuringia—d. May 27, 1525, Mühlhausen) German religious reformer. A student of theology and an associate of Martin Luther, he served as a pastor until his socialism and mystical doctrines led to his removal. His belief in the inner light of the Holy Spirit as opposed to the authority of the Bible alienated the Lutherans. He preached widely, championing the common people, and in 1525 he organized the working classes of Mühlhausen. He led the Peasants' Revolt in Thuringia in 1524–25; after the defeat of his forces, he was tortured, tried, and executed.

muqarnas See stalactite work

Muqi Fachang *or* **Mu-hsi Fa-ch'ang** (fl. 13th century, Sichuan province, China) Chinese Chan (Japanese: Zen) Buddhist painter. Toward the end of the Southern Song dynasty (1127–1279), Muqi fled to a monastery near Hangzhou. He painted a variety of subjects—including landscapes, flowers, still lifes, and more orthodox iconographic subjects. The most famous paintings associated with Muqi include *Six Persimmons* and a triptych with a white-robed Guanyin flanked on either side by a scroll of monkeys and a crane. The paintings vary in style and subject matter, but there is throughout a sense of immediate vision and a totally responsive hand, expressed with broad and evocative washes of ink. His paintings on Chan themes stimulated many copies in Japan.

Murābiṭūn, al- See Almoravid dynasty

Murad, Ferid (b. Sept. 14, 1936, Whiting, Ind., U.S.) U.S. pharmacologist. He received his M.D. and Ph.D. from Western Reserve University (later Case Western Reserve University). Murad showed that nitroglycerin and related heart drugs induce the formation of nitric oxide, a gas that increases the diameter of blood vessels. Along with Robert F. Furchgott and Louis J. Ignarro, he was awarded a 1998 Nobel Prize for the discovery that nitric oxide acts as a signaling molecule in the cardiovascular system. Their combined work uncovered an entirely new mechanism for how blood vessels relax and widen. This discovery led to the development of the drug Viagra, which is used to treat erectile dysfunction.

mural Painting applied to and made integral with the surface of a wall or ceiling. Its roots can be found in the universal desire that led prehistoric peoples to create cave paintings—the desire to decorate their surroundings and express their ideas and beliefs. The Romans produced large numbers of murals in Pompeii and Ostia, but mural painting (not synonymous with fresco) reached its highest degree of creative achievement in Europe with the work of such Renaissance masters as Masaccio, Fra Angelico, Leonardo da Vinci, Michelangelo, and Raphael. In the 20th century, the mural was embraced by artists of the Cubist and Fauve movements in Paris, revolutionary painters in Mexico (e.g., Diego Rivera, José Clemente Orozco, David Alfaro Siqueiros), and Depression-era artists under the sponsorship of the U.S. government (e.g., Ben Shahn, Thomas Hart Benton).

Murasaki Shikibu \mu-'rä-sä-kē-'shē-kē-bu\ (b. c. 978, Kyōto, Japan) Japanese writer. Her real name is unknown, and the primary source of knowledge about her life is a diary she kept (1007–10). Her *Tale of Genji* (completed c. 1010) is a long and complex tale, concerned mostly with the loves of Prince Genji and the women in his life. Supremely sensitive to human emotions and the beauties of nature, it provides delightful glimpses of life at the court of the empress Jōtō mon'in, whom Murasaki served. It is generally considered the greatest work of Japanese literature and perhaps the world's first novel.

Murat \mə-'rä**, Joachim** (b. March 25, 1767, La Bastide-Fortunière, France—d. Oct. 13, 1815, Pizzo, Calabria) French soldier and king of Naples (1808–15). He served in Italy and Egypt as a daring cavalry commander, and later he aided Napoleon in his coup d'état (1799) and married Napoleon's sister Caroline Bonaparte. He helped win the Battle of Marengo (1800). Appointed governor of Paris, he was promoted to marshal in 1804. After victories at the Battles of Austerlitz (1805) and Jena (1806), he was made king of Naples (1808), where he carried out administrative and economic reforms and encouraged Italian nationalism. He led troops in Napoleon's Russian campaign at the Battle of Borodino (1812) but left the army during its retreat from Moscow. He supported Napoleon again during the Hundred Days in 1815, but he was defeated with his Neapolitan forces at the Battle of Tolentino and was later taken prisoner and shot.

CLICHE MUSEES NATIONAUX, PARIS

Murchison River River, Western Australia, Australia. Sporadically flowing west to the Indian Ocean, it is 440 mi (708 km) long. In 1891 the river's name was given to one of Australia's richest goldfields, and some gold is still mined in the area. Kalbarri National Park is on the lower Murchison, where the river cuts a scenic gorge through the coastal range.

Murcia \'mər-shə\ Autonomous community (pop., 2001: 1,197,646), province, and historic region, southeastern Spain. It covers 4,368 sq mi (11,314 sq km), and its capital is the city of Murcia. It was an independent Moorish kingdom until its annexation by Castile in 1243. The autonomous community was established in 1982. The Segura River flows through its centre, irrigating rich farmland and orchards. The ports of Cartagena, Mazarrón, and Aguilas have grown with the development of shipping and mining along the coastal plain. Principal crops are grain, olives, grapes, and melons.

Murcia City (pop., 2001: 370,745), capital of the autonomous community of Murcia, southeastern Spain. The site was settled before the Roman occupation of Spain in the 3rd century BC. It became the Muslim city of Mursīyah in AD 825, when it was made a provincial capital by the emir of Córdoba. It was the birthplace of Ibn al-ʿArabī (1165). The Segura River divides the city into older and newer parts. The 14th-century cathedral was restored in the 18th century. It is a communications and agricultural-trade centre for surrounding areas. Its silk industry dates from Moorish times.

murder See homicide

Murder, Inc. Popular name for an arm of the U.S. national crime syndicate founded c. 1930 in Brooklyn, N.Y., to threaten, maim, or murder designated victims for a price. Its services were available to any syndicate member anywhere in the country; many of its victims were themselves syndicate members who were killed for "business reasons." Its principal figures were Louis Buchalter, known as Louis Lepke, and Albert Anastasia. Investigated by Thomas Dewey, it was exposed in 1940–41 by a former member, Abe "Kid Twist" Reles, who described some 70 murders and suggested hundreds more; he himself died mysteriously in the middle of the investigation.

Murdoch \'mər-ˌdäk**, Dame (Jean) Iris** (b. July 15, 1919, Dublin, Ire.—d. Feb. 8, 1999, Oxford, Oxfordshire, Eng.) British novelist and philosopher. A graduate of the University of Oxford, she worked as a university lecturer while pursuing her writing career. Her first published work was a study of Jean-Paul Sartre (1953). Her novels, including *The Bell* (1958), *A Severed Head* (1961), *The Black Prince* (1973), *The Sea, the Sea* (1978), and *The Book and the Brotherhood* (1987), typically have convoluted plots featuring philosophical and comic elements. Her nonfiction philosophical works include *The Sovereignty of Good* (1970) and *Metaphysics as a Guide to Morals* (1992). Her decline under Alzheimer disease was chronicled by her husband, the critic John Bayley, in *Elegy for Iris* (1999).

Murdoch, (Keith) Rupert (b. March 11, 1931, Melbourne, Vic., Austl.) Australian-U.S. newspaper publisher and media entrepreneur. Son of a famous Australian war correspondent and publisher, he inherited two Adelaide newspapers in 1954 and boosted their circulation by emphasizing crime, sex, scandal, sports, and human interest stories, while taking an outspokenly conservative editorial stance. He used this approach with soaring success with papers bought in Australia, Britain, and the U.S. by his global media holding company, The News Corporation Ltd. He also acquired conventional and respected publications, including *The Times* of

© 2006 Encyclopædia Britannica, Inc.

London. In the 1980s and ’90s he expanded into book and electronic publishing, television broadcasting, and film and video production. His holdings include the *New York Post*; Fox, Inc. (see Fox Broadcasting Co.); HarperCollins Publishers; British Sky Broadcasting; and Star TV, a pan-Asian television service.

Mureș \'mü-resh\ **River** River, rising in the eastern Carpathian Mountains, east-central Romania. It flows west across northern Romania and across the Hungarian border to join the Tisza River at Szeged, Hung.; it is about 450 mi (725 km) long. It is the Tisza’s most important tributary and a significant traffic route; it is navigable for small boats for more than 200 mi (320 km).

muriatic acid See hydrochloric acid

Murillo \mù-'rē-ō,\ *English* \myù-'ri-lō**, Bartolomé Esteban** (baptized Jan. 1, 1618, Sevilla, Spain—d. April 3, 1682, Sevilla) Spanish painter. The most popular Baroque religious painter of 17th-century Spain, he is noted for his idealized figures, most of them painted for religious orders and the confraternities of his native Sevilla (Seville). His early works were executed in the naturalistic style of Francisco de Zurbarán, but with the development of his mature style in the 1650s he soon surpassed the older master in fame and popularity. The softly modeled forms, rich colours, and broad brushwork of the later paintings, such as the *Immaculate Conception* of 1652 (his favourite subject), reveal the influence of 16th-century Venetian and Flemish Baroque painters. Murillo’s works were copied and imitated throughout Spain and its empire, and he was the first Spanish painter to achieve fame outside the Spanish world.

Murji’ah \'mùr-jē-ə\ One of the earliest sects of Islam to believe in the postponement of judgment on those who have committed serious sins, recognizing that God alone is able to decide whether a Muslim has lost his faith. The Murji’ah flourished during the 7th–8th century, a period of strife in the Muslim community. Unlike the Khārijites, a militant sect that wanted to oust serious sinners from the community and declare jihad against them, the Murji’ah, who advocated leaving great sinners to God, claimed that no one who had professed Islam could be declared an infidel. When the Khārijites revolted against the Umayyad dynasty, the Murji’ah declared that revolt against a Muslim ruler could not be justified under any circumstances. The Murji’ah were moderates who emphasized the love and goodness of God.

Murmansk Seaport (pop., 1999 est.: 382,700), northwestern Russia. Situated on the eastern shore of Kola Bay near the Barents Sea, it is the world’s largest city north of the Arctic Circle. Its ice-free harbour makes it Russia’s only port with unrestricted access to the Atlantic. Founded in 1915 as a supply port in World War I, it was a base for the British, French, and U.S. forces against the Bolsheviks in 1918; it also served as a major supply base during World War II. In addition to a Russian naval base, it has a large fishing fleet and fish-processing industry.

Murnau \'mùr-ˌnaù**, F.W.** *orig.* **Friedrich Wilhelm Plumpe** (b. Dec. 28, 1889, Bielefeld, Ger.—d. March 11, 1931, Hollywood, Calif., U.S.) German film director. After studying at the University of Heidelberg, he became a protégé of Max Reinhardt in Berlin. During World War I he served as a combat pilot and made propaganda films. He directed his first feature in 1919 and won international acclaim for *Nosferatu* (1922), which is regarded by many as the most effective screen adaptation of Bram Stoker’s *Dracula*, and *The Last Laugh* (1924). In 1927 he moved to Hollywood, where he made films such as *Sunrise* (1927), his masterpiece, and *Tabu* (1931; with Robert Flaherty). Murnau’s films revolutionized the art of cinematic expression by using the camera subjectively to interpret the emotional state of a character.

Muromachi period In Japanese history, period of military government (bakufu, or shogunate) from the 14th to the 16th century. The *bakufu* was established in 1338 by the samurai (warrior) Ashikaga Takauji. Although the *bakufu* lasted in name until 1573, when the last of the Ashikaga shoguns was deposed, the Ashikaga in fact lost control of Japan during the Ōnin War (1467–77). The Muromachi period was, despite considerable turbulence and unrest, a time of great cultural growth, during which Zen Buddhism, nō theatre and other literary forms, and *sumi-e* (Chinese-style ink painting) flourished. See also Ashikaga family; daimyo; Kanō school.

Murphy, Audie (Leon) (b. June 20, 1924, near Kingston, Texas, U.S.—d. May 28, 1971, near Roanoke, Va.) U.S. war hero and actor. Enlisting in the army in 1942, he became the most decorated U.S. soldier of World War II. He killed hundreds of Germans, and he once jumped onto a burning tank destroyer to turn its machine gun on enemy troops. In 1945 he received the Congressional Medal of Honor. On the strength of his heroic status, he became a movie actor after the war, starring in films such as *The Red Badge of Courage* (1951), *To Hell and Back* (1955), and *The Quiet American* (1958). He died when his private plane crashed. He was buried in Arlington National Cemetery with full military honours.

Murphy, Frank *orig.* **William Francis Murphy** (b. April 13, 1890, Harbor Beach, Mich., U.S.—d. July 19, 1949, Detroit, Mich.) U.S. Supreme Court justice (1940–49). After serving in World War I, he held several elective posts, including mayor of Detroit (1930–33). He was governor-general (1933–35) and U.S. high commissioner (1935–36) of the Philippines. Elected governor of Michigan (1937–38), he refused to use troops to break sit-down strikes by automobile workers. As U.S. attorney general (1939–40), he established the Justice Department’s civil rights unit. Appointed to the Supreme Court of the United States by Pres. Franklin D. Roosevelt, he strongly defended civil rights and dissented in a case upholding the internment of Japanese Americans during World War II.

Frank Murphy
COURTESY OF THE LIBRARY OF CONGRESS, WASHINGTON, D.C.

Murphy, Isaac Burns (b. 1861, Fayette county, Ky., U.S.—d. Feb. 12, 1896, Louisville, Ky.) U.S. jockey. He was one of the first jockeys to pace his mount for a charge down the homestretch—a technique soon described as the “grandstand finish.” He was the first three-time winner of the Kentucky Derby (1884, 1890, and 1891), and his career winning percentage of 34.5 has never been equaled. At his peak in the late 1880s, he became the highest-paid athlete in America, earning close to $20,000 a year. He was the first jockey elected to the National Museum of Racing’s Hall of Fame and one of only two African Americans inducted.

Murray, George Redmayne (b. June 20, 1865, Newcastle-upon-Tyne, Northumberland, Eng.—d. Sept. 21, 1939, Mobberley, Cheshire) British physician. After receiving his M.D. from the University of Cambridge, he became a pioneer in the treatment of endocrine disorders. He was one of the first to use extracts of animal thyroid glands to relieve a form of hypothyroidism.

Murray, Sir James (Augustus Henry) (b. Feb. 7, 1837, Denholm, Roxburghshire, Scot.—d. July 26, 1915, Oxford, Oxfordshire, Eng.) Scottish lexicographer. He taught in a grammar school (1855–85). His *Dialect of the Southern Counties of Scotland* (1873) and a major article on English for *Encyclopædia Britannica* (1878) established him as a leading philologist. He was hired by the Philological Society as editor of the vast *New English Dictionary on Historical Principles*, later called the *Oxford English Dictionary*, in 1879, and he applied himself to the work with legendary energy and resourcefulness. The first volume appeared in 1884, and by his death he had completed about half the dictionary.

Murray, Philip (b. May 25, 1886, Blantyre, Lanark, Scot.—d. Nov. 9, 1952, San Francisco, Calif., U.S.) Scottish-born U.S. labour leader. After immigrating to the U.S. in 1902, he became a coal miner in Pennsylvania. He joined the United Mine Workers of America and rose through the ranks to serve as vice president (1920–42) under John L. Lewis. When Lewis became president of the newly formed Congress of Industrial Organizations (CIO) in 1936, he delegated Murray to create an industry-wide steelworkers’ union (see United Steelworkers of America). Murray succeeded Lewis as CIO president in 1940 and held the post until his death. See also AFL-CIO.

Murray River Principal river of Australia. Rising near Mount Kosciusko, in southeastern New South Wales, it flows across southeastern Australia from the Snowy Mountains to the Great Australian Bight of the Indian Ocean; it is 1,610 mi (2,590 km) long. It forms the boundary

© 2006 Encyclopædia Britannica, Inc.

between Victoria and New South Wales and then turns south and flows into Encounter Bay through Lake Alexandrina. River shipping was important in the 19th century, but navigation practically ceased with growing competition from railways and the demand for irrigation water. The river valley is of great economic importance, fostering the production of grains, fruit, and wine, and the raising of cattle and sheep.

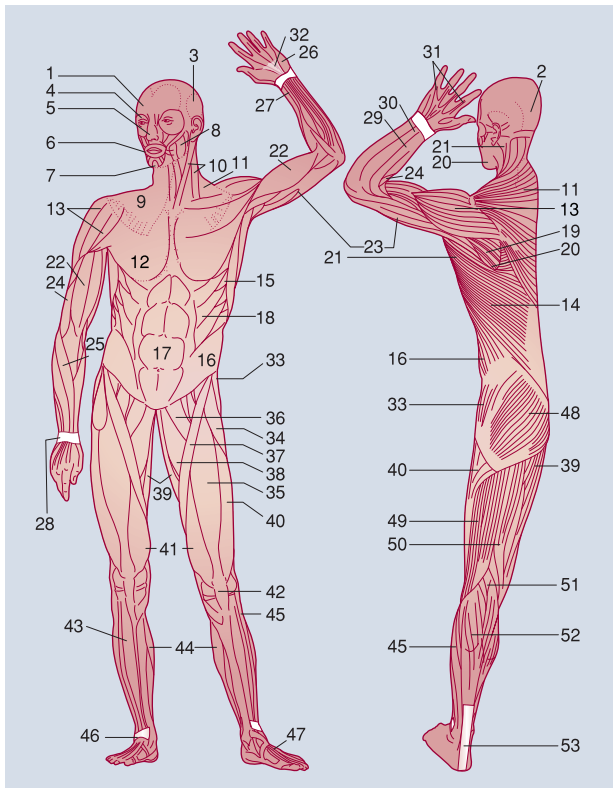
murre \'mər\ Any of certain black-and-white seabirds (genus *Uria*, family Alcidae) that are about 16 in. (40 cm) long and breed from the Arctic Circle to Nova Scotia, California, Portugal, and Korea. Murres nest in vast numbers on sheer cliffs. When half grown, the single chick enters the sea with its parents to escape gulls and skuas. In autumn the birds swim south. See also guillemot.

Common murres (*Uria aalge*), ringed phase at left
R.J. Tulloch—Bruce Coleman Inc./EB Inc.

Murrow, Edward (Egbert) R(oscoe) (b. April 25, 1908, Greensboro, N.C., U.S.—d. April 27, 1965, Pawling, N.Y.) U.S. radio and television broadcaster. Murrow joined CBS in 1935 and two years later became head of its European Bureau. He became famous for his eyewitness reports of World War II events such as the German occupation of Austria. After the war, with Fred Friendly, he produced *Hear It Now*, an authoritative radio news digest, and for television the comparable *See It Now*. He also produced *Person to Person* and other television programs. In the 1950s he was an influential force for the free dissemination of information, producing a notable exposé of the tactics of Sen. Joseph McCarthy that contributed to the demise of McCarthyism.

Murrumbidgee \ˌmə-rəm-'bi-jē\ **River** River, southeastern New South Wales, Australia. The major right-bank tributary of the Murray River, it flows west from the Great Dividing Range near Canberra to join the Murray 140 mi (225 km) from the Victoria border; it is about 1,050 mi (1,690 km) long. The Murrumbidgee Irrigation Area involves more than 1,000 sq mi (2,600 sq km) of farmland and supports livestock pastures and the cultivation of grapes, citrus fruits, wheat, cotton, and rice.

Mūsā \'mü-sä\ *or* **Mousa** (d. 1332/37?) Emperor (*mansa*) of the West African Mali empire from 1307 (or 1312). Mūsā left a realm notable for its extent and riches (he built the Great Mosque at Timbuktu), but he is best remembered for the splendour of his pilgrimage to Mecca (1324), which awakened the world to Mali's stupendous wealth and stimulated a desire among North Africans and Europeans to locate its source. Under Mūsā, Mali became one of the largest empires in the world and Timbuktu grew to be a major commercial city.



Musandam \mə-'san-dəm\ **Peninsula** Northeastern extension of the Arabian Peninsula. It partially separates the Gulf of Oman from the Persian Gulf to form the Strait of Hormuz to the north. Part of Oman, it is divided from the rest of the country by the United Arab Emirates. It is a mountainous region with a rocky coast that is hazardous to passing ships. Fishing is the main industry, and there are reserves of petroleum and natural gas off the western coast. The port town of Dībā al-Ḥiṣn is on the southeastern coast.

Musavi, Ruhollah See Ruhollah Khomeini

Muscat *or* **Masqat** \'məs-ˌkät\ City (pop., 2003: city, 24,769; urban agglom., 638,000), capital of Oman, located on the Gulf of Oman. Situated on a cove surrounded by volcanic mountains, it came under Persian control in the 6th century BC, and Islam was introduced into the region in the 7th century AD. The Portuguese gained control in 1508 and made Muscat a trading post and naval base until they were expelled in 1650. Held again by the Persians (1650–1741), it later became part of the sultanate of Oman. Two 16th-century Portuguese forts overlook the city; the sultan's Indian-style palace is built at the edge of the sea.

Muscat and Oman See Oman

muscle Contractile tissue that produces motion for functions, including body movements, digestion, focusing, circulation, and body warmth. It can be classified as striated, cardiac, and smooth or as phasic and tonic (responding quickly or gradually to stimulation, respectively). Striated muscle, whose fibres appear striped under a microscope, is responsible for voluntary movement. Most of these muscles are phasic. They are attached to the skeleton and move the body by contracting in response to signals from the central nervous system; contraction is achieved by the sliding of thin filaments (of actin) between thick ones (of myosin); stretch receptors in the tissue provide feedback, allowing smooth motion and fine motor control. The branched fibres of cardiac muscle give it a netlike structure; contraction originates in the heart's muscle tissue itself with a signal from the natural pacemaker; vagus and sympathetic nerves control heart rate. Smooth muscle, the muscle of internal organs and blood vessels, is generally involuntary and tonic; its cells can operate either collectively or individually (in response to separate nerve endings) and have different shapes. Disorders of voluntary muscle cause weakening, atrophy, pain, and twitching. Some systemic diseases (e.g., dermatomyositis, polymyositis) can cause muscle inflammation. See also abdominal muscle; muscle tumour; muscular dystrophy; myasthenia gravis.

Major muscles of the human body. TENNESSEE VALLEY AUTHORITY (TVA). The city of Muscle Shoals (pop., 2000: 11,924) developed from the TVA complex in the Wilson Dam area.

muscle tumour Abnormal tissue growth in or originating from MUSCLE tissue. There are three major types. Leiomyomas are tumours of smooth muscles, seen most often in the uterus but also in the digestive, urinary, and female genital systems. Part of the tumour may become malignant, but it usually does not spread or recur. Rhabdomyomas occur most often in cardiac muscle. Some forms spread, and it may remain contained in tissue or become diffuse and hard to remove. Rhabdomyomas involving both smooth and striated muscle are often malignant and may grow very large. The several types of rhabdomyosarcoma are rare; they arise in skeletal muscle, usually in the leg or arm, and are extremely malignant.

muscovite \'məs-kə-ˌvīt\ *or* **common mica** *or* **potash mica** *or* **isinglass** Abundant SILICATE mineral that contains potassium and aluminum and has a layered atomic structure. It is the most common member of the MICA group. Because it occurs in thin, transparent sheets, it was used in Russia for window panes and became known as Muscovy glass (isinglass), hence its name. Muscovite is usually colourless but may be light gray, brown, pale green, or rose red. Its low iron content makes it a good electrical and thermal insulator.

muscular dystrophy \'dis-trə-fē\ Inherited disease that causes progressive weakness in the skeletal (and occasionally heart) muscle. Muscle tissue degenerates and regenerates randomly and is replaced by scar tissue and fat. There is no specific treatment. Physical therapy, braces, and corrective surgery may help. Duchenne muscular dystrophy, the most common, strikes only males. Symptoms, including frequent falls and difficulty in standing up, start in boys 3–7 years old; muscle wasting progresses from the legs to the arms and then the diaphragm. Pulmonary infection or respiratory failure usually causes death before age 20. The gene can now be detected in female carriers and male fetuses. Becker dystrophy, also sex-linked, is less severe and begins later. Patients remain able to walk and usually survive into their 30s and 40s. Myotonic muscular dystrophy affects adults of both sexes, with MYOTONIA and degeneration two to three years later, along with cataracts, baldness, and gonadal atrophy. Limb-girdle dystrophy affects the pelvic or shoulder muscles in both sexes. Facioscapulohumeral (face, shoulder-blade, and upper-arm) dystrophy starts in childhood or adolescence and affects both sexes; after initial symptoms of difficulty raising the arms, the legs and pelvic muscles can be affected; the main facial effect is difficulty in closing the eyes. Life expectancy is normal.

Muse In Greco-Roman religion and myth, any of a group of sister goddesses, daughters of ZEUS and Mnemosyne (Memory). A festival was held in their honour every four years near Mount Helicon, the centre of their cult in Greece. They probably began as the patron goddesses of poets, though later their range was extended to include all the liberal arts and sciences. Nine Muses are usually named: Calliope (heroic or epic poetry), Clio (history), Erato (lyric or love poetry), Euterpe (music or flutes), Melpomene (tragedy), Polyhymnia (sacred poetry or mime), Terpsichore (dancing and choral song), Thalia (comedy), and Urania (astronomy).

museum Public institution dedicated to preserving and interpreting the primary tangible evidence of humans and their environment. Types of museums include general (multidisciplinary) museums, natural-history museums, science and technology museums, history museums, and art museums. In Roman times the word referred to a place devoted to scholarly occupation (see MUSEUM OF ALEXANDRIA). The public museum as it is known today did not develop until the 17th–18th century. The first organized body to receive a private collection, erect a building to house it, and make it publicly available was the University of Oxford; the resulting Ashmolean Museum opened in 1683. The 18th century saw the opening of great museums such as the BRITISH MUSEUM, LOUVRE, and UFFIZI GALLERY. By the early 19th century the granting of public access to formerly private collections had become common. What followed for the next 100 years was the worldwide founding of museums intended for the public. In the 20th century, museums have broadened their roles as educational facilities, sources of leisure activity, and information centres. Many sites of historical or scientific significance have been developed as museums. Museum attendance has increased greatly, often attracted by "blockbuster" exhibitions, though museums have had to become more financially resourceful due to constraints in public funding.

Museum of Modern Art (MOMA) Museum in New York City, the world's most comprehensive collection of U.S. and European art from the late 19th century to the present. It was founded in 1929 by a group of private collectors. The original building on 53rd St. opened in 1939; a later addition and sculpture garden were designed by PHILIP JOHNSON (1953). A condominium tower and western wing, doubling the exhibition space, were completed in 1984. Its collections of Cubist, Surrealist, and Abstract Expressionist paintings are extensive; other holdings include sculpture, graphic arts, industrial design, architecture, photography, and film. Through its permanent collections, exhibitions, and many publications, it exerts a strong influence on public taste and artistic production.

Museveni \mü-'sə-ven-ˌē**, Yoweri (Kaguta)** (b. 1944, Mbarra district, Uganda) President of Uganda (from 1986). As a university student he led a group allied with African liberation movements. When IDI AMIN came to power in 1971, Museveni went into exile. He founded the Front for National Salvation, which helped topple Amin in 1979. He replaced MILTON OBOTE as president in 1986, winning election to the post in 1996. Though he rejected multiparty democracy, he allowed a free press and private enterprise. He is credited with bringing stability and economic growth to Uganda, though his support for rebels in other African countries has been controversial.

Musgrave, Thea (b. May 27, 1928, Barnton, Edinburgh, Scot.) Scottish composer. She studied with NADIA BOULANGER and AARON COPLAND, and she later taught at the University of California at Santa Barbara (1970–78) and elsewhere in the U.S. She has written a number of dramatic concertos, some of which reflect her interest in music's spatial dimension, but she is best known for her operas, including *The Voice of Ariadne* (1973), *Mary, Queen of Scots* (1977), and *Simon Bolívar* (1995).

Mushet \'məsh-ət**, Robert Forester** (b. 1811, Coleford, Gloucestershire, Eng.—d. January 1891, Coleford) British steelmaker. He was the son of the ironmaster David Mushet (1772–1847). Robert's discovery in 1868 that adding tungsten to STEEL greatly increases its hardness even after air cooling produced the first commercial steel ALLOY, a material that formed the basis for the development of tool steels for the machining of metals. Mushet also discovered that the addition of manganese to steel produced by the BESSEMER PROCESS improved the steel's ability to withstand rolling and forging at high temperatures.

mushroom Fleshy spore-bearing structure of certain fungi (see FUNGUS), typically of the class Basidiomycetes. It arises from the MYCELIUM, which may live hundreds of years or a few months, depending on its food supply. Some species grow cellular strands (hyphae) in all directions, forming a circular mat with a "fairy ring" of fruiting bodies around the outside. Popularly, "mushroom" refers to the edible sporophores, while "toadstool" refers to inedible or poisonous sporophores, but there is no scientific distinction between the two names. Mushrooms are classified by cap shape. Umbrella-shaped sporophores with spore-shedding gills on the undersurface are found chiefly in the AGARIC family (Agaricaceae). Mushrooms that bear spores in an easily detachable layer on the underside of the cap belong to the family Boletaceae. Together the agarics and boletes include most of the forms known as mushrooms. The highly prized edible CHANTERELLE is a bolete. The MORELS (class Ascomycetes) are popularly included with the true mushrooms because of their shape and fleshy structure. Since some poisonous mushrooms closely resemble edible ones, mushrooms intended for eating must be accurately identified. Mushroom poisoning can cause nausea, diarrhea, vomiting, cramps, hallucinations, coma, and sometimes death. See illustration opposite.

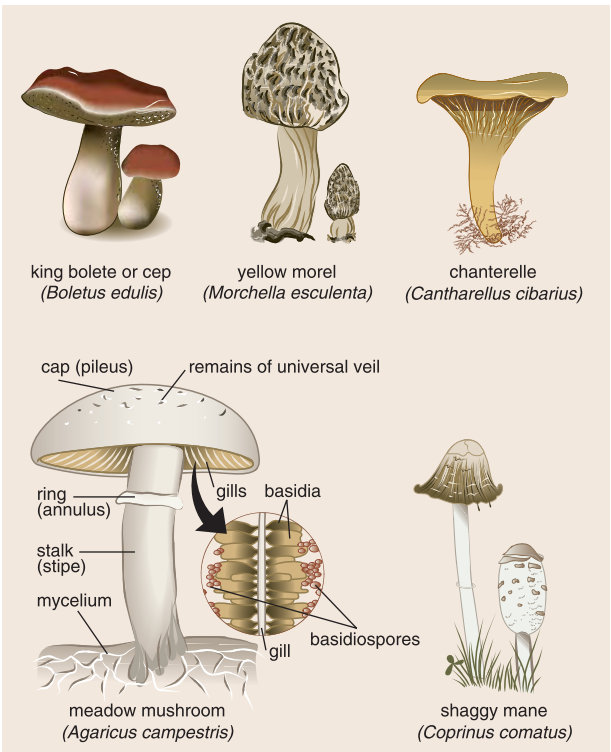
mushroom poisoning *or* **toadstool poisoning** Sometimes fatal effect of eating any of the 70–80 species of poisonous MUSHROOMS, or toadstools. Many contain toxic ALKALOIDS. The most deadly, *Amanita phalloides* ("death cup"), causes violent abdominal pain, vomiting, and bloody diarrhea. Severe liver, kidney, and central-nervous-system damage lead to coma. Over half the victims die. Treatment with thioctic acid, glucose, and penicillin or by filtering the blood with charcoal may be effective. *A. muscaria* causes vomiting, diarrhea, excessive perspiration, and confusion, with recovery within 24 hours. *Gyromitra esculenta* toxin is usually destroyed by cooking, but in susceptible people it affects the central nervous system and breaks down blood cells, causing jaundice. Some poisonous mushrooms resemble harmless ones, so extreme caution is needed in wild-mushroom gathering.

Musial \'myü-zē-əl**, Stan(ley Frank)** (b. Nov. 21, 1920, Donora, Pa., U.S.) U.S. baseball player. Musial played his entire career for the St. Louis Cardinals (1941–63), starting as a pitcher but switching to the outfield and ultimately to first base. A left-handed batter, "Stan the Man" became

© 2006 Encyclopædia Britannica, Inc.

one of the game's great hitters. His lifetime totals of hits (3,630), runs (1,949), and times at bat were second only to those of TY COBB, his total of runs batted in (1,951) was the fourth-highest of all time, and his total of extra-base hits (1,477) was only surpassed later by HANK AARON. Popular among fans for his unfailing graciousness, he became a Cardinals executive after retirement.

Musial
PICTORIAL PARADE-EB INC.



music Art concerned with combining vocal or instrumental sounds for beauty of form or emotional expression, usually according to cultural standards of rhythm, melody, and, in most Western music, HARMONY. Music most often implies sounds with distinct PITCHES that are arranged into MELODIES and organized into patterns of RHYTHM AND METRE. The melody will usually be in a certain KEY or MODE, and in Western music it will often suggest harmony that may be made explicit as accompanying CHORDS or COUNTERPOINT. Music is an art that, in one guise or another, permeates every human society. It is used for such varied social purposes as ritual, worship, coordination of movement, communication, and entertainment.

music box Mechanical musical instrument in which projecting pins on a revolving brass cylinder or disk, encoding a piece of music, pluck tuned steel tongues. It was probably invented c. 1780 in Switzerland. With its modular cylinders or disks, it was a popular domestic instrument until displaced by the player piano and phonograph.

German music box, with disk in playing position, from Leipzig, *c.* 1900

music hall and variety theatre Popular entertainment that featured successive acts by singers, comedians, dancers, and actors. The form derived from the taproom concerts given in city taverns in England in the 18th–19th centuries. To meet the demand for entertainment for the working class, tavern owners often annexed nearby buildings as music halls, where drinking and smoking were permitted. The originator of the English music hall as such was Charles Morton, who built Morton's Canterbury Hall (1852) and Oxford Hall (1861) in London. Leading performers included LILLIE LANGTRY, Harry Lauder (1870–1950), and GRACIE FIELDS. Music halls evolved into larger, more respectable variety theatres, such as London's Hippodrome and the Coliseum. Variety acts combined music, comedy acts, and one-act plays and featured celebrities such as SARAH BERNHARDT and HERBERT TREE. See also VAUDEVILLE.

A mushroom typically consists of a stalk (stipe) and a cap (pileus). As the mushroom develops from an underground mycelium and pushes upward, it is protected by a thin membrane (universal veil), which eventually ruptures, leaving fragments on the cap. Another membrane, attaching the cap to the stalk, also ruptures, allowing the cap to expand and leaving a remnant ring (annulus) on the stalk. Radiating rows of gills are found on the cap's undersurface; these bear the club-shaped reproductive structures (basidia) which form minute spores known as basidiospores, of which a single mushroom may produce millions.

musica ficta *Latin* **"feigned music"** In medieval and Renaissance music, the practice of inserting unnotated chromatic notes (see CHROMATICISM) during performances. According to treatises of the times, it was left to the performers to "correct" certain INTERVALS. Which intervals were to be changed, and how and under what circumstances, varied over time. This practice was responsible for the introduction of accidentals (sharps, flats, naturals) into MUSICAL NOTATION. It also influenced the evolution of the major and minor KEYS on which most Western music came to be based, for it modified the medieval CHURCH MODES to resemble the major and minor SCALES.

musical *or* **musical comedy** Theatrical production that is characteristically sentimental and amusing in nature, having a simple but distinctive plot and offering music, dancing, and dialogue. Its roots can be traced to 18th- and 19th-century genres such as BALLAD OPERA, SINGSPIEL, and opéra comique. *The Black Crook* (1866), often called the first musical comedy, attracted patrons of opera and serious drama as well as those of BURLESQUE SHOWS. European composers such as SIGMUND ROMBERG brought to the U.S. a form of OPERETTA that was the generic source for musical comedy. GEORGE M. COHAN ushered in the genre's heyday, and in the 1920s and '30s it entered its richest period with the works of JEROME KERN, GEORGE GERSHWIN and IRA GERSHWIN, COLE PORTER, RICHARD RODGERS, and OSCAR HAMMERSTEIN. Kern and Hammerstein's *Show Boat* (1927) was perhaps the first musical to employ music thoroughly integrated with the narrative. The genre flourished in the 1950s with works by composers such as LEONARD BERNSTEIN, but it began to decline in the late 1960s, by which time musicals had begun to diverge in many different directions, incorporating elements such as rock music, operatic styling, extravagant lighting and staging, social comment, nostalgia, and pure spectacle. Later notable musical composers included STEPHEN SONDHEIM and ANDREW LLOYD WEBBER.

musical notation Written, printed, or other visual representation of music. There are two basic approaches to notating music. Tablature (such as guitar chord diagrams) depicts the actions a performer is to take (in particular, showing where to put the fingers to produce a given sound). Symbolic notation describes the sounds themselves and includes methods that vary from assigning pitches different letters of the alphabet to representing a given combination of notes by a graphic sign. The Western notation system combines rhythmic notation (the appearance of a note indicates its duration) with pitch notation (the line or space on a staff where a note is placed indicates its pitch). Thus, a single symbol shows both pitch and duration, and a string of these symbols notates both melody and rhythm. See illustration on following page.

musicology Scholarly and scientific study of music. In the late 18th and early 19th centuries, such study was done by amateurs such as LUDWIG VON KÖCHEL. As interest in earlier music grew, greater professionalism was required, including the ability to decipher and assess musical manuscripts and historical documents. Musicology's first great monument was the first edition of JOHANN SEBASTIAN BACH's complete works (1851–99). The scope of musicology may be summarized as covering the study of the history and phenomena of music, including (1) form and notation, (2)

biography, (3) the development of musical instruments, (4) music theory (harmony, melody, modes, etc.), and (5) aesthetics, acoustics, and physiology of the voice, ear, and hand. In recent decades music theory has again become a separate specialization.

musk ox Arctic RUMINANT (BOVID species *Ovibos moschatus*) with a musky odour, large head, and small ears. The neck, legs, and tail are short. Males stand 5 ft (1.5 m) tall and may weigh almost 900 lb (400 kg). Both sexes have horns. The broad-based horns of males, up to 2 ft (60 cm) long, start at the middle of the head, dip downward along the sides, and then curve upward. The shaggy, dark brown coat reaches nearly to the feet. Eskimos make a fine cashmerelike cloth from the thick wool undercoat, which is shed in summer. Musk oxen travel in herds of 20–30, eating grass, lichen, willow, and other low-growing plants. See photograph above.

muskellunge \'məs-kə-ˌlənj\ Species (*Esox masquinongy*) of somewhat uncommon PIKE valued as a fighting game fish and, to a lesser extent, as a food fish. It inhabits weedy rivers and lakes of the North American Great Lakes region. It averages about 20 lbs (9 kg), but may grow to 6 ft (1.8 m) long and weigh 80 lbs (36 kg) or more, making it the largest fish in the pike family. The lower part of the cheeks and the gill covers are scaleless.

Musk oxen (*Ovibos moschatus*).
LEONARD LEE RUE III

musket Muzzle-loading shoulder firearm developed in 16th-century Spain. Designed as a larger version of the harquebus, muskets were fired with MATCHLOCKS until FLINTLOCKS were developed in the 17th century; flintlocks were replaced by percussion locks in the early 19th century. Early muskets were often handled by two persons and fired from a portable rest. Typically 5.5 ft (1.7 m) long and weighing about 20 lbs (9 kg), they fired a ball about 175 yards (160 m) with little accuracy. Later types were smaller, lighter, and accurate enough to hit a person at 80–100 yards (75–90 m). The musket was replaced in the mid-19th century by the breech-loading RIFLE.

Muskogean \məs-'kō-jē-ən\ **languages** Family of about eight North American Indian languages spoken or formerly spoken across much of what is now the southeastern U.S. In the 16th century Koasati (Coushatta) and Alabama were probably spoken in what is now northern Alabama, Creek (Muskogee) and Hitchiti in Alabama and Georgia, and Apalachee in the Florida Panhandle. To the west were Chickasaw in northern Mississippi and western Tennessee and Choctaw in central Mississippi. By the mid-19th century Apalachee was long extinct, and the forced removals of the 1830s (see TRAIL OF TEARS) had pushed most of the remaining Muskogean-speakers either west of the Mississippi or into Florida, where the SEMINOLE continue to speak a dialect of Creek in central Florida and Mikasuki (Miccosukee) in the Everglades. The extant Muskogean languages continue to be spoken, at least by adults, with Choctaw (in Oklahoma and Mississippi) having the most speakers.

muskrat Either of two semiaquatic, brown RODENT species (family Cricetidae) native to marshes, shallow lakes, and streams of North America and introduced into Europe. The compact, heavy-bodied muskrat, or musquash (*Ondatra zibethica*), is about 12 in. (30 cm) long, not including the long, scaly, flat tail. The partially webbed hind feet have a stiff, bristly fringe. Anal sacs produce a musky secretion. The commercially valuable fur consists of long, stiff, glossy guard hairs overlying a dense, soft underfur. Muskrats live in either a burrow dug into the bank or a reed-and-rush mound built in the water. They eat sedges, reeds, roots, and an occasional aquatic animal. The round-tailed muskrat, or Florida water rat (*Neofiber alleni*), is smaller.

Muskrat (*Ondatra zibethica*).
JOHN H. GERARD

Muslim Brotherhood *Arabic* **Al-Ikhwān al-Muslimūn** Religio-political organization founded in Egypt in 1928 by Ḥasan al-Bannā (1906–49) that promoted the QUR'ĀN and ḤADĪTH as the proper basis for society. It quickly gained many followers throughout North Africa and the Middle East and influenced the development of Muslim groups in other regions. It became politicized after 1938, rejecting Westernization, modernization, and secularization. Suppressed in Egypt after a 1954 assassination attempt

© 2006 Encyclopædia Britannica, Inc.

on GAMAL ABDEL NASSER, it operated clandestinely in the 1960s and '70s. Beginning in the late 1980s, it experienced an upsurge; though its candidates were often listed under other parties, Brotherhood candidates competed in legislative elections in Egypt and Jordan.

Muslim calendar See Muslim CALENDAR

Muslim League *orig.* **All India Muslim League** Political group that led the movement calling for a separate Muslim country to be created out of the partition of British India (1947). The league was founded in 1906, and in 1913 it adopted self-government for India as its goal. For several decades it supported Hindu-Muslim unity in an independent India, but in 1940, fearing Hindu domination, the league called for a separate state for India's Muslims. After the creation of Pakistan in 1947, the Muslim League (as the All Pakistan Muslim League) became Pakistan's dominant political party, but it gradually declined in popularity and by the 1970s had disappeared altogether. See also MOHAMMED ALI JINNAH.

mussel Any of numerous BIVALVE species of either the marine family Mytilidae, found worldwide, or the freshwater superfamily Unionacea, called naiads, found mostly in the U.S. and Southeast Asia. Marine mussels are usually wedge-shaped or pear-shaped and 2–6 in. (5–15 cm) long. They may be smooth or ribbed and often have a hairy covering. The shells of many species are dark blue or greenish brown on the outside and pearly on the inside. Mussels attach themselves to solid objects or to one another, often forming dense clusters. Some burrow into soft mud or wood. They are eaten by birds and starfishes, and some species are raised commercially for food.

Atlantic ribbed mussels (*Modiolus demissus*)
WALTER DAWN

Musset \mǖ-'sā**, (Louis-Charles-) Alfred de** (b. Dec. 11, 1810, Paris, France—d. May 2, 1857, Paris) French poet and playwright. A member of a noble family, Musset came under the influence of Romanticism in adolescence and produced his first work, *Stories of Spain and of Italy*, in 1830. After an early play failed, he published historical tragedies and comedies but refused to let them be performed. He is best remembered for his poetry, including light satirical pieces and poems of dazzling technical virtuosity, as well as passionate, eloquent lyrics such as "La Nuit d'octobre" (1837). A fitful love affair with GEORGE SAND inspired some of his finest work.

Mussolini, Benito (Amilcare Andrea) *known as* **Il Duce** \il-'dü-chā\ (b. July 29, 1883, Predappio, Italy—d. April 28, 1945, near Dongo) Italian dictator (1922–43). An unruly but intelligent youth, he became an ardent socialist and served as editor of the party newspaper, *Avanti!* (1912–14). When he reversed his opposition to World War I, he was ousted by the party. He founded the pro-war *Il Popolo d'Italia*, served with the Italian army (1915–17), then returned to his editorship. Advocating government by dictatorship, he formed a political group in 1919 that marked the beginning of FASCISM. A dynamic and captivating orator at rallies, he organized the March on ROME (1922) to prevent a socialist-led general strike. After the government fell, he was appointed prime minister, the youngest in Italian history. He obtained a law to establish the fascists as the majority party and became known as *Il Duce* ("The Leader"). He restored order to the country and introduced social reforms and public works improvements that won widespread popular support. His dreams of empire led to the invasion of Abyssinia (later Ethiopia) in 1935. Supported in his fascist schemes by ADOLF HITLER but wary of German power, Mussolini agreed to the Rome-Berlin Axis and declared war on the Allies in 1940. Italian military defeats in Greece and North Africa led to growing disillusionment with Mussolini. After the Allied invasion of Sicily (1943), the Fascist Grand Council dismissed him from office. He was arrested and imprisoned but rescued by German commandos, then became head of the Hitler-installed puppet government at Salò in northern Italy. As German defenses in Italy collapsed in 1945, Mussolini tried to escape to Austria but was captured and executed by Italian partisans.

Benito Mussolini.
H. ROGER-VIOLLET

Mussorgsky \mù-'sòrg-skē**, Modest (Petrovich)** (b. March 21, 1839, Karevo, Russia—d. March 28, 1881, St. Petersburg) Russian composer. Composing without training in his teens, he met several of the composers with whom he later made up THE FIVE, a group with the common goal of creating a nationalist school of Russian music. He received his first composition lessons from MILY BALAKIREV in 1857; he soon resigned from his military regiment to devote himself to music. He held a series of government jobs, but his worsening alcoholism eventually made him unemployable. His personal decline was accompanied by maturity as a composer, and he wrote his major works, including the symphonic poem *Night on Bald Mountain* (1867), the great opera *Boris Godunov* (1868), and the famous piano cycle *Pictures at an Exhibition* (1874). His 65 songs describe vivid scenes of Russian life and realistically reproduce the inflections of the spoken Russian language. After Mussorgsky's death, his works were published in drastically edited form, purged of their distinctive starkness and unorthodox harmonies; the original versions were made available in 1928.

Mustafa Kemal See Mustafa Kemal ATATÜRK

Mustang See P-51

mustard family Family Brassicaceae (or Cruciferae), composed of 350 genera of mostly herbaceous plants with peppery-flavored leaves. The pungent seeds of some species lead the spice trade in volume traded. Mustard flowers take the form of a Greek cross, with four petals, usually white, yellow, or lavender, and an equal number of sepals. The seeds are produced in podlike fruits. Members of the mustard family include many plants of economic importance that have been extensively altered and domesticated by humans. The most important genus is *Brassica* (see BRASSICA); TURNIPS, RADISHES, RUTABAGAS, and many ornamental plants are also members of the family. As a spice, mustard is sold in seed, powder, or paste form.

Mut \'müt\ In EGYPTIAN RELIGION, a sky goddess and divine mother. Mut may have originated either in the Nile River delta or in Middle Egypt. During the 18th dynasty (1539–1292 BC), she became the companion of the god AMON at THEBES. Amon, Mut, and the young god KHONS (said to be her son) formed the Theban triad. The name Mut means "mother," and her role was that of an older woman among the gods. She was usually represented as a woman wearing a double crown; she was also sometimes depicted with the head of a lioness.

mutagen \'myü-tə-jən\ Any agent capable of altering a cell's genetic makeup by changing the structure of the hereditary material, DNA. Many forms of electromagnetic radiation (e.g., cosmic rays, X rays, ultraviolet light) are mutagenic, as are various chemical compounds. The effects of some mutagens are increased or suppressed in some organisms by the presence of certain other, nonmutagenic substances; oxygen, for example, makes cells more sensitive to the mutagenic effects of X rays.

Mutanabbī \,mù-tà-'nàb-bē\, (Abū al-Ṭayyib Aḥmad ibn Ḥusayn) al- (b. 915, Al-Kūfah, Iraq—d. Sept. 23, 965, near Dayr al-ʿĀqūl) Poet regarded by many as the greatest in the Arabic language. Al-Mutanabbī received an education, unusual for his time and rank, because of his poetic talent. He lived among the BEDOUIN and, claiming to be a prophet, led an unsuccessful Muslim revolt in Syria. After two years' imprisonment he recanted and became a wandering poet, eventually leaving Syria for Egypt and Iran. He primarily wrote PANEGYRICS in a flowery, bombastic style marked by improbable metaphors. His poetic voice is proud and arrogant in tone, and his verse is crafted with consummate skill and artistry. His powerful influence on Arabic poetry persisted into modern times.

mutation Alteration in the genetic material of a cell that is transmitted to the cell's offspring. Mutations may be spontaneous or induced by outside factors (MUTAGENS). They take place in the GENES, occurring when one base is substituted for another in the sequence of bases that determines the GENETIC CODE, or when one or more bases are inserted or deleted from a gene. Many mutations are harmless, often masked by the presence of a dominant normal gene (see DOMINANCE). Some have serious consequences; for example, a particular mutation inherited from both parents results in SICKLE-CELL ANEMIA. Only mutations that occur in the sex cells (eggs or

© 2006 Encyclopædia Britannica, Inc.

sperm) can be transmitted to the individual's offspring. Alterations caused by these mutations are usually harmful. In the rare instances in which a mutation produces a beneficial change, the percentage of organisms with this gene will tend to increase until the mutated gene becomes the norm in the population. In this way, beneficial mutations serve as the raw material of EVOLUTION.

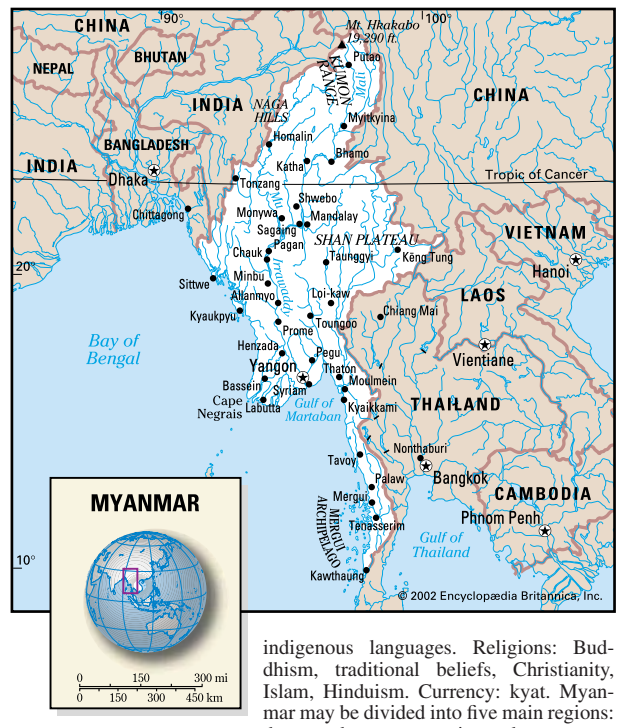
Mu'tazilah \mü-'tä-zi-lə\ In ISLAM, one of two early religious groups. The term applies primarily to members of a theological school that flourished in Al-BAṢRAH and BAGHDAD in the 8th–10th century. These Mu'tazilah were the first Muslims to employ systematically the categories and methods of Hellenistic philosophy to derive their dogma. The tenets of their faith included belief in the oneness of God (*tawḥīd*), advocation of human free will (the ability to choose between good and evil), and the fundamental belief in God's fairness (i.e., God will punish only those deserving of punishment). Their doctrine of a created QUR'ĀN (the eternal nature of which was advocated by their opponents) held sway in the caliphal court briefly in the early 9th century and was the first instance in the Muslim world in which political authorities attempted to enforce any form of doctrinal rigour; the Mu'tazilah theological program soon lost political sway, however, and had faded by the 13th century. Though it was ultimately abandoned by SUNNITE Muslims (the group's methods came to be accepted by some SHĪ'ITE groups), its true importance lay in the fact that it forced other theological groups to embrace a more rigorous dialectical method (see KALĀM).

mutiny Any concerted resistance to lawful military authority. Mutiny was formerly regarded as a most serious offense, especially aboard ships at sea. Wide disciplinary powers were given the commanding officer, including the power to inflict CAPITAL PUNISHMENT without a COURT-MARTIAL. With the development of radio communications, the threat diminished and harsh punishment was prohibited in the absence of a court-martial.

Mutsuhito See MEIJI EMPEROR

mutual fund *or* **unit trust** *or* **open-end trust** Company that invests the funds of its subscribers in diversified SECURITIES and issues units representing shares in those holdings. It differs from an INVESTMENT TRUST, which issues shares in the company itself. While investment trusts have a fixed capitalization and a limited number of shares for sale, mutual funds make a continuous offering of new shares at net asset value (plus a sales charge) and redeem their shares on demand at net asset value, determined daily by the market value of the securities they hold.

Muwaḥḥidūn, al- North African dynasty: see ALMOHAD DYNASTY; Arabian religious group: see WAHHĀBĪ



Muybridge \'mī-ˌbrij**, Eadweard** *orig.* **Edward James Muggeridge** (b. April 9, 1830, Kingston upon Thames, Surrey, Eng.—d. May 8, 1904, Kingston upon Thames) English photographer. He immigrated to the U.S. from England as a young man, and in 1868 his photos of Yosemite Valley made him famous. Hired by LELAND STANFORD to photograph a trotting horse in motion, to test Stanford's contention that it lifted all four legs simultaneously, he developed a special fast shutter for his battery of 12 to 24 cameras, and in 1877 he proved Stanford right. He lectured widely on animal locomotion, illustrating his lectures with his zoopraxiscope, a predecessor of the movie projector. His extensive photographic studies of human movement (1884–87) have been useful to artists and scientists.

Mwene Matapa \'mwā-nā-mä-'tä-pə\ Title borne by a line of kings ruling a South African territory between the Zambezi and Limpopo rivers, in what is now Zimbabwe and Mozambique, from the 14th to the 17th century. Their domain, often called Matapa (or Mutapa), is associated with the historical site of GREAT ZIMBABWE in southeastern Zimbabwe.

Mweru, Lake \'mwā-rü\ *French* **Lac Moero** \ˌlák-mwā-'rō\ Lake, central Africa. It is located on the boundary between southeastern Democratic Republic of the Congo (Zaire) and Zambia, west of the southern tip of Lake TANGANYIKA. Part of the CONGO RIVER system, it is 76 mi (122 km) long and has a surface area of 1,900 sq mi (4,920 sq km). The Luapula River, a headstream of the Congo River, flows through it. The Bangweulu Swamps adjoin the lake.

My Lai \'mē-'lī\ **Massacre** (March 16, 1968) Mass killing of as many as 500 unarmed villagers by U.S. soldiers in the hamlet of My Lai during the VIETNAM WAR. A company of U.S. soldiers on a search-and-destroy mission against the hamlet found no armed Viet Cong there but nonetheless killed all the elderly men, women, and children they could find; few villagers survived. The incident was initially covered up by high-ranking army officers, but it was later made public by former soldiers. In the ensuing courts-martial, platoon leader Lt. William Calley was accused of directing the killings and was convicted of premeditated murder and sentenced to life in prison; but Pres. RICHARD NIXON intervened on his behalf, and he was paroled after three years. The massacre and other atrocities revealed during the trial divided the U.S. public and contributed to growing disillusionment with the war.

Myanmar \'myän-ˌmär\ *or* **Burma** *officially* **Union of Myanmar** Country, Southeast Asia, on the Bay of BENGAL and the ANDAMAN SEA. Area: 261,228 sq mi (676,577 sq km). Population (2005 est.): 46,997,000. Capitals: YANGÔN (Rangoon)/Pyinmana. Inhabitants are chiefly Burman; others include Chin, Shan, and Karen. Languages: Burmese (official), many

indigenous languages. Religions: Buddhism, traditional beliefs, Christianity, Islam, Hinduism. Currency: kyat. Myanmar may be divided into five main regions: the northern mountains, the western ranges, the coastal plains, the central lowlands, and the Shan Plateau in the east. Major rivers are the IRRAWADDY and the SALWEEN. The tropical climate is greatly influenced by the monsoons of southern Asia. Only about one-sixth of this largely mountainous land is arable. It has a centrally planned, developing economy that is largely nationalized and based on agriculture and trade. Rice is the most important crop and principal export; teak is also important. Myanmar is ruled by a military regime; its head of state and government is the chairman of the State Peace and Development Council, assisted by the prime minister. The area was long inhabited, with the Mon and Pyu states dominant from the 1st century BC to the 9th century AD. It was united in the 11th century under a Burmese dynasty that was overthrown by the Mongols in the 13th century. The Portuguese, Dutch, and English traded there in the 16th–17th century. The modern Myanmar (Burmese) state was founded in the 18th century by ALAUNGPAYA. Conflict with the British over ASSAM resulted in a series of wars, and Myanmar fell to the British in 1885. Under British control, it became Burma, a province of India. It was occupied by Japan in World War II and became independent in 1948. The military took power in a coup in 1962 and nationalized major economic sectors. Civilian unrest in the 1980s led to antigovernment rioting that was suppressed by force. In 1990 opposition parties won in national elections, but the army continued in control. Trying to negotiate for a freer government amid the unrest, AUNG SAN SUU KYI was awarded the Nobel Peace Prize in 1991.

myasthenia gravis \ˌmī-əs-'thē-nē-ə-'gra-vəs\ Chronic AUTOIMMUNE DISEASE causing MUSCLE weakness. Autoantibodies block the response of muscle cells to ACETYLCHOLINE. Muscles weaken with repeated use but regain

© 2006 Encyclopædia Britannica, Inc.

their strength after rest. The pattern varies, but usually muscles used in eye movements, facial expressions, chewing, swallowing, and respiration are affected first, then neck, trunk, and limb muscles. Severe cases impede breathing. Anticholinesterase drugs stimulate nerve-impulse transmission, and corticosteroids may help. Removal of the THYMUS has improved severe cases. Remission lasting several years may occur.

mycelium \mī-'sē-lē-əm\ Mass of branched, tubular filaments (hyphae) of fungi (see FUNGUS) that penetrate soil, wood, and other organic matter. The mycelium makes up the THALLUS (undifferentiated body) of a typical fungus. The mass may be microscopic in size or developed into visible structures, such as brackets, MUSHROOMS, PUFFBALLS, or TRUFFLES. The mycelium produces SPORES, directly or through special fruiting bodies.

Mycenae \mī-'sē-nē\ Prehistoric city, northeastern PELOPONNESE, Greece. A natural rock citadel, it was the legendary capital of AGAMEMNON. It flourished during the BRONZE AGE, building the distinctive MYCENAEAN civilization. It was at its height in the Aegean c. 1400 BC and declined c. 1100 BC with the invasion of the DORIANS from the north. Excavations at Mycenae began in 1840, but the most celebrated discoveries there were those by HEINRICH SCHLIEMANN c. 1876. Ruins include the Lion Gate, acropolis, granary, and several royal BEEHIVE TOMBS and shaft graves.

Mycenaean \ˌmī-sə-'nē-ən\ Any member of a group of warlike Indo-European peoples who entered Greece from the north starting c. 1900 BC and established a BRONZE AGE culture on the mainland and nearby islands. Their culture was dependent on that of the MINOANS of Crete, who for a time politically dominated them. They threw off Minoan control c. 1400 and were dominant in the Aegean until they themselves were overwhelmed by the next wave of invaders c. 1150. MYCENAE continued to exist as a city-state into the period of Greek dominance, but by the 2nd century AD it was in ruins. Mycenaean myths and legends lived on through oral transmission into later stages of Greek civilization and form the basis of Homeric epic and Greek tragedy. Their language is believed to be the most ancient form of Greek.

mycobacterium \ˌmī-kō-bak-'tir-ē-əm\ Any of the rod-shaped BACTERIA that make up the genus *Mycobacterium*. The two most important species cause TUBERCULOSIS and LEPROSY in humans; another species causes tuberculosis in both cattle and humans. Some mycobacteria live on decaying organic matter; others are parasites. Most are found in soil and water in a free-living form or in diseased tissue of animals. Various antibiotics have had some success against mycobacterium infections.

mycology \mī-'kä-lə-jē\ Study of fungi (see FUNGUS), including MUSHROOMS and YEASTS. Many fungi are useful in medicine and industry. Mycological research has led to the development of such antibiotic drugs as PENICILLIN, STREPTOMYCIN, and TETRACYCLINE. Mycology also has important applications in the dairy, wine, and baking industries and in the production of dyes and inks. Medical mycology is the study of fungus organisms that cause disease in humans.

mycoplasma \ˌmī-kō-'plaz-mə\ Any of the BACTERIA that make up the genus *Mycoplasma*. They are among the smallest of bacterial organisms. The cell varies from a spherical or pear shape to that of a slender branched filament. *Mycoplasma* species are gram-negative (see GRAM STAIN) and do not require oxygen. They are colonial microorganisms that lack cell walls. They are parasites of joints and the mucous membranes lining the respiratory, genital, or digestive tracts of cud-chewing animals, carnivores, rodents, and humans. Toxic by-products excreted by the bacteria accumulate in the host's tissues, causing damage. One species causes a widespread but rarely fatal pneumonia in humans.

mycorrhiza \ˌmī-kə-'rī-zə\ Product of close association between the branched, tubular filaments (hyphae) of a FUNGUS and the ROOTS of higher plants. The association usually enhances the nutrition of both the host plant and the fungal symbiont. The establishment and growth of certain plants (e.g., citrus plants, orchids, pines) depends on mycorrhizae; other plants survive but do not flourish without their fungal symbionts.

mycoses See FUNGAL DISEASES

mycotoxin TOXIN produced by a FUNGUS. Numerous and varied, mycotoxins can cause hallucinations, skin inflammation, liver damage, hemorrhages, miscarriage, convulsions, neurological disturbances, and/or death in livestock and humans. The best-known mycotoxins are AFLATOXIN, ERGOT toxin, and the agents of MUSHROOM POISONING.

Myerson, Goldie See GOLDA MEIR

mynah *or* **myna** \'mī-nə\ Any of several Asian songbird species of the STARLING family (Sturnidae). The hill mynah (*Gracula religiosa*) of southern Asia, called the grackle in India, is about 10 in. (25 cm) long and glossy black with white wing patches, yellow wattles, and orange bill and legs. In the wild, it chuckles and shrieks; caged, it learns to imitate human speech far better than its chief rival, the gray PARROT. The common, or Indian, mynah (*Acridotheres tristis*) was introduced into Australia, New Zealand, and Hawaii. The crested mynah (*A. cristatellus*), native to China and Indonesia, was introduced into British Columbia, Canada, but has not spread.

myositis \ˌmī-ə-'sī-təs\ INFLAMMATION of MUSCLE tissue, often from bacterial, viral, or parasitic INFECTION but sometimes of unknown origin. Most types destroy muscle and surrounding tissue. Bacteria may directly infect muscle (usually after injury) or produce substances toxic to it. Some chronic diseases (e.g., TUBERCULOSIS, third-stage SYPHILIS) can involve the muscles. Parasites (e.g., TAPEWORMS, PROTOZOANS) in contaminated food enter the bloodstream from the intestines and lodge in muscle.

myotonia \ˌmī-ə-'tō-nē-ə\ Disorder causing difficulty relaxing contracted voluntary MUSCLES. All or only a few may be affected. Myotonia seems to originate in the muscles (myopathy) rather than the NERVOUS SYSTEM. Certain TOXINS can cause it. A hereditary form, myotonia congenita (Thomsen disease), can affect eyelid and eye motion, swallowing, or talking. Quick movements cause muscle stiffening. There is also a myotonic form of MUSCULAR DYSTROPHY. ANALGESICS, ANESTHETICS, and anticonvulsant drugs can alleviate the symptoms.

Myra \'mī-rə\ Ancient city, LYCIA, southern coast of ANATOLIA. Its location was near the modern city of Kale in southwestern TURKEY. Ancient ruins dating from the 5th to 3rd centuries BC include an acropolis, a magnificent theatre, and several rock-cut tombs that resemble wooden houses and shrines. St. PAUL is known to have visited Myra in the 1st century AD, and St. NICHOLAS was bishop of the city in the 4th century. It was the capital of Byzantine Lycia until it fell to the ʿAbbāsids in 808.

Myrdal \'mi̇ər-ˌdäl,\ *English* \'mir-ˌdäl**, (Karl) Gunnar** (b. Dec. 6, 1898, Gustafs, Dalarna, Swed.—d. May 17, 1987, Stockholm) Swedish economist and sociologist. He received his Ph.D. from Stockholm University and taught there from 1933 until 1967. His early work emphasized pure theory, but he later focused on applied economics and social problems. He explored the social and economic problems of African Americans in the U.S. (1938–40) and in 1944 published the classic study *An American Dilemma*, in which he presented his theory that poverty breeds poverty. In regard to development economics, he argued that rich and poor countries, rather than converging economically, might well diverge, the poor countries becoming poorer as the rich countries enjoyed economies of scale and the poor ones were forced to rely on primary products. In 1974 he shared the Nobel Prize with Friedrich von HAYEK. His wife, Alva Myrdal (1902–86), was a sociologist, diplomat, UN administrator, and antiwar activist; she shared the 1982 Nobel Peace Prize with Alfonso García Robles.

Myron \'mī-rən\ (b. c. 480 BC, Greece—d. 440 BC) Greek sculptor. An older contemporary of PHIDIAS and POLYCLITUS, he was considered by the ancients one of the most versatile and innovative of all Attic sculptors. He was the first Greek sculptor to combine a mastery of movement with a gift for harmonious composition. Working almost exclusively in bronze, he is best known for his studies of athletes in action, particularly the *Discus Thrower*, c. 450 BC.

Discus Thrower, Roman marble copy of Greek bronze by Myron, c. 450 BC; in the National Roman Museum, Rome.

myrtle Any of the evergreen shrubs in the genus *Myrtus* (family Myrtaceae). Authorities differ widely over the number of species included; most occur in South America, while some are found in Australia and New Zealand. Common myrtle (*M. communis*) is native to the Mediterranean and the Middle East and is cultivated in southern England and the warmer portions of North America. Other plants known as myrtle include the MOUNTAIN LAUREL and PERIWINKLE. The

family Myrtaceae, commonly called the myrtle family, includes the plants that produce the spices ALLSPICE and CLOVES, and the genus *Eucalyptus*. See also CRAPE MYRTLE.

Mysore \mī-'sōr\ City (pop., 2001 prelim.: 742,261), southern KARNATAKA state, southern India. Situated midway between the KAVERI and Kabbani rivers, the site was inhabited before the 3rd century BC. The city was the capital of the princely state of Mysore (1799–1831), then it was occupied by the British. The state's second largest city, it is an important industrial centre producing textiles, chemicals, and foodstuffs. Sites of interest include the 17th-century British residency, the maharaja's palace, and the University of Mysore (founded 1916). Nearby Chamundi Hill has a monolith representing Nandi, the sacred bull of the Hindu deity SHIVA.

Mysore See KARNATAKA

mystery play Vernacular drama of the Middle Ages. It developed from the LITURGICAL DRAMA and usually represented a biblical subject. In the 13th century, craft guilds began producing mystery plays at sites removed from the church, adding apocryphal and satirical elements to the dramas. In England groups of 25–50 plays were later organized into lengthy cycles, such as the Chester plays and the Wakefield plays. In England the plays were often performed on moveable pageant wagons, while in France and Italy they were acted on stages with scenery representing heaven, earth, and hell. Technical flourishes such as flying angels and fire-spouting devils kept the spectators' attention. The genre of the mystery play declined by 1600. See also MIRACLE PLAY; MORALITY PLAY.

mystery religion Any of various secret cults of the Greco-Roman world. Derived from primitive tribal ceremonies, mystery religions reached their peak of popularity in Greece in the first three centuries AD. Their members met secretly to share meals and take part in dances and ceremonies, especially initiation rites. The cult of DEMETER produced the most famous of the mystery religions, the ELEUSINIAN MYSTERIES, as well as the ANDANIA MYSTERIES. DIONYSUS was worshiped in festivals that included wine, choral singing, sexual activity, and mime. The Orphic cult, by contrast, based on sacred writings attributed to ORPHEUS, required chastity and abstinence from meat and wine. Mystery cults also attached to ATTIS, ISIS, and JUPITER DOLICHENUS, among others.

mystery story Work of fiction in which the evidence related to a crime or to a mysterious event is so presented that the reader has an opportunity to consider solutions to the problem, the author's solution being the final phase of the piece. The mystery story is an age-old popular genre and is related to several other forms. Elements of mystery may be present in narratives of horror or terror, pseudoscientific fantasies, crime stories, accounts of diplomatic intrigue, affairs of codes and ciphers and secret societies, or any situation involving an enigma. See also DETECTIVE STORY; GOTHIC NOVEL.

mysticism Spiritual quest for union with the divine. Forms of mysticism are found in all major religions. HINDUISM, with its goal of absorption of the soul in the All, is inherently predisposed to mystical experience. BUDDHISM emphasizes MEDITATION as a means of moving toward NIRVANA. In ISLAM, SUFISM employs metaphors of intoxication and of the love between bride and bridegroom to express the desire for union with the divine. In JUDAISM, the foundations of mysticism were laid in the visions of the biblical prophets and were later developed in the KABBALA and in HASIDISM. Mysticism has appeared intermittently in CHRISTIANITY, notably in the writings of St. AUGUSTINE and St. TERESA OF ÀVILA, and in the works of Meister ECKHART and his 14th-century successors.

myth Traditional story of ostensibly historical events that serves to unfold part of the worldview of a people or explain a practice, belief, or natural phenomenon. Myths relate the events, conditions, and deeds of gods or superhuman beings that are outside ordinary human life and yet basic to it. These events are set in a time altogether different from historical time, often at the beginning of creation or at an early stage of prehistory. A culture's myths are usually closely related to its religious beliefs and rituals. The modern study of myth arose with early 19th-century ROMANTICISM. Wilhelm Mannhardt, JAMES GEORGE FRAZER, and others later employed a more comparative approach. SIGMUND FREUD viewed myth as an expression of repressed ideas, a view later expanded by CARL GUSTAV JUNG in his theory of the "collective unconscious" and the mythical ARCHETYPES that arise out of it. BRONISŁAW MALINOWSKI emphasized how myth fulfills common social functions, providing a model or "charter" for human behaviour. CLAUDE LÉVI-STRAUSS discerned underlying structures in the formal relations and patterns of myths throughout the world. MIRCEA ELIADE and RUDOLF OTTO held that myth is to be understood solely as a religious phenomenon. Features of myth are shared by other kinds of literature. Origin tales explain the source or causes of various aspects of nature or human society and life. FAIRY TALES deal with extraordinary beings and events but lack the authority of myth. SAGAS and EPICS claim authority and truth but reflect specific historical settings.

myxedema \ˌmik-sə-'dē-mə\ Physiological reaction to low levels of thyroid hormone in adults, either due to THYROID-GLAND removal, lack of function, or atrophy, or secondary to a PITUITARY-GLAND disorder. Gradual changes include enlarged tongue, thick, puffy skin, drowsiness, cardiac enlargement, and slow metabolism. Low thyroid hormone affects levels of other hormones, and may result in low blood sodium and disorders of the reproductive system (including reduced fertility), adrenal glands, and circulatory system. Treatment is with thyroid hormone.

Myxomycetes See SLIME MOLD

myxovirus \ˌmik-sō-'vī-rəs\ Any of a group of VIRUSES that are agents of INFLUENZA and can cause the common COLD, MUMPS, and MEASLES in humans, canine DISTEMPER, rinderpest in cattle, and Newcastle disease in fowl. The virus particle is encased in a fatty membrane, variable in shape from spheroidal to threadlike, and studded with spikelike protein projections; it contains RNA. These viruses react with a protein on the surface of red blood cells; many of them cause red blood cells to clump together.

NAACP *in full* **National Association for the Advancement of Colored People** Oldest and largest U.S. civil rights organization. It was founded in 1909 to secure political, educational, social, and economic equality for African Americans; W.E.B. Du Bois and Ida B. Wells were among its 60 founders. Headquartered in Baltimore, Md., the NAACP has undertaken litigation, political activity, and public education programs. In 1939 it organized the independent Legal Defense and Education Fund as its legal arm, which sued for school desegregation in *Brown v. Board of Education* (1954). During World War II it pressed for desegregation of the armed forces, which was achieved in 1948. In 1967 its general counsel, Thurgood Marshall, became the U.S. Supreme Court's first African American justice.

Naber, John (b. Jan. 20, 1956, Evanston, Ill., U.S.) U.S. swimmer. He swam for the University of Southern California, winning 15 championships. At the 1976 Olympics he won four gold medals and a silver; his world-record times in the 100-m and 200-m backstroke stood for seven years.

Nabis \'nä-bēz\ (from Hebrew *navi*, "prophet" or "seer") Group of French artists who paved the way for the development of abstract art in the early 20th century. The Nabis preached that a work of art is the visual expression of an artist's synthesis of nature and his or her personal aesthetic. They were influenced by Paul Gauguin and the Pont-Aven school, as well as by Japanese woodcuts, Symbolist painting, and the Pre-Raphaelites. Paul Sérusier (1865–1927), the group's founder, painted the first Nabi work, *Landscape at the Bois d'Amour at Pont-Aven* (also called *Talisman*; 1888). Original members included Pierre Bonnard and Édouard Vuillard; a later member was Aristide Maillol.

Nabisco *in full* **National Biscuit Company** Former U.S. snack food and bakery product company. It was formed in 1989 when the American Biscuit Company merged with the New York Biscuit Company and went on to introduce a number of popular consumer brands such as Oreo cookies (1912) and Ritz crackers (1934). After being acquired by R.J. Reynolds in 1985 and becoming part of RJR Nabisco, Nabisco was sold to Philip Morris Cos. (renamed Altria Group, Inc.), which was the parent company of Kraft Foods, Inc.

Nabokov \nə-'bō-kəf, 'na-bə-ˌkȯf**, Vladimir (Vladimirovich)** (b. April 22, 1899, St. Petersburg, Russia—d. July 2, 1977, Montreux, Switz.) Russian-born U.S novelist and critic. Born to an aristocratic family, he had an English-speaking governess. He published two collections of verse before leaving Russia in 1919 for Cambridge University, but by 1925 he had turned to prose as his main genre. During 1919–40 he lived in England, Germany, and France. His life before he moved to the U.S. in 1940 is recalled in his superb autobiography, *Speak, Memory* (1951). Beginning with *King, Queen, Knave* (1928), his writing began to feature intricate stylistic devices. His novels are principally concerned with the problem of art itself, presented in various disguises, as in *Invitation to a Beheading* (1938). Parody is frequent in *The Gift* (1937–38) and later works. His novels written in English include the notorious and greatly admired best-seller *Lolita* (1955), which brought him wealth and international fame; *Pale Fire* (1962); and *Ada* (1969). His critical works include a monumental translation of and commentary on Aleksandr Pushkin's *Eugene Onegin*, 4 vol. (1964).

Nabokov, 1968
© PHILIPPE HALSMAN

Nabu \'nä-ˌbü\ Major god in the Assyrian-Babylonian pantheon, the son of Marduk. He was patron of the art of writing and a god of vegetation. As the recorder of the fates assigned to humans by the gods, Nabu's symbols were the clay tablet and the stylus. His holy city was Borsippa. Goddesses associated with Nabu were Nana, a Sumerian deity; the Assyrian Nissaba; and the Akkadian Tashmetum.

Nabuco \nä-'bü-kō\ **(de Araújo), Joaquim (Aurelio Barretto)** (b. Aug. 19, 1849, Recife, Braz.—d. Jan. 17, 1910, Washington, D.C., U.S.) Leader of Brazil's abolitionist movement. Both in the national Chamber of Deputies (from 1878) and in the Brazilian Anti-Slavery Society, which he founded, Nabuco worked tirelessly to end slavery in Brazil. Emancipation was proclaimed in 1888, and in the ensuing economic disruption the emperor Pedro II was overthrown (1889) and a republic established. A monarchist, Nabuco retired from public life until 1900, when he accepted the republic and entered its service. As ambassador to the U.S. he distinguished himself as an advocate of Pan-Americanism.

Nadar \nȧ-'dȧr\ *orig.* **Gaspard-Félix Tournachon** (b. April 5, 1820, Paris, France—d. March 21, 1910, Paris) French photographer, caricaturist, and writer. When his father's bankruptcy forced him to leave medical school in 1838, he settled in Paris and began selling caricatures to humour magazines. By 1853 he had become an expert photographer and had opened a portrait studio. His studies of prominent Parisians such as Charles Baudelaire (1855) and Eugène Delacroix (1855) were exceptional in their naturalness, in contrast to the stiff formality of most portraits of the time. His studio became a favourite meeting place of the Paris intelligentsia and was the site of the first Impressionist exhibit. A tireless innovator, in 1855 he patented the idea of using aerial photographs in mapmaking and surveying, and in 1858 he himself made the first successful aerial photograph, from a balloon. He also wrote novels, essays, satires, and autobiographical works.

Nader, Ralph (b. Feb. 27, 1934, Winsted, Conn., U.S.) U.S. lawyer and consumer advocate. The son of Lebanese immigrants, he attended Princeton University and Harvard Law School. In 1963 he left his private law practice in Hartford, Conn., to hitchhike to Washington, D.C., where he began public interest work. His concern about unsafe car designs resulted in the best-selling book *Unsafe at Any Speed* (1965), which led directly to the passage of national auto-safety standards. Since then he and his associates, known as "Nader's Raiders," have performed numerous studies on consumer health, safety, and financial issues and have lobbied for greater government regulation of business and industry in a variety of areas. He was instrumental in the passage of the Freedom of Information Act (1966) and in establishing the Occupational Safety and Health Administration (OSHA), the Consumer Product Safety Commission, and the Environmental Protection Agency. He also founded the consumer organization Public Citizen and the U.S. Public Interest Research Group, an umbrella organization for other public interest research groups. As the Green Party candidate in the 2000 U.S. presidential election, he won 3% of the national vote. His work has had major and lasting effects on many aspects of American life.

Nādir Shāh \nä-'dēr-'shä\ (b. Oct. 22, 1688, Kobhan, Ṣafavid Iran—d. June 1747, near Fatḥābād) Iranian conqueror and ruler. Originally a bandit of the Turkish Afshar tribes, he helped restore Ṭahmāsp II of the Ṣafavid dynasty to Iran's throne, defeating the Ghilzay Afghan usurper Maḥmūd. He later deposed Ṭahmāsp II to place the latter's infant son on the throne; he made himself regent, then deposed the son and took the throne himself in 1736. He engaged in constant warfare with his neighbours, enlarging his empire from the Indus River to the Cauca-

sus Mountains. Suspicious of those around him and capriciously cruel, he was assassinated by his own troops.

NAFTA *in full* **North American Free Trade Agreement** Trade pact signed by Canada, the U.S., and Mexico in 1992, which took effect in 1994. Inspired by the success of the European Community in reducing trade barriers among its members, NAFTA created the world's largest free-trade area. It basically extended to Mexico the provisions of a 1988 Canada-U.S. free-trade agreement, calling for elimination of all trade barriers over a 15-year period, granting U.S. and Canadian companies access to certain Mexican markets, and incorporating agreements on labour and the environment. See also General Agreement on Tariffs and Trade; World Trade Organization.

Nag Hammadi \ˈnäg-hȧm-ˈmä-dē\ Town in Upper Egypt on the Nile. In 1945 a collection of 13 codices containing 53 Gnostic texts (scriptures and commentaries) was found nearby at the site of an ancient settlement on the river's eastern bank. Written in the Coptic language, the texts were composed in the 2nd or 3rd century and copied in the 4th century. They include accounts of the life of Jesus and his sayings after his resurrection, predictions of the apocalypse, and theological treatises. As the only surviving documents written by Gnostics themselves, they constitute a major source of knowledge about Gnosticism.

naga \ˈnä-gə\ In Hindu and Buddhist mythology, a semidivine being, half human and half serpent. *Naga*s can assume either wholly human or wholly serpentine form. They live in an underground kingdom filled with beautiful palaces that are adorned with gems. Brahma is said to have relegated the *naga*s to the nether regions and to have commanded them to bite only the truly evil or those destined to die prematurely. *Naga*s are also associated with waters—rivers, lakes, seas, and wells—and are regarded as guardians of treasure. In Buddhism it is believed that the snake king sheltered the Buddha from rain for seven days while he was meditating.

Naga Hills Hill region, northeastern India and northwestern Myanmar (Burma). A northern extension of the Arakan Mountains system, the hills reach a height of 12,552 ft (3,826 m) at Mount Saramati on the frontier. The densely forested hills receive heavy monsoon rains. The area is inhabited by tribes of Naga peoples living in small villages.

Nagaland State (pop., 2001 prelim.: 1,988,636), northeastern India. It borders Myanmar (Burma) and the states of Manipur, Assam, and Arunachal Pradesh and has an area of 6,401 sq mi (16,579 sq km). Its capital is Kohima. Except for a small area of plain, the entire state is covered with ranges of hills that are northward extensions of the Arakan Mountains system. Myanmar ruled the region from 1819 to 1826, when the British began annexing its hill areas. The Naga people accepted statehood within an independent India in 1963. There are more than 20 major Naga tribes and subtribes, with different dialects and customs. About two-thirds are Christian, and most others are Hindu or Muslim. Agriculture is the mainstay of the economy. Crops include rice, millet, sugarcane, potatoes, and tobacco.

Nagarjuna \nä-ˈgär-jù-nə\ (b. 150—d. c. 250) Indian monk and philosopher, founder of the Madhyamika school of Buddhism. Born into a Brahman family, he underwent a spiritual conversion when he studied the doctrines of Mahayana Buddhism. His *Fundamental Wisdom of the Middle Way* and *The Dialectical Method* are critical analyses of false views about how existence arises, the means of knowledge, and the nature of reality. He established the concept of sunyata—emptiness, or the lack of an absolute reality behind the changing forms of existence—as a fundamental tenet of the Madhyamika school.

Nagasaki City (pop., 2003 est.: 418,523), western Kyushu, Japan. It is a seaport and commercial city at the mouth of the Urakami River, where it empties into Nagasaki Harbour. It was the only Japanese port open to foreign trade in 1639–1859. After the Portuguese and English traders were expelled in 1639, only the Dutch, Chinese, and Koreans were allowed into the harbour. In the 19th century it was the winter port of the Russian Asiatic fleet (until 1903). It became a major shipbuilding centre in the early 20th century. In 1945 the second atomic bomb attack was carried out there by the U.S. during World War II; some 40,000 were killed immediately, up to 40,000 more died soon after, and many more were injured. The bomb also destroyed about 40% of the city's buildings. Nagasaki has been rebuilt and is a spiritual centre for movements to ban nuclear weapons.

Nagorno-Karabakh Region (pop., 2002 est.: 144,300), southwestern Azerbaijan. It occupies an area of about 1,700 sq mi (4,400 sq km) on the northeastern flank of the Karabakh Range. The region was formerly part of Iran but was annexed by Russia in 1813. In 1923 it was established as an autonomous province of the Azerbaijan S.S.R. In 1988 the region's Armenian majority demonstrated against Azerbaijanian rule, and in 1991 (after the breakup of the Soviet Union) war broke out between the two ethnic groups. Since 1994 it has been controlled by ethnic Armenians, though officially it remains part of Azerbaijan.

Nagoya City (pop., 2000 prelim.: 2,171,378), southern Honshu, Japan. Located east of Kyōto, at the head of Ise Bay, it is one of Japan's leading industrial cities. Manufactures include textiles, watches, bicycles, sewing machines, machine tools, chemicals, and ceramics. The city dates from 1610, when a great castle was erected by the Owari branch of the Tokugawa shogunate; the castle was destroyed during World War II and rebuilt in 1959. The city's educational and cultural institutions include Nagoya University and the Tokugawa Art Museum. The Atsuta Shrine and the Ise Shrine located there are the oldest and most highly esteemed Shintō shrines in Japan.

Nagpur \ˈnäg-ˌpůr\ City (pop., 2001 prelim.: 2,051,320), northeastern Maharashtra state, India. It is situated along the Nag River, almost at the geographic centre of India. Founded in the 18th century by a Gond prince, it became the capital of members of the Maratha confederacy. In the 19th century it was under British control. The city's products include textiles, iron goods, pharmaceuticals, transport equipment, cotton, and oranges. It is dominated by the centrally located former British fort. It is an educational and cultural centre.

nagual \nä-ˈgwäl\ *or* **nahual** \nä-ˈwäl\ In some Mesoamerican religions, a personal guardian spirit that resides in an animal. The person who wishes to find his nagual goes to sleep in an isolated spot, and the animal that appears in a dream or that confronts him when he awakens will thereafter be his guardian spirit. Many modern Mesoamerican Indians believe that the first creature to cross over the ashes spread before a newborn baby becomes the child's nagual. In some areas, nagual refers to the animal into which men with magical powers can transform themselves to do evil.

Nagy \ˈnädʸ**, Imre** (b. June 7, 1896, Kaposvár, Hung., Austria-Hungary—d. June 16, 1958, Budapest, Hung.) Hungarian politician. He fought in World War I, was captured by the Russians, and joined the Red Army. He lived in Moscow (1929–44), then returned to Hungary under the Soviet occupation and held several ministerial posts. An advocate for peasants' rights, he became premier (1953–55) but was ousted for his independent ideas. During the Hungarian Revolution (1956), he again served as premier and sought to establish Hungary's independence from Soviet domination. He made an unsuccessful appeal to the West for help against the invading Soviet troops, and he was arrested, tried, and executed.

Nagy, László Moholy- See László Moholy-Nagy

Nahanni \nä-ˈhä-nē\ **National Park** National park, southwestern Northwest Territories, Canada. Established in 1972, it occupies an area of 1,177,700 acres (476,968 hectares). Its central feature is the South Nahanni River, a tributary of the Liard River; it flows southeast from the Mackenzie Mountains and is 350 mi (563 km) long. The park also contains three large canyons and a variety of birds, wildlife, and flowers.

Nahḍah \ˈnä-hə-də**, Ḥizb al-** *Arabic* **"Renaissance Party"** Tunisian political party founded in 1981 by Rachid al-Ghannouchi and Abdelfattah Mourou (ʿAbd al-Fattāḥ Mūrū) as the Islamic Tendency Movement. Its platform called for a fairer distribution of economic resources, the establishment of multiparty democracy, and the injection of more religiosity in daily life; it claims to seek these goals through nonviolent means. After 1984 the party was reorganized to operate clandestinely as well as publicly; it took its current name in 1988. Though the government of Zine el-Abidine Ben Ali has treated party members less harshly than did that of Habib Bourguiba, it remains illegal.

Nahua \ˈnä-wə\ Indian population of Mexico and Central America, of whom the Aztec are the best known. Modern-day Nahua are agricultural, practicing shifting cultivation and working both common and private land. They are skilled weavers, using fibres of the maguey plant, wool, and cotton. Nahua parents and godparents have strong ties in a fictive kin relationship. Though they profess Roman Catholicism, the Nahua believe in witchcraft and recognize a variety of supernatural beings. See also Nahuatl language.

© 2006 Encyclopædia Britannica, Inc.

nahual See NAGUAL

Nahuatl \'nä-ˌwä-tᵊl\ **language** UTO-AZTECAN LANGUAGE of Mexico, which continues to be spoken by more than a million modern Mexicans in various markedly divergent dialects. Nahuatl was the language of perhaps the majority of the inhabitants of pre-Conquest central Mexico, including Tenochtitlán (now MEXICO CITY), the capital of the AZTEC empire. Soon after the Conquest in the 1520s, Nahuatl began to be written in a Spanish-based orthography, and an abundance of documents survive from the colonial period, including annals, municipal records, poetry, formal addresses, and *The History of the Things of New Spain*, a remarkable compendium of Nahua culture compiled by Indian informants under the direction of the Franciscan friar Bernardino de Sahagún (1499–1590).

Nahuel Huapí \nä-'wel-wä-'pē**, Lake** Lake, in the eastern foothills of the ANDES MOUNTAINS, southwestern Argentina, near the Chilean border. The largest lake in Argentina's lake district, it has an area of about 215 sq mi (560 sq km) and a depth of nearly 1,500 ft (460 m). It is dotted with islands, including Victoria Island, the site of a forestry research station. The lake region was designated the NAHUEL HUAPÍ NATIONAL PARK in 1934.

Nahuel Huapí National Park National park, southwestern Argentina. Originating as a reserve in 1903 with a large donation of private land, it became Argentina's first national park in 1934. The park and adjacent nature reserve now cover about 2,740 sq mi (7,100 sq km) and include dense forests, rivers, glaciers, and snow-clad peaks, including El Tronador ("The Thunderer"), Mount Catedral, and Lake NAHUEL HUAPÍ.

Nahum \'nā-(h)əm\ (fl. late 7th century BC) One of the 12 Minor Prophets in the Bible, traditional author of the book of Nahum. (His prophecy is part of a larger book, The Twelve, in the Jewish canon.) The prophet Nahum is identified only as a resident of Elkosh. His subject is the collapse of the Assyrian empire and the fall of its capital, NINEVEH (612 BC), which he views as a demonstration of God's desire to punish the wickedness of the Assyrians, Israel's longtime enemies.

Nahyān \ˌnä-hə-'yan\ **dynasty** *or* **Āl Nahyān ("Nahyān family")** Ruling family of the emirate of ABU DHABI, a constituent part of the UNITED ARAB EMIRATES (UAE). The family were originally BEDOUIN of the Banū Yās confederation of Arabia from around the oases of Liwā'. The first emir arrived in the late 1770s and established a commercial port on the island. The current emir, Sheikh Zāyid ibn Sulṭan Āl Nahyān, is also president of the UAE.

nail In construction and carpentry, a slender metal shaft, pointed at one end and flattened at the other end, used as a FASTENER. Most often used to join pieces of wood, nails are also used with plastic, drywall, masonry, and concrete. They are usually made of steel but can also be made of stainless steel, iron, copper, aluminum, or bronze. The pointed end is called the point, the shaft is called the shank, and the flattened part is called the head.

nail Structure made of KERATIN that grows on the back of the end of each finger and toe. Nails consist of a root, under the skin; a translucent plate, attached to a nail bed beneath; and a free edge. Nail plate (and probably bed) cells are produced at the root and pushed forward as new cells form behind them. They die and turn white as they reach the free edge and lose contact with the richly vascularized nail bed, which supplies them with nutrients. Fingernails grow continuously at about 0.5 mm per week; toenails grow more slowly. They protect the tips of fingers and toes and help the fingers pry, pick up small objects, and scratch.

Nain brothers, Le See LE NAIN BROTHERS

Naipaul \'nī-ˌpȯl**, Sir V(idiadhar) S(urajprasad)** (b. Aug. 17, 1932, Trinidad) Trinidadian novelist. Descended from Hindu Indians who immigrated to Trinidad as indentured servants, Naipaul left Trinidad in 1950 to attend Oxford University and settled in England. He won critical recognition with *A House for Mr. Biswas* (1961), about an immigrant's attempt to assert his identity and independence. Other novels that explore, in an often harshly critical tone, the disintegration and alienation typical of postcolonial nations include *In a Free State* (1971, Booker Prize), *Guerrillas* (1975), and *A Bend in the River* (1979). He also wrote *The Enigma of Arrival* (1987), *Half a Life* (2001), and nonfictional studies of India. Naipaul was awarded the Nobel Prize for Literature in 2001.

Nairobi \nī-'rō-bē\ City (pop., 1999: 2,143,254), capital of Kenya. It is located in south-central Kenya at an elevation of about 5,500 ft (1,680 m). Founded c. 1899 as a colonial railroad site, it became the capital of BRITISH EAST AFRICA in 1905. As a government and trade centre, it attracted many settlers from rural Kenya, making it one of the largest cities in Africa. When Kenya gained independence in 1963, it remained the capital, with its area greatly expanded by the new constitution. It is Kenya's principal commercial and industrial city, producing beverages, processed food, cigarettes, and furniture. The city exports many products via the port of MOMBASA. Noted institutions and landmarks include the University of Nairobi and the National Museum of Kenya. Tourism is an important industry, with NAIROBI NATIONAL PARK attracting many visitors.

Nairobi National Park National park, Kenya. Located about 5 mi (8 km) south of NAIROBI, it was established in 1946. It has an area of 45 sq mi (117 sq km). It is noted for wildlife, including lions, gazelles, black rhinoceroses, giraffes, antelopes, zebras, numerous reptiles, and hundreds of bird species.

Naismith \'nā-ˌsmith, 'nāz-məth**, James A.** (b. Nov. 6, 1861, Almonte, Ont., Can.—d. Nov. 28, 1939, Lawrence, Kan., U.S.) Canadian-born U.S. physical education instructor, inventor of BASKETBALL. He studied theology but excelled in sports. At the YMCA Training School in Springfield, Mass. (1890–95), he was asked to devise a new indoor winter sport. His version of basketball called for nine players (later reduced to five) per team and the use of peach baskets (later netted hoops) as goals. He was coach of the basketball team at the University of Kansas (1898–1937). He is also credited with inventing the protective helmet for gridiron football players. The Naismith Memorial Basketball Hall of Fame was incorporated in Springfield in 1959.

James A. Naismith holding a ball and a peach basket, the first basketball equipment.
UPI

Naivasha \nī-'vä-shä**, Lake** Lake, southwest-central Kenya. It is located in the GREAT RIFT VALLEY, at 6,180 ft (1,884 m) above sea level. The lake's area fluctuates, ranging between about 44 and 383 sq mi (114 and 991 sq km). It has no known outlet. It serves as a weekend resort for residents of NAIROBI, to the southeast.

naive art *also called* **outsider art** Work of artists in sophisticated societies who lack or reject formal training. Naive artists, not to be confused with hobbyists, create with the same passion as trained artists but without formal knowledge of methods. Naive works are often extremely detailed, with a tendency toward the use of brilliant, saturated colours and a characteristic absence of perspective, which creates the illusion of figures floating in space. Well-known naive artists include HENRI ROUSSEAU and GRANDMA MOSES.

Najd See NEJD

Nakae Tōju \'nä-kä-ˌe-'tō-jü\ *orig.* **Gen** *or* **Mokken** (b. April 21, 1608, Ōmi province, Japan—d. Oct. 11, 1648, Ōmi province) Japanese Neo-Confucian scholar. A feudal retainer, he left his post in 1634 and returned to his native village to carry out his obligations to his widowed mother. There he taught and studied the works of ZHU Xi, but eventually he abandoned Zhu's philosophy for the idealist thought of WANG Yangming. Like Wang, he believed truth was to be discovered through intuition and reflection rather than empirical investigation and that the universe's unifying principle exists in the human mind, not in the external world. He believed that a concept could be fully understood only when acted upon; this emphasis on action made him popular with 19th- and 20th-century Japanese nationalists.

Nakhon Ratchasima \ˌnä-ˌkȯn-ˌrä-chə-'sē-mä\ City (pop., 1999 est.: 181,400), northeastern Thailand. It is the area's transportation, commercial, financial, and governmental centre. It grew rapidly during the 1960s and '70s with the buildup of its Royal Thai Air Force Base, from which U.S. warplanes operated during the VIETNAM WAR. Nearby are restored 11th-century KHMER temples, a major tourist attraction.

Nakhon Si Thammarat \ˌnä-ˌkȯn-ˌsē-ˌtä-mə-'rät\ Town (pop., 1999 est.: 105,176), southern Thailand, on the eastern coast of the MALAY PENINSULA. The walled town, one of Thailand's oldest, was founded more than 1,000 years ago. It was the capital of a powerful state that controlled the midsection of the peninsula and was often called Ligor until the early 20th

© 2006 Encyclopædia Britannica, Inc.

century. It is the area's commercial centre and site of the Wat Mahathudu temple complex. The town is noted for its NIELLO work in silver.

Nalanda \nä-'lən-də\ Buddhist monastic centre, often spoken of as a university, in northern Bihar state, India. Though it is traditionally dated to the time of the BUDDHA (6th–5th centuries BC), archaeological excavations date its foundations to the 5th century AD. It housed a population of several thousand teachers and students. Topics studied included logic, grammar, astronomy, and medicine. The Chinese pilgrims XUANZANG and Yijing provided vivid accounts of Nalanda in the late 7th century. Nalanda continued to flourish through the 12th century and became a centre of religious sculpture. It was probably sacked during Muslim raids c. 1200 and never recovered.

Nalchik \'näl^{y}-chik\ City (pop., 1999 est.: 234,700), southwestern Russia. It lies along the Nalchik River where the river leaves the Caucasian foothills. Founded as a Russian fortress in 1818, it gained importance after the RUSSIAN REVOLUTION OF 1917. It is a popular holiday, climbing, and health resort, and it has a university and research institute. It contains considerable industry, including engineering and hydrometallurgy.

Namath \'nā-məth**, Joe** *in full* **Joseph William Namath** (b. May 31, 1943, Beaver Falls, Pa., U.S.) U.S. football quarterback. He developed his quarterback skills at the University of Alabama. An exceptional passer, in his third season with the New York Jets (1965–77) he threw for a record 4,007 yards. Though long hampered by knee injuries, by the time of his retirement he had set seasonal and career records for most games with 300 yards or more gained in passing. The nickname "Broadway Joe" reflected his fondness for New York nightlife.

Namatjira, Albert (b. July 28, 1902, Hermannsburg, near Alice Springs, N.Terr., Austl.—d. Aug. 8, 1959, Alice Springs) Australian Aboriginal painter. A member of the Aranda tribe, Namatjira learned European watercolour painting techniques at a Lutheran mission school. In 1936 he sold his first painting, and, in 1938, he sold all 41 watercolours on display in his first major solo exhibition in Melbourne. He exhibited his work—generally depictions of the desertlike landscape of central Australia—frequently in the next two decades and became well known in Australia and overseas. One of his paintings was presented to Queen Elizabeth II in 1954.

Nambudiri \nəm-'bü-drē\ Dominant CASTE of the Indian state of Kerala. Rigidly orthodox, its members regard themselves as the representatives of the ancient VEDIC RELIGION and of the traditional Hindu code. They place great emphasis on their priestly status and do not normally engage in business. The chief landowners of Kerala, they derive their wealth from their landholdings.

name One or more words designating an individual entity. The names of certain specific people, places, and things, called proper nouns, are capitalized. Types of names include personal names (Sheila, Raul), placenames (London, Nairobi), titles of works of art (*Mona Lisa*, *Paradise Lost*), brand names (Sanka, Vaseline), names of historical events or eras (War of the Roses, Renaissance), and political, artistic, or philosophical movements (Progressivism, Cubism). Personal names may pass from one culture to another, often changing form—Jochanan (Hebrew), Johann (German), John (English), Ian (Scottish), etc. Family names (surnames) are of more recent origin; the conventions that govern them have existed only since the 11th century. Many hereditary family names came from given names—for example, Alfred, the son of John, might be called Alfred Johnson. Others came from place-names or occupations—Henri from the town of Avignon might become Henri d'Avignon, and Robert, a blacksmith, might become Robert Smith.

Namib Desert \'nä-mib\ Desert region, extending 1,200 mi (1,900 km) from Namibe, Angola, along the entire coast of Namibia to the Olifants River in South Africa. It is an almost rainless area, 50–80 mi (80–130 km) wide over most of its length, traversed by rail lines linking WALVIS BAY with the Republic of South Africa. It is basically a smooth platform of bedrock of various types and ages. In the southern half the platform is covered with sand. The eastern part, the Inner Namib, supports large numbers of antelope. The shore area has a dense population of marine birds, including flamingos, pelicans, and penguins.

Namibia \nə-'mi-bē-ə\ *officially* **Republic of Namibia** Country, southwest coast of Africa. Area: 318,580 sq mi (825,118 sq km). Population (2005 est.): 2,030,000. Capital: WINDHOEK. About one-third of the people are Ovambo. Others include Nama, Kavango, Herero, and San.

Languages: English (official), various Bantu languages (notably Ovambo), Afrikaans, San. Religions: Christianity (Protestant, Roman Catholic, other Christians); also traditional beliefs. Currency: Namibian dollar. Namibia may be divided into three broad regions: the NAMIB DESERT, the Central Plateau, and the KALAHARI DESERT. The economy is based largely on agriculture and on the production and export of diamonds. Namibia is a republic with two legislative houses; its head of state and government is the president. Long inhabited by indigenous peoples, it was explored by the Portuguese in the late 15th century. In 1884 it was annexed by Germany as German South West Africa. It was captured in World War I by South Africa (and subsequently called South West Africa until 1968), which received it as a mandate from the LEAGUE OF NATIONS in 1919 and refused to give it up after World War II. A UN resolution in 1966 ending the mandate was challenged by South Africa in the 1970s and '80s. Through long negotiations involving many factions and interests, Namibia achieved independence in 1990. The country has been severely affected by the AIDS epidemic; a large proportion of the population has become infected with HIV.

Namri Songtsen See GNAM-RI STRONG-BTSAN

Nan-ching See NANJING

Nanak \'nä-nək\ (b. April 15, 1469, Rai Bhoi di Talvandi, near Lahore, India—d. 1539, Kartarpur, Punjab) Indian founder of SIKHISM. Born into a Hindu merchant CASTE, he worked as a storekeeper until a spiritual experience incited him to leave his job and family and begin a 20-year phase of travel. He eventually settled in Kartarpur, a village in Punjab, to which he attracted many disciples, and he became the first GURU of the Sikhs. His doctrine stressed the unity and uniqueness of God and offered salvation through disciplined meditation on the divine name. It stipulated that meditation must be inward and rejected all external aids such as idols, temples, mosques, scriptures, and set prayers. After his death the stories told of his life were collected in anthologies called the *Janam-sakhi*s.

Nanchang *or* **Nan-ch'ang** City (pop., 2003 est.: 1,419,813), capital of JIANGXI province, southeastern China. An old walled city on the right bank of the GAN RIVER, it was founded in 201 BC. In AD 959 it became the capital of the Southern Tang dynasty. At the end of the MONGOL period it was a battleground between the founder of the MING DYNASTY and local warlords. In the early 16th century a rebellion was launched against the Ming regime. Nanchang suffered from the TAIPING REBELLION. In 1927 it was the site of revolutionary activities of the Chinese Communist Party. Since 1949 it has become industrialized; its products include textiles, milled rice, and automotive parts.

© 2006 Encyclopædia Britannica, Inc.

Nanda dynasty Family that ruled Magadha, in northern India (c. 343–c. 321 BC). Legends regarding the low-class origins and ruthless conquests of its founder, Mahapadma, are supported by classical scholarship. The brief period of Nanda rule, along with the succeeding and more lengthy tenure of the MAURYAN EMPIRE, represent the political aspect of a great transitional epoch in which settled agriculture and the growing use of iron resulted in production surpluses and the growth of cities. There are references to the wealth of the Nandas, their sizable military, and administrative initiatives such as irrigation projects.

Nanga Parbat \'nəŋ-gə-'pər-bət\ Peak, western HIMALAYAS. It is located in the Pakistani-administered portion of the KASHMIR region. In 1895 the British climber Albert F. Mummery led the first expedition to the 26,660-ft (8,126-m) summit, but he died in the attempt. Severe weather and frequent avalanches caused the deaths of at least 30 other climbers before the Austrian Hermann Buhl reached the top in 1953.

Nangnang *or* **Lelang** *or* **Lo-lang** Colony of China in northern Korea, established during the HAN DYNASTY (206 BC–AD 220). It was located near modern-day P'yŏngyang, and from there the Chinese incorporated southern Korea and parts of Japan into their sphere of influence. The Chinese maintained a commandery there for 400 years. Its presence introduced the local people to wet-rice cultivation and iron and high-fired ceramic technology.

Nanjing \'nän-'jiŋ\ *or* **Nan-ching** *conventional* **Nanking** \'nan-'kiŋ\ City (pop., 2003 est.: 2,966,000), capital of JIANGSU province, east-central China. Located on the southeastern bank of the YANGTZE RIVER (Chang Jiang) northwest of SHANGHAI, the site has been inhabited for thousands of years. The present city was founded in 1368 by the MING DYNASTY, which had its capital there (1368–1421). It was taken by the British in the OPIUM WARS of 1842 and was largely destroyed in 1864 after having served (since 1853) as the capital of the TAIPING REVOLUTIONARIES. Nanjing was opened as a treaty port in 1899 and was the NATIONALIST capital from 1928 to 1937; it was then taken by the Japanese, and it was the site of the NANJING MASSACRE in the Sino-Japanese War of 1937–45. It was occupied by communist forces in 1949 and became the provincial capital in 1952. Nanjing is a port city and a major industrial and communications centre with a number of universities and colleges. Nearby monuments include mausoleums of SUN YAT-SEN and a Ming emperor.

Nanjing, Treaty of (Aug. 29, 1842) Treaty that ended the first OPIUM WAR, the first of the unequal treaties between China and foreign imperialist powers. China paid the British an indemnity, ceded the territory of HONG KONG, and agreed to establish a "fair and reasonable" tariff. British merchants, who had previously been allowed to trade only at GUANGZHOU (Canton), were now permitted to trade at five "treaty ports" and with whomever they pleased (see CANTON SYSTEM). The treaty was supplemented in 1843 by the British Supplementary Treaty of the Bogue, which allowed British citizens to be tried in British courts and granted Britain any rights in China that China might grant to other countries. See also BRITISH EAST INDIA COMPANY; LIN ZEXU.

Nanjing Massacre *or* **Rape of Nanjing** (December 1937–January 1938) Mass killing and rape of Chinese people in Nanjing by Japanese soldiers after the Japanese had captured the city on Dec. 13, 1937. The Japanese commander ordered the destruction of Nanjing, which had been the Nationalist Chinese capital. Estimates of the number killed range from 100,000 to more than 300,000, and tens of thousands of rapes were committed. Japanese wartime brutality in China contributed to cool relations between the two countries into the 21st century. See also WAR CRIME; WORLD WAR II.

Nanna See SIN

Nanni di Banco \'nän-nē-dē-'bäŋ-kō\ (b. 1384/90?, Florence, Republic of Florence—d. 1421, Florence) Florentine sculptor. Trained by his father, a sculptor who worked on the cathedral of Florence, Nanni received his first important commission from that cathedral, a life-size marble statue of the prophet Isaiah. The classically influenced *Four Crowned Saints* (c. 1411–13) for Or San Michele is considered his masterpiece. He is thought to have been the teacher of the DELLA ROBBIA FAMILY. His work exemplifies the stylistic transition from GOTHIC to RENAISSANCE in early 15th-century Italy.

Nanning \'nän-'niŋ\ *or* **Nan-ning** *formerly (1913–45)* **Yung-ning** \'yuŋ-'niŋ\ City (pop., 2003 est.: 1,031,672), capital of GUANGXI province, southern China. Located on the banks of the Yung River, it was the site of a county seat first established in AD 318. A frontier prefecture under the SONG DYNASTY, it was later ruled successively by the MING and QING dynasties and was opened to foreign trade in 1907. It was occupied by the Japanese during the Sino-Japanese War (1937–45), although it was briefly a U.S. air base. It was a supply base for communist forces during the anti-French war in Indochina (see INDOCHINA WARS) and the VIETNAM WAR. Formerly known mainly as a commercial and administrative centre, it now also has diversified manufacturing.

nanotechnology Manipulation of atoms, molecules, and materials to form structures on the scale of nanometres (billionths of a metre). These nanostructures typically exhibit new properties or behaviours due to QUANTUM MECHANICS. In 1959 RICHARD FEYNMAN first pointed out some potential quantum benefits of miniaturization. A major advancement was the invention of molecular-beam epitaxy by Alfred Cho and John Arthur at Bell Laboratories in 1968 and its development in the 1970s, which enabled the controlled deposition of single atomic layers. Scientists have made some progress at building devices, including computer components, at nanoscales. Faster progress has occurred in the incorporation of nanomaterials in other products, such as stain-resistant coatings for clothes and invisible sunscreens.

Nansen \'nän-sən**, Fridtjof** (b. Oct. 10, 1861, Store-Frøen, near Kristiania, Nor.—d. May 13, 1930, Lysaker, near Oslo) Norwegian explorer and statesman. In 1888 he led the first expedition to cross the ice fields of Greenland. On a later expedition, in 1895, in an attempt to reach the North Pole, he reached the farthest northern latitude then attained. He engaged in scientific research (1896–1917) and led oceanographic expeditions in the North Atlantic in 1900 and 1910–14. He undertook diplomatic missions as Norway's first minister to Britain (1906–08) and as head of Norway's delegation to the new League of Nations (1920). He directed the repatriation from Russia of over 400,000 prisoners of war for the League and organized famine relief in Russia for the Red Cross. In 1922 he was awarded the Nobel Prize for Peace; he used the prize money for international relief work. In 1931 the Nansen International Office for Refugees was established in Geneva.

Nantahala \ˌnan-tə-'hā-lə\ **River** River, western North Carolina, U.S. It flows 40 mi (64 km) north through the Nantahala National Forest into the Little Tennessee River and is noted for whitewater rafting and its scenery. The Nantahala Gorge is the subject of many CHEROKEE legends.

Nantes \'nänt\ *Breton* **Naoned** \'nå-ned\ *ancient* **Condivincum** City (pop., 1999: 270,251), northwestern France. Located on the LOIRE RIVER, west of TOURS, it derives its name from the Namnètes, a Gallic tribe settled there before the Romans conquered GAUL. The HUNS, the NORMANS, and dukes of BRITTANY claimed it before it passed to France in 1499. It rallied to King HENRY IV of France after he signed the Edict of NANTES in 1598. During the FRENCH REVOLUTION its populace suffered many executions. Occupied by German troops in World War II, it was heavily damaged by Allied bombing; it was taken by U.S. troops in 1944. Rebuilt into a major economic centre, it has important industrial plants and shipbuilding yards. It also boasts a castle, a cathedral, a university, and an art museum.

Nantes, Edict of (April 13, 1598) Law promulgated by HENRY IV of France to grant religious liberty and full civil rights to the Protestant HUGUENOTS. It stipulated that Protestant pastors were to be paid by the state, and public worship was permitted in most of the kingdom, though not in Paris. It also restored Catholicism in all areas where Catholic practice had been interrupted by the Wars of RELIGION. The edict was resented by the Catholic clergy; Cardinal de RICHELIEU annulled its political clauses in 1629, and the full edict was revoked by LOUIS XIV in 1685.

Nantucket Island (pop., 2000: 9,520), Atlantic Ocean, south of CAPE COD, Mass., U.S. It is separated from MARTHA'S VINEYARD by the Muskeget Channel. Of glacial origin, it has sandy beaches, a good harbour, and a moderate climate. Purchased from the PLYMOUTH colony in 1641, it became part of New York and was settled in 1659, then ceded to Massachusetts in 1692. In the 1690s Quakers began arriving on the island. It was a whaling centre in the 18th century. The summer tourist trade is now its economic mainstay.

naos See CELLA

napalm \'nā-ˌpäm\ Organic compound, the aluminum SOAP or SALT of a mixture of FATTY ACIDS, used to thicken GASOLINE for use as an incendiary in FLAMETHROWERS and firebombs. The thickened mixture, itself also called napalm, burns more slowly and can be propelled more accurately and over

© 2006 Encyclopædia Britannica, Inc.

greater distances than gasoline. When it comes in contact with surfaces, including the human body, it sticks tenaciously and continues to burn. It was developed and first used by the U.S. in World War II. Its use in the Vietnam War became highly controversial.

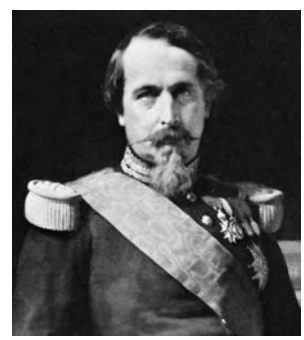
Napata \'na-pə-tə\ Town in ancient Egypt. Located below the fourth cataract of the Nile River in the northern part of what is now The Sudan, it was the capital (c. 750–590 BC) of the Nubian kingdom of Kush and was part of the homeland of the Karmah culture. From the early 18th dynasty it came under Egyptian influence. Ruins in the area include pyramids and temples.

naphthalene \'naf-thə-ˌlēn\ Simplest of the fused (condensed) ring hydrocarbons, an aromatic compound composed of two benzene rings sharing two adjacent carbon atoms ($C_{10}H_8$). It is a white solid at room temperature, very volatile, with a characteristic odour. Naphthalene is an important raw material in the manufacture of dyes and synthetic resins and has been used as a moth repellent.

Napier \'nā-pər**, John** (b. 1550, Merchiston Castle, near Edinburgh, Scot.—d. April 4, 1617, Merchiston Castle) Scottish mathematician and champion of Protestantism. He divided his life between attacks on the church of Rome and the pursuit of numerical calculations. On a number of occasions he urged James IV of Scotland to deal firmly with the Catholic threat. From 1594 he worked on developing secret weapons, including a metal chariot with small holes through which shot could be fired. He developed the concept of the logarithm to facilitate calculations involving multiplication, division, roots, and powers. He also introduced the decimal point as a notation for decimal fractions. The set of calculating rods he designed was a precursor to the slide rule.

Naples *Italian* **Napoli** \'nä-pō-lē\ *ancient* **Neapolis** City (pop., 2001 prelim.: 993,386), capital of Campania, southern Italy. Located on the northern side of the Bay of Naples, southeast of Rome, it was founded c. 600 BC by refugees from an ancient Greek colony; it was conquered by the Romans in the 4th century BC. Part of the realms of the Byzantines and then the Saracens, in the 11th century it was conquered by the Norman ruler of Sicily, and through the 19th century it was the capital of the Kingdom of the Two Sicilies and the Kingdom of Naples. It was entered by Giuseppe de Garibaldi's expedition in 1860. Heavily damaged in World War II by Allied and German bombing, it was later rebuilt, but it suffered severe earthquake damage in 1980. It is a commercial and cultural centre and a major port with diversified industries. Among the city's attractions are medieval castles, an abundance of churches, numerous museums, including the National Archaeological Museum of Greco-Roman antiquities, and a university.

Naples, Bay of Semicircular inlet of the Tyrrhenian Sea, southern Italy. It extends southeastward for 20 mi (32 km) from Cape Miseno to Campanella Point. It is noted for its scenic beauty, which is enhanced by the volcanic hills surrounding it, including Mount Vesuvius. Its major port is Naples, and along its shore are ruins of the ancient cities of Pompeii and Herculaneum.



Naples, Kingdom of Former kingdom comprising the southern portion of the Italian peninsula. The region was held successively by Romans, Byzantines, Lombards, and Saracens before it was conquered by Normans in the 11th century and incorporated into their kingdom of Sicily. It became a separate kingdom in 1282, but it was reunited with Sicily in 1442 as one of the Two Sicilies. Again separating from Sicily in 1458, it was claimed by France and then by Spain, which ruled it for two centuries. It was ceded to the Austrian Habsburgs in 1713 but was conquered in 1734 by the Spanish Bourbons, who reestablished the Kingdom of the Two Sicilies. Napoleon annexed it to France and then made it an independent kingdom (1806–15), after which the Bourbons were restored. In 1860 Naples and Sicily voted for unification with northern Italy.

Napo \'nä-pō\ **River** River, northeastern Ecuador and northeastern Peru. It rises in Ecuador and flows east across the Peruvian border through dense rainforests for about 550 mi (885 km) to empty into the Amazon River. It is an important transport route. Cattle are raised along its banks, and the forests yield rubber, chicle, and timber.

Napoleon *French* **Napoléon Bonaparte** *orig. Italian* **Napoleone Buonaparte** (b. Aug. 15, 1769, Ajaccio, Corsica—d. May 5, 1821, St. Helena Island) French general and emperor (1804–15). Born to parents of Italian ancestry, he was educated in France and became an army officer in 1785. He fought in the French Revolutionary Wars and was promoted to brigadier general in 1793. After victories against the Austrians in northern Italy, he negotiated the Treaty of Campo Formio (1797). He attempted to conquer Egypt (1798–99) but was defeated by the British under Horatio Nelson in the Battle of the Nile. The Coup of 18–19 Brumaire brought him to power in 1799, and he installed a military dictatorship, with himself as First Consul. He introduced numerous reforms in government, including the Napoleonic Code, and reconstructed the French education system. He negotiated the Concordat of 1801 with the pope. After victory against the Austrians at the Battle of Marengo (1800), he embarked on the Napoleonic Wars. The formation of coalitions of European countries against him led Napoleon to declare France a hereditary empire and to crown himself emperor in 1804. He won his greatest military victory at the Battle of Austerlitz against Austria and Russia in 1805. He defeated Prussia at the Battles of Jena and Auerstedt (1806) and Russia at the Battle of Friedland (1807). He then imposed the Treaty of Tilsit on Russia, ending the fourth coalition of countries against France. Despite his loss to Britain at the Battle of Trafalgar, he sought to weaken British commerce and established the Continental System of port blockades. He consolidated his European empire until 1810 but became embroiled in the Peninsular War (1808–14). He led the French army into Austria and defeated the Austrians at the Battle of Wagram (1809), signing the Treaty of Vienna. To enforce the Treaty of Tilsit, he led an army of about 600,000 into Russia in 1812, winning the Battle of Borodino, but was forced to retreat from Moscow with disastrous losses. His army greatly weakened, he was met by a strong coalition of allied powers, who defeated him at the Battle of Leipzig (1813). After Paris was taken by the allied coalition, Napoleon was forced to abdicate in 1814 and was exiled to the island of Elba. In 1815 he mustered a force and returned to France to reestablish himself as emperor for the Hundred Days, but he was decisively defeated at the Battle of Waterloo. He was sent into exile on the remote island of St. Helena, where he died six years later. One of the most celebrated figures in history, Napoleon revolutionized military organization and training and brought about reforms that permanently influenced civil institutions in France and throughout Europe.

Napoleon II, duke von Reichstadt *orig.* **Napoléon-François-Charles-Joseph Bonaparte** (b. March 20, 1811, Paris, France—d. July 22, 1832, Schönbrunn, Austria) The only son of Napoleon and Marie-Louise, he was born during Napoleon's reign as emperor and styled "King of Rome." On Napoleon's abdication (1814), Marie-Louise took her son to live at the court of her father, Emperor Francis II, rather than allow him to remain in France as the focus of resistance as Napoleon II. Given the Austrian title of duke of Reichstadt, he was controlled by Klemens, prince von Metternich. In 1830 Bonapartist insurgents attempted to restore Reichstadt as Napoleon II, but he was already ill with tuberculosis, which would kill him.

Napoleon III *or* **Louis-Napoléon** *orig.* **Charles-Louis-Napoléon Bonaparte** (b. April 20, 1808, Paris, France—d. Jan. 9, 1873, Chislehurst, Kent, Eng.) Emperor of France (1852–70). The nephew of Napoleon, he spent his youth in exile in Switzerland and Germany (1815–30). With the death in 1832 of Napoleon's son, Napoléon-François-Charles-Joseph Bonaparte, duke von Reichstadt, he became the claimant to the French throne. After an abortive coup d'état, he was exiled by King Louis-Philippe to the U.S. After another attempted coup (1840), he was arrested, tried, and imprisoned. He escaped to England (1846) and returned to Paris (1848), where he was elected to the national assembly. He evoked the legend of Napoleon to win the popular vote as president of the Second Republic. Attempting to expand his power, he staged a coup in 1851 and made himself dictator; in 1852, as Napoleon III, he became emperor of the Second Empire. Seeking to reestablish French power, he led France into the Crimean War and helped negotiate the treaty at the Congress of Paris (1856). He sided with Sicily against Austria (1859) and was victorious at the Battle of Solferino. He aided Italy in achieving unity and annexed

Napoleon III, detail of a portrait by Hippolyte Flandrin; in the Versailles Museum.
H. ROGER-VIOLLET

© 2006 Encyclopædia Britannica, Inc.

Savoy and Nice (1860). He promoted liberalized policies within France, which enjoyed prosperity during much of his reign. In the 1860s he gradually introduced political liberalization. He expected material rewards from his "Latin empire" after installing Maximilian as emperor of Mexico (1864–67) but was disappointed. He kept France neutral in the Austro-Prussian War (1866), but in 1870 Otto von Bismarck contrived to involve France in the disastrous Franco-Prussian War. After leading his troops to defeat in the Battle of Sedan (September 1870), Napoleon surrendered and was deposed as emperor.

Napoleonic Code *French* **Code Civil** French civil code enacted by Napoleon in 1804. It clarified and made uniform the private law of France and followed Roman law in being divided into three books: the law of persons, things, and modes of acquiring ownership of things. In Louisiana, the only civil-law state in the U.S., the civil code of 1825 (revised in 1870 and still in force) is closely connected to the Napoleonic Code. See also law code.

Napoleonic Wars (1799–1815) Series of wars that ranged France against shifting alliances of European powers. Originally an attempt to maintain French strength established by the French Revolutionary Wars, they became efforts by Napoleon to affirm his supremacy in the balance of European power. A victory over Austria at the Battle of Marengo (1800) left France the dominant power on the continent. Only Britain remained strong, and its victory at the Battle of Trafalgar (1805) ended Napoleon's threat to invade England. Napoleon won major victories in the Battles of Ulm and Austerlitz (1805), Jena and Auerstedt (1806), and Friedland (1807) against an alliance of Russia, Austria, and Prussia. The resulting Treaties of Tilsit (1807) and the Treaty of Schönbrunn (1809) left most of Europe from the English Channel to the Russian border either part of the French Empire, controlled by France, or allied to it by treaty. Napoleon's successes resulted from a strategy of moving his army rapidly, attacking quickly, and defeating each of the disconnected enemy units. His enemies' responding strategy was to avoid engagement while withdrawing, forcing Napoleon's supply lines to be overextended; the strategy was successfully used against him by the duke of Wellington in the Peninsular War and by Mikhail, Prince Barclay de Tolly, in Russia. In 1813 the Quadruple Alliance formed to oppose Napoleon and amassed armies that outnumbered his. Defeated at the Battle of Leipzig, he was forced to withdraw west of the Rhine River, and after the invasion of France (1814) he abdicated. He rallied a new army to return in the Hundred Days (1815), but a revived Quadruple Alliance opposed him. His final defeat at the Battle of Waterloo was caused by his inability to surprise and to prevent the two armies, led by Wellington and Gebhard von Blücher, from joining forces to defeat him. With his second abdication and exile, the era of the Napoleonic Wars ended.

nappe \'nap\ In geology, a large body or sheet of rock that has been moved by faulting or folding a distance of about 1 mi (1.5 km) or more from its original position. A nappe may be the hanging wall of a low-angle thrust fault (a fracture in the rocks of the Earth's crust caused by contraction), or it may be a large recumbent fold (i.e., an undulation in the stratified rocks that have an essentially horizontal axial plane); both processes position older rocks over younger rocks.

Naqādah *or* **Naqada** \nə-'kä-də\ Archaeological site, east-central Egypt. Located on the west bank of the Nile River north of ancient Karnak, it contains the remains of a Neolithic town and burial grounds of the predynastic period (before c. 2925 BC). It was first excavated by British archaeologist Flinders Petrie in the late 19th century. A modern town at the site has pottery and silk industries.

Nara period (710–784) Period of Japanese history during which the emperor resided in Nara. The capital city was modeled on the capital of Tang-dynasty China, Chang'an, from whom the Japanese borrowed extensively in this period. Buddhism, which had entered Japan a little more than a century earlier, rose in popularity, and many temples and statues were commissioned. The Chinese writing system was introduced and modified by the Japanese (see Japanese writing system), allowing two official histories and the earliest Japanese poetry collections to be produced. The Taihō Code, adopted officially in 701, was based on Chinese law, and the Chinese equal-field system of land distribution, though no longer rigorously enforced, continued to remain in effect. The imperial state extended its frontiers to include southern Kyushu and northern Honshu.

Narayan(swami) \nə-'rī-ən\, R(asipuram) K(rishnaswami) (b. Oct. 10, 1906, Madras, India—d. May 13, 2001, Madras) Indian writer. Narayan briefly worked as a teacher before devoting himself to writing. His first novel, *Swami and Friends* (1935), recounts the adventures of a group of schoolboys. His novels, which typically portray human relationships and the ironies of Indian daily life in which modern urban existence clashes with ancient tradition, include *The English Teacher* (1945), *The Guide* (1958), *The Man-Eater of Malgudi* (1961), *The Vendor of Sweets* (1967), *A Tiger for Malgudi* (1983), and *The World of Nagaraj* (1990). He also wrote short stories, memoirs, and modern prose versions of Indian epics.

Narayanan, Kocheril Raman (b. Oct. 27, 1920, Uzhavoor, India—d. Nov. 9, 2005, New Delhi) President of India (1997–2002). He was the first member of the country's lowest social caste—the group traditionally considered to be untouchable—to occupy the office. Raised in poverty, he attended the University of Travancore on a scholarship and graduated from the London School of Economics with top academic honours. In 1949 he became a diplomat, despite opposition from upper-caste officials, and was ambassador to several countries, including China and the U.S. After serving as a cabinet minister in parliament, he was named vice president in 1992 and president in 1997.

Narbonensis \ˌnär-bə-'nen-səs\ *or* Gallia Narbonensis Ancient Roman province between the Alps, the Mediterranean Sea, and the Cévennes Mountains, comprising what is now southeastern France. Part of Roman Gallia (see Gaul), it was originally called Provincia (see Provence) and was renamed Gallia Narbonensis under Augustus. It became fully Romanized and was governed by a proconsul. The mild climate attracted many Roman immigrants. Vineyards prospered, olive groves were cultivated, and splendid buildings were erected. The province was also famous for its culture, especially the schools at Massilia (see Marseille).

narcissism \'när-sə-ˌsi-zəm\ Mental disorder characterized by extreme self-absorption, an exaggerated sense of self-importance, and a need for attention and admiration from others. First identified by Havelock Ellis in 1898, the disorder is named for the mythological Narcissus, who fell in love with his own reflection. In addition to an inflated self-image and addiction to fantasy, narcissism is characterized by an unusual coolness and composure, which is shaken only when the narcissistic confidence is threatened, and by the tendency to take others for granted or to exploit them. According to Sigmund Freud, narcissism is a normal stage in children's development, but it is considered a disorder when it occurs after puberty.

Narcissus \när-'si-səs\ In Greek mythology, a beautiful youth who fell in love with his own reflection. He was the son of the river god Cephissus and the nymph Leriope. His mother was told by a seer that he would have a long life, provided he never saw his own reflection. His callous rejection of the nymph Echo or of his lover Ameinias drew upon him the gods' vengeance: he fell in love with his own image in the waters of a spring and wasted away. The narcissus flower sprang up where he died.

narcissus \när-'si-səs\ Any of about 40 species of bulbous, fragrant, ornamental plants that make up the genus *Narcissus* in the amaryllis family, native mainly to Europe. Popular spring garden flowers include the daffodil, or narcissus (*N. pseudonarcissus*), the jonquil (*N. jonquilla*), and poet's narcissus (*N. poeticus*). The stem usually bears one large blossom. The central crown of each yellow, white, or pink flower ranges in shape from the form of a trumpet, as in the daffodil, to a ringlike cup, as in the poet's narcissus. Rushlike or flattened leaves arise from the base of the plant. Though poisonous, the bulbs were once used in medicines.

Daffodil (*Narcissus pseudonarcissus*). WALTER CHANDOHA

narcolepsy Sleep disorder with sudden, uncontrollable spells of daytime sleep and disturbances of nighttime sleep. It usually begins in youth or early adulthood and is presumably due to dysfunction of certain brain structures. Narcoleptics can fall asleep anywhere and anytime—for instance, while talking, eating, or driving. Sleep usually lasts a moment, rarely over an hour, and the narcoleptic is easily awakened. Sleep paralysis, normal when falling asleep or waking, occurs during full consciousness in narcolepsy, with brief but complete inability to move.

© 2006 Encyclopædia Britannica, Inc.

narcotic Drug that produces analgesia (see analgesic), narcosis (stupor or sleep), and drug addiction. In most people narcotics also produce euphoria. Those that occur naturally in the opium poppy, notably morphine, have been used since ancient Greek times. The main therapeutic use of narcotics is for pain relief. Most countries limit the production, sale, and use of narcotics because of their addictive properties and detrimental effects and the incidence of drug abuse. With the development in the 19th century of the hypodermic needle and of heroin, five to 10 times as potent as morphine, the use and abuse of narcotics increased dramatically. A narcotic overdose can cause central nervous system depression, respiratory failure, and death.

Narmada River \nər-'mə-də\ *or* **Nerbudda River** River, central India. Rising in Madhya Pradesh state, it is 801 mi (1,289 km) long. It flows west into the Gulf of Khambhat, and forms the traditional boundary between Hindustan and the Deccan. Called Namade by the Greek geographer Ptolemy in the 2nd century AD, it has always been an important route between the Arabian Sea and the Ganges River valley. It is a pilgrimage route for Hindus who regard it their most sacred river after the Ganges.

Narodnik \nä-'rȯd-ˌnik\ *Russian* **Populist** Member of a 19th-century socialist movement in Russia. In the 1860s and '70s the movement attracted intellectuals who believed that political propaganda among the peasants (*narod*, "people") would lead to their revolt and the liberalization of the tsarist regime. Attempts to arouse the peasants produced police persecution and arrests, which drove the socialists to more radical methods, including terrorism. The revolutionary group Land and Freedom, led by Georgy Plekhanov, was formed in the mid-1870s and continued to work among the peasantry until it split in 1879. The movement's populist ideology was revived in the 20th century by the Socialist Revolutionary Party.

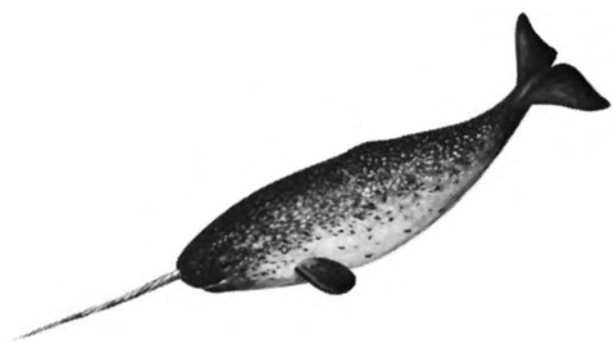
Narragansett \ˌnar-ə-'gan-sət\ **Bay** Inlet of the Atlantic Ocean, southeastern Rhode Island, U.S. It extends north for 28 mi (45 km) into the state, almost dividing it into two parts. The bay includes Rhode, Prudence, and Conanicut islands and Mount Hope Bay, which is crossed by one of New England's longest bridges. Since colonial times it has been an active shipping centre; its chief ports are Providence and Newport. Much of the bay's area is devoted to fishing and recreation.

Narses \'när-ˌsēz\ (b. c. 480, Armenia—d. 574, probably Rome or Constantinople) Byzantine general under Justinian I. A eunuch, he commanded the imperial bodyguard and rose to become grand chamberlain. He helped to quell a riot in 532 and save Justinian's throne; his loyalty to the emperor brought him into the confidence of the emperor's wife Theodora. In 538 Narses was sent on a military expedition to retake Italy, but his inability to cooperate with the commander allowed the Ostrogoths to triumph. He returned to Italy in 551 and conquered the Ostrogothic kingdom. He held power in Italy until removed by Justinian's successor (567). It was rumoured that Narses had invited the Lombards, who conquered much of Italy, into the peninsula in retaliation for his dismissal.

narthex Long, narrow porch, usually colonnaded or arcaded, crossing the entire width of a church at its entrance. The narthex is usually separated from the nave by columns or a pierced wall. In Byzantine churches the space is divided into two parts: An exonarthex forms the outer entrance to the building and bounds the esonarthex, which opens onto the nave.

narwhal *or* **narwal** \'när-ˌwäl\ *or* **narwhale** \'när-ˌwāl\ Toothed whale (*Monodon monoceros,* family Monodontidae) of the Arctic, found in groups of 15–20 along coasts and sometimes in rivers. Narwhals are mottled gray, attain a length of 11.5–16 ft (3.5–5 m), and have no dorsal fin. They have only two teeth, at the upper jaw tip. The male's left tooth is a straight, protruding tusk, up to 8.9 ft (2.7 m) long, that is grooved on the surface in a left-handed spiral. It was prized in medieval times as the unicorn horn. The tusk is thought to have evolved as a sexual display. Narwhals eat fishes, cephalopods, and crustaceans. They are hunted by humans for their tusks and meat. See photograph opposite.

NASA *in full* **National Aeronautics and Space Administration** Independent U.S. government agency established in 1958 for research and development of vehicles and activities for aeronautics and space exploration. Its goals include improving human understanding of the universe, the solar system, and Earth and establishing a permanent human presence in space. NASA, previously the National Advisory Committee for Aeronautics (NACA), was created largely in response to the Soviet Union's launch of Sputnik in 1957. Its organization was well under way in 1961, when Pres. John F. Kennedy proposed that the U.S. put a man on the Moon by the end of the 1960s (see Apollo). Later unmanned programs (e.g., Viking, Mariner, Voyager, Galileo) explored other planets and interplanetary space, and orbiting observatories (e.g., the Hubble Space Telescope) have studied the cosmos. NASA also developed and launched various satellites with Earth applications, such as Landsat and communications and weather satellites. It planned and developed the space shuttle and led the development and construction of the International Space Station.



NASDAQ \'naz-dak\ *in full* **National Association of Securities Dealers Automated Quotations** U.S. market for over-the-counter securities. Established in 1971 by the National Association of Securities Dealers (NASD), NASDAQ is an automated quotation system that reports on the trading of domestic securities not listed on the regular stock exchanges. It publishes two composite price indexes daily as well as bank, insurance, transportation, utilities, and industrial indexes. By the 1990s it had surpassed the American Stock Exchange (AMEX) to become the second largest U.S. securities market, in terms of market capitalization, after the New York Stock Exchange. Members register with the Securities and Exchange Commission and meet requirements for assets, capital, public shares, and shareholders. In 1999 it merged with AMEX to form the Nasdaq-Amex Market Group, and in 2000 NASD sold nearly half its interest in NASDAQ to private investors. See also over-the-counter market.

Naseby \nāz-bē**, Battle of** (June 14, 1645) Decisive battle in the English Civil Wars between the Parliamentary New Model Army and the royalist army of Charles I. The two armies met near Naseby, south of Leicester, and deployed along parallel ridges. The 10,000-man royalist force under Prince Rupert drove back part of the Parliamentary cavalry but then engaged in wild pursuit, leaving the royalist infantry exposed. The more disciplined Parliamentary force under Oliver Cromwell regrouped and counterattacked, routing the royalists and taking 4,000 prisoners. With the loss of his best soldiers, Charles could no longer meet the New Model Army in open battle and effectively lost the war.

Nāṣer od-Dīn Shāh See Nāṣir al-Dīn Shāh

Nash, John (b. 1752, London?, Eng.—d. May 13, 1835, Cowes, Isle of Wight) British architect and city planner. From 1798 Nash was employed by the Prince of Wales. Acquiring considerable wealth, he built for himself East Cowes Castle, Isle of Wight (1798), which had much influence on Gothic Revival architecture. He subsequently dotted England and Ireland with castles, houses, and cottages in the Gothic or Italianate style. Regent's Park, London (1811), comprises a canal, lake, wooded area, botanical garden, and, on the periphery, shopping arcades and picturesque groupings of residences. In 1821 he began to reconstruct Buckingham House, London, as a royal palace; dismissed before completing the project, he faced an inquiry into its cost and structural soundness. Nash's East and West Park Villages, London (completed after his death by his chief assistant, James Pennethorne), served as models for "garden suburbs" of separate houses informally arranged.

Nash, John Forbes (b. June 13, 1928, Bluefield, W.Va., U.S.) U.S. mathematician. He earned a doctorate from Princeton University at 22. He began teaching at Massachusetts Institute of Technology in 1951 but left in the late 1950s because of mental illness; thereafter he was informally associated with Princeton. Beginning in the 1950s with his influ-

ential thesis "Non-cooperative Games," Nash established the mathematical principles of GAME THEORY. His theory, known as the Nash solution or Nash equilibrium, attempted to explain the dynamics of threat and action among competitors. Despite its practical limitations, it was widely applied by business strategists. He shared the 1994 Nobel Prize in Economics with John C. Harsanyi (b. 1920) and Reinhard Selten (b. 1930). A film version of his life, *A Beautiful Mind* (2001), won an Academy Award for best picture.

Nash, (Frederic) Ogden (b. Aug. 19, 1902, Rye, N.Y., U.S.—d. May 19, 1971, Baltimore, Md.) U.S. writer of humorous poetry. Nash sold his first verse in 1930 to *The New Yorker*, on whose staff he worked. In 1931 he published *Hard Lines*, the first of 20 collections that include *The Bad Parents' Garden of Verse* (1936), *I'm a Stranger Here Myself* (1938), and *Everyone but Thee and Me* (1962). His audacious, quotable verse employs delightfully impossible rhymes, puns, and ragged stanzas, often interrupted by digressions. He wrote several children's books and the lyrics for the musicals *One Touch of Venus* (1943) and *Two's Company* (1952).

Nashe \'nash**, Thomas** (b. 1567, Lowestoft, Suffolk, Eng.—d. c. 1601, Yarmouth, Norfolk?) English pamphleteer, poet, dramatist, and novelist. The first of the English prose eccentrics, Nashe wrote in a vigorous combination of colloquial diction and idiosyncratic coined compounds that was ideal for controversy. Among his works are the satire *Pierce Penilesse His Supplication to the Divell* (1592); the masque *Summers Last Will and Testament* (1592, published 1600); *The Unfortunate Traveller* (1594), the first PICARESQUE NOVEL in English; and *Nashes Lenten Stuffe* (1599). The play *Dido, Queen of Carthage* (1594) was a collaboration with CHRISTOPHER MARLOWE.

Nashville City (pop., 2000: 545,524), capital of Tennessee, U.S. It is located on the CUMBERLAND RIVER. Founded in 1779 as Nashborough, it was incorporated as the town of Nashville in 1784. It became a city in 1806 and the state capital in 1843. During the AMERICAN CIVIL WAR, it was occupied by Federal troops (1862). The war's last major battle (1864) took place outside the city. It is a financial and commercial centre, producing shoes, clothing, glass, and tires. Important industries include printing, publishing, and recording. Well known for COUNTRY AND WESTERN MUSIC, it is the site of Opryland U.S.A. and the Country Music Hall of Fame and Museum. It is the home of many universities, including VANDERBILT and Fisk.

Nashville Convention (1850) Two-session meeting of proslavery U.S. Southerners. In 1849 Mississippi held a convention at the urging of JOHN C. CALHOUN, calling for all slaveholding states to send delegates to Nashville, Tenn., to form a united front against perceived Northern aggression. Delegates from nine Southern states met in June 1850; though extremists favoured SECESSION, moderate Whigs and Democrats prevailed. The group adopted 28 resolutions defending slavery but was willing to allow an extension to the Pacific of the boundary established in the MISSOURI COMPROMISE. After the COMPROMISE OF 1850, a smaller group of delegates met in November; dominated by extremists, it denounced the compromise and called again for secession.

Näsi, Lake *or* **Lake Näsijärvi** \'na-sē-ˌyar-vē\ Lake, southwestern Finland. About 20 mi (32 km) long and 8 mi (13 km) wide at its widest point, it is the largest of the Pyhä lakes. Its southern banks are flat and barren, but the northern shore is more developed. Ferries have operated on the lake since 1858.

Nāṣir al-Dīn Shāh \nä-'sēr-ål-'dēn-'shä\ *or* **Nāṣer od-Dīn Shāh** (b. (b. July 17, 1831, Tehrān, Iran—d. May 1, 1896, Tehrān) QĀJĀR DYNASTY shah of Iran (1848–96) who began his reign as a reformer but became increasingly conservative. Domestically, he curbed the power of the clergy in secular affairs, introduced telegraph and postal services, built roads, opened the first school offering education along Western lines, and launched Iran's first newspaper. Later in his rule, however, he steadfastly refused to deal with the growing pressure for reforms. He granted a series of concessionary rights to foreigners in return for large payments. Foremost among these was a 50-year concession given in 1890 on the purchase, sale, and processing of all tobacco in the country, which led to a national boycott of tobacco and the withdrawal of the concession the following year. The incident—popularly termed the "Tobacco Rebellion"—is often considered to be the origin of modern Iranian nationalism.

Nāṣir-e Khusraw \nå-'ser-e-ḵos-'rō\ (b. 1004, Qubādiyān, Khorāsān—d. c. 1072/ 77, Yumgān, Central Asia) Persian poet, theologian, and propagandist. Born into a family of government officials who belonged to the SHIʿITE branch of Islam, he attended school only briefly. In 1045 he made a pilgrimage to Mecca and then traveled to Palestine and Egypt, which was then ruled by the Shīʿite FĀṬIMID DYNASTY. He returned to his homeland to serve as a missionary for the Fāṭimid's ISMĀʿĪLĪ sect of Shīʿites, but his efforts aroused the hostility of the majority SUNNITES and he was obliged to flee. Considered one of the greatest Persian writers, he is remembered for his didactic and devotional poetry as well as for his *Diary of a Journey Through Syria and Palestine*.

Nāṣirah, Al- See NAZARETH

Naskapi See MONTAGNAIS AND NASKAPI

Nasmyth \'nā-ˌsmith**, James** (b. Aug. 19, 1808, Edinburgh, Scot.—d. May 7, 1890, London, Eng.) Scottish engineer. Son of the artist Alexander Nasmyth (1758–1840), he is known mainly for his invention of the steam hammer (1839), an important metallurgical tool of the INDUSTRIAL REVOLUTION. He also devised tools such as a planing machine, a steam pile driver, and a hydraulic punching machine, and he manufactured more than 100 steam locomotives. He retired at 48 to devote himself to his hobby, astronomy.

Naṣrānī \näs-'rå-nē**, Cape** *or* **Ra's Naṣrānī** \'rås-ˌnäs-'rå-nē\ Inlet and cape, southeastern coast of the SINAI Peninsula, Egypt. The site of an Egyptian military base, it was captured by Israeli forces in the Sinai campaign of 1956 (see SUEZ CRISIS). After the SIX-DAY WAR in 1967, Israel again occupied the site before withdrawing from the Sinai Peninsula in the early 1980s. In 1972 a new town, Ophira (now Sharm al-Shaykh), was built there. The region has been developed as a recreational and tourist area.

Nassau Historical region of Germany, former duchy, western part of modern HESSE. It is a thickly forested and hilly area north and east of the Rhine, crossed by the LAHN RIVER and the Taunus Mountains. The title "Count of Nassau" was first assumed in the 12th century. Nassau joined the CONFEDERATION OF THE RHINE and became a duchy in 1806. It was annexed by Prussia in 1866. The present-day royal heads of The Netherlands and Luxembourg are descended from this family, called the house of Nassau.

Nassau City (pop., 1999 est.: 214,000), capital of The Bahamas. Located on the northeastern coast of New Providence island, it was settled by the English in the 17th century and became a rendezvous for pirates in the 18th century. Forts were built there to ward off attacks by encroaching Spaniards. During the AMERICAN CIVIL WAR, it became a base for Confederate blockade runners. It is now a popular resort; its economy is based on tourism.

Nasser, Gamal Abdel *also spelled* **Jamāl ʿAbd al-Nāsir** (b. Jan. 15, 1918, Alexandria, Egypt—d. Sept. 28, 1970, Cairo) Egyptian army officer who was prime minister (1954–56) and president (1956–70) of Egypt. In his youth, he took part in anti-British demonstrations. As an army officer, he led a coup that deposed the royal family (1952) and installed Gen. Muḥammad Naguib as head of state. In 1954 he deposed Naguib and made himself prime minister. The MUSLIM BROTHERHOOD tried to assassinate him but failed. In 1956 he promulgated a constitution that made Egypt a one-party socialist state with himself as president. In the same year, he nationalized the Suez Canal (see SUEZ CRISIS) and secured Soviet assistance to build the ASWAN HIGH DAM after the U.S. and Britain canceled their offer of aid. Soon thereafter, Egypt weathered an attack by British, French, and Israeli forces. A charismatic figure, he aspired to lead the Arab world and succeeded briefly in forming the United Arab Republic with Syria (1958–61). He led the Arab world in the disastrous SIX-DAY WAR against Israel but had tentatively accepted a U.S. peace plan for Egypt and Israel when he died of a heart attack. He was succeeded by ANWAR EL-SĀDĀT.

Nasser, Lake *or* **Lake Nubia** Lake, southern Egypt and northern Sudan. About 300 mi (480 km) long, it was formed in the 1960s by the construction of the Aswan High Dam in order to control the annual floods of the Nile River, whose waters now feed the lake. Its waters, when discharged downstream, have brought some 1,250 sq mi (3,240 sq km) of additional land under irrigation. Its formation flooded a number of archaeological sites, including those found at Abu Simbel. In The Sudan it is known as Lake Nubia.

Nast, Thomas (b. Sept. 27, 1840, Landau, Baden—d. Dec. 7, 1902, Guayaquil, Ecua.) German-born U.S. political cartoonist. He arrived in the U.S. at six, and from 1862 to 1886 he worked as a cartoonist for *Harper's Weekly*. His cartoons in support of the Northern cause in the American Civil War were so effective that Abraham Lincoln called him "our best recruiting sergeant." Many of his most effective cartoons were attacks on the New York City political machine of William Marcy Tweed in the 1870s; one led to Tweed's identification and arrest in Spain. Nast originated the Republican Party's elephant, the Democratic Party's donkey, and one of the most popular images of Santa Claus. Left destitute by the failure of a brokerage house, he was appointed U.S. consul in Ecuador, where he died.

nasturtium \nas-'tər-shəm\ Any of various annual plants of the genus *Tropaeolum* (family Tropaeolaceae), native to Mexico, Central America, and northern South America, and cultivated elsewhere as garden plants. Brilliant yellow, orange, or red flowers are funnel-shaped and have a long spur that contains sweet nectar. The peppery-tasting leaves and flowers are sometimes used in salads, and the young flower buds and fruit are sometimes used as seasoning. *Nasturtium* also is a genus of aquatic herbs in the mustard family (see watercress).

Common nasturtium (*Tropaeolum majus*).
DEREK FELL

Natal \nə-'täl\ Seaport and city (pop., 2002 est.: 734,500), northeastern Brazil. It is situated near the mouth of the Potengi River on the Atlantic Ocean coast. Founded by the Portuguese in 1597 near the site of a fort, Natal was given town status in 1611. It is the capital and principal commercial centre of the state of Rio Grande do Norte; it is also a busy port and naval base. It is the seat of the State University of Rio Grande do Norte. The Marine Research Institute and the Barreira do Inferno rocket base are located in the vicinity.

Natal \nə-'täl\ Former province, southeastern Republic of South Africa. The area was occupied for centuries by Bantu-speaking peoples. It was given the name Natal by Vasco da Gama when he sighted the harbour of Port Natal (now Durban) on Christmas Day (Portuguese Natal) in 1497. The first European settlers arrived in 1824. In 1837 Afrikaners arrived in the interior and, after they defeated the Zulu there, established the Republic of Natal. Annexed by the British in 1843, it was extended by numerous acquisitions. During the South African War, Natal was invaded by Afrikaner forces, which were checked by the British. In 1910 it became a province of the Union of South Africa and in 1961 of the Republic of South Africa. The fragmented, nonindependent black state, or homeland, of KwaZulu was later created within Natal, which was the scene of clashes by rival black factions (see African National Congress; Inkatha Freedom Party). After the South African elections of 1994, the region was united to form the province of KwaZulu/Natal.

Nataraja \ˌnə-tə-'rä-jə\ The Hindu god Shiva in his form as the cosmic dancer. The most common images show him with four arms and flying locks, dancing on a dwarf (a symbol of human ignorance) and encircled by a ring of flames. The Nataraja sculpture shows Shiva as the source of all movement within the cosmos, represented by the loop of flames. The dance's purpose is to release humans from illusion; the place where the god performs the dance is believed to lie both at the centre of the universe and within the human heart.

Nataraja, dancing Shiva, Indian bronze image, 12th–13th century AD; in the Museum of Asiatic Art, Amsterdam.

Natchez Trace Old road, southeastern U.S. It follows an Indian trail (or trace) to the northeast from Natchez, Miss., across northwestern Alabama to Nashville, Tenn., and is more than 500 mi (800 km) long. A wagon road constructed in the early 19th century was used by traders and settlers. Among its historical landmarks are the Emerald and Bynum Indian ceremonial mounds and Chickasaw Village, in Mississippi, and Napier Mine and Metal Ford in Tennessee.

Nathan (fl. 10th century BC) Prophet at the courts of David and Solomon in ancient Israel. In II Samuel, God establishes his covenant with David through Nathan, who also appears rebuking David for taking Bathsheba from her husband. As punishment, David was not allowed to build the Temple at Jerusalem, since Nathan had a vision informing him that its construction must be postponed until Solomon succeeded to the throne. Nathan later anointed the new king, securing Solomon's place against rivals, and may have recorded events during the reigns of David and Solomon.

Nathans, Daniel (b. Oct. 30, 1928, Wilmington, Del., U.S.—d. Nov. 16, 1999, Baltimore, Md.) U.S. microbiologist. He received a medical degree from Washington University. Working principally at Johns Hopkins University, he used the restriction enzyme isolated from a bacterium by Hamilton O. Smith to investigate the structure of the DNA of a monkey virus (SV40), the simplest virus known to produce cancer. His construction of a genetic map of the virus was the first application of restriction enzymes to the problem of identifying the molecular basis of cancer. He shared a 1978 Nobel Prize with Smith and Werner Arber.

nation People whose common identity creates a psychological bond and a political community. Their political identity usually comprises such characteristics as a common language, culture, ethnicity, and history. More than one nation may comprise a state, but the terms nation, state, and country are often used interchangeably. A nation-state is a state populated primarily by the people of one nationality.

Nation, Carry (Amelia) *orig.* **Carry Moore** (b. Nov. 25, 1846, Garrard county, Ky., U.S.—d. June 9, 1911, Leavenworth, Kan.) U.S. temperance advocate. Though she held a teaching certificate, her education was intermittent. In 1867 she married a young physician but soon left him because of his alcoholism. In 1877 she married David Nation, a lawyer, who would divorce her for desertion in 1901. After a 1890 U.S. Supreme Court decision weakened the prohibition laws of Kansas, where she was living, she joined the temperance movement; she came to believe that the unlawfulness of saloons meant they could be destroyed with impunity. A tall and heavy woman, she would march alone or with hymn-singing supporters into saloons and sing, pray, and shout while she smashed

Carry Nation.

their fixtures and stock with a hatchet. Jailed many times, she paid her fines with proceeds from her lectures and sales of souvenir hatchets.

Nation, The U.S. weekly journal of opinion, the oldest continuously published U.S. periodical. Founded in 1865 by Frederick Law Olmsted and Edwin L. Godkin (1831–1902) as a reformist publication, it was sold to the *New York Evening Post* in 1881 and was a weekly edition of the paper until 1914. While Oswald Garrison Villard (1872–1949) was owner and editor (1918–34), it moved decisively to the political left and has remained there under subsequent owners and editors, as during its outspoken opposition to Sen. Joseph McCarthy and to U.S. involvement in the Vietnam War. In circulation it is one of the largest intellectual journals in America.

Nation of Islam *or* **Black Muslims** African American religious movement that mingles elements of Islam and black nationalism. It was founded in 1931 by Wallace D. Fard, who established its first mosque in Detroit, Mich. Fard retired into obscurity and his assistant Elijah Muhammad, who founded a second temple in Chicago, took over in 1934. He asserted the moral and cultural superiority of Africans over whites and urged African Americans to renounce Christianity as a tool of the oppressors. His teachings also included the traditional Islamic tenets of monotheism, submission to God, and strong family life. The Nation of Islam grew quickly after World War II, and in the early 1960s it achieved national prominence through the work of Malcolm X. Leadership disputes led Malcolm to form a separate organization and finally to his assassination in 1965. In the 1970s Elijah Muhammad was succeeded by his son, Wallace D. Muhammad (b. 1933), who renamed the organization the American Muslim Mission. In 1985 he dissolved the Mission, urging its members to become orthodox Muslims. A splinter group headed by Louis Farrakhan retains the movement's original name and principles. In the early 21st century there were approximately 10,000 members of the Nation of Islam.

National Aeronautics and Space Administration See NASA

National Assembly *French* **Assemblée Nationale** French parliamentary body. The name was used first during the French Revolution to designate the revolutionary assembly formed by representatives of the Third Estate (1789) and then as a short form for the National Constituent Assembly (1789–91). It was used again when the National Assembly of 1871–75 drafted a new constitution. In the Third Republic (1875–1940), the name designated the two houses of parliament, the Senate and the Chamber of Deputies. In the Fourth Republic (1946–58) and Fifth Republic (from 1958), the name was applied only to the lower house (the former Chamber of Deputies). The National Assembly consists of 577 deputies, elected in single-seat constituencies for five-year terms.

National Association for the Advancement of Colored People See NAACP

national bank In the U.S., any commercial bank chartered and supervised by the federal government and operated by private individuals. National banks were created during the Civil War under the National Bank Act of 1863 to combat financial instability caused by state banks and to help finance the war effort. When these banks purchased federal bonds and deposited them with the comptroller of the currency, they were permitted to circulate national bank notes, thereby creating a stable, uniform national currency. After the Civil War, the government began to retire the bonds issued during the war, which reduced the number of national bank notes that could be issued. Concern over the inflexibility of national bank notes led to the formation of the Federal Reserve System in 1913, which all national banks were required to join. The U.S. Treasury assumed the obligation of issuing national bank notes in 1935, effectively ending the issue of money by private commercial banks.

National Basketball Association (NBA) U.S. professional basketball league. It was formed in 1949 by the merger of two rival organizations, the National Basketball League (founded 1937) and the Basketball Association of America (1946). In 1976 the NBA was augmented by the absorption of four teams from the former American Basketball Association (founded 1967). The NBA membership is divided into two conferences, each with three divisions. The Eastern Conference consists of the Atlantic Division (Boston Celtics, New Jersey Nets, New York Knicks, Philadelphia 76ers, Toronto Raptors), the Central Division (Chicago Bulls, Cleveland Cavaliers, Detroit Pistons, Indiana Pacers, Milwaukee Bucks), and the Southeast Division (Atlanta Hawks, Charlotte Bobcats, Miami Heat, Orlando Magic, Washington Wizards). The Western Conference consists of the Northwest Division (Denver Nuggets, Minnesota Timberwolves, Portland Trail Blazers, Seattle SuperSonics, Utah Jazz), the Pacific Division (Golden State Warriors, Los Angeles Clippers, Los Angeles Lakers, Phoenix Suns, Sacramento Kings), and the Southwest Division (Dallas Mavericks, Houston Rockets, Memphis Grizzlies, New Orleans Hornets, San Antonio Spurs).

National Broadcasting Company See NBC

National Collegiate Athletic Association (NCAA) Organization that administers U.S. intercollegiate athletics. It was formed in 1906 but did not acquire significant powers to enforce its rules until 1942. Headquartered at Indianapolis, Ind., it functions as a general legislative and administrative authority, formulating and enforcing rules of play for various sports and eligibility criteria for athletes. It has about 1,200 member schools and conducts about 80 national championships in a total of about 20 sports.

National Convention *French* **Convention Nationale** Governing assembly (1792–95) of the French Revolution. Comprising 749 deputies elected after the overthrow of the monarchy (1792), it sought to provide a new constitution for France. The struggle between the radical Montagnards and the moderate Girondins dominated the Convention until the Girondins were purged in 1793. The democratic constitution already approved by the Convention was not put into effect while the Montagnards controlled the assembly (1793–94). After the Thermidorian Reaction (1794), the balance of power in the Convention was held by members of the Plain. The Girondins were recalled, and the Constitution of 1795 was approved for the Directory regime that replaced the Convention.

national debt *or* **public debt** Total indebtedness of a government, especially as evidenced by securities issued to investors. The national debt grows whenever the government operates a budget deficit—that is, when government spending exceeds government revenues in a year. To finance its debt, the government can issue securities such as bonds or treasury bills. The level of national debt varies from country to country, from less than 10% of the gross domestic product (GDP) to more than double it. Public borrowing is thought to have an inflationary effect on the economy and thus is often used during recessions to stimulate consumption, investment, and employment. See also deficit financing; John Maynard Keynes.

National Education Association (NEA) Voluntary association of U.S. teachers, administrators, and other educators associated with elementary and secondary schools and colleges and universities. Founded in 1857 as the National Teachers Assn., it is among the world's largest professional organizations. Operating much like a labour union, it represents its members through numerous state and local affiliates. It seeks to improve the schools and working conditions, advance the cause of public education, promote federal legislation, and sponsor research.

National Endowment for the Arts (NEA) Independent agency of the U.S. government that supports the creation, dissemination, and performance of the arts. It was created by the U.S. Congress in 1965 and funds projects in literature, music, theatre, film, dance, fine arts, sculpture, and crafts. The majority of NEA grants go directly to institutions such as art museums, not-for-profit theatres, and symphony orchestras; to arts programs in schools; and to support events such as folk arts festivals. Some individual artists are funded for specific projects as well. Grants are often awarded by the NEA in cooperation with state and local arts agencies. NEA funding dropped in the 1990s, as Congressional opposition arose in response to certain NEA-supported projects.

National Endowment for the Humanities (NEH) U.S. independent agency. Founded in 1965, it supports research, education, preservation, and public programs in the humanities. It provides grants to museums, libraries, archives, television programs, historic sites, translation and editorial projects by academic presses, educational and research institutions, and individuals.

National Film Board of Canada (NFB) Canadian department of film production. It was established in 1939 and directed by John Grierson (1898–1972), who developed the studio into a leading producer of documentaries, including the World War II propaganda films *Canada Carries On* and *The World in Action*. The studio also made high-quality animated movies by Norman McLaren (1914–87) and others, and it later expanded to produce feature films, including *The Luck of Ginger Coffey* (1964), *The Apprenticeship of Duddy Kravitz* (1974), and *The Company of Strangers* (1990).

© 2006 Encyclopædia Britannica, Inc.

National Football League (NFL) Major professional football organization in the U.S. It was founded in 1920 at Canton, Ohio; its first president was Jim Thorpe. In 1970 it merged with the rival American Football League (founded 1959). Beginning with the 2002 season, it was divided into two conferences, each with four divisions. The National Conference consists of the East Division (Dallas Cowboys, New York Giants, Philadelphia Eagles, and Washington Redskins), the South Division (Atlanta Falcons, Carolina Panthers, New Orleans Saints, and Tampa Bay Buccaneers), the North Division (Chicago Bears, Detroit Lions, Green Bay Packers, and Minnesota Vikings), and the West Division (Arizona Cardinals, St. Louis Rams, San Francisco Forty-Niners, and Seattle Seahawks). The American Conference consists of the East Division (Buffalo Bills, Miami Dolphins, New England Patriots, and New York Jets), the South Division (Houston Texans, Indianapolis Colts, Jacksonville Jaguars, and Tennessee Titans), the North Division (Baltimore Ravens, Cincinnati Bengals, Cleveland Browns, and Pittsburgh Steelers), and the West Division (Denver Broncos, Kansas City Chiefs, Oakland Raiders, and San Diego Chargers). The league season culminates with the Super Bowl, the annual championship game between the winners of the National and American conferences.

national forest In the U.S., any of numerous forest areas under federal supervision for the purposes of conserving water, timber, wildlife, fish, and other renewable resources and providing public recreation areas. Administered by the U.S. Department of Agriculture's Forest Service, in the early 21st century the forests numbered 155 and occupied 352,000 sq mi (911,700 sq km) in 40 states and Puerto Rico. They were founded in 1891 as a system of forest reserves and were renamed national forests in 1907. See also Gifford Pinchot.

National Gallery of Art Museum in Washington, D.C., part of the Smithsonian Institution. It was founded in 1937 when Andrew W. Mellon donated his collection of European paintings to the U.S. He also donated funds to construct the gallery's Neoclassical building, opened in 1941. Now known as the West Building, it is connected by plaza and underground concourse to the East Building, designed by I.M. Pei (completed 1978). The museum houses an extensive collection of U.S. and European paintings, sculpture, decorative arts, and graphic arts from the 12th to 21st centuries; especially well represented are works by Italian Renaissance, 17th-century Dutch, and 18th- and 19th-century French artists.

National Gallery of Canada National art museum founded in Ottawa in 1880. Its holdings include extensive collections of Canadian art as well as important European works. Its nucleus was formed with the donation of diploma works by members of the Royal Canadian Academy. In 1911 the drawing collection was formed (1913–24) with important works by Albrecht Dürer and Rembrandt, and the photography collection was begun in 1967. A new building opened in 1988; the Canadian Centre for the Visual Arts opened in 1991 and a multimedia learning centre in 1996. The museum circulates several hundred exhibitions to other cities throughout the country each year.

National Geographic Society U.S. scientific society founded in 1888 in Washington, D.C., by a small group of eminent explorers and scientists "for the increase and diffusion of geographic knowledge." At the turn of the 21st century it had approximately nine million members. It has supported more than 7,000 major scientific projects and expeditions, including those of Robert E. Peary, Richard E. Byrd, the Leakey family, Jacques-Yves Cousteau, Jane Goodall, and Dian Fossey. It has published numerous books, atlases, and bulletins and has created hundreds of television documentaries. *National Geographic Magazine* is a monthly magazine of geography, archaeology, anthropology, and exploration. It became a leader in reproducing colour photographs and printing photographs of undersea life, views from the stratosphere, and animals in their natural habitats. It also became famous for articles containing substantial information on environmental, social, and cultural aspects of the regions covered. See also Gilbert Grosvenor.

National Guard, U.S. Reserve group organized by the U.S. Army and Air Force. Every state and territory of the U.S. has a National Guard, which can be called on by state governors during emergencies such as riots and natural disasters. Guard units may also be ordered into active duty for up to two years by the U.S. president in the event of a national emergency. Enlistment in the National Guard is voluntary.

National Health Service (NHS) Comprehensive government public-health service in Britain covering virtually the entire population, established in 1946. Financed primarily by general taxes, most services are free. General practitioners and dentists are paid per patient registered with them and may also have private patients. Hospital and specialist services are provided in government hospitals and other facilities by salaried professionals. Local health authority services provide maternity and child welfare, home nursing, and other preventive services. The NHS has provided generally good health care at relatively low cost, but the increasing expense of hospital stays has caused financial strain.

National Hockey League (NHL) Organization of professional North American ice-hockey teams. The league was formed in 1917 by five Canadian teams; the first U.S. team, the Boston Bruins, was added in 1924. It today consists of 30 teams in two conferences and six divisions. The Eastern Conference includes the Atlantic Division (New Jersey Devils, New York Islanders, New York Rangers, Philadelphia Flyers, and Pittsburgh Penguins), the Northeast Division (Boston Bruins, Buffalo Sabres, Montreal Canadiens, Ottawa Senators, and Toronto Maple Leafs), and the Southeast Division (Atlanta Thrashers, Carolina Hurricanes, Florida Panthers, Tampa Bay Lightning, and Washington Capitals). The Western Conference includes the Central Division (Chicago Blackhawks, Columbus Blue Jackets, Detroit Red Wings, Nashville Predators, and St. Louis Blues), the Northwest Division (Calgary Flames, Colorado Avalanche, Edmonton Oilers, Minnesota Wild, and Vancouver Canucks), and the Pacific Division (Mighty Ducks of Anaheim, Dallas Stars, Los Angeles Kings, Phoenix Coyotes, and San Jose Sharks). At the end of the regular winter season, the top teams in each division engage in a play-off for the Stanley Cup.

national income accounting Set of principles and methods used to measure a country's income and production. There are two ways of measuring national economic activity: the expenditure approach, which measures the money value of the total output of goods and services in a given period (usually a year); and the income approach, which measures the total income derived from economic activity after allowing for capital consumption. The most commonly used indicator of national output is the gross domestic product (GDP). National income may be derived from gross national product (GNP) by making allowances for certain non-income costs included in the GNP, such as indirect taxes, subsidies, and depreciation. National income thus calculated represents the aggregate income of the owners of the factors of production; it is the sum of wages, salaries, profits, interest, dividends, rent, and so on. The data accumulated for calculating the GDP and national income may be manipulated in various ways to show various relationships in the economy. Common uses of the data include breakdowns of GDP according to type of product, breakdowns of national income by type of income, and analyses of the sources of financing (e.g., personal savings, company funds, or national deficits).

National Institutes of Health (NIH) U.S. government agency that conducts or supports biomedical research. It is made up of numerous specialized institutes (e.g., National Cancer Institute; National Heart, Lung, and Blood Institute; National Institute on Aging; National Institute of Child Health and Human Development; and National Institute of Mental Health). Part of the Department of Health and Human Services, it also trains health researchers; disseminates information; and maintains other offices and divisions, the National Library of Medicine (the foremost source of medical information in the U.S.), and several research centres.

National Labor Relations Act See Wagner Act

National Labor Relations Board (NLRB) U.S. government agency charged with administering the National Labor Relations Act (1935). The three-member NLRB, appointed by the president, organizes elections to determine whether employees wish to be represented by a labour union in collective bargaining and monitors labour practices by employers and unions. It does not initiate investigations; its involvement must be sought by employers, individuals, or unions. Though it lacks enforcement power for its orders, it can prosecute cases in court.

National League (NL) Oldest existing U.S. major-league professional baseball organization. The league was founded in 1876. Its supremacy was challenged by several rival organizations over the years, of which only the American League has survived; beginning in 1903, the champions of the two leagues have engaged in an annual World Series competition. Today the National League consists of 16 teams aligned in three divisions. In the Eastern Division are the Atlanta Braves, Florida Marlins (Miami), New York Mets, Philadelphia Phillies, and Washington (D.C.) Nationals. In the Central Division are the Chicago Cubs, Cincin-

© 2006 Encyclopædia Britannica, Inc.

nati Reds, Houston Astros, Milwaukee Brewers, Pittsburgh Pirates, and St. Louis Cardinals. In the Western Division are the Arizona Diamondbacks (Phoenix), Colorado Rockies (Denver), Los Angeles Dodgers, San Diego Padres, and San Francisco Giants.

National Liberal Party *German* **Nationalliberale Partei** Political party that was active first in Prussia and the North German Confederation from 1867, then in Germany in 1871–1918. From 1871 until 1879 the National Liberals, under the leadership of Rudolf von Bennigsen and Johannes von Miquel, enthusiastically supported Chancellor Otto von Bismarck in the Reichstag (parliament) and constituted a virtual government party, winning more seats than any other party. After losing many seats in the election of 1879, the party split over the issue of giving the Reichstag control over revenues. It formed a coalition with the Conservatives in 1890, but its influence waned thereafter.

National Liberation Front Title used by nationalist, usually socialist, movements in various countries since World War II. In Greece, the National Liberation Front-National Popular Liberation Army was a communist-sponsored resistance group that operated in occupied Greece during the war. In Vietnam, the National Front for the Liberation of the South was formed in 1960 to overthrow the South Vietnamese government (see Viet Minh). In Algeria, the National Liberation Front, successor to the body that directed Algeria's war of independence (1954–62), was the only constitutionally legal party from 1962 to 1989. In Uruguay, the leftist guerrilla Tupamaro National Liberation Front (1963) battled police and the army from 1967 to 1972; it later became a legal political party. In the Philippines, the Moro National Liberation Front (1968) espoused separatism for the Moros; during the last three decades of the 20th century, its insurgency resulted in about 100,000 deaths. The Corsican National Liberation Front (1976), the largest and most violent Corsican nationalist movement, remained active into the 21st century. See also Sandinistas.

national monument In the U.S., any of numerous areas reserved by the federal government for the protection of objects or places of historical, scientific, or prehistoric interest. They include natural physical features, remains of Indian cultures, and places of historical importance. In 1906 Pres. Theodore Roosevelt established the first national monument, Devils Tower, in Wyoming. They are administered by the National Park Service of the U.S. Department of the Interior.

National Organization for Women (NOW) U.S. women's rights organization. It was founded in 1966 by Betty Friedan to promote equal rights for women, particularly in the area of employment. With some 500,000 members (both women and men) and 550 chapters, it addresses, through lobbying and litigation, issues such as child care, pregnancy leave, and abortion and pension rights. In the 1970s its major concern was passage of the Equal Rights Amendment to the Constitution, though the amendment failed in 1982. NOW has been more successful at the state level, where it has lobbied for state equal rights amendments and comparable-worth (equal pay for equal work) legislation.

national park Area set aside by a national government for the preservation of its natural environment. Most national parks are kept in their natural state. Those in the U.S. and Canada emphasize land and wildlife preservation, those in Britain focus mainly on the land, and those in African nations focus primarily on animals. The world's first national park, Yellowstone, was established in the U.S. by Pres. Ulysses S. Grant in 1872. Canada's first national park, Banff, was established in 1885. Japan and Mexico established their first national parks in the 1930s; Britain's national parks date to 1949. The U.S. National Park Service, established in 1916, now also manages national monuments, preserves, recreation areas, and seashores, as well as lakeshores, historic sites, parkways, scenic trails, and battlefields. See also national forest.

National Party *in full* **National Party of South Africa** South African political party that ruled the country in 1948–94. Its following included most Afrikaners and many English-speaking whites. It was founded in 1914 by J.B.M. Hertzog as the National Party of South Africa and sought to rally Afrikaners against the Anglicizing policies of the government of Louis Botha and Jan Smuts. After winning the 1948 elections, the party enacted a mass of racial legislation, a policy that the party named apartheid. In 1961 it severed ties with the Commonwealth and made South Africa a republic. In the 1990s, under F.W. de Klerk of the National Party, the government began to repeal racially discriminatory laws. The National Party was defeated in South Africa's first universal elections in 1994 but participated in a coalition government with its longtime rival, the African National Congress. With the enactment of a new constitution in 1996, the Nationalists resigned from the government in protest, marking their first time out of government since 1948. In 1998 the party changed its name to the New National Party. After several years of declining popularity, in 2005 the party's federal council voted in favour of disbanding the party. See also P.W. Botha.

National Public Radio (NPR) U.S. public radio network. It was established by the Corporation for Public Broadcasting in 1970 to provide programming to U.S. noncommercial and educational radio stations. While initially providing programs on the arts, after 1983 the network focused largely on news programming. It features the daily programs *Morning Edition* and *All Things Considered*, as well as the interview programs *Fresh Air* and *Talk of the Nation*.

National Recovery Administration (NRA) (1933–35) U.S. government agency established to stimulate business recovery during the Great Depression. As part of the National Industrial Recovery Act (1933), the NRA established codes to eliminate unfair trade practices, reduce unemployment, and set minimum wages and maximum hours. The U.S. Supreme Court invalidated the act in 1935 because it gave quasi-legislative powers to the executive branch. Many of its provisions appeared in subsequent legislation.

National Republican Party U.S. political party formed after the Jeffersonian Republicans split in 1825. The National Republicans included followers of John Quincy Adams and Henry Clay and opponents of Andrew Jackson. Adams, the incumbent president, ran as the party's unsuccessful candidate in the 1828 presidential election. Its 1832 presidential nominee was Clay, whose platform endorsing a high tariff, internal improvements, and the Bank of the United States (see Bank War). After losing again to Jackson, the party joined with conservatives and other anti-Jackson forces to form the Whig Party.

National Rifle Association (NRA) Governing organization for the sport of shooting with rifles and pistols. It was founded in Britain in 1860. The U.S. organization, formed in 1871, has a membership of some four million. Both the British and the U.S. groups sponsor regional and national shooting competitions and offer gun safety programs. The U.S. NRA, one of the most powerful political lobbies in the country, has vigorously opposed many legislative proposals for the control of firearms.

National Security Agency (NSA) U.S. intelligence agency responsible for cryptographic and communications intelligence and security. Established in 1952 by a presidential directive (not by law), it has operated largely without Congressional oversight. Its director has always been a general or an admiral. Its mission includes the protection and formulation of codes, ciphers, and other cryptology as well as the interception, analysis, and solution of coded transmissions. It conducts research into all forms of electronic transmission and operates listening posts around the world for the interception of signals. A target for penetration by foreign intelligence services, until recently it maintained no contact with the public or the press. Though its budget and the number of its employees is secret, the NSA is acknowledged to be far larger than the Central Intelligence Agency, possessing financial resources that rival those of the world's largest companies.

National Security Council (NSC) U.S. agency that advises the president on domestic, foreign, and military policies related to national security. With the Central Intelligence Agency, it was established by the 1947 National Security Act. It provides the White House with a foreign-policy-making instrument independent of the State Department. It has four members—the president, vice president, and secretaries of state and defense—and its staff is headed by the national security adviser.

National Socialism *or* **Nazism** Totalitarian movement led by Adolf Hitler as head of Germany's Nazi Party (1920–45). Its roots lay in the tradition of Prussian militarism and discipline and German Romanticism, which celebrated a mythic past and proclaimed the rights of the exceptional individual over all rules and laws. Its ideology was shaped by Hitler's beliefs in German racial superiority and the dangers of communism. It rejected liberalism, democracy, the rule of law, and human rights, stressing instead the subordination of the individual to the state and the necessity of strict obedience to leaders. It emphasized the inequality of individuals and "races" and the right of the strong to rule the weak. Politically, National Socialism favoured rearmament, reunification of the Ger-

man areas of Europe, expansion into non-German areas, and the purging of "undesirables," especially Jews. See also FASCISM.

nationalism Loyalty and devotion to one's NATION or country, especially as above loyalty to other groups or to individual interests. Before the era of the nation-state, the primary allegiance of most people was to their immediate locality or religious group. The rise of large, centralized states weakened local authority, and society's increasing secularization weakened loyalty to religious groups, though shared religion—along with common ethnicity, political heritage, and history—is one of the factors that draws people together in nationalist movements. Early nationalist movements in 18th- and early 19th-century Europe were liberal and internationalist, but they gradually became more conservative and parochial. Nationalism is considered a major contributing cause of World War I, World War II, and many other wars of the modern era. In Africa and Asia in the 20th century, nationalist movements often arose in opposition to COLONIALISM. After the fall of the Soviet Union, powerful nationalist sentiments in eastern Europe and the former Soviet republics contributed to ethnic conflicts, such as those in the territories of the former Yugoslavia.

Nationalist Party *or* **Kuomintang** *or* **Guomindang** \'gwō-'min-'däŋ\ Political party that governed all or part of mainland China from 1928 to 1949 and subsequently ruled Taiwan. Founded by Song Jiaoren (1882–1913) and led by SUN YAT-SEN, it evolved from a revolutionary league working to overthrow the QING DYNASTY into a political party. In the early 1920s the party received guidance from the Soviet Bolshevik party; until 1927 it collaborated with the CHINESE COMMUNIST PARTY. Sun's program, which stressed nationalism, democracy, and people's livelihood, was ineffectively implemented by his successor, CHIANG KAI-SHEK, who became increasingly conservative and dictatorial. During World War II, Chiang focused on suppressing the Chinese communists at the expense of defending the country from the Japanese; in 1949 the Nationalists were driven from the mainland to Taiwan. There they maintained a monopoly on political power until 1989, when the first legal opposition party won seats in the legislature. The first non-Nationalist president was elected in 2000. See also WANG JINGWEI.

nationality Affiliation with a particular NATION or sovereign state. People, business corporations, ships, and aircraft all have nationalities. Nationality is inferior to CITIZENSHIP, insofar as the latter implies a full set of political privileges and the former does not. Countries have limited rights to determine which of their inhabitants will be their nationals. People generally acquire a nationality by birth within a particular country's territory, by inheritance from one or both parents, or by NATURALIZATION. It may change or be augmented or taken away if a country cedes control of the territory where one lives to another country.

Nations, Battle of the See Battle of LEIPZIG

Native American See AMERICAN INDIAN

Native American arts Literary, performing, and visual arts of the indigenous peoples of the Western Hemisphere. Folktales have long been a part of the social and cultural life of diverse groups of American Indian and Inuit peoples. These tales were passed on orally by storytellers whose presentation could shape the power of a story. One technique they frequently employed was the repetition of incidents. Elements of mythology—which vary from region to region—are also central. Any definition of a Native American musical style is complicated by the variety between tribes and within tribal repertoires. An evident feature of much music is male dominance. Equally evident is its limitation to a single singer, who performs without harmonization and with percussion accompaniment. The singing voice is well supported from the diaphragm and has a pulsating quality caused by the rhythmic expulsion of breath. Melodies are generally sparse, sometimes even monotone; only rarely do songs expand beyond the notes of the pentatonic (five-tone) scale. Among the instruments used are drums, rattles, and sometimes wind instruments such as the PANPIPE. The dances of Native American peoples represent forms passed down over centuries and modified through interaction with foreign and other Indian cultures. Their origins lie in religious rites; in attempts to invoke magic and thus cure illness or assure success in food production, hunting, and warfare; and in such life-passage rites as birth, puberty, and death. Patterns within the dance reflect complex relations of rank and gender, and the dancers themselves often represent different religious symbols. Characteristic of Indian dancers is a slightly forward-tilted posture, forward raising of the knee, flat-footed stamp or toe-heeled action, and tendencies towards muscular restraint and relaxation in gesture. Native American visual arts also vary widely from tribe to tribe and region to region. The particular utilitarian form that Native American art took on often reflected the social organization of the cultures involved; for example, political and military societies found their major art forms in weaponry, pageantry of costume, and panoply. Working with the materials natural to their respective homelands, the various Indian cultures also produced art that reflected their environment; for example, those living in forested regions became gifted sculptors in wood. Some of the best Native American artwork was applied to those objects intended to please a deity, soothe the angry gods, and placate or frighten evil spirits. Among the many media explored by Native American cultures are WEAVING, POTTERY, BASKETRY, wooden SCULPTURE, clayware, quillwork, EMBROIDERY, BEADWORK, TOTEM POLES, MURALS, and MASKS. Architectural achievements are also varied and include the monumental stone cliff dwellings of the American Southwest and the enormous Pyramid of Quetzalcoatl at Cholula in Mexico. See also KACHINA; NAVAJO WEAVING; ORAL TRADITION; PUEBLO POTTERY; TRICKSTER TALE.

Native American Church *or* **peyotism** Religious movement among North American Indians involving the drug PEYOTE. Peyote was first used to induce supernatural visions in Mexico in pre-Columbian times; its use extended north into the Great Plains in the 19th century, and peyotism is now practiced among more than 50 tribes. Peyotist beliefs, which combine Indian and Christian elements, vary from tribe to tribe. They involve worship of the Great Spirit, a supreme deity who deals with humans through various other spirits. In many tribes peyote is personified as Peyote Spirit and is associated with JESUS. The rite often begins on Saturday evening and continues through the night. The Peyote Road is a way of life calling for brotherly love, family care, self-support through work, and avoidance of alcohol.

Native Dancer (foaled 1950) U.S. Thoroughbred racehorse. He won the Preakness and Belmont stakes in 1953 but finished second in the Kentucky Derby. In 1954 he was named Horse of the Year. He won 21 of 22 total starts, achieving widespread popularity as the first horse whose major victories were seen on national television.

native element Any of the 19 chemical elements that occur as MINERALS and are found in nature uncombined with other elements. They are commonly divided into three groups: metals (platinum, iridium, osmium, iron, zinc, tin, gold, silver, copper, mercury, lead, chromium); semimetals (bismuth, antimony, arsenic, tellurium, selenium); and nonmetals (sulfur, carbon). Members of the group of native elements form under widely varying physicochemical conditions and in very different rock types. Many deposits are sufficiently abundant to be commercially important.

NATO *in full* **North Atlantic Treaty Organization** International military alliance created to defend western Europe against a possible Soviet invasion. A 1948 collective-defense alliance between Britain, France, The Netherlands, Belgium, and Luxembourg was recognized as inadequate to deter Soviet aggression, and in 1949 the U.S. and Canada agreed to join their European allies in an enlarged alliance. A centralized administrative structure was set up, and three major commands were established, focused on Europe, the Atlantic, and the English Channel (disbanded in 1994). The admission of West Germany in 1955 led to the Soviet Union's creation of the opposing Warsaw Treaty Organization, or WARSAW PACT. France withdrew from military participation in 1966. Since NATO ground forces were smaller than those of the Warsaw Pact, the balance of power was maintained by superior weaponry, including intermediate-range nuclear weapons. After the Warsaw Pact's dissolution and the end of the Cold War in 1991, NATO withdrew its nuclear weapons and attempted to transform its mission. It involved itself in the Balkan conflicts of the 1990s. Article 5 of the North Atlantic Treaty stated that an attack on one signatory would be regarded as an attack on the rest. This article was first invoked in 2001 in response to the terrorist SEPTEMBER 11 ATTACKS against the U.S. Additional countries joined NATO in 1999 and 2004 to bring the number of full members to 26.

Natsume Sōseki \ˌnä-tsù-'mā-'sō-ˌse-kē\ *known as* **Sōseki** *orig.* **Natsume Kinnosuke** (b. Feb. 9, 1867, Edo, Japan—d. Dec. 9, 1916, Tokyo) Japanese novelist. Originally a teacher, Natsume made his literary reputation with two very successful comic novels, *I Am a Cat* (1905–06) and *Botchan* (1906). After 1907 he gave up teaching and produced sombre works dealing with human attempts to escape from loneliness, including *The Wayfarer* (1912–13), *The Gate* (1910), *Kokoro* (1914), and

© 2006 Encyclopædia Britannica, Inc.

Grass on the Wayside (1915). The first writer of modern realistic novels in Japan, he articulately and persuasively depicted the plight of the alienated modern Japanese intellectual.

natural bridge *or* **natural arch** Naturally created arch formation resembling a bridge. Most are erosion features that occur in sandstone or limestone. Some are formed by the collapse of part of a cavern roof. Others may be produced by entrenched rivers eroding through MEANDER necks to form cutoffs. Still others are produced by exfoliation (separation of successive thin shells) and may be enlarged by wind erosion.

Natural Bridges National Monument National monument, southeastern Utah, U.S. Comprising three large natural bridges carved by two winding streams, it was established in 1908. The largest bridge, Sipapu, is 222 ft (68 m) high and spans 261 ft (80 m). Pictographs were carved on another of the bridges, Kachina, by early cliff dwellers.

natural childbirth Any of the systems (e.g., the Lamaze method) of managing birth without drugs or surgery. All begin with classes to teach pregnant women about the birth process, including when to push and what breathing and relaxation techniques to use at which stage. The goal is to reduce fear and muscle tension, which can increase the pain of labour, and to make the mother an active participant in the process. The father or another partner usually attends the classes with the mother and coaches her during the birth. See also MIDWIFERY; OBSTETRICS AND GYNECOLOGY.

natural gas Colourless, highly flammable gaseous HYDROCARBON consisting primarily of methane and ethane. It may also contain heavier hydrocarbons, carbon dioxide, hydrogen, hydrogen sulfide, nitrogen, helium, and argon. It commonly occurs in association with crude oil (see PETROLEUM). Natural gas is extracted from wells drilled into the Earth. Some natural gas can be used as it comes from the well, without any refining, but most requires processing. It is transported either in its natural gaseous state by pipeline or, after liquefaction by cooling, by tankers. Liquefied natural gas occupies only about 1/600 of the volume of the gas. It has grown steadily as a source of energy since the 1930s.

natural law In JURISPRUDENCE and POLITICAL PHILOSOPHY, a system of right or justice common to all humankind and derived from nature rather than from the rules of society, or positive law. The concept can be traced to ARISTOTLE, who held that what was "just by nature" was not always the same as what was "just by law." In one form or another, the existence of natural law was asserted by the Stoics (see STOICISM), CICERO, the Roman jurists, ST. PAUL, ST. AUGUSTINE, GRATIAN, ST. THOMAS AQUINAS, JOHN DUNS SCOTUS, William of OCKHAM, and FRANCISCO SUÁREZ. In the modern period, HUGO GROTIUS insisted on the validity of natural law even on the assumption that God does not exist, and THOMAS HOBBES defined a law of nature as "a precept of general rule found out by reason, by which a man is forbidden to do that which is destructive of his life." Hobbes attempted to construct an edifice of law by rational deduction from a hypothetical "state of nature" and a SOCIAL CONTRACT of consent between rulers and subjects. JOHN LOCKE departed from Hobbes in describing the state of nature as an early society in which free and equal men observe the natural law. JEAN-JACQUES ROUSSEAU postulated a savage who was virtuous in isolation and actuated by two principles "prior to reason": self-preservation and compassion. The authors of the U.S. DECLARATION OF INDEPENDENCE refer only briefly to "the Laws of Nature" before citing equality and other "unalienable" rights as "self-evident." The French DECLARATION OF THE RIGHTS OF MAN AND OF THE CITIZEN asserts liberty, property, security, and resistance to oppression as "imprescriptible natural rights." Interest in the concept of natural law declined dramatically in the 19th century, partly as a result of skeptical attacks by JEREMY BENTHAM and other proponents of UTILITARIANISM; it was revived in the mid-20th century in light of the crimes committed by the Nazi regime during World War II. Skepticism of natural law and natural rights remained strong, however, and later writers almost invariably talked of HUMAN RIGHTS rather than natural rights.

natural selection Process that results in adaptation of an organism to its environment by means of selectively reproducing changes in its GENOTYPE. Variations that increase an organism's chances of survival and procreation are preserved and multiplied from generation to generation at the expense of less advantageous variations. As proposed by CHARLES DARWIN, natural selection is the mechanism by which EVOLUTION occurs. It may arise from differences in survival, fertility, rate of development, mating success, or any other aspect of the life cycle. MUTATION, GENE FLOW, and GENETIC DRIFT, all of which are random processes, also alter GENE abundance. Natural selection moderates the effects of these processes because it multiplies the incidence of beneficial mutations over generations and eliminates harmful ones, since the organisms that carry them leave few or no descendants. See also SELECTION.

naturalism Aesthetic movement of the late 19th to early 20th century. The movement was inspired by the principles and methods of natural science, especially DARWINISM, which were adapted to literature and art. In literature, naturalism extended the tradition of REALISM, aiming at an even more faithful, pseudoscientific representation of reality, presented without moral judgment. Characters in naturalistic literature typically illustrate the deterministic role of heredity and environment on human life. The movement originated in France, where its leading exponent was ÉMILE ZOLA. In America it is associated with the work of writers such as STEPHEN CRANE and THEODORE DREISER. Visual artists associated with naturalism chose themes from life, capturing subjects unposed and not idealized, thus giving their works an unstudied air. Following the lead of the Realist painter GUSTAVE COURBET, painters chose themes from contemporary life, and many deserted the studio for the open air, finding subjects among peasants and tradespeople, capturing them as they found them. As a result, finished canvases had the freshness and immediacy of sketches. Zola, the spokesman for literary naturalism, was also the first to champion ÉDOUARD MANET and the Impressionists (see IMPRESSIONISM).While naturalism was short-lived as a historical movement, it contributed to art an enrichment of realism, new areas of subject matter, and a largeness and formlessness that was closer to life than to art. Its multiplicity of impressions conveyed the sense of a world in constant flux.

naturalism In philosophy, the theory that affirms that all beings and events in the universe are natural and therefore can be fully known by the methods of scientific investigation. Though naturalism has often been equated with MATERIALISM, it is much broader in scope. Strictly speaking, naturalism has no ontological bias toward any particular set of categories of reality: DUALISM and MONISM, ATHEISM and THEISM, IDEALISM and materialism are all compatible with it. Naturalism was most influential in the 1930s and '40s, chiefly in the U.S. among philosophers such as F.J.E. Woodbridge (1867–1940), Morris R. Cohen (1880–1947), JOHN DEWEY, Ernest Nagel (1901–85), Sidney Hook (1902–89), and W.V.O. QUINE.

naturalistic fallacy FALLACY of treating the term "good" (or any equivalent term) as if it were the name of a natural property. In 1903 G.E. MOORE presented in *Principia Ethica* his "open-question argument" against what he called the naturalistic fallacy, with the aim of proving that "good" is the name of a simple, unanalyzable quality, incapable of being defined in terms of some natural quality of the world, whether it be "pleasurable" (JOHN STUART MILL) or "highly evolved" (HERBERT SPENCER). Since Moore's argument applied to any attempt to define good in terms of something else, including something supernatural such as "what God wills," the term "naturalistic fallacy" is not apt. The open-question argument turns any proposed definition of good into a question (e.g., "Good means pleasurable" becomes "Is everything pleasurable good?")—Moore's point being that the proposed definition cannot be correct, because if it were the question would be meaningless.

naturalization Process of granting NATIONALITY or CITIZENSHIP to an ALIEN. It may be granted after voluntary application or through legislation, marriage to a citizen, or parental action. Involuntary naturalization occurs when one's home territory is annexed by a foreign state. Qualifications for naturalization may include a minimum residency period, a minimum age, law-abiding character, good health, self-sufficiency, satisfactory knowledge of the new country, and willingness to give up one's former nationality.

Nature Conservancy Nonprofit organization dedicated to environmental conservation and the preservation of biodiversity, founded in 1951, that operates the largest private system of nature sanctuaries in the world. It owns and manages more than 1,500 preserves throughout the U.S., comprising more than 9 million acres (3.8 million hectares) of ecologically significant land, and has expanded into Latin America and the Pacific. Government-administered programs identify the relative abundance of plant and animal species and the habitats they need to survive, and the Conservancy then acquires—through gifts, exchanges, easements, debt-for-nature swaps, purchases, and other nonconfrontational arrangements—areas that are home to threatened species.

trade and cultural relations between Greece and Egypt. It declined after Alexander the Great's conquest of Egypt and the founding of Alexandria in 332 BC. In 1884 archaeologist Flinders Petrie discovered the site and helped excavate it.

Nauru \nä-'ü-rü\ *officially* **Republic of Nauru** Island country, southeastern Micronesia, western South Pacific Ocean. Area: 8 sq mi (21 sq km). Population (2005): 10,200. Capital: Yaren (district). About two-thirds of the population are indigenous Nauruans. Languages: Nauruan, English. Religion: Christianity (mostly Protestant; also Roman Catholic). Currency: Australian dollar. Nauru is a coral island with a central plateau 100–200 ft (30–60 m) high. A thin strip of fertile land encircling the island is the major zone of human settlement. It lacks harbours; ships must anchor to buoys beyond a reef. Nauru once had the world's largest concentration of phosphate, and its economy was based on phosphate mining and processing; however, the deposits have been depleted, and the economy has been converting to fishing and other ventures. Nauru is a republic with one legislative house; its head of state and government is the president. It was inhabited by Pacific Islanders when the first British explorers arrived in 1798 and named it Pleasant Island because of their friendly welcome. Annexed by Germany in 1888, it was occupied by Australia at the start of World War I, and in 1919 it was placed under a joint mandate of Britain, Australia, and New Zealand. During World War II it was occupied by the Japanese. Made a UN trust territory under Australian administration in 1947, Nauru gained complete independence in 1968 and became a full member of the Commonwealth and the UN in 1999.

nausea Discomfort in the pit of the stomach associated with disgust for food and a feeling that vomiting will follow, as it often does. Nausea results from irritation of nerve endings in the stomach or duodenum, which stimulate brain centres that control nausea and vomiting. Nausea can be a symptom of minor or serious disorders. Common causes include indigestion (from eating too fast or from stress around mealtime), food poisoning, motion sickness, and pregnancy (morning sickness). Nausea may also arise from any cause of abnormal lack of appetite (e.g., shock, pain, influenza, badly fitting dentures, liver or kidney disease). Simple nausea often is relieved by vomiting.

nautilus \'nȯ-tᵊl-əs\ Either of two genera of cephalopods. The pearly, or chambered, nautilus (genus *Nautilus*) lives in the outermost chamber of its smooth, coiled, usually 36-chambered shell, about 10 in. (25 cm) in diameter. A connecting tube adjusts the gases in the chambers, allowing the shell to act as a float. Nautiluses search the ocean bottom for shrimp or other prey, which they capture with up to 94 small, suckerless, contractile tentacles. The paper nautilus (genus *Argonauta*) feeds on plankton near the surface of tropical and subtropical seas. The female resembles an octopus but has a thin, unchambered, coiled shell, 12–16 in. (30–40 cm) in diameter. The much smaller male has no shell.

Chambered nautilus (*Nautilus*)
DOUGLAS FAULKNER

Nautilus Any of at least three historic submarines. Robert Fulton built one of the earliest submersible craft in 1800 in France; his *Nautilus* had a collapsible mast and sail for surface propulsion and a hand-turned propeller for power. Andrew Campbell and James Ash of Britain built a *Nautilus* submarine driven by battery-powered electric motors in 1886. The name was also chosen for the world's first nuclear-powered submarine, launched by the U.S. Navy in 1954. Capable of longer submersion than any previous submarine, it made a historic trip under the ice cap of the North Pole from Point Barrow, Alaska, to the Greenland Sea in 1958.

Navajo \'na-və-ˌhō\ *or* **Navaho** North American Indian people living mostly in northwestern New Mexico, Arizona, and southeastern Utah, U.S. The Navajo speak an Athabaskan language related to that of the Apache. The Navajo and Apache migrated from Canada to the Southwest c. AD 900–1200, after which the Navajo came under the influence of the Pueblo Indians. Painted pottery and the famous Navajo rugs, as well as sandpainting, are products of this influence. The craft of silversmithing probably came from Mexico in the mid-19th century. The traditional economy was based on farming and later herding of sheep, goats, and cattle. The basic social unit was the band. Religion focused on the emergence of the first people from worlds beneath the Earth's surface. In 1863 the U.S. government ordered Col. Kit Carson to put an end to Navajo and Apache raiding; his offensives resulted in the incarceration of about 8,000 Navajo and the destruction of crops and herds. Today many Navajo live on or near the Navajo Reservation (24,000 sq mi [64,000 sq km] in New Mexico, Arizona, and Utah); thousands earn their living as transient workers. Their language has been tenaciously preserved; they used it to great effect during World War II by transmitting coded messages in Navajo. The Navajo are the most populous Native American group in the U.S., with about 270,000 individuals claiming sole Navajo descent in the 2000 U.S. census.

Navajo National Monument National monument, northern Arizona, U.S. Covering 360 acres (146 hectares), it comprises three historic cliff dwellings: Betatakin (Navajo: "Ledge House"), Keet Seel ("Broken Pottery"), and Inscription House, among the best-preserved and most elaborate cliff dwellings known. The largest, Keet Seel, was first discovered by whites in 1895; the three sites were made a national monument in 1909. The dwellings were the principal home of the Kayenta Anasazi c. 1250–1300. The 135 rooms of Betatakin are tucked into a cliffside alcove 452 ft (138 m) high and 370 ft (113 m) wide. Also situated in a cliff alcove are the 160 rooms and 6 kivas (ceremonial houses) of Keet Seel. Inscription House (closed to the public) has 74 rooms.

Navajo weaving Blankets and rugs made by the Navajo, considered among the best-made textiles produced by Native Americans of the U.S. By 1500 the Navajo were well established in what is now the southwestern U.S., where they began to practice weaving when they turned from a seminomadic life to agriculture. From the Hopi they learned how to make looms and weave fabrics on a large scale; but whereas the Hopi limited their designs to striped patterns, the Navajo introduced geometric shapes, diamonds, lozenges, and zigzags. Traditionally Navajo blankets were made of natural-coloured wool or wool in dark colours produced by dyes made from roots, herbs, and minerals. After the introduction of aniline dyes in the late 19th century, Navajo weavers began using brighter wools and a broader range of decorative motifs.

Naval Limitation, International Conference on See Washington Conference

naval warfare Military operations conducted on, under, or over the sea and waged against other seagoing vessels or targets on land or in the air. The earliest naval attacks were raids by the armed men of a tribe or town using fishing boats or merchant ships. The first warships were galleys, replaced in the 16th and 17th centuries by sail-driven warships equipped with cannons. The British victory over the Spanish Armada (1588) marked a major development: British galleons refused to allow the Spanish ships to get close enough for boarding and hand-to-hand combat and instead pounded them with guns of superior firing capability. Ships of the line and cruisers emerged in the 17th and 18th centuries. In the later 19th century, steam replaced sail propulsion, and ironclads offered greater protection against the increasing power of guns. The battleship, developed in these years, reigned until World War II, when the Pearl Harbor attack proved that bombers launched from aircraft carriers could sink any and all surface ships. Since then, naval air power—missiles as well as carrier-based planes—has been the primary weapon of the world's fleets. Submarines also play a major role in naval warfare.

navaratra In Hinduism, a 9-day festival followed on the 10th day by the *dasehra* celebration. The festival includes feasting, visiting, public concerts, plays, and fairs. Among the goddess Durga's followers, who are especially numerous in Bengal and Assam, the Durga-puja is celebrated during this period; in other parts of India, *dasehra* is associated with the victory of Rama over Ravana, acted out in a pageant climaxed by the burning of effigies of demons.

Navarino \ˌnä-vä-'rē-nō**, Battle of** (Oct. 20, 1827) Naval engagement in the War of Greek Independence against Turkey. A fleet of British, French, and Russian ships was sent to aid Greece by intercepting supplies for the Egyptian-Turkish fleet anchored in the Navarino Bay in the Peloponnese. Shortly after it entered the harbour, the superior guns of the European fleet sent three-fourths of the larger Egyptian-Turkish fleet to

© 2006 Encyclopædia Britannica, Inc.

the bottom and forced others aground. The defeat marked the last significant battle between wooden sailing ships and led to Turkey's evacuation from Greece.

Navarra *English* **Navarre** Autonomous community (pop., 2001: 555,829) and province, northern Spain. Established in 1982, it has an area of 4,012 sq mi (10,391 sq km) and is bordered by France. It is approximately coextensive with the Spanish part of the historical kingdom of Navarra. The Pyrenees dominate the northern half of the province, and a Mediterranean climate prevails in the south. Manufacturing industries are clustered around the commercial centre and capital, Pamplona.

Navarra *English* **Navarre** \nə-'vär\ Ancient kingdom, northern Spain, bordered by France, Aragon, Castile, and the Basque Country. It encompassed the modern autonomous community of Navarra and part of the modern French department of Pyrénées-Atlantiques. It was conquered by the Romans, then the Visigoths, and Charlemagne. It became an independent kingdom in the 10th century. A succession of French dynasties ruled Navarra after 1234. Incorporated into Castile in 1515, it was united to the French crown when Henry of Navarre became King Henry IV of France in 1589.

Navarro \nä-'vä-rō**, Fats** *orig.* **Theodore Navarro** (b. Sept. 24, 1923, Key West, Fla., U.S.—d. July 7, 1950, New York, N.Y.) U.S. jazz trumpeter. Navarro replaced Dizzy Gillespie in the big band of Billy Eckstine in 1946, acquiring a reputation as a virtuoso player capable of executing complex phrases with rare grace. He participated in the burgeoning jazz milieu based around 52nd St. in New York City in the late 1940s, working with bebop innovators such as Bud Powell, Charlie Parker, and Tadd Dameron (1917–65). Addiction to heroin curtailed his activity, and he died of tuberculosis.

Navas de Tolosa, Battle of Las See Battle of Las Navas de Tolosa

nave Main part of a Christian church, extending from the entrance (the narthex) to the transept or chancel (area around the altar). In a basilican church (see basilica), which has side aisles, nave refers only to the central section. Medieval naves were generally divided into many bays, producing the effect of great length. During the Renaissance, the nave format became more flexible, and the nave was divided into fewer compartments, giving a feeling of spaciousness and balanced proportion among the height, length, and width, as in St. Paul's Cathedral.

Nave, Salisbury Cathedral, England, begun 1220
A.F. KERSTING

navigation Science of directing a craft by determining its position, course, and distance traveled. Early mariners followed landmarks visible on shore and studied prevailing winds for clues to direction. The Phoenicians and Polynesians sailed out of sight of land and used the stars to set their course. The compass (first used by the Chinese c. 1100) was the first navigational aid that gave a constant reference point, though its accuracy was limited, especially in heavy seas. Modern compasses are stabilized by gyroscopes and housed in binnacles that compensate for the craft's motion. Ship speed was first calculated by dropping overboard a log attached to a reel of line knotted at regular intervals; the number of knots exposed while the log drifted and a sandglass emptied gave the vessel's speed in knots (nautical mph). Charts are another essential navigational tool. Fixing a position requires charts detailing known locations, together with instruments that calculate a vessel's bearing relative to them. The earliest instrument for determining latitude was the quadrant, which measured the altitude of the polestar or the noonday sun. Other early instruments included the sextant and the astrolabe. Longitude (used for navigation with increasing success in the 17th–18th century) was fixed using chronometers and tables showing positions of celestial bodies throughout the year. In the 20th century, radio beacons and satellite networks allowed aircraft and ships to determine their position. Dead reckoning uses an accurate history of a vessel's headings and speeds drawn from gyroscopes and from computerized measurements of the craft's acceleration. See also Global Positioning System.

Navigation Acts English laws in the 17th–18th centuries that required the use of English or colonial ships to carry English trade. The laws were designed to encourage English shipbuilding and restrict trade competition from England's commercial rivals, especially the Dutch. The acts of the 18th century gradually restricted trade by the American colonies and contributed to growing colonial resentment with the imposition of additional duties on sugar, tobacco, and molasses.

Navistar International Corp. Leading U.S. truck manufacturer. It originated as International Harvester Co., which was incorporated in 1902, merging McCormick Harvesting Machine Co. (founded by Cyrus H. McCormick to market his mechanical reaper) with four smaller machinery makers. It became a pioneer in motorized trucks when it introduced its high-wheeled "auto wagons" for farmers. It began producing tractors in the 1930s and soon became a major manufacturer of earth-moving equipment. Facing economic difficulties in the early 1980s, it sold most of its U.S. construction-equipment business and disposed of its farm-equipment line to concentrate almost entirely on trucks, and in 1986 the company changed its name to Navistar International.

Navratilova \ˌnav-rə-ti-'lō-və**, Martina** (b. Oct. 18, 1956, Prague, Czech.) Czech-born U.S. tennis player. She became the undisputed top-seeded player in the world in 1979 after winning the Wimbledon women's singles and doubles. In 1982 she won 90 of 93 matches, and in 1983 she won 86 of 87 matches. In 1984 she was honoured for winning the grand slam but later was denied the title on a technicality. By 1987 she had won 37 individual grand-slam championships, and by 1994 she had won 56, ranking second only to Margaret Smith Court. By 1992 she had accumulated more championships (158) than any other player, male or female, in tennis history, and she retired in 1994 with 167 titles. In 2000 she returned to professional play, competing in several doubles events. In 2003 she won the mixed doubles at Wimbledon, tying Billie Jean King for most Wimbledon titles (20). With the victory, Navratilova, who was 46, became the oldest player to win at Wimbledon.

navy Warships and craft of every kind maintained by a nation for fighting on, under, or over the sea. A large modern navy includes aircraft carriers, cruisers, destroyers, frigates, submarines, minesweepers and minelayers, gunboats, and various types of support, supply, and repair ships, as well as naval bases and ports. Naval ships are the chief means by which a nation extends sea power. Their two chief functions are to achieve sea control and sea denial. Control of the sea enables a nation and its allies to carry on maritime commerce, amphibious assaults, and other seaborne operations that may be essential in wartime. Denial of the sea deprives enemy merchant vessels and warships of safe navigation. See also U.S. Navy.

Náxos \'nak-säs\ Largest island (pop., 1991: 14,838) of the Cyclades, Greece. It is about 22 mi (35 km) long and 16 mi (26 km) wide, with an area of 165 sq mi (427 sq km). The capital and chief port, Náxos, on the western coast, is on the site of the island's ancient and medieval capitals. In ancient times, it was famous for its wines and the worship of Dionysus. In mythology, it is where Theseus abandoned Ariadne. In the 7th–6th centuries BC a deep-grained white marble was exported for statuary. It was captured by the Persians in 490 BC and by Athens in 471 BC. A Venetian duchy ruled from 1207 to 1566; it was later ruled by the Turks. In 1830 it joined the Greek kingdom. Ruins of a Mycenaean settlement (see Mycenae) have been found there. Nàxos produces white wine, citrus, and emery.

Nayar \'nä-yər\ Hindu caste of the Indian state of Kerala. Before the British conquest in 1792, the Nayar caste supplied Kerala's royalty and nobility, militia, and land managers. During British rule, Nayars became prominent in politics, medicine, education, and law. Unlike most Hindus, Nayars traditionally were matrilineal, and fathers had no rights or obligations with regard to their children. Plural marriage, in which both men and women could receive multiple "visiting" spouses, was practiced until the 19th century. Laws passed in the 1930s enforced monogamy and gave children full rights of inheritance from the father.

Nayarit \ˌnī-ə-'rēt\ State (pop., 2000: 920,185), west-central Mexico. It covers an area of 10,417 sq mi (26,979 sq km), and its capital is Tepic. The Sierra Madre rises steeply from the Pacific littoral and cuts the terrain into gorges and valleys. Peaks include the volcanoes Ceboruco and Sangangüey. The coastal lagoons are well-known bird refuges. The main river, Grande de Santiago, flowing from Lake Chapala, is sometimes considered a continuation of the Lerma River. The economy is primarily based on agriculture.

© 2006 Encyclopædia Britannica, Inc.

Nazarene \'na-zə-ˌrēn\ Any member of the Brotherhood of St. Luke, an association formed in 1809 by young German, Swiss, and Austrian painters in reaction against Neoclassicism. It was the first effective anti-academic movement in European painting. The members acquired the originally derisive nickname Nazarenes because of their affectation of biblical style of hair and dress. The Nazarenes believed that all art should serve a moral or religious purpose. They admired medieval and early Renaissance painters and rejected most subsequent painting, believing it abandoned religious ideals in favour of artistic virtuosity. Members lived and worked together in a semimonastic existence, trying to imitate the teaching situation of the medieval workshop. The leading members were Friedrich Overbeck (1789–1869), Franz Pforr (1788–1812), and Peter von Cornelius (1783–1867).

Nazareth *Hebrew* **Naẓerat** \ˌnä-zə-'rät\ *Arabic* **Al-Nāṣirah** \en-'nä-sē-ˌrä\ Town (pop., 2000 est.: 69,604), northern Israel, southeast of Haifa. It is Israel's largest Arab city. In the New Testament, it is the childhood home of Jesus. It contains many Christian churches and is a pilgrimage centre. Captured by Christians several times during the Crusades, it was taken by the Ottoman Empire in 1517. It was part of British-mandate Palestine from 1918 and part of Israel from 1948. Christian Arabs form the majority of the population.

Nazi Party German political party of National Socialism. Founded in 1919 as the German Workers' Party, it changed its name to the National Socialist German Workers' Party when Adolf Hitler became leader (1920–21). The nickname Nazi was taken from the first word of its full name, Nationalsozialistische Deutsche Arbeiter-Partei. The party grew from its home base in Bavaria and attracted members from disaffected elements throughout Germany. It organized strong-arm groups (later the SA) to protect its rallies. Though the failed Beer Hall Putsch diminished the party's influence, the effects of the Great Depression brought millions of new members, and in 1932 the party became the largest bloc in the Reichstag. After Hitler was named chancellor in 1933, he obtained passage of the Enabling Act, and his government declared the Nazi party to be the only political party in Germany and required bureaucrats to become members. The party controlled virtually all activities in Germany until Germany's defeat in World War II (1945), after which the party was banned.

NBA See National Basketball Assn.

NBC *in full* **National Broadcasting Co.** Major U.S. commercial broadcasting company. It was formed in 1926 by RCA Corp., General Electric Co. (GE), and Westinghouse and was the first U.S. company to operate a broadcast network. Directed by RCA's president David Sarnoff, it became wholly owned by RCA in 1930. NBC was initially divided into the semi-independent Blue Network, based on station WJZ, and the Red Network, based on WEAF, each with links to stations in other cities. By 1938 the Red Network carried 75% of NBC's programs. The Blue Network was sold in 1941 and became the American Broadcasting Co. (ABC). NBC entered television broadcasting in a weakened position, and by 1952 it trailed CBS in audience ratings, though it gradually regained its leading position. In 1986 RCA was sold to GE; in 1987 NBC sold its radio networks. In the 1990s NBC expanded its cable television programming, creating MSNBC (an alliance with Microsoft) and CNBC (an alliance with Dow Jones).

NCAA See National Collegiate Athletic Assn.

NCR Corp. U.S. manufacturer of cash registers, computers, and information-processing systems. It was founded in 1884 as National Cash Register Co. by John H. Patterson, who bought a failing maker of cash registers in Dayton, Ohio. He improved the design, sent out an aggressive sales force, and hired repairmen to service his products after sale. The company expanded in the 20th century, introducing accounting machines in the 1920s, electronic products during World War II, computer hardware and software in the 1960s, and microelectronics in the 1970s. In 1991 it was purchased by AT&T Corp. and renamed AT&T Global Information Solutions. When AT&T split into three companies in 1996, NCR Corp. was spun off and assumed its former name.

Ndebele \en-də-'bā-lā\ *formerly* **Matabele** \ˌmad-ə-'bā-lā\ Bantu-speaking people who live primarily around the city of Bulawayo, Zimb., but also in Botswana. They originated early in the 19th century as an offshoot of the Nguni of Natal, moving first to Basutoland (now Lesotho) and ultimately to Matabeleland (Zimbabwe). Under Lobengula they grew in power but were defeated by the British in 1893. Today they are a farming and herding people numbering more than 1.5 million. They differ from the Ndebele of South Africa, whose women are known worldwide for their elaborate beadwork and the strong geometric designs they paint on the walls of their houses.

N'Djamena \ˌən-jä-'mā-nä\ *formerly* **Fort-Lamy** \ˌfȯr-lə-'mē\ City (pop., 1993: metro. area, 530,965), capital of Chad. It lies adjacent to Cameroon on the eastern bank of the Chari River, where it joins the Logone River. Founded in 1900 as Fort-Lamy, it remained a small settlement until after Chad's independence in 1960. In 1973 its name was changed to N'Djamena. It was occupied by Libyan forces in 1980–81 during the civil war that began in the 1960s. It is an important marketplace for cotton, cattle, and fish. It is the site of the nation's only university, the University of Chad (founded 1971).

Ndongo \ən-'dȯŋ-gō\ Historical African kingdom of Mbundu people. Established c. 1500 in what is now Angola, it instituted trade relations with the Portuguese of São Tomé in the 16th century. When Portugal tried to take it over, some 100 years of fighting ensued. It was absorbed into Angola c. 1670.

Ne Win \'nā-'win**, U** *or* **Shu Maung** \'shü-'maůŋ\ (b. May 24, 1911, Paungdale, Burma—d. Dec. 5, 2002, Yangôn, Myanmar) Leader of Burma (Myanmar) from 1962 to 1988. He became involved in the Burmese independence movement in the mid-1930s. During World War II he initially served in the Japanese-sponsored army but later helped organize underground resistance to the Japanese. In 1962 he ousted the elected prime minister U Nu; his subsequent regime combined military dictatorship with a socialist economic program. Burma became isolated and impoverished under Ne Win, and he resigned in 1988. He continued to exercise power behind the scenes, however, until shortly before his death.

NEA See National Education Association; National Endowment for the Arts

Neagh \'nā**, Lough** Lake, east-central Northern Ireland. It is the largest lake in the British Isles, with an area of 153 sq mi (396 sq km). It is about 15 mi (24 km) wide and 18 mi (29 km) long, though it is only about 40 ft (12 m) deep. Ancient deposits in Toome Bay, on its northwestern shore, have yielded the oldest recorded human artifacts in Ireland. In 1959 flood-control works significantly lowered the lake level.

Neanderthal \nē-'an-dər-ˌthäl, nā-'än-dər-ˌtäl\ Species of the human genus (*Homo*) that inhabited much of Europe and the Mediterranean lands c. 200,000–28,000 years ago. The name derives from the discovery in 1856 of remains in a cave above Germany's Neander Valley. Some scholars designate the species as *Homo neanderthalensis* and do not consider Neanderthals direct ancestors of modern humans (*Homo sapiens*). Others regard them as a late archaic form of *H. sapiens* that was absorbed into modern human populations in some areas while simply dying out in others. Neanderthals were short, stout, and powerful. Cranial capacity equaled or surpassed that of modern humans, though their braincases were long, low, and wide. Their limbs were heavy, but they seem to have walked fully erect and had hands as capable as those of modern humans. They were cave dwellers who used fire, wielded stone tools and wooden spears to hunt animals, buried their dead, and cared for their sick or injured. They may have used language and may have practiced a primitive form of religion. See also Mousterian industry.

near-death experience Mystical or transcendent experience reported by people who have been on the threshold of death. The near-death experience varies with each individual, but characteristics frequently include hearing oneself declared dead, feelings of peacefulness, the sense of leaving one's body, the sense of moving through a dark tunnel toward a bright light, a life review, the crossing of a border, and meetings with other spiritual beings, often deceased friends and relatives. Near-death experiences are reported by about one-third of those who come close to death. Cultural and physiological explanations have been offered, but the causes remain uncertain. Typical aftereffects include greater spirituality and decreased fear of death.

Near East See Middle East

Nebraska State (pop., 2000: 1,711,263), west-central U.S. Bordered by South Dakota, Iowa, Missouri, Kansas, Colorado, and Wyoming, it covers 77,353 sq mi (200,343 sq km); its capital is Lincoln. The Missouri River is on its eastern boundary. The North Platte and South Platte unite in southwest-central Nebraska to form the Platte River. Various prehistoric

© 2006 Encyclopædia Britannica, Inc.

peoples inhabited the area as early as 8000 BC. Indian tribes living in the area include PAWNEE, Oto, and Omaha in the east and centre, as well as Oglala, SIOUX, ARAPAHO, and COMANCHE in the west. The U.S. bought the territory from France as part of the LOUISIANA PURCHASE in 1803. In 1804 the LEWIS AND CLARK EXPEDITION visited the Nebraska side of the Missouri River. It became part of Nebraska Territory with the KANSAS-NEBRASKA ACT of 1854. Nebraska was admitted to the Union as the 37th state in 1867. Soon after, the population increased, and as Indian resistance on the frontier was broken, settlement extended to Nebraska's panhandle. At the turn of the 20th century, it experienced a short but influential POPULIST MOVEMENT. In 1937 it established a unicameral legislature, the only one in the country. Most of the state is agricultural; its industries include food processing and machinery. Petroleum is the principal mineral resource. In addition to Lincoln, OMAHA is the state's other cultural and industrial centre.

Nebuchadnezzar II See NEBUCHADREZZAR II

Nebuchadrezzar \ˌneb-yə-kəd-'re-zər\ **II** *or* **Nebuchadnezzar** \ˌneb-yə-kəd-'ne-zər\ (b. c. 630—d. c. 561 BC) Second and greatest king of the Chaldean dynasty of BABYLONIA. He began his military career as an administrator (c. 610 BC) and ascended the throne on his father's death, just after winning Syria from the Egyptians (605 BC). He attacked Judah, capturing Jerusalem in 597 and recapturing it in 587/586, and deporting prominent citizens to BABYLON. He devoted time and energy to restoring Babylon, by paving roads, rebuilding temples, and digging canals. At least in folk tradition, he is credited with building the Hanging Gardens of Babylon.

nebula \'neb-yə-lə\ Any of various tenuous clouds of gas and dust in interstellar space. Nebulae constitute only a small percentage of a GALAXY's mass. Dark nebulae (e.g., the COALSACK) are very dense, cold molecular clouds that appear as large, obscure, irregularly shaped areas in the sky. Bright nebulae (e.g., the CRAB NEBULA, PLANETARY NEBULA) appear as faintly luminous, glowing surfaces; they emit their own light or reflect that of stars near them. The term *nebula* also formerly referred to galaxies outside the MILKY WAY GALAXY.

nebular hypothesis See SOLAR NEBULA

NEC Corp. Major Japanese computer, electronics, and telecommunications equipment manufacturer. Nippon Electric Company, Ltd. (officially NEC Corp. in 1983), was founded in 1899 with funding from the WESTERN ELECTRIC CO. INC. of the U.S. NEC was the first Japanese joint venture with a foreign company. As Japan's preeminent telecommunications company, NEC contributed to developments in mobile telephony, fibre-optic networks, private-branch exchanges (PBXs), and microwave, digital, and satellite communications systems. Besides mainframe computers, NEC was an early manufacturer of personal computers (PCs). In 1997 NEC merged its North American PC operations with Zenith Data Systems and Packard Bell to form Packard Bell-NEC, Inc.

necessity In LOGIC and metaphysics, a modal property of a true proposition whereby it is not possible for the proposition to be false and of a false proposition whereby it is not possible for the proposition to be true. A proposition is logically necessary if it instantiates a law of logic or can be made to instantiate a law of logic through substitution of definitionally equivalent terms. Examples are "It is raining now or it is not raining now" and "All men are human beings" (assuming "men" can be replaced with "male human beings"). Necessary propositions are sometimes said to be true or false (as the case may be) in all POSSIBLE WORLDS. A contingently true or false proposition is thus one that is true in some possible worlds and false in others (e.g., "France is a democracy"). All true logically necessary propositions are analytic (see ANALYTIC-SYNTHETIC DISTINCTION) and knowable A PRIORI. Some philosophers recognize a second category of "metaphysically" necessary propositions that are not analytic and generally not a priori; examples include identity statements such as "Water is H_2O."

Nechako \ni-'cha-kō\ **River** River, central British Columbia, Canada. The major tributary of the FRASER RIVER, it flows east for nearly 150 mi (240 km). The Stuart River, a tributary 258 mi (415 km) long, joins it between Fort Fraser and Prince George, where it parallels the Canadian National Railway. In 1952 the Nechako was bisected by Kenney Dam, which created a reservoir whose overflow generates electricity.

Neckar River \'ne-kär\ River, southwestern Germany. It rises in the BLACK FOREST near the headwaters of the DANUBE RIVER and is 228 mi (367 km) long. It flows north and northeast, passing STUTTGART. Its picturesque valley becomes broader and deeper, passing hills crowned by feudal castles. It flows past HEIDELBERG and enters the RHINE RIVER at MANNHEIM.

Necker \nā-'ker, 'ne-kər**, Jacques** (b. Sept. 30, 1732, Geneva, Switz.—d. April 9, 1804, Coppet) Swiss-born French financier and director-general of finance under LOUIS XVI. He became a banker in Paris, and, after becoming wealthy from speculating during the Seven Years' War, he was appointed minister of Geneva in Paris (1768). He retired from banking in 1772 and became France's director-general of finance in 1777. Despite his cautious reforms, he was forced to resign in 1781 over opposition to his scheme to help finance the AMERICAN REVOLUTION. He was recalled in 1788 to rescue the almost bankrupt France, and he proposed financial and political reforms that included a limited constitutional monarchy. Opposition from the royal court led to Necker's dismissal on July 11, 1789, an event that provoked the storming of the BASTILLE. After serving again briefly (1789–90), he retired to Geneva. GERMAINE DE STAËL was his daughter.

necropolis \ni-'krä-pə-ləs\ (Greek: "city of the dead") Extensive and elaborate burial place serving an ancient city. The locations of these cemeteries varied. Many in Egypt, such as the necropolis of western Thebes, were situated across the Nile River opposite the cities. In Greece and Rome a necropolis often lined the roads leading out of town. A necropolis was discovered in the 1940s under ST. PETER'S BASILICA in Rome.

nectarine Smooth-skinned PEACH (*Prunus persica* 'nectarina'), grown throughout warmer temperate regions. They result when some peaches self-pollinate or are crossed so that they express a genetic factor for smooth skin. Nectarines are commonly eaten fresh or cooked in desserts and jams; they are a good source of vitamins A and C.

Nectarine (*Prunus persica* var. *nectarina*)
J.C. ALLEN AND SON

Needham, John Turberville (b. Sept. 10, 1713, London, Eng.—d. Dec. 30, 1781, Brussels, Belg.) British naturalist. He was a Roman Catholic priest, whose reading about microscopic organisms led him to study natural history in London and Paris (1746–49). He became a strong supporter of the theory that life arose from inorganic matter (spontaneous generation) and that life processes cannot be explained by the laws of chemistry and physics (vitalism). In 1750 he presented his theory of spontaneous generation and attempted to offer scientific evidence supporting it.

needle Basic implement used in sewing or embroidering and, in variant forms, for knitting and crocheting. The sewing needle is small, slender, and rodlike. One end is sharply pointed to make passing it through fabric easy; the other end has a slot (called an eye) to carry a THREAD. Modern sewing needles are made of steel. Crocheting needles are eyeless and have a hook on one end; they are usually of steel or plastic. Knitting needles are long, made of various materials, and bluntly pointed at one or both ends, sometimes with a knob at the end opposite the point.

needlefish Any of about 60 species (family Belonidae) of primarily marine, edible, carnivorous fishes found throughout temperate and tropical waters. Needlefish are adept jumpers and have a long, slender jaw with sharp teeth. They are long, slim, and silvery, with a blue or green back. The largest species grows to 4 ft (1.2 m) long. The garfish (*Belone belone*) occurs in Europe, and the houndfish (*Tylosurus crocodilus*) is found everywhere in the tropics.

needlepoint Type of embroidery in which the stitches are counted and worked with a needle over the threads, or mesh, of a canvas foundation. It was known as canvas work until the early 19th century. If the canvas has 16 or more mesh holes per linear inch, the embroidery is called petit point; most needlepoint was petit point in the 16th–18th century. Needlepoint as it is known today originated in the 17th century, when the fashion for furniture upholstered with embroidered fabrics prompted the development of a more durable material to serve as the embroidery's foundation. Wool is generally used for needlepoint, silk yarn less often. Needlepoint kits, con-

taining canvas stamped with a design and all the materials needed for the project, were sold as early as the mid-18th century. See also BARGELLO.

Nefertiti \ˌne-fər-ˈtē-tē\ (fl. 14th century BC) Queen of Egypt and wife of AKHENATON (r. 1353–36 BC). She is known from her portrait bust found at TELL EL-AMARNA, the king's new capital. She may have been an Asian princess from Mitanni. She appears with Akhenaton in reliefs at Tell el-Amarna and followed his new cult of the sun god ATON. Of her six daughters, two became queens of Egypt. In the 12th year of Akhenaton's reign, Nefertiti either retired after losing favour or died.

Negev \ˈne-ˌgev\ *or* **Ha-Negev** Desert region, southern Israel. Bounded by the SINAI Peninsula and the Jordan Rift Valley, it has an area of about 4,700 sq mi (12,200 sq km). It was a pastoral region in biblical times and an important source of grain for the Roman Empire. After the Arab conquest of Palestine (7th century AD), it was left desolate, and for more than 1,200 years it had only a small population of BEDOUIN. Modern agricultural development began with three KIBBUTZim in 1943; others were founded after World War II (1939–45), when irrigation projects were initiated. Assigned to Israel in the partition of Palestine in 1948, it was the scene of clashes between Israeli and Egyptian forces in 1948–49. It is the site of many preplanned Israeli settlements, including the port city of Elat, Israel's outlet to the Red Sea. Beersheba is an important administrative centre. The region produces grain, fruit, and vegetables; mineral resources include potash, bromine, and copper.

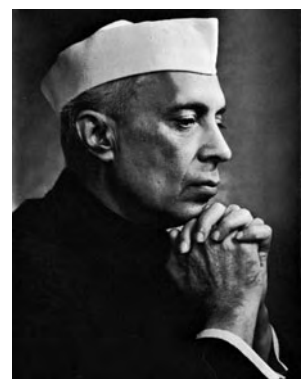
negligence In law, failure to exercise the degree of care expected of a person of ordinary prudence in protecting others from a risk of harm. It may render one civilly and sometimes criminally liable for resulting injuries. The doctrine of negligence does not require the elimination of all risk, but rather only foreseeable and unreasonable risk. Thus a higher standard applies to explosives manufacturers than to manufacturers of kitchen matches. The plaintiff must ordinarily prove the defendant's negligence with a preponderance of evidence. See also CONTRIBUTORY NEGLIGENCE.

negotiable instrument Transferable document (e.g., a bank note, check, or draft) containing an unconditional promise or order to pay a specified amount to its holder upon demand or at a specified time. In the U.S., the Uniform Commercial Code governs negotiable instruments.

Negritude \nā-grē-ˈtüd\ Literary movement of the 1930s, '40s, and '50s. It began among French-speaking African and Caribbean writers living in Paris as a protest against French colonial rule and the policy of assimilation. Its leading figures—LÉOPOLD SENGHOR of Senegal, AIMÉ CÉSAIRE of Martinique, and Léon Damas (1912–78) of French Guiana—began to examine Western values critically and to reassess African culture. The group believed that the value and dignity of African traditions and peoples must be asserted, that Africans must look to their own heritage for values and traditions, and that writers should use African subject matter and poetic traditions. The movement faded in the early 1960s after its objectives had been achieved in most African countries.

Negro leagues Associations of teams of black baseball players active largely between 1920 and the late 1940s. The principal leagues were the Negro National League, originally organized by Rube Foster in 1920, and the Negro American League, organized in 1937. The most noted teams included the Homestead (Pa.) Grays, who won nine pennants in the years 1937–45 and included the great hitters COOL PAPA BELL, BUCK LEONARD, and JOSH GIBSON. In the mid 1930s the Pittsburgh Crawfords included SATCHEL PAIGE and the clutch-hitter William Julius "Judy" Johnson. The Kansas City Monarchs, after winning four national championships, lost JACKIE ROBINSON to the Brooklyn Dodgers; the breaking of the colour barrier in major and minor league baseball led to the Negro leagues' decline.

Negro \ˈnā-grō\ **River** *or* **Guainía** \gwī-ˈnē-ə\ **River** River, northwestern South America. A major tributary of the AMAZON RIVER, it rises in the rainforest of eastern Colombia, where it is known as the Guainía, and forms a section of the border between Colombia and Venezuela. It crosses Brazil and joins the Amazon at MANAUS. It is about 1,400 mi (2,250 km) long and is a major transport artery. Its name comes from its jet-black colour, which is caused by the decomposition of organic matter and its low silt content.



Negro River River, central Uruguay. It rises in the southern highlands of Brazil. Flowing southwest across Uruguay, it is dammed at the Rincón del Bonete Reservoir, the largest artificial lake in South America, with an area of roughly 4,000 sq mi (10,400 sq km). The river joins the URUGUAY RIVER at Soriano. Although it is about 500 mi (800 km) long, it is navigable for only about 45 mi (70 km) upstream from its mouth.

Negroid See RACE

Negros \ˈnā-grōs\ Island (pop., 2000: 3,691,784) in the VISAYAN group, central Philippines. It is the fourth largest island of the archipelago and is shaped like a boot. The island is about 135 mi (217 km) long and has an area of 4,907 sq mi (12,710 sq km). It produces about half of all Philippine sugar and is one of the wealthiest and most politically influential regions in the country. BACOLOD, on the northwestern coast, is its largest city and an important sugar exporter.

Nehemiah \ˌnē-ə-ˈmī-ə\ (fl. 5th century BC) Jewish leader who supervised the rebuilding of JERUSALEM. His story is told in the biblical book of Nehemiah. He was cupbearer to the Persian ruler Artaxerxes I soon after the end of the BABYLONIAN EXILE, when the Temple of JERUSALEM had been rebuilt but the Jewish community was still weak and fragmented. Around 444 BC he was put in charge of Jerusalem's reconstruction, and he organized the rebuilding of the city walls. He also revived adherence to Mosaic law and forbade intermarriage with non-Jews. His work as a reformer was later continued by EZRA.

Nehru \ˈnā-rü**, Jawaharlal** (b. Nov. 14, 1889, Allahabad, India—d. May 27, 1964, New Delhi) First prime minister of independent India (1947–64). Son of the independence advocate Motilal Nehru (1861–1931), Nehru was educated at home and in Britain and became a lawyer in 1912. More interested in politics than law, he was impressed by MOHANDAS K. GANDHI's approach to Indian independence. His close association with the INDIAN NATIONAL CONGRESS began in 1919; in 1929 he became its president, presiding over the historic Lahore session that proclaimed complete independence (rather than dominion status) as India's political goal. He was imprisoned nine times between 1921 and 1945 for his political activity. When India was granted limited self-government in 1935, the Congress Party under Nehru refused to form coalition governments with the Muslim League in some provinces; the hardening of relations between Hindus and Muslims that followed ultimately led to the partition of India and the creation of Pakistan. Shortly before Gandhi's assassination in 1948, Nehru became the first prime minister of independent India. He attempted a foreign policy of nonalignment during the COLD WAR, drawing harsh criticism if he appeared to favour either camp. During his tenure, India clashed with Pakistan over the Kashmir region and with China over the Brahmaputra River valley. He wrested Goa from the Portuguese. Domestically, he promoted democracy, socialism, secularism, and unity, adapting modern values to Indian conditions. His daughter, INDIRA GANDHI, became prime minister two years after his death.

Neilson \'nēl-sən**, James Beaumont** (b. June 22, 1792, Shettleston, Lanark, Scot.—d. Jan. 18, 1865, Queenshill, Kirkcudbright) Scottish inventor. Working at the Glasgow Gasworks (1817–47), he introduced the use of a hot-air blast for the SMELTING of IRON ore. It had been believed that a blast of cold air was the most efficient smelting method (see WILLIAM FAIRBAIRN); Neilson demonstrated that the opposite was true, patenting his idea in 1828. Use of the hot blast tripled iron output per ton of coal, permitted iron to be recovered from lower-grade ores, and made possible the efficient use of raw coal and lower grades of coal instead of COKE and the construction of larger smelting furnaces.

Neiman Marcus \ˌnē-mən-'mär-kəs\ U.S. department-store chain. It was founded in Dallas, Texas, in 1907 by Herbert Marcus, his sister Carrie Marcus Neiman, and her husband, A.L. Neiman. From the beginning it featured unusual merchandise, particularly extravagant and outlandish gifts (including camels and Chinese junks) intended to appeal to the rich, in addition to a more standard selection for moderate-income customers. The company acquired luxury New York retailer Bergdorf Goodman in 1987. It also operates a mail-order business through catalogs.

Neith \'nēt\ Ancient Egyptian goddess, patroness of the city of SAIS in the Nile River delta. Neith was worshiped in predynastic times (c. 3000 BC), and several queens of the 1st dynasty were named after her. She also became an important goddess in the city of MEMPHIS. She was usually depicted as a woman wearing a red crown, holding crossed arrows and a bow. She was the mother of SEBEK and, later, of RE.

Nejd \'nezhd\ *or* **Najd** \'nəzhd\ Region of central SAUDI ARABIA. Comprising a rocky plateau sloping eastward from the mountains of the HEJAZ, it is sparsely settled, except for a few fertile oases. In the mid-18th century it became the centre of the WAHHĀBI, members of a puritanical Islamic movement that by 1803 had expanded into MECCA. Nejd has been under the rule of the SAʿŪD DYNASTY almost continuously since 1824. It was united with the Hejaz and became the independent kingdom of Saudi Arabia in 1932.

Nelson, (John) Byron (b. Feb. 4, 1912, Fort Worth, Texas, U.S.) U.S. golfer. "Lord Byron," as he was known to the golf world, began his career as a caddie at the age of 12 and became a professional golfer in 1932. He won the U.S. Open (1939), the Masters (1937, 1942), and the PGA championship (1940, 1945), setting records in 1945 when he won 18 out of 30 tournaments, 11 in succession.

Nelson, Horatio Nelson, Viscount *known as* **Lord Nelson** (b. Sept. 29, 1758, Burnham Thorpe, Norfolk, Eng.—d. Oct. 21, 1805, at sea, off Cape Trafalgar, Spain) British naval commander. He entered the navy in 1770 and served in the West Indies from 1777 to 1783. In 1793 he was sent to support the British allies against the French in the Mediterranean. After the British victory against the Spanish and French in the Battle of Cape St. Vincent (1797), he was promoted to rear admiral. In 1798 he pursued NAPOLEON's fleet to Egypt, where he won the decisive Battle of the NILE. During a prolonged stay in Naples for his ships' repairs, he pursued a love affair with Emma, Lady HAMILTON. For helping restore the Neapolitan king FERDINAND I to power (1799), he was created duke di Bronte. As second in command of an expedition to attack Denmark, he skillfully won the Battle of COPENHAGEN (1801) and was appointed commander in chief of the navy. In 1805 he was sent to the Mediterranean to meet the threat posed by the French fleet in Napoleon's scheme to invade England. In the ensuing Battle of TRAFALGAR, Nelson, aboard his flagship *Victory*, was shot by a French sniper from the *Redoutable* and died just as the British fleet secured its victory. His death was widely mourned, and he became England's most popular hero. His brilliant tactical command assured British naval supremacy for over 100 years.

Nelson, Willie (b. April 30, 1933, Fort Worth, Texas, U.S.) U.S. COUNTRY MUSIC singer and songwriter. His grandfather taught him to play guitar, and by age 10 he was performing at local dances. After working as a disc jockey, in 1961 he moved to Nashville, Tenn., where he wrote hit songs for dozens of country, rhythm-and-blues, and pop singers; these songs include "Hello Walls," "Night Life," and "Crazy." Returning to Texas, he released the hit album *Red Headed Stranger* (1975); it was followed by *Wanted: The Outlaws*, which outsold every country album that had preceded it, and *Stardust* (1978), with songs by HOAGY CARMICHAEL and IRVING BERLIN. He has recorded with at least 75 other singers, including Waylon Jennings (b. 1937). In the 1980s he organized annual Farm Aid festivals to raise money for farmers. His later albums include the critically acclaimed *Teatro* (1998).

Nelson River River, north-central Manitoba, Canada. Flowing out of northern Lake WINNIPEG into HUDSON BAY, it is 400 mi (644 km) long. It was discovered in 1612 by the English explorer Thomas Button, and a trading post of the HUDSON'S BAY COMPANY was established there c. 1670. Fur traders used the river as an inland route. The Hudson Bay Railway now follows most of the river's course.

Neman \'ne-mən\ **River** *Lithuanian* **Nemunas** \'ne-mü-ˌnäs\ *Belarusian* **Nyoman** River, central Europe. Rising in Belarus, south of MINSK, it flows west into Lithuania and between Lithuania and Kaliningrad province, Russia, to empty into the BALTIC SEA. It is 582 mi (937 km) long and navigable for most of its length. It was known as the Memel River in the former eastern Prussia and as the Russ 22 mi (35 km) from its mouth. It was the scene of many battles between Russian and German forces in World War I.

Nemanja, Stefan See STEFAN NEMANJA

nematode \'ne-mə-ˌtōd\ *or* **roundworm** Any of more than 15,000 named and many more unnamed species of WORMS in the class Nematoda (phylum Aschelminthes). Nematodes include plant and animal parasites and free-living forms found in soil, freshwater, saltwater, and even vinegar and beer malts. They are bilaterally symmetrical and usually tapered at both ends. Some species have separate sexes; others are hermaphroditic. They range from microscopic to about 23 ft (7 m) long. Nematode parasites can occur in almost any body organ but are most common in the digestive, circulatory, or respiratory system. Hookworms, PINWORMS, and EELWORMS are nematodes. See also FILARIAL WORM, GUINEA WORM, TRICHINA.

Nematode (*Ascaris lumbricoides*)
JAVIER PALAUS SOLER—OSTMAN AGENCY

Nemea, Battle of \'nē-mē-ə\ (394 BC) Battle in the Corinthian War (395–387 BC). The conflict took place when a coalition of Greek city-states determined to destroy Sparta's ascendancy after its victory in the PELOPONNESIAN WAR. The outnumbered Spartans were victorious, crushing first the Athenians and then the Thebans, Corinthians, and Argives.

Nemerov \'nem-ər-ˌōf**, Howard** (b. March 1, 1920, New York, N.Y., U.S.—d. July 5, 1991, University City, near St. Louis, Mo.) U.S. poet. He attended Harvard University and served as a pilot in World War II before teaching at various colleges, including Bennington. His verse, marked by irony and self-deprecatory wit, is often about nature; it appears in several volumes beginning with *The Image and the Law* (1947) and including *Collected Poems* (1977, Pulitzer Prize, National Book Award). His fiction includes *The Homecoming Game* (1957) and *A Commodity of Dreams and Other Stories* (1960). He was poet laureate of the U.S. (1988–90). His sister DIANE ARBUS was a notable photographer.

Nemesis \'ne-mə-səs\ Greek goddess of retribution. In the earliest Greek religion she was worshiped as a fertility goddess. Later legends told how ZEUS, in the form of a swan, coupled with her in the form of a goose. Nemesis then laid the egg from which HELEN of Troy was born (in other versions LEDA was said to be Helen's mother). Nemesis dealt out punishments that expressed the gods' disapproval of human presumption. Her cult was also popular in Rome, particularly among soldiers.

Nemi \'nā-mē**, Lake** *ancient* **Lacus Nemorensis** Crater lake in the Alban Hills, southeast of Rome, Italy. Its area is about 0.67 sq mi (1.7 sq km), and it is 110 ft (34 m) deep. Nearby were a temple and grove sacred to the goddess DIANA. Two ships dating from the reign of CALIGULA were raised from the lake bottom in the 1920s but were burned by the retreating German army in 1944, toward the end of World War II.

Nen River *formerly* **Nonni River** River, northeastern China. It is the main tributary of the SUNGARI (Songhua) River. It rises on the eastern slopes of Da Hinggan Range in northern HEILONGJIANG province and flows south, forming part of the border between Heilongjiang and JILIN provinces and watering the fertile northern section of the Manchurian plain. It is about 740 mi (1,190 km) long and is an important route; much of it is navigable.

nene \'nā-ˌnā\ *or* **Hawaiian goose** Species (*Branta sandvicensis*) of GOOSE, the state bird of Hawaii. A close relative of the CANADA GOOSE, the

© 2006 Encyclopædia Britannica, Inc.

nene is a nonmigratory, nonaquatic species with shortened wings and half-webbed feet. It is about 25 in. (65 cm) long and has a gray-brown barred body and black face. It feeds on berries and grasses on high lava slopes. Predation by introduced mammals (including dogs, cats, pigs, and mongooses) and human hunting had reduced the population to a few small flocks by 1911. It has since been successfully bred in captivity, but flocks released in the wild have failed to form self-sustaining colonies.

Nenni, Pietro (Sandro) (b. Feb. 9, 1891, Faenza, Italy—d. Jan. 1, 1980, Rome) Italian politician. He joined the Italian Socialist Party (PSI) in 1921 and edited its newspaper, *Avanti!* (1922–26). After criticizing the Fascist Party and Benito Mussolini, he was arrested and fled to Paris (1926). In the Spanish Civil War, he cofounded the Garibaldi Brigade. He was imprisoned in Germany and Italy in World War II, then became leader of the PSI; he led the left wing in alliance with the Communist Party until 1956. In 1963 he allied the PSI with the Christian Democrats and served as vice premier in three successive cabinets and as foreign minister (1968–69).

Neo-Confucianism In China, a rationalistic revival of Confucianism in the 11th century that influenced Chinese thought for 800 years. The movement sought to reestablish the supremacy of the Confucian heritage over the increasingly popular Buddhism and Daoism. Its two principal schools of thought were the Lixue (School of Principle), whose chief philosopher was Zhu Xi, and the Xinxue (School of Mind), represented by Lu Xiangshan and Wang Yangming. Neo-Confucianism was introduced into Japan by Zen Buddhists and became the guiding philosophy of the Tokugawa period (1603–1867), providing a heavenly sanction for the existing social order. Its emphasis on classical literature led to renewed interest in the Japanese classics and a revival of Shintō studies.

neo-Darwinism Theory of evolution that represents a synthesis of Charles Darwin's theory in terms of natural selection and modern population genetics. The term was first used after 1896 to describe the theories of August Weismann (1834–1914), who asserted that his germ-plasm theory made impossible the inheritance of acquired characteristics and supported natural selection as the only major process that would account for biological evolution.

Neo-Expressionism Art movement, chiefly of painters, that dominated the European and American art market in the early to mid-1980s. It was controversial both in the quality of its production and in the highly commercialized aspects of its presentation. Its practitioners, including Julian Schnabel and Anselm Kiefer, reacted to the highly intellectualized abstract art of the 1970s by creating dramatic, gestural paintings that incorporated some figurative elements and recognizable symbols. Their art was characterized by a tense yet playful presentation of objects in a "primitivist" manner, vivid colour harmonies, large scale, and a sense of inner tension and alienation. See also Expressionism.

Neo-Impressionism Movement in French painting of the late 19th century, in reaction against the realism of Impressionism. The Neo-Impressionists, led by Georges Seurat and Paul Signac, applied paint to canvas in dots of contrasting pigments, scientifically chosen so that adjacent dots would blend from a distance into a single colour. The technique is known as pointillism. Whereas the Impressionists captured the fugitive effects of colour and light, the Neo-Impressionists crystallized them into immobile monumentality.

Neo-Kantianism Revival of Kantianism in German universities that began c. 1860. At first primarily an epistemological movement, Neo-Kantianism slowly extended over the whole domain of philosophy. The first decisive impetus toward reviving Immanuel Kant's ideas came from natural scientists. Hermann von Helmholtz applied physiological studies of the senses to the question of the epistemological significance of spatial perception raised by *The Critique of Pure Reason* (1781). Neo-Kantianism reached its apex in the early 20th-century Marburg school, which included Hermann Cohen (1842–1918) and Paul Natorp (1854–1924). They repudiated Helmholtz's naturalism and reaffirmed the importance of the transcendental method. Ernst Cassirer, another Marburg-school figure, brought Kantian principles to bear on the whole realm of cultural phenomena. Wilhelm Windelband (1848–1915) and Heinrich Rickert (1863–1936) introduced Kantianism into the philosophy of history. Neo-Kantianism also influenced the phenomenology of Edmund Husserl and of the early works of Martin Heidegger.

Neo-Paganism Any of several movements that attempt to revive the polytheistic religions of Europe and the Middle East. Largely a product of the 1960s, contemporary Neo-Paganism has flourished particularly in the U.S., Britain, and Scandinavia. Its adherents often have deep ecological concerns and an attachment to nature; many worship an earth-mother goddess and center their rituals on the change of the seasons. Since the late 1970s, Neo-Paganism has also attracted feminists open to female personifications of the deity. Major Neo-Pagan groups include the Church of All Worlds, Feraferia, Pagan Way, the Reformed Druids of North America, the Church of the Eternal Source, and the Viking Brotherhood. See also Wicca.

Neo-Thomism \ˌnē-ō-ˈtä-ˌmi-zəm\ Modern revival of the philosophical and theological system developed by St. Thomas Aquinas and his later commentators. Neo-Thomism follows Aquinas in distinguishing between the realms of nature (in which reason and philosophy hold sway) and supernature (in which faith and theology are dominant). Aquinas's thought was presented in philosophy and theology courses or manuals, especially in the Dominican Order, through the 17th and 18th centuries, though most manuals of this period were watered with the opinions of other Schoolmen and remained remote from modern concerns. The modern revival of authentic Thomism began in the 19th century under the influence of the Jesuits and the papacy, who sought a sound philosophical foundation on which to develop responses to contemporary intellectual and social problems. After the mid-20th century neo-Thomists attempted to develop an adequate philosophy of science, to take into account the findings of phenomenology and psychiatry, and to evaluate the ontologies of existentialism and naturalism. See also Jacques Maritain.

Neoclassical architecture Revival of Classical architecture during the 18th and early 19th centuries. The movement concerned itself with the logic of entire Classical volumes, unlike Classical revivalism (see Greek Revival), which tended to reuse Classical parts. Neoclassical architecture is characterized by grandeur of scale; simplicity of geometric forms; Greek, especially Doric (see order), or Roman detail; dramatic use of columns; and a preference for blank walls. The new taste for antique simplicity represented a general reaction to the excesses of the Rococo style. Neoclassicism thrived in the U.S. and Europe, with examples occurring in almost every major city. Russia's Catherine II transformed St. Petersburg into an unparalleled collection of Neoclassical buildings as advanced as any contemporary French and English work. By 1800 nearly all new British architecture reflected the Neoclassical spirit (see Robert Adam; John Soane). France's boldest innovator was Claude-Nicolas Ledoux, who had a central role in the evolution of Neoclassical architecture. In the U.S. Neoclassicism continued to flourish throughout the 19th century, as many architects looked to make the analogy between the young country and imperial Rome when designing major government buildings. The style also spread to colonial Latin America.

Neoclassicism See Classicism and Neoclassicism

neoconservatism U.S. political movement. It originated in the 1960s among conservatives and some liberals who were repelled by or disillusioned with what they viewed as the political and cultural trends of the time, including leftist political radicalism, lack of respect for authority and tradition, and hedonistic and immoral lifestyles. Neoconservatives generally advocate a free-market economy with minimum taxation and government economic regulation; strict limits on government-provided social-welfare programs; and a strong military supported by large defense budgets. Neoconservatives also believe that government policy should respect the importance of traditional institutions such as religion and the family. Unlike most conservatives of earlier generations, neoconservatives maintain that the United States should take an active role in world affairs, though they are generally suspicious of international institutions, such as the United Nations and the World Court, whose authority could intrude upon American sovereignty or limit the country's freedom to act in its own interests. See also conservatism.

neodymium Metallic chemical element, chemical symbol Nd, atomic number 60. Silvery white in colour, it is a rare earth metal and one of the lanthanide series. It is a component of important alloys, among them misch metal (15% neodymium), used in lighter flints and various metallurgical processes. Alloyed with iron and boron, neodymium is the basis for powerful permanent magnets used in computer hard drives, lightweight earphones, and numerous other applications. Neodymium compounds are employed as ceramics glazes. The crude oxide counteracts the greenish cast imparted to glass by iron contaminants, and a very pure oxide is used to make a vivid purple glass. Neodymium is added to glass or other host

© 2006 Encyclopædia Britannica, Inc.

materials to form the active elements for certain solid-state LASERS. Glass containing a mixture of neodymium and praseodymium (another rare earth element) is used in glassblowers' goggles.

neofascism Political philosophy and movement that arose in Europe in the decades following World War II. Like earlier fascist movements, neofascism advocated extreme nationalism, opposed liberal individualism, attacked Marxist and other left-wing ideologies, indulged in racist and xenophobic scapegoating, and promoted populist right-wing economic programs. Unlike the fascists, however, neofascists placed more blame for their countries' problems on non-European immigrants than on leftists and Jews, displayed little interest in taking lebensraum (German: "living space") through the military conquest of other states, and made concerted efforts to portray themselves as democratic and "mainstream." The National Front in France, led by JEAN-MARIE LE PEN, and the Liberal-Democratic Party in Russia, led by Vladimir Zhirinovsky, are often cited as neofascist.

Neolithic \ˌnē-ə-ˈli-thik\ **Period** *or* **New Stone Age** Final stage of technological development or cultural evolution among prehistoric humans. It is characterized by the use of stone tools shaped by polishing or grinding, the domestication of plants or animals, the establishment of permanent villages, and the practice of such crafts as pottery and weaving. The Neolithic followed the PALEOLITHIC PERIOD (and in northwestern Europe the MESOLITHIC) and preceded the BRONZE AGE. Its beginning is associated with the villages that emerged in South Asia c. 9000 BC and flourished in the TIGRIS and EUPHRATES river valleys from c. 7000 BC. Farming spread northward throughout Eurasia, reaching Britain and Scandinavia only after 3000 BC. Neolithic technologies also spread to the Indus River valley of India by 5000 BC and to the Huang Ho valley of China by c. 3500 BC. The term is not applied to the New World, though Neolithic modes of life were achieved independently there by c. 2500 BC.

neon Chemical ELEMENT, chemical symbol Ne, atomic number 10. One of the NOBLE GASes, neon is colourless, odourless, tasteless, and completely unreactive. It occurs in minute amounts in the atmosphere and is obtained by fractional DISTILLATION of liquefied air. When under low pressure, it glows a bright orange-red if an electric current is passed through it. It was discovered in 1898, and since the 1920s its chief use has been in luminous tubes and bulbs.

neoplasm See TUMOR

Neoplatonism Form of PLATONISM developed by PLOTINUS in the 3rd century AD and modified by his successors. It came to dominate the Greek philosophical schools and remained predominant until the teaching of philosophy by pagans ended in the late 6th century. It postulated an all-sufficient unity, the One, from which emanated the Divine Mind, or LOGOS, and below that, the World Soul. Those transcendent realities were thought to support the visible world. All things emanated from the One, and individual souls could rise to mystical union with the One through contemplation. Though Plotinus's thought in some respects resembles GNOSTICISM, he was passionately opposed to that doctrine.

neoprene \ˈnē-ə-ˌprēn\ Any of a class of elastomers (rubberlike synthetic organic compounds of high molecular weight) made by POLYMERIZATION of the MONOMER 2-chloro-1,3-butadiene and vulcanized (cross-linked, like RUBBER), by sulfur, metallic oxides, or other agents. These synthetic rubbers, discovered in 1931 (see W.H. CAROTHERS), are generally too expensive to use in making tires, but their resistance to chemicals and oxidation (see OXIDATION-REDUCTION) makes them valuable in specialized applications, including shoe soles, hoses, adhesives, gaskets, seals, and foamed articles.

Neorealism *or* **neorealismo** Italian aesthetic movement that flourished especially after World War II. It sought to deal realistically with the events leading up to the war and with their resulting social problems. Rooted in the 1920s, it was similar to the *verismo* ("realism") movement, from which it originated, but differed in that its upsurge resulted from the intense feelings inspired by fascist repression, the Resistance, and the war. Neorealist writers include ITALO CALVINO, ALBERTO MORAVIA, and CESARE PAVESE. During the fascist years many Neorealist writers went into hiding, were imprisoned or exiled, or joined the Resistance. The movement reemerged in full strength after the war. Neorealism in film embraced a documentary-like objectivity; actors were often amateurs, and the action centred on commonplace situations. Often crudely and hastily made, Neorealist productions stood in stark contrast to traditional escapist feature films. Two notable examples of Neorealist films are ROBERTO ROSSELLINI's *Open City* (1945) and VITTORIO DE SICA's *The Bicycle Thief* (1948).

Neosho \nē-ˈō-shō\ **River** *or* **Grand River** River, southeastern Kansas and northeastern Oklahoma, U.S. It rises in east-central Kansas and flows into Oklahoma, where it is also known as the Grand, to join the ARKANSAS RIVER near Fort Gibson. It flows about 460 mi (740 km). Neosho is an OSAGE Indian word meaning "clear and abundant water." The crossing of the river at Council Grove was a starting point for the SANTA FE TRAIL.

Nepal \nə-ˈpȯl\ *officially* **Kingdom of Nepal** Country, southern Asia. Area: 56,827 sq mi (147,181 sq km). Population (2005 est.): 27,133,000. Capital: KATHMANDU. Most of the people are Nepalese of Indo-

Aryan ancestry; there is a significant minority of Tibeto-Nepalese peoples. Languages: Nepali (official), English, various others. Religions: Hinduism (official); also Buddhism, Islam. Currency: Nepalese rupee. Nepal contains some of the most rugged mountainous terrain in the world. The Great HIMALAYAS, including Mount EVEREST, are in its central and northern parts. As a result of its years of geographic and self-imposed isolation, it is one of the world's least-developed countries. Its market economy is mostly based on agriculture, including livestock raising; tourism is also important. Nepal is a constitutional monarchy with a bicameral parliament; its chief of state is the king, and the head of government is the prime minister. The region developed under early Buddhist influence, and dynastic rule dates from about the 4th century AD. It was formed into a single kingdom in 1769 and fought border wars with China, Tibet, and British India in the 18th–19th centuries. Its independence was recognized by Britain in 1923. A new constitution in 1990 restricted royal authority and accepted a democratically elected parliamentary government. Nepal signed trade agreements with India in 1997. The country was stunned in 2001 when the crown prince killed most members of the royal family, including himself.

nepheline \ˈne-fə-ˌlēn\ *or* **nephelite** Most common FELDSPATHOID mineral, an aluminosilicate of sodium and potassium ($Na_3KAl_4Si_4O_{16}$). It is sometimes used as a substitute for feldspars in the manufacture of glass and ceramics.

nepheline syenite \ˈsī-ə-ˌnīt\ Medium- to coarse-grained IGNEOUS ROCK, a member of the alkali-syenite group, which consists largely of feldspar and nepheline. Nepheline syenite from Canada is used to replace feldspar in the manufacture of ceramic and glass products.

nephrite \ˈne-ˌfrīt\ Gem-quality, usually green SILICATE MINERAL in the tremolite-actinolite-ferrotremolite series of AMPHIBOLES. It is the less prized

© 2006 Encyclopædia Britannica, Inc.

but more common of the two types of JADE and may be distinguished from JADEITE by its splintery fracture and oily lustre. Nephrite occurs in low-grade (formed under low-temperature, low-pressure conditions), regionally metamorphosed rocks. Important deposits occur in China, Siberia, New Zealand, Switzerland, Alaska, and Wyoming.

nephritis \ni-'frī-təs\ INFLAMMATION of the kidneys. There are numerous kinds, involving different kidney tissues. The most common type is BRIGHT DISEASE. Symptoms vary with the type of nephritis; severe cases can result in KIDNEY FAILURE. Causes include infection, ALLERGY or AUTOIMMUNE DISEASE, blockage in the URINARY SYSTEM, and hereditary diseases. Treatment addresses the cause where possible.

nephrology \ni-'frä-lə-jē\ Branch of medicine dealing with KIDNEY function and diseases. An understanding of kidney physiology is important not only in treating kidney disease but in knowing the effect of drugs, diet, and HYPERTENSION on kidney disease, and vice versa. The first scientific observations of the kidney were made in the mid-17th century by Lorenzo Bellini (1643–1704) and MARCELLO MALPIGHI; CARL LUDWIG was the first to elaborate on their true physiological function (1844). A key development in nephrology was the permanent arteriovenous shunt (1960), which made repeated hemodialysis feasible, instantly changing the outlook for chronic-renal-disease patients from certain death to 90% survival. See also DIALYSIS, KIDNEY FAILURE, KIDNEY STONE, KIDNEY TRANSPLANT, NEPHRON.

nephron Functional unit of the KIDNEY that removes waste and excess substances from the blood to produce URINE. Each of the million or so nephrons in each kidney is a tubule 1.2–2.2 in. (30–55 mm) long. At one end it is closed, expanded, and folded into a double-walled cuplike structure (Bowman's capsule) enclosing a cluster of CAPILLARIES (glomerulus). Fluid forced out of the blood through the capillary walls of the glomerulus into Bowman's capsule flows into the adjacent renal tubule, where water and nutrients are selectively reabsorbed from the fluid back into the blood, and ELECTROLYTES such as sodium and potassium are balanced in several distinct sections along its length. The final concentrated product is urine. See also URINARY SYSTEM.

Neptune Eighth PLANET from the Sun, discovered in 1846 and named for the Roman god of the sea. It has an average distance from the Sun of 2.8 billion mi (4.5 billion km), taking nearly 164 years to complete one orbit and rotating every 16.11 hours. Neptune has more than 17 times Earth's mass, 58 times its volume, and 12% stronger gravity at the top of its atmosphere. It has an equatorial diameter of 30,775 mi (49,528 km). Neptune consists largely of hydrogen and helium. It has no solid surface; its interior is believed to consist of a fluid mixture of rock, ices, and gas. Its atmosphere contains substantial amounts of methane gas, whose absorption of red light causes Neptune's deep blue-green colour. The VOYAGER 2 space probe in 1989 discovered winds of over 1,570 mi/hour (700 m/second), the fastest known for any of the Sun's planets, and dark spots that appear to be storms similar to Jupiter's GREAT RED SPOT. Neptune receives little solar radiation, but it radiates substantially more energy than it receives, which indicates an internal heat source. Neptune's weak magnetic field traps charged particles in a belt around the planet. Neptune has a system of rings, made up largely of dust-size particles, and at least 13 moons; the largest is TRITON, almost as big as Earth's Moon.

Neptune holding his trident, classical sculpture; in the Lateran Museum, Rome
ALINARI—ART RESOURCE

Neptune In ROMAN RELIGION, the god of water. Neptune was originally the god of fresh water, but by 399 BC he was identified with the Greek god POSEIDON and thus became a deity of the sea. His female counterpart, Salacia, probably began as a goddess of spring water but was later equated with the Greek goddess Amphitrite. Neptune's festival (Neptunalia) took place in the heat of summer (July 23), when fresh water was scarcest. In art Neptune is often given Poseidon's attributes, the trident and dolphin.

Nerbudda River See NARMADA RIVER

Nerchinsk, Treaty of (1689) Peace settlement between Russia and QING-DYNASTY China that checked Russia's eastward expansion. Russia lost easy access to the Sea of Okhotsk but gained the right of passage to Beijing for its trade caravans. The treaty also gained China's implied recognition of Russia as a state of equal status, something other European countries could not accomplish. The Nerchinsk treaty was the basis of Russo-Chinese relations until 1858–60.

Nereid \'nir-ē-əd\ In GREEK MYTHOLOGY, any of the daughters of the sea god NEREUS and of Doris, daughter of Oceanus. The Nereids, who numbered 50 or 100, were depicted as young girls who inhabited any water, salt or fresh, and were benign toward humanity. They were popular figures in Greek literature. The best known were Amphitrite, consort of POSEIDON; THETIS, wife of Peleus (king of the Myrmidons) and mother of ACHILLES; and Galatea, a Sicilian loved by the Cyclops POLYPHEMUS.

Nereus \'nir-ē-əs\ Greek sea god. The son of Pontus (a personification of the sea) and GAEA, he was noted for his gift of prophecy and his ability to change his shape. He lived at the bottom of the sea with his daughters, the NEREIDS. HERACLES wrestled with him in a variety of shapes in order to gain his advice about recovering the golden apples of the Hesperides.

Nereus struggling with Heracles, detail from a Greek water jar found at Vulci, *c.* 490 BC; in the British Museum
COURTESY OF THE TRUSTEES OF THE BRITISH MUSEUM

Nergal In MESOPOTAMIAN RELIGION, a secondary god of the Sumero-Akkadian pantheon. He was identified with Irra, the god of scorched earth and war, and with Meslamtaea. The city of Cuthah was the center of his cult. In the 1st millennium BC he was described as a benefactor who hears prayers, restores the dead to life, and protects agriculture and flocks. Later he was called a "destroying flame" and was depicted as a god of pestilence, hunger, and devastation. The other sphere of Nergal's power was the underworld, where he ruled as king and where the goddess Ereshkigal was his queen.

Neri \'nā-rē**, Saint Philip** (b. July 21, 1515, Florence—d. May 26, 1595, Rome; canonized 1622; feast day May 26) Roman Catholic mystic. He went to Rome to pursue religious studies in 1533. In 1548 he cofounded a society of laymen dedicated to the care of pilgrims, the poor, and the sick. After his ordination in 1551 he moved to the community of San Girolamo della Carità in Rome. From 1564 to 1575 he was rector of the church of San Giovanni, and in 1575 GREGORY XIII granted him Santa Maria in Vallicella, where he established his Congregation of the Oratory, a group of priests and clerics engaged in devotion and charitable activities. One of the outstanding mystics of the Counter-Reformation, he was noted for his eloquence as a preacher.

Nernst \'nernst**, Walther Hermann** (b. June 25, 1864, Briesen, Prussia—d. Nov. 18, 1941, Muskau, Ger.) German scientist, one of the founders of modern PHYSICAL CHEMISTRY. He taught at the Universities of Göttingen and Berlin until forced to retire in 1933 by the Nazi regime. Nernst's researches on the theory of electric cells (see BATTERY), the thermodynamics of chemical EQUILIBRIUM, the properties of vapours at high temperatures and of solids at low temperatures, and the mechanism of photochemistry have had important applications. His formulation of the third law of THERMODYNAMICS gained him a 1920 Nobel Prize. He also invented an improved electric light and an electronically amplified piano.

Nero *in full* **Nero Claudius Caesar Augustus (or Drusus) Germanicus** *orig.* **Lucius Domitius Ahenobarbus** (b. Dec. 15, AD 37, Antium, Latium—d. June 9, 68, Rome) Roman emperor (54–68). He was adopted by CLAUDIUS when the emperor married Nero's mother, AGRIPPINA THE YOUNGER, and took the throne after Claudius died. He was guided by his tutor, SENECA, and by Agrippina until he murdered her and broke free of his advisers. By respecting the Senate and leaving imperial administration alone, he became popular in the east, but BOUDICCA's revolt in Britain (61), unemployment, and contempt for his frivolousness and excesses caused dissatisfaction. In 64 a fire, possibly lit at his orders,

© 2006 Encyclopædia Britannica, Inc.

destroyed much of Rome; he persecuted the Christians as scapegoats and proceeded to build a garish palace, the Domus Aurea, on lands that had been privately held. With his reign in decline, he murdered his wife, Octavia, as well as her successor, Poppaea, ordered Seneca to kill himself, and executed senators who criticized him. Revolts in Gaul and Spain were led by Galba, who was declared emperor by his army. Nero came to be regarded as mad, giving public lyre and theatrical performances to the disgust of his subjects. Condemned by the Senate, he chose suicide over execution.

ANDERSON—ALINARI FROM ART RESOURCE

Nerses \'ner-sēz\ **I the Great, Saint** (b. c. 310—d. 373?; feast day, February 19) Patriarch of the Armenian church from c. 353. A descendant of St. Gregory the Illuminator (240–332), Nerses became the most important figure in Armenia during his patriarchate, establishing monastic and charitable institutions and schools. He was a supporter of King Pap of Armenia but broke with him over his fostering of religious ties with the court of Constantinople, which led to Pap's instigating the murder of Nerses.

Nerthus \'ner-thůs\ Ancient Germanic goddess. Tacitus refers to her as Mother Earth and says she was worshiped by seven tribes. Her worship centered on a temple in a sacred grove on an island in the Baltic Sea. She was believed to enjoy visiting her people. Her presence was discerned by her priest, and while she was among them her people lived in peace. Her identification with the god Njörd suggests that she may have been a hermaphrodite.

Neruda \nā-'rü-thä**, Pablo** *orig.* **Neftalí Ricardo Reyes Basoalto** (b. July 12, 1904, Parral, Chile—d. Sept. 23, 1973, Santiago) Chilean poet and diplomat. He began writing poetry at age 10, and at 20 he published his most widely read work, *Twenty Love Poems and a Song of Despair* (1924), inspired by an unhappy love affair. In 1927 he was named an honorary consul, and he later represented Chile in several Asian and Latin American countries; late in life he was ambassador to France. While in Asia he began *Residence on Earth* (1933, 1935, 1947), a verse cycle remarkable for its examination of social decay and personal isolation. In 1945 he was elected senator and joined the Communist Party; he later spent years in exile when the government turned toward the right. *Canto General* (1950), his great epic poem about the American continents, was deeply influenced by Walt Whitman and is the culminating expression of his political beliefs. *Elemental Odes* (1954) celebrates common, everyday objects. He was awarded the Nobel Prize for Literature in 1971.

Pablo Neruda.
CAMERA PRESS

Nerva \'nər-və\ *in full* **Nerva Caesar Augustus** *orig.* **Marcus Cocceius Nerva** (b. c. AD 35—d. Jan. 28, 98) Roman emperor (96–98), first of the Five Good Emperors. A member of a distinguished senatorial family, Nerva served twice as consul (71, 90). After an undistinguished career, he was chosen to succeed Domitian because of his age, dignity, and lack of children who would succeed him. He rejected Domitian's autocratic tyranny but completed Domitian's building projects and instituted his administrative and financial reforms. He adopted Trajan as his heir.

nerve See neuron

nerve gas Weapon of chemical warfare that affects the transmission of nerve impulses through the nervous system. The organophosphorus nerve agents Tabun, Sarin, and Soman were developed by Germany during World War II but not used. They and a newer agent, VX, were produced in huge quantities by the U.S. and Soviet Union during the Cold War; their stockpiling and use during war are now banned by the Chemical Weapons Convention of 1993. A single droplet of VX or Sarin, if inhaled or in contact with the skin, can be absorbed into the bloodstream and paralyze the nervous system, leading to respiratory failure and immediate death. Sarin was used in 1995 in a lethal attack in the Tokyo subways by members of Aum Shinrikyo.

Nervi \'ner-vē**, Pier Luigi** (b. June 21, 1891, Sondrio, Italy—d. Jan. 9, 1979, Rome) Italian engineer and building contractor. He became internationally renowned for his invention of ferro-cement, a material of his own invention composed of dense concrete heavily reinforced with evenly distributed steel mesh that together give it both lightness and strength. His first significant projects included a series of airplane hangars in Italy (1935–41) conceived as concrete vaults with huge spans. In addition to designing buildings, he succeeded in building a sailboat with a ferro-cement hull only 0.5 in. (1.25 cm) thick. Ferro-cement was vital to his complex for the Turin Exhibition (1949–50), a prefabricated, corrugated cylindrical 309-ft (93-m) arch. Nervi worked on the UNESCO headquarters in Paris (1950) with Marcel Breuer and helped design Italy's first skyscraper, the Pirelli Building in Milan (1955–59). Although Nervi's primary concern was never aesthetic, many of his works nonetheless achieved remarkable expressive force.

nervous system System of specialized cells (neurons, or nerve cells) that conduct stimuli from a sensory receptor through a neuron network to the site (e.g., a gland or muscle) where the response occurs. In humans, it consists of the central and peripheral nervous systems, the former consisting of the brain and spinal cord and the latter of the nerves, which carry impulses to and from the central nervous system. The cranial nerves handle head and neck sensory and motor activities, except the vagus nerve, which conducts signals to visceral organs. Each spinal nerve is attached to the spinal cord by a sensory and a motor root. These exit between the vertebrae and merge to form a large mixed nerve, which branches to supply a defined area of the body. Disorders include amyotrophic lateral sclerosis, chorea, epilepsy, myasthenia gravis, neural tube defect, parkinsonism, and poliomyelitis. Effects of disorders range from transient tics and minor personality changes to major personality disruptions, seizures, paralysis, and death.

Nesiotes See Critius and Nesiotes

Ness, Eliot (b. April 19, 1903, Chicago—d. May 7, 1957, Coudersport, Pa.) U.S. law-enforcement official. He was 26 years old when he was hired as a special agent of the U.S. Department of Justice to head its Chicago Prohibition bureau, with the express purpose of breaking up the bootlegging network of Al Capone. He formed a nine-man team of extremely dedicated and unbribable officers, "the Untouchables"; the evidence they collected helped send Capone to prison for income-tax evasion in 1931. After Prohibition was ended in 1933, Ness headed the alcohol-tax unit of the U.S. Treasury department (1933–35); he was later director of public safety in Cleveland (1935–41) and director of a division of the Federal Security Agency (1941–45).

Ness, Loch Lake, Highland council area, Scotland. It is 788 ft (240 m) deep and about 23 mi (36 km) long and has the largest volume of fresh water in Britain. It forms part of the Caledonian Canal system developed by Thomas Telford. On its shores are remains of two fortresses. Surface oscillations, or seiches, caused by differential heating, are common. Reports of an aquatic monster inhabiting Loch Ness date back centuries but remain unproved.

Nesselrode \nyis-syilʸ-'rôd-yi,\ *English* \'ne-səl-ˌrōd**, Karl (Robert Vasilyevich), Count** (b. Dec. 13, 1780, Lisbon, Port.—d. March 23, 1862, St. Petersburg, Russia) Russian statesman. After serving in the Russian diplomatic service, he acted as minister of foreign affairs (1822–56) and as chancellor (1845–62). He sought to influence the Ottoman Empire with the Treaty of Hünkâr İskelesi (1833) and the Straits Convention (1841). He supported aid to Austria in suppressing the Hungarian uprising (1848). His policy of promoting Russia's influence in the Balkans helped precipitate the Crimean War. He negotiated the subsequent treaty at the Congress of Paris.

nest Structure built by an animal as a permanent home or for bearing and rearing offspring. The social insects build systems of chambers and tunnels, above or below ground. Fishes' nests vary from shallow depressions in sand to enclosed structures constructed of vegetation. Certain frog species build mud-basin nests or floating masses of hardened froth. Alligators use mud and vegetation and cobras use leaves and forest litter to build a nest for their eggs. The most common type of bird nest is a cup-shaped or domed structure of twigs, leaves, mud, and feathers. Many mammals, especially small ones, build nests in trees, on the ground, or in burrows.

Nest of the American robin.
JEFF FOOTT/BRUCE COLEMAN INC.

Nestlé SA Multinational manufacturer of food products. Headquartered in Vevey, Switz., it operates branches and subsidiaries in more than 70 countries. Its products include condensed and powdered milk, baby foods, chocolate, cheese, instant coffee and tea, condiments, and frozen foods. Its history dates to 1866, when two Swiss firms were established, the Anglo-Swiss Condensed Milk Co. and a company founded by Henri Nestlé to manufacture the first infant formula. In 1905 they merged to become the Nestlé and Anglo-Swiss Condensed Milk Co. Nestlé created the first milk chocolate and in 1937 the first instant coffee, which it produced under the name Nescafé. It acquired various other firms, including Crosse & Blackwell in 1960, Stouffer Corp. in 1973, Carnation Co. in 1984, and Ralston Purina pet foods in 2001. Acquisitions have helped the company maintain its ranking as the world's largest food company. Nestlé adopted its present name in 1977.

Nestor In Greek legend, the king of Pylos in Elis. All his brothers were killed by Heracles, but Nestor survived. In Homer's *Iliad* he appeared as an elder statesman who entertained the warriors with tales of his youthful exploits. He brought 90 ships to aid the Greeks in their war against Troy. When, at the war's end, the Greeks sailed for home, Nestor went in a different direction and missed the storm Athena sent to disperse their ships. In the *Odyssey* Telemachus, son of Odysseus, came to Elis looking for his father, and Nestor entertained him.

Nestorian Member of a Christian sect that originated in Asia Minor and Syria in the 5th century AD, inspired by the views of Nestorius. Nestorians stressed the independence of Christ's divine and human natures. Nestorian scholars played a prominent role in the formation of Arab culture after the Arab conquest of Persia; Nestorianism also spread to India, China, Egypt, and Central Asia, where certain tribes were almost entirely converted. Today the Nestorians are represented by the Church of the East, or Persian church, usually referred to in the West as the Assyrian or Nestorian church. Most of its members, who number more than 200,000, live in Iraq, Syria, and Iran.

Nestorius (b. 4th century, Germanicia, Syria Euphratensis, Asia Minor—d. c. 451, Panopolis, Egypt) Founder of Nestorian Christianity. Born of Persian parents, he studied in Antioch and was ordained a priest. As bishop of Constantinople from 428, he aroused controversy when he objected to Cyril of Alexandria's granting Mary the title of Theotokos ("God-Bearer"), which he believed compromised Christ's full humanity. In 431 the Council of Ephesus condemned his teaching as heresy on the ground that he denied the reality of Christ's incarnation, and Nestorius went into exile, first in the Libyan desert and then in Upper Egypt. Nestorianism was adopted by the Persian church, whose members still adhere to his ideas.

Néstos River *or* **Mesta River** River, southwestern Bulgaria and northeastern Greece. It rises in the northwestern Rhodope Mountains and flows southeast for 150 mi (240 km) into the northern Aegean Sea opposite the island of Thásos. As it crosses the Bulgarian frontier into Greece, it divides Macedonia from Thrace.

Netherlands, The *officially* **Kingdom of The Netherlands** *byname* **Holland** Country, northwestern Europe. Area: 16,034 sq mi (41,528 sq km). Population (2005 est.): 16,300,000. Capital: Amsterdam.

Seat of government: The Hague. Most of the people are Dutch. Languages: Dutch (official), English. Religions: Christianity (Roman Catholic, Protestant); also Islam. Currency: euro. The Netherlands' southern and eastern region consists mostly of plains and a few high ridges; its western and northern region is lower and includes polders on the site of the Zuiderzee and the common delta of the Rhine, Meuse, and Schelde rivers. Coastal areas are almost completely below sea level and are protected by dunes and artificial dikes. Although densely populated, the country has a low birthrate. Its developed market economy is based largely on financial services, light and heavy industries, and trade. It is a constitutional monarchy with a parliament comprising two legislative houses; its chief of state is the monarch, and the head of government is the prime minister. Celtic and Germanic tribes inhabited the region at the time of the Roman conquest. Under the Romans trade and industry flourished, but by the mid-3rd century AD Roman power had waned, eroded by resurgent Germanic tribes and the encroachment of the sea. A Germanic invasion (406–407) ended Roman control. The Merovingian dynasty followed the Romans but was supplanted in the 7th century by the Carolingian dynasty, which converted the area to Christianity. After Charlemagne's death in 814, the area was increasingly the target of Viking attacks. It became part of the medieval kingdom of Lotharingia (see Lorraine), which avoided incorporation into the Holy Roman Empire by investing its bishops and abbots with secular powers, leading to the establishment of an Imperial Church. Beginning in the 12th century, much land was reclaimed from the sea as dike building occurred on a large scale; Flanders developed as a textiles centre. The dukes of Burgundy gained control in the late 14th century. By the early 16th century the Low Countries came to be ruled by the Spanish Habsburgs. The Dutch had taken the lead in fishing and shipbuilding, which laid the foundation for Holland's remarkable 17th-century prosperity. Culturally, this was the period of Jan van Eyck, Thomas à Kempis, and Desiderius Erasmus. Calvinism and Anabaptist doctrines attracted many followers. In 1581 the seven northern provinces, led by Calvinists, declared their independence from Spain, and in 1648, following the Thirty Years' War, Spain recognized Dutch independence. The 17th century was the golden age of Dutch civilization. Benedict de Spinoza and René Descartes enjoyed the intellectual freedom, and Rembrandt and Johannes Vermeer painted their masterpieces. The Dutch East India Co.

© 2006 Encyclopædia Britannica, Inc.

secured Asian colonies, and the country's standard of living soared. In the 18th century Dutch maritime power declined; the region was conquered by the French during the French revolutionary wars and became the Kingdom of Holland under Napoleon (1806). The Netherlands remained neutral in World War I and declared neutrality in World War II but was occupied by Germany. After the war it lost the Netherlands Indies (Indonesia from 1949) and Netherlands New Guinea (in 1962; now Irian Jaya). It joined NATO in 1949 and was a founding member of the European Economic Community (later renamed the European Community and now embedded in the European Union). At the outset of the 21st century The Netherlands benefitted from a strong, highly regulated mixed economy but struggled with the social and economic challenges of immigration.

Netherlands Antilles \an-'ti-lēz\ *formerly* **Curaçao** \ˌkůr-ə-'sō, ˌkyůr-ə-'saů\ Nonmetropolitan island territory of The Netherlands (pop., 2005 est.: 183,000), in the Caribbean Sea. Area: 308 sq mi (800 sq km). It consists of two widely separated groups of islands: Sint Eustatius, the southern section of St. Martin, and Saba making up the northern group, at the northern end of the Leeward Islands; and Curaçao and Bonaire (and also Aruba until 1986) constituting the southern group, about 500 mi (800 km) to the southwest, off the coast of Venezuela. The capital, on Curaçao, is Willemstad. Originally inhabited by Arawak and Carib Indians, the islands were encountered in the late 15th century and claimed for Spain. In the 17th century the Dutch gained control, and in 1845 the islands became the Netherlands Antilles. In 1954 they became an integral part of The Netherlands, with full autonomy in domestic affairs. Aruba seceded from the federation in 1986.

Neto \'nā-tü**, (Antônio) Agostinho** (b. Sept. 17, 1922, Icolo e Bengo, Angola—d. Sept. 10, 1979, Moscow, Russia, U.S.S.R.) Poet, physician, and first president of Angola. In 1948 Neto joined a movement aimed at rediscovering indigenous Angolan culture. He studied medicine in Lisbon and returned to Angola in 1959 as a doctor. In 1960 he was arrested in the presence of his patients by colonial authorities, who opened fire when the patients protested. He was imprisoned in Portugal for two years before escaping to join the Marxist Movimento Popular de Libertação de Angola (MPLA), whose president he became in 1962. When Angola became independent in 1975, he was proclaimed president, though he never controlled all the country's territory (see Jonas M. Savimbi). His poems were widely recognized in the Portuguese-speaking world.

nettle family Family Urticaceae, composed of about 45 genera of herbaceous plants, shrubs, small trees, and a few vines, found mostly in tropical regions. Many species, especially the nettles (*Urtica*) and Australian nettle trees (*Laportea*), have on their stems and leaves stinging hairs that break the skin and release a fluid that irritates it for hours. Ornamental species include artillery plant (*Pilea microphylla*) and baby tears (*Helxine soleiroli*), both creeping plants. The trumpet tree (*Cecropia peltata*), a species of the New World tropics, has hollow stems that are inhabited by biting ants. Ramie, or China grass (*Boehmeria nivea*), produces a valuable fibre. Some nettles can be cooked and eaten.

network In broadcasting, a radio or television company that produces programs for broadcast to member stations. See ABC, CBS, CNN, NBC, PBS.

network, computer Two or more computers and peripheral equipment (e.g., printers) that are connected with one another for the purpose of exchanging data electronically. Two basic network types are local area networks (LANs) and wide-area networks. Wide-area networks connect computers and smaller networks to larger networks over greater geographical areas, including different continents. Communications may occur over cables, fibre optics, or satellites, but most computer users access the network with a modem, using telephone lines. The largest wide-area network is the Internet. In the 1990s the World Wide Web was introduced and became the most popular way to access other Internet sites.

network, neural See neural network

Netzahualcóyotl \nā-ˌtsä-wäl-'kō-ˌyō-tᵊl\ City (pop., 2000: 1,225,083), central Mexico. It is a suburb of Mexico City and is one of Mexico's largest municipalities. Settlement began just after 1900, when Lake Texcoco was reduced in size and large areas of land were uncovered along the southern shore. To the north is Xochiaca Dam (built 1946), which protects the city from floods.

Neubrandenburg \'nȯi-ˌbrän-dən-ˌbůrk\ City (pop., 2002 est.: 71,723), northeastern Germany, near the northern end of Tollense Lake. It was founded in 1248 as a fortified outpost, became part of Mecklenburg in about 1300, and prospered from its weaving industry and as a market centre. In the 17th–19th centuries it was plundered during the Thirty Years' War, devastated by fire, and battered by the Napoleonic Wars. Its medieval fortifications are well preserved, but most of its buildings were destroyed by bombing in World War II. Much rebuilt after 1952, it has engineering, food-processing, and chemical industries.

Neuchâtel, Lake \ˌnœ-shä-'tel\ Lake, western Switzerland. With an area of 84 sq mi (218 sq km), it is the largest lake entirely within Switzerland. It is a survivor of a former glacial lake in the lower Aare valley, at the base of the Jura Mountains. On the northern shore is La Tène, a prehistoric site, which dates to the late Iron Age culture.

Neue Sachlichkeit \ˌnȯi-ə-'zäk̲-liⁱk̲-ˌkīt\ *German* **"New Objectivity"** Movement in German painting of the 1920s and early 1930s reflecting the cynicism and resignation of the post-World War I period. The term was coined in 1925 by Gustav Hartlaub, director of the Mannheim Kunsthalle, for an exhibition including works by George Grosz, Otto Dix, and Max Beckmann, the movement's leading exponents. They worked in a realistic style, as opposed to the prevailing styles of abstraction and Expressionism, using meticulous detail to portray evil in smooth, cold, and static images derived from Italian Metaphysical painting for the purpose of violent social satire. The movement ended in the 1930s with the rise of Nazism.

Neue Zürcher Zeitung \'nȯi-ə-'tsůr-k̲ər-'tsī-tůŋ\ *German* **"New Zürich Newspaper"** Daily newspaper published in Zürich, Switz., generally considered one of the world's great newspapers. Founded as the weekly *Zürcher Zeitung* in 1780, it took its present name in 1821. In 1868 it became a joint-stock company, with shares held by Zürich citizens. Two daily editions were published by 1869, and three by 1894. From its founding it has appealed to readers interested in deep coverage of international news. Austere in demeanour, it is characterized by careful, nonsensational reporting, highly informed and extremely thorough analysis, and background information supplied as context for every major story.

Neuilly \nœ-'yē**, Treaty of** (November 27, 1919) Peace treaty between Bulgaria and the Allied Powers after World War I, signed at Neuilly-sur-Seine, France. Bulgaria was forced to reduce its army to 20,000 men, cede lands to Yugoslavia and Greece that involved the transfer of 300,000 people, and pay reparations to the Allies.

Neumann \'nȯi-ˌmän**, (Johann) Balthasar** (b. 1687, Eger, Bohemia, Austrian Habsburg domain—d. Aug. 19, 1753, Würzburg) German architect. Born in Bohemia, Neumann moved to Würzburg in 1711. In 1719 he began work on a new palace for the prince-bishop, Johann Philipp Franz von Schönborn, that was especially noted for its grand staircase. Friedrich Karl von Schönborn, who was elected prince-bishop of Würzburg in 1729, went on to became Neumann's greatest patron, putting Neumann in charge of all major building projects in Würzburg and Bamberg, including palaces, public buildings, bridges, a water system, and many churches. One of Neumann's best works was the pilgrimage church at Vierzehnheiligen (1743–53). A master of the late Baroque style, he made ingenious use of domes and barrel vaults to create sequences of round and oval spaces possessing an airy elegance lit by huge windows; the lively interplay of these elements was accented by lavish use of decorative plasterwork, gilding, statuary, and murals.

Neumann, John von See John von Neumann

neural network Type of parallel computation in which computing elements are modeled on the network of neurons that constitute animal nervous systems. This model, intended to simulate the way the brain processes information, enables the computer to "learn" to a certain degree. A neural network typically consists of a number of interconnected processors, or nodes. Each handles a designated sphere of knowledge, and has several inputs and one output to the network. Based on the inputs it gets, a node can "learn" about the relationships between sets of data, sometimes using the principles of fuzzy logic. For example, a backgammon program can store and grade results from moves in a game; in the next game, it can play a move based on its stored result and can regrade the stored result if the move is unsuccessful. Neural networks have been used in pattern recognition, speech analysis, oil exploration, weather prediction, and the modeling of thinking and consciousness.

neural tube defect Congenital defect of the brain or spinal cord from abnormal growth of their precursor, the neural tube (see embryology), usu-

© 2006 Encyclopædia Britannica, Inc.

ally with spine or skull defects. The tube may fail to close properly, have parts missing, or have a blockage (see HYDROCEPHALUS). In spina bifida, vertebrae are open over the back of the spinal cord, usually at the base. This may not affect function if no further defects (local absence of skin or MENINGES, protrusion of tissue, defect opening into the spinal cord) exist. The more serious forms can cause paralysis and impair bladder and bowel function. In encephalocele, a meningeal sac containing brain tissue protrudes from the skull. The effects depend on the amount of tissue involved. Adequate folic-acid intake by women of childbearing age reduces the risk of neural tube defects. Early surgery can prevent or minimize disability.

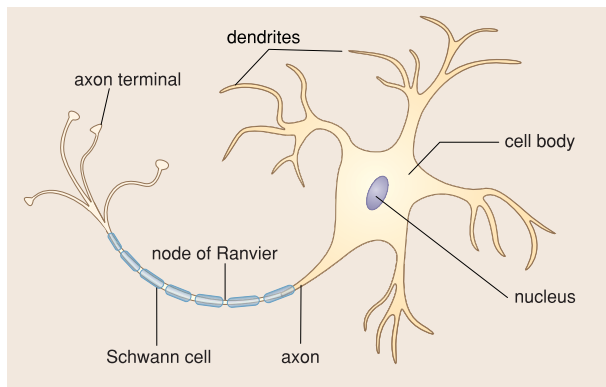
neuralgia \nyu̇-'ral-jə\ Pain of unknown cause in the area covered by a peripheral sensory nerve. In trigeminal neuralgia (tic douloureux), brief attacks of severe shooting pain along a branch of the trigeminal nerve (in front of the ear) usually begin after middle age, more often in women. Initially weeks or months apart, they become more frequent and easily triggered by touching the affected area, talking, eating, or cold. Analgesics help, but permanent cure requires surgery. Glossopharyngeal neuralgia causes recurring severe pain, most often in men over 40. Excruciating pains begin in the throat and radiate to the ears or down the neck, with or without a trigger (e.g., sneezing, yawning, chewing). Usually separated by long intervals, attacks subside before analgesics take effect. Surgery may help in extreme cases. See also NEURITIS.

Neurath \'nȯi-rät**, Konstantin, baron von** (b. Feb. 2, 1873, Klein-Glattbach, Ger.—d. Aug. 14, 1956, Enzweihingen, W.Ger.) German diplomat. He entered the diplomatic service in 1903 and served as minister to Denmark (1919–22), ambassador to Italy (1922–30), and ambassador to Britain (1930–32). As Germany's foreign minister (1932–38), he lent respectability to ADOLF HITLER's expansionist foreign policy. As "protector" of Bohemia and Moravia (1939–41), he was accused of being too lenient and was replaced by REINHARD HEYDRICH. After World War II, he was tried and imprisoned for war crimes (1946–54).

neuritis \nyu̇-'rī-təs\ INFLAMMATION of one or several nerves. The cause may be mechanical, vascular, allergic, toxic, metabolic, or viral. Symptoms—tingling, burning, or stabbing pains with sensory nerves and anything from muscle weakness to paralysis with motor nerves—are usually confined to the part of the body served by the inflamed nerve. In Bell palsy, facial nerve inflammation causes a characteristic facial muscle distortion. Analgesics can relieve the pain. Once the underlying cause is treated, recovery is usually rapid but may be incomplete in severe cases, with residual motor and sensory disturbances. See also NEURALGIA.

neurology Medical specialty concerned with NERVOUS SYSTEM function and disorders. Clinical neurology began in the mid-19th century, when mapping of the functional areas of the brain first began and understanding of the causes of conditions such as EPILEPSY improved. The development of ELECTROENCEPHALOGRAPHY in the 1920s aided in the diagnosis of neurological disease, as did the development of COMPUTED AXIAL TOMOGRAPHY in the 1970s and nuclear MAGNETIC RESONANCE IMAGING in the 1980s. In addition to dealing with physical disorders (e.g., tumours, trauma), neurology is unique among medical specialties in its intersection with PSYCHIATRY. Greater understanding of the brain chemistry of disorders such as SCHIZOPHRENIA and DEPRESSION has led to a wide array of effective drugs that nevertheless work best in conjunction with PSYCHOTHERAPY. Side effects of drug or surgical therapy can be serious, and many nervous system disorders have no effective treatment.

neuron *or* **nerve cell** Any of the cells of the NERVOUS SYSTEM. Sensory neurons relay information from sense organs, motor neurons carry impulses to muscles and glands, and interneurons transmit impulses between sensory and motor neurons. A typical neuron consists of dendrites (fibres that receive stimuli and conduct them inward), a cell body (a nucleated body that receives input from dendrites), and an axon (a fibre that conducts the nerve impulse from the cell body outward to the axon terminals). Both axons and dendrites may be referred to as nerve fibres. Impulses are relayed by NEUROTRANSMITTER chemicals released by the axon terminals across the synapses (junctions between neurons or between a neuron and an effector cell, such as a muscle cell) or, in some cases, pass directly from one neuron to the next. Large axons are insulated by a myelin sheath formed by fatty cells called Schwann cells. Bundles of fibres from neurons held together by CONNECTIVE TISSUE form nerves. See illustration opposite.



neuropathy \nu̇-'rä-pə-thē\ Disorder of the peripheral NERVOUS SYSTEM. It may be genetic or acquired, progress quickly or slowly, involve motor, sensory, and/or autonomic (see AUTONOMIC NERVOUS SYSTEM) nerves, and affect only certain nerves or all of them. It can cause pain or loss of sensation, weakness, PARALYSIS, loss of REFLEXES, muscle ATROPHY, or, in autonomic neuropathies, disturbances of blood pressure, heart rate, or bladder and bowel control; impotence; and inability to focus the eyes. Some types damage the NEURON itself, others the myelin sheath that insulates it. Examples include CARPAL TUNNEL SYNDROME, AMYOTROPHIC LATERAL SCLEROSIS, POLIOMYELITIS, and SHINGLES. Causes include diseases (e.g., DIABETES MELLITUS, LEPROSY, SYPHILIS), injury, TOXINS, and VITAMIN deficiency (e.g., BERIBERI). See also NEURALGIA; NEURITIS.

neuropsychology Science concerned with the integration of psychological observations on behaviour with neurological observations on the central NERVOUS SYSTEM (CNS), including the BRAIN. The field emerged through the work of PAUL BROCA and Carl Wernicke (1848–1905), both of whom identified sites on the CEREBRAL CORTEX involved in the production or comprehension of language. Great strides have since been made in describing neuroanatomical systems and their relation to higher mental processes. The related field of neuropsychiatry addresses itself to disorders such as APHASIA, KORSAKOFF SYNDROME, TOURETTE SYNDROME, and other CNS abnormalities. See also LATERALITY.

neurosis Mental and emotional disorder that affects only part of the PERSONALITY, is accompanied by a less distorted perception of reality than in a PSYCHOSIS, and is characterized by various physiological and mental disturbances (such as visceral symptoms and impaired concentration). The neuroses include ANXIETY attacks, certain forms of DEPRESSION, HYPOCHONDRIASIS, hysterical reactions, OBSESSIVE-COMPULSIVE DISORDERS, PHOBIAS, various SEXUAL DYSFUNCTIONS, and some TICS. They have traditionally been thought to be based on emotional CONFLICT in which a blocked impulse seeks expression in a disguised response or symptom. Behavioral psychologists regard them as learned, inappropriate responses to stress, which can be unlearned.

neurotransmitter Chemical released by NEURONS to stimulate neighbouring neurons, allowing impulses to be passed from one cell to the next throughout the NERVOUS SYSTEM. A nerve impulse arriving at the axon terminal of one neuron stimulates release of a neurotransmitter, which crosses the microscopic gap (see SYNAPSE) in milliseconds to the adjoining neuron's dendrite. Many chemicals are believed to act as neurotransmitters. The few that have been identified include ACETYLCHOLINE, DOPAMINE, and SEROTONIN. Some neurotransmitters activate neurons; others inhibit them. Some mind-altering drugs act by changing synaptic activity.

Neuschwanstein \'nȯi-'shvän-ˌshtīn\ **Castle** Elaborate castle built on a rock ledge over the Pöllat Gorge in the Bavarian Alps, near Füssen, Ger. Begun in 1869 at the behest of Bavaria's LOUIS II, this lavish stronghold is an eccentric romantic reconstruction of a medieval castle, complete with

Structure of a neuron. Dendrites, usually branching fibres, receive and conduct impulses to the cell body, where inputs arriving from various dendrites are integrated. Nerve impulses are conducted along the axon. When an impulse reaches the axon terminals, neurotransmitter chemicals are released into a gap (synapse) between the neuron and a neighbouring cell, and the impulse is transmitted to an adjacent neuron or effector cell (as of a muscle or gland). Schwann cells surround large axons, forming an insulating sheath. Spaces (nodes of Ranvier) between Schwann cells serve to conduct the nerve impulse quickly along the axon.
© MERRIAM-WEBSTER INC.

© 2006 Encyclopædia Britannica, Inc.

a walled courtyard, indoor garden, towers, and an artificial cave. Its two-story throne room is modeled after a Byzantine basilica. Wall paintings depict scenes from Richard Wagner's operas.

Neusiedler \'nȯi-ˌzēd-lər\ **Lake** *Hungarian* **Fertő-tó** \'fer-tœ̄-'tō\ Lake, eastern Austria and northwestern Hungary. The shallow lake was formerly entirely within Hungary, but in 1922 the northern two-thirds were transferred to Austria. Formed during the Pleistocene Epoch, it is Austria's lowest point, 377 ft (115 m) above sea level. Heavy reed growth along its shores supports many species of birds, which are protected by an international sanctuary and a biological station.

Neustria \'nü-strē-ə\ During the Merovingian period, the western part of the kingdom of the Franks after the 6th-century conquest by Clovis. The eastern kingdom was Austrasia. Neustria corresponded roughly to the area of present-day France west of the Meuse River and north of the Loire River. The name later denoted a much smaller area; by the 11th–12th centuries it was sometimes used synonymously with Normandy.

neutering See castration

Neutra \'nȯi-trä,\ *English* \'nü-trə**, Richard (Joseph)** (b. April 8, 1892, Vienna, Austria—d. April 16, 1970, Wuppertal, W.Ger.) Austrian-born U.S. architect. Educated in Vienna and Zürich, Neutra moved to the U.S. in 1923. His most important early work was the Lovell House, Los Angeles (1927–29), which features glass expanses and cable-suspended balconies. Shortly after World War II, Neutra created his most memorable works: the Kaufmann Desert House, Palm Springs, Calif. (1946–47), and the Tremaine House, Santa Barbara, Calif. (1947–48). Elegant and precise, these houses are considered exceptionally fine examples of the International Style, which Neutra helped introduce into the U.S. Carefully placed in the landscape, Neutra's houses often have patios or porches that make the outdoors seem part of the house. He believed that architecture should be a means of bringing man back into harmony with nature and with himself and was particularly concerned that his houses reflect the way of life of the owner. His later works included office buildings, churches, housing projects, and cultural centres. His many writings include *Survival Through Design* (1954).

neutralism See nonaligned movement

neutrality Legal status of a country arising from its abstention from all participation in a war between other countries, the maintenance of an attitude of impartiality toward the belligerents, and the recognition by the belligerents of this abstention and impartiality. Historically, the rights of neutral countries typically included freedom from use or occupation of their territory by any warring party, maintenance of diplomatic relations with other neutrals and belligerents, freedom of their citizens to go about their business, and respect for their intent to be neutral. In both World War I and World War II, many of the basic concepts of neutrality ceased to be respected, and by the late 20th century the freedom of the neutral had been sharply reduced.

neutrino \nü-'trē-nō\ Fundamental particle with no electric charge, little mass, and a spin value of ½. Neutrinos belong to the lepton family of subatomic particles. There are three types of neutrino, each associated with a charged lepton: the electron, the muon, and the tau. Neutrinos are the most penetrating of subatomic particles because they react with matter only by the weak force. They do not cause ionization, because they are not electrically charged. All types of neutrino have masses much smaller than their charged partners.

neutrino \nü-'trē-nō\ **problem, solar** Shortfall in the expected number of neutrinos produced by the Sun that are detected on Earth. Long-running experiments begun in the 1960s found only one-third to two-thirds the number of neutrinos predicted by theory to arrive from the Sun, where they are emitted as a result of nuclear fusion in the solar core. The discrepancy implied either that the theory of solar energy production was wrong or that neutrinos transformed en route to Earth in a way that made some of them seem to vanish. By the early 2000s strong evidence had been gathered in support of the latter explanation—that neutrinos "oscillate" in flight among their different types, not all of which could be detected in the experiments. For this to occur, neutrinos must have at least a tiny mass, though the specific values remained to be determined.

neutron One of the constituent particles of every atomic nucleus except ordinary hydrogen. Discovered in 1932 by James Chadwick (1891–1974), it has no electric charge and has nearly 1,840 times the mass of the electron. Free neutrons undergo beta decay with a half-life of about 10 minutes. Thus, they are not readily found in nature, except in cosmic rays. They are a penetrating form of radiation. When bombarded with neutrons, various elements undergo nuclear fission and release more free neutrons. If enough free neutrons are produced, a chain reaction can be sustained. This process led to the development of nuclear power as well as the atomic bomb. Neutron beams produced in cyclotrons and nuclear reactors are important probes of matter, revealing details of structure in both organic and inorganic susbtances.

neutron bomb *or* **enhanced radiation warhead** Small thermonuclear weapon that produces minimal blast and heat but releases large amounts of lethal radiation. The blast and heat are confined to a radius of only a few hundred yards; within a somewhat larger area, the bomb throws off a massive wave of neutron and gamma radiation, which is extremely destructive to living tissue. Such a bomb could be used with deadly efficiency against tank and infantry formations on the battlefield without endangering towns or cities only a few miles away. It can be carried in a missile or delivered by a howitzer or even an attack aircraft.

neutron star Any of a class of extremely dense, compact stars thought to be composed mainly of neutrons with a thin outer atmosphere of primarily iron atoms and electrons and protons. Though typically about 12 mi (20 km) in diameter, they have a mass roughly twice the Sun's and thus extremely high densities (about 100 trillion times that of water). Neutron stars have very strong magnetic fields. A solid surface differentiates them from black holes. Below the surface, the pressure is much too high for individual atoms to exist; protons and electrons are compacted together into neutrons. The discovery of pulsars in 1967 provided the first evidence of the existence of neutron stars, predicted in the early 1930s and believed by most investigators to be formed in supernova explosions. See also white dwarf star.

Neva \nye-'vä\ **River** River, northwestern Russia. It flows 46 mi (74 km) from Lake Ladoga west to the Gulf of Finland in the Baltic Sea. It is navigable by large ships but is usually frozen from November to April. The city of St. Petersburg is at its mouth. Its banks were the scene of a battle in 1240 in which Alexander Nevsky, prince of Novgorod, defeated the Swedes.

Nevada State (pop., 2000: 1,998,257), western U.S. Bordered by Oregon, Idaho, Utah, Arizona, and California, it covers 110,567 sq mi (286,368 sq km); its capital is Carson City. The Black Rock Desert is in the northwest; the Colorado River forms its extreme southeastern boundary. Human settlement in the area has spanned more than 20,000 years, and evidence of prehistoric inhabitants include dwelling remains and rock art. Early inhabitants included the Shoshone and Paiute Indians. Spanish missionaries in the 18th century and fur traders in the 1820s arrived before major exploration and mapping were done by John C. Frémont and Kit Carson (1843–45). Nevada was part of the land ceded to the U.S. by Mexico in 1848 and was included in the Utah Territory (1850–61). Settlements increased after the discovery of the Comstock Lode, a rich silver deposit, at Virginia City in 1859. It became the Territory of Nevada in 1861 and the 36th U.S. state in 1864. It began its transition to a modern economy during the Great Depression when gambling was legalized. Construction of the Hoover Dam aided the economy of southern Nevada. In the 1950s the state became the main testing site for atomic-energy experiments. The traditional bases of its economy, mining and agriculture, are overshadowed by government activity and tourism, the latter centred on Las Vegas, Reno, and Lake Tahoe.

Nevelson, Louise *orig.* **Leah Berliavsky** (b. Sept. 23?, 1899/1900, Kiev, Russia—d. April 17, 1988, New York, N.Y., U.S.) Ukrainian-born U.S. sculptor. Born in Kiev, she moved with her family to Maine in 1905. She studied at New York's Art Students League and with Hans Hofmann in Munich (1931). Her early figurative sculptures feature blockish, interlocking masses and found objects that anticipate her mature style. By the 1950s she was working almost exclusively in abstract forms. She is best known for the large, monochromatic abstract sculptures of this period, consisting of open-faced wooden boxes stacked to make freestanding walls. Within the boxes are highly suggestive collections of abstract-shaped objects mingled with pieces of architectural debris and other found objects skillfully arranged to produce a sense of mystery and then painted a single colour, usually black. She is recognized as one of the foremost sculptors of the 20th century.

Nevins, Allan (b. May 20, 1890, Camp Point, Ill., U.S.—d. March 5, 1971, Menlo Park, Calif.) U.S. historian. He worked nearly 20 years as a journalist before joining the faculty at Columbia University (1928–58). His best-known works include biographies of U.S. political and industrial figures, including *Grover Cleveland* (1932, Pulitzer Prize) and *Hamilton Fish* (1936, Pulitzer Prize), and his eight-volume history of the American Civil War, comprising *Ordeal of the Union* (1947), *The Emergence of Lincoln* (1950), and *The War for Union* (1959–71). In 1948 he inaugurated at Columbia the first oral history program in the U.S.

Nevsky, Alexander See Saint Alexander Nevsky

New Age movement Movement that spread through occult communities in the 1970s and '80s. It looked forward to a "New Age" of love and peace and offered a foretaste of the coming era through personal transformation and healing. The movement's strongest supporters were followers of esotericism, a religious perspective based on the acquisition of mystical knowledge. At its height, the movement attracted millions of Americans, who practiced astrology, yoga, and channeling and used crystals as healing tools. Adherents sought to bring about global transformation, and in 1987 many participated in the Harmonic Convergence, an attempt to accomplish that goal.

New Britain *formerly* **Neu-Pommern** \nȯi-'pȯ-mərn\ Largest island (population 1999 est.: 435,000) in the Bismarck Archipelago, Papua New Guinea. It was visited and named by English explorer William Dampier in 1700. After periods under German, Australian, and Japanese rule, it became part of Papua New Guinea in 1975 when that nation attained independence. It is crescent-shaped and heavily forested, and it has several volcanoes. Its highest peak, Mount Sinewit, at 7,999 ft (2,438 m), erupted violently in 1937. Commercial products include coconuts, cocoa, and palm oil. Its harbours include Blanche Bay, Talasea, and Jacquinot Bay.

New Brunswick Province (pop., 2001: 729,498), one of the three Maritime Provinces, eastern Canada. Bordered by the U.S. and the Canadian province of Quebec, it lies on the Gulf of St. Lawrence and the Northumberland Strait (east) and the Bay of Fundy (south); it is connected with Nova Scotia by the Isthmus of Chignecto. Its capital, Fredericton, is home to the University of New Brunswick (founded 1785; Canada's oldest university). New Brunswick was part of the original Acadia; it was colonized by the French in the 18th century, then captured by the British, who expelled the French-speaking Acadians in 1755 and incorporated the area into Nova Scotia. After the American Revolution, some 14,000 loyalists from the U.S. settled there. As a result of this large influx, it was separated from Nova Scotia, and the province of New Brunswick was established in 1784. In 1867 it became an original member of the Dominion of Canada. Forests cover 90% of the province, whose major cities include Saint John and Moncton. Forestry and lumbering are the largest industries, followed by commercial fishing.

New Brunswick, University of Canadian public university in Fredericton, founded in 1785. It has faculties of administration, arts, computer science, education, engineering, forestry, graduate studies, law, nursing, physical education, science, and business and additional programs in business, languages, and social sciences. A branch campus is located in Saint John.

New Caledonia French overseas territory (pop., 2005 est.: 237,000), southwestern South Pacific Ocean. It consists of the islands of New Caledonia and Walpole, the Isle of Pines, and several other island groups. Its capital is Nouméa. The main island, New Caledonia, has rich deposits of nickel that are among the largest in the world. Archaeological excavations indicate an Austronesian presence in the area c. 2000–1000 BC. The islands were visited by Capt. James Cook in 1774 and by various navigators and traders in the 18th–19th century. They were occupied by France in 1853 and were a penal colony from 1864 to 1897. New Caledonians joined the Free French cause of Charles de Gaulle in 1940; the islands were the site of Allied bases during the Pacific war. They became a French overseas territory in 1946. In 1987 residents voted by referendum to remain part of France.

New Church *or* **Swedenborgians** Church whose members follow the teachings of Emanuel Swedenborg. Swedenborg did not himself found a church, but he believed that his writings would be the basis of a "new church," which he associated with the "new Jerusalem" mentioned in the Book of Revelation. In 1788, soon after his death, a group of his followers established a church in London. The first Swedenborgian society in the U.S. was organized in Baltimore in 1792. Baptism and the Lord's Supper are the two sacraments of the church, and New Church Day (June 19) is added to the established Christian festivals. There are three New Church groups: the General Conference of the New Church, the General Convention of the New Jerusalem in the U.S.A., and the General Church of the New Jerusalem.

New Comedy Greek drama from c. 320 BC to the mid-3rd century BC that offers a mildly satiric view of contemporary Athenian society. Unlike Old Comedy, which parodies public figures and events (see Aristophanes), New Comedy features fictional average citizens in domestic life. The chorus, the representative of forces larger than life, is reduced to a small band of musicians and dancers. Plays usually involve the conventionalized situation of thwarted lovers and contain stock characters. Menander introduced the New Comedy and became its most famous exponent; Plautus and Terence translated its plays for the Roman stage. Elements of New Comedy influenced European drama down to the 18th century.

New Criticism *or* **formalism** Post–World War I school of Anglo-American literary theory that insisted on the intrinsic value of a work of art and focused attention on the individual work alone as an independent unit of meaning. New Critics were opposed to the practice of bringing historical or biographical data to bear on the interpretation of a work. The primary critical technique was analytic (or "close") reading of the text, concentrating on its language, imagery, and emotional or intellectual tensions. Critics associated with the movement include I. A. Richards, William Empson, John Crowe Ransom, and R. P. Blackmur (1904–1965).

New Deal U.S. domestic program of Pres. Franklin Roosevelt to bring economic relief (1933–39). The term was taken from Roosevelt's speech accepting the 1932 presidential nomination, in which he promised "a new deal for the American people." New Deal legislation was enacted mainly in the first three months of 1933 (Roosevelt's "hundred days") and established such agencies as the Civil Works Administration and the Civilian Conservation Corps to alleviate unemployment, the National Recovery Administration to revive industrial production, the Federal Deposit Insurance Corp. and the Securities and Exchange Commission to regulate financial institutions, the Agricultural Adjustment Administration to support farm production, and the Tennessee Valley Authority to provide public power and flood control. A second period of legislation (1935–36), often called the second New Deal, established the National Labor Relations Board, the Works Progress Administration, and the social security system. Some legislation was declared unconstitutional by the U.S. Supreme Court, and some programs did not accomplish their aims, but many reforms were continued by later administrations and permanently changed the role of government. See also Public Works Administration.

New Delhi \'de-lē\ City (pop., 2001 prelim.: 294,783), capital of India, on the western bank of the Yamuna River, south of Old Delhi in Delhi capital territory. Built from 1912 to 1929, it was formally opened in 1931, when it became the capital. In contrast to the convoluted street plan of Old Delhi, New Delhi has an orderly, diagonal pattern and gives a feeling of openness and quiet. The main east-west axis is Central Vista Park, a thoroughfare lined with government buildings, museums, and research centres.

New Democratic Party Canadian democratic socialist political party. Formed in 1961 from the Co-operative Commonwealth Federation, it favours a mixed public-private economy, broadened social benefits, and an internationalist foreign policy. It formed governments in Saskatchewan, Manitoba, and British Columbia intermittently from the 1940s to the 1990s, in the Yukon Territory from the 1980s, and in Ontario in the 1990s. At the national level, however, it has enjoyed only marginal success. The NDP draws much of its support from the farmers of Manitoba and Saskatchewan and the urban workers of British Columbia and Ontario.

New Economic Policy (NEP) Economic policy of the Soviet Union (1921–28). A temporary retreat from the failed War Communism policy of extreme centralization and doctrinaire socialism, the new measures included the return of most agriculture, retail trade, and light industry to private ownership (though the state retained control of heavy industry, banking, transport, and foreign trade) and the reintroduction of money into the economy. The policy allowed the economy to recover from years of war. In 1928 chronic grain shortages prompted Joseph Stalin to begin to eliminate private ownership of farmland and to collectivize agriculture under state control, effectively ending the NEP. By 1931 state control was reimposed over all industry and commerce.

New England Region, northeastern U.S. It consists of the states of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, and Connecticut and has an area of 66,667 sq mi (172,668 sq km). Named by John Smith, who explored its shores in 1614, it was later settled by English Puritans (see Puritanism). The New England colonies, fueled by self-sufficient farmers, evolved representative governments. The area's numerous harbours soon promoted the growth of overseas commerce and a vigorous shipbuilding industry. In the 18th century it became a hotbed of agitation for independence from Britain, and its patriots played leading roles in the American Revolution.

New England Confederation *or* **United Colonies of New England** Organization of four American colonies. In 1643 delegates from Massachusetts, Connecticut, New Haven, and Plymouth met to solve trade, boundary, and religious disputes and to form a common defense against the French, Dutch, and Indians. They drew up articles of agreement and established a directorate of eight commissioners. The confederation was weakened by its advisory status and by the 1665 merger of Connecticut and New Haven. It was active in King Philip's War but dissolved in 1684 when the Massachusetts charter was revoked.

New England Range Upland area, northeastern New South Wales, Australia. Part of the Great Dividing Range, it stretches about 200 mi (320 km) parallel to the eastern coast, constituting Australia's largest plateau region. The highest point, Round Mountain, is 5,300 ft (1,615 m). New England National Park, on the eastern slope of the range, is one of several semitropical and temperate rainforest areas designated a UNESCO World Heritage site in 1986.

New England Renaissance See American Renaissance

New France Possessions of France in North America from 1534 to the Treaty of Paris in 1763. After the first land claim for France by Jacques Cartier (1534), the company of New France was established in 1627. With the explorations by Samuel de Champlain, Jacques Marquette, La Salle, Louis Jolliet, and others, the boundaries of New France expanded beyond the lower St. Lawrence River to include the Great Lakes and the Mississippi Valley. From 1689 rivalry between England and France affected their possessions in North America. The French and Indian War (1754–63) resulted in the cession of Canada and the territory east of the Mississippi River to England and the territory west of the Mississippi to Spain, with France keeping only the islands of St.-Pierre and Miquelon off the coast of Newfoundland.

New Goa See Panaji

New Granada, Viceroyalty of Spanish viceroyalty in northwestern South America during colonial times. The region was conquered by the Spanish in the 16th century and was initially subject to the Viceroyalty of Peru. It became a separate viceroyalty—first established temporarily in 1717, and later permanently in 1739—that included the modern countries of Colombia, Panama, Venezuela, and Ecuador. Its capital was Santa Fé (modern Bogotá). It was liberated from Spain in 1823.

New Guinea *Indonesian* **Irian** \ˌir-ē-ˈän\ Island, eastern Malay Archipelago, western Pacific Ocean, north of Australia. Divided roughly in half between Indonesia (west) and Papua New Guinea (east), New Guinea is the second largest island in the world (after Greenland). It is about 1,500 mi (2,400 km) long and 400 mi (650 km) wide at its widest point, with an area of about 309,000 sq mi (800,000 sq km). The terrain ranges from lowland rainforest to fertile highlands and a rugged mountainous spine; its climate is tropical. Copper and gold are its chief mineral resources. The majority of the people of New Guinea are subsistence farmers.

New Hampshire State (pop., 2000: 1,235,786), northeastern U.S. One of the New England states, it is bordered by Canada and the U.S. states of Maine, Massachusetts, and Vermont; the Atlantic Ocean lies to the southeast. New Hampshire covers 9,283 sq mi (24,043 sq km); its capital is Concord. The Connecticut River forms its western boundary with Vermont. The White Mountains in its central part contain Mount Washington. The region was inhabited by Algonquin Indians (see Algonquian languages) when the first English people settled near Portsmouth in 1623. The area came under the jurisdiction of Massachusetts in 1641 and became a separate crown colony in 1679. It was the first colony to declare its independence from Britain in 1776. Following the nation's establishment, the state grew rapidly. Agriculture flourished and manufacturing developed along the rivers. Portsmouth became a major shipbuilding centre. The economy is now based primarily on manufacturing and tourism, although dairy farming and granite quarrying are also important. Because it holds the nation's earliest presidential primary, it has furnished the first testing ground for many candidacies. Dartmouth and the University of New Hampshire are two of the state's prominent educational institutions.

New Haven City (pop., 2000: 123,626), south-central Connecticut, U.S. A port of entry on Long Island Sound, it was originally settled in 1638 and became part of the colony of Connecticut in 1665. It was the co-capital with Hartford until 1875. New Haven was sacked by loyalist forces during the American Revolution (1779), and during the American Civil War it was a centre of abolitionist activity (see abolitionism). A number of famous inventors made the city a centre of industrial technology, including Charles Goodyear, Eli Whitney, and Samuel F.B. Morse. It is the home of Yale University and several other educational and cultural institutions.

New Hebrides See Vanuatu

New Ireland *formerly* **Neu-Mecklenburg** \nȯi-ˈme-klən-ˌberg\ Island and province (pop., 1999 est.: 111,906), Bismarck Archipelago, Papua New Guinea. The island has an area of 3,340 sq mi (8,651 sq km) and is about 200 mi (320 km) long. The terrain is largely mountainous. The province includes many nearby smaller islands. It was discovered by Dutch navigators in 1616 but was little known before 1884, when it became part of a German protectorate. After World War I it was mandated to Australia. The island was occupied by the Japanese in World War II. When Papua New Guinea gained independence in 1975, it became part of that country. Most of the inhabitants live in the north. Copra production dominates commercial development.

New Jersey State (pop., 2000: 8,414,350), eastern U.S. Lying on the Atlantic Ocean, it is bordered by New York, Delaware, and Pennsylvania. It covers 7,790 sq mi (20,176 sq km); its capital is Trenton. The Hudson River forms its northeastern boundary; the Delaware River, its western boundary. Before European colonization, the region was inhabited by Delaware Indian tribes. Although it was sighted by Giovanni Verrazzano and Henry Hudson, it was first settled by Dutch and Swedish traders. It was the site of numerous battles during the American Revolution, including one led by Gen. George Washington in 1776, after crossing the Delaware (see Battles of Trenton and Princeton). It was the third state to ratify the U.S. Constitution in 1787. Between the Revolutionary and Civil wars, it underwent tremendous industrialization, abetted by the construction of canals and, later, railways. Although known as the "Garden State," a name influenced by its 18th-century agricultural fertility, its economy is based primarily on manufacturing, and it has many research facilities and laboratories. Tourism, led by Atlantic City, is also important. Chief cities include Newark, Jersey City, Paterson, and Elizabeth.

New Mexico State (pop., 2000: 1,819,046), southwestern U.S. Bordered by Mexico and the U.S. states of Colorado, Oklahoma, Texas, and Arizona, it covers 121,598 sq mi (314,939 sq km); its capital is Santa Fe. In the west, it is crossed north-south by the Continental Divide. The Rio

Grande bisects the state and for a short distance forms the boundary with Texas. Human settlement in the area has probably spanned 10,000 years. Before the Navajo and Apache arrived in the 15th century, an agricultural Indian civilization had developed irrigation systems, pueblos, and cliff dwellings, whose ruins still dot the state. Spaniards from Mexico claimed the area for Spain in the 16th century, and in 1540 Francisco Vázquez de Coronado explored it. The first settlement was at Santa Fe in 1610. Missionaries were active in the 1600s. It became part of Mexico in 1821 and was ceded to the U.S. in 1848 at the end of the Mexican War. The Territory of New Mexico was established by Congress in 1850. It became the 47th U.S. state in 1912 and retained its frontier image. World War II spurred economic and social change, bringing research facilities, including that at Los Alamos. The economy today is largely dependent on the export of raw materials and on federal government expenditures; oil and natural gas are also important. The University of New Mexico and a fine arts community are in Albuquerque.

New Model Army (1645) Army that won the English Civil Wars for Parliament. It was formed to provide a well-trained force drawn from all parts of England instead of the limited local militias. The new army also replaced the private armies raised by individual generals that lacked a unified command. Under Baron Fairfax and Oliver Cromwell, the New Model Army won the Battle of Naseby and effectively ended the first phase of the Civil Wars.

New Nationalism American political policy espoused by Theodore Roosevelt. Influenced by Herbert Croly's *The Promise of American Life* (1910), Roosevelt used the phrase in a speech in which he tried to reconcile the liberal and conservative wings of the Republican Party. New Nationalism called for federal intervention to promote social justice and the economic welfare of the underprivileged. In 1912, as the presidential candidate of the Progressive Party, Roosevelt ran unsuccessfully on a platform based on the precepts of New Nationalism. See also Robert La Follette.

New Orleans City (pop., 2000: 484,674), southeastern Louisiana, U.S. Situated between the Mississippi River and Lake Pontchartrain, it is the state's largest city and a major deepwater port. Founded in 1718 by French colonist Jean-Baptiste Le Moyne de Bienville, it was ceded to Spain in 1763. In 1800 it was ceded back to France and three years later sold to the U.S. by Napoleon. Incorporated in 1805, it was the state capital from 1812 to 1849. During the American Civil War the city was captured and occupied by Union forces (1862). A notable tourist centre, its attractions include Mardi Gras and the French Quarter, a popular tourist area noted for its nightclubs and Creole architecture and cuisine. It is also a medical, industrial, and educational centre. It was devastated by Hurricane Katrina in August 2005, when the levees protecting the city were breached and nearly all the city was flooded.

New Orleans, Battle of (1815) Battle between the U.S. and Britain during the War of 1812. Late in 1814 a British fleet of more than 50 ships commanded by Gen. Edward Pakenham (1778–1815) sailed into the Gulf of Mexico and prepared to attack New Orleans. Gen. Andrew Jackson, commander of the U.S. Army of the Southwest, which consisted chiefly of militiamen and volunteers, fought the British regulars who stormed their position on Jan. 8, 1815. His troops were so effectively entrenched behind earthworks and the British troops so exposed that the fighting was brief, ending in a decisive U.S. victory, a British withdrawal, and the death of Gen. Pakenham. The battle was without military value, since the Treaty of Ghent ending the war had been signed in December, but the news had been slow to arrive. The victory nevertheless raised national morale, enhancing Jackson's reputation as a hero and preparing his way to the presidency.

New Orleans, Battle of (April 24–25, 1862) Naval action in the American Civil War. A Union squadron of 43 ships led by David Farragut entered the Mississippi River below New Orleans and breached the chain cables stretched across the river as a defense. The 3,000 Confederate troops under Mansfield Lovell withdrew northward and the city fell. The Union army under Benjamin Butler entered the city on May 1 and began an occupation that lasted until the end of the war. The loss of New Orleans was a major blow to the Confederacy.

New Orleans jazz See Dixieland

New Realism Early 20th-century movement in metaphysics and epistemology that opposed the idealism dominant in British and U.S. universities. Early leaders included William James, Bertrand Russell, and G. E. Moore, who adopted the term realism to signal their opposition to idealism. In 1910 William Pepperel Montague, Ralph Barton Perry, and others signed an article entitled "The Program and First Platform of Six Realists," and followed it with a cooperative volume, *The New Realism* (1912). In defending the independence of known things, New Realism affirmed that in cognition "the content of knowledge, that which lies in or before the mind when knowledge takes place, is numerically identical with the thing known" (a form of direct realism). To some realists, this epistemological monism seemed unable to give a satisfactory explanation of the mind's proneness to error.

new religious movement (NRM) Any religion originating in recent centuries having characteristic traits including eclecticism and syncretism, a leader who claims extraordinary powers, and a "countercultural" aspect. Regarded as outside the mainstream of society, NRMs in the West are extremely diverse but include millennialist movements (e.g., the Jehovah's Witnesses), Westernized Hindu or Buddhist movements (e.g., the Hare Krishna movement), so-called "scientific" groups (e.g., Scientology), and nature religions (see Neo-Paganism). In the East they include China's 19th-century Taiping movement (see Taiping rebellion) and present-day Falun Gong movement, Japan's Tenrikyo and PL Kyodan, and Korea's Ch'ondogyo and Unification Church. Some NRMs fade away or meet tragic ends; others, such as the Mormon church, eventually become accepted as mainstream.

New Republic, The Weekly journal of opinion, founded in 1914 by Willard Straight, with Herbert Croly as editor. Long one of the most influential liberal magazines in the U.S., it early reflected the progressive movement and sought reforms in U.S. government and society. Its popularity declined in the 1920s when liberalism was out of favour but revived in the 1930s. After initially opposing Pres. Franklin D. Roosevelt's administration, it supported Roosevelt's New Deal. After becoming editor in 1946, former U.S. vice president Henry Wallace moved the magazine further left until he was forced to resign. In the early 1980s the magazine began to display an array of commentary reflecting the resurgence of conservatism in U.S. politics.

New River River, southwestern Virginia and southern West Virginia, U.S. It is formed in North Carolina and flows north across Virginia into West Virginia, where it joins the Gauley River to form the Kanawha River. It is about 255 mi (410 km) long and is spanned by one of the longest steel-arch bridges in the world, the New River Gorge bridge near Fayetteville, W.Va., whose main span is 1,700 ft (518 m).

New School University *formerly* **New School for Social Research** Private university in New York City. It was established in 1919 as an informal centre for adult education and soon became the first American university to specialize in continuing education. In 1934 it established a graduate faculty of political and social sciences, staffed mainly by refugee academics from Nazi Germany. It also includes a liberal arts college, a graduate school of management and urban policy, the Mannes College of Music, and the Parsons School of Design.

New Siberian Islands Island group, Arctic Ocean, northeastern Russia, north of eastern Siberia. The islands divide the Laptev Sea from the East Siberian Sea. They are separated from the Siberian mainland by Dmitry Laptev Strait. With an area of about 14,500 sq mi (38,000 sq km), they are snow-covered for more than nine months of the year. Arctic fox, northern deer, lemming, and many species of birds inhabit the islands.

New South Wales State (pop., 2001: 6,609,304), southeastern Australia. Bounded by Queensland, the Pacific Ocean, Victoria, and South Australia, it has an area of 309,130 sq mi (800,640 sq km); the capital is Sydney. The dominant geographic feature is the Great Dividing Range. Inhabited from prehistoric times, New South Wales was claimed for Britain by Capt. James Cook in 1770. The colony included the entire continent except for Western Australia. The interior was explored throughout the 19th century and colonies were set up there, separate from New South Wales. In 1901 it became part of the Commonwealth of Australia. The state ceded the area of the Australian Capital Territory in 1911. New South Wales is the centre of commercial farming, industry, and culture in Australia.

New Spain, Viceroyalty of Former Spanish viceroyalty (1535–1821), principally in North America. At various times it included what is now the southwestern U.S. (as well as Florida and parts of the coast of the Gulf of Mexico), Mexico, Central America north of Panama, much of the West Indies, and the Philippines. Mexico City was the seat of the gov-

© 2006 Encyclopædia Britannica, Inc.

ernment, which also had jurisdiction over Spain's Caribbean possessions. The first viceroy sent Francisco Vázquez de Coronado on his northern expeditions. The viceroyalty succumbed to the coalition forged by Agustín de Iturbide in 1821.

New Sweden Only Swedish colony in North America, on the Delaware River, extending from the site of present-day Trenton, N.J., U.S., to the mouth of the river. It was established by the New Sweden Co. led by Peter Minuit in 1638, when Fort Christina was built at what is now Wilmington, Del. It was captured by the Dutch in 1655 under Peter Stuyvesant. The Swedish colonists were allowed to keep their lands and continue their customs under Dutch rule.

New Testament Second of the two major divisions of the Christian Bible. Christians see the New Testament as the fulfillment of the promise of the Old Testament. It recounts the life and ministry of Jesus and interprets their meaning for the early church, focusing especially on the new covenant created between God and the followers of Jesus. There are 27 books in the New Testament: four Gospels, or stories of the life and teachings of Christ; the Acts of the Apostles, a historical narrative of the first years of the Christian church; 21 epistles, or letters of advice and instruction to early Christians; and the Book of Revelation, a description of the coming apocalypse. Most were written in the later 1st century AD, though none can be dated precisely. Only two authors are known for certain: St. Paul, credited with 13 epistles; and St. Luke, writer of the third gospel and the Book of Acts. Attributions of other authors range from highly likely (for the other three gospels) to completely unknown (for the Epistle to the Hebrews). These documents circulated among the early churches and were used as preaching and teaching sources. The earliest known list of the current New Testament canon dates from AD 367 in a work by St. Athanasius. A church council of 382 gave final approval to the list.

New Thought Mind-healing movement that originated in the U.S. in the 19th century. Its earliest proponent, Phineas P. Quimby (1802–66), was a mesmerist who taught that illness is mental. New Thought was influenced by philosophers ranging from Plato to Emanuel Swedenborg, Georg Wilhelm Friedrich Hegel, and Ralph Waldo Emerson and in turn influenced Mary Baker Eddy's Christian Science. The International New Thought Alliance (formed 1914) asserts that sin and illness stem from incorrect thinking. New Thought groups emphasize Jesus as a teacher and healer and proclaim his kingdom as being within each person.

new town Form of urban planning designed to relocate populations away from large cities by grouping homes, hospitals, industry and cultural, recreational, and shopping centers to form entirely new, relatively autonomous communities. The new-town movement was anticipated by the Utopian Ebenezer Howard in the early 20th century (see garden city). The first official new towns were proposed in Britain's New Towns Act of 1946. The idea found favor in other countries, especially in the U.S., Western Europe, and Soviet Siberia. New towns outside Britain often failed to incorporate enough of the mixed-use atmosphere that gives a town vitality. A dramatic increase in commuting and use of the car obviated the need for new towns to be so self-contained.

New Wave *French* **nouvelle vague** Group of individualistic French film directors of the late 1950s, including Claude Chabrol, François Truffaut, Jean-Luc Godard, Louis Malle, Eric Rohmer, Alain Resnais, and others. Most of the New Wave directors were associated with the important film magazine *Cahiers du Cinéma*, in which they developed the highly influential auteur theory, calling for films to express the director's personal vision. Their films were characterized by a brilliance of technique that sometimes overshadowed the subject matter. Among the most important New Wave films were Godard's *Breathless* (1959), Truffaut's *The 400 Blows* (1959), and Resnais's *Hiroshima mon amour* (1959).

New World monkey Any of some 100 species of monkeys (the platyrrhine ["flat-nosed"] monkeys) that inhabit tropical Central and South America. Platyrrhines have a broad nose, with a wide septum separating the outwardly directed nostrils, and relatively unopposable thumbs. Most species have a long tail, which in a few species is prehensile. They are divided by zoologists into five families: the marmosets and tamarins; the titis, sakis, and uakaris; the spider monkeys and woolly monkeys; the capuchin monkeys and squirrel monkeys; and the durukulis. See also Old World monkey.

New Year's Day First day of the new year, celebrated with religious, cultural, and social observances around the world. It is usually marked by rites and ceremonies that symbolize casting off the old year and rejoicing in the new. Most of the world recognizes January 1 as the start of a new year because the Gregorian calendar, from its papal origin in 1582, has become the international reference for treaties, corporate contracts, and other legal documents. Nevertheless, numerous religious and national calendars have been retained. For example, in the Persian calendar (used in Iran and Afghanistan) New Year's Day falls on the spring equinox (March 20 or 21 in the Gregorian calendar). The more widely employed Islamic (Hijrī) calendar is based on 12 lunar months of 29 or 30 days; thus, the Islamic New Year's Day gradually regresses through the longer Gregorian calendar. The Hindu new year starts on the day following the first new moon on or after the spring equinox. The Chinese new year begins at sunset on the new moon in the sign of Aquarius (late January or early February). The Hebrew calendar is based on 12 lunar months (13 in certain years) of 29 or 30 days; the Jewish New Year's Day, or Rosh Hashanah, can fall anytime from September 6 to October 5 in the Gregorian calendar.

New York State (pop., 2000: 18,976,457), eastern U.S. It is bordered by Canada and the U.S. states of Vermont, Massachusetts, Connecticut, New Jersey, and Pennsylvania; Lake Erie and Lake Ontario are to the west and the Atlantic Ocean to the southeast. New York covers 53,013 sq mi (137,304 sq km); its capital is Albany. The Hudson, St. Lawrence, Delaware, and Niagara rivers all form parts of its boundaries. The Adirondack Mountains are in the northeast; the Catskills are in the east. Before European colonization, Algonquins (see Algonquian languages) and Iroquois inhabited the area. In 1524 Giovanni Verrazzano visited New York Bay. The 1609 explorations of Henry Hudson and Samuel de Champlain led to settlement. In 1664 the Dutch colony, New Netherland, led by Peter Stuyvesant, surrendered to the British and was renamed New York. The French and Indian War resulted in skirmishes in northern and central New York; its conclusion confirmed English dominance in the region. In the American Revolution, it was the scene of many battles, including those of Ticonderoga and Saratoga, and of Benedict Arnold's treason at West Point. New York adopted the first state constitution (1777). The capital moved from New York City to Albany in 1797. The opening of the Erie Canal in 1825 spurred development of the western part of the state. In the 19th century the growing influence in New York City of Tammany Hall caused tension between the city and the state. The economy was once based largely on manufacturing in cities, including Buffalo, Rochester, and Syracuse. It is now dominated by service industries, concentrated in New York City.

New York, State University of (SUNY) Largest university system in the U.S. Founded in 1948, it consists of university centres in Albany, Binghamton, Buffalo, and Stony Brook; colleges of arts and sciences in Brockport, Buffalo, Cortland, Fredonia, Geneseo, New Paltz, Old Westbury, Oneonta, Oswego, Plattsburgh, Potsdam, and Purchase; three medical centres (two in New York City and one in Syracuse); several two-year agricultural and technical colleges; a nonresidential continuing-education program (Empire State College); over 30 community colleges; and various other specialized units.

New York Central Railroad Major U.S. railroad. It was founded in 1853 to consolidate 10 railroads that paralleled the Erie Canal between Albany and Buffalo, the oldest being the Mohawk and Hudson, New York state's first railway (established 1831). Cornelius Vanderbilt won control of the New York Central in 1867 and combined it with his New York and Hudson railroads running from Manhattan to Albany. The system grew until it had 10,000 mi (16,000 km) of track linking New York with Boston, Montreal, Chicago, and St. Louis. The New York Central began to decline after World War II, and in 1968 it merged with its chief competitor, the Pennsylvania Railroad Co., to form the Penn Central Transportation Co. The merger failed, and the railroad was forced into bankruptcy in 1970. Its passenger services were taken over by Amtrak in 1971, and its other railroad assets were transferred to Conrail in 1976.

New York City City (pop., 2000: 8,008,278), southeastern New York, at the mouth of the Hudson River. The largest city in the U.S. and an important seaport, it consists of five boroughs: the Bronx, Brooklyn, Manhattan, Queens, and Staten Island. The site of a Dutch trading post on Manhattan Island, it was colonized as New Amsterdam by Dutch director general Peter Minuit, who bought it from the Indians in 1626. The colony surrendered to the British in 1664 and was renamed New York. It was the capital of the state (1784–97) and of the U.S. (1789–90). The economy grew after the opening of the Erie Canal in 1825, and the city

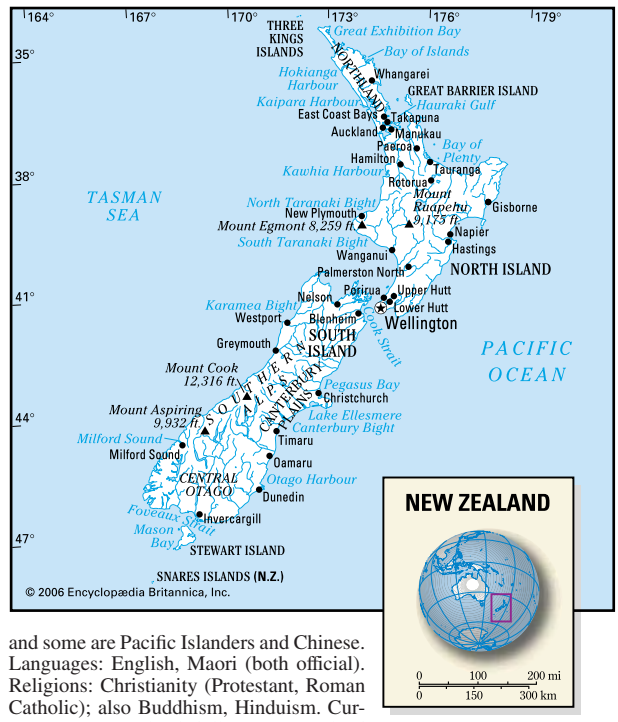
© 2006 Encyclopædia Britannica, Inc.

expanded rapidly after the American Civil War, developing transportation and communications systems. In 1898 the five boroughs were merged into a single city. Long a magnet for immigrants to the U.S., it is a centre of world trade and finance, media, art, entertainment, and fashion. Because of its prominence and its central role in world commerce, the city was a target for acts of terrorism. In September 2001, hijackers intentionally flew airliners into the twin towers of the World Trade Center, destroying them and destroying or damaging several adjacent buildings; the attacks killed some 2,800 people. See September 11 attacks.

New York City Ballet Preeminent U.S. ballet company. The company is descended from the American Ballet, which was founded by George Balanchine and Lincoln Kirstein in 1935 and revived as the Ballet Society in 1946; it assumed its current name in 1948. Under Balanchine's artistic direction, the company became the leading U.S. ballet troupe, combining European classical ballet with American characterization and innovation and exerting enormous influence on American dance. It moved to its permanent home, the New York State Theater at Lincoln Center, in 1964. Later artistic directors Jerome Robbins and Peter Martins contributed numerous works to its repertoire. Its leading dancers have included Maria Tallchief, Edward Villella, Jacques d'Amboise, and Suzanne Farrell.

New York Daily News Morning daily tabloid newspaper published in New York City. It was founded in 1919 by Joseph Medill Patterson and his cousin Robert McCormick as a subsidiary of the Tribune Co. of Chicago. The first successful tabloid-format newspaper in the U.S., it quickly attracted a large readership with sensational coverage of crime, scandal, and violence; it also included lurid photographs, cartoons, and entertainment features. It was an early user of wirephotos and developed a large staff of photographers. In 1993 it was bought by Mortimer B. Zuckerman.

New York Public Library Largest city public library in the U.S. and one of the great libraries of the world. It was established in 1895, and its central building opened in 1911. Its holdings include more than 10 million books and more than 10 million manuscripts, as well as large collections of pictures, maps, books for the blind, films, and microfilms.



New York school Painters who participated in the development of contemporary art, particularly Abstract Expressionism, in or around New York City in the 1940s and '50s. During and after World War II, leadership in avant-garde art shifted from war-torn Europe to New York, and the New York school maintained a dominant position in world art into the 1980s. Abstract Expressionism, Minimalism, Pop art, and the new realist styles of the late 1960s, among others, all had their beginnings in New York. See also action painting.

New York Stock Exchange (NYSE) World's largest marketplace for securities. The exchange began as an informal meeting of 24 men in 1792 on what is now Wall Street in New York City. It was formally constituted as the New York Stock and Exchange Board in 1817, and its present name was adopted in 1863. Since 1868 membership has been obtained by purchasing a seat from an existing member; membership has been limited to 1,366 since 1953. The exchange provided capital for the industrialization of the U.S. in the 19th century. After the Panic of 1837 it began to demand that companies disclose information about their finances to the public as a condition of offering stock. The stock-market crash of 1929 led to regulation by the Securities and Exchange Commission. To be listed on the NYSE, a company must earn $2.5 million before taxes, have more than one million shares of stock outstanding, give common stockholders voting rights, and publish periodic financial statements. See also American Stock Exchange; NASDAQ.

New York Times, The Morning daily newspaper, long the U.S. newspaper of record. From its establishment in 1851 it has aimed to avoid sensationalism and to appeal to cultured, intellectual readers. In 1896 it was bought by Adolph Ochs, who built it into an internationally respected daily. Its prestige was notably enhanced by its coverage of the sinking of the *Titanic* and of the two world wars. In the 1970s it became involved in controversy with its publication of the Pentagon Papers. Later in the decade, under the direction of Ochs's grandson, Arthur Ochs Sulzberger, its organization and staff underwent sweeping changes, including the introduction of a national edition printed at regional sites. Today it is perhaps the most respected and influential newspaper in the world. It is the flagship of The New York Times Co., whose interests include other newspapers (including the *Boston Globe*), magazines, and broadcast and electronic media.

New Yorker, The U.S. weekly magazine, famous for its varied literary fare and humour. It was founded in 1925 by Harold Ross, who was its editor until 1951. Initially focused on New York City's amusements and social and cultural life, it gradually acquired a broader scope, encompassing literature, current affairs, and other topics. Aimed at a sophisticated, liberal audience, it became renowned for its short fiction, cartoons, major (occasionally book-length) nonfiction pieces, and detailed reviews in the arts. It was sold in 1985 to Samuel I. Newhouse, Jr. (see Newhouse family). Since Ross, its editors have been William Shawn (1952–87), Robert Gottlieb (1987–92), Tina Brown (1992–98), and David Remnick (from 1998).

New Zealand Island country, South Pacific Ocean. Area: 104,454 sq mi (270,534 sq km). Population (2005 est.): 4,096,000. Capital: Wellington. Most of the people are of European origin; about one-tenth are Maori,

and some are Pacific Islanders and Chinese. Languages: English, Maori (both official). Religions: Christianity (Protestant, Roman Catholic); also Buddhism, Hinduism. Currency: New Zealand dollar. New Zealand consists of the North Island and the South Island, which are separated by Cook Strait, and several smaller islands. Both main islands are bisected by mountain ranges. New Zealand has a developing market economy based largely on agriculture (dominated by sheep raising), small-scale industries, and services. It is a constitutional monarchy with one legislative house; its chief of state is the British monarch represented by the governor-general, and the head of government is the prime minister. Polynesian occupation dates to c. AD 1000. First sighted by Dutch explorer Abel Janszoon Tasman in 1642, the main islands were charted by Capt. James Cook in 1769. Named a British crown colony in 1840, the area was the scene of warfare between colonists and native Maori through the 1860s. The capital was moved from Auckland to Wellington in 1865, and in 1907 the colony became the Dominion of New Zealand. It administered Western Samoa from 1919 to 1962 and participated in both World Wars. When Britain joined the European Economic Community in the early 1970s, its influence led New Zealand to expand its export markets and diversify its economy. New Zealand also became more independent in its foreign relations and took a strong stand against nuclear proliferation. The literacy rate is nearly 100%. The cultural milieu is predominantly European, although there has been a revival of traditional Maori culture and art, and Maori social and economic activism have been central to political developments in New Zealand since the late 20th century.

Newar \'nā-'wär\ People living in the Kathmandu Valley in Nepal. They make up about half the population of the valley. Most are Hindu, but some practice an Indian form of Buddhism. The Newar have a wide range of

© 2006 Encyclopædia Britannica, Inc.

occupations; they have traditionally been noted as architects and artisans, the builders of the famous temples and shrines of Kathmandu. Painting and sculpture flourished among them in the 10th–16th centuries. The Newar population of Nepal is estimated to be about 540,000.

Newark \'nü-ərk\ City (pop., 2000: 273,546) and port of entry, northeastern New Jersey, U.S., west of New York City. It was founded in 1666 by Puritans and was chartered as a township in 1693. It was the site of the College of New Jersey (1748–56; now Princeton University). In 1776 the city served as a supply base for Gen. George Washington. It was incorporated as a city in 1836. The largest city in the state, it was the scene of major civil disturbances in 1967. It is a highly diversified industrial, transportation, and insurance centre. It was the birthplace of Aaron Burr and Stephen Crane.

Newbery, John (b. 1713, Waltham St. Lawrence, Berkshire, Eng.—d. Dec. 22, 1767, London) English publisher. In 1744 he set up a bookshop and publishing house in London, and it became one of the first to publish children's books, including *A Little Pretty Pocket-Book* and *Little Goody Two-Shoes.* In 1781 his firm published the first collection of nursery rhymes associated with Mother Goose. He is commemorated by the Newbery Medal, awarded annually since 1922 by the American Library Association for the most distinguished contribution to children's literature in the U.S. It is presented along with the Caldecott Medal (see Randolph Caldecott), awarded for the best children's picture book.

Newcastle (-under-Lyme), Thomas Pelham-Holles, 1st duke of (b. July 21, 1693—d. Nov. 17, 1768, London, Eng.) British politician. He inherited lands from his father and uncle that by 1714 made him one of the wealthiest Whig landowners in England. He helped bring about the succession of George I, for which he received the title of duke (1715). Chosen by Robert Walpole as secretary of state, he served from 1724 to 1754, then succeeded his brother Henry Pelham as prime minister (1754–56, 1757–62). Noted for his skill in distributing patronage to secure parliamentary support for a particular ministry, Newcastle wielded great political influence in the reigns of George I and George II.

Newcastle (-upon-Tyne), William Cavendish, 1st duke of (b. c. 1593—d. Dec. 25, 1676, Welbeck, Nottinghamshire, Eng.) British Royalist commander in the English Civil Wars. Through inheritances and royal favour, he became very wealthy. In 1642 he was given command of the four northern English counties and raised the siege of York (1642). After the Royalist defeat at the Battle of Marston Moor, he left England for France and Holland. He returned at the Restoration and regained his estates. A patron of poets and dramatists, he also wrote several comedies.

Newcastle upon Tyne *or* **Newcastle** City and metropolitan borough (pop., 2001: 259,573), metropolitan county of Tyne and Wear, historic county of Northumberland, northeastern England, on the River Tyne. It dates from the Roman period and derives its name from the Norman castle built in 1080 by Robert II of Normandy, the oldest son of William I (the Conqueror). At first an important wool trade centre, it became a major mining area and coal-shipping port in the 16th century. It was among the world's largest ship-repairing facilities; its economy now rests on associated marine and heavy engineering industries. The city is also an educational centre and features a 14th-century church.

Newcomen \'nü-kə-mən**, Thomas** (b. Feb. 28, 1663, Dartmouth, Devon, Eng.—d. Aug. 5, 1729, London) British engineer. In 1712 he built his atmospheric steam engine, a precursor of James Watt's engine. In the Newcomen engine, atmospheric pressure pushed the piston down after the condensation of steam had created a vacuum in the cylinder. Newcomen engines were used for some years in the draining of mines and in raising water to power waterwheels.

Newell, Allen (b. March 19, 1927, San Francisco, Calif., U.S.—d. July 19, 1992, Pittsburgh, Pa.) U.S. cognitive scientist. He taught at Carnegie Mellon University from 1961 until his death. In the late 1950s and early 1960s he collaborated with Herbert Simon in constructing an influential model of human problem solving (*Human Problem Solving*, 1972). His later work was concerned with artificial intelligence, and he is known for his development of computer models of human cognition and the development of a unified theory of cognition (*Unified Theories of Cognition*, 1990). In 1992 he received the National Medal of Science.

Newfoundland Dog breed developed in Newfoundland, possibly from crosses between native dogs and the Great Pyrenees dogs that Basque fishermen introduced into North America in the 17th century. Noted for sea rescues, the gentle, patient Newfoundland stands 26–28 in. (66–71 cm) and weighs 110–150 lbs (50–68 kg). Powerful hindquarters, a large lung capacity, large webbed feet, and a heavy, oily coat enable it to swim in cold waters. It has also been used as a watchdog and draft animal. The typical Newfoundland is solid black; the Landseer Newfoundland is usually black and white.

Newfoundland, Memorial University of See Memorial University of Newfoundland

Newfoundland \'nü-fənd-lənd\ **and Labrador** Province (pop., 2001: 512,930), one of the four Atlantic provinces of Canada. Consisting of the island of Newfoundland and Labrador on the mainland, and bounded by Quebec, it extends into the North Atlantic Ocean and is the easternmost part of North America. Its capital is St. John's. It was originally settled by Indians and Eskimos. Viking ruins from c. AD 1000 have been found in the northern part of the island. John Cabot claimed the island for England in 1497; the first colony was established at St. John's in 1583. France and England disputed possession of the area, and though England retained control with the 1713 Peace of Utrecht, controversies over fishing rights continued through the 19th century. A province since 1949, it includes the Grand Banks fishing grounds. Fishing, mainly for cod, was virtually the only industry until the early 20th century, when western Labrador's vast iron reserves began to be exploited.

Newhouse family Family that built a large publishing empire in the U.S. in the late 20th century. The family's fortunes began with Samuel Irving Newhouse (1895–1979), who, as a clerk at age 17, made a failing newspaper in Bayonne, N.J., profitable. From the early 1920s he bought and turned around other papers; at his death his company, Advance Publications Inc., owned 31 newspapers, 7 magazines, 5 radio stations, 6 television stations, and 15 cable television systems. Led by his sons Samuel I. Newhouse, Jr. (b. 1928), and Donald E. Newhouse (b. 1930), Advance Publications greatly expanded, buying several book publishers, including Random House (sold to Bertelsmann AG in 1998), and becoming one of the largest U.S. magazine publishers with titles such as *The New Yorker*, *Vanity Fair*, *Vogue*, *Glamour*, *Bride's*, and *Gourmet*.

Newman, Arnold (Abner) (b. March 3, 1918, New York, N.Y., U.S.) U.S. photographer. He studied art at the University of Miami, then worked in the photography studio of a Miami department store. In 1946 he opened his own studio in New York City, where he specialized in portraits of well-known people posed in settings associated with their work. His "environmental portraiture" greatly influenced 20th-century portrait photography. His best-known portraits include those of Max Ernst, Alfred Stieglitz, Georgia O'Keeffe, Igor Stravinsky, Pablo Picasso, and Jean Cocteau.

Newman, Barnett *orig.* **Baruch Newman** (b. Jan. 29, 1905, New York, N.Y., U.S.—d. July 3, 1970, New York City) U.S. painter. Born to Polish immigrant parents, he studied at the Art Students League and City College. With Robert Motherwell and Mark Rothko, he cofounded the school called "Subject of the Artist" (1948), which held open sessions and lectures for other artists. He developed a style of mystical abstraction and achieved his breakthrough with *Onement I* (1948), in which a single stripe (or "zip") of orange vertically bisects a field of dark red. This austerely geometric style became his trademark and had a great influence on artists such as Ad Reinhardt and Frank Stella.

Newman, John Henry *known as* **Cardinal Newman** (b. Feb. 21, 1801, London, Eng.—d. Aug. 11, 1890, Birmingham, Warwick) English churchman and man of letters. He attended the University of Oxford, where in 1833 he became the leader of the Oxford Movement, which stressed the Catholic elements in the English religious tradition and sought to reform the Church of England. He was received into the Roman Catholic church in 1845, but he came under suspicion among the more rigorous clergy because of his quasi-liberal spirit. A challenge from Charles Kingsley prompted him to write an eloquent exposition of his spiritual history, the widely admired *Apologia pro Vita Sua* (1864). The work assured his place in the church, and in 1879 he became a cardinal-deacon. He also wrote theological works, religious poetry, and several hymns, including "Lead, Kindly Light."

Newman, Paul (b. Jan. 26, 1925, Cleveland, Ohio, U.S.) U.S. film actor. He studied drama at Yale University and the Actors Studio and first appeared on Broadway in *Picnic* (1953). In 1954 he made his screen debut in the disastrous biblical epic *The Silver Chalice*. He won favourable notice in *Somebody up There Likes Me* (1956) and *The Long Hot Sum-*

© 2006 Encyclopædia Britannica, Inc.

mer (1958). In many of his best-remembered roles, he captured the darker, less heroic aspects of a character's nature, as in such successful films as *The Hustler* (1961), *Hud* (1963), *Cool Hand Luke* (1967), *Butch Cassidy and the Sundance Kid* (1969), *The Color of Money* (1986; Academy Award), and *Nobody's Fool* (1994). He directed and produced films such as *Rachel, Rachel* (1968) and *The Glass Menagerie* (1987), both of which starred his wife, Joanne Woodward. In 1982 he launched the successful "Newman's Own" line of food products, with its profits going to a number of charitable causes.

Newport Town (pop., 1995 est.: 22,000), Isle of Wight, in the historic county of Hampshire, England. It was probably the Roman settlement of Medina; there is no trace of Saxon settlement. The first charter was granted between 1177 and 1184, and the borough was incorporated in 1608. It is the Isle of Wight's trade and agricultural centre.

Newport City (pop., 2000: 26,475) and port of entry, southeastern Rhode Island, U.S., at the mouth of Narragansett Bay. Founded in 1639 by colonists from Massachusetts, it became a haven for religious refugees. With Providence, it was the joint capital of the state until 1900. Newport has held many of the America's Cup yacht races, and it is a centre for naval education. It also is the site of one of Cornelius Vanderbilt's mansions (The Breakers) and the Touro synagogue, which is the oldest in the U.S.

Newport Town, port, and county borough (pop., 2001 est.: 137,017), historic county of Monmouthshire, Wales, at the Bristol Channel mouth of the River Usk. By c. 1126 it was a medieval borough with a castle. The city was chartered in 1385. It was industrialized in the 19th century and was the scene of Chartist riots in 1839 (see Chartism). Industries include steel and aluminum.

Newport News City (pop., 2000: 180,150) and port of entry, southeastern Virginia, U.S., at the mouth of the James River. The site was settled in 1621 by 50 colonists from Ireland. It was incorporated as a city in 1896 and was an important embarkation point in both World Wars. With Norfolk and Portsmouth, it constitutes the Port of Hampton Roads. It is the site of one of the largest shipyards in the world, producing luxury liners, aircraft carriers, and nuclear-powered submarines.

Newry and Mourne District (pop., 2001: 87,058), southeastern Northern Ireland. Bordered by the Irish Sea and the republic of Ireland, it is divided in two by the Newry Canal, the first major canal in the British Isles, built 1730–41. Limestone and granite are quarried in the Mourne Mountains. The administrative seat is at Newry.

news agency *or* **news service** *or* **wire service** Organization that gathers, writes, and distributes news to newspapers, periodicals, radio and television broadcasters, government agencies, and other users. It does not publish news itself but supplies news to subscribers, who, by sharing costs, obtain services they could not otherwise afford. All the mass media depend on agencies for the bulk of the news they carry. Some agencies focus on special subjects or on a local area or nation. Many news agencies are cooperatives, with members providing news from their area to a pool for general use. The largest news agencies are United Press International, Associated Press, Reuters, and Agence France-Presse.

newscast Radio or television broadcast of news events. News gathering and broadcasting by the radio networks began in the mid-1930s and increased significantly during World War II. The television newscast began in 1948 with 15-minute programs that resembled movie newsreels. The current U.S. format employs a newscaster or anchorperson reading news stories, with interpolated audiotape (for radio) or videotape (for television) and live reports from remote journalists. Noted newscasters have included Edward R. Murrow, Walter Cronkite, and David Brinkley.

Newsday Evening daily tabloid newspaper published in Long Island, N.Y. It was established in 1940, as the residential suburbs in Nassau and Suffolk counties began to expand. Following a liberal-independent policy, it has specialized in reporting serious local news. The newspaper itself has earned three Pulitzer Prizes for meritorious public service, and its writers and reporters have earned many more. *Newsday* is owned by the Tribune Co., which acquired the paper through its merger with the Times Mirror Co.

newsgroup Internet forum for discussion of specific subjects. Newsgroups are organized into subjects (e.g., automobiles); each typically has several subgroups (e.g., classic cars, Formula One racing cars). A person starts a threaded discussion by "posting" (uploading) an article; the follow-up replies (including replies to replies) comprise the discussion. A newsgroup name usually consists of an abbreviation (e.g., "rec" for the recreation newsgroup) followed by subgroup names separated by dots (e.g., "rec.music.jazz"). Viewing and posting messages requires a news reader, a program that connects the user to an Internet news server. Most newsgroups are connected via Usenet, a worldwide network that uses the Network News Transfer Protocol (NNTP). See also bulletin-board system.

newspaper Publication usually issued daily, weekly, or at other regular times that provides news, views, features, and other information of public interest and often carries advertising. Forerunners of the modern newspaper appeared as early as ancient Rome (see Acta). More or less regular papers printed from movable type appeared in Germany, Italy, and the Netherlands in the early 17th century. The first English daily was *The Daily Courant* (1702–35). Though preceded by official papers, James Franklin's *New-England Courant* (1721) was the first independent newspaper in Britain's North American colonies. By 1800 the principles of a free press and a basic formula for both serious and popular papers were taking root in much of Europe and the U.S. In the 19th century the number of U.S. papers and their circulations rose dramatically, owing to wider literacy, broadening appeal, lower prices, and technological advances in typesetting, printing, communications, and transport. By late in the century, newspapers had achieved great power. Competition for readers often led to sensationalism and, in the 20th century, gave rise to the so-called tabloids (see yellow journalism). Since 1900 newspaper publishing worldwide has expanded greatly; in large countries it has experienced consolidation driven by media conglomerates or through the acquisitions of smaller papers by larger ones.

Newsweek U.S. weekly newsmagazine, published in New York City. Founded (as *News-Week*) in 1933 by Thomas J.C. Martyn, a former editor of *Time*, it merged with *Today* magazine in 1937. It initially offered a rather drab survey of the news with columns of analysis. After World War II it grew livelier, especially after its purchase by Philip Graham, publisher of *The* Washington Post, in 1961. It has a strong reputation for accurate, brisk, and vivid reporting and, like *Time*, presents news in terse summary form, organized by departments.

newt *or* **eft** Any of more than 40 salamander species (family Salamandridae) prevalent in the southeastern U.S. and Mexico and also found in Asia and Great Britain. Aquatic species are called newts; terrestrial species are called efts. Newts have a long, slender body, and the tail is higher than it is wide. They eat earthworms, insects, snails, and other small animals. Both aquatic and terrestrial species breed in ponds. The three species (genus *Triturus*) in Britain are sometimes called tritons. The red eft (*Notophthalmus viridescens*) of eastern North America is bright red during its terrestrial youth, after which it becomes permanently aquatic and dull green.

Warty newt (*Triturus cristatus*)
TONI ANGERMAYER

newton Absolute unit of force, abbreviated N, in the metre-kilogram-second (MKS) system of physical units (see International System of Units). It is defined as the force necessary to provide a mass of 1 kg with an acceleration of 1 m per second per second. One newton is equal to a force of 100,000 dynes in the centimetre-gram-second (CGS) system, or a force of about 0.2248 lb in the foot-pound-second (English or U.S.) system. It is named for Isaac Newton, whose second law of motion describes the changes a force can produce in the motion of a body.

Newton, Huey P(ercy) (b. Feb. 17, 1942, Monroe, La., U.S.—d. Aug. 22, 1989, Oakland, Calif.) U.S. African American activist. Though illiterate when he graduated from high school, he taught himself to read before attending college. He met Bobby Seale (b. 1936) while attending the San Francisco School of Law, and in 1966 they formed the Black Panther Party. In 1974 Newton was accused of murder and fled to Cuba; on his return in 1977, he was freed after two trials ended in hung juries. In 1980 he received a doctorate in social philosophy from the University of California at Santa Cruz. In 1989 he was sentenced to six months in jail

© 2006 Encyclopædia Britannica, Inc.

for misusing money intended for a Black Panther-founded school; later that year he was discovered shot dead on a street in Oakland, Calif.

Newton, Sir Isaac (b. Jan. 4, 1643, Woolsthorpe, Lincolnshire, Eng.—d. March 31, 1727, London) English physicist and mathematician. The son of a yeoman, he was raised by his grandmother. He was educated at Cambridge University (1661–65), where he discovered the work of René Descartes. His experiments passing sunlight through a prism led to the discovery of the heterogeneous, corpuscular nature of white light and laid the foundation of physical optics. He built the first reflecting telescope in 1668 and became a professor of mathematics at Cambridge in 1669. He worked out the fundamentals of calculus, though this work went unpublished for more than 30 years. His most famous publication, *Principia Mathematica* (1687), grew out of correspondence with Edmond Halley. Describing his works on the laws of motion (see Newton's laws of motion), orbital dynamics, tidal theory, and the theory of universal gravitation, it is regarded as the seminal work of modern science. He was elected president of the Royal Society of London in 1703 and became the first scientist ever to be knighted in 1705. During his career he engaged in heated arguments with several of his colleagues, including Robert Hooke (over authorship of the inverse square relation of gravitation) and G.W. Leibniz (over the authorship of calculus). The battle with Leibniz dominated the last 25 years of his life; it is now well established that Newton developed calculus first, but that Leibniz was the first to publish on the subject. Newton is regarded as one of the greatest scientists of all time.

Newton's law of gravitation Statement that any particle of matter in the universe attracts any other with a force (F) that is proportional to the product of their masses (m_1 and m_2) and inversely proportional to the square of the distance (R) between them. In symbols: $F = G(m_1m_2)/R^2$, where G is the gravitational constant. Isaac Newton put forth the law in 1687 and used it to explain the observed motions of the planets and their moons, which had been reduced to mathematical form by Johannes Kepler early in the 17th century.

Newton's laws of motion Relations between the forces acting on a body and the motion of the body, formulated by Isaac Newton. The laws describe only the motion of a body as a whole and are valid only for motions relative to a reference frame. Usually, the reference frame is the Earth. The first law, also called the law of inertia, states that if a body is at rest or moving at constant speed in a straight line, it will continue to do so unless it is acted upon by a force. The second law states that the force F acting on a body is equal to the mass m of the body times its acceleration a, or $F = ma$. The third law, also called the action-reaction law, states that the actions of two bodies on each other are always equal in magnitude and opposite in direction.

Newtown Saint Boswells \'nüt-ᵊn-sənt-'bäz-wəlz\ Village (pop., 1991: 1,108), Scottish Borders council area, historic county of Roxburghshire, southeastern Scotland. It lies on the Edinburgh-Carlisle railway. Before 1929 its population consisted mainly of railroad employees. Since then its main function has changed to local governmental administration, and it has important livestock sales and a campus of Borders College. Dryburgh Abbey, founded in 1150, has the tombs of Sir Walter Scott and Field Marshal Douglas Haig.

Newtownabbey \ˌnüt-ᵊn-'a-bē\ Town and district (pop., 2001: 79,995), eastern Northern Ireland, established in 1973. The town was formed in 1958 from seven villages and is a residential continuation of Belfast. It is surrounded by modern industrial complexes that manufacture tires, telephones, and textiles. The district's light agricultural activity is centred around the administrative seat of Ballyclare.

Newtownards \ˌnüt-ᵊn-'ärdz\ Town (pop., 1991: 24,301), district seat of Ards, Northern Ireland. Settled in 1608 on the site of a ruined monastery, it is located east of Belfast. It is now a manufacturing centre.

Ney, Michel, duke d'Elchingen (b. Jan. 10, 1769, Sarrelouis, France—d. Dec. 7, 1815, Paris) French army officer, the best-known of Napoleon's marshals. He distinguished himself in the French Revolutionary Wars and rose to general in 1799. A supporter of Napoleon, he was created marshal of France in 1804 and duke d'Elchingen in 1808 after victories in the Napoleonic Wars. He led French forces in the Battle of Friedland (1807) and at the Battle of Borodino (1812). In the French retreat from Moscow, he courageously commanded the exposed rear guard and earned Napoleon's praise as "the bravest of the brave." After Napoleon's abdication, Ney favoured Louis XVIII but rallied to Napoleon's support in the Hundred Days and commanded troops at the unsuccessful Battle of Waterloo. After the Bourbon Restoration, he was court-martialed and shot by firing squad.

Neyshābūr \ˌnā-shä-'bür\ *or* **Nīshāpūr** \ˌnē-shə-'půr\ Town (pop., 1996: 158,847), northeastern Iran. Its name derives from its founder, the Sāsānian king Shāpūr I. One of the four great cities of the region of Khorāsān, it was the residence of the 5th-century Sāsānian king Yazdegerd II. It declined by the mid-7th century but flourished again under the Ṭāhirid (821–873) and Sāmānid (819–999) dynasties. It was the residence of the Seljūq sultan Toghrïl Beg in the 11th century but again declined in the 12th century. The tombs of the renowned poet and scholar Omar Khayyam and the mystic poet Farīd al-Dīn ʿAṭṭār are nearby.

Nez Percé \'nez-'pərs\ North American Indian people living mainly in Idaho, U.S. Their language belongs to the Penutian language group, and their traditional homeland is an area centring on the Snake River in central Idaho, western Oregon, and western Washington. The name Nez Percé, applied by French Canadian trappers, means "Pierced Noses"; they call themselves Nimíipuu (Nee-me-poo), meaning "The Real People." Their culture was primarily that of the Plateau Indians, with some Plains Indian influence. Their domestic life centred on small villages near streams with abundant salmon; they also hunted small game and collected wild plant foods. After acquiring horses, they began to hunt bison and became more warlike, eventually becoming one of the dominant tribes in the region. Through a series of treaties in the mid-1800s, their traditional territory was severely reduced; the tragic Nez Percé War (1877), led by Chief Joseph, was the result. At the turn of the 21st century, they numbered some 3,300.

Neẓāmī \'nez-ˌȯ-ˌmē\ *or* **Niẓāmī** *orig.* **Ilyās Yūsuf Niẓāmī Ganjawī** (b. c. 1141, Ganja, Seljūq empire—d. 1209, Ganja) Greatest romantic epic poet in Persian literature. Little is known of his life, except that he spent it in what is now Azerbaijan. Only a handful of his *qaṣīdah*s (odes) and ghazels have survived; his reputation rests on his great *Khamseh* ("The Quintuplet"), a group of five poems totaling 30,000 couplets, in which he brought a colloquial and realistic style to the epic. The fourth poem, *The Seven Beauties*, is considered his masterpiece.

Ngami \əŋ-'gä-mē**, Lake** Shallow lake, northwestern Botswana, north of the Kalahari Desert. It was a large lake, estimated at more than 170 mi (275 km) in circumference when the explorer David Livingstone sighted it in 1849. The lake varies in size with the amount of rainfall, and, although it is much smaller today than in Livingstone's time, it is rich in birdlife.

NGO See nongovernmental organization

Ngo Dinh Diem \'ŋō-'din-dē-'em,\ *English* \en-'gō-'din-dē-'em\ (b. Jan. 3, 1901, Quang Binh province, Viet.—d. Nov. 2, 1963, Cho Lon, S.Viet.) President of South Vietnam (1955–63). Of noble birth, Diem was on friendly terms with the Vietnamese imperial family and served as Emperor Bao Dai's minister of the interior (1933), but he resigned when the French would not accept his legislative reforms. He turned down an invitation to join Ho Chi Minh's forces and lived in self-imposed exile until invited back in 1954 by Bao Dai to serve as prime minister of South Vietnam. In 1955 he ousted the emperor and made himself president. He refused to carry out elections mandated by the Geneva Accords of 1954, ruled autocratically, and showed preference to fellow Roman Catholics in an overwhelmingly Buddhist country. An unpopular leader, Diem was assassinated by his generals in 1963.

Ngugi wa Thiong'o \ˈᵑg-'gü-gē-wä-'thyóŋ-gō\ *orig.* **James Thiong'o Ngugi** (b. Jan. 5, 1938, Limuru, Kenya) Kenyan novelist. Educated in Uganda and England, he wrote the first major novel in English by an East African; the popular *Weep Not, Child* (1964) is the story of a family drawn into the struggle for Kenyan independence. His other novels include *A Grain of Wheat* (1967) and *Petals of Blood* (1977). As he became more sensitive to the effects of colonialism, he adopted his traditional name and wrote in the Bantu language of the Kikuyu people. He also wrote plays and numerous essays on literature, culture, and politics.

Nguni \en-'gü-nē\ Cluster of related ethnic groups living in South Africa, Swaziland, and Zimbabwe. They include the Xhosa, Zulu, Swazi, and Ndebele. They speak very closely related Bantu languages—some of which are unique among Niger-Congo languages in having click sounds, absorbed from contact with their Khoisan-speaking neighbours. The

© 2006 Encyclopædia Britannica, Inc.

Nguni were dispersed from their original homeland in what is now Eastern Cape province and KwaZulu-Natal by the Mfecane disturbances of the 1820s and the expansion of European power.

Nguyen \'ŋwē-ən,\ *English* \'nü-ən, en-gī-'en\ **dynasty** (1802–1945) Last Vietnamese dynasty. During the 16th century, while the emperors of the Later Le dynasty were nominally in control, the Nguyen family came to rule southern Vietnam in an essentially independent fashion. Emperor Gia Long (1762–1820), founder of the dynasty, conquered all of Vietnam in 1802; his successors modeled their administration on the Chinese Qing dynasty (1644–1911/12). The French invaded in 1858 and eventually took control of the entire country. They retained the Nguyen emperors as rulers of Annam (central Vietnam) and Tonkin (northern Vietnam) but not of southern Vietnam (Cochinchina). Bao Dai, the last emperor, abdicated following the Vietnamese nationalists' proclamation of independence in 1945.

NHL See National Hockey League

Ni Zan *or* **Ni Tsan** (b. 1301, Wuxi, Jiangsu province, China—d. 1374) Chinese artist. He was a part of the group of Chinese painters later known as the Four Masters of the Yuan dynasty (including Wu Zhen, Huang Gongwang, and Wang Meng). Although Ni was born to wealth, he chose not to serve the foreign Mongol dynasty of the Yuan and instead lived a life of retirement and scholarship. He was characterized by his contemporaries as particularly quiet and fastidious, qualities that are found in his art. In his paintings, usually landscapes, he used elements sparingly, favoured ink monochrome, and left great areas of the paper untouched. His works are characterized by a sombre quiet, and they often feature a rustic hut, a few trees or other indications of plant life, and elemental landforms. He was much imitated by later painters, making originals by him difficult to authenticate.

niacin \'nī-ə-sən\ *or* **nicotinic** \ˌni-kə-'tē-nik, ˌni-kə-'ti-nik\ **acid** *or* **vitamin B_3** Water-soluble vitamin of the vitamin B complex, essential to growth and health in animals, including humans. It is found in the body only in combined form as a coenzyme, nicotinamide adenine dinucleotide (NAD), which is involved in the metabolism of carbohydrates and the oxidation of sugar derivatives and other substances. One of the most stable vitamins, it survives most cooking and most preserving processes. It is widely found in dietary sources, especially lean meat. Deficiency causes pellagra. It is used as a drug to reduce high cholesterol levels in the blood.

Niagara Falls Great falls of the Niagara River, on the U.S.-Canadian border. They are divided by Goat Island into the Horseshoe (or Canadian) Falls and the American Falls. At the foot of the American Falls is the Cave of the Winds, a large rocky chamber formed by erosion. The river below the falls flows between high cliffs, forming Whirlpool Rapids. Bridges spanning the river include Rainbow Bridge between the U.S. and Canadian cities of Niagara Falls. French missionary Louis Hennepin visited in 1678. Tourism is a major industry, and the falls are a hydroelectric centre.

Niagara River River forming the U.S.-Canada boundary between western New York and southern Ontario. Its high flow and steep descent make it one of the best sources of hydroelectric power in North America. It connects Lake Erie with Lake Ontario, and Niagara Falls lies about halfway along its course. The U.S. and Canadian cities of the same name are on either bank of the river. It is navigable from Lake Erie to the upper rapids.

Niamey \'nyä-mā\ City (pop., 1999: metro. area, 731,000), capital of Niger, along the Niger River. Originally an agricultural village of Maouri, Zerma, and Fulani peoples, it became the capital of Niger colony in 1926 and grew rapidly after World War II. At the intersection of trade routes, it has residents from other parts of Niger, as well as Yoruba and Hausa traders, merchants, officials, and craftsmen from Nigeria, Benin, and Togo. It is a commercial centre and home to Université Abdou Moumouni (1971).

Nian Rebellion *or* **Nien Rebellion** \'nyän\ (c. 1852–68) Rebellion in northern China during the Qing dynasty. The Nian, a secret society, was probably a reincarnation of the White Lotus Society; it attracted poor peasants, salt smugglers, and army deserters who used guerrilla hit-and-run tactics to attack the wealthy and redistribute the plundered goods among the needy. They took over local militias and formed their own armies. They were finally crushed by Li Hongzhang, who defeated them using modern weapons and blockade lines. See also Taiping Rebellion.

Niarchos \nē-'är-kōs**, Stavros (Spyros)** (b. July 3, 1909, Athens, Greece—d. April 15, 1996, Zürich, Switz.) Greek shipping magnate. He first bought ships to transport wheat for his family's flour mill, then established his own shipping firm, Niarchos Group, in 1939. His ships were used by Allied forces in World War II, and after the war he used the insurance money he gained from ships sunk in combat to buy oil tankers. He favoured large ships, and many of his supertankers (of which Niarchos Ltd. at its height operated more than 80) set world records for size and carrying capacity. His longtime rivalry with Aristotle Onassis was famous.

Nias \'nē-əs\ Island, western Indonesia, in the Indian Ocean. The largest island in a chain along the western coast of Sumatra, it has an area of 1,842 sq mi (4,772 sq km). Most of the people are animists (see animism) and speak dialects of the Austronesian language family. The chief village is Gunungsitoli on the northeastern coast. Megalithic monuments and wooden sculptures honouring the dead or representing fertility are common on the island. Tourism (notably surfing) has become important. Coastal areas were devastated by an earthquake-generated tsunami in 2004.

Nibelungenlied \'nē-bə-ˌlùŋ-ən-ˌlēt\ *German* **"Song of the Nibelungs"** Middle High German epic poem written c. 1200 by an unknown poet from the Danube region in what is now Austria. It is preserved in three main 13th-century manuscripts. Elements of great antiquity are discernible in the poem, traceable to Old Norse literature, stories in the *Poetic* Edda, and Scandinavian sagas. The principal characters are Prince Siegfried, Queen Brunhild, Princess Kriemhild, her brother King Gunther, and his henchman Hagen; the story focuses on deceit, revenge, and slaughter. Many variations and adaptations of the poem appeared in later centuries, including Richard Wagner's opera cycle *Der Ring des Nibelungen* (1853–74).

Nicaea \nī-'sē-ə\ Independent principality (1204–61) of the fragmented Byzantine Empire. Founded in 1204 by Theodore I Lascaris, it was the political and cultural centre from which a restored Byzantium arose in the mid-13th century under Michael VIII Palaeologus. It extended from the Black Sea coast east of the Sangarius River southwest across western Anatolia to Miletus and the Menderes (Maeander) River. It became a centre of Greek education, especially under Theodore II Lascaris, who founded an imperial school. It declined after 1261, when Michael VIII regained the Byzantine capital of Constantinople.

Nicaea \nī-'sē-ə**, Council of** (ad 325) First ecumenical council of the Christian Church, held at Nicaea (now Iznik, Turkey). Called by Emperor Constantine I, the council condemned Arianism and drew up the Nicene Creed. It failed to set a uniform date for Easter.

Nicaragua *officially* **Republic of Nicaragua** Country, Central America. Area: 50,337 sq mi (130,373 sq km). Population (2005 est.): 5,487,000. Capital: Managua. Most of the people are mestizos. Languages: Spanish (official), indigenous Indian languages, English. Religion: Christianity (predominantly Roman Catholic; also Protestant). Currency: córdoba oro. Nicaragua's western half consists of thickly forested mountain ranges and fertile valleys. Parallel to the Pacific coast is a belt of about 40 dormant and active volcanoes. The eastern coastline along the Caribbean Sea is known as the Mosquito Coast. Earthquakes are common and sometimes severe. Nicaragua has a developing market economy based largely on agriculture, light industries, and trade. It is a republic with one legislative house; its head of state and government is the president. The area has been inhabited for thousands of years, most notably by the Maya. Christopher Columbus arrived in 1502, and Spanish explorers discovered Lake Nicaragua soon thereafter. Nicaragua was governed by Spain until the early 1820s. It became a part of Mexico (1822–23) and then part of the United Provinces of Central America until 1838, when full independence was achieved. The U.S. intervened in political affairs by maintaining troops there (1912–33). Ruled by the dictatorial Somoza family (1937–79), Nicaragua was taken over by the Sandinista party after a popular revolt. The Sandinistas were then opposed by armed insurgents, the U.S.-backed Contras, from 1981. The Sandinista government nationalized several sectors of the economy but lost national elections in 1990. The new government reprivatized many public enterprises. See map on opposite page.

Nicaragua, Lake Lake, southwestern Nicaragua. It is 102 mi (164 km) long, with a surface area of about 3,100 sq mi (8,000 sq km). The largest freshwater lake between the U.S. and Peru, it is connected to Lake Managua by the Tipitapa River and is drained by the San Juan River. It is the only freshwater lake in the world containing marine animal life,

© 2006 Encyclopædia Britannica, Inc.

including sharks, swordfish, and tarpon. Its largest island, Ometepe, is the preeminent site in Nicaragua for pre-Columbian archaeological finds.

Nice \'nēs\ *ancient* **Niceaea** City (pop., 1999: city, 342,738; metro. area, 888,784) southeastern France. It is located on the Côte d'Azur of the Mediterranean Sea, near the Italian border. Founded by Greeks c. 350 BC, it was conquered by Romans in the 1st century AD and became a trading station. It was held by the counts of Provence in the 10th century. In 1388 it passed to the counts of Savoy. The city was ceded to France in 1860. Sheltered by beautiful hills, Nice has a pleasant climate and is the leading resort of the French Riviera.

Nicene Creed \'nī-ˌsēn, nī-'sēn\ Ecumenical Christian statement of faith accepted by the Roman Catholic, Eastern Orthodox, Anglican, and major Protestant churches. Originally written in Greek, it was long thought to have been drafted at the Council of Nicaea (325), but is now believed to have been issued by the Council of Constantinople (381), based on a baptismal creed already in existence.

Nicephorus II Phocas \nī-'se-fə-rəs...'fō-kəs\ (b. 912, Cappadocia—d. Dec. 10/11, 969, Constantinople) Byzantine emperor (963–969). A powerful military commander, he fought the Arabs in the east, liberated Crete from its Arab rulers (961), and gained control of the eastern Mediterranean. After the death of Romanus II, Nicephorus cooperated in a plot to seize the throne, accepting the crown (963) and marrying Theophano, the regent of the two legitimate heirs. He continued his exploits against the Arabs but was surrounded by discontent and intrigue at home; he retired to a fortified palace, where he was killed by former friends guided by his wife and his chief lieutenant.

niche \'nich\ Smallest unit of a habitat that is occupied by an organism. A habitat niche is the physical space occupied by the organism; an ecological niche is the role the organism plays in the community of organisms found in the habitat. The activities of an organism and its relationships to other organisms are determined by its particular structure, physiology, and behaviour.

Nichiren \'nē-chē-ˌren\ *orig.* **Zennichi** (b. March 30, 1222, Kominato, Japan—d. Nov. 14, 1282, Ikegami) Japanese Buddhist prophet, founder of Nichiren Buddhism. The son of a fisherman, he entered a Buddhist monastery at age 11. After an exhaustive study of all the major Buddhist schools in Japan, he concluded in 1253 that the Lotus Sutra was the only doctrine suitable for his age and predicted calamity for Japan if all other sects were not abandoned. This pronouncement caused him to be banished from his monastery. He also claimed that Japan was the chosen country of Buddhism, from which Buddhist salvation would spread to other lands. He was later exiled to an island in the Sea of Japan, where in 1272 he wrote his major work, *Liberation from Blindness*.

Nichiren Buddhism One of the largest schools of Japanese Buddhism, founded by Nichiren. It believes that the essence of the Buddha's teachings are contained in the Lotus Sutra and that the beliefs of other Buddhist schools are erroneous. In Nichiren Buddhism, the chanting of the title of the Lotus Sutra can lead to salvation. After Nichiren's death the school split into various subsects, notably Nichiren-shu, which controls the temple founded by Nichiren at Mount Minobu, and Nichiren-sho-shu, which is headquartered in a temple at the foot of Mount Fuji. Nichiren-sho-shu has adherents in the U.S.; in Japan its lay organization is the Soka-gakkai.

Nicholas *Russian* **Nikolay Nikolayevich** (b. Nov. 18, 1856, St. Petersburg, Russia—d. Jan. 5, 1929, Antibes, France) Russian grand duke. The nephew of Tsar Alexander II, he entered the imperial army (1872) and served in the Russo-Turkish War (1877–78). As inspector general of calvary (1895–1905), he introduced reforms in training and equipment. From 1905 he commanded the St. Petersburg military district, and in 1914 he was appointed head of all Russian forces. A popular commander, he led the army to early successes in World War I but was hampered by shortages. Dismissed in 1915 by Nicholas II, he commanded in the Caucasus (1915–17). After the Russian Revolution of 1917 he moved to France, where he led an organization to unite anticommunist Russian émigrés.

Nicholas, Saint *or* **Santa Claus** (fl. 4th century, Myra, Lycia, Asia Minor; feast day December 6) Minor saint associated with Christmas. Probably bishop of Myra, he is reputed to have provided dowries for three poor girls to save them from prostitution and to have restored to life three children who had been chopped up by a butcher. He became the patron saint of Russia and Greece, of charitable fraternities and guilds, and of children, sailors, unmarried girls, merchants, and pawnbrokers. After the Reformation his cult disappeared in all the Protestant countries of Europe except Holland, where he was known as Sinterklaas. Dutch colonists brought the tradition to New Amsterdam (now New York City), and English-speaking Americans adopted him as Santa Claus, who is believed to live at the North Pole and to bring gifts to children at Christmas.

Merry Old Santa Claus by Thomas Nast.
BETTMANN/CORBIS

Nicholas I *Russian* **Nikolay Pavlovich** (b. July 6, 1796, Tsarkoye Selo, near St. Petersburg, Russia—d. March 2, 1855, St. Petersburg) Tsar of Russia (1825–55). He was the son of Paul I and was trained as an army officer. In 1825 he succeeded his brother Alexander I as emperor and suppressed the Decembrist revolt. His reign came to represent autocracy, militarism, and bureaucracy. To enforce his policies, he created such agencies as the Third Section (political police). In foreign policy, Nicholas quelled an uprising in Poland (1830–31) and aided Austria against a Hungarian uprising (1849). His designs on Constantinople led to war with Turkey (1853) and drew other European powers into the Crimean War. He was succeeded by his son Alexander II.

Nicholas II *orig.* **Gerard of Burgundy** (b. Lorraine—d. July 19/26, 1061, Florence) Pope (1058–61). Known as an advocate of reform, he was bishop of Florence before being elected pope in opposition to the antipope Benedict X. At the Lateran Council of 1059 he reformed the process of papal election, placing it in the hands of the cardinals and limiting the emperor's role. The German bishops voided his decree (1061), revealing growing tensions between empire and papacy. Nicholas brought about a diplomatic revolution, which worsened relations with Germany and its weak regent, when he sought an alliance with the Normans in southern Italy and invested Robert Guiscard as duke of Apulia, Calabria, and Sicily (1059). His legislation against clerical marriage and simony was an important part of the Gregorian reform movement.

Nicholas II *Russian* **Nikolay Aleksandrovich** (b. May 18, 1868, Tsarskoye Selo, near St. Petersburg, Russia—d. July 16/17, 1918, Yekaterinburg) Tsar of Russia (1894–1917). Son of ALEXANDER III, he received a military education and succeeded his father as tsar in 1894. He was an autocratic but indecisive ruler and was devoted to his wife, ALEXANDRA, who strongly influenced his rule. His interest in Asia led to construction of the TRANS-SIBERIAN RAILROAD and also helped cause the disastrous RUSSO-JAPANESE WAR (1904–05). After the RUSSIAN REVOLUTION OF 1905, he agreed reluctantly to a representative DUMA but restricted its powers and made only token efforts to enact its measures. His prime minister, PYOTR STOLYPIN, attempted reforms, but Nicholas, increasingly influenced by Alexandra and GRIGORY RASPUTIN, opposed him. After Russia suffered setbacks in WORLD WAR I, Nicholas ousted the popular grand duke NICHOLAS as commander in chief of Russian forces and assumed command himself, at the bidding of Alexandra and Rasputin. His absence from Moscow and Alexandra's mismanagement of the government caused increasing unrest and culminated in the RUSSIAN REVOLUTION OF 1917. Nicholas abdicated in March 1917 and was detained with his family by GEORGY Y. LVOV's provisional government. Plans for the royal family to be sent to England were overruled by the local Bolsheviks. Instead the family was sent to the city of Yekaterinburg, where they were executed in July 1918.

Nicholas V *orig.* **Tommaso Parentucelli** (b. Nov. 15, 1397, Sarzana, Republic of Genoa—d. March 24, 1455, Rome) Pope (1447–55). Soon after his election, he ended the schism caused by the rivalry between popes and church councils. He restored peace to the Papal States, won Poland's allegiance, and gained the support of Austria by promising to crown Frederick III as Holy Roman emperor. Nicholas initiated the Peace of LODI (1455) in order to end strife in Italy, and he tried to stamp out SIMONY and other corrupt practices in the church. A patron of art and scholarship, he rebuilt many of Rome's architectural treasures and founded the Vatican Library. Although Nicholas was the first of the RENAISSANCE popes, his failure to promote real religious reform helped bring about the REFORMATION of the 16th century.

Nicholas Brothers U.S. tap-dancing duo. Fayard Antonio Nicholas (b. Oct. 20, 1914, Mobile, Ala., U.S.—d. Jan. 24, 2006, Los Angeles, Calif.) and his brother Harold Lloyd Nicholas (b. March 17, 1921, Winston-Salem, N.C.—d. July 3, 2000, New York, N.Y.) developed the "classical tap" form, combining jazz dance, ballet, and acrobatics with tap. They gained fame at a young age while dancing at Harlem's COTTON CLUB (1932–39); they went on to appear in films such as *Stormy Weather* (1943), as well as on Broadway and later on television. They began their careers at a time when opportunities were few and stereotyped roles the norm for black entertainers, but they rose above this marginalization and enhanced the art of tap with their elegance and sensational showmanship.

Nicholas of Cusa (b. 1401, Kues, Trier—d. Aug. 11, 1464, Todi, Papal States) German cardinal, mathematician, scientist, and philosopher. Ordained a priest in 1440, he was made a cardinal in Italy and became bishop there in 1450. In *On Catholic Concordance* (1433), he supported the supremacy of the general councils of the church over the papacy's authority (see CONCILIAR MOVEMENT). However, after witnessing the failure of the Council of Basel to unify the church or enact reform, he reversed his position and became an ardent supporter of the pope. Skilled in nearly every branch of learning, he anticipated the work of NICOLAUS COPERNICUS by discerning a movement in the universe that did not centre on the Earth. He also carried out botanical experiments and collected ancient manuscripts. In his discourse *On Learned Ignorance* (1440), he described the learned man as one who is aware of his own ignorance.

Nicholas of Verdun (fl. c. 1150–1210, Flanders) French enamelist and goldsmith, considered the greatest of his day. He was an important figure during the transition from late ROMANESQUE to early GOTHIC style. His best-known work is the altarpiece of the Abbey Church of Klosterneuburg, Austria (1181), which reveals his mastery of metalworking and the technique of champlevé enameling, in which compartments hollowed out from a metal base are filled with vitreous enamel. The altar is the most ambitious of its kind in the 12th century.

Nichols, Mike *orig.* **Michael Igor Peschkowsky** (b. Nov. 6, 1931, Berlin, Ger.) German-born U.S. stage and film director. He and his parents fled Germany for the U.S. in 1938. After studying at the University of Chicago and the ACTORS STUDIO, he formed a comic improvisational group in Chicago. He and Elaine May (b. 1932) toured with and recorded a set of brilliant social-satire routines. He later directed several Broadway hits, including *Barefoot in the Park* (1963), *The Odd Couple* (1965), and *Plaza Suite* (1968). His first film, *Who's Afraid of Virginia Woolf?* (1966), was followed by *The Graduate* (1967, Academy Award); his later films include *Catch-22* (1970), *Silkwood* (1983), *Working Girl* (1988), and *Primary Colors* (1998). His productions focused on the absurdities and horrors of modern life as revealed in personal relationships.

Nicholson, Jack (b. April 22, 1937, Neptune, N.J., U.S.) U.S. film actor. He acted in low-budget movies before earning acclaim for his role in *Easy Rider* (1969). He followed it with such successful films as *Five Easy Pieces* (1970), *Carnal Knowledge* (1971), *Chinatown* (1974), *One Flew over the Cuckoo's Nest* (1975, Academy Award), *The Shining* (1980), *Terms of Endearment* (1983, Academy Award), *Prizzi's Honor* (1985), *Batman* (1989), *Hoffa* (1992), and *As Good As It Gets* (1997, Academy Award). Noted for his devilish grin and his portrayals of unconventional outsiders, he has attained iconic status as one of the most popular and admired stars of his time.

Nicias \'ni-shē-əs\ (b. c. 470—d. 413 BC, Sicily) Athenian leader. He was renowned for his enormous wealth. Seeking to end the PELOPONNESIAN WAR (431–404), in 421 he negotiated a 50-year alliance (the Peace of Nicias), which held for six years before the ambitions of ALCIBIADES led to renewed warfare. In 415 Nicias reluctantly shared command of a Sicilian expedition with Lamachus and Alcibiades. When Alcibiades was recalled and Lamachus died, Nicias, himself seriously ill, lost the advantage they had achieved in the siege of Syracuse; when he tried to escape, his troops were overwhelmed and he was captured and executed.

nickel Metallic chemical ELEMENT, one of the TRANSITION ELEMENTS, chemical symbol Ni, atomic number 28. Nickel is silvery white, tough, harder than iron, ferromagnetic (see FERROMAGNETISM), and highly resistant to rusting and corrosion. It occasionally occurs free and is fairly common but not often concentrated in igneous rocks. As pure metal, it is used to coat other metals (see PLATING) and as a catalyst. In alloys, it is used in coins, Monel metal, nickel silver, nickel-chrome and stainless steels, permanant magnets, and cutlery. Its compounds, in which it most often has VALENCE 2, have a variety of industrial uses, as CATALYSTS and mordants (see DYE) and in ELECTROPLATING.

Nicklaus \'nik-ləs**, Jack (William)** (b. Jan. 21, 1940, Columbus, Ohio, U.S.) U.S. golfer, one of the greatest in the game's history. Nicklaus won the U.S. Amateur Championship twice (1959, 1961) while attending Ohio State University. After turning professional in 1962, he won the U.S. Open four times (1962, 1967, 1972, 1980), the Masters Tournament six times (1963, 1965, 1966, 1972, 1975, 1986), the PGA Championship five times (1963, 1971, 1973, 1975, 1980), and the British Open three times (1966, 1970, 1978). He was a member of the winning U.S. World Cup team six times and was a record three-time individual World Cup winner (1963, 1964, 1971). By 1986 "the Golden Bear" had played in 100 major championships, finishing in the top three 45 times. He combined skill and power with remarkable concentration and composure under pressure. In 2005 Nicklaus retired from tournament play with 73 PGA wins—a number exceeded only by SAM SNEAD with 82—and a record 18 major professional championship titles.

Jack Nicklaus, 1982.

Nicolet \ˌni-kə-'lā**, Jean** (b. 1598, Cherbourg, France—d. Nov. 1, 1642, Sillery, Que., Can.) French explorer in North America. In 1618 he traveled to New France, where he lived with Indian tribes. He learned several Indian languages and became the interpreter for the French colony at Three Rivers (1633). He journeyed into Huron territory, canoeing with several Indians through the Straits of Mackinac to became the first European to see Lake Michigan (1634). He later explored the region of present-day Wisconsin.

© 2006 Encyclopædia Britannica, Inc.

Nicolls, Richard (b. 1624, Ampthill, Bedfordshire, Eng.—d. May 28, 1672, in the North Sea, off Suffolk, Eng.) English colonial governor of New York. In 1664 he forcibly seized the Dutch colony of New Amsterdam and renamed the province and its main city for his patron, the duke of York. He thereby became the first governor of the English colony of New York. An efficient administrator, he issued the colony's first legal code in 1665. He returned to England in 1668 and resumed his duties as gentleman of the bedchamber to the duke.

Nicopolis \nə-'kä-pə-ləs**, Battle of** (September 25, 1396) Turkish victory over an army of European crusaders. When the Ottoman Turks besieged Constantinople (1395), MANUEL II PALAEOLOGUS appealed to Europe for help. The king of Hungary organized a crusade intended to expel the Turks from the Balkans and then march to Jerusalem. The crusaders laid siege to Nicopolis, the main Turkish stronghold on the Danube River, but Turkish forces arrived from Constantinople and slaughtered most of the crusaders. The battle ended international efforts to halt Turkish expansion into the Balkans and central Europe.

Nicopolis \nə-'kä-pə-lis\ **Actia** Ancient city, northwestern Greece. Its ruins lie about 4 mi (6 km) north of Préveza. It was founded in 31 BC by Octavian (later AUGUSTUS) to commemorate his victory over MARK ANTONY and CLEOPATRA at the Battle of ACTIUM. It became the capital of the coastal region, encompassing ACARNANIA and EPIRUS, and was famous for its buildings and for the Actian Games. Destroyed in the 4th century AD and rebuilt, it was finally destroyed by Bulgarians in the 11th century. Its ruins include a basilica, a Roman theatre, and an aqueduct.

Nicosia \ˌni-kə-'sē-ə\ *Greek* **Lefkosia** \'lef-kō-'sē-ə\ *Turkish* **Lefkoşa** City (pop., 2004 est.: Greek sector, 219,200; 1996: Turkish sector, 39,973), capital of CYPRUS. Lying on the Pedieos River, it is bordered by mountains to the north and south. It was a kingdom in the 7th century BC and has been the capital of the island since the 10th century AD. It came successively under the control of the Byzantines, Venetians, and Ottomans; the British held it from 1878 until 1960. During the 20th century the city grew beyond the existing circular Venetian walls. The population in the surrounding area is engaged mainly in agriculture. A UN buffer zone has separated the city's Greek and Turkish sectors since 1974.

nicotine Principal ALKALOID of TOBACCO, occurring throughout the plant but mostly in the leaves. It is a HETEROCYCLIC COMPOUND, containing a PYRIDINE ring; its chemical formula is $C_{10}H_{14}N$. Nicotine is the chief addictive ingredient (see DRUG ADDICTION) in cigarettes and cigars and in snuff. It has a unique biphasic effect: Inhaled in short puffs it is a stimulant, but when inhaled slowly and deeply it can be a tranquilizer. In larger doses, nicotine is a highly toxic poison, used as an insecticide, fumigant, and vermifuge.

nicotinic acid See NIACIN

Nicoya \nē-'kō-yä**, Gulf of** Inlet of the Pacific Ocean, northwestern coast of Costa Rica. It is formed by the protrusion of the Nicoya Peninsula from the mainland and extends north and northwest for about 50 mi (80 km). The Tempisque, Abangares, and Tárcoles rivers empty into the gulf. It has several islands, including Chira, the largest, and San Lucas. The largest town and port on the shores of the gulf is Puntarenas.

Nicoya Peninsula Peninsula, western Costa Rica. It is bounded to the west and south by the Pacific Ocean, to the northeast by the Cordillera de Guanacaste, and to the southeast by the Gulf of NICOYA. It measures about 85 mi (140 km) from northwest to southeast. Descendants of the pre-Columbian Chorotega-Mangues Indians reside in villages on the peninsula.

Niebuhr \'nē-ˌbůr**, Barthold Georg** (b. Aug. 27, 1776, Copenhagen, Den.—d. Jan. 31, 1831, Bonn, Prussia) German historian. Niebuhr held posts in state service in Denmark and Prussia before resigning to become state historiographer. In 1810 he began a series of lectures at the University of Berlin that were the basis of his great work, the enormously influential *History of Rome* (1811–32). In it he introduced skepticism to historical scholarship, showing how to analyze historical sources, discard worthless material, and lay bare elements from which historical facts could be reconstructed, and thereby initiating a new era in historiography.

Niebuhr \'nē-ˌbůr**, Reinhold** (b. June 21, 1892, Wright City, Mo., U.S.—d. June 1, 1971, Stockbridge, Mass.) U.S. theologian. The son of an evangelical minister, he studied at Eden Theological Seminary and Yale Divinity School. He was ordained in the Evangelical Synod of North America in 1915 and served as pastor of Bethel Evangelical Church in Detroit, Mich., until 1928. His years in that industrial city made him a critic of capitalism and an advocate of socialism. From 1928 to 1960 he taught at New York's Union Theological Seminary. His influential writings, which forcefully criticized liberal Protestant thought and emphasized the persistence of evil in human nature and social institutions, include *Moral Man and Immoral Society* (1932), *The Nature and Destiny of Man*, 2 vol. (1941–43), and *The Self and the Dramas of History* (1955).

Reinhold Niebuhr, 1963
COURTESY OF THE RARE BOOK DEPARTMENT, UNION THEOLOGICAL SEMINARY LIBRARY, NEW YORK CITY

niello \nē-'e-lō\ Black metallic alloy of sulfur with silver, copper, or lead, used to fill designs that have been engraved on the surface of a metal object, usually of silver. The black sulfides are powdered, and after the engraved silver has been moistened, the powder is spread on it. When the metal is heated, the niello melts and runs into the engraved channels. After the excess niello is scraped away, the surface is polished. The contrast of the black niello against the bright surface produces an attractive decorative effect. During the height of its popularity in the Renaissance, the technique was widely used for embellishing liturgical as well as utilitarian objects. Nielli (objects decorated with niello) were produced in ancient Rome and 9th-century England. In Russia niello work is known as Tula work.

Nielsen, Carl (August) (b. June 9, 1865, Sortelung, near Norre Lyndelse, Den.—d. Oct. 3, 1931, Copenhagen) Danish composer. He studied violin and trumpet as a child and began composing by imitating classical models. In 1890 he went to Germany to learn of newer developments and met JOHANNES BRAHMS, whose music came to influence his own. His individual style—still following classical forms but using intense CHROMATICISM combined with a lyric, melodic strain—emerged after 1900. The last five of his six symphonies (1902–25) are the core of his work, but he also composed many short orchestra pieces, piano and chamber music, concertos for violin, flute, and clarinet, and a wind quintet.

Nielsen ratings National ratings of the popularity of U.S. television shows. Developed by A.C. Nielsen in 1950, the system now samples television viewing in about 5,000 homes. A meter attached to each television set records the channel being watched and sends the data to a computer centre; individual buttons record which person in each household is watching a given program. Separate surveys are done for many large media market areas. The ratings project each program's total audience; for example, a rating of 20 denotes that 20% of U.S. households tuned in to a particular program. Commercial television networks use the ratings to set advertising rates for each program as well as to determine which programs to continue and to cancel.

Niemeyer \'nē-ˌmī-ər\ **(Soares Filho), Oscar** (b. Dec. 15, 1907, Rio de Janeiro, Braz.) Brazilian architect. Beginning in 1934, he worked in the office of Lúcio Costa, an early exponent of the Modern movement in Brazil. Niemeyer's first major independent project was the plan for Pampulha (1941), a suburb of Belo Horizonte. The project is notable for the free-flowing forms used in many of its buildings. Other commissions followed, and in 1947 Niemeyer represented Brazil in the planning of the United Nations buildings in New York City. In 1956 Niemeyer was asked to design the new capital city of Brasília; he agreed to design the government buildings but suggested a national competition for the master plan, a competition subsequently won by his mentor, Costa. Niemeyer served as chief architect for NOVA-CAP, the government building authority in Brasília, from 1956 to 1961. Among the Brasília buildings designed by Niemeyer are the President's Palace, the Brasília Palace Hotel, the presidential chapel, and the cathedral. Active into his nineties, he was commissioned to design the mushroomlike Museum of Contemporary Art in Niterói, Braz. (1991). With its lyrical and sculptural forms, his work is free-flowing and optimistic. Niemeyer received the Pritzker Architecture Prize in 1988.

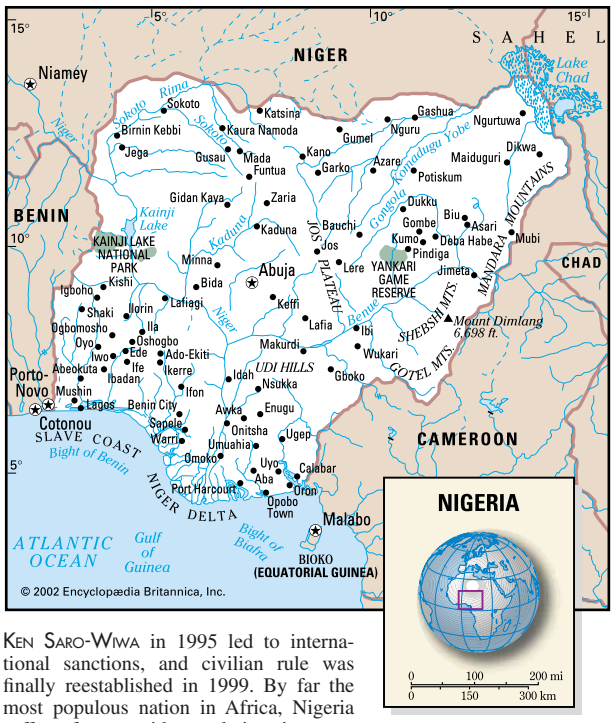
Niemöller \'nē-ˌmœl-ər\ **(Friedrich Gustav Emil) Martin** (b. Jan. 14, 1892, Lippstadt, Ger.—d. March 6, 1984, Wiesbaden, W.Ger.) German theologian. A war hero as a submarine commander in World War I, he became a minister in 1924. When the Nazis came to power in 1933, he protested their interference in church affairs and helped combat discrimination against Christians of Jewish background. As founder of the anti-Nazi Confessing Church, he worked to oppose Adolf Hitler. Arrested in 1937, he was interned until 1945. After the war he helped rebuild the Evangelical Church. Increasingly disillusioned with prospects for demilitarization, he became a controversial pacifist; for his efforts to extend friendship ties to Soviet-bloc countries, he received the Lenin Peace Prize (1967) and West Germany's Grand Cross of Merit (1971).

Nien Rebellion See Nian Rebellion

Niepce \'nyeps\ **(Joseph-) Nicéphore** (b. March 7, 1765, Chalon-sur-Saône, France—d. July 5, 1833, Chalon-sur-Saône) French inventor. In 1807 Niepce and his brother invented an internal-combustion engine (fueled with lycopodium powder). In 1813 he began experiments with lithography. He is best remembered for his experiments with photography, which he called heliography. In 1826–27, using a camera, he made a view from his workroom window on a pewter plate—the first permanently fixed image from nature. In 1829 he began a partnership with L.-J.-M. Daguerre to perfect and exploit heliography, but he died before they had achieved any further advance.

Nietzsche \'nē-chə, 'nē-chē\ **Friedrich (Wilhelm)** (b. Oct. 15, 1844, Röcken, Saxony, Prussia—d. Aug. 25, 1900, Weimar, Thuringian States) German-Swiss philosopher and writer, one of the most influential of modern thinkers. The son of a Lutheran pastor, he studied at Bonn and Leipzig and at age 24 became professor of Classical philology at the University of Basel. He became close to the older Richard Wagner, in whose operas he saw the potential for the revival of Western civilization, but broke with Wagner angrily in 1876. His *Birth of Tragedy* (1872) contained major insights into ancient Greek drama; like *Untimely Meditations* (1873), it is dominated by a Romantic perspective also influenced by Arthur Schopenhauer. Mental and physical problems forced him to leave his position in 1878, and he spent 10 years attempting to recover his health in various resorts while continuing to write prolifically. His works from *Human, All Too Human* (1878) to *The Gay Science* (1882) extol reason and science, experiment with literary genres, and express his emancipation from his earlier Romanticism. His mature writings, particularly *Beyond Good and Evil* (1886), *A Genealogy of Morals* (1887), and *Thus Spake Zarathustra* (1883–92), were preoccupied with the origin and function of values in human life. If, as he believed, life neither possesses nor lacks intrinsic value and yet is always being evaluated, then such evaluations can usefully be read as symptoms of the evaluator's condition. He fulminated against Christianity and announced the death of God. His major breakdown in 1889 marked the virtual end of his productive life. He was revered by Adolf Hitler for his dislike of democracy and his heroic ideal of the *Übermensch* (Superman), though the Nazis perverted Nietzsche's thought and ignored much in it that was hostile to their aims. His analyses of the root motives and values that underlie traditional Western religion, morality, and philosophy affected generations of theologians, philosophers, psychologists, poets, novelists, and playwrights.

Niger \'nī-jər, nē-'zher\ *officially* **Republic of Niger** Country, western Africa, on the southern edge of the Sahara. Area: 459,286 sq mi (1,189,546 sq km). Population (2005 est.): 12,163,000. Capital: Niamey. More than half the people are Hausa; there are also Songhai-Zerma and Kanuri. Languages: French (official), Hausa, Arabic. Religions: Islam (predominantly Sunni); also traditional beliefs. Currency: CFA franc. A landlocked country, Niger is characterized by savanna in the south and desert in the centre and north; most of the population lives in the south. The Niger River dominates in the southwest and the Aïr Massif (a mountainous region) in the north-central part of the country. Niger has a developing economy based largely on agriculture and mining. It is a republic with one legislative body; its head of state and government is the president, assisted by the prime minister. There is evidence of Neolithic culture in the region, and there were several precolonial kingdoms. First explored by Europeans in the late 18th century, it became part of French West Africa in 1904. It became an overseas territory of France in 1946 and gained independence in 1960. The first multiparty elections were held in 1993. Ibrahim Baré Maïnassara led a military coup in 1996, but after his assassination in 1999 the country returned to democratic government. See map above.



Niger-Congo languages Family of some 1,400 languages of Africa. All of these are considered to be distinct languages and not simply dialects. The named dialects of these languages number many thousands more, not to mention the variant names for those languages and dialects. Niger-Congo languages are spoken by about 85% of the population of Africa, from Dakar, Senegal, in the west to Mombasa, Kenya, and in the east and south to Cape Town, S.Af. The name Niger-Congo was introduced in 1955 by Joseph H. Greenberg. As understood today, Niger-Congo has nine branches: Mande, Kordofanian, Atlantic (formerly West Atlantic), Kru, Gur, Kwa, Ijoid, Adamawa-Ubangi (formerly Adamawa-Eastern), and Benue-Congo.

Niger River *or* **Joliba** \'jäl-ə-bə\ *or* **Kworra** \'kwȯr-ə\ Principal river of western Africa. The third longest on the continent, it rises in Guinea near the Sierra Leone border and flows into Nigeria and the Gulf of Guinea. It is 2,600 mi (4,183 sq km) long, and its middle course is navigable for about 1,000 mi (1,600 km). Peoples living along the Niger include the Bambara, the Malinke, and the Songhai. It was explored by Mungo Park beginning in 1796.

Nigeria *officially* **Federal Republic of Nigeria** Country, western Africa. Area: 356,669 sq mi (923,768 sq km). Population (2005 est.): 131,530,000. Capital: Abuja. There are more than 250 ethnic groups, including Hausa, Fulani, Yoruba, and Igbo. Languages: English (official), Hausa. Religions: Christianity (Protestant, other Christians, Roman Catholic), Islam, traditional beliefs. Currency: naira. Nigeria consists of plateaus and the lowlands between them, which are major river basins fed especially by the Niger River. It has a developing mixed economy based largely on petroleum production and agriculture; manufacturing is growing in importance. Services, trade, and transportation employ more than two-fifths of the workforce. Nigeria is a federal republic with two legislative bodies; its head of state and government is the president. Inhabited for thousands of years, the region was the centre of the Nok culture from 500 BC to AD 200 and of several precolonial empires, including Kanem-Bornu, Benin, and Oyo. The Hausa and Fulani also had states. Visited in the 15th century by Europeans, it became a centre for the slave trade. The area began to come under British control in 1861 and was made a British colony in 1914. Nigeria gained independence in 1960 and became a republic in 1963, with Nnamdi Azikiwe as president. Ethnic strife soon led to military coups, and military groups ruled the country from 1966 to 1979 and from 1983 to 1999. Civil war between the federal government and the former Eastern Region, Biafra (1967–70), ended in Biafra's surrender after the death by starvation of perhaps a million Biafrans. In 1991 the capital was moved from Lagos to Abuja. The government's execution of

© 2006 Encyclopædia Britannica, Inc.

Ken Saro-Wiwa in 1995 led to international sanctions, and civilian rule was finally reestablished in 1999. By far the most populous nation in Africa, Nigeria suffers from rapid population increase, political instability, foreign debt, slow economic growth, a high rate of violent crime, and rampant government corruption.

Night of the Long Knives (June 30, 1934) Purge of Nazi leaders by Adolf Hitler. Fearing that the paramilitary SA had become too powerful, Hitler ordered his elite SS guards to murder the organization's leaders, including Ernst Röhm. Also killed that night were hundreds of other perceived opponents of Hitler, including Kurt von Schleicher and Gregor Strasser.

nighthawk Any of several species of North and South American birds in the whippoorwill family (Caprimulgidae) that are buff, reddish, or grayish brown, usually with light spots or patches, and 6–14 in. (15–35 cm) long. They fly about at night, especially at evening and dawn, catching flying insects in their mouths. The common nighthawk (*Chordeiles minor*), or bullbat, inhabits most of North America, migrating to South America in winter. It is about 8–12 in. (20–30 cm) long and grayish brown, with a white throat and wing patches. It has a sharp nasal call. During courtship it dives swiftly, creating audible whirring sounds.

nightingale Any of several small Old World thrushes (family Turdidae) renowned for their song. The name refers in particular to the Eurasian nightingale (*Erithacus megarhynchos*), a brown bird, 6.5 in. (16 cm) long, with a rufous tail. It sings day and night from perches in shubbery. Its strong and varied song, with prominent crescendo effects, has been regarded for centuries throughout Europe and Asia as the most beautiful of all birdsongs. The thrush nightingale, or sprosser (*E. luscinia*), is a closely related, more northerly species with slightly darker plumage. The term is also applied to other birds with rich songs (e.g., the wood thrush).

Eurasian nightingale (*Erithacus megarhynchos*)
H. REINHARD—BRUCE COLEMAN INC.

Nightingale, Florence (b. May 12, 1820, Florence, Italy—d. Aug. 13, 1910, London, Eng.) Italian-born British nurse, founder of trained nursing as a profession. As a volunteer nurse, she was put in charge of nursing the military in Turkey during the Crimean War. Her first concern was sanitation: patients' quarters were infested with rats and fleas, and the water allowance was one pint per head per day for all purposes. She used her own finances to purchase supplies. She also spent many hours in the wards; her night rounds giving personal care to the wounded established her image as the "Lady with the Lamp." Her efforts to improve soldiers' welfare led to the Army Medical School and a Sanitary Department in India. She started the first scientifically based nursing school, was instrumental in setting up training for midwives and nurses in workhouse infirmaries, and helped reform workhouses. She was the first woman awarded the Order of Merit (1907).

nightjar *or* **goatsucker** Any of about 60–70 species of birds (family Caprimulgidae) found almost worldwide in temperate to tropical regions. The name is sometimes applied to all birds in the order Caprimulgiformes. (The name goatsucker derives from an old belief that they sucked goat's milk at night.) Nightjars are gray, brown, or reddish brown. They eat flying insects at night. The common nightjar (*Caprimulgus europaeus*) has a flat head; wide, bristle-fringed mouth; large eyes; and soft plumage that results in noiseless flight. It is about 12 in. (30 cm) long. Its North American relatives include the nighthawk and whippoorwill.

nightshade family Family Solanaceae, composed of at least 2,400 species of flowering plants in about 95 genera. Though found worldwide, the nightshades are most abundant in tropical Latin America. Many are economically important as food or medicinal plants. Among the most important are the potato, eggplant, tomato, garden pepper, tobacco, and many garden ornamentals, including the petunia. The medicinally significant nightshades are potent sources of such alkaloids as nicotine, atropine, and scopolamine; they include deadly nightshade (belladonna), jimsonweed (*Datura stramonium*), henbane, and mandrake. The genus *Solanum* contains almost half the species in the family. The species usually called nightshade in North America and England is *S. dulcamara*, also called bittersweet and woody nightshade.

nihilism \'nī-ə-ˌli-zəm, 'nē-ə-ˌli-zəm\ Any of various philosophical positions that deny that there are objective foundations for human value systems. In 19th-century Russia the term was applied to a philosophy of skepticism that opposed all forms of aesthetic ism and advocated utilitarianism and scientific rationalism; it was popularized through the figure of Bazarov in Ivan Turgenev's *Fathers and Sons* (1862). Rejecting the social sciences, classical philosophical systems, and the established social order, nihilism rejected the authority of the state, the church, and the family. It gradually became associated with political terror and degenerated into a philosophy of violence.

Nijinska \nə-'zhin-skə**, Bronislava** *orig.* **Bronislava Fominitshna Nizhinskaya** (b. Jan. 8, 1891, Minsk, Russia—d. Feb. 21, 1972, Pacific Palisades, Calif., U.S.) Russian-born U.S. dancer, choreographer, and teacher. She trained at the Imperial Ballet School in St. Petersburg and joined the Mariinsky Theatre company in 1908. She danced with the Ballets Russes in Paris from 1909, as did her brother, Vaslav Nijinsky. She choreographed several ballets for the company, including *Les Noces* (1923), *The Blue Train* (1924), and *Les Biches* (1924). During the 1920s and 1930s she created works for other companies, including her own (1932–37). In 1938 she moved to Los Angeles, where she opened a school, and she continued to work as a guest choreographer into the early 1960s.

their own company, he and his sister, Bronislava Nijinska, trained further in St. Petersburg, and he joined the Mariinsky Theatre company in 1907. With his spectacular leaps and unrivaled grace, he was an immediate success, dancing leading roles in *Giselle*, *Swan Lake*, and *Sleeping Beauty*, often with Anna Pavlova and Tamara Karsavina. In 1909 he joined the new Ballets Russes, and he created many roles in Michel Fokine's ballets, including *Carnaval*, *Les Sylphides*, *Le Spectre de la rose*, *Petrushka*, and *Daphnis and Chloe*. In 1912–13 he choreographed *The Afternoon of a Faun*, *Jeux*, and *The Rite of Spring*, all of which caused scandals. His marriage in 1913 led to his dismissal from the company by his mentor, Sergey Diaghilev. He continued to perform but with less success. His intensifying mental illness led to his retirement in 1919, and he lived mostly in mental institutions in Switzerland, France, and England until his death. His status as a legend is unequaled in the history of dance.

Nijmegen \'nā-ˌmā-ɣə**, Treaties of** (1678–79) Peace treaties that ended the Franco-Dutch War. In the treaty between France and the Dutch Republic, France agreed to return Maastricht and to suspend the anti-Dutch tariff of 1667. In the treaty between France and Spain, Spain gave up regions to France that gave it a protected northeastern border and secured the safety of Paris. By negotiating separate treaties, France gained advantages over its enemies in the war.

Nike \'nī-kē, 'nē-kā\ Greek goddess of victory. She was the daughter of the giant Pallas and the river Styx. Nike was originally an attribute of both Athena and Zeus, represented as a small figure carried in their hand. She gradually came to be recognized as a mediator between gods and mortals, and was frequently shown carrying a palm branch, wreath, or staff as the messenger of victory. When depicted on her own, she was often a winged figure hovering over the victor in a competition. At Rome she was worshiped as Victoria.

Nike, sculpture from a bronze vessel, probably made in a Greek city of southern Italy, c. 490 BC; in the British Museum
COURTESY OF THE TRUSTEES OF THE BRITISH MUSEUM

Nike Inc. U.S. sportswear company. It was founded in 1964 as Blue Ribbon Sports by Bill Bowerman (b. 1911), a track-and-field coach at the University of Oregon, and his former student Phil Knight (b. 1938). They opened their first retail outlet in 1966, launched the Nike brand shoe in 1972, and renamed the company Nike Inc. in 1978. In 1979 it claimed 50% of the U.S. running shoe market. In 1980 the company went public. Part of Nike's success is owed to endorsements by such athletes as John McEnroe, Michael Jordan, and Mia Hamm. In the 1990s the company suffered from revelations about conditions in its overseas factories, but it remained a top producer of athletic shoes and clothing.

Nikolais \'nē-kə-līz**, Alwin** (b. Nov. 25, 1910, Southington, Conn., U.S.—d. May 8, 1993, New York, N.Y.) U.S. dancer, choreographer, composer, and designer. He studied modern dance with various teachers, including Hanya Holm, whose assistant he later became. In 1948 he became director of the Henry Street Playhouse in New York City, and in 1951 he formed the Nikolais Dance Theater to present his productions of integrated motion, sound, shape, and colour. Nikolais directed the Center for Contemporary Dance in Angers, Fr. (1979–81). In 1989 his company merged with another to form the Nikolais and Murray Louis Dance Company.

Alwin Nikolais.
MARTHA SWOPE

Nikon \'nyē-kən\ *orig.* **Nikita Minin** (b. 1605, Veldemanovo, Russia—d. Aug. 27, 1681, en route to Moscow) Leader of the Russian Orthodox church. Born a peasant, he rose through the ranks of the priesthood to become patriarch of Moscow and all Russia in 1652. Granted sovereign power during the absence of Tsar Alexis on military campaigns, he purged Russian religious books and practices of what he considered corruptions, and he exiled his opponents. His reforms troubled many believers and led to a schism in the church (see Old Believers) as well as to widespread disaffection (see Doukhobors), and his high-handedness alienated Alexis. In 1666 a council of Greek patriarchs convened by Alexis stripped Nikon of all priestly functions but retained his reforms.

Nile, Battle of the (Aug. 1, 1798) Battle between the British fleet under Horatio Nelson and French Revolutionary forces at Abū Qīr Bay, near Alexandria, Egypt. In a plan to constrict British trade routes by invading Egypt, Napoleon ordered the French fleet to sail from its port of Toulon to Alexandria. The French eluded the British fleet to reach Abū Qīr Bay, where they anchored in a defensive line. Nelson discovered the French at twilight and ordered an immediate attack. In an all-night battle, the British destroyed or captured all but two of the 13 French ships. The decisive victory isolated Napoleon's army in Egypt and secured British control of the Mediterranean.

Nile perch Large food and game fish (family Latidae) found in the Nile and other African rivers and lakes. The Nile perch (*Lates niloticus*) has a large mouth and is greenish or brownish above, silvery below. It grows to about 6 ft (1.8 m) and weighs 300 lbs (140 kg). It has a slender body, a protruding lower jaw, a rounded tail, and two dorsal fins. Other species in the same family are found in African river systems and in Asian and Australian estuaries and coastal waters. The members of the family are sometimes classified with snooks (family Centropomidae).

Nile River *Arabic* **Baḥr al-Nīl** \bär-al-'nēl\ River, eastern and northeastern Africa. The longest river in the world, it is about 4,132 mi (6,650 km) long from its remotest headstream (which flows into Lake Victoria) to the Mediterranean Sea. After leaving the lake, it flows generally north through Uganda, The Sudan, and Egypt. Its major tributaries—including the Al-Ghazāl (Gazelle) River, the Blue Nile, and the Atbara River—join it before it enters Lake Nasser near the Egypt-Sudan border. Below the Aswan High Dam, which impounds the lake, it continues northward to its delta near Cairo, where it empties into the Mediterranean. The first use of the Nile for irrigation in Egypt began when seeds were sown in the mud left after its annual floodwaters had subsided. It has supported continuous human settlement for at least 5,000 years, and networks of canals and waterworks have been built since the 19th century. The Aswan High Dam, built in 1959–70, provides flood protection, hydroelectric power, and a dependable water supply for both crops and humans. The Nile is also a vital waterway for the transport of people and goods.

Nilo-Saharan \ˌnī-lō-sə-'hä-rən\ **languages** Group of perhaps 115 African languages spoken by more than 27 million people from Mali to Ethiopia and from southernmost Egypt to Tanzania. The concept of Nilo-Saharan as a single stock combining a number of earlier groupings was introduced in 1963 by Joseph H. Greenberg; most Africanists accepted it as a working hypothesis, though shifts have taken place. In terms of numbers of speakers, the most significant divisions of Nilo-Saharan languages include Central Sudanic, Fur, Nilotic, Nubian, Saharan, Songhai, and Surmic. Songhai is spoken by more than 2 million people in Mali and Niger, and Kanuri (a Saharan language) is spoken by about 4.5 million in northeastern Nigeria and adjacent Chad and Niger. Central Sudanic comprises languages of southern Chad, southern Sudan, and northeastern Congo (Kinshasa). Nubian languages (including the only Nilo-Saharan language with an ancient written tradition) are spoken along the Nile in northern Sudan and southern Egypt. The Nilotic languages are spoken by some 14 million people (see Nilotes), including the Dinka, Nuer, Luo, Turkana, Kalenjin, and Masai.

Nilot *plural* **Nilotes** Any member of a cluster of east-central African peoples living in southern Sudan, northern Uganda, and western Kenya. The name refers to the region of the Upper Nile and its tributaries, where most of them live. Nilotic languages belong to the Eastern Sudanic group of the Nilo-Saharan family. A notable shared physical characteristic is their average height, men commonly reaching 7 ft (210 cm). The Acholi, Dinka, Luo, Masai, Nandi, Nuer, and Shilluk are classed as Nilotes. Altogether they number about seven million.

Nilsson, Birgit *orig.* **Märta Birgit Svensson** (b. May 17, 1918, Västra Karup, Swed.—d. Dec. 25, 2005, Västra Karup) Swedish soprano. She made her debut in Stockholm in 1946, and she performed in the complete *Ring* cycle of Richard Wagner in Munich (1954–55). She went on to sing most of the major Wagnerian soprano roles at Bayreuth between 1954 and 1970; she was acclaimed as the greatest Wagnerian soprano of her time for the astonishing power and capacities of her rich voice. From 1959 she

© 2006 Encyclopædia Britannica, Inc.

often sang at the Metropolitan Opera in New York City. Her other significant roles included Richard Strauss's Elektra and Salome, Giacomo Puccini's Turandot, and Ludwig van Beethoven's Leonore. She retired in 1984.

Nimbarka (fl. 13th century, South India) Indian yogi and founder of the devotional sect called Nimbarkas or Nimandi. Little is known of his life except that he was a Brahman and a notable astronomer. Like Ramanuja, he believed that the creator god and the souls he created were distinct but shared in the same substance, and he stressed devotion to Krishna as the only means of liberation from the cycle of rebirth. The Nimanda sect flourished in the 13th–14th century in eastern India.

Nimeiri \nə-'mer-ē**, Gaafar Mohamed el-** (b. Jan. 1, 1930, Wad Nubawi, Omdurman, Sudan) President of The Sudan (1971–85). In 1969 he helped overthrow the civilian regime of Ismaʿīl al-Azharī. Nimeiri's own government was temporarily ousted in 1971, but he was returned to office following a plebiscite. He granted autonomy to the Southern Sudan in 1972, inaugurated one of the world's largest sugar-refinery projects (1981), and sought to develop agriculture. His attempts to impose Islamic law were resisted by Christians and others in the south, which led to his fall from power.

Nîmes \'nēm\ *ancient* **Nemausus** City (pop., 1999: 133,424), southern France. It was the capital of a Gaulish tribe that submitted to Rome in 121 BC. Augustus founded a new city there, and for five centuries it was one of the principal cities of Roman Gaul. It was plundered by the Vandals and Visigoths in the 5th century AD and occupied by Moors in the 8th century. It passed to the French crown in 1229. Damaged in 1815 during fighting between royalists and Bonapartists, it returned to prosperity with the coming of the railways in the late 19th century. It is noted for its Roman remains, including an amphitheatre, an aqueduct, and the Maison Carée (an ancient temple restored in 1789).

ART RESOURCE—EB INC.

Nimitz \'ni-mits**, Chester W(illiam)** (b. Feb. 24, 1885, Fredericksburg, Texas, U.S.—d. Feb. 20, 1966, near San Francisco, Calif.) U.S. naval officer. He graduated from the U.S. Naval Academy in 1905 and served in World War I with the U.S. Atlantic submarine force. He rose to become chief of the navy's bureau of navigation in 1939. After the Japanese attack on Pearl Harbor, he was made commander in chief of the U.S. Pacific fleet, which won the battles of Midway and the Coral Sea (1942). In succeeding years, the historic battles of the Solomon Islands (1942–43), the Gilbert Islands (1943), and Iwo Jima and Okinawa (1945) were fought under his direction. The Japanese surrender was signed aboard his flagship, the USS *Missouri*. From 1945 to 1947 he served as chief of naval operations.

Nimrūd See Calah

Nin \'nēn, 'nin**, Anaïs** (b. Feb. 21, 1903, Neuilly, France—d. Jan. 14, 1977, Los Angeles, Calif., U.S.) French-born U.S. author. Daughter of the Cuban composer Joaquín Nin (1878–1949), she began her literary career in Paris in 1932. In the 1940s she moved to New York, where she published novels and short stories at her own expense. Her writing, including the novel *Cities of the Interior*, 5 vol. (1959), shows the influence of Surrealism and psychoanalysis. She won late recognition in 1966 with the publication of the first volume of her personal diaries; seven more volumes followed. Her account of her long incestuous relationship with her father was published posthumously.

Ninety-five Theses Propositions for debate on the question of indulgences, written by Martin Luther and, according to legend, posted on the door of the castle church in Wittenberg, Ger., on Oct. 31, 1517. This event is now seen as the beginning of the Protestant Reformation. The theses were written in response to the selling of indulgences to pay for the rebuilding of St. Peter's Basilica in Rome. They represented an implicit criticism of papal policy and stressed the spiritual, inward character of the Christian faith. Widely circulated, they aroused much controversy. In 1518 Luther published a Latin manuscript with explanations of the theses.

Nineveh \'ni-nə-və\ Oldest and most populous city of ancient Assyria, on the eastern bank of the Tigris River opposite modern Mosul, Iraq. Its greatest development was under Sennacherib and Ashurbanipal in the 7th century BC. It was captured and destroyed by Nabopolassar of Babylonia and his allies, the Scythians and Medes, in 612 BC. Excavations made in 1845–51 revealed palaces, a library, city walls, and many gates and buildings.

Ningxia *or* **Ningsia** \'niŋ-'shyä\ *in full* **Hui Autonomous Region of Ningxia** Autonomous region (pop., 2002 est.: 5,720,000), northern China. It is bounded by Shaanxi and Gansu provinces and Inner Mongolia autonomous region and has an area of 25,600 sq mi (66,400 sq km). China's Great Wall runs along its northeastern boundary. The capital is Yinchuan. It is nearly coextensive with the ancient kingdom of the Tangut people, whose capital was captured by Genghis Khan in the early 13th century. The region is mostly desert and is sparsely settled, but the vast plain of the Huang He (Yellow River) in the north has been irrigated for centuries; over the years many canals have been built.

Ninhursag \nin-'k̲ůr-ˌsäg\ In Mesopotamian religion, the city goddess of Adab and of Kish. Worshiped especially by the herders of northern Mesopotamia, she was the goddess of the stony, rocky ground, and she had the power to produce wildlife in the foothills and in the desert. A mother figure, she was the goddess of birth; she also appeared as a sorrowing mother in her lament for her son, a young colt. Her husband was the god Shulpae, and among their children was Mululil, a dying god whose death was mourned in yearly rites.

Niño, El See El Niño

Ninsun \'nin-ˌsůn\ In Mesopotamian religion, the city goddess of Kullab. Worshiped especially by herders in southern Mesopotamia, she was originally represented as a cow and was considered to be the divine power behind all the qualities that herders wanted in their cattle. She was also represented in human form and could give birth to human offspring. Her son was the wild bull Dumuzi, whom she lamented in a yearly ritual, and her husband was the legendary hero Lugalbanda. Her Sumerian counterparts included Ninhursag.

Ninurta \ni-'nůr-tä\ In Mesopotamian religion, the city god of Girsu. The son of Enlil and Ninlil, he was the god of thunder and of the spring rains and floods as well as the god of the plow. His original name was Imdugud ("Raincloud"), and his earliest form was that of the thundercloud represented as an enormous black bird roaring its thunder cry from a lion's head. Eventually Ninurta was given human form, and his original shape was assigned to his ancient enemy. His festival marked the beginning of the plowing season.

Niobe \nī-'ō-bē\ In Greek mythology, the prototype of the bereaved mother. The daughter of Tantalus, she married King Amphion of Thebes and bore him six sons and six daughters. She made the mistake of boasting of her fertility to the Titaness Leto, who had only two children, Apollo and Artemis. As punishment for her pride, Apollo killed all of Niobe's sons and Artemis all her daughters. Niobe was so overwhelmed with grief that the gods turned her into a rock on Mount Sipylus (near modern Izmir, Turkey), which weeps endlessly as the snow above it melts.

Apollo and Artemis killing the children of Niobe, red-figure calyx krater by the Niobid Painter, c. 455–450 BC; in the Louvre, Paris.
CLICHE MUSEES NATIONAUX, PARIS

Niobid \nī-'ō-bid\ **Painter** (fl. c. 475–450 BC, Greece) Greek vase painter, named for a calyx krater showing the death of the children of Niobe. Because the Niobid Painter made a deliberate effort to express space and depth by arranging figures on different levels, the vessel is thought to reflect the innovative technique of the now lost mural paintings of Polygnotus.

Niobrara \ˌnī-ə-'brar-ə\ **River** River, Wyoming and Nebraska, U.S. Flowing east across Wyoming's high

© 2006 Encyclopædia Britannica, Inc.

plains and Nebraska's sandhills and low plains, it joins the Missouri River at the village of Niobrara, Neb., at the South Dakota line. It is 431 mi (694 km) long. The Agate Fossil Beds National Monument is located on the river, north of Scottsbluff, Neb.

Nipigon \'ni-pi-ˌgän**, Lake** Lake, Ontario, Canada. Located north of Lake Superior and northeast of Thunder Bay, it is about 70 mi (110 km) long and 50 mi (80 km) wide and has an area of 1,870 sq mi (4,840 sq km). It lies at an elevation of 1,050 ft (320 m) and has a maximum depth of 540 ft (165 m). Its Indian name means "deep, clear water." It is studded with many wooded islands, and large bays characterize its shoreline. Its outlet is the Nipigon River, which flows into Lake Superior.

Nipissing \'ni-pə-ˌsiŋ**, Lake** Lake, southeastern Ontario, Canada. Located midway between the Ottawa River and Georgian Bay, it is 50 mi (80 km) long and 30 mi (48 km) wide, with an area of 321 sq mi (832 sq km). A remnant of glacial Lake Algonquin, it contains many islands. The French River drains the lake as it flows west into Georgian Bay. It was discovered by Étienne Brûlé c. 1610 and was later a fur-trading route linking the Ottawa River with the upper Great Lakes.

Nippur \ni-'půr\ Ancient Mesopotamian city southeast of Babylon. Located in what is now southeastern Iraq, it was originally on the Euphrates River, whose course later changed. By 2500 BC it was the centre of worship of the Sumerian storm god Enlil (see Sumer). Parthian construction (see Parthia) later buried Enlil's sanctuary, and the city fell into decay in the 3rd century AD. It was abandoned in the 12th or 13th century. Excavations have revealed temples, a ziggurat, and thousands of clay tablets that are a primary source of information on ancient Sumerian civilization. Also uncovered were an Akkadian tomb (see Akkad) and a large temple devoted to the Mesopotamian goddess of healing.

Female figure, made of gypsum, with a gold mask that stood at a temple altar in Nippur, c. 2700 BC; in the Iraq Museum, Baghdad

Nirenberg \'nir-ən-ˌbərg**, Marshall Warren** (b. April 10, 1927, New York, N.Y., U.S.) U.S. biochemist. He received his Ph.D. from the University of Michigan. He demonstrated that each possible triplet (codon) of the four different kinds of nitrogen-containing bases found in DNA and (in some viruses) in RNA (with three exceptions) ultimately causes the incorporation of a specific amino acid into a cell protein. His research earned him a Nobel Prize in 1968, which he shared with Robert William Holley and Har Gobind Khorana, whose work, like Nirenberg's, helped show how genetic instructions in the cell nucleus control the composition of proteins.

nirvana \nir-'vä-nə\ (Sanskrit: "Extinction") In Indian religious thought, the transcendent state of freedom achieved by the extinction of desire and of individual consciousness. Nirvana is the supreme goal of the disciplines of meditation, particularly in Buddhism. Release from desire (and consequent suffering) and the continuous round of rebirths constitutes enlightenment, or the experience of nirvana. Theravada Buddhism conceives of nirvana as tranquillity and peace; Mahayana Buddhism equates it with *sunyata* (emptiness), *dharma-kaya* (the essence of the Buddha), and *dharma-datu* (ultimate reality).

Niš *or* **Nish** \'nēsh\ City (pop., 2000 est.: 182,583), southeast of Belgrade, Serbia, Serbia and Montenegro. The ancient Roman city was mentioned by Ptolemy in the 2nd century AD. It was the birthplace of Constantine I (c. 280), who adorned it with many buildings. Bomb damage in World War II and postwar construction erased much of its Turko-Byzantine style. It was held at various periods by Bulgarians, Hungarians, and Turks. During the Turkish period it became an important station on the route from Istanbul to Hungary. It was ceded to Serbia by the Treaty of Berlin in 1878 and was its capital until 1901. It is a railroad junction and commercial centre.

Nīshāpūr See Neyshābūr

Nissan \'nē-'sän\ **Motor Co., Ltd.** Japanese automaker. Headquartered in Tokyo, Nissan manufactures cars, trucks, and commercial equipment. Formed from the merger of two smaller firms in 1925, it adopted its present name in 1934. In World War II the company produced military vehicles; seized by Allied forces in 1945, it did not return to full production until 1955. Nissan's sales grew rapidly after it entered the world market in the 1960s, and it established assembly plants in several countries, including Australia, Germany, Mexico, and the U.S. In 1999 the French automaker Renault bought a 37% stake in the company and later increased its share.

NIST See Bureau of Standards

nitrate Any salt or ester of nitric acid (HNO_3). The salts are inorganic compounds with ionic bonds, containing the nitrate ion (NO_3^-) and any cation. Many, particularly ammonium nitrate, are used as agricultural fertilizers (see saltpeter). Their runoff in surface water and groundwater can cause serious illness in humans. The esters are organic compounds with covalent bonds, having the structure $R—O—NO_2$, in which R represents an organic combining group such as methyl, ethyl, or phenyl.

nitre See saltpetre

nitric \'nī-trik\ **acid** Inorganic compound, colourless, fuming, highly corrosive liquid, chemical formula HNO_3. A common laboratory reagent, it is important in the manufacture of fertilizers and explosives (including nitroglycerin), as well as in organic syntheses, metallurgy, ore flotation, and reprocessing of spent nuclear fuel. A strong acid, it is toxic and can cause severe burns. It attacks most metals and is used for etching steel and photoengraving.

nitric oxide Colourless, toxic gas (NO), formed from nitrogen and oxygen by the action of electric sparks or high temperatures or, more conveniently, by the action of dilute nitric acid on copper or mercury. First prepared c. 1620 by Jan B. Helmont, it was first studied in 1772 by Joseph Priestley, who called it "nitrous air." An industrial procedure for the manufacture of hydroxylamine is based on the reaction of nitric oxide with hydrogen in the presence of a catalyst. The formation of nitric oxide from nitric acid and mercury is applied in a volumetric method of analysis for nitric acid or its salts. The gas is synthesized via enzyme-catalyzed reactions in humans and other animals, where it serves as a signaling molecule. Among its numerous biological roles, it causes dilation of blood vessels and as such is an important regulator of blood pressure. Nitric oxide is one of the components of air pollution generated by internal-combustion engines.

nitrifying bacteria \'nī-trə-ˌfī-iŋ\ Small group of oxygen-requiring bacteria that use nitrogen as an energy source. These microorganisms are important in the nitrogen cycle as converters of soil ammonia to nitrates, compounds usable by plants. The nitrification process requires two distinct groups: bacteria that convert ammonia to nitrites, and bacteria that convert nitrites to nitrates. In agriculture, irrigation with dilute solutions of ammonia results in an increase in soil nitrates through the action of nitrifying bacteria. See also denitrifying bacteria.

nitrite \'nī-ˌtrīt\ Any salt or ester of nitrous acid (HNO_2). The salts are inorganic compounds with ionic bonds, containing the nitrite ion (NO_2^-) and any cation. The esters are organic compounds with covalent bonds, having the structure $R—O—N—O$, in which R represents a carbon-containing combining group and the bonding is from carbon to oxygen. These covalent nitrites are constitutional isomers (see isomerism) of the nitro compounds, nitric acid derivatives ($R—NO_2$), in which the bonding is from carbon to nitrogen. Nitrites are used as food preservatives and color enhancers, though they are so toxic they have caused deaths and combine with amines to produce carcinogens. They are used in medicine to dilate blood vessels.

nitro compound \'nī-ˌtrō\ Any of a class of chemical compounds in which the nitro group ($—NO_2$) forms part of the molecular structure. The most common examples are organic compounds, isomers of nitrite esters in which a carbon atom is linked by a covalent bond to the nitro group's nitrogen atom. Many nitro compounds are commercially used as explosives, solvents, or raw materials and chemical intermediates. They are generally made by a reaction between nitric acid and an organic compound.

nitrogen Gaseous chemical element, chemical symbol N, atomic number 7. A colourless, odourless, tasteless gas, it makes up 78% of Earth's atmosphere and is a constituent of all living matter. As the nearly unre-

© 2006 Encyclopædia Britannica, Inc.

active diatomic molecule N_2, it is useful as an inert atmosphere or to dilute other gases. Nitrogen is commercially produced by DISTILLATION of liquefied air. NITROGEN FIXATION, achieved naturally by soil microbes and industrially by the HABER-BOSCH PROCESS, converts it to water-soluble compounds (including AMMONIA and NITRATES). Industrially, ammonia is the starting material for most other nitrogen compounds (especially nitrates and NITRITES), whose main uses are in agricultural fertilizers and explosives. In compounds, nitrogen usually has VALENCE 3 or 5. It forms several OXIDES including NITROUS OXIDE (N_2O; laughing gas), NITRIC OXIDE (NO), nitrogen dioxide (NO_2), and other forms (such as N_2O_3 and N_2O_5). Some of the nitrogen oxides, often referred to generically as NO_x, are notorious as contributors to urban AIR POLLUTION. Other compounds include the nitrides, exceptionally hard materials made from nitrogen and a metal; CYANIDES; azides, used in detonators and percussion caps; and thousands of organic compounds containing nitrogen in FUNCTIONAL GROUPS or in a linear or ring structure (see HETEROCYCLIC COMPOUND). See also NITROGEN CYCLE.

nitrogen cycle Circulation of NITROGEN in various forms throughout nature. Nitrogen is essential to life, but in the atmosphere it is in a form (the diatomic molecule N_2) unavailable to most organisms. NITROGEN FIXATION by microbes turns this nitrogen into NITRATES and other compounds, which plants or algae assimilate into their tissues. Animals that eat plants in turn incorporate the compounds into their own tissues. Microbes decompose the remains and waste of all living things into AMMONIA (ammonification); the ammonia may leave the soil through vaporization into the air or leaching into water. Ammonia remaining in soil may be transformed by bacteria into nitrates (nitrification), which then can be reassimilated into living organisms, or into free nitrogen (denitrification), which reenters the atmosphere. Hence, once fixed from air, some nitrogen goes through the cycle repeatedly without returning to the gaseous state.

nitrogen fixation Any natural or industrial process that causes free NITROGEN in the air to combine chemically with other elements to form more reactive nitrogen compounds such as AMMONIA, NITRATES, or NITRITES. Soil microorganisms (e.g., *Rhizobium* bacteria living in root nodules of LEGUMES) are responsible for more than 90% of all nitrogen fixation. Though nitrogen is part of all PROTEINS and essential in both plant and animal METABOLISM, plants and animals cannot use elemental nitrogen such as the nitrogen gas (N_2) that forms 80% of the atmosphere. Symbiotic nitrogen-fixing bacteria invade the root hairs of host plants, where they multiply and stimulate the formation of root nodules, enlargements of plant cells and bacteria in close association. Within the nodules the bacteria convert free nitrogen to nitrates, which the host plant uses for its development. Nitrogen fixation by bacteria associated with legumes is of prime importance in agriculture. Before the use of synthetic FERTILIZERS in the industrial countries, usable nitrogen was supplied as MANURE and by CROP ROTATION that included a legume crop.

nitrogen narcosis *or* **nitrogen euphoria** *or* **raptures of the deep** Effects of breathing nitrogen under increased pressure. In divers breathing compressed air, nitrogen saturates the nervous system, causing an intoxicating light-headed, numb feeling, then slowed reasoning and dexterity, and then emotional instability and irrationality. Severe cases progress to convulsions and blackout. Susceptibility varies, and severity increases with depth, but there are no aftereffects. Physical function remains normal, and divers may be unaware of the growing irrationality that can cause them to rise too fast (see DECOMPRESSION SICKNESS) or let their air supply run out. Helium, which dissolves less easily in body tissues, is substituted for nitrogen for deep dives.

nitroglycerin \ˌnī-trə-ˈgli-sə-rən\ *or* **glyceryl trinitrate** Organic compound, powerful explosive and ingredient of most forms of DYNAMITE. It is a colourless, oily, somewhat toxic liquid with a sweet, burning taste. Its safe use as a blasting explosive became possible after ALFRED P. NOBEL developed dynamite in the 1860s with an inert porous material (moderator) such as CHARCOAL or DIATOMACEOUS EARTH. Nitroglycerin is also used in a mixture in rocket propellants. In medicine, it is used to dilate blood vessels, especially to ease ANGINA PECTORIS.

nitrous oxide \ˈnī-trəs\ *or* **laughing gas** Inorganic compound, one of the OXIDES of NITROGEN. A colourless gas with a pleasantly sweetish odour and taste, it has an ANALGESIC effect when inhaled; it is used as an ANESTHETIC (often called just "gas") in dentistry and surgery. This effect is preceded by mild hysteria, sometimes with laughter, hence the name *laughing gas*. It is also used as a propellant in food aerosols and as a leak detector.

Nivernais \ˌnē-vər-ˈnā\ Historical region, central France. Originally part of BURGUNDY, it became a county c. 10th century. FRANCIS I of France made it a duchy in 1539 for Francis of Cleves. In 1659 it was sold to Cardinal MAZARIN. His descendants possessed it until the FRENCH REVOLUTION, when it was the last great FIEF to be reunited to the French crown. During the ANCIEN RÉGIME it was administered from Nevers.

Nixon, Richard M(ilhous) (b. Jan. 9, 1913, Yorba Linda, Calif., U.S.—d. April 22, 1994, New York, N.Y.) 37th president of the U.S. (1969–74). He studied law at Duke University and practiced in California (1937–42). After serving in World War II, he was elected to the U.S. House of Representatives (1946). As a member of the House Un-American Activities Committee, he received national attention for his hostile questioning of ALGER HISS. In 1950 he was elected to the Senate following a bitter campaign in which he unfairly portrayed his opponent as a communist sympathizer; the epithet "Tricky Dick" dates from this period. He won the vice presidency in 1952 as the running mate of Republican DWIGHT D. EISENHOWER. During the campaign he delivered a nationally televised address, the "Checkers" speech (named for the dog he admitted receiving as a political gift), to rebut charges of financial misconduct. He and Eisenhower were reelected easily in 1956. As the Republican presidential candidate in 1960, he lost narrowly to JOHN F. KENNEDY. After failing to win the 1962 California gubernatorial race, he announced his retirement from politics and criticized the press, declaring that it would not "have Dick Nixon to kick around anymore." He moved to New York to practice law. He reentered politics by running for president in 1968, narrowly defeating HUBERT H. HUMPHREY with his "southern strategy" of seeking votes from southern and western conservatives in both parties. As president, he began to withdraw U.S. military forces from South Vietnam while resuming the bombing of North Vietnam. His expansion of the VIETNAM WAR to Cambodia and Laos in 1970 provoked widespread protests in the U.S. He established direct relations with China and made a state visit there in 1972, the first by a U.S. president. On a visit to the Soviet Union later that year, he signed agreements resulting from the STRATEGIC ARMS LIMITATION TALKS between the U.S. and the Soviet Union held between 1969 and 1972, known as SALT I. In domestic affairs, Nixon responded to persistent inflation and increasing unemployment by devaluing the dollar and imposing unprecedented peacetime controls on wages and prices. His administration increased funding for many federal civil-rights agencies and proposed legislation that created the Occupational Safety and Health Administration (OSHA) and the ENVIRONMENTAL PROTECTION AGENCY (EPA). In 1972 he won reelection with a landslide victory over GEORGE MCGOVERN. Assisted by HENRY A. KISSINGER, he concluded a peace agreement with North Vietnam (1973), though the war did not come to an end until 1975. His administration helped to undermine the coalition government of Chile's Marxist Pres. SALVADOR ALLENDE, leading to Allende's overthrow in a military coup in 1973. Nixon's second term was overshadowed by the WATERGATE SCANDAL, which stemmed from illegal activities by Nixon and others related to the burglary and wiretapping of the headquarters of the Democratic Party. After lengthy congressional investigations and facing near-certain impeachment, Nixon resigned the presidency on Aug. 8, 1974, the first president to do so. Though never convicted of wrongdoing, he was pardoned by his successor, GERALD FORD. In retirement, he wrote his memoirs and several books on foreign policy, which modestly rehabilitated his reputation and earned him a role as an elder statesman and foreign-policy expert.

Niẓām al-Mulk \nē-ˈzȧm-ůl-ˈmülk\ *orig.* **Abū ʿAlī Ḥasan ibn ʿAlī** (b. c. 1018/19, Ṭūs, Khorāsān, Iran—d. Oct. 14, 1092, Nahāvand) Persian VIZIER of the Turkish SELJŪQ DYNASTY sultans. He worked for the rulers of the GHAZNAVID DYNASTY before serving ALP-ARSLAN as governor of Khorāsān. In 1063 he was made vizier, a position he occupied for 30 years, serving Alp-Arslan's son Malik-Shah from the latter's ascension. Believing that a ruler's power should be absolute and that the ruler should preserve the kingdom's stability and traditions, he recorded his views in the *Seyāsatnāmeh* ("Book of Government"). He is seen as the quintessential vizier and as a staunch Sunnite Muslim. He promoted the MADRASAH as a centre of learning, partly to combat Shīʿite propaganda. He was murdered, likely by an Ismāʿīlī ASSASSIN, after falling out of favour with Malik-Shah.

Nizhny Novgorod \ˈnizh-nē-ˈnȯv-gə-rət\ *formerly (1932–90)* **Gorky** City (pop., 2002: 1,311,200), western RUSSIA. It is located on the

© 2006 Encyclopædia Britannica, Inc.

southern bank of the Volga River at its confluence with the Oka River. Founded in 1221, it was annexed to Moscow in 1392. It was strategically important in the Russian conquest of the Volga through the mid-16th century. In 1932 it was renamed for Maksim Gorky, who was born there. Under the Soviet regime it was a place of internal exile for Andrey Sakharov. The city has several 16th- and 17th-century buildings and is one of Russia's major industrial centres.

Njáls \'nyaůls\ **saga** *or* **Njála** \'nyaů-lä\ *or* **Burnt Njáll** \'bərnt-'nyaůl\ Icelanders' saga, one of the longest and finest. Set in a society where blood ties impose inescapable obligations and honour demands vengeance for past injuries, it presents the most comprehensive picture of Icelandic life in the heroic age. Its overriding mood is tragic pessimism. Its vividly drawn characters, who range from comic to sinister, include two heroes—Gunnar (Gunther), a brave, guileless, generous youth, and Njál, a wise and prudent man endowed with prophetic gifts.

Njörd \'nyȯrd, 'nyȯrth\ Norse god of the wind and of the sea and its riches. His aid was invoked in seafaring and hunting, and he was the god of prosperity. He was the father of Freyr and Freyja by his sister. Njörd's tribe, the Vanir, gave him as a hostage to the rival tribe of Aesir, and the giantess Skadi chose him as her husband. The marriage failed because Njörd preferred to live in Nóatún, his home by the sea, whereas Skadi was happier in her father's mountain dwelling place. Several traditions hold that Njörd was a divine ruler of the Swedes.

Nkomo \en-'kō-mō**, Joshua (Mqabuko Nyongolo)** (b. June 19, 1917, Semokwe Reserve, Matabeleland, Rhodesia—d. July 1, 1999, Harare, Zimb.) Zimbabwean (formerly Rhodesian) black nationalist. Nkomo helped lead the guerrilla war against white rule in Rhodesia, but his forces played a less important role than those of Robert Mugabe. As leader of the Zimbabwe African People's Union (ZAPU), he became Mugabe's longtime rival. They participated in a coalition government in 1980–82, but Nkomo was removed following a breach between them. ZAPU and Mugabe's Zimbabwe African National Union (ZANU) merged in 1987 to form ZANU–Patriotic Front, and Nkomo became a vice president in Mugabe's government in 1990.

Nkrumah \en-'krü-mə**, Kwame** (b. September 1909, Nkroful, Gold Coast—d. April 27, 1972, Bucharest, Rom.) Nationalist leader and president of Ghana (1960–66). Nkrumah worked as a teacher before going to the U.S. to study literature and socialism (1935–45). In 1949 he formed the Convention People's Party, which advocated nonviolent protests, strikes, and noncooperation with the British authorities. Elected prime minister of the Gold Coast (1952–60) and then president of independent Ghana, Nkrumah advanced a policy of Africanization and built new roads, schools, and health facilities. After 1960 he devoted much of his time to the Pan-African movement, at the expense of Ghana's economy. Following an attempted coup in 1962, he increased authoritarian controls, withdrew from public life, increased contacts with communist countries, and wrote works on political philosophy. With the country facing economic ruin, he was deposed in 1966 while visiting Beijing.

Nkrumah, 1962

no-till farming *or* **till-less agriculture** Cultivation technique in which the soil is disturbed only along the slit or hole into which seeds are planted. Reserved detritus from previous crops covers and protects the seedbed. Primary benefits are a decreased rate of soil erosion; reduced need for equipment, fuel, and fertilizer; and significantly less time required for tending crops. The method also improves soil-aggregate formation, microbial activity in the soil, and water infiltration and storage. Conventional tillage controls weed growth by plowing and cultivating, but no-till farming selectively uses herbicides to kill weeds and the remains of the previous crop. No-till farming is one of several primitive farming methods revived as conservation measures in the 20th century.

Noah Biblical character from Genesis. The son of Lamech and ninth in descent from Adam, he was a man of blameless piety, who was chosen by God to perpetuate the human race after his wicked contemporaries had perished in the flood. On God's instructions, Noah built an ark and took into it one male and one female of each of the world's animals. After the waters receded, God set a rainbow in the sky as a guarantee of his promise never again to curse the earth. Noah was the father of Shem, Ham, and Japheth, from whom the entire human race is supposed to have descended. Noah is also said to have been the originator of vineyard cultivation.

noaide \nō-'ī-dē\ In Sami religion, a shaman who mediates between his clients and various supernatural beings and forces. To aid people suffering from illness or other serious troubles, the noaide performs a dramatic séance, which includes divination, trance, confrontation of supernatural beings, and the ritual treatment of the patient. The noaides can accomplish both good and evil, and their powers were formerly much feared.

Nobel \nō-'bel**, Alfred (Bernhard)** (b. Oct. 21, 1833, Stockholm, Swed.—d. Dec. 10, 1896, San Remo, Italy) Swedish chemist, engineer, and industrialist. His attempts to find a safe way to handle nitroglycerin resulted in the invention of dynamite and the blasting cap. He built a network of factories to manufacture dynamite and corporations to produce and market his explosives. He went on to develop more powerful explosives and to construct and perfect detonators for explosives that did not explode on simple firing (e.g., when lit with a match). Nobel registered more than 350 patents, many unrelated to explosives (e.g., artificial silk and leather). A complex personality, both dynamic and reclusive, he was a pacifist but was labeled the "merchant of death" for inventing explosives used in war. Perhaps to counter this label, he left most of his immense fortune, from worldwide explosives and oil interests, to establish the Nobel Prizes, which would become the most highly regarded of all international awards.

Nobel Prize Any of the prizes awarded annually by four institutions (three Swedish and one Norwegian) from a fund established under the will of Alfred B. Nobel. The will specified that awards should be given "to those who, during the preceding year, shall have conferred the greatest benefit on mankind." Since 1901, prizes have been awarded for physics, chemistry, physiology or medicine, literature, and peace; since 1969, a sixth prize, established by the Bank of Sweden, has been awarded in economic sciences. The Nobel Prizes are regarded as the most prestigious prizes in the world. See tables on opposite and following pages.

noble gas *or* **inert gas** Any of the six chemical elements that make up the rightmost group of the periodic table as usually arranged: helium, neon, argon, krypton, xenon, and radon. All are colourless, odourless, and nonflammable and occur in tiny amounts in the atmosphere (though helium is the most plentiful element in the universe). Their stable electronic configurations, with no unpaired electrons to share, make them extremely unreactive—hence "noble" (i.e., aloof) or inert—though the three heaviest, with outer electrons held less firmly, can form compounds (mainly with fluorine). These gases absorb and give off electromagnetic radiation in a much less complex way than other substances, a property exploited in their use in fluorescent lighting devices and discharge lamps. They glow with a characteristic colour when confined in a transparent container at low pressure with an electric current passing through it. Their very low boiling and melting points make them useful as refrigerants for low-temperature research (see cryogenics).

nocturne Nineteenth-century character piece for piano. The name was first used c. 1812 by the Scottish composer John Field (1782–1837) for works employing a lyrical melody over an accompaniment of broken chords. Frédéric Chopin's romantic nocturnes, similar in style, are the most celebrated.

nodule \'nä-jül\ In geology, a rounded mineral concretion that is distinct from, and may be separated from, the formation in which it occurs. Nodules usually are elongated and have a knobby irregular surface; they are generally oriented parallel to the bedding. Chert and flint, clay ironstone, and phosphorites commonly occur as nodules. Manganese-rich nodules are found on the ocean floor.

Noel-Baker (of the City of Derby), Philip John Noel-Baker, Baron *orig.* **Philip John Baker** (b. Nov. 1, 1889, London, Eng.—d. Oct. 8, 1982, London) British statesman and advocate of disarmament. He worked for the League of Nations secretariat (1919–22) and taught international relations at the University of London (1924–29). He served

[1]Nationality given is the citizenship of recipient at the time award was made. [2]Naturalized citizen. [3]Adolf Hitler forbade Germans to accept Nobel prizes (January 1937).
[4]No awards made 1940–42.

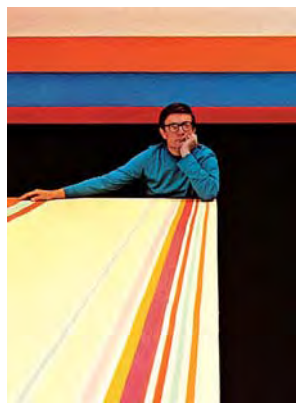
in the House of Commons (1929–31, 1936–70) and in ministerial posts (1945–61). He helped draft the UN charter, and he campaigned widely for peace through multilateral disarmament. An Olympic runner in 1912, 1920, and 1924, he later served as president of UNESCO's International Council on Sport and Physical Recreation (1960–82). In 1959 he was awarded the Nobel Prize for Peace.

Nogi Maresuke \'nō-gē-ˌmä-'räs-kā\ (b. December 1849, Edo [Tokyo], Japan—d. Sept. 13, 1912, Tokyo) General in MEIJI-PERIOD Japan. He served as governor of Taiwan and fought in the RUSSO-JAPANESE WAR. On the death of the MEIJI EMPEROR, Nogi and his wife committed ritual suicide by SEPPUKU (self-disembowlment), considered the ultimate SAMURAI act of loyalty. This action affected such Meiji-period writers as NATSUME SŌSEKI and Mori Ōgai (1862–1922) and illuminated the contrast between Japan's feudal past and rapidly modernizing present.

Noguchi \nō-'gü-chē**, Isamu** (b. Nov. 17, 1904, Los Angeles, Calif., U.S.—d. Dec. 30, 1988, New York, N.Y.) U.S. sculptor and designer. He spent his early years in Japan. After premedical studies at Columbia University, he became CONSTANTIN BRANCUSI's assistant in Paris. He was influenced as well by ALBERTO GIACOMETTI, ALEXANDER CALDER, PABLO PICASSO, and JOAN MIRÓ. His medical training suggested to him the interrelatedness of bone and stone. Much of his work consists of elegantly abstracted, rounded forms in highly polished stone. His long collaboration with MARTHA GRAHAM resulted in stage sets for many ballets, and he also designed many public sculptures, sculptural gardens, and playgrounds, as well as furniture.

Noh theatre *or* **No theatre** Classic Japanese theatrical form. One of the world's oldest extant theatrical forms, Noh theatre has a heroic theme, a chorus, and highly stylized action, costuming, and scenery. Its all-male performers are storytellers who use their visual appearances and movements to suggest their tale rather than enact it. Noh (from Japanese *nō*, meaning "talent" or "skill") developed from ancient forms of dance-drama and became a distinctive form in the 14th century. The five types of Noh plays are the *kami* ("god") play, which involves a sacred story of a SHINTŌ shrine; the *shura mono* ("fighting play"), which centres on warriors; the *katsura mono* ("wig play"), which has a female protagonist; the *gendai mono* ("present-day play") or *kyōjo mono* ("madwoman play"), which is varied in content; and the *kiri* or *kichiku* ("final" or "demon") play, which features devils and strange beasts. Kan'ami (1333–84) and his son Zeami (1363–1443) wrote many of the most beautiful Noh texts; more than 200 remain in the modern Noh repertoire.

noise Undesired sound that is intrinsically objectionable or that interferes with other sounds being listened to. In electronics and information theory, noise refers to those random, unpredictable, and undesirable signals, or changes in signals, that mask the desired information content. In radio, this noise is called static; in television, it is called snow. White noise is a complex signal or sound covering the entire range of component frequencies, or TONES, all of which possess equal intensity.



© 2006 Encyclopædia Britannica, Inc.

Nok culture Ancient Iron Age African culture. It existed on the Benue Plateau of Nigeria between about 500 BC and AD 200 and was first discovered in 1928 in the village of Nok. Artifacts having similar features were found over an area that stretched about 300 miles (480 km) east to west and 200 miles (320 km) north to south. The most characteristic of these are hollow, coil-built clay figurines of animals and stylized human beings, usually heads. Other artifacts include iron and stone tools and stone ornaments.

nökhör \'nœ-kœr\ *Mongol* **"comrade"** In Mongolia during the time of Genghis Khan (c. 1160–1227), one who forswore loyalty to family and clan to devote himself to following a leader to whom he attached himself. Many of Genghis Khan's best generals were *nökhör*. In modern times the word is used more loosely.

Nolan, Sir Sidney (b. April 22, 1917, Melbourne, Austl.—d. Nov. 27, 1992, London, Eng.) Australian artist. Early in his career he created greatly simplified abstractions. In the mid 1940s he began to paint the local desolate desert landscapes in a more representational style. In his mature work he often applied unusual media—such as polyvinyl acetate—to masonite, glass, or canvas. Apart from his landscapes, most of his works dealt with Australian historical or legendary characters and events—notably, the bushranger Ned Kelly.

Noland, Kenneth (b. April 10, 1924, Asheville, N.C., U.S.) U.S. painter. Noland attended Black Mountain College in North Carolina and studied under the French sculptor Ossip Zadkine in Paris (1948–49). He and Morris Louis, influenced by the work of Helen Frankenthaler, worked together on the technique of staining with thinned paints. This method presented pure, saturated colour as an integral part of the canvas. He employed his colours in concentric rings and parallels that were shaped and proportioned in relation to the shape of the canvas. Noland taught at the Institute of Contemporary Arts (1950–52) and at Catholic University (1951–60), both in Washington, D.C., and at Bennington College (1968) in Vermont.

Nolde \'nōl-də**, Emil** *orig.* **Emil Hansen** (b. Aug. 7, 1867, Nolde, near Bocholt, Ger.—d. April 15, 1956, Seebüll, near Niebüll, W.Ger.) German Expressionist painter, printmaker, and watercolourist. Born to a peasant family, he carved wood for a living and came late to painting. Though briefly a member of Die Brücke (1906–07), he was essentially a solitary painter. Fervently religious and racked by a sense of sin, he created such works as *Dance Around the Golden Calf* (1910), in which the figures' erotic frenzy and demonic faces are rendered with deliberately crude draftsmanship and dissonant colours. On an ethnological expedition to the East Indies (1913–14), he was impressed by the power of the art he saw there. Back in Europe, he produced brooding landscapes (e.g., *Marsh Landscape*, 1916) and colourful flowers. As a printmaker he was noted especially for the stark black-and-white effect of his crudely incised woodcuts. Although he was an early advocate of Germany's National Socialist Party, the party declared his art "degenerate" and forbade him to paint. His late, postwar works reveal his disillusionment.

nomadism Way of life of peoples who do not live continually in the same place but move cyclically or periodically. It is based on temporary centres whose stability depends on the available food supply and the technology for exploiting it. A hunting and gathering society is a type of nomadic group. Pastoral nomads, who depend on domestic livestock, migrate in an established territory to find pasture for their animals. Tinker or trader nomads, such as the Roma (Gypsies; see Rom) and the Irish and Scottish Travellers, are associated with a larger society but maintain their mobile way of life. Nomadism declined in the 20th century as urban centres expanded and governments sought to regulate or eliminate it.

Nome Seaport (pop., 2000: 3,505), western Alaska, U.S., on the southern side of the Seward Peninsula. Founded as a mining camp called Anvil City after the discovery of gold at nearby Anvil Creek in 1898, it became a centre of the Alaskan gold rush of 1899–1903. Its population, estimated at 20,000 in 1900, had dwindled to 852 by 1920. Gold mining remained the chief occupation until the dredge fields were closed in 1962. The finish line for the Iditarod trail sled race, it also serves as a supply centre for northwestern Alaska.

non-Euclidean geometry Any theory of the nature of geometric space differing from the traditional view held since Euclid's time. These geometries arose in the 19th century when several mathematicians working independently explored the possibility of rejecting Euclid's parallel postulate. Different assumptions about how many lines through a point not on a given line could be parallel to that line resulted in hyperbolic geometry and elliptic geometry. Mathematicians were forced to abandon the idea of a single correct geometry; it became their task not to discover mathematical systems but to create them by selecting consistent axioms and studying the theorems that could be derived from them. The development of these alternative geometries had a profound impact on the notion of space and paved the way for the theory of relativity. See also Nikolay Lobachevsky, Bernhard Riemann.

nonaligned movement In international politics, the group of states sharing the peacetime policy of avoiding political or economic affiliations with major power blocs. At its beginning the nonaligned movement consisted primarily of Asian and African states that were once colonies of the Western powers and were wary of being drawn into a new form of dependence by the West or by the communist bloc. Founded by Jawaharlal Nehru, Gamal Abdel Nasser, and others, the movement held its first official meeting in 1961 in Bandung, Indon.; 25 countries attended. Meetings have since been held on a three-year schedule. While the Soviet Union existed, the movement tended to seek development assistance from both the U.S. and the Soviet Union but to refrain from forming political or military alliances with either country. Since the dissolution of the Soviet Union in 1991, the nonaligned movement has been chiefly concerned with debt forgiveness and with development of fairer trade relationships with the West. By the early 21st century the movement had more than 110 members.

noncognitivism Denial of the characteristic cognitivist thesis that moral sentences are used to express factual statements. Noncognitivists have proposed various alternative theories of meaning for moral sentences. In *Language, Truth and Logic* (1936), A. J. Ayer stated the emotivist thesis that moral sentences are not statements at all (see emotivism). In *The Language of Morals* (1952), Richard M. Hare (born 1919) agreed that in making moral judgments we are not primarily seeking to describe anything, but claimed that neither are we simply expressing our attitudes; instead, he suggested that moral judgments prescribe—that is, are a form of imperative sentence (see prescriptivism).

Nonconformist Any English Protestant who does not conform to the doctrines or practices of the established Church of England. The term was first used after the Restoration of the monarchy in 1660 to describe congregations that had separated from the national church. Such congregations, also called Separatists or Dissenters, often rejected Anglican rites and doctrines as being too close to Catholicism. In the late 19th century, Nonconformists of various denominations joined together to form the Free Church Federal Council. In England and Wales the term is generally applied to all Protestant denominations outside Anglicanism, including Baptists, Congregationalists, Unitarians, Presbyterians, Methodists, Quakers, and Churches of Christ.

nondirective psychotherapy *or* **client-centered therapy** Type of psychotherapy in which the counselor refrains from interpretation or explanation but encourages the client to establish a person-to-person relationship with him or her and to talk freely. It originated with Carl R. Rogers and influenced later individual and group therapies. The goal is to enable the client to see him- or herself more clearly and react more openly with the therapist and others. The client determines the course, speed, and duration of treatment.

nongovernmental organization (NGO) Organization that is not part of any government. A key distinction is between not-for-profit groups and for-profit corporations; the vast majority of NGOs are not-for-profit. In some countries, particularly socialist ones, some NGOs are government-organized. The purposes of NGOs cover the entire range of human interests and may be domestic or international in scope. Many NGOs are key sources of information for governments on issues such as

© 2006 Encyclopædia Britannica, Inc.

human rights abuses and environmental degradation. Some NGOs fulfill quasi-governmental functions for ethnic groups that lack a state of their own. NGOs may be financed by private donations, international organizations, governments, or a combination of these. In Britain, quasi-autonomous nongovernmental organizations, or "quangos," are organizations that have nonelected boards and receive public funds which they also disburse. See also AMNESTY INTERNATIONAL; GREENPEACE; WORLD WILDLIFE FUND.

Nonni River See NEN RIVER

Nono, Luigi (b. Jan. 29, 1924, Venice, Italy—d. May 8, 1990, Venice) Italian composer. A law student, he also studied music with Gian Francesco Malipiero (1882–1973), Bruno Maderna (1920–73), and Hermann Scherchen (1891–1966). He came to public attention in 1950 with his work *Variazioni Canoniche*, orchestral variations on a 12-tone theme of ARNOLD SCHOENBERG, whose daughter Nuria he married in 1955. An avowed communist, Nono often produced works of political substance, many of which sparked controversy and reaction. He employed aleatory (chance) techniques and SERIALISM, sometimes fragmenting language and using electronically manipulated sounds. His best-known work is the opera *Intolleranza* (1961).

nonobjective art See ABSTRACT ART

Nonpartisan League Alliance of U.S. farmers to gain protection from wheat monopolies. Founded in North Dakota in 1915 by Arthur Townley, it demanded that mills, grain elevators, banks, and hail-insurance companies be state owned. In 1916 its candidate, Lynn Frazier, was elected governor of North Dakota, and the state legislature enacted its program in 1919. The league declined after the 1920s and affiliated with the Democrats in 1956.

nonrepresentational art See ABSTRACT ART

nonsense verse Humorous or whimsical verse that features absurd characters and actions and often contains evocative but meaningless words coined for the verse. It is unlike the ritualistic gibberish of children's counting-out rhymes in that it makes such words sound purposeful. It differs from other comic verse in its resistance to any rational or allegorical interpretation. Most nonsense verse has been written for children and is modern, dating from the beginning of the 19th century. Examples include EDWARD LEAR's *Book of Nonsense* (1846), LEWIS CARROLL's "Jabberwocky" (1871), and HILAIRE BELLOC's *Bad Child's Book of Beasts* (1896). See also LIMERICK.

nonsteroidal anti-inflammatory drugs See NSAIDs

Nootka \'nüt-kə\ *or (since 1980)* **Nuu-chah-nulth** Any of several bands of NORTHWEST COAST INDIAN people of southwestern Vancouver Island, B.C., Can., and northwestern Washington, U.S. The name Nuu-chah-nulth, which they adapted in preference to Nootka (given them by others), means "Along the Mountains." They speak a Wakashan language. Culturally related to the KWAKIUTL, the Nootka were specialized whale hunters. They moved seasonally, returning to their principal homesites during the winter. Local groups were usually socially and politically independent. The most important religious ceremony was the shaman's dance, a reenactment of mythological themes that ended with a POTLATCH. Today the Nuu-chah-nulth number about 6,000.

Nootka Sound Controversy (1790) Dispute between Spain and Britain over ship seizures off the western Canadian coast. Spain seized four British trading ships in Nootka Sound, an inlet of Vancouver Island, Can., in accordance with Spanish claims to the northwestern coast of America. Britain threatened war, maintaining that sovereignty necessitated actual occupation of the land. Spain yielded to British demands and signed an agreement acknowledging the right of each country to trade and establish settlements on unoccupied land.

Nora Ancient city, southwest of CAGLIARI, SARDINIA. Ruins from the 7th century BC indicate that the site was first settled by PHOENICIANS. It was the capital of Sardinia after the Roman annexation in the 1st century AD. Excavations have revealed a wealthy imperial Roman city with a theatre, an aqueduct, a temple of Juno, a nymphaeum, and private villas overlying a typical Phoenician port.

noradrenaline See NOREPINEPHRINE

Nordenskiöld \'nür-dən-ˌshœld**, (Nils) Adolf Erik, Frihere (baron)** (b. Nov. 18, 1832, Helsinki, Fin.—d. Aug. 12, 1901, Dalbyö, Swed.) Finnish-born Swedish geologist, mineralogist, geographer, and explorer. In 1858 he settled in Stockholm and became professor and curator of mineralogy at the Swedish State Museum. He led several expeditions to the Arctic island of Spitsbergen between 1864 and 1873, and in 1870 he led an expedition to western Greenland. In 1878–79, on the steam vessel *Vega*, he sailed from Norway to Alaska on the first expedition to successfully navigate the NORTHEAST PASSAGE. He was created a baron on his return. In 1883 he became the first to break through the great sea ice barrier of the southeast Greenland coast.

Nordic skiing Skiing techniques and events of Scandinavian origin that include CROSS-COUNTRY SKIING and SKI JUMPING. Nordic events were included in the first Winter Olympics in 1924. See also ALPINE SKIING.

norepinephrine \ˌnȯr-ˌep-ə-'nef-rən\ *or* **noradrenaline** One of two CATECHOLAMINE HORMONES (EPINEPHRINE is the other) secreted by the ADRENAL GLANDS, as well as at nerve endings, as a NEUROTRANSMITTER. It resembles adrenaline chemically and in its actions on the body, which mimic sympathetic NERVOUS SYSTEM stimulation. It constricts most blood vessels and is given for certain types of SHOCK. Norepinephrine is formed from TYROSINE and converted to epinephrine. It was discovered by Ulf von Euler-Chelpin (1905–83) in the mid-1940s.

Norfolk \'nȯr-fək\ Administrative and historic county (pop., 2001: 796,733), eastern England. Bounded by Suffolk (south), Cambridgeshire and Lincolnshire (west), and the North Sea (north and east), it is low-lying and has reed swamps, including the famous Broads that resulted from medieval peat cutting and a subsequent change in sea level. Paleolithic, Mesolithic, and Neolithic artifacts have been found, including impressive STONE AGE flint mines in Breckland. In the Middle Ages the region's prosperity depended mainly on wool. Among the county's most important cities is NORWICH. The economy is now largely agricultural.

Norfolk City (pop., 2000: 234,403), southeastern Virginia, U.S. A port of entry on the Elizabeth River, it is located just south of HAMPTON ROADS. Founded in 1682, it was incorporated as a borough in 1736. It was destroyed by fires in 1776 and 1799. YELLOW FEVER killed 10% of the population in 1855. During the AMERICAN CIVIL WAR the city was occupied by Union troops. Prosperity resumed after 1870 when railroads linked the port to other trade centres. With NEWPORT NEWS and PORTSMOUTH it makes up the Port of Hampton Roads. Shipping, shipbuilding, and light industry are the major economic activities. Norfolk is the headquarters of the U.S. Atlantic Fleet and NATO's Supreme Allied Command, Atlantic.

Norfolk, Thomas Howard, 2nd duke of (b. 1443—d. May 21, 1524, Framlingham, Suffolk, Eng.) English noble prominent in the reigns of HENRY VII and HENRY VIII. Son of the 1st duke of Norfolk, he was made steward of the royal household and created earl of Surrey in 1483. While fighting for RICHARD III, he was taken prisoner (and his father killed) in the Battle of BOSWORTH FIELD. After his release in 1489, he commanded the defense of the Scottish borders and later defeated the Scots at the Battle of FLODDEN. Norfolk later served as lord treasurer and a privy councillor, and he helped arrange the marriage of MARGARET TUDOR to JAMES IV of Scotland. In 1520 he was guardian of England during Henry VIII's absence in France.

Norfolk, Thomas Howard, 3rd duke of (b. 1473—d. Aug. 25, 1554, Kenninghall, Norfolk, Eng.) English noble prominent in the reign of HENRY VIII. Son of the 2nd duke of NORFOLK, he was made lord high admiral in 1513 and helped rout the Scots at the Battle of FLODDEN. Succeeding his father as duke (1524), he led the faction opposed to Cardinal WOLSEY, whom he replaced as president of the royal council in 1529. He supported the marriage of his niece ANNE Boleyn to Henry (1533), but later (as lord high steward) he presided over her trial (1536). He skillfully suppressed the PILGRIMAGE OF GRACE rebellion and by 1540 was the most powerful of Henry's councillors. His position weakened after his niece CATHERINE Howard was put to death (1542) and his son Henry Howard (1517–47) was executed for treason. Imprisoned as an accessory to his son, he was released by Queen MARY in 1553.

Norfolk, Thomas Howard, 4th duke of (b. March 10, 1538, Kenninghall, Norfolk, Eng.—d. June 2, 1572, London) English noble executed for his intrigues against Queen ELIZABETH I. He was the grandson of the 3rd duke of NORFOLK, whom he succeeded as duke in 1554. In favour with both Queen MARY and Queen Elizabeth, Norfolk commanded the English forces that invaded Scotland in 1559–60. He led the commission to resolve problems between MARY, QUEEN OF SCOTS, and Scotland's Prot-

© 2006 Encyclopædia Britannica, Inc.

estant nobility (1568). He became involved in a plan to free Mary from imprisonment by marrying her and was arrested after a failed revolt by Catholic nobles (1569). Released in 1570, Norfolk was drawn into another plot to install Mary on the English throne through a Spanish invasion of England; discovery of the plot led to his arrest and execution.

Norfolk Island Island territory of Australia, southern Pacific Ocean. Located midway between New Caledonia and New Zealand, the island has an area of 13 sq mi (35 sq km). Discovered by Capt. James Cook in 1774, it became a British penal colony (1788–1814, 1825–55). The population of Pitcairn Island was moved here in 1856, and many residents of Norfolk Island are descended from crew members of HMS *Bounty*. Of volcanic origin, it has generally rugged terrain with abundant Norfolk Island pine. The major industry is tourism.

Norfolk Island pine Evergreen timber and ornamental conifer (*Araucaria excelsa*, or *A. heterophylla*) of the family Araucariaceae, native to Norfolk Island in the South Pacific Ocean. In nature this pine grows to a height of 200 ft (60 m), with a trunk sometimes reaching 10 ft (3 m) in diameter. The wood of large trees is used in construction, furniture, and shipbuilding. The sapling stage is grown worldwide as a houseplant and as an outdoor ornamental in regions with a Mediterranean climate. The monkey puzzle tree is a relative.

Norfolk Island pine (*Araucaria excelsa*).

Noricum Ancient kingdom and Roman province, west-central Europe. It was located roughly south of the Danube River and north of modern Italy. Originally controlled by a Celtic confederacy, it was annexed by Augustus c. 15 BC. Its rich iron and gold mines were worked by the Romans. Latin inscriptions on coins indicate a Romanized culture. Emperor Claudius enhanced the significance of several of Noricum's towns and recruited soldiers from the area for the Praetorian Guard c. AD 50. The Franks settled there by the end of the 5th century AD.

Noriega \ˌnȯr-ē-ˈä-gə\ (Morena), Manuel (Antonio) (b. Feb. 11, 1938, Panama City, Pan.) Panamanian general who was the actual power behind a civilian president. Born into a poor family, he attended military school in Peru and joined Panama's National Guard on his return. As chief of military intelligence in the 1970s, he cooperated with the Central Intelligence Agency and negotiated the release of U.S. freighter crews held by Cuba, but he was tainted by persistent reports of drug trafficking and brutality. In 1989, as head of the armed forces, he canceled election results that displeased him. The U.S. government then invaded Panama, primarily to capture Noriega. He was brought to trial in the U.S., convicted of racketeering, drug trafficking, and money laundering, and sentenced to 40 years in prison. His jail term was later reduced.

normal distribution In statistics, a frequency distribution in the shape of the classic bell curve. It accurately represents most variations in such attributes as height and weight. Any random variable with a normal distribution has a mean (see mean, median, and mode) and a standard deviation that indicates how much the data as a whole deviate from the mean. The standard deviation is smaller for data clustered closely around the mean value and larger for more dispersed data sets.

Norman Any of the Vikings, or Norsemen, who settled in northern France (or the Frankish kingdom) and their descendants. As pagan pirates from Denmark, Norway, and Iceland, they raided the European coast in the 8th century. They settled in the lower Seine valley by c. 900. In 911 they were granted territory around what is now Rouen by King Charles III and then extended their territory westward. They founded the duchy of Normandy, governed by a line of rulers who called themselves counts or dukes of Normandy. Though the Normans converted to Christianity and adopted the French language, they continued to display their Viking ancestors' recklessness and appetite for conquest. In the 11th century they seized England in the Norman Conquest and colonized southern Italy and Sicily. The Normans also participated in the reconquest of Spain and in the Crusades, and the Normans of Italy and Sicily were rivals of the Byzantine emperors.

Norman, Greg(ory John) (b. Feb. 10, 1955, Mount Isa, Queen., Austl.) Australian golfer. After losing the 1984 U.S. Open in an 18-hole playoff, he won the British Open in 1986 and repeated that victory in 1993. Nicknamed "the Great White Shark" for his light blond hair and his aggressive style, he had compiled 78 career individual victories by 1998. Though he was one of the top PGA career money winners, victory in the most prestigious tournaments often eluded him—he lost the Masters Tournament by one stroke in 1986 and 1987 and has been the runner-up in eight major tournaments. His gracious attitude after his loss to Nick Faldo in the 1996 Masters won him a large number of fans.

Norman, Jessye (b. Sept. 15, 1945, Augusta, Ga., U.S.) U.S. soprano. She won the Munich International Music Competition in 1968 and debuted in Berlin as Elisabeth in *Tannhäuser* (1969). She appeared at La Scala, Milan, in 1972 and made recital debuts in London and New York City the next year. Having garnered extraordinary praise for years, she made her Metropolitan Opera debut in *Les Troyens* in 1983, confirming her reputation as perhaps the greatest soprano of her generation. An imposing stage presence with a vibrant and flexible voice, her operatic and concert repertoire encompasses an exceptionally wide range.

Norman Conquest (1066) Military conquest of England by William, duke of Normandy (later William I), mainly through his victory over Harold II at the Battle of Hastings. Edward the Confessor had designated William as his successor in 1051. When Harold, duke of Wessex, was crowned king of England in 1066 instead, William assembled an invasion force of 5,000 knights. After defeating Harold's army near Hastings on October 14 and advancing to London, he was crowned king in Westminster Abbey on Christmas Day, 1066. Native revolts continued until 1071, notably in Northumbria. The Norman Conquest brought great social and political changes to England, linking the country more closely with western Europe and replacing the old English aristocracy with a Norman aristocracy. The English language was subjected to a long period of influence by Anglo-French, which remained in literary and courtly use until the reign of Edward III and in legal reporting until the 17th century.

Normandy *French* **Normandie** \nȯr-mä^{n}-ˈdē\ Historic and cultural region, northwestern France. The capital was Rouen. It has been inhabited since Paleolithic times. Its Celtic population was conquered by the Romans c. 56 BC, when it became part of the province of Lugdunensis. Invaded by Vikings in the 8th century AD, it was ceded to their chief, Rollo, in 911 by Charles III (the Simple) of France. The Vikings became known as Normans, hence the region's name. William, duke of Normandy, united Normandy and England (Norman Conquest, 1066) and became William I (the Conqueror) of England. Normandy became a province of France in 1450 and was divided into several departments after the French Revolution. It was the site of the World War II Allied invasion of German-occupied France in 1944 (see Normandy Campaign). The region has retained its rural character despite the growth of towns along the lower Seine valley.

Normandy Campaign Allied invasion of northern Europe in World War II that began on June 6, 1944, with the largest amphibious landing in history in Normandy, France. Also called Operation Overlord, the landing transported 156,000 U.S., British, and Canadian troops across the English Channel in over 5,000 ships and 10,000 planes. Commanded by Gen. Dwight D. Eisenhower, the Allied forces landed at five beaches on the Normandy coast and soon established lodgement areas, despite stiff German resistance and heavy losses at the code-named Omaha Beach and Juno Beach. Allied air supremacy prevented rapid German reinforcements, and discord between Adolf Hitler and his generals stalled crucial counterattacks. Though delayed by heavy fighting near Cherbourg and around Caen, the Allied ground troops broke out of the beachheads in mid-July and began a rapid advance across northern France. The Normandy Campaign is traditionally considered to have concluded with the liberation of Paris on Aug. 25, 1944.

Norodom \ˈnȯr-ə-dəm *orig.* **Vody** (b. 1834, Cambodia—d. April 24, 1904, Phnom Penh) King of Cambodia (r. 1860–1904). Cambodia had been under the joint vassalage of Vietnam and Siam (Thailand) since 1802. After the death of Norodom's father in 1860, the Siamese asserted sole dominion over Cambodia by refusing to allow the Vietnamese to participate in Norodom's crowning. France opposed Siamese claims on the country and forced Norodom to accept French protection. He was crowned in 1864, and during his reign France dominated Cambodian affairs.

Norodom Sihanouk \ˌsē-ə-ˈnük\ *in full* **Preah Bat Samdech Preah Norodom Sihanouk** (b. Oct. 31, 1922, Phnom Penh, Camb.) Cambodia's king (1941–55 and 1993–2004); he also held other posts. He abdicated in favour of his father in 1955, becoming his father's prime minister; he became head of state on his father's death in 1960. During the Vietnam War he steered a neutral course between the radical right and left in both his foreign and internal policies. Overthrown by Lon Nol in 1970, he campaigned for the Khmer Rouge but was imprisoned after they came to power, and most of his family was killed. Released in the face of a Vietnamese invasion (1979), he denounced both the Vietnamese and the Khmer Rouge. In 1982 he became president of a fragile coalition of resistance groups. Following UN-sponsored elections in 1993, Cambodia's National Assembly voted to restore the monarchy, and Sihanouk again became king. He abdicated on Oct. 7, 2004, and his son Norodom Sihamoni, chosen to succeed him, was crowned king on October 29.

Norris, (Benjamin) Frank(lin) (b. March 5, 1870, Chicago, Ill., U.S.—d. Oct. 25, 1902, San Francisco, Calif.) U.S. novelist and short-story writer. Norris initially worked as an overseas correspondent and in publishing. He became the first important American author to embrace naturalism. *McTeague* (1899) is a portrait of an acquisitive society. He adopted a more humanitarian ideal beginning with his masterpiece, *The Octopus* (1901), the first novel of a projected trilogy dealing with the economic and social forces involved in the wheat industry. The second part, *The Pit*, appeared in 1903, but the third was unwritten at his death. Despite romanticizing tendencies, his works present a vivid, authentic picture of life in California in his day.

Norris, George W(illiam) (b. July 11, 1861, Sandusky, Ohio, U.S.—d. Sept. 2, 1944, McCook, Neb.) U.S. politician. He served in the U.S. House of Representatives from 1903 to 1913. In the U.S. Senate (1913–43) he drafted the 20th Amendment to the Constitution of the United States, which abolished the so-called lame-duck session of Congress. He also worked for the introduction of presidential primaries and for direct election of U.S. senators. He introduced the bill establishing the Tennessee Valley Authority and coauthored the Norris-La Guardia Act, which restricted the use of injunctions in labour disputes. An independent Republican, he said he "would rather be right than regular."

Norsemen See Vikings

North, Alex (b. Dec. 4, 1910, Chester, Pa., U.S.—d. Sept. 8, 1991, Pacific Palisades, Calif.) U.S. film composer and conductor. North studied at the Curtis Institute and Juilliard. In the early 1930s he traveled to Moscow and became the sole American member of the Union of Soviet Composers. He composed ballet scores for Martha Graham and others and later studied and conducted in Mexico City. North's score for *A Streetcar Named Desire* (1951), the first jazz-based film score, brought him to prominence. His dozens of films over 30 years include *Spartacus* (1960), *Who's Afraid of Virginia Woolf?* (1966), and *Prizzi's Honor* (1985).

North (of Kirtling), Frederick, Lord *later* **earl of Guilford** (b. April 13, 1732, London, Eng.—d. Aug. 5, 1792, London) English prime minister (1770–82). Elected to Parliament at age 22, he served as lord of the treasury (1759–65) and as chancellor of the Exchequer (1767–70). As prime minister, he gave vacillating support to both harsh and conciliatory measures toward the American colonies before the American Revolution. Although only a halfhearted supporter of the war, he was a pliant agent of George III. He resigned on hearing the news of Charles Cornwallis's defeat at the Siege of Yorktown. In 1783 he formed a brief coalition with his former Whig opponent Charles James Fox.

North, Simeon (b. July 13, 1765, Berlin, Conn., U.S.—d. Aug. 25, 1852, Middletown, Conn.) U.S. firearms manufacturer. He supplied pistols and rifles to the U.S. government from 1799. He developed the use of interchangeable parts in manufacturing (see armoury practice; mass production) and the first-known milling machine. In 1825 he built a breech-loading rifle with fully interchangeable parts.

North Africa campaigns (1940–43) Battles in World War II for control of North Africa. After the 1940 victory by Italian troops in Egypt, the Italians were driven back into Libya by British troops. German reinforcements led by Erwin Rommel forced the British to retreat into Egypt after the defense of Tobruk. In 1942 the British under Bernard Law Montgomery counterattacked at the Battles of El Alamein and pushed the Germans west into Tunisia. In November 1942 U.S. and British forces under Dwight D. Eisenhower landed in Algeria and Morocco, then moved east into Tunisia. In May 1943 the Allies, advancing from east and west, defeated the Axis forces and forced the surrender of 250,000 Axis troops.

North America Continent, Western Hemisphere. The third-largest continent on earth, it lies mostly between the Arctic Circle and the Tropic of Cancer. It is almost completely surrounded by bodies of water, including the Pacific Ocean, the Bering Strait, the Arctic Ocean, the Atlantic Ocean, and the Caribbean Sea and Gulf of Mexico. Area: 9,361,791 sq mi (24,247,039 sq km). Population (2001 est.): 454,225,000. Shaped like an inverted triangle, North America was apparently the first continent to achieve its current approximate size and shape. Its geologic structure is built around a stable platform of Precambrian rock called the Canadian Shield. To the southeast are the Appalachian Mountains and to the west are the younger and much taller Cordilleras. These mountains extend the length of the continent and occupy about one-third of the total land area. The Rocky Mountains constitute the eastern Cordillera. The highest point is Mount McKinley. The Mississippi River basin, including its major tributaries, the Missouri and Ohio, occupies more than one-eighth of the continent's total area. Generally temperate climatic conditions prevail. Arable land accounts for about one-eighth of the land area and forests for about one-third. English, the primary language of the U.S., predominates, followed by Spanish; French is spoken in parts of Canada. Most of the continent's population of European descent is found in the U.S. and Canada. Intermarriage between whites and Indians was common in Mexico, and mestizos constitute about three-fifths of the Mexican population. North America has a mixture of developed, partly developed, and developing economies, adequate reserves of most metallic resources, and the world's largest reserves of cadmium, copper, lead, molybdenum, silver, and zinc. It is the world's leading food producer, largely because of mechanized and scientific farming in the U.S. and Canada. Among the continent's democratically governed states are Canada, Mexico, Costa Rica, and the U.S. The nations of North America have sought hemispheric unity as members of the Organization of American States, which also includes South American countries. They also sought stronger economic ties, and in 1992 Canada, the U.S., and Mexico signed the North American Free Trade Agreement (NAFTA), which called for the elimination of most tariffs and other trade barriers between the three countries. The first inhabitants were American Indians, who migrated from Asia about 20,000 years ago. The greatest pre-Columbian civilizations were in Mesoamerica (see Mesoamerican civilization) and included the Olmec, Maya, Toltec, and Aztec, who were conquered by the Spanish. The continent long remained sparsely settled and undeveloped. Beginning in the 17th century it underwent a profound transformation with the coming of Europeans and the Africans they introduced as slaves. The style of life became Latin American south of the Rio Grande and Anglo-American to the north, with enclaves of French culture in Canada and Louisiana. Slavery, practiced in the 16th–19th centuries, added a significant minority culture of African origin, especially in the U.S. and the Caribbean (see West Indies). The huge industrial economy of the U.S., its abundant resources, and its military strength give the continent considerable global influence. See map on following page.

North Atlantic Treaty Organization See NATO

North Canadian River River, south-central Oklahoma, U.S. It rises in a high plateau in New Mexico and flows east through the Texas and Oklahoma panhandles past Oklahoma City, joining the Canadian River in the Eufaula Reservoir. The North Canadian River is 800 mi (1,287 km) long. Above the mouth of the Wolf River, one of its tributaries, the North Canadian is know as Beaver River.

North Carolina State (pop., 2000: 8,049,313), southern Atlantic region, U.S. Lying on the Atlantic Ocean, it is bordered by Virginia, South Carolina, and Tennessee. It covers 52,671 sq mi (136,417 sq km); its capital is Raleigh. Ranges of the Appalachian Mountains, including the Great Smoky Mountains, are in the west; the Blue Ridge Mountains are in the east. Several Indian peoples inhabited the area before Europeans arrived. The coast was explored by Giovanni da Verrazzano in 1524, and the first English settlement in the New World was established at Roanoke Island in 1585. It formed part of the Carolina grant of 1663. A provincial congress in 1776 gave the first explicit sanction of independence by an American colony, and North Carolina was invaded by British troops in 1780. An original state of the Union, it was the 12th to ratify the Constitution. Its 18th-century agricultural economy based on slave labour continued into the 19th century. It seceded from the Union in 1861; fol-

lowing the American Civil War, it annulled the secession order and abolished slavery, and it was readmitted to the Union in 1868. In the 1940s its economy improved as some of the nation's largest military installations, including Fort Bragg, were located there. It has a large rural population but is also the leading industrial state of its region, and it has an expanding high technology industry in the Raleigh-Durham area. Products include tobacco, corn, and furniture.

North Carolina, Regulators of See Regulators of North Carolina

North Cascades National Park National park, northwestern Washington, U.S. Established in 1968 to preserve mountain snowfields, glaciers, alpine meadows, and lakes in the northern part of the Cascade Range, it covers an area of 504,781 acres (204,278 hectares). The Ross Lake National Recreation Area separates the park into two sections, the northern unit extending to the Canadian border and the southern unit adjoining the Lake Chelan National Recreation Area.

North Dakota State (pop., 2000: 642,200), U.S. Situated in the north-central region, it is bordered by Canada and the U.S. states of Minnesota, South Dakota, and Montana. It covers 70,704 sq mi (183,123 sq km); its capital is Bismarck. The Missouri River crosses it; the Red River forms its eastern boundary. There is evidence of prehistoric inhabitation throughout the state. At the time of European contact, it was inhabited by various tribes of Plains Indians. It became part of the U.S. with the Louisiana Purchase of 1803. The northeastern corner was added by a treaty with Great Britain in 1818. In 1804–05 the Lewis and Clark Expedition wintered there among the Indians. In 1861 it became part of the Dakota Territory. Separated from South Dakota, it was admitted to the Union in 1889 as the 39th state. In the 20th century North Dakota's history was marked by the increasing mechanization of agriculture, the enlargement of farms, and the loss of a rural population. In the 1950s it became an oil-producing state, and in the 1960s air bases and missile sites were built there. Its larger cities include Fargo, Grand Forks, and Minot.

North Down District (pop., 2001: 76,323), eastern Northern Ireland. Located on the southern shores of Belfast Lough, it was established in 1973, with Bangor as its administrative seat. Most of the working population is employed in Belfast. Tourism flourishes, and Bangor is a popular seaside resort.

North German Confederation (1867–71) Union of the German states north of the Main River, formed after Prussia's victory in the Seven Weeks' War. The confederation recognized the individual states' rights but was effectively controlled by Prussia, whose king served as its president and whose chancellor was Otto von Bismarck. Its constitution served as a model for that of the German Empire, with which it merged in 1871.

North Island Island (pop., 2001 est.: 2,849,724), New Zealand. The smaller of the country's two principal islands, it is separated from South Island by the Cook Strait. It has an area of 44,702 sq mi (115,777 sq km). A growing majority of the population of New Zealand lives on North Island, concentrated in the cities of Wellington and Auckland.

North Korea See North Korea

North Platte River River, Colorado, Wyoming, and Nebraska, U.S. One of the two main arms of the Platte River, it rises in northern Colorado, flows north into Wyoming, then turns east and southeast across the Nebraska border to join the South Platte and form the Platte. It is 680 mi (1,094 km) long and is part of an irrigation, power, and flood-control project of the Missouri River basin. It has large reservoirs and dams.

North Pole Northern end of the Earth's geographic axis, located at latitude 90° N. It is the northern point from which all meridians of longitude start. Lying in the Arctic Ocean and covered with drifting pack ice, it has six months of constant sunlight and six months of total darkness each year. Robert E. Peary claimed to have reached the pole by dogsled in 1909, but that is now in dispute; Roald Amundsen and Richard E. Byrd claimed to have reached it by air in 1926. The geographic pole does not coincide with the magnetic North Pole, which in the early 21st century lay at about 82°45′ N, 114°25′ W, or with the geomagnetic North Pole, which is at about 79°45′ N, 71°45′ W.

North Sea *ancient* **Mare Germanicum** Arm of the Atlantic Ocean. Extending south from the Norwegian Sea between Norway and the British Isles, it connects the Skagerrak (channel between Norway and Denmark) with the English Channel. It is about 600 mi (970 km) long and 350 mi (560 km) wide, with an average depth of 308 ft (94 m). Parts of the sea feature deep trenches, while others have excellent fishing, renowned fisheries, and extensive oil and natural gas deposits.

North Star See Polaris

North West Co. (1783–1821) British-Canadian fur-trading company. Its operations were centred around the Lake Superior region and the valleys of the Red, Assiniboine, and Saskatchewan rivers. It later spread north and west to the Arctic and Pacific oceans. When its competitor, the Hudson's Bay Co., established a colony on the Red River (1811–12), North West workers destroyed the colony in the Seven Oaks Massacre. Hudson's Bay workers retaliated by destroying the North West post at Fort Gibraltar. The British government pressured the two companies to merge in 1821 as the Hudson's Bay Co.

North York Former city (pop., 2001: 608,288), southeastern Ontario, Canada. In 1998 it joined the cities of Etobicoke, Scarborough, Toronto, and York and the borough of East York to become the City of Toronto. North York became a borough in 1967 and a city in 1979. Planned industrial and residential development protects more than 4,000 acres (1,620 hectares) of parks and open space. York University and the Black Creek Pioneer Village are among its attractions.

North Yorkshire Administrative (pop., 2001: 569,660) and geographic county, part of the historic county of Yorkshire, northern England. Its administrative seat is Northallerton. Prehistoric sites show evidence of a military Roman occupation. In the Middle Ages it was a peripheral region of England with numerous castles of the great landowning families. Monastic orders, including the Cistercians, grew wealthy from sheep farming. The area played a significant part in the Wars of the Roses and the English Civil Wars. The modern economy is mainly agricultural.

Northampton Town and borough (pop., 2001: 194,477), administrative and historic county of Northamptonshire, in the Midlands region, England. Originating c. 1100 as a walled town with a castle, it was granted its first charter in 1189. In 1460, during the Wars of the Roses, King Henry VI was captured in Northampton by Yorkists. The town walls survived until the Restoration, when they were torn down under King Charles II as punishment for supporting the Parliamentarians. Now a retail and marketing centre, it also supports light industry.

Northampton, Henry Howard, earl of (b. Feb. 25, 1540, Shottesham, Norfolk, Eng.—d. June 15, 1614, London) English noble noted for his intrigues in the reigns of Elizabeth I and James I. Younger brother of the 4th duke of Norfolk, he was implicated in efforts to free Mary, Queen of Scots. He successfully sought favour with the Scottish king James VI, who, on his accession as James I of England, made Howard a privy councillor (1603) and earl of Northampton (1604). As a judge at the trials of Walter Raleigh (1603) and Guy Fawkes (1605), he pressed for conviction.

Northamptonshire \nôr-'thamp-tən-ˌshir\ Administrative (pop., 2001: 629,676) and historic county of the East Midlands region, England. It has remains of early settlements, including pre-Celtic and Roman. Norman and early English building styles coexist with mansions and country

© 2006 Encyclopædia Britannica, Inc.

houses from as early as the 13th century. The county was largely pro-Parliament during the English Civil Wars. It combines traditional rural life with a modern economy of varied industries in centres such as Northampton, the county seat, and Corby.

Northcliffe (of Saint Peter), Alfred Charles William Harmsworth, Viscount (b. July 15, 1865, Chapelizod, near Dublin, Ire.—d. Aug. 14, 1922, London, Eng.) British newspaper publisher. After an impoverished childhood and a few attempts to make a quick fortune, he joined his brother, Harold Sidney Harmsworth (1868–1940), in publishing popular periodicals that formed the basis of Amalgamated Press, at the time the world's largest periodical publishing empire. In 1896 he started the *Daily Mail*, one of the first British newspapers to popularize its coverage to appeal to a mass readership. He also founded the *Daily Mirror* (1903) and bought *The Times* (1908), transforming it into a modern newspaper. His influence was greatest in shifting the press away from its traditional informative role to that of the commercial exploiter and entertainer of mass publics. He has been considered the most successful publisher in the history of the British press.

Northeast Passage Maritime route along the northern coast of Europe and Asia. It lies between the Atlantic and Pacific oceans mainly off northern Siberia. Early explorers included Willem Barents, Olivier Brunel, and Henry Hudson. In 1778 Capt. James Cook saw both sides of the Bering Strait and demonstrated that Asia and North America are two separate continents. The passage was first traversed by Adolf Erik Nordenskiöld in 1878–79. Since the late 1960s it has been kept open in summer by icebreakers.

Northern Dvina \dvē-'nä\ **River** *Russian* **Severnaya** \'sye-vyir-nə-yə\ **Dvina** River, northern Russia. Formed by the junction of the Sukhona and Yug rivers, it is one of the largest and most important waterways of the northern European part of Russia. It flows northwest for 462 mi (744 km) and enters the Dvina inlet of the White Sea below the city of Arkhangelsk. Navigable for most of its length, it was used by early fur hunters and colonists, and monasteries and towns were established at important confluences. It retains its economic importance and is linked with the Volga-Baltic Waterway via the Sukhona River.

Northern Expedition (1926–27) Campaign of the Chinese Nationalist army, led by Chiang Kai-shek, that advanced north from Guangzhou (Canton) to the Yangtze River (Chang Jiang) battling warlord forces. The Northern Expedition was aided by Soviet arms and advisers and by a propaganda corps that preceded them. After defeating the warlords, the Nationalist army turned on Britain as the chief imperialist power and primary enemy. In response, the British returned their concessions in Hankou and Jiujiang but prepared to defend Shanghai. The alliance between the communists and the Nationalists fell apart at that point: when communist-led labour unions captured Shanghai for Chiang he attacked and suppressed them, and when he set up his new government in Nanjing he expelled the communists from it. See also Zhang Zuolin.

Northern Ireland Part of the United Kingdom of Great Britain and Northern Ireland occupying the northeastern portion of the island of Ireland. Area: 5,461 sq mi (14,144 sq km). Population (2001): 1,685,267. Capital: Belfast. It is bounded by the republic of Ireland, the Irish Sea, the North Channel, and the Atlantic Ocean. Northern Ireland is often referred to as the province of Ulster. The people are descended from indigenous Irish and immigrants from England and Scotland. Language: English (official). Religions: Protestantism (the majority) and Roman Catholicism (a minority). Currency: pound sterling. Northern Ireland's industries include engineering, shipbuilding (which has been in severe decline), automobile manufacturing, textiles, food and beverage processing, and clothing. The service industry employs about three-fourths of the workforce, and manufacturing employs less than one-fifth of workers. Agriculture is important, with most farm income derived from livestock. Northern Ireland shares most of its history with the republic of Ireland, though Protestant English and Scots immigrating in the 16th–17th centuries tended to settle in Ulster. In 1801 the Act of Union created the United Kingdom, which united Great Britain and Ireland. In response to mounting Irish sentiment in favour of Home Rule, the Government of Ireland Act was adopted in 1920, providing for two partially self-governing units in Ireland: the northern six counties constituting Northern Ireland and the southern counties now making up the republic of Ireland. In 1968 civil rights protests by Roman Catholics sparked violent conflicts with Protestants and led to the occupation of the province by British troops in the early 1970s. The Irish Republican Army (IRA) mounted a prolonged campaign of violence in an effort to force the withdrawal of British troops as a prelude to Northern Ireland's unification with Ireland. In 1972 Northern Ireland's constitution and parliament were suspended, bringing the province under direct rule by the British. Violence continued for three decades before dropping off in the mid-1990s. In 1998 talks between the British government and the IRA resulted in a peace agreement that provided for extensive Home Rule in the province. In 1999 power was devolved to an elected assembly, though the body was hampered by factional disagreements. Sporadic sectarian strife continued in the early 21st century, as the IRA gradually carried out decommissioning (disarming).

Northern Mariana Islands Self-governing commonwealth (pop., 2005 est.: 80,400) in political union with the U.S., in the western Pacific Ocean. Composed of 22 islands north of Guam, the Northern Marianas extend 450 mi (720 km) and have an area of 184 sq mi (477 sq km). The capital, Chalan Kanoa, is on Saipan. Saipan, Tinian, and Rota are the principal inhabited islands. Others include Alamagan and Agrihan; Pagan was evacuated for a time after a 1981 volcanic eruption. The indigenous people are Micronesian; other inhabitants are Chamorro and Filipino. The islands were discovered by Ferdinand Magellan in 1521. They were colonized by Spain in 1668. Sold by Spain to Germany in 1899, they were occupied by Japan in 1914 and became a Japanese mandate from the League of Nations after 1919. They were the scene of fierce fighting in World War II; Tinian was the base for U.S. planes that dropped atomic bombs on Hiroshima and Nagasaki. The Northern Marianas were granted to the U.S. as a UN trust territory in 1947 and became self-governing in 1978 (when the residents became U.S. citizens). The UN trusteeship ended in 1986.

Northern Pacific Railway Co. Major U.S. railroad that operated between St. Paul and Seattle. It was chartered by Congress in 1864 to build a line from Lake Superior to the Pacific coast. Financed by Jay Cooke until 1873, it was later completed with Henry Villard's backing. Financially troubled in the 1890s, it was reorganized by J. P. Morgan. He shared control of it with James J. Hill, whose Great Northern Railway Co. was a competitor and who sought to combine the two railroads with the Chicago, Burlington and Quincy through the Northern Securities Co. This arrangement was declared a violation of antitrust laws by the Supreme Court in 1904, but the three railroads remained financially linked and in 1970 were permitted to merge as the Burlington Northern, Inc. Burlington Northern acquired the St. Louis-San Francisco Railway Co. in 1980 and the Santa Fe Pacific Corp. in 1995.

Northern Rhodesia See Zambia

Northern Territory Territory (pop., 2001 prelim.: 200,019), northern Australia. It covers an area of 520,900 sq mi (1,349,130 sq km). Its capital is Darwin; the only other sizable town is Alice Springs. Most of the people are of European descent; about one-fifth are Australian Aboriginals. It consists mainly of tableland, with the Simpson Desert in the southeast and the Arnhem Land plateau in the north. It was inhabited by Aboriginals for thousands of years; they held Ayers Rock as central to their culture. The coast was explored by the Dutch in the 17th century and surveyed in the early 19th century by Matthew Flinders. First included as part of New South Wales, it was annexed to South Australia in 1863. It reverted to being under direct control of the Commonwealth of Australia in 1911. The northern parts were bombed by the Japanese in World War II and occupied by Allied troops. It was granted self-government within the Commonwealth in 1978. It remains sparsely inhabited; its economy rests on cattle farming, mining, government services, and a growing tourism industry.

Northern War, First (1655–60) Final stage of the struggle over the Polish-Swedish succession. In 1655 the Swedish king Charles X Gustav declared war on Poland on the pretext that it refused to recognize him as king. In alliance with Brandenburg, Sweden invaded Poland with initial success, but when Russia, Denmark, and Austria declared war on Sweden, Brandenburg deserted to join the coalition. The Swedes were driven from Poland but later twice invaded Denmark. The war ended with the Polish sovereigns renouncing their claim to the Swedish throne and the Swedes acquiring Skåne from Denmark.

Northern War, Second *or* **Great Northern War** (1700–21) Military conflict to challenge Sweden's supremacy in the Baltic area. Sweden's expansion in the Baltic Sea coastlands antagonized Russia, Denmark-Norway, and Saxony-Poland, which formed an anti-Swedish coalition in 1698. They attacked Swedish-held regions in 1700, but Sweden's Charles XII successfully countered the attacks and restored the sta-

© 2006 Encyclopædia Britannica, Inc.

tus quo. The Russians eventually succeeded in establishing their power on the eastern Baltic coast, and Peter I the Great founded his new capital of St. Petersburg there in 1703. Sweden renewed its attack on Russia in 1707, but was defeated at the Battle of Poltava (1709). Despite an alliance with Turkey against Russia (1710–11), Swedish forces suffered defeats in its territories by the revived anti-Swedish coalition, which by then included England and Prussia. Charles opened peace negotiations in 1717, but in 1718 he invaded southeastern Norway, where he was killed. His successor, Frederick I (1676–1751), negotiated peace settlements in 1719–21, including the Treaty of Nystad, which ceded Estonia, Livonia, and other territory to Russia. The war marked the decline of Swedish influence and the emergence of Russia as a major power.

Northern Wei dynasty *or* **Toba dynasty** (AD 386–534/35) Longest-lived and most powerful of the northern Chinese dynasties that ruled after the Han dynasty fell and before the Sui and Tang dynasties reunified China. Founded by Toba tribesmen, the Northern Wei defended its territory against other northern nomads and by 439 had unified all of northern China. The Wei lifestyle became more sedentary, and the Toba people, impressed by Chinese culture, began to emulate the Chinese. To bring into cultivation land abandoned during war, hundreds of thousands of peasants were relocated and allocated land under the equal-field system of land distribution. The rulers of the Northern Wei were great patrons of Buddhism, and the period is noted for its Buddhist art, particularly at the caves of Yungang. The one exception, the emperor Taiwu, persecuted Buddhists and supported Daoism.

Northern Wei sculpture Chinese sculpture, dominated by simple images of the Buddha, dating from the era of the Northern Wei dynasty (AD 386–534/535). The art represents the first major influence of Buddhism on China, and may be divided into two major periods. The first style (c. 452–494), an amalgam of foreign influences traceable to the Buddhist art of India, is characterized by heavy stylization of blocky volumes. The second style (c. 494–535) clothes the Buddha in the costume of the Chinese scholar and emphasizes a sinuous cascade of drapery falling over an increasingly flattened figure.

Northrop \'nȯr-thrəp**, John Howard** (b. July 5, 1891, Yonkers, N.Y., U.S.—d. May 27, 1987, Wickenberg, Ariz.) U.S. biochemist. He worked most of his career on the staff of New York City's Rockefeller Institute for Medical Research (1916–61). His early research on fermentation processes led to a study of enzymes essential for digestion, respiration, and general life processes. He established that enzymes obey the laws of chemical reactions, and he crystallized pepsin, trypsin, and chymotrypsin and their zymogens. With James Sumner and Wendell Meredith Stanley he shared a 1946 Nobel Prize.

Northumberland Administrative (pop., 2001: 307,186) and historic county, northeastern England. It includes several islands, including Lindisfarne (Holy Island), and much of the ancient Anglo-Saxon kingdom of Northumbria. The landscape is varied, with coastal plains in the east, the rugged Cheviot Hills and moors in the west, and industrial areas in the southern River Tyne valley. It was the site of prehistoric settlement before the Roman domination began in AD 122, when Hadrian's Wall was built. It was the scene of border warfare with Scotland until the union of Scotland with England in 1603. Good farmland is limited; industrial complexes produce heavy machinery.

Northumberland, John Dudley, duke of (b. 1502—d. Aug. 22, 1553, London, Eng.) English politician. After serving as deputy governor of English-occupied Calais (1538) and lord high admiral (1542), he fought in the invasion of Scotland (1544) and captured the French city of Boulogne (1544). He was created earl of Warwick (1546) and in 1547 became a member of the regency council that governed for the young Edward VI. After engineering the fall of the duke of Somerset, Warwick assumed control of the regency (1550). He made himself duke of Northumberland in 1551 and ordered Somerset's arrest and execution in 1552. He imposed strict conformity to Protestant doctrine in support of the Reformation. In 1553 he persuaded the dying Edward VI to will the crown to Northumberland's daughter-in-law, Lady Jane Grey; thwarted by supporters of Mary Tudor (Mary I), he was arrested and executed for treason.

Northumbria Anglo-Saxon kingdom of Britain. Located between the River Humber and the Firth of Forth, it extended from the Irish Sea to the North Sea. Its religious, artistic, and intellectual achievements in the 7th–8th centuries were epitomized by such centres as Lindisfarne and the monasteries of Wearmouth and Jarrow. Jarrow, with its fine library, was the home of the Venerable St. Bede. After Northumbria's expansion in the 7th century, it became the most powerful of the Anglo-Saxon kingdoms before being destroyed by the Danes, who captured York in 866. In 944 the last Scandinavian ruler of York was expelled, and Northumbria became an earldom within the kingdom of England.

Northwest Coast Indian Any member of the North American Indian peoples inhabiting a narrow but rich belt of coastland and offshore islands from southeast Alaska to northwestern California. A signal feature of Northwest Coast society was the emphasis on each individual's hereditary social rank. A person's position within a local group depended on his genealogical closeness to the legendary group ancestor. For food the peoples of the area depended primarily on five species of salmon; herring; oil-rich "candlefish," or eulachon; smelt; cod; halibut; and mollusks—all of which were abundant. Water transport was highly important, and all groups made efficient dugout canoes. Northwest Coast woodworking was facilitated by the natural abundance of easily worked timbers, especially red cedar and redwood. Groups of the Northwest Coast include, from north to south, Tlingit, Haida, Tsimshian, northern Kwakiutl (Heiltsuq), Bella Coola, southern Kwakiutl, Nootka, Coast Salish, Chinook, and a series of lesser divisions.

Northwest Ordinances (1784, 1785, 1787) Measures enacted by the U.S. Congress for the division and settlement of the Northwest Territory, the frontier region extending north of the Ohio River to the Great Lakes and west of Pennsylvania to the Mississippi River. The original ordinance, written by Thomas Jefferson, divided the territory into self-governing districts and set population requirements for statehood. The final ordinance, written partly by Rufus King, set land-grant sizes and prices, provided public land for schools, outlawed slavery, and guaranteed civil liberties. It established the principle of admitting new states on equal terms with the original 13 states.

Northwest Passage Sea passage between the Atlantic and Pacific oceans along the northern coast of North America. The search for a commercial sea route around the American land barrier dates from the end of the 15th century and attracted explorers such as Jacques Cartier, Francis Drake, Martin Frobisher, and Capt. James Cook. The passage was finally navigated successfully in 1903–05 by Roald Amundsen. As a modern trade route it has been only marginally useful, because of the difficulties in navigating around the polar ice cap and the giant icebergs in the Atlantic between Greenland and Baffin Island and in the Pacific in the Bering Strait. The U.S. and Canadian governments have tried to encourage international commerce in the passage, noting how much it would shorten many international shipping distances. However, the cost of strengthening ships against ice and potentially high insurance rates for vessels used in Arctic service have been factors inhibiting the development of the Northwest Passage as a trade route.

Northwest Territories Territory (pop., 2001 est.: 40,900), northern Canada. Bounded by the Yukon Territory, Hudson Bay, and Nunavut, it stretches across the roof of the North American continent, reaching into the Arctic Circle. The capital is Yellowknife. It includes many islands, including Victoria Island; the Mackenzie River; and Great Bear and Great Slave lakes. More than half the people are Inuit (Eskimos) and American Indians. In the 18th century the mainland was explored by Samuel Hearne for the Hudson's Bay Company and by Alexander Mackenzie. European settlers were mainly whalers, fur traders, and missionaries until the 1920s, when oil was discovered and the territorial administration was formed. Mining is the principal industry and centres on the petroleum and natural gas fields in the western Arctic coastal regions.

Northwestern University Private university in Evanston, Illinois, U.S., founded in 1851. It is a comprehensive research institution that includes a college of arts and sciences and schools of music, education, social policy, graduate studies, law, medicine, and dentistry. It also includes the Medill School of Journalism, the McCormick School of Engineering and Applied Science, and the Kellogg Graduate School of Management. Research facilities include centres for the study of learning, urban affairs and policy, and superconductivity.

Norway *officially* **Kingdom of Norway** Country, western Scandinavian Peninsula, northern Europe. Area: 125,004 sq mi (323,758 sq km). Population (2005 est.): 4,617,000. Capital: Oslo. Most of the people are Norwegian, though there are several ethnic minorities, including some 30,000 to 40,000 Sami (Lapps). Language: Norwegian (official). Religion: Christianity (predominantly Evangelical Lutheran [official]). Currency:

© 2006 Encyclopædia Britannica, Inc.

Norwegian krone. Norway is among Europe's largest countries. It is a mountainous land with extensive plateau regions in its southwestern and central parts. Traditionally a fishing and lumbering country, it greatly increased its mining and manufacturing activities since World War II. It has a developed economy largely based on services, petroleum and natural gas production, and light and heavy industries. Literacy is virtually 100%. Norway is a constitutional monarchy with one legislative house; its chief of state is the king, and the head of government is the prime minister. Several principalities were united into the kingdom of Norway in the 11th century. It had the same king as Denmark from 1380 to 1814, when it was ceded to Sweden. The union with Sweden was dissolved in 1905, and Norway's economy grew rapidly. It remained neutral during World War I, although its shipping industry played a vital role in the conflict. It declared its neutrality in World War II but was invaded and occupied by German troops. Norway maintains a comprehensive welfare system and is a member of NATO. Its citizens rejected membership in the European Union in 1994.

Norway lobster See scampi

Norwegian language North Germanic language of the West Scandinavian branch, spoken by some five million people in Norway and the U.S. Old Norwegian became a separate language by the end of the 12th century. Middle Norwegian became the tongue of most native speakers about the 15th century. Modern Norwegian has two rival forms. Dano-Norwegian (Bokmål, or Riksmål), the more popular, stems from written Danish used during the union of Denmark and Norway (1380–1814; see Kalmar Union). It is used in national newspapers and most literary works. New Norwegian (Nynorsk), based on western rural dialects, was created by Ivar Aasen (1813–96) in the mid-19th century to carry on the tradition of Old Norse. Both languages are used in government and education. Plans to unite them gradually in a common language, Samnorsk, were officially abandoned in 2002.

Norwegian Sea Open sea, Northern Hemisphere. It is bordered by Greenland, Iceland, Spitsbergen, and Norway. A submarine ridge linking Greenland, Iceland, the Faroe Islands, and northern Scotland separates the Norwegian Sea from the Atlantic Ocean. The sea is crossed by the Arctic Circle, but the warm Norway Current that flows northeast off the Norway coast produces generally ice-free conditions. Colder currents mixing with this warm water create excellent fishing grounds.

Norwich \'nȯr-ich\ City (pop., 2001: 121,553), administrative and historic county, Norfolk, England. Located on the River Wensum northeast of London, it had become an important market centre when it was sacked and occupied by the Danes in the 11th century. It was among the most prosperous English provincial towns for centuries; its economy was fostered by Edward III, who induced Flemish weavers to settle there, and by the influx of immigrants during the reign of Elizabeth I. One of England's largest centres of footwear manufacturing, it features a Norman castle and cathedral. It is the traditional regional capital of East Anglia and the site of a cathedral founded shortly after the Norman Conquest.

nose Prominent structure between and below the eyes. With the complex nasal cavity behind it, it functions for breathing and smelling. Behind the front section (vestibule), which includes the nostrils, it is divided vertically by three convoluted ridges (conchae) into air passages. In the highest one, the olfactory region, a small segment of mucous membrane lining contains neurons covered by a moisture layer, in which microscopic particles in inhaled air dissolve and stimulate the neurons. The rest of the cavity warms and moistens inhaled air and filters particles and bacteria out of it. Sinus cavities in the bone on both sides of the nose drain into the air passages. During swallowing, the soft palate closes off the back of the nose against food.

Nossob \'nō-ˌsäb\ **River** *or* **Nosop** \'nō-ˌsäp\ **River** River, southern Africa. Rising in central Namibia, it flows southeast through the western Kalahari Desert and forms part of the border between Botswana and South Africa, bisecting the Kalahari Gemsbok National Park (now part of Kgalagadi Transfrontier Park). It joins the Auob River before emptying into the Molopo River, which flows into the Atlantic Ocean. It is about 500 mi (800 km) long. Because of irregular rainfall, in the 20th century the lower Nossob's riverbed contained flowing water only a few times.

nostoc \'nä-ˌstäk\ Any of the cyanobacteria that make up the genus *Nostoc*. The cells are arranged in beadlike chains grouped together in a gelatinous mass. Ranging from microscopic to walnut-sized, nostoc masses may be found on soil and floating in still water. A special thick-walled cell has the ability to withstand drying for long periods of time. After 70 years of dry storage, cells of one species can germinate into filaments when moistened. Like most other cyanobacteria, nostocs contain two pigments and are capable of nitrogen fixation.

Nostradamus \ˌnäs-trə-'dā-məs\ *orig.* **Michel de Notredame** (b. Dec. 14, 1503, Saint-Rémy, France—d. July 2, 1566, Salon) French astrologer and physician known for his prophecies. He practiced medicine in southern France from 1529 and gained a reputation for his innovative treatment of plague victims in 1546–47. He began making prophecies in 1547, and in 1555 they were published in a book titled *Centuries*. He wrote them in rhymed quatrains, using a cryptic style that mingled French, Latin, Spanish, and Hebrew. Catherine de Médicis invited him to her court as an astrologer, and in 1560 he was appointed physician to Charles IX. His prophecies are still widely read; readers have discovered apparent predictions of such world events as the French Revolution and World War I.

Nostratic \nȯ-'strat-ik\ **hypothesis** Proposal of an overarching northern Eurasian language family, still of uncertain validity. Holger Pedersen was the first to suggest that the Indo-European, Uralic, Altaic, Afroasiatic, and other language families might belong in one broad category (Nostratic). In the 1960s Vladislav Illich-Svitych made a detailed case in favour of the hypothesis and added Kartvelian (see Caucasian languages) and Dravidian to the list; he began reconstructing Proto-Nostratic but died in 1966 before finishing. Important contributions to this theory were also made by the Russian-born Israeli linguist Aron Dolgopolsky. The hypothesis remains highly controversial.

notary *or* **notary public** Public officer who certifies and attests to the authenticity of writings (e.g., deeds) and takes affidavits, depositions, and protests of negotiable instruments. The notary is commissioned by the state and may act only within the territory authorized by state statutes. Most states set maximum fees for notarial services and require that a notarial seal or stamp be impressed on documents authenticated by a notary public. In the civil-law countries of western Europe and in Latin American and French areas of North America, the role of the notary is more significant, being roughly equivalent to that of a lawyer who specializes in real estate, sales, mortgages, and the settlement of estates but who may not appear in court.

sula on the northern Honshu coast, it extends north for 50 mi (80 km) and has a width of about 19 mi (30 km). The town of Wajima, on the peninsula's northern coast, is known for its women pearl divers and its production of elaborate lacquerware. Parts of the peninsula were designated national park land in 1968.

Nôtre, André Le See André Le Nôtre

Notre Dame, University of Private university in Notre Dame, near South Bend, Indiana, U.S. It was founded in 1842 and reorganized in the 1920s; it became coeducational in 1972. It is affiliated with the Roman Catholic church. It has colleges of arts and letters, science, engineering, and business administration. It also has a graduate school and a law school.

Notre-Dame de Paris \nō-trᵊ-ˈdäm-də-pä-ˈrē\ (1163–c. 1350) Gothic cathedral on the Île de la Cité in Paris. Probably the most famous Gothic cathedral, Notre-Dame is a superb example of the Rayonnant style. Two massive Early Gothic towers (1210–50) crown the western facade, which is divided into three stories and has doors adorned with Early Gothic carvings and surmounted by a row of figures of Old Testament kings. The single-arch flying buttresses at the eastern end are notable for their boldness and grace. Its three great rose windows, which retain their 13th-century glass, are of awe-inspiring beauty.

Notre-Dame de Paris.

Notre-Dame school Composers of organum at the cathedral of Notre-Dame de Paris in the late 12th and early 13th centuries. Léonin (c. 1135–1201?) is credited with composing two-voice florid organum characterized by a rhythmically patterned "melisma" (a series of notes sung on one syllable) added to each sustained note of the plainchant (see Gregorian chant). He may have devised the rhythmic notation (ligatures) that made this possible or at least codified the important system of rhythmic modes. His younger contemporary Pérotin (fl. c. 1200) is said to have edited, extended, and added parts to Léonin's *Magnus liber organi* ("Great Book of Organum") and created the first three- and four-voice textures known in world music. See also Ars Antiqua.

Notte, Gherardo delle See Gerrit van Honthorst

Nottingham \ˈnä-tiŋ-em\ City and unitary authority (pop., 2001: 266,995), geographic and historic county of Nottinghamshire, north-central England. Located on the River Trent, northeast of Birmingham, the original Saxon town was held by the Danes in the 9th century and became part of the Danelaw. It was the scene of three parliaments in the 14th century. In 1642, on Standard Hill, King Charles I raised his standard at the outbreak of the English Civil Wars. Nottingham Castle stands on that site. The link between Nottingham and Robin Hood is commemorated by a statue on Castle Green. The city has a distinctive lace quarter. It is the site of the University of Nottingham.

Nottinghamshire \ˈnä-tiŋ-em-ˌshir\ Administrative (pop., 2001: 748,503), geographic, and historic county, East Midlands, north-central England. It has coalfields and railway lines in the west, and in its centre it contains a broad belt of infertile sandstone. It is the location of the medieval forest of Sherwood, the haunt of Robin Hood, which stretched north from the city of Nottingham. Farmland is found in the Vales of Trent and Belvoir, where agriculture includes dairy farming. The chief river is the Trent, along which there are numerous thermal electric power stations. The southwestern part of the county is densely populated and heavily industrialized.

Nouakchott \nù-ˈäk-ˌshät\ City (pop., 1999 est.: metro. area, 881,000), capital of Mauritania. It is on a plateau near the Atlantic coast of western African, north-northeast of Dakar, Senegal. It was a small village until Mauritania was granted full independence from France in 1960. Then the city was developed as the capital of the new nation. It was a major refugee centre during the Saharan droughts of the 1970s and grew rapidly. A port facility was built nearby for the export of petroleum and copper.

Nouméa \nü-ˈmā-ə\ *formerly* **Port-de-France** \ˌpȯr-də-ˈfräⁿs\ Town (pop., 1996: 76,293), port, and capital of New Caledonia territory. Located on the southwestern coast of New Caledonia Island, it was founded in 1854 as Port-de-France. The city is situated on an excellent deepwater harbour protected by Nou Island and a reef. It has modern buildings, a large public market, and St. Joseph's Cathedral, an old stone structure.

nouvelle cuisine \nü-ˈvel-kwi-ˈzēn\ Style in international cuisine developed in France in the 1960s and '70s that stresses freshness, lightness, and clarity of flavour, as distinct from the richer and more calorie-laden classic haute cuisine. Dishes commonly include sauces made of vegetable and fruit purees, novel combinations of foods in small quantities, and elegant displays highlighting details of texture and colour.

nova Any of a class of stars whose luminosity temporarily increases by several thousand up to a million times normal. Most appear to be close binary stars, one of which is a white dwarf star drawing in matter from the other until it becomes unstable, causing an outburst in which the outer layer of material is shed. A nova reaches maximum luminosity within hours after its outburst and may shine intensely for several days or even a few weeks; it then slowly returns to its former level. The process can repeat at intervals ranging from a few dozen to hundreds of thousands of years. Stars that become novas are usually too faint to see with the unaided eye until their sudden increase in luminosity, sometimes great enough to make them readily visible in the night sky. To observers, such objects may appear to be new stars; hence their name (Latin for "new"). See also supernova.

Nova Scotia \ˌnō-və-ˈskō-shə\ Province (pop., 2001: 943,000), Canada, one of the Maritime Provinces. It comprises the peninsula of Nova Scotia, Cape Breton Island, and a few small adjacent islands, and it is bounded by the Northumberland Strait, the Gulf of St. Lawrence, the Atlantic Ocean, the Bay of Fundy, and New Brunswick. Its capital is Halifax. The region was first visited by Vikings c. AD 1000 and was inhabited by Micmac Indians when John Cabot claimed it for England in 1497. French settlers in 1605 adopted the Micmac name Acadia for the region. English and Scottish colonists arrived by 1621. The conflict between France and England over control of the area was ended by the 1713 Peace of Utrecht, which awarded it to England. In the 1750s, the British expelled most of the French settlers. Following the American Revolution, many loyalists emigrated there. It joined the Dominion of Canada in 1867 as one of the original members. The province's economic mainstays are fishing, shipbuilding, and transatlantic shipping.

Novalis, detail of an engraving by Edouard Eichens, 1845
COURTESY OF THE STAATLICHE MUSEEN ZU BERLIN, GERMANY; PHOTOGRAPH, WALTER STEINKOPF

Novalis \nō-ˈvä-lis\ *orig.* **Friedrich Leopold, Baron von Hardenberg** (b. May 2, 1772, Oberwiederstedt, Prussian Saxony—d. March 25, 1801, Weissenfels, Saxony) German Romantic poet and theorist. Born into a noble family, he took his pseudonym from a former family name. He studied law and then mining and in 1799 became a mine inspector. His beautiful *Hymns to the Night* (1800) expresses his grief on the death of his young fiancée. In his last years before his own death from tuberculosis at age 28, he drafted a philosophical system based on idealism and produced his most

L | M | N

significant poetic work. His mythical romance *Heinrich von Ofterdingen* (1802) describes a young poet's mystical and romantic searchings.

Novara \nō-'vä-rä**, Battle of** (March 23, 1849) Battle of the first Italian war of independence at Novara, Italy, near Milan. Austrian troops under Joseph Radetzky defeated a larger Italian force under Charles Albert, king of Sardinia-Piedmont. The defeat revealed Piedmont's lack of support from the smaller Italian states and led to the abdication of Charles Albert.

Novartis AG Swiss pharmaceutical company. It was formed through the 1996 merger of two Swiss firms: Ciba (see Ciba-Geigy) and Sandoz, a chemical company with interests in pharmaceuticals, nutrition, and agriculture. Novartis's products include generic drugs, eye-care products, consumer health-care products, and pharmaceuticals. In 2002 the company created an ethics committee to evaluate research involving human stem cells.

novel Fictional prose narrative of considerable length and some complexity that deals imaginatively with human experience through a connected sequence of events involving a group of persons in a specific setting. The genre encompasses a wide range of types and styles, including picaresque, epistolary, gothic, romantic, realist, and historical novels. Though forerunners of the novel appeared in a number of places, including Classical Rome and 11th-century Japan, the European novel is usually said to have begun with Miguel de Cervantes's *Don Quixote*. The novel was established as a literary form in England in the 18th century through the work of Daniel Defoe, Samuel Richardson, and Henry Fielding. The typical elements of a conventional novel are plot, character, setting, narrative method and point of view, scope, and myth or symbolism. These elements have been subject to experimentation since the earliest appearance of the novel. Compare antinovel. See also novella; short story.

novella Story with a compact and pointed plot, often realistic and satiric in tone. Originating in Italy during the Middle Ages, it was often based on local events; individual tales often were gathered into collections. The novella developed into a psychologically subtle and structured short tale, with writers frequently using a frame story to unify tales around a theme, as in Giovanni Boccaccio's *Decameron*. The term is also used to describe a work of fiction intermediate in length—and sometimes complexity—between a short story and a novel. Examples of novellas include Fyodor Dostoyevsky's *Notes from the Underground* (1864), Joseph Conrad's *Heart of Darkness* (1902), Thomas Mann's *Death in Venice* (1912), and Henry James's *The Aspern Papers* (1888).

Noverre \nō-'ver**, Jean-Georges** (b. April 29, 1727, Paris, Fr.—d. Oct. 19, 1810, Saint-Germain-en-Laye) French dancer and choreographer. His treatise *Letters on Dancing and Ballets* (1760) stressed the need for unified dramatic structure by integrating story, music, choreography, and set design, as opposed to the loosely connected episodes of the dance suite that then prevailed. This innovative approach—called *ballet d'action*, or "ballet with a story"—brought major reforms in ballet production. His invention of *ballet d'action* was challenged by Gasparo Angiolini, who had developed a simpler approach to the new form. In 1776 Noverre became ballet master of the Paris Opéra.

Novgorod \'nȯv-gə-rət\ City (pop., 2002: 217,200), northwestern Russia. Located on the Volkhov River north of Lake Ilmen, it is one of the oldest Russian cities. First mentioned in the chronicles of AD 859, it came under Rurik c. 862. It was of great importance in the 11th to 15th centuries, when it was the capital of the principality of Novgorod. It prospered by trade with Central Asia, Byzantium, and the Hanseatic League. The centre of the Novgorod school of painting, it was ruled by Alexander Nevsky in the 13th century. It became a rival of Moscow, was destroyed by Ivan IV in 1570, and declined with the rise of St. Petersburg. It was held by the Germans in World War II and suffered heavy damage. Many historic buildings were later restored, and these were designated a UNESCO World Heritage site in 1992. The city is a centre of tourism.

Novgorod school Important school of Russian medieval icon and mural painting that flourished around Novgorod in the 12th–16th centuries. Novgorod, Russia's cultural centre in the 13th–14th centuries, when most of the rest of the country was occupied by the Mongols, preserved the Byzantine traditions that formed the basis of Russian art but introduced lighter and brighter colours, flatter forms, softening of facial types, and increasing use of a graceful, rhythmic line to define form. Until the early 14th century, artistic activity was dominated by mural painting. A new artistic impetus was provided by the introduction of the iconostasis. When icons were displayed together on the iconostasis rather than scattered about the walls of the church, they demanded a coherent overall impression, which was achieved by strong, rhythmic lines and colour harmonies. Figures took on the elongated shape that became standard in Russian art. In the 16th century artistic leadership passed to the Moscow school.

"Miracle of St. George over the Dragon," icon by an anonymous artist of the Novgorod school, egg tempera on panel, beginning of the 15th century; in the State Tretyakov Gallery, Moscow, I.A. Ostroukhov Collection
NOVOSTI PRESS AGENCY

Novi Sad \'nō-vē-'säd\ *Hungarian* **Újvidék** \'ü-ē-ˌvē-ˌdāk\ City (pop., 2000 est.: 179,626), Serbia, Serbia and Montenegro. The administrative capital of the autonomous region of the Vojvodina, it is a transit port on the Danube River, northwest of Belgrade. Founded in the 17th century, it was part of Hungary until the formation of Yugoslavia in 1918. The city is an ethnically diverse agricultural centre; its economy suffered badly during the 1990s Balkan upheavals.

Novosibirsk \ˌnō-vȯ-si-'birsk\ *formerly (1895–1925)* **Novonikolayevsky** City (pop., 2001 est.: 1,393,200), south-central Russia, in Asia. The capital of Novosibirsk province, it is the chief city of western Siberia and lies on the Ob River where the latter is crossed by the Trans-Siberian Railroad. The city began in 1893 and was named for Tsar Nicholas II in 1895. During World War II many Russian factories from the west were moved there. It is renowned for industry and scientific research. As Siberia's cultural and educational centre, it developed the satellite town Akademgorodok with research institutes and a university.

NOW See National Organization for Women

Noyce, Robert (Norton) (b. Dec. 12, 1927, Burlington, Iowa, U.S.—d. June 3, 1990, Austin, Texas) U.S. engineer. He received a Ph.D. from MIT. In 1957 he launched Fairchild Semiconductor, one of the first electronics firms in what came to be called Silicon Valley. Simultaneously but independently, he and Jack Kilby invented the integrated circuit computer chip in 1959. With his colleague Gordon Moore, he founded Intel Corporation. in 1968. In 1988 Noyce became president of Sematech, Inc., a research consortium formed and financed jointly by industry and the U.S. government to keep the U.S. semiconductor industry at the forefront of semiconductor manufacturing technology.

Noyes \'nȯiz**, John Humphrey** (b. Sept. 3, 1811, Brattleboro, Vt., U.S.—d. April 13, 1886, Niagara Falls, Ont., Can.) U.S. social reformer. While studying for the ministry at Yale, Noyes declared his belief in "perfectionism," announcing that he had achieved a state of sinlessness. Because his views were in direct opposition to the prevailing Calvinism, he was forced to leave Yale. In 1836 he organized a community of "Bible communists" in Putney, Vt., where he advocated free love and "complex" marriage as opposed to "simple," or monogamous, marriage. Arrested for adultery in 1846, he fled to Oneida, N.Y., where he established the Oneida Community, which he led until 1879, when he fled to Canada to avoid legal action. He wrote several books on perfectionism and a history of U.S. utopian communities.

Nozick, Robert (b. Nov. 16, 1938, Brooklyn, N.Y., U.S.—d. Jan. 23, 2002, Cambridge, Mass.) U.S. philosopher. He received a Ph.D. in philosophy at Princeton University in 1963 and taught at Harvard University from 1969 until his death. His best-known work, *Anarchy, State, and Utopia* (1974), is a closely argued and highly original defense of the libertarian "minimal state" (a state whose powers are limited to those necessary to protect citizens against violence, theft, and fraud) and a critique of the social-democratic liberalism of his Harvard colleague John Rawls. Against anarchism, Nozick argued that the minimal state is justified because it would arise in a state of nature through transactions that would not violate anyone's natural rights (see natural law); against liberalism and ideologies farther left, he argued that no more than the minimal state is justified because any state with more extensive powers would violate the

© 2006 Encyclopædia Britannica, Inc.

natural rights of its citizens. Nozick emphasized that the minimal state as he envisioned it could encompass smaller communities in which the central public authority would have more than minimal powers. Because each such community would be free to realize its own idea of the good society, the minimal state, according to Nozick, constitutes a "framework for utopia."

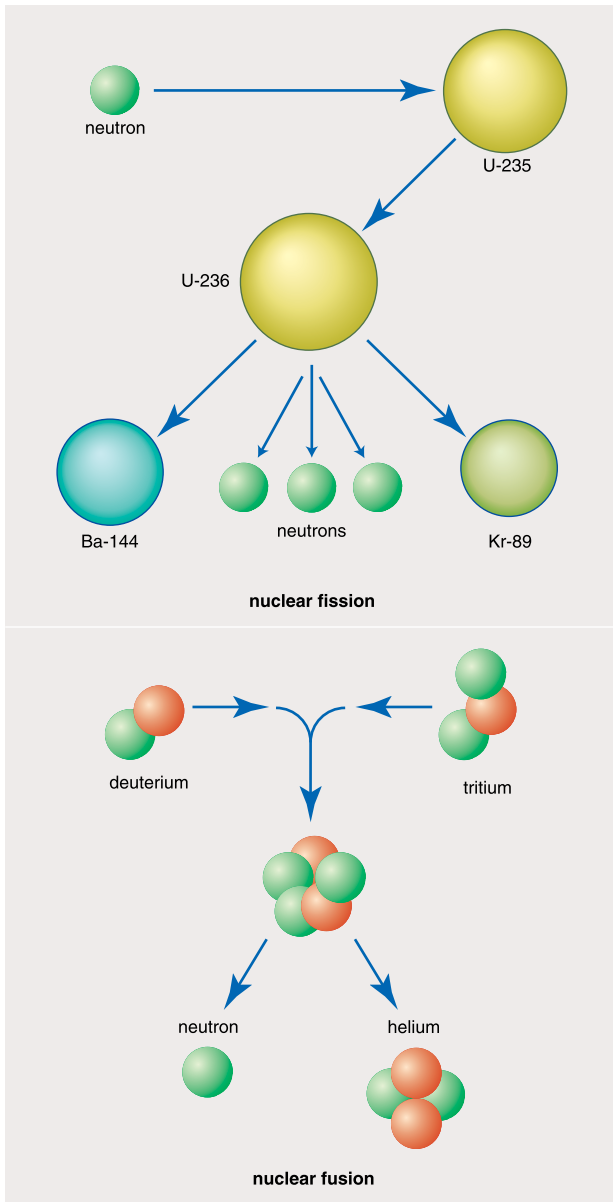
NSAIDs \'en-ˌsedz, 'en-ˌsādz\ *or* **nonsteroidal anti-inflammatory drugs** Drugs that reduce inflammation and are effective against pain (see analgesic) and fever. Most are available without prescription and are usually used for short periods for mild pain. Aspirin is technically an NSAID, but the term is generally applied to a newer class of drugs, including ibuprofen and similar drugs (e.g., naproxen, ketoprofen) that, like aspirin, inhibit prostaglandin synthesis. They act with fewer side effects, but aspirin-sensitive people should not use them.

Nu See Nun

Nu, U *orig.* **Thakin Nu** (b. May 25, 1907, Wakema, Burma—d. Feb. 14, 1995, Yangôn, Myanmar) Burmese independence leader and prime minister of Burma (Myanmar; 1948–58, 1960–62). A prominent nationalist activist since his student days, U Nu became the first prime minister of independent Burma in 1948. Though an able statesman, he was plagued by ethnic-minority insurrections and economic difficulties. He resigned in 1958, was reinstated in 1960, and was overthrown and imprisoned by Ne Win in 1962. After his release he organized resistance to Ne Win. He made an unsuccessful bid for power after Ne Win's government fell in 1988.

Nu River See Salween River

Nubia Ancient region of the Nile River valley, northeastern Africa. Its borders originally extended north to include Aswān and, before completion of the Aswan High Dam, the first cataract of the Nile in Upper Egypt. The region now encompasses part of The Sudan and southern Egypt and contains the Nubian Desert in the northeast. For about 1,800 years in ancient times it was politically dominated by Egypt, although Nubian kings did sit on the Egyptian throne during the 25th dynasty. The kingdom of Kush and its culture were centred in southern Nubia. Later Nubia was the centre of a powerful state with Dunqulah as its capital (6th–14th centuries AD), after which it was captured by the Arabs. The region was conquered by Egypt in 1820–22.



Nubia, Lake See Lake Nasser

Nubian Desert Desert, northeastern Sudan. It is separated from the Libyan Desert by the Nile River valley to the west. Rocky and rugged with some dunes, it is essentially a sandstone plateau interspersed with many wadis (seasonal rivers) that die out before reaching the Nile. Precipitation averages less than 5 in (13 cm) annually.

nuclear energy *or* **atomic energy** Energy released from atomic nuclei in significant amounts. In 1919 Ernest Rutherford discovered that alpha rays could split the nucleus of an atom. This led ultimately to the discovery of the neutron and the release of huge amounts of energy by the process of nuclear fission. Nuclear energy is also released as a result of nuclear fusion. The release of nuclear energy can be controlled or uncontrolled. Nuclear reactors carefully control the release of energy, whereas the energy release of a nuclear weapon or resulting from a core meltdown in a nuclear reactor is uncontrolled. See also chain reaction, nuclear power, radioactivity.

nuclear fission Division of a heavy atomic nucleus into two fragments of roughly equal mass, accompanied by the release of a large amount of energy, the binding energy of the subatomic particles. The energy released in the fission of one uranium nucleus is about 50 million times greater than that released when a carbon atom combines with oxygen atoms in the burning of coal. The energy appears as kinetic energy of the fragments, which converts to thermal energy as the fragments collide in matter and slow down. Fission also releases two or three free neutrons. The free neutrons can bombard other nuclei, leading to a series of fissions called a chain reaction. The energy released from nuclear fission is used to generate electricity, to propel ships and submarines, and is a source of the vast destructive power of nuclear weapons. See illustration opposite.

nuclear fusion Process by which nuclear reactions between light elements form heavier ones, releasing huge amounts of energy. In 1939 Hans Bethe suggested that the energy output of the sun and other stars is a result of fusion reactions among hydrogen nuclei. In the early 1950s American scientists produced the hydrogen bomb by inducing fusion reactions in a mixture of the hydrogen isotopes deuterium and tritium, forming a heavier helium nucleus. Though fusion is common in the sun and other stars, it is difficult to produce artificially and is very difficult to control. If controlled nuclear fusion is achieved, it might provide an inexpensive energy source because the primary fuel, deuterium, can be extracted from ordinary water, and eight gallons of water could provide the energy equivalent to 2,500 gallons of gasoline. See illustration below.

Top: Uranium-235 combines with a neutron to form an unstable intermediate, which quickly splits into barium-144 and krypton-89 plus three neutrons in the process of nuclear fission. Bottom: Deuterium and tritium combine by nuclear fusion to form helium plus a neutron.

© MERRIAM-WEBSTER INC.

nuclear magnetic resonance (NMR) Selective absorption of very high-frequency radio waves by certain atomic nuclei subjected to a strong

© 2006 Encyclopædia Britannica, Inc.

stationary MAGNETIC FIELD. Nuclei that have at least one unpaired PROTON or NEUTRON act like tiny magnets. When a strong magnetic field acts on such nuclei, it sets them into PRECESSION. When the natural FREQUENCY of the precessing nuclear magnets corresponds to the frequency of a weak external radio wave striking the material, energy is absorbed by the nuclei at a frequency called the resonant frequency. NMR is used to study the molecular structure of various solids and liquids. MAGNETIC RESONANCE IMAGING, or MRI, is a version of NMR used in medicine to view soft tissues of the human body in a hazard-free, noninvasive way.

nuclear medicine Medical specialty using radioactive ELEMENTS or ISOTOPES for diagnosis and treatment of disease. A radioisotope is introduced into the body (usually by injection). The radiation it emits, detected by a scanner and recorded, reflects its distribution in different tissues and can reveal the presence, size, and shape of abnormalities in various organs. The isotopes used have short half-lives and decay before RADIOACTIVITY causes any damage. Different isotopes tend to concentrate in particular organs (e.g., iodine-131 in the thyroid). Radioactive substances are also implanted to treat small, early-stage cancers. This yields a slow, continuous dose that limits damage to normal cells while destroying tumour cells. See also COMPUTED AXIAL TOMOGRAPHY; DIAGNOSTIC IMAGING; POSITRON EMISSION TOMOGRAPHY; RADIATION THERAPY; RADIOLOGY.

Nuclear Non-proliferation Treaty (NPT) *officially* **Treaty on the Non-proliferation of Nuclear Weapons** International agreement intended to prevent the spread of nuclear technology. It was signed by the U.S., Britain, the Soviet Union, and 59 other countries in 1968. The three major signatories agreed not to assist states lacking nuclear weapons to obtain or produce them; the nonnuclear signatories agreed not to attempt to obtain nuclear weapons in exchange for assistance in developing nuclear power for peaceful purposes. France and China, both nuclear powers, declined to ratify the treaty until 1992, and some nuclear powers, including Israel and Pakistan, have never signed it. In 1995, when the treaty was due to expire, it was extended indefinitely by a consensus vote of 174 countries at the United Nations. See also NUCLEAR TEST-BAN TREATY.

nuclear physics Branch of PHYSICS dealing with the structure of the atomic NUCLEUS and RADIATION from unstable nuclei. A principal research tool of nuclear physics is a high-energy beam of particles, such as PROTONS or ELECTRONS, directed as projectiles against nuclear targets. By analyzing the directions and energies of the recoiling particles and any resulting nuclear fragments, nuclear physicists can obtain details of nuclear structure, the STRONG FORCE that binds nuclear components together, and the release of energy from the nucleus.

nuclear power Energy produced by NUCLEAR FISSION of heavy atomic nuclei. About one-third of all electric power worldwide now comes from nuclear power plants. The navies of many countries include nuclear-powered warships; almost half of U.S. combat warships are nuclear-powered. Most commercial nuclear reactors are thermal reactors. Two types of light-water reactors in use throughout the world are the boiling-water reactor and the pressurized-water reactor. In the liquid-metal fast-breeder reactor, fuel is utilized 60 times more effectively than in light-water reactors. See also NUCLEAR ENERGY.

nuclear reactor Device that can initiate and control a self-sustaining series of NUCLEAR-FISSION reactions. Neutrons released in one fission reaction may strike other heavy nuclei, causing them to fission. The rate of this chain reaction is controlled by introducing materials, usually in the form of rods, that readily absorb neutrons. Typically, control rods made of cadmium or boron are gradually inserted into the core if the series of fissions begins to proceed at too great a rate, which could lead to MELTDOWN of the core. The heat released by fission is removed from the reactor core by a coolant circulated through the core. Some of the thermal energy in the coolant is used to heat water and convert it to high-pressure steam. This steam drives a turbine, and the turbine's mechanical energy is then converted into electricity by means of a generator. Besides providing a valuable source of electric power for commercial use, nuclear reactors also serve to propel certain types of military surface vessels, submarines, and some unmanned spacecraft. Another major application of reactors is the production of radioactive isotopes that are used extensively in scientific research, medical therapy, and industry.

Nuclear Regulatory Commission (NRC) U.S. independent REGULATORY AGENCY that oversees the civilian use of nuclear energy. Established in 1974 to replace the Atomic Energy Commission, the NRC licenses the construction and operation of nuclear reactors and other facilities and the ownership and use of nuclear materials. It issues standards, rules, and regulations for the maintenance of licenses, and it regularly inspects nuclear facilities to ensure compliance with public health and safety, environmental quality, national security, and antitrust laws. The NRC also investigates nuclear accidents, conducts public hearings, and reviews power-plant operations. Its commissioners are appointed by the president of the U.S.

nuclear species See NUCLIDE

Nuclear Test-Ban Treaty *officially* **Treaty Banning Nuclear Weapons Tests in the Atmosphere, in Outer Space and Under Water** Treaty that prohibits all tests of NUCLEAR WEAPONS except those conducted underground. U.S.-Soviet test-ban talks began after concerns arose in the 1940s and '50s about the dangers of radioactive fallout from above-ground nuclear tests. These talks made little progress until the CUBAN MISSILE CRISIS of 1962. In the following year, Britain, the U.S., and the Soviet Union signed the treaty, and more than 100 other governments soon followed. France and China were notable nonsignatories. In 1996 the treaty was replaced by the Comprehensive Test-Ban Treaty, which will not take effect until it is signed by all 44 countries with nuclear power plants. India refuses to do so on the ground that the treaty lacks disarmament provisions and permits nonexplosive testing. See also NUCLEAR NON-PROLIFERATION TREATY.

nuclear weapon *or* **atomic weapon** *or* **thermonuclear weapon** Bomb or other warhead that derives its force from NUCLEAR FISSION, NUCLEAR FUSION, or both and is delivered by an aircraft, missile, or other system. Fission weapons, commonly known as ATOMIC BOMBS, release energy by splitting the nuclei of uranium or plutonium atoms; fusion weapons, known as HYDROGEN BOMBS or thermonuclear bombs, fuse nuclei of the hydrogen isotopes tritium or deuterium. Most modern nuclear weapons actually combine both processes. Nuclear weapons are the most potent explosive devices ever invented. Their destructive effects include not only a blast equivalent to thousands of tons of TNT but also blinding light, searing heat, and lethal radioactive FALLOUT. The number of nuclear weapons reached its peak in the 1980s, when the U.S. had some 33,000 and the Soviet Union 38,000. Since the end of the Cold War both countries have decommissioned or dismantled thousands of warheads. Other declared nuclear powers are the United Kingdom, France, China, India, and Pakistan. Israel is widely assumed to possess nuclear weapons, and North Korea, Iran, and Iraq often have been accused of seeking to build them. Some countries, such as South Africa, Brazil, and Argentina, have acknowledged pursuing nuclear weapons in the past but have abandoned their programs. See also NUCLEAR NON-PROLIFERATION TREATY; NUCLEAR TEST-BAN TREATY.

nuclear winter Environmental devastation that some scientists contend would result from a nuclear war. The basic cause, as hypothesized, would be huge fireballs created by exploding nuclear warheads, which would ignite great fires (firestorms). Smoke, soot, and dust would be lifted to high altitudes and driven by winds to form a uniform belt encircling the Northern Hemisphere. The clouds could block out all but a fraction of the Sun's light, and surface temperatures would plunge for as much as several weeks. The semidarkness, killing frosts, and subfreezing temperatures, combined with high doses of RADIATION, would interrupt plant photosynthesis and could thus destroy much of the Earth's vegetation and animal life. Other scientists dispute the results of the original calculations, and, though such a nuclear war would undoubtedly be devastating, the degree of damage to life on the Earth remains controversial.

nucleic \nü-'klē-ik, nů-'klā-ik\ **acid** Any of the organic compounds making up the genetic material of living cells. Nucleic acids direct the course of PROTEIN synthesis, thereby regulating all cell activities. Their transmission from one generation to the next is the basis of HEREDITY. The two main types, DNA and RNA, are composed of similar materials but differ in structure and function. Both are long chains of repeating NUCLEOTIDES. The sequence of PURINES and PYRIMIDINES (bases)—ADENINE (A), GUANINE (G), CYTOSINE (C), and either THYMINE (T; in DNA) or URACIL (U; in RNA)—in the nucleotides, in groups of three (triplets, or codons), constitutes the GENETIC CODE.

nucleolus See NUCLEUS

nucleophile \'nü-klē-ə-ˌfīl\ ATOM or MOLECULE that contains an ELECTRON pair available for BONDING and in CHEMICAL REACTIONS therefore seeks a posi-

© 2006 Encyclopædia Britannica, Inc.

tive centre, such as the NUCLEUS of an atom or the positive end of a polar molecule (see COVALENT BOND; ELECTRIC DIPOLE). In the Lewis electron theory (see ACID-BASE THEORY), advanced by the U.S. chemist Gilbert Lewis (1875–1946) in 1923, nucleophiles are by definition Lewis bases. Examples include the hydroxide ion (OH^-), the ions of the HALOGENS chlorine, bromine, and iodine (Cl^-, Br^-, and I^-, respectively), ammonia (NH_3), and water (H_2O). See also BASE; ELECTROPHILE.

nucleoprotein \ˌnü-klē-ō-ˈprō-ˌtēn\ Macromolecular complex consisting of a PROTEIN linked to a NUCLEIC ACID, either DNA or RNA. The proteins that combine with DNA are generally of characteristic types called HISTONES and protamines. The resulting nucleoproteins (deoxynucleoproteins) make up the CHROMOSOMES of living cells. Many VIRUSES are little more than organized agglomerations of deoxynucleoproteins. Many specific RNA nucleoproteins are also known; they have diverse cellular functions.

nucleoside \ˈnü-klē-ə-ˌsīd\ Any of a class of organic compounds, including structural subunits of NUCLEIC ACIDS. Each consists of a molecule of a five-carbon SUGAR (RIBOSE in RNA, deoxyribose in DNA) and a nitrogen-containing base, either a PURINE or a PYRIMIDINE. The base URACIL occurs in RNA, THYMINE in DNA, and ADENINE, GUANINE, and CYTOSINE in both, as part of the nucleosides uridine, deoxythymidine, adenosine or deoxyadenosine, guanosine or deoxyguanosine, and cytidine or deoxycytidine. Nucleosides usually have a PHOSPHATE group attached, forming NUCLEOTIDES. Usually obtained by decomposition of nucleic acids, nucleosides are important in physiological and medical research. Those that are not part of nucleic acids include puromycin and certain other ANTIBIOTICS produced by fungi.

nucleosynthesis \ˌnü-klē-ō-ˈsin-thə-səs\ Production on a cosmic scale of all the chemical ELEMENTS from one or perhaps two simple types of atomic nuclei (see NUCLEUS), those of HYDROGEN and HELIUM. Elements differ in the number of PROTONS and ISOTOPES of each element by the number of NEUTRONS in their nuclei. One type of nucleus can be transformed into another by adding or removing protons, neutrons, or both, processes that go on in STARS. Many of the first 26 elements (up to iron) and their present cosmic abundances can be accounted for by successive NUCLEAR FUSION reactions, beginning with HYDROGEN, in stellar cores. Heavier elements are believed to be created in the death of stars during SUPERNOVA explosions, by capture of successive neutrons by lighter nuclei and decay of some of these neutrons into protons (with ejection of an ELECTRON and a NEUTRINO each time).

nucleotide \ˈnü-klē-ə-ˌtīd\ Any of a class of organic compounds, including the structural units of NUCLEIC ACIDS. Each consists of a NUCLEOSIDE and one or more PHOSPHATE groups. In nucleic acids, the phosphate of one nucleotide joins to the sugar of the next to form the backbone. Important nucleotides that are not part of nucleic acids include ATP, cyclic AMP (needed in GLYCOGEN breakdown), and certain COENZYMES.

nucleus Specialized structure occurring in most CELLS (except BACTERIA) and separated from the rest of the cell by the nuclear membrane. This membrane seems to be continuous with the cell's ENDOPLASMIC RETICULUM and has pores that permits the passage of large molecules. The nucleus controls and regulates the cell's activities (e.g., growth and metabolism) and carries the GENES. Nucleoli are small bodies often seen within the nucleus that play an important part in the synthesis of RNA and protein. A cell normally contains only one nucleus.

nucleus Central, positively charged core of an ATOM. It consists of positively charged PROTONS and neutral NEUTRONS, known collectively as nucleons, held together by the STRONG FORCE. The number of nucleons can range from 1 to about 270, depending on the element. ISOTOPES are atoms of the same element that have the same number of protons but different numbers of neutrons. Some nuclei, especially heavier ones, are unstable, or radioactive (see RADIOACTIVITY), emitting energy in the form of alpha rays (see ALPHA DECAY), beta rays (see BETA DECAY), or GAMMA RAYS. The nucleus makes up nearly all the MASS but only a minute fraction of the volume of the atom.

nuclide *or* **nuclear species** Species of ATOM as characterized by the number of PROTONS, NEUTRONS, and the energy state of the NUCLEUS. A nuclide is characterized by its mass number and its ATOMIC NUMBER. To be regarded as distinct, a nuclide must have an energy content sufficient for a measurable lifetime, usually more than 10^{-10} second. Nuclear ISOMERS, which have the same number of protons and neutrons but differ in energy content and RADIOACTIVITY, are also distinct nuclides. Nuclides are associated with radioactive decay and may be stable or unstable. There are about 1,700 known nuclides, of which about 300 are stable and the rest radioactive.

nudibranch \ˈn(y)ü-də-ˌbraŋk\ *or* **sea slug** Any marine GASTROPOD in the order Nudibranchia. Most nudibranchs lack a shell, mantle cavity (see MOLLUSK), and gills, and breathe through the body surface. The delicately colored body, up to 16 in. (43 cm) long, has bizarre defensive outgrowths, called cerata, that discharge nematocysts ingested from CNIDARIAN prey. Antennalike organs arise from the head. Nudibranchs occur in shallow waters of all oceans, where they feed chiefly on other invertebrates, particularly SEA ANEMONES. Some species can swim; others are bottom creepers. The term sea slug sometimes refers to all members of the subclass Opisthobranchia.

nuée ardente \nü-ˈā-är-ˈdänt\ *French* **"fiery or glowing cloud"** Highly destructive, incandescent mass of gas-enveloped particles that is associated with volcanic eruptions. These glowing avalanches, as they are sometimes called, can move down even slight inclines at speeds as high as 100 mph (160 kph). The temperature of the gases can reach 1,100–1,300 °F (600–700 °C). Nuées ardentes are exceedingly destructive, killing all living things in their path. Most occur in the circum-Pacific region known as the Ring of Fire. See also TUFF.

Nuer \ˈnü-ər\ People of the marsh and savanna living on both banks of the Nile River in southern Sudan. They speak an Eastern Sudanic language of the NILO-SAHARAN family. The Nuer are cattle-raising people who also cultivate millet and spear fish. They spend the rainy season in permanent villages on the higher ground and the dry season in riverside camps. Feuding between clans is common, as is warfare with the DINKA. They number 1.5 million. See also NILOT.

Nuevo León \ˈnwā-vō-lā-ˈōn\ State (pop., 2000: 3,834,141), northeastern Mexico. It covers an area of 25,067 sq mi (64,924 sq km), and its capital is MONTERREY. The SIERRA MADRE Oriental crosses the state from northwest to southeast. The region became a state in 1824 and was occupied by U.S. troops during the MEXICAN WAR. Its iron and steel industries were the first heavy industry in Latin America; the state also supports agricultural and textile enterprises.

nuisance In law, an act, object, or practice that interferes with another's rights or interests by being offensive, annoying, dangerous, obstructive, or unhealthful. Such activities as obstructing a public road, polluting air and water, operating a house of prostitution, or keeping explosives are public nuisances and constitute criminal violations. A private nuisance is an activity or condition (e.g., excessive noise, disagreeable odor) that interferes with the use and enjoyment of one's property and that may be a cause of action in civil litigation. An attractive nuisance is something on one's property that poses a risk to children or others who may be attracted to it.

Nujoma \nü-ˈjō-mə**, Sam(uel Shafiihuma)** (b. May 12, 1929, Owambo, South West Africa) First president (1990–2005) of independent Namibia. In the late 1950s Nujoma helped found the Ovamboland People's Organization, forerunner of the SOUTH WEST AFRICA PEOPLE'S ORGANIZATION (SWAPO). He became SWAPO's first president in 1960, and, after years of petitioning the UN to compel South Africa to release control of South West Africa, he authorized armed resistance (1966). In 1989, after some 30 years in exile, he led SWAPO to victory in the UN-supervised elections.

Nuku'alofa \ˌnü-kü-ä-ˈlō-fə\ Town (pop., 1999 est.: 36,360), capital, and chief port of Tonga. Located on the northern shore of Tongatapu Island in the southern Pacific Ocean, it has a deep-draft harbour that is protected by reefs. Commercial activities centre on the export of copra and bananas. Landmarks include the 19th-century royal palace, a chapel, and royal tombs.

Nullarbor \ˈnə-lə-ˌbȯr\ **Plain** Vast limestone plateau, southern Australia. It lies along the south coast of western South Australia and eastern Western Australia, extending north from the GREAT AUSTRALIAN BIGHT to the GREAT VICTORIA DESERT. It occupies 100,000 sq mi (260,000 sq km) of generally flat surface in bedrock. The name Nullarbor is derived from the Latin *nullus arbor* ("no tree"). The Nullarbor National Park preserves rare vegetation and fauna. The plain has many limestone caves, including Koonalda Cave, an archaeological site. The park is crossed by the world's longest stretch of straight railroad track (330 mi [530 km]).

nullification Doctrine upholding the right of a U.S. state to declare null and void an act of the federal government. First enunciated in the VIRGINIA AND KENTUCKY RESOLUTIONS (1798), it was expanded by JOHN C. CALHOUN in response to the Tariff of 1828. Calhoun maintained that a state "interposition" could block enforcement of a federal law. The South Carolina legislature agreed by passing the Ordinance of Nullification (1832), threatening to secede if the federal government forced collection of the 1828 tariff duties. Pres. ANDREW JACKSON asserted the supremacy of the federal government. The U.S. Congress passed a compromise tariff bill reducing the duties but also passed the Force Bill, which authorized federal enforcement of the law. The South Carolina legislature rescinded its ordinance, but the conflict highlighted the danger of nullification.

number Basic element of mathematics used for counting, measuring, solving equations, and comparing quantities. They fall into several categories. The counting numbers are the familiar 1, 2, 3 . . . ; whole numbers are the counting numbers and ZERO; INTEGERS are the whole numbers and the negative counting numbers; and the RATIONAL NUMBERS are all possible quotients formed by integers, including FRACTIONS. These numbers can be symbolically represented by terminating or repeating decimals. IRRATIONAL NUMBERS cannot be represented by fractions of integers or repeating decimals and must be represented by special symbols such as $\sqrt{2}$, e, and π. Together, the rational and irrational numbers constitute the REAL NUMBERS, which form an algebraic field (see FIELD THEORY), as do the COMPLEX NUMBERS. While the counting numbers and rational numbers come about as the means of counting, calculating, and measuring, the others arose as means of solving equations. See also TRANSCENDENTAL NUMBER.

number system Method of writing numerals to represent numbers. The use of ZERO as a placeholder was the greatest advance in number systems. The most common system is the decimal system, in which 10 symbols (the HINDU-ARABIC NUMERALS) denote multiples of powers of 10 by their position relative to the decimal point. Computers have brought greater awareness of the binary number system, in which two symbols, 0 and 1, represent multiples of powers of 2.

number theory Branch of mathematics concerned with properties of and relations among INTEGERS. It is a popular subject among amateur mathematicians and students because of the wealth of seemingly simple problems that can be posed. Answers are much harder to come up with. It has been said that any unsolved mathematical problem of any interest more than a century old belongs to number theory. One of the best examples, recently solved, is FERMAT'S LAST THEOREM.

numerical analysis Branch of applied mathematics that studies methods for solving complicated equations using arithmetic operations, often so complex that they require a computer, to approximate the processes of ANALYSIS (i.e., CALCULUS). The arithmetic model for such an approximation is called an ALGORITHM, the set of procedures the computer executes is called a PROGRAM, and the commands that carry out the procedures are called CODE. An example is an algorithm for deriving π by calculating the perimeter of a regular polygon as its number of sides becomes very large. Numerical analysis is concerned not just with the numerical result of such a process but with determining whether the ERROR at any stage is within acceptable bounds.

numerical control (NC) Control of a system or device by direct input of data in the form of numbers, letters, symbols, words, or a combination of these forms. It is a principal element of COMPUTER-INTEGRATED MANUFACTURING, particularly for controlling the operation of machine tools. NC is also essential to the operation of modern industrial ROBOTS. The two basic types of NC systems are point-to-point, in which a device is programmed to perform a series of motions with fixed starting and stopping points, and continuous-path, in which a point-to-point programmed device has sufficient memory to be "aware" of its former actions and their results and to act in accordance with this information.

numerology Use of numbers to interpret a person's character or divine the future. It is based on the assertion by PYTHAGORAS that all things can be expressed in numerical terms because they are ultimately reducible to numbers. Using a method analogous to that of the Greek and Hebrew alphabets (in which each letter also represented a number), modern numerology attaches a series of digits to an inquirer's name and uses these, along with the date of birth, to reveal the person's true nature and prospects.

Numidia \nü-'mi-dē-ə\ Ancient country, North Africa, approximately coextensive with modern Algeria. During the Second Punic War (see PUNIC WARS), its two great tribes divided, one supporting the Romans and the other the Carthaginians. The tribal chief MASINISSA was made king of Numidia after the Roman victory in 201 BC. After the destruction of CARTHAGE, thousands fled to Numidia, which became a Roman province in 46 BC. Its capital was Cirta, and the chief city was Hippo, which was the see of St. AUGUSTINE. After its conquest by the VANDALS in AD 429, Roman civilization there declined rapidly; some pockets of native culture survived, however, and even continued after the Arab conquest in the 8th century.

Nun \'nün\ *or* **Nu** Oldest of the Egyptian gods and father of RE, the sun god. Nun represented the dark, turbulent waters out of which the cosmos was churned. Since it was believed that the primeval ocean continued to surround the ordered cosmos, the creation myth was reenacted each day as the sun rose from the waters. Nun was also thought to exist as subsoil water and as the source of the annual flooding of the NILE.

Nun River \'nün\ River, southern Nigeria. Considered the direct continuation of the NIGER RIVER, it flows southwest to the Gulf of GUINEA, at Akassa. It was a trade route in the 19th century, when the IGBO kingdom controlled commerce. Petroleum was discovered along the Nun in 1963, and oil is piped from the oil fields along the Trans-Niger Pipeline.

Nunavut \'nü-nə-ˌvüt\ Territory (pop., 2001: 26,745), north-central Canada. Nunavut (Inuit: "Our Land") is the result of Canada's largest land claim settlement, created to give the Inuit (see ESKIMO), representing 85% of its population, a greater voice in Canadian government. Occupying an area of 772,000 sq mi (2,000,000 sq km), or one-fifth of Canada's landmass, it comprises the central and eastern parts of the former NORTHWEST TERRITORIES, including BAFFIN and ELLESMERE islands. Its capital is IQALUIT. The area was settled by Inuit from 4500 BC to AD 1000. Vikings probably visited during the Middle Ages, but the first records of exploration are from MARTIN FROBISHER's 1576 search for the NORTHWEST PASSAGE. The mainland was explored by Englishman Samuel Hearne in 1770–72. After passing through British possession, it was transferred to Canada in 1870. In 1976 a political organization called for the creation of a territory to settle Inuit claims in the Northwest Territories. The proposal was approved by the Canadian government in 1993. Nunavut's first elections were held in February 1999, and the territory was inaugurated on April 1, 1999.

Nūr al-Hilmī \'nür-ˌäl-'hil-mē**, Burhanuddin bin Muhammad** (b. 1911, Kota Bharu, Malaya—d. Oct. 25, 1969, Taiping, Malaysia) Malay nationalist leader. After serving the administration of the Japanese occupation during the war, Nūr al-Hilmī became a prominent left-wing leader who worked for an independent and multiracial Malaysia. In 1956 he became president of the Pan-Malayan Islamic Party, which became the principal opposition party in Malaysian politics. Detained in 1965 for allegedly pro-Indonesian activities, he was released in 1966; he remained nominal president of the party until his death.

Nureyev \nù-'rā-yef**, Rudolf (Hametovich)** (b. March 17, 1938, Irkutsk, Russia, U.S.S.R.—d. Jan. 6, 1993, Paris, Fr.) Russian ballet dancer. After studying ballet in Leningrad (1955–58), he joined the Kirov Ballet as a soloist. He defected during the company's tour to Paris in 1961. Thereafter he danced as a guest artist with many companies, especially the ROYAL BALLET, where he regularly partnered MARGOT FONTEYN. His performances, combining an intensely romantic sensibility with stunning muscularity and technique, made him an international star. He choreographed new versions of *Romeo and Juliet*, *Manfred*, and *The Nutcracker*. From 1983 to 1989 he was artistic director of the Paris Opéra Ballet.

Nurhachi \'nür-'hä-chē\ (b. 1559, Manchuria—d. Sept. 30, 1626) Chieftain of one branch of the Juchen (later called MANCHU), whose attack on China in 1618 presaged his son DORGON's conquest. Nurhachi first defeated a rival in his own tribe and then subdued the other four Juchen

tribes in his immediate area. During this time, he also established a Manchu state and enlisted the scholar Erdeni to create a Manchu writing system. He organized his troops under the BANNER SYSTEM. In 1616 Nurhachi proclaimed himself KHAN and called his dynasty Jin, harking back to the Juchen Jin dynasty of the 12th century. In 1626 he was defeated by the Chinese and died of battle wounds. See also HONGTAIJI; QING DYNASTY.

Nūrī al-Saʿīd \ˌnůr-ē-ål-så-ˈēd\ (b. 1888, Baghdad, Iraq—d. July 14, 1958, Baghdad) Iraqi soldier and longtime prime minister of Iraq. He entered the army in 1909, when Iraq was a province of the OTTOMAN EMPIRE. Captured by the British during World War I (1914–18), he joined a British-backed Arab revolt against the Ottomans. After the war he joined the Iraqi government under the Hāshimite king FAYṢAL I. Prime minister on 14 different occasions, he was pro-British and supported the monarchy. In 1958 he supported a union with Jordan that was strongly opposed by the military. He was killed in the coup that followed.

Nurmi, Paavo (Johannes) (b. June 13, 1897, Turku, Fin.—d. Oct. 2, 1973, Helsinki) Finnish track athlete. The outstanding long-distance runner of his generation, he captured nine gold medals and three silver in three Olympic Games (1920, 1924, 1928), setting two records at the 1924 games in a little over an hour. He held the world record for the mile run for eight years (1923–31). For his prowess he was nicknamed "the Flying Finn."

Paavo Nurmi, 1931.

Nürnberg \ˈnůrn-ˌberk\ *also known as* **Nuremberg** City (pop., 2002 est.: city, 491,307; metro. area, 1,018,211), BAVARIA, southern Germany, on the Pegnitz River. It grew up around a castle in the 11th century, and in 1219 it received its first charter. It became one of the greatest of the German free imperial cities, reaching the height of its power in the 16th century. In 1806 it became part of the kingdom of Bavaria. In the 1930s it was a centre of the NAZI PARTY; the site of the Nazis' annual NÜRNBERG RALLIES, in 1935 it gave its name to the anti-Semitic NÜRNBERG LAWS. It was severely damaged in World War II. After the war it was the scene of the NÜRNBERG TRIALS. The city was rebuilt and is now a commercial and manufacturing centre. Nürnberg's historic sites include the 11th-century royal palace. Its Academy of Arts (founded 1662) is the oldest in Germany. The city was the birthplace of ALBRECHT DÜRER.

Nürnberg Laws (1935) Two measures designed by ADOLF HITLER and approved by a NAZI PARTY convention at Nürnberg, Ger., on Sept. 15, 1935. The laws deprived Jews of German citizenship and forbade marriage or sexual relations between Jews and "citizens of German or cognate blood." Supplementary decrees defined a Jew as a person with at least one Jewish grandparent and declared that Jews could not vote or hold public office.

Nürnberg Rallies Massive rallies held by the NAZI PARTY in Nürnberg, Ger., to showcase its power. After smaller rallies at party conventions in 1923 and 1927, the first large-scale rally was held in 1929 and featured the nationalistic pageantry that marked subsequent annual rallies (1933–38). Attended by hundreds of thousands of Nazis, the rallies were carefully staged to reinforce party enthusiasm with martial songs, massed banners and flags, goose-step marches, torchlight processions, and lengthy orations by ADOLF HITLER and other Nazi leaders.
